We were now going about a mile from Frederick. Everything was going along first-rate. The three dogs were whipping every field in gait style. All at once a buggy passed us, going toward Frederick. The buggy contained two men, and the three dogs came running in toward us. My best dog, Dick, was the first to jump out of the buggy with the two men in toward Frederick. We halted and called, and whistled with all our might, but to no purpose, the dog was going with the buggy, and now they were about a mile off. Nothing was left me but to turn my horse's head, put him to the trot and follow on after them and get my dog. I felt very much a man, although somewhat discouraged at the turn affairs had taken, knowing well that we had lost the dog. I turned my horse's head and started, anticipating. Quickly I turned my horse and buggy, gave the horse the reins, came down on him with the whip, and sped along at a rapid rate, the dogs running, the dust flying, the horses going at a full dead run and we following at the top of our voices.

We were now going about the top of our speed, and were fast gaining on the dog and the buggy. I was just going up the hill at the cemetery gate, and the noise from our following did not appear as yet to attract his attention, and I thought at this time we would be compelled to follow the chase through the town. We had not yet checked our speed, and were still fast gaining upon them. When the buggy and dog struck the pike at the cemetery gate we were then about two hundred yards off from them, and we followed at the top of our voices, but we could not make him hear. All at once I grabbed my breech-loader and fired three successive shots. This instantly attracted the dog's attention, and he seeing the other two dogs now for the first time found out his mistake. He came bounding down the road at a terrible rate of speed, and when he got to us he was very glad. He jumped up, wagged his tail and tried to tell us how he had made the mistake. We turned our horse again and started down the road on our way. We got out and hunted a field on James Hood's farm, but did not find anything. We continued on farther and hunted a field on Finis's Farm. Nellie came to a point about the middle of the field. I said to Gill, "Look there, Nell has got a whole covey," and again I said, "Be careful Gill, and let us kill as many of them as we can." Gill said, "I cautioned him not to shoot too much in a hurry, to take his time and to pick out his birds and take good aim, and try and kill one with each barrel as they got up. There stood Nell as stiff as a poker, not a muscle moving. She would catch my eye sometimes while she was crouching there with such a conscious glance, which said truly and plainly, "Tread lightly and carefully, the game is at hand." I then turned to Gill and asked if he was ready, his reply was, "I am." I then said to my brother, "I cooked both barrels of my gun and with my mouth full of powder, I was in front, my horse on the trigger of my gun, I walked in and kicked in front of the dog. One bird buzzed up, and it had hardly got out of the stubbles before Gill's gun cracked and he killed it. There was not another bird there, nor not one; I don't know when I was ever so fooled as I was this time. This bird was a scattered bird, and some hunters had been in the field before us. As a matter of fact, I had been in the field and there was a crowd of sportsmen, they looked like a picket line during the war. They had all muskets, carbines and dogs of every description. They all knew me, but I only knew one of them, and he was John

Gumber. They told me they had raised a flock of partridges in the field where they were, and they were scattered in every direction, and they were hunting now for them. While I was conversing with them one single partridge got up from right under my feet. My Scott gun cracked and the bird fell literally blown to pieces by my fire. The crowd hooted and shouted, and they looked at me and my gun as if I was something wonderful to behold.

We lost much time here. It was now near ten o'clock, and we only had two partridges. We left and got in our buggy and went on farther. About two miles farther on we heard great firing in front of us, and on coming up to the spot we found Captain Patton, Lewis McMurtry's head clerk, with a fine brace of dogs, beating some thick cover, where he had driven a covey of birds. He had killed four of them. The sun was just setting, and now it was dark, and the moon almost played out. He said, "Mr. Schley, if you want to shoot you can help yourself; the birds are all scattered around here."

I hitched my buggy, pulled off my coat, called up my dogs and pitched into the cover. I beat the tall, rank weeds and high grass for about a half hour, and only found one bird, and I killed that. I had to hunt for a half hour before I found it, it being so very, very hot the dogs could not smell it. Here we lost much time, and now it was dark, and the moon almost played out. He said, "Mr. Schley, if you want to shoot you can help yourself; the birds are all scattered around here."

We got in our buggy and went down the road farther. I heard a partridge calling in a field, and, looking over, I saw in the same field a pump. I said to Gill, "We will hunt that field, and we will give the dogs some water." We halted and hatched our horse and pumped some water for the dogs, and took a drink of water ourselves. We beat this stubble field all over, but not a bird did we find. We beat across the field down the road farther in a small piece of wood just where we were going. We got in the buggy and drove right for this piece of woods. When we arrived there we found Col. Bluebaker and George Hergersimer, with three or four dogs, and they were shooting at a great rate. Their guns were cracking, cracking every minute. It was now near twelve o'clock. I said to Gill, "We will sit something." So we halted and sat under the trees and ate a little, and while we were eating these fellows were firing away. But they had not yet seen us. When we were through with our lunch we walked over to them. They were very glad to see us, and said they had raised two or three coveys in the field and that they were all scattered around. They said, "Pitch in and help yourselves." I threw my gun from my shoulder and called my dogs, and I made them beat the ground very closely. I raised eight single birds and two rabbits, and I killed every one of them, and made some beautiful shots. It was now fast going on one o'clock, and Col. Bluebaker insisted on us going with him and his partner to a spring, about a half mile off. The spring is known as Shellen's Spring. Way down on the "manor," he said, he had fired oysters, whisky and pickles. He wanted us to eat with him. So we all started for the spring, and spread our little blankets on the grass, and we were all fed, the horse and dogs and watered them. We were enjoying the beauty of the day as much as the refreshments. In a short time we bade our hospitable friends good-day and left, they going toward home, we going farther down the road.

We drove about two miles, and passed through the big Manor Woods near Adamsdown. Here we hitched our horse in a large open woods, known as the Big Manor Woods. Now we had gotten out of the limits and cover, and the wind, and everything was as quiet as the grave. Now and then the wind went whistling through the branches and leaves, but the sound of the sportsman's gun was not to be heard. Here we found plenty of birds and all full coveys. We did excellent shooting. One covey we killed twelve birds out of. We had as high as six birds lying dead at one time, not having time to pick them up. Shooting so fast with our breech-loaders, many of them would fall in high, rank grass and briars, which made awful hunting for them. Many birds we lost, but we did splendid shooting. But hot, dry and thirsty; don't talk. The dogs all lay down and panted, and we could not get any air in this place, and there was not a drop of water near us, not even a mud-puddle. Gill remarked, "I am so hot I don't know what to do. I really can't spit any more. I know of a small house about a mile off, and I know water must be close to it." So we went into the buggy and put whip to the horse and went for this house. We were then in the wind, a colored woman made her appearance, and I gave her twenty cents to get us a bucket of water. She soon got it and we all had a hearty drink, which we enjoyed very much. It was now fast drawing toward sunset, and we were about ten miles from home. We turned our faces homeward. We beat a thick wood full of briars and second growth timber on our way home. We could not find a single bird. We lost one of our dogs, Bob, and could not find him high or low. On our going back to the buggy, a mile off, we found him all broken up, standing under the buggy. He did not know us, but when he saw Dick and Nell then he was all right. We arrived home about half-past eight, and counted our bag, and found we had 47 partridges, 2 rabbits and 1 hawk. This bag beat any one bag on the first day as far as we could hear from. So we got the honor of bringing home more birds than any one that was out that day. We went to bed tired and slept soundly until morning. On the next day we fully intended going again, but the day proved so hot and dry we concluded to put it off. So ended our first day of the partridge season, and, hope we may be as successful on our next hunt.

FRANK SCHLEY.

A TURKEY HUNT IN WESTERN MARYLAND.

EMERSONVILLE, N. Y., Oct. 31, 1878.

EDITOR FOREST AND STREAM:

While preparing a short vacation in Allegheny County, Maryland, I ran across a famous wild turkey hunter, and we started one morning as day was breaking for a hunt on Big Savage Mountain. A brisk walk of an hour brought us to the foot of it, and, before starting up, I had dressed his old-fashioned rifle, a piece that "Porte Crayon" had immortalized in his sketches of Virginia and Maryland mountains. Indeed, I caught myself saying to myself, "Porte Crayon" might have run across and have used Jake as the origin of one of his "savage hunters." He told me that he had better keep a lookout for a pheasant, so I put in a shell of No. 7 and one of No. 6 so I would be prepared for birds of any kind smaller than the turkeys, which we did not expect to see before afternoon. We kept straight up the mountain side, Jake going, as it seemed to me, at a double click, but in reality a very moderate gait. Every few hundred yards I would sit down and wait for my breath to catch up. However, all things must come to an end, as did our journey to the top. We reached the top and began to descend to what is called Cranberry Swamp, where Jake assured me pheasants and woodcock were plenty. On reaching the

ground I searched it thoron big, and came to the conclusion that Jake's plentiful birds must have gone visiting, for a solitary woodcock was the only bird that I saw. I went to the top of the Mountain and raveled north for about five miles and began to descend. On reaching the bottom we separated to look for squirrels that seemed to have gone after Jake's birds. I lit my pipe and lay down behind a log to wait for Jake to come back and to rest. Presently I heard in the woods above me a loud gobble, Jake trying his call, thought I, soon I heard a whistle, and I saw Jake molting for me to approach him. When I got close he asked, "Did you hear them? The dog scattered the dogs; let's go up the hill." So off we went for another fifty miles as Jake said, but not a mile in reality. We posted ourselves between two fallen trees, and Jake commenced to yell, "Soon an answer come from our right—'peep, peep.' The call continued with its answering 'peep.' Soon a loud gobble, gobble, from our left was heard. We slowly shifted our guns to bear on the approaching gobbler, and I looked at my shells to make sure I had No. 2's in both barrels. Soon I saw the gobbler jump down from a log, and, with two or three hens, walk rapidly toward us. Jake, having stopped; his call, cautioned, 'Make sure you fire, and don't move.' I had lain in ambush for human game a times past, and my nerves had not failed me then, neither did they now. I followed the magnificent looking bird till he was just entering a spot that was clear and—bang went Jake's rifle. The gobbler disappeared as if the ground had opened and swallowed him. Jake had shot at a hen and missed. She ran a few steps, stopped to see the direction we were in, and I let her have the right barrel. As soon as the gun cracked Jake ran and picked up the bird, a full-grown hen. Up the hill again was his command, and off we started for another half or three-quarters of a mile. Again we posted ourselves behind a log and took a quick smoke for about a quarter of an hour. Then Jake opened his mouth and brought out the call. Less than ten minutes brought an answer from down the hill. A very few minutes brought it in manifest of Jake, who killed it. It proved to be a young hen. The last shot from the rifle not having made more noise than a cap snapping, we recommenced "calling." Ten minutes passed, and an answer was returned from the brush behind us, so close that I did not dare to climb over the log. So wheeling slowly around on my heels, I brought the gun to bear just as the turkey came in sight, about fifty yards off. I covered it and pulled not one trigger, as I intended to let both barrels go. I saw a male had planted both heels against my shoulder. The next instant my gun was crashing away at the log, and Jake was bringing the turkey to our pile that now looked very respectable. It began to grow late, and, being about seven miles from home, we packed the turkeys on our backs and started. By the time we reached the village our turkeys had increased to a hundred weight. ENGINEER.

LUBRICATORS FOR GUNS.

EDITOR FOREST AND STREAM:

If the rusty surface of a barrel be examined under the microscope it will be found to present an uneven surface studded with thousands of holes which serve admirably as conservatories of moisture, and tend to the oxidation of the affected metal. Grease and oil are then simply applied to serve as an impermeable barrier to the air, the oxygen of which ever present in millions of free molecules attacks readily any substance for which it has affinity and forms in its combination with it the oxyd which we commonly call rust. As long as barrels of guns are perfectly smooth but few retrets are present in which oxidation favored by the sportsman has to exert its power, but when they are once attacked the sportsman has to exert his power to keep them from rusting. The difficulty to this is none the less on account of the many different materials of the trigger plates, the nipples of muzzle-loaders and the plungers of breech-loaders, as the deep greases that they favor rusting. Near salt water, where the air is frequently charged with minute and actively corroding particles of saline substances, guns suffer most, and an efficient lubrication is there of the highest importance. After using, with poor success, about all of the advertised preparations, which on paper guarantee absolute immunity from rust, and finding them near and on the sea more or less worthless, I tried at last, and obtained highly satisfactory results by applying mercurial ointment, which when once well rubbed in prevents effectually all damage. A Frank Wesley rifle and a Fox breech-loader treated in this manner were the only arms which emerged bright and clean from the wreck of a vessel which terminated, during the latter end of last summer, a shooting excursion to Labrador in which I had participated. Previously to packing up I had a lot of ointment melted and applied by means of a soft camel hair brush to the barrels and locks. The issue was also well lubricated and the nipples next closed with the grease. The barrels were greased with it. A couple of newspapers were wrapped around to detain the grease on stock to prevent the grease from being rubbed off, and in this manner they were, without any further additional care, packed into the traveling trunk. The wreck of a vessel is a hard affair on the passengers and their effects, particularly their shooting implements. I passed unfortunately through this ordeal, and trunks, guns and all were washed about a whole night in the overboarded cabin of our stranded schooner, and the consequences did not allow of their drying even after they were rescued the next day. The rifles were so wet that many of my fellow passengers who had escaped unhurt, but were coated all over with rust, and they had been well oiled and smeared with several kinds of highly advertised rust preventers. The blue ointment alone stood the trying test, and not a solitary red spot was visible on the guns treated with it, when at last after two days of delay a chance for thorough inspection was afforded. I have learned, additionally, that I gain time and lessen trouble by not removing all the grease from any easily affected corners, as the iron does not so liberally hermetically protected and I use space then common machine oil for the plants and screw barrels and locks. Whenever I shall take another journey to the sea shore I shall put my trust in the experience of the past and by simply applying a coat of the ointment over all exposed parts avoid the trouble of continually overhauling and inspecting every part of my armament. L.

THE DITMAR POWDER.

BINGHAMTON, N. Y., Nov. 10, 1878.

EDITOR FOREST AND STREAM:

In answer to Mr. D. A. Tomblie's letter in your last issue I have to say that my powder is absolutely safe when used according to instructions. This was a case of overloading. I suppose the guns in question were either 12 or 16 bore. For the 12 bore I say proper charges are 3½ drs.; for 10 bore, 3 drs. In this case 6 drs. had been used. I suppose it was G powder, which I make expressly for Capt. Bogardus's use and which has come into great favor on account of its lightness. It is a very strong powder, and I see no reason why sportsmen should use more than what I recommend. I say in my circulars larger charges would give no better results, but strain the gun. Of the coarser grades, or if my ride powder is used in shot guns, larger charges can be used without strain to the gun, but of no more than recommended. Captain Bogardus has used this powder in his 20 bore, Sigs. gun, but if I remember right only 1½ drs., with good results, which shows that it can be used in the lightest charges.

I am for light charges with black powder too, as I find that the heavy charges only show their effect on the shoulder, but as there seems to be a tendency to use heavy charges I will make a powder from now which

SHOOTING AND WINNING.—In a race at the late Ballard County (Ky.) Fair, one of the jockeys, who was to ride at one hundred pounds, weighing only seventy, the extra thirty pounds were added in the shape of two wet blankets. After starting, the blankets slipped to the mare's left side, and slipped upon her flank at every jump. The saddle also turned, and, in his efforts to right it, the jockey—a juvenile edition of the Fifteenth Amendment—lost one of his reins. Nothing daunted, the darky clung to the mare's back like a circus monkey, and, urging on the frightened animal, landed her a winner of the race. When the mare was stopped the saddle was under her belly and the blankets were dragging at her heels. The darky was delighted with his success, but declares he will "nebbur ride wid dem cursed blankets no mo'."—Turf, Field and Farm.

BULLET PROOF CARS.—A firm in St. Paul, Minn., patentees of a fire, bullet and burglar proof railroad car, has addressed a letter to the Post-office Department, tendering the use of their invention to the Government, free of royalty, for the Union Pacific and Central Pacific Railroads. These cars are regular railroad monitors, the doors and windows being constructed so as to close automatically on a spring being touched, and with sufficient force to kill the intruder who attempts to prevent it. The cars are also provided with inside breaks and apparatus for detaching them from the rest of the train. The value of the mails passing over the two roads named would seem to make such cars desirable; but the Department has no authority to build or purchase such cars, or any other, as they are supplied by the railroads and form a part of the contract stipulation.—Washington Republican.

Messrs. TIFFANY & CO.'S stock of Plated Ware for the Fall Trade comprises:

THE
"Standard Gem"
MICROSCOPE.

This is a new pattern of high power microscope; attractive in design and simple in operation. It stands upon three supports, and has a mirror for throwing an intense light upon the object. Can be used either standing upon the table or held in the hand. This microscope has a high magnifying power (4000 times the area), and makes the slightest object look wonderfully large, bringing out the smallest portions, and showing up the minutest details. In a single half looks like a huge cable, and the foot of a fly like some queer animal creation. Multitudes of objects will suggest themselves when one becomes acquainted with the use of this instrument, which is simple and easily understood. It is interesting, entertaining and instructive.

N. B.—This is a high-power microscope for examining minute objects, such as are quite invisible to the naked eye. Price by mail, postage \$1.50. Send for forty-eight page catalogue of skates and useful novelties.

FISH & SIMPSON,
123 Nassau Street, N. Y.

BENJ. PIKE'S SON & CO.

Admission, 50 cents. Reserved seats, 10c. extra.

We have the best Imitation Gold Watch in the Market for Trading Purposes. The metal is a composition of other metals, so closely resembling gold that the best judge and it difficult to detect the difference, except by a chemical test, and it is the best substitute for gold known. American Movement. Expansion. Balance. Beautifully Engraved or Engine Turned Hunting Cases, and equal in appearance to a GOLD WATCH THAT COSTS from \$150 to \$200. It sells and trades readily for from \$60 to \$100, and if you wish a watch for your own use to make money on, try this. Owing to our large sales we are enabled to reduce the price of them to \$12 each with an elegant Chain attached. They are used on Railroads, Steamers, and in Manufactories, and other places where accurate time is required, and gives general satisfaction. We send them by Mail or Express, on receipt of \$12, to any part of the country, or it will be sent C. O. D. when the customer desires and remits \$3 on account. These elegant CHAINS weigh about Fifty Pennyweights, and the same pattern in pure gold would cost \$170. We sell these Chains at \$3 Post Office in the United States. We sell the Watch without the Chain for \$10. J. BRIDE & CO., nov21 gm

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can be got out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle .32, .38, or .44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an object d'art valued at \$100, and a money prize of £705, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Chomondrey Pannell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 10 birds out of 12 at 28 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in succession at 100 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 10 guineas, presented by Mr. J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 56 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875, No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England.

A. B. KAY & CO., Newark, N. J.

Buck and Heavy Drop Shot Cartridges for Long-Range, Deer, Duck and Goose Shooting.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SALE, therefore we would respectfully caution the dealers against laying in a stock of unsuitable articles for the Spring Trade, when you can purchase the Best Ball ever made at a price less than can be charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with 25 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where clubs use them you can readily see which the hardest shooting in matches reported in paper, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot shall follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and shot and upland the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2. HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO, 10 Platt Street, N. Y. City. "TRAPS, HART & SLOAN, Newark, N. J.

Address CAPT. A. H. BOGARDUS, Elkhardt, Logan Co., Ill., or can be had from him wherever he shoots. DISCOUNT TO THE TRADE.

FOREST AND STREAM

ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.
Ten Cents a Copy.

NEW YORK, THURSDAY, NOVEMBER 28, 1878.

Volume 14--No. 17.
No. 311 Fulton St., N. Y.

For Forest and Stream and Rod and Gun, VOICES OF THE FOREST.

IN my rude canoe on the quiet lake,
I sit in the calm moonlight;
Where tall trees throw their shadows,
And sweet sounds fall on the night;
Where the air breathes through the tall old pines,
With many a sigh and moan;
A choir of a hundred voices I hear,
Though I sit here and sing alone.

The stars look down from the sky above,
And up from the waters below;
The fire-fly flashes his tiny lamp
With its phosphorescent glow.
I hear the voice of the whippoorwill,
The deep notes of the frog,
And the many mysterious voices that greet me,
From forest and lake and bog.

I hear the beat of the solemn owl,
The sound of the wood-duck's call;
The trout, as it leaps from the lake in play,
And I feel its splash and fall.
The grating teeth of the deer as he feeds,
And I hear his stamp in the lake;
Toward the shore glides an antlered buck,
Leaving his rippling wake.

I hear the sound of the insect choir,
And I feel their piercing sting;
I hear the chattering squirrel's cheer,
And after the loon's clamor ring;
The muffled drumming of partridges
In the tangled brush near by;
The hoarse croak of the raven,
And the tree-toe's piping cry.

Only a few boat lengths away,
There's a deep ravine near a beautiful bay;
There's a grove of pines, with their garments green,
And their shadows lie dark on the waters between.
As I steeled for the spot there issued a sound
That curdled my blood, and made my heart bound,
"A panther," I whispered; and homeward I went;
O'er the waters I flew, and hurried to tent.
"Why man," I laughed to the guide; "what's whitened your cheek?
'Twas no panther, but only a screech-owl's shriek;
No more in these forests the panther prowls,
'Men raised in the woods are not sea-died at owls.'"

—STEPHEN.

For Forest and Stream and Rod and Gun

Field Sports in San Diego Co. Cal.--No. 1.

By T. S. VAN DYKE.

ALAND about as unknown to the sportsman as Alaska, about as unknown to the majority of Californians themselves as Kamtschatka; pictured by the imagination as a burning waste; tenanted mainly by Mexicans, Indians, tarantulas, snakes, centipedes, scorpions and deas; despised, ridiculed and abused by the State to which it belongs,—is the county of San Diego. After what I heard about it in the places as above, it was not without many misgivings that I ventured into the living tomb it was described to be, and should hardly have done so had not all reluctantly admitted that it had what I was in search of—the best climate in the State. I find it so vastly different from all that I had been led to believe that I must, for the benefit of a certain class of sportsmen, give some description of it, for I believe it is destined to become for them one of the best known and most valuable resorts that our country affords.

A high mountain chain, cutting the county in two, shuts the western portion entirely out from all influence of the terrible Colorado desert, which covers the entire eastern half, and leaves a climate and country totally different from that of Arizona and the neighborhood of Fort Yuma. From this mountain chain the land breaks away toward the far-shining Pacific, forming a country about as large as New Jersey, containing all varieties of climate, scenery and soil. Throughout the whole of this, poor land was so abundant that nature was compelled to stack it, and as time was precious in those days, the job was done in such a hasty and careless manner that it lies slung around loosely in all directions and shapes. Everywhere are vast piles, from 1,000 to 3,000 or 5,000 feet

high, and some 7,000 or 8,000. The intervals are filled with lesser piles, vast ravines or table-lands, which, in turn, are cut up with ravines, valleys and gulches innumerable, of all widths, depths and lengths.

The country is not, as would be supposed from its climate, a drab heap of bars, brown hills, though such in places are numerous enough; but here and there lies, like a quiet lake in the frowning frame of its surroundings, a lovely and well-watered valley, with thousands of acres of the richest land and gardens, and fields of perennial green, while the majority of the hills are robed in vestments of eternal green of every variety of shade from the dark velvet to the most delicate of the light tints. This "chapparel" consists mainly of bushes from five to fifteen feet in height, of a nature that would flourish luxuriantly on the southern slope of a fresh-baked brick. As we recede from the coast, timber appears in the canyons, and as the land rises higher it grows larger and thicker, and spreads out from the canyons up the mountain sides, and covers the tops of the high mountains with dense forests.

In the lowlands the streams are dry in summer, and half the time even in winter, and the water is generally warm and poor for drinking; but in the mountains are many living streams and springs of delicious cold water.

The scenery is, of course, not so grand as that of other portions of the State, and yet is sufficiently fine to be highly attractive. On every hand are mountains that, if in the Adirondacks, would be sung in song and blazoned in story by a thousand giants. Here and there great rugged cliffs of gray, impassive granite have elbowed their resistless way thousands of feet into the blue dome of heaven, and long chains cleaving the sky with serrated backs rise in all directions. Smaller mountains and ridges innumerable lie scattered in all directions; and over all has been sown in wild, reckless profusion myriads of granite boulders of every size and shape. Along the mountain passes they stand like grim sentinels of the land, far up along the peaks, and on the points they lie grouped like frowning fortresses, and away out upon the plains they sometimes stand like giant mill-stones in a giant country. From almost any mountain top may be seen the silver shaven of the peaceful ocean, with its high rocky islands, to the south the ragged mountains of Mexico, and to the east and north peaks and chains of all sizes up to 11,500 feet. Long canyons filled with richest verdure of a dozen shades wind their sinuous arms in loving embrace almost around the mountain's neck. On all hands may be seen the long green trail of some stream which, though sleeping for years below its sandy bed, still keeps the adjacent land in every living beauty, and far away toward the coast the table-land rolls away in long, billowy swells. All this, in winters when we are blessed with a few decent showers, is spattered from valley to mountain crest with a profusion and variety of flowers that benumbs the wonder of even the most enthusiastic rambler about flowers in Upper California and Colorado. The resources of this section are, like those of Southern California, generally far short of the extravagant nonsense with which the real estate sharp lands his ever-ready blunderbuss to beg the Eastern gull, yet also much greater than one accustomed to the rich prairies and copious rains of the west would at first suppose. But these I shall pass, as I have to deal only with its resources for the sportsman.

To the climate, however, justice has never been done, even by its best friends. It is thought high praise to call it "semi-tropical." It is a insult, and I think Heaven it is "semitropical." It is San Diego climate, the finest, not in the world perhaps, but in any civilized part of the world where an American can live and enjoy life. I do not say this because I live here, but on the contrary, I live here for the same reason that I say this; because, from a thorough comparison of U. S. records with those of other places, from the unvarying testimony of numerous travelers and climate-seekers in every part of the world, and from a three years' residence, I am convinced that, from the year round, there is no place where one can live so many days out of doors without suffering from heat or cold, rain, mud, winds, and other climatic discomforts. At the casual end of the Pacific rain belt it gets less rain than any other habitable portion of our country, while the unfailing sea-breeze, formed by the suction of the ascending heated air of day, makes the summer temperature of the coast far less unpleasant than that of even Massachusetts. Though the winter is theoretically a "rainy season," unfortunately for anything like agriculture it practically is not. About three years out of five the winter is much drier than the driest summer ever seen east of the Rocky Mountains, while the summer is only an eight months' chain of attenuated dryness long drawn out. The average winter is like the loveliest of October weather at the East. Day after day and week after week the sun climbs the same old cloudless arch and sinks behind an immaculate curtain of amber and rose. An occasional approach to the winter of the North. The damp, curvating heat of Florida is unknown at any time of year, and while the winter days are always warm enough to burn in shirt-sleeves, they are never so hot that a coat is uncomfortable. The temperature of the coast is cooler in summer than that of Maine, yet warmer in winter than that of South Carolina. Back in the country it is a few degrees warmer by day and a few cooler at night; yet the mercury seldom reaches 90, and 100 no oftener than in New York. Owing to the great dryness of the air, which enables the never-failing breeze to re-

move the perspiration very fast and allows a rapid radiation the moment the sun is gone, making very cool nights, the summer is, instead of a nuisance, a positive luxury compared with anything to be found East. Of course there are exceptions. On the mountains there is more rain and some snow and ice in winter, and some few canyons and basins shut off from the breeze are extra hot in summer. But the climate-seeker can always take his choice from a great variety of climates. Once in eight or ten years there will be an extra wet winter (though the wettest ever known gave only seven or eight inches of rain, the average being eight), and once in ten or three years the whole State will be swept for a day or two or three by a scorching sirocco. The air is extremely dry, and either in winter or summer meat may be dried without salt or smoke. I have never found a place where anything like malaria is so utterly unknown, though it could doubtless be produced by excessive irrigation in summer of large tracts, a thing of which, however, there is no danger with the present rainfall.

To my great surprise I find it remarkably free from insect or reptile pests. Both insects and reptiles are numerous; but not of the fraternal kind. No festive gnats or black fly hankers for your blood, and the impressive bug, that in the Northern and Eastern hotel so gently o'er the sleeper stealthily, is here unknown. The mosquito and midge are found in but few spots; the diabolical wood-lice luggerth no closer than at the East; and no flegger makes geological explorations in your crust. An ant will occasionally mistake an unsuspected shank for a beanpole and ascend to investigate, and a flea will once in a while demand payment, though I lived here two years before one presented me his bill. In three years, mostly spent in hunting, I have seen but ten rattlesnakes, the most poisonous kind; five or six tarantulas, one scorpion and one centipede. The county has a population of 5,000 or 6,000 whites, fully equal in intelligence, culture, hospitality and respectability to that of any rural portion of our country, and far superior to that of some portions. The Indians and Mexicans number about the same, and are quiet, orderly and nearly all industrious. The county is well governed, and life and property are as safe as in any part of California, and far safer than in many parts of our country.

For the invalid sportsman who is compelled to hunt climate for a living, or who would escape for a time the rigors of a Northern winter, San Diego Co. offers some peculiar advantages. He will find abundance of game and the easiest county to hunt in that he has probably ever seen. Either in a wagon or on horseback, as well as on foot, he can go almost anywhere where the game is without the slightest danger of getting lost, without plunging through swamps, mud or water, without treading and swearing his way through sawgrass, canebrake or briars, or incurring blisters upon an endless succession of fallen logs, tangled vines, roots, etc. There are some thick patches of cactus as well as heavy chapparel, but there is no necessity at all for going into either to find game in abundance. Here he will find within a short distance of his boarding place vast game preserves, upon which the resident sportsmen can make no visible impression, and which are barred to the market hunter by law.

For the sportsman who is lawless, the county offers most of transportation, price of ammunition, cheapness of other meat, etc. Quail abound here in quantities of which the Eastern sportsman has no conception, and the shooting lasts from September till March, being the very best when our Eastern fields are closed by both law and snow. Hares and rabbits (an unscientific distinction, but I will make it for convenience, nevertheless) are very abundant on the low lands and broad valleys. Rabbits of a variety peculiar to this section, are smaller than the jack rabbit of the plains and the cotton-tail of the East, and as much superior in flavor to them or the white hare of the North as the woodcock is to the woodpecker. For years I would not notice the detestable little bunny of the East; but those keep in a kind of brush or low waist-high, through which they run and dodge in a way that makes capture almost impossible, and even if they will be out along the shore, they are difficult to soon fill the bag of the tyro who cannot shoot running. In winter every lagoon abounds with ducks, which, owing to the dry banks and smooth surroundings, are very easy to get at; and although the shooting is inferior to many parts of the West and Northern California, yet it is by no means to be despised. Good bags can be made by the tyro, and he who wants the glorious wing-shooting may find only a comrade or two in the way that makes capture almost impossible, and even if they will be out along the shore, they are difficult to soon fill the bag of the tyro who cannot shoot running. No royal woodcock here goes twisting and whistling upward through the timber, and no lordly grouse bursts from the brake with booming wing; but the dear little snipe is here in some places, and along the coast-wet, curlew and plover are very abundant, while doves, meadow larks, highlanders, etc., are plenty for those who want such game.

In the high mountains is a beautiful variety of quail, larger a little than dear old Bob White; a distinct and beautiful variety of pigeon, and a gray squirrel, apparently the same as the most beloved friend of my boyhood, except that it lives in the trees and ground as well as trees, though I think the tree squirrel is still another variety.

The shooting season here is practically endless, as by the

time the quail season closes the young hares and rabbits are almost full grown. At an instance of the ease of hunting here, I will give a case within my personal knowledge. Three years ago, during a stay of three months at the excellent house of J. O. Miner in El Cajon Valley, Mr. E. L. Ford, of the publishing house of J. B. Ford & Co., New York, killed something over 250 ducks, 200 hares and rabbits, and scores of plovers and doves. The gentleman had never before touched a gun, and I cannot say that he was not able to pull half a mile an hour, and rarely left his buggy to shoot. There are plenty of places where this can be done by any one of gumption, though I believe El Cajon to be the best place for nearly all kinds of small game, and Miner's is certainly the best place there to find accommodations, a good host and hostess, and plenty of home comforts. Such as that I found it during a year's residence with him. For sportsmen out of health, I cannot say that this is as good a place as the upper part of the State and many parts of the West and South. It is doubtful if there is any shooting as good here as it may be found farther north. The duck and deer hunting certainly is not, and neither geese nor snipe are so abundant. But for the invalid this is just the place, and I think any one who was well would enjoy a winter here.

For Forest and Stream and Rod and Gun.

THE ADIRONDACK UNVEILED.

"A HOWLING WILDERNESS."

IT was autumn. I had always been wild to go to the primeval seclusion of the wilderness. When a boy I used to speak whole chapters of Murray's Guide, at Sunday-school exhibitions, and I read the accounts of those early surveyors who could not plant their tripods without danger of striking a bear's toe; but never until this year were the bright dreams of my youth realized. An article in a Northern paper stating that bears were so plentiful that it was almost impossible to keep pumpkin-pies for a day, and that they were frequently discovered up the grape vines before breakfast—I mean the bears—so crazed me that the next day found Don Albani and me in an Adirondack stage starting for "the wilds where never man trod." My chum was dressed in a delicate maroon velvet jacket with point-lace collar. Inside and out of his coat were a hundred or more labelled pockets. Some held cartridges, others essence of peppermint and curiosities in general, such as a whale's tooth, and the scalp of an Indian, which he alleged he took. This latter he always showed to the driver when the vehicle became excessively protracted in its momentum.

It was a wild ride. I do not mean that the speed was great, except at one time when an irate steer charged us and stuck his horns through the back-board, pushing us up the hill at a rate never equalled before or again by that stage. Albani cut off the steer's head, and we preserved it as a memento; but you will hardly believe me, his rage was so great that for two miles he followed us without any head. At the first bend of the road, however, in his blind fury he kept straight on into the iron wall we were melted up into. From iron, horse nails and other useful articles.

Our expectations of the woods were greatly disappointed when we found the persistence with which rail fences and houses clung to the side of the road. Then, too, the telegraph poles never gave out, and the wires were in no place devoid. The natives, who regarded us in the light of Arctic adventures or religious fanatics, jeered the sides of the road and exclaimed: "I reckon you'll get a devil's spruce down afore you come out," and other annoying words. The horses usually walked a mile or two and then paused to recover breath. Sometimes our stop was at a prehistoric hotel or postoffice, at others by the side of a pearly trout brook, where the water literally boiled with—the horses. No trout seen there for fifteen years. As I said before the crowds became so annoying at the hamlets that we were obliged to lecture on temperance in order to rid ourselves. It is the only thing that makes them move.

We stopped for dinner at what was called a hotel, and were regaled on what we at first supposed to be venison, but which proved to be woodchuck. The proprietor said there was "good shootin' off 'em," and tried to induce us to stay, but woodchuck had no charms at four dollars a coach," and the driver commenced his afternoon performance of breaking forty clothes poles on the horses backs in two consecutive hours without sleep. For twenty miles we sat silent, too full to speak—full of gloomy forebodings, I mean—except the driver who drank whiskey without a license at this temperance hotel. We passed Catamount Mountain and Panther Gorge, in which a herd of swine were feasting. I recoiled in horror at the wilderness. The hunters once still pursued us, and toward the latter part of the journey we were annoyed by peddlers selling lavender neckties and gum. We saw no hand-organ grinders, however, and took courage. At last we came to a place where there was no fence, and a sigh of relief broke from our imprisoned souls. Then a river, on its smooth surface myriads of "water fowl"—all belonging to Bill Spooner.

Darkness was coming on, and we were starving. The driver offered some spruce gum, unprotected, from the lower abysses of his pocket, but we thanked him, saying: "O kind sir, dear sir, save yourself! You are of value to the community. You drive a stage; carry the mail and help your fellow creatures. Take the gum yourself and live! We are nothing but bears from Wall street." He only smiled as the glow of the hotel lights broke upon us. We were weary and hungry, and the driver, as several of the greatest hunters in the woods had chewed on that piece, and it was of historic interest.

We were in the wilderness. It was a very civilized sort of a place. From the grand piano were issuing soft symphonies, and gentlemen, whom we were informed were guides, dressed in swallow-tails, were entertaining the ladies with hunting adventures. It seemed hardly possible that the belated creatures were guides and could carry a man five miles a day. We asked the proprietor how many deer he had seen that day and if the piano did not frighten them. Albani and I fairly leaped for joy when he said the deer rather "liked the piano, and often poked their heads in the window of an evening." He also told us that a bear was roosting up a tree not half a mile distant, and that they had a hook and line out for him. The method is this: A catfish-line of from a mile to a mile and a quarter in length, has a shark hook at one end

baited with a freshly killed cur—the bears are such curious fellows—this is then carried its full length by a man, assisted by another with a cane to keep panthers from seizing the bait. On their return all the boarders seize the unbaited end and anxiously await a bite. The bite of a bear is quite similar to that of a pickerel, only more so. At the first nibble the boarders all twist their limbs around the stove and other immovable objects, and suspense reigns supreme. A quick pull announces that he has swallowed the pup, and all are glad to get all pull in. Of course several trees always hang to the bear and many ferns. The ladies then gather the autumn leaves and press the ferns, and the bear is converted into grease and other useful articles.

If the bear is not dead by the time he reaches the hotel the children stick pins into him and poke his tongue until he faints. No bear bait, no bear bait, and no bear bait is the able to vindicate the reputation of our respective fairies. Since the law prohibited trout-fishing then, we were served with what were called "canned trout," so nicely preserved that the man who caught them (the day before) would not have believed them the same fish. They were a little dangerous, however, as they had been shot on the runways, and the sharp pellets of shot stuck in our throats, making it necessary to blow about twenty times and other articles of furniture in order to scrape them down.

That night the lake was convulsed by a terrible storm. The hotel rocked like a light-house and many were sea sick. Lemons could not be had for love or money, and the water came into the parlors so suddenly that a party of two young gentlemen and two ladies had to take refuge on the piano. They were finally rescued in boats. By the pale glare of the lamps the trout could be seen swimming around all over the first floor and it was confidently expected that there would be good fishing in the dining room for a week. Imagine our surprise the next morning to find the entire establishment as dry as if there never had been a flood. Of course the deluge was the prevailing subject of conversation, and it was generally believed to be one of the faults of President Hayes in not attending to the weather.

Just before the storm broke out, I came out and prepared to fish from the piazza. There was a look of calm indifference on his face as he slowly drew out a quarter of a mile of line and fastened a nice croton bug to the end of it. The boarders en masse came out to see him and predicted his utter failure. They did not know their man. A member of the International Scientific Protective Benevolent Game Association advanced and warned Albani not to fish out of season, but on his proud countenance he said he was not allowed to speculate. He looked noble as he surveyed the spring mass of spectators. I trembled for him and whispered, "Do take in 200 yards, just for my sake, Al!" He only smiled. Slowly he untangled the line and threw straight up. The delicate cord ascended, the croton bug kicking. No sooner had it reached its apex than with the speed of lightning Albani grasped it and it sped over the house, chimney, parlor and kitchen. Then the crowd cried, "It's coming back, boys! Show it!"

The loud whistle of the line, like an aerolite or rocket harp announced its return. The friction with the air had set the bug on fire, and only a flame of glaring light marked its place. It came back and sped across the lake its full length amid the cheers of the dumfounded crowd. But stay! what new wonder awaits us? Lo! the hook has hit in a tree and snatched the wary black duck from his roost. Another cheer. Albani grasps the reel and the duck comes skipping across. He has wrung his neck. Amid the applause the piazza fell, which increased our bill materially. Again Albani steps forth and draws the line. This time he used a short cord. Whizz it goes back; but alas! the falling of the piazza had made Albani nervous, and the cruel line went swooping into one of the rooms and returned bearing on its point a ladies' switch.

"Another misplaced switch," the crowd cried, and screams came from the apartment, "It's all I had in this world" (Adirondacks); but the switch had sunk never to rise again. To make a long story short, a horse had to be killed that day for his tail, and with this temporary substitute she returned to New York for repairs. The horse's hide was then made into buckskin gloves and other useful articles for the party. We remained just two days more. On the first we ascended a mountain called Marcy, from which the guide said we could see the Mississippi River. We examined it carefully with a glass, however, and pronounced the water too clear for that river, it was more likely some cove of the many streams which flow from the Rocky Mountains. We saw the red workmen return at night with their dinner pails across the East River Bridge, and then we came back to the hotel. On the second day Albani and I each killed one of a deer. The way it happened was this: The whole Adirondack region was out after that deer, and five men died at once, there being no reason to suspect that a man killed the deer any more than the other four. She was a doe. Does have no horns; they "take after" their mothers. For lack of other relics we brought the deer's horns away with us, and as bad luck would have it, met the owner on our return trip. He remarked, "Just two days more. On the first we ascended a mountain called Marcy, from which the guide said we could see the Mississippi River. HIGGINS' SINGLE-BARREL PIGEON MATCH.

HIS name was Higgins, and he came running into the office to say that a blue pigeon had flown in through the broken window on the third floor, and he wanted to know if he might not go up there and catch it. We assented, and went along to see the fun. Armed with an old broom, together we repaired to the scene of action. On one side of the room reclined a whisky barrel, while a dozen barrels of cotton were ranged near the wall opposite. Above the barrel the pigeon was discovered clinging bat-like to the wall near the rafters. Broom in hand, Higgins cautiously poised himself on the barrel and aimed a blow at the bird that would most infallibly have settled him had the barrel remained firm; but it shot from under him, and instead of bridging down the pigeon, Higgins himself was brought down, floored by whisky, as it were. We, the umpire, scored "no bird." The pigeon left his resting-place, and after circling round the room a few times, perched on a bale of cotton. Higgins picked himself up, and, brushing off the dust, tried it again. To reach the prey he lifted himself on top of a bale of cotton, on which the dust of two months had gathered. Crawling cautiously along on hands and knees, he approached the pigeon, which calmly awaited his coming. It seemed so tame we brought him to take it alive, and as it was our warehouse, he laid aside his broom and reached out his hand to grasp the unsuspecting victim; but he had no salt to put on its tail, and as he clutched at it the bird flew again, while we, in the language of a colored base-ball player, called out, "Joining; why don't you catch him on the few?" He was mad now, for it was hot and dirty work climbing along the cotton, and as he descended with the broom, and rushed toward where the pigeon had again alighted, he gave vent to his feelings in language which, though not celestial, might under the circumstances be termed "pigeon English." This time he hurled the broom at the bird with great violence, but missed and hit himself. The pigeon was now roused, and flew and round the room, while Higgins chased him, striking at him in the wildest way. It had become a question of endurance, when suddenly the bird, through him of the broken window by which he had entered, and out he flew, leaving Higgins to brush off the dust and wish himself a "canny Scot," that he might cut the pigeon wing and thus curtail his flight.

SNIGSBY.

Fish Culture.

MASSACHUSETTS—Gloucester, Nov. 15.—The Fish Commission secured some two millions of codfish eggs Wednesday, and put them into the hatching cones. Everything promises a successful opportunity for thoroughly testing the practicability of artificially hatching the eggs of the codfish.

MARYLAND.—Thirty thousand salmon have been deposited in the Elk River tributaries, and fifteen thousand in the Chester River at Millington.

HONOR TO WHOM HONOR IS DUE.—It is not of at all uncommon occurrence that credit is given where it does not belong, and that one man receives a reward for the success of another man's work. An instance in point has just come to our notice. In a letter to the London *Field* of the 2d inst., a correspondent writing of the piscicultural prize recently awarded among the annual prizes of the French Accimatization Society, says:

The next recipient on the list is M. Teller, whose services consisted in constructing an apparatus suitable for the transport of *Salmo gairdneri* ova from California to Europe; the thought and care he bestowed on the same having done much to insure the safe arrival of the last consignment of eggs, and thus render possible the introduction of Californian salmon into French waters. The apparatus in question is composed of two iron boxes situated one within the other, the intervening space being filled with ice and sawdust. The ova, having a layer of ice above and below it, occupy the center of the inner box, and a few small holes in the latter allow the ice water to escape. Thanks to this cautious arrangement, the temperature remained during the whole voyage at about 36° Fahr.; incubation was retarded, and the eggs did not hatch out till some time after their arrival in Paris.

Commenting upon this in the next issue of the *Field*, our esteemed friend Fred Mather goodly naturedly says:

Part of the above is not only news to me, but very funny news, as I brought the eggs over, and never saw nor heard of the box described; nor had any suggestions from any person in France upon the subject, nor have I told any one the temperature at which they were kept, which, instead of 36 deg., was 49 deg. The facts are these: I was then U. S. Fish Commissioner, and the United States Commissioner on Fish and Fisheries, wished to make a shipment of eggs of the California salmon (*Oncorhynchus gairdneri*) to Europe, and I was selected to accompany them. They were packed in moss in California by Mr. Livingston Stone, and I proposed to re-pack them in New York in boxes containing a number of flannel trays, with an ice chamber on top. Mr. Stone was fearful that exposure to the air in repacking might hasten the development of the eggs, as it was a question of responsibility, I only packed 25,000 in the refrigerator, and these were the only ones saved. My box had several faults: The eggs would roll on the trays if the box was tipped up, and the cold air did not get down to the bottom. This year Herr Von Behr, Pres. of the Deutsche Fischerei Verein, ordered 100,000 eggs, on condition that I should re-pack and accompany them. The box I arranged the ice chamber with a grating below instead of a few holes, made the frame smaller to allow an air passage all around, used mosquito netting instead of cotton flannel, and cut out air passages in the tops of the frames to allow circulation over the eggs, fixed a cover of netting to lie upon the eggs, which, when wet, prevented their rolling in some degree. I sailed from New York on the 12th of October with the following shipment: 250,000 for Germany, 100,000 for Holland, 100,000 for France and 10,000 for England. The latter arrived now at the Free Museum at Liverpool, in charge of the curator, Mr. T. J. Moore, and part in the Southport Aquarium. My box was of rough iron boards, and only cost, frames and all, seven shillings. Its dimensions were 25in. high by 14in square, in-

gun! and spare the fingerlings! O lover of the rod! And so shall thy days end in quiet, peace and happiness, and thou shalt not "see red" in the rosy hours of the morn, nor "dream black" in the still, solemn watches of the night.

The Count during all one morning's sport had been unusually taciturn—his was the very soul of all locality; for, except an occasional *Sacre*, when a big fellow would get away, or a suppressed *mille tonnerres* when they took off his minnow, he stood stern and silent on his log.

Myself (loq.)—"My dear Count, you do not seem to enjoy your angling this morning. What is the matter?"

Count—"Ah! my dear young friend, it makes the feeling of sorrow over me to think that this beautiful stream runs in the *La Belle France*, where so many would enjoy these big bass, these gay perch, all of colors the most beautiful."

Laughing at the unexpected turn which the Count's patriotism had taken this morning, I proposed, as we had a walk of four miles over the roughest ground in all Kentucky, that we return to camp. Bill shouldered the fish in a large corn sack, the Count his Wesley Richards, and the two rods, and so up the river to our camp. Being considerably in advance of the rest, on turning a sharp bend in the stream I saw a large clump of teal, which were gallily disporting themselves in a still shallow on our own side. Stopping, with monitory finger on lip, I motioned to the Count to come to me. He had insisted before we started on loading his gun with buck-shot, for "fear of an encounter of buck," and now, drawing the charge quickly as possible, I poured into each barrel about a half-handful of No. 6 shot—a supply of which Bill had brought with him—and telling the Count to creep to a large red oak, about forty yards from the birds, I waited with much interest the denouement.

The melancholy *culpatia* of the morning was now transformed into the experienced, enthusiastic duck-hunter. Throwing off his broad Panama hat, the Count threw himself flat on the ground and worked his way up the oak from where he was to shoot. Raising himself on his knees, he poised the heavy gun, and fired. He meant what a roar! Never had I thought that a shotgun could crack so loud. Running up to the oak I found the Count lying on his back, gazing vacantly at the branches over his head. With the aid of Bill I raised him to a sitting posture. Rubbing his hand ruefully on the top of his head and anathematizing all the duck guns in the world, and this special one in particular, in the choicest French, we gathered enough from his disjointed statements to learn the following facts:

The Count in loading his gun for the "encounter of buck" in the morning had put in two full charges of powder, and I had put in more than that quantity of loose shot, and, of course, when the gun was fired, she resented the overcharges, and, jumping like an *enferme diable*, had landed on the crown of the head of the kneeling shooter.

Result—A contusion about the size of a walnut and a general laziness for about fifteen minutes.

So soon as I could speak for the suppressed laughter which seemed almost killing me, I offered him my condolence in the politest French that I could muster, but the exile from sunny France evidently looked upon himself as a victim of a deep conspiracy between myself and the innocent Bill.

However, when that sable son of Africa returned, bearing the spoils of that lucky shot, the good-natured Count forgave me instantly, and, with some money gifts, Bill also.

There they lay, ten fine, fat blue-wing teal, those which, if served with a sprinkling of lemon and their own gravy, no better bird flies. Once more we wended our way to camp, and, arriving there, found the Doctor skinning a noble buck, which had fallen to his unerring aim.

Soon the rest of the party came straggling in with some turkeys adding to our list of game.

And the tale of the red, red deer and the red, red wine disappeared that night. I could chronicle how the valiant Gail, after many heavy potatoes and being reminded of his mishap of the morning, challenged the Doctor to mortal combat on the spot; how Pete fell into the river, being enticed to do so by a baleful trap laid by the innocent-looking Bill; how the lawyer and the two farmers shot at a spot, by torchlight; all this and much more could this veracious historian chronicle, but Apollo plucks his robe and says, "Enough!"

As one day in camp is very like another, I shall end this pleasant reminiscence of old times by saying that we all got back safe to the haunts of civilization, bringing back as rich spoil two deer and a number of turkeys. Of fish, I need say no more than that we had all we could eat while in camp, and of ducks, abundance.

And there goes the big-hearted Doctor and the mercenary Count? It was but just now that they were here walking through these pages with me, evoked from memory's mystic depths by the magic of my old steel pen.

Yes, they and hundreds of others are gone before. May I meet them in the unknown hereafter, knowing and loving them better, if possible, than I did on earth.

Patently,
Lafayetteville, Ga., Sept. 30, 1878.

SIALIA: THE STORY OF A BLUEBIRD.

SHORTLY after noon of a beautiful June day, many years ago, the writer of this article started forth, as was his custom in his unregenerate youth and before the game law was amended, in search of adventures and birds' eggs; but principally birds' eggs.

He had not gone far when he saw seated upon a branch of an ancient pear tree a motherly-looking bluebird, with an apparently well-beloved family of three. He no sooner saw this beautiful family group than he determined to possess one of its members, and immediately proceeded to carry this determination into effect.

As they were out of reach, they must be started from their position before anything could possibly be done. This was easily accomplished, and while the parent bird plotted two of them away in safety the other, probably a fast youth who was impatient of parental control, took another direction, determined, apparently, to shift for himself. But he found, as many another in his position has found, that he lacked strength and experience.

He flew a short distance, hotly pursued by his prospective captor; but his strength soon failed him and he was constrained to alight, which, from inexperience, he did in a rather

awkward manner. Striking upon his feet, he fell forward and turned completely over before he came to a perfect understanding of his position. But he was not to be taken yet, and immediately launched out upon another flight, shorter than the first. His manner of alighting was very similar to that already described; but he was now too much exhausted to attempt another flight. Casting his eyes about him he saw a large oak leaf, under which he immediately thrust his head, and imagined, in his simplicity, that he was safe from all danger; but he was mistaken. He was so large, or, more properly, the leaf was so small, that the greater portion of his body was left exposed. He was picked up tenderly and carefully, and, with his prize securely held, the captor flew away at more than ordinary speed (wishing to avoid being himself captured), as, in the excitement of the chase, he had been led into the back-yard of a crusty neighbor, who would probably, had he known the facts, have taken measures that might have resulted in mutual dissatisfaction.

Sialia was duly installed in a large cage, and his captivity commenced. For a long time he was very disconsolate, and seemed in danger of going into a decline; but the elastic spirits of youth triumphed, and he forgot his earlier days and settled down to his new life. His contentment and the attainment of this happy state of feeling was hastened by the introduction between the bars of his cage of a few of the creeping things of earth. It may be here remarked that the quantity of food which would disappear into that cavernous opening in his head, commonly called a mouth, was wonderful—even fearful—to contemplate. He grew constantly in size and beauty—and certainly there was abundant opportunity for improvement in it—until he reached a young bluebird being only second in ugliness to a young robin.

His life was uneventful and apparently happy for a time; but one day, while upon another predatory expedition, a goldfinch's nest was discovered, and after some trouble one of the young was secured and borne homeward. This infant, together with another of the same species, taken a few days before, was put in charge of Sialia, to be educated and reared in the way they were used to.

Upon their being placed in the cage with him he seemed for a time to be at a loss as to how he should conduct himself, and from time to time he cast curious glances from the corners of his eyes toward these (to him) strange birds. But this constraint on his part soon wore off. After sitting quietly for a time—no doubt meditating and coming to the conclusion that these new companions of his would be his rivals in the attention of his friends, and being assayed by jealousy—he commenced, at first cautiously, and then boldly, to crowd them toward the end of the perch. As he was much the largest of the three, he soon had them in uncomfortably close quarters, so close, indeed, that one of the finches, in fear of being crushed, pushed through between the wires of the cage and flew aimlessly about the room. It was soon caught, however, and returned to the cage. Finding that this manner of proceeding would afford him no permanent relief, he refrained from any further practice of it, and they lived as peacefully as might be under the circumstances. In fact, after a time, he came to take great interest in their welfare; and to prevent them from injuring themselves by over-eating, as in their youthful carelessness they were liable to do, he would gorge himself nearly to bursting. But he was not accurate in his calculations as to the amount which a finch should eat, and it was found advisable to take him by the finches from Sialia.

He found great pleasure in playing with them, and he was frequently with difficulty prevented from swallowing them and thus bringing himself to an untimely end. He always resisted these precautionary efforts in his behalf, and protested loudly and volubly upon every such occasion.

One day he escaped from his cage and took a prominent position on the top of a neighboring tree. Of course the first thought was how to get him back to his cage. Nothing would induce him to return until a piece of bread was held in water, his favorite food—was temptingly displayed before him, when he immediately descended and allowed himself to be caught and returned to his captivity.

If petted and handled often he became quite fearless, but if neglected for a few days his wild nature asserted itself, and he would grow suspicious of every one who approached him. Sometimes, in his efforts to escape, he would carefully push himself into the pocket or sleeve of the person who was holding him, and seemed not in the least disconcerted at the strange quarters in which he found himself.

The cat, which was full-grown when Sialia was first caught, became accustomed to seeing him, and at last took hardly any notice of him; but he never failed to notice her when she gave him an opportunity. The cage was frequently left upon the floor, or he sprang back, as he would, at the sight of her, and his tail was almost certain to get a kick, which made her in time come to consider that neighborhood an unpleasant one.

His door being one day left open he appeared unexpectedly at the dinner table, or, rather, upon the table. He immediately helped himself to that which stood nearest, which, unfortunately, happened to be salt. This evidently did not suit his taste, for he sprang back in a short time, and his expressive astonishment and wonder spread itself over his expressive countenance. Then he commenced a series of backward movements round and round that salt dish, shaking his head violently in his efforts to free his bill from the salt, particles of which still clung to it. At another time he inadvertently took a sip of hot tea, and afterward he was very cautious how he tasted anything with which he was not familiar.

It was his usual custom to keep very late hours, eating and amusing himself by lamp-light at any time between the hours of nine and twelve in the evening. He took great pleasure in catching flies about the room in the daytime or evening, as the case might be—it seemed to make little difference with him. He would perch upon a finger and allow himself to be carried from place to place in search of prey. Upon being placed in reach of an insect he would immediately seize it and swallow it with evident relish. If the fly was beyond the reach of the person holding him he would leave his position on the finger and fly up to the place which it occupied, and after disposing of it would return to the perch. Of course he always had better success in the evening, because while he seemed to see perfectly well by lamp-light the flies were not so fortunate, and fell an easy prey.

His fate is still a mystery. One morning in the early summer, when he had been with us for but little more than a year, we found his cage door partly open, and Sialia was not inside. We never saw him again. The cage stood near an open window, and it is possible that, finding his door open or having opened it himself, he passed out through it and the open window to freedom, or perhaps to death, which latter is probable from his inexperience to take care of himself.

O. F. EARLE.

side; it held twelve frames, each carrying 3,000 eggs. With, as you see, a slight knowledge of how the eggs came over, and hearing for the first time of what had been done in France toward bringing them safely, you may imagine how amused I was when I read the above quotation in the *Field*.

From all of which it will be seen that at least one gold medal of the Acclimatization Society has gone to the wrong place. We do not know that the cause of American fish culture, or of American ingenuity, as applied to fish culture, will suffer for all that, nor do we apprehend that Mr. Mathers' efforts to transport his salmon eggs across the ocean will be any the less energetic or less successful; but if more medals are to be given it might answer the purpose as well perhaps hereafter to give them where they belong.

WISCONSIN—Madison, Nov. 2.—*Editor Forest and Stream:* On the 10th of December the State Fish Commissioners will meet in Milwaukee for the purpose of consulting with the city authorities in the feasibility of establishing a permanent fish hatchery. Previous experiments have proven that the small amount of money thus far annually spent in pisciculture has not been in vain. At the Milwaukee hatchery activity prevails. Superintendent Welch reports that he has finished taking lake trout eggs, and has about four millions eggs in the boxes. At Saugetuck and Escanaba men are at work securing ten millions of eggs for the Milwaukee hatchery. It is expected that two millions of whitefish will be hatched at Madison; also, half a million of brook trout. At Madison everything is in first-class order. One hundred and fifty thousand California salmon have been hatched, which are to be distributed throughout the State. The following is the new law taking effect from November 1: "Any person who shall catch or take any fish from the waters of Lake Michigan within this State, or of the east side of Green Bay, with any trap or pound-net, the meshes of the pot of which are less than one inch and a half from knot to knot, or technical language, of a pot less than three-inch meshes, shall be punished by fine not exceeding \$10 for each day's unlawful use of such net." The prompt enforcement of this law will save millions of fish which otherwise would be ruthlessly destroyed. ROVER.

ENGLISH FISH CULTURE IN 1668.—In 1668 letters patent were granted to "Walter Underhill the elder, Walter Underhill the younger, and Samuel Walton," for "a way for preserving and bringing of salmon alive and well conditioned to the City of London and other places, from Newcastle and Berwick and other places, being their own invention, and never before used or practiced in this the realm." Unfortunately no specification has been preserved of this interesting discovery. We hardly see the direction the invention could have taken, bearing in mind the difficulties of traveling. Seeing that modern pisciculturists would be sorely tried if they tried to do the like now with salmon in any number, a detailed account would be very interesting.—*London Country.*

SEVERN TROUT IN NEW ZEALAND.—A correspondent of a London paper, writing from Otago, says: "Trout fishing is now fairly established in some of the creeks and rivers, and really good sport can be had. The trout were originally got from the river Severn, and have increased wonderfully; they grow much larger than any trout I ever saw in England. I have caught one myself of over 8 lbs., and dozens between that weight and 4 lbs. It is an everyday occurrence to catch them 4 lbs. or 5 lbs. Any passable sort of fisherman should get a basket of from ten to thirty fish a day, weighing from half a pound upward; it is not allowable to take fish under seven inches long."

GRATUITOUS DISTRIBUTION OF SALMON OVA IN GERMANY.—The German Fischerei-Verein announces its intention again this year to distribute impregnated salmon ova gratuitously to all existing piscicultural establishments throughout the German Empire that may care to apply for them. Last year more than two million impregnated ova were distributed among the several societies applying for them, in addition to about 900,000 grayling ova and many thousands of various *Oreogelidae*.

ARTIFICIAL BREEDING OF STURGEON.—The efforts made this year by the Rendsburg and Magdeburg Fischerei-Verein to carry on the artificial breeding of sturgeon have completely failed. Among the fish secured by the Rendsburg Society very few indeed were females, and not one of these contained roe. The Magdeburg Society were equally unfortunate.

—Last June Mr. D. G. Colwell procured several thousand young eels and placed them in the mill pond. They were about two inches long at that time. Last Saturday, while working in the mill race, he caught one which was over seven inches in length, showing that they have grown about one inch per month since placed in the pond. In about a year from now we may expect good eel fishing in the Shiawassee. —*Fenton Independent.*

—Palmer & Sons, of Boscebel, Wis., advertise trout eggs for sale.

Natural History

For Forest and Stream and Rod and Gun. SCIENTIFIC NAMES OF THE BLACK BASS.

SINCE the publication of the name *Micropterus pallidus* (Raf.), Gill and Jordan, as a substitute for *Micropterus nigricans* for the scientific name of the large-mouthed black bass, I have received numerous congratulations, verbal and written, from brother fishermen on the appropriateness of the name "selected," and I presume that my colleague in this matter, Professor Gill, has had a similar experience. Lately, a correspondent of *FOREST AND STREAM*, Mr. A. F. Clapp, suggests that the name *Micropterus salmoides* be likewise "stamped out" to make room for some more appropriate appellation. It seems timely, therefore, that we should "rise and explain."

The name *Micropterus pallidus* is not a name of our own selection, but a name which by the laws of scientific nomenclature we are bound to use. By the operation of these laws

every genus must bear the oldest (generic) name bestowed on any of its members, unless this name has been previously used for something else, or is glaringly false (not simply irrelevant or inappropriate), or is otherwise illegible; every species must bear the first (specific) name imposed upon it (unless, as before, it be for one species or another illegible), and the proper name of any genus must be made by combining the above mentioned specific and generic names.

This is the law on the subject, and, as elsewhere, the law is usually, though not always, simply right. We accept many meaningless or even objectionable names to avoid the confusion attendant upon arbitrary changes. Were it not for these rules science would ever suffer, as it has much suffered in the past from the efforts of the improvers of nomenclature—men who invent new names for old objects for the purpose of securing their own personal glory. The names *Gryllus*, *Grinch*, *Heichenow*, or what not, after them. In the words of "a right Sagamann," John Cassin: "There is not, evidently, any other course consistent with justice and the plainest principles of right and morality, and, in fact, no alternative, unless, indeed, an operator is disposed to set himself up for the first of all history, as is said of an early Chinese emperor. The latter course, in a degree, singular as it may appear, is not entirely unknown, and has been practiced by a whole school of modern science as a much cow rather than as a transcendent goddess, a distinction in classification first made by the great poet Schiller."

Now, as to the names of our species of bass, I take it for granted that the reader knows (a) what a black bass is and what it is not (b); that there are two species of black bass, the large-mouthed and the small-mouthed, the latter being with most anglers the black bass, *per se*, and the other the off horse; and (c) what the difference between them is. In any event you will find it all written in Professor Gill's most excellent paper, "On the Species of the Genus *Micropterus*," in the "Proceedings of the American Association for the Advancement of Science in 1873."

The earliest published notice of a black bass with a scientific name was of one of the small-mouthed kind, sent to Lacépède from South Carolina. This species he named *Micropterus*, and otherwise detestable custom of our erring Southern brethren of calling a black bass in the river, or a weakfish in the sea, a "trout." Now, we may presume that the great French naturalist was puzzled by this name, and put on his spectacles to see what in the world could be "trout-like" about such a fish, with its coarse scales and spinous fins. To him it looked more like a wrasse or cunner, *Labrus*, called trout; but no matter, it must resemble a trout somehow or the Americans would not call it so. So he put it down in his great work as *Labrus salmoides*, the trout-like *Labrus*, to the everlasting injury of the fish. The name is not only senseless, but bad Latin, the proper form of the word being *Salmonoides*.

Lacépède had another specimen of the black bass, without label, and from an unknown locality. This one he gave the last rays of the dorsal broken and torn loose from the rest, and was otherwise in a forlorn condition. This specimen he considered as a genus distinct from the other, and he gave it the name of *Micropterus dolomieu*—"Dolomieu's small-in." Dolomieu was a friend of Lacépède, who had had about as much to do with the fish as George Washington or Victor Hugo. No one could tell, either from figure or description, what this *Micropterus dolomieu* was, but Cuvier, thirty years later, found the original type and pronounced it a black bass, in poor condition, and declared that "the genus and species of *Micropterus* ought to disappear from the catalogue of fishes."

Then the versatile and eccentric Professor Rafinesque appeared upon the scene, and in rapid succession gave the small-mouthed black bass names enough for a whole family. First he called it *Bodianus achiyan*, being told that the Canadian voyageurs knew the fish by that name. Then afterward specimens of different sizes appeared as *Callurus punctulatus*, *Lepomis trifasciatus*, *Lepomis flecularis*, *Lepomis salmoneus*, *Lepomis notatus* and *Eleutheron culture*. Soon after Le Sueur with a lofty scorn for Rafinesque and his doings, named specimens of different sizes, *Callurus fuscatus*, *Callurus olivaceus* and *Callurus minimus*. Lastly, DeKay, in 1842, called it *Centrarchus obscurus*, and we hope this may be the last.

Now the name *Micropterus*, but, of course, it is, of course, the one to be adopted. But suppose we "stamp it out." Is *Micropterus dolomieu* any better? Out with it! *Micropterus achiyan*? Just as bad. I fear that the "stamping out" process would have to be continued too long. You may spell it *salmonoides* if you like, but you cannot get rid of it.

Now for the large-mouthed bass. The oldest description we find is that of a young specimen from the Ohio by Rafinesque, in 1819, of *Lepomis carolinensis*. The description is good enough, and not altogether correct, but the name is a happy inspiration, as good as *salmonoides* is bad. Soon after (1833) Le Sueur described the same fish from Florida as *Cichla floridana*, a name which would be well enough if it were confined to the streams of the orange groves, but it seems rather narrow in view of the fact that the fish is found in Mexico and Manitoba, and everywhere between.

Next, a specimen came to Cuvier from Valenciennes, under the title of "Black Bass of Lake Huron." To their eyes the fish was black enough, but not a *Black* (*i. e.* *Labrus*), and they called it *Huro nigricans*, the "Black Huron," making a new genus for it because their specimen had but six dorsal spines, the last four having been broken off, leaving two dorsal fins. The colored figure which they published remained a standing puzzle for some time.

In Dr. Kirtland's private copy of his own fishes of Ohio he had carefully drawn off and colored a copy of Cuvier's figure of his Black Huron, and had all his life sought for such a fish in the lakes and never found it. About a year before his death, Dr. Kirtland asked me if I had ever seen that fish or could tell him what it was, and I had the pleasure of informing him that it was a demoralized black bass. Next, in 1854, Professor Agassiz, thinking that this fish in the Tennessee River could not be the same as in Lake Huron, called it *Gryllus notatus*, a good name enough but 34 years too late. In the same year, specimens from Texas were named *Gryllus nactus* by Baird and Girard, but the fish is found in other streams than the Rio Nueces. Then a nasty & d excellent name, *Gryllus megalomus*, was given by Mr. Garlick in 1857, which closes the American synonymy, but the disease has broken out in France again, and Messrs. Vaillant and Bocourt of Paris, who ought to know better, again gave it the name of *Gryllus notatus* and *Gryllus variabilis*. The poorest business a French naturalist can engage in is that of describing new species of American Fishes. A good share of our cumbersome and confusing synonymy is due to Gallic assistance.

Now in 1873 Prof. Gill, in his masterly review of these species, followed the thread back only to *Huro nigricans* in 1838, and so called the big-mouthed black bass, as he was bound to do, *Micropterus nigricans*. The names *floridana* and *pallidus* were presumed by him to refer to the other species, for the reason that he had never seen a big-mouthed black bass either from the Ohio River or from Florida. In 1876 Prof. Goode had collected it in Florida, and so felt bound to restore Le Sueur's name and to call it *Micropterus floridana*. In 1877 called Professor Gill's attention to the fact that there were big-mouthed as well as small-mouthed black bass in the streams where Rafinesque fished, and he agreed with me at once that the *Lepomis pallidus* of Rafinesque was the big-mouthed, which is why the big-mouthed black bass Oswego bass, grass bass and bayou bass is *Micropterus pallidus* (Rafinesque), Gill and Jordan at present date, and such may it ever remain.

Now, as to the name of the genus itself, the difficulty is just as great. The name *Micropterus* is unquestionably the oldest. But (a) we are perhaps not absolutely certain that the original *Micropterus dolomieu* was a black bass at all; (b) it was described as distinct under the cronomic impression that it had a fat adipose fin behind the dorsal, and (c) the name (small fin) refers to this imaginary peculiarity, and is therefore incorrect.

On the other hand, the black bass really has smaller fins than any of its relatives, and the name has therefore a certain appropriateness. I think, with professor Gill, that it should be retained, although Professor Cope and others, as good authority as we are, are inclined to demur.

Next comes *Callurus* (beautiful tail), not a bad name, for the young bass have the tail ornamented with black, white and yellow, but not a very good name. Then come *apleus* (scaly opercles), previously applied to the sunfishes, and therefore not usable, for a bass. Then come Rafinesque's *Aplites*, *Nenacampsis*, *Diophtes* and *Aplousion*, unworthy of any attention, although for some reason *Diophtes* has kept up a sort of life, while the other three have wholly died.

Next come the name *Huro* for the large-mouthed, and *Gryllus* for the small-mouthed. Of course the two do not belong to separate genera, and the name *Gryllus* was given as the black bass was sent to the museum at Paris. Thus our two species are often called in foreign books the Black Huron (*Huro nigricans*), and the Salmon-formed Growler (*Gryllus salmoides*). The name *Gryllus* is a graceful one, and has been used more frequently than any other, but there are seven names ahead of it on the record, and first come first served and synonymy take the hindmost.

The names *Labrus*, *Bodianus*, *Cichla* and *Centrarchus* belong to wholly different fishes, and were given by different authors through mistakes as to the relationship of the black bass.

I trust that this hasty and rather polemic account will be of some service to the numerous class of my fishing brethren who like to be right in their use of names and who want to know, you know, who, like Wilhelm Tell, cannot "laage priet" an older whaler. DAVID S. JORDAN.

Irvington, Indiana, Nov. 8, 1878.

A SPARROW'S CHIRUP FROM EUROPE.

MR. EDITOR: LANSING, Oct. 27, 1878.

I am much amused at the bitterness which the sparrow-war in America has assumed, and cannot forbear laughing when remembering a funny melancholy German who emigrated to America in 1834 or '5. He had been there about two months or so, when he said "shook his head, looking sighingly, 'No, I cannot live in a country where there are not even sparrows,' and returned to old Vaterland. But (arceus) he had been there for two months or so, when he became again homesick for America, shook his head in a melancholy manner, looking sighingly, 'No, I cannot live in a country where there is no sparrow in your porridge pot,' and returned to America. Sparrow absence in the new world, and consequent emigration in the old country drove him half a dozen times across the sea, until he at last died about 1855 in Hohenheim, sighing uningly with his last gasp, 'Sparrow,' and pointing with his shaking finger to a bold cock sparrow which, amorously chirping, strutted on the sill of his open window."

When I was a little boy the nunsism of my father had to send every year several hundreds of sparrows' heads, together with a certain number of claws of birds of prey and raven's talons, to the Emperor of Austria, and I remember that the Emperor's cooks used to come to the conclusion that the sparrow was a nuisance. Very soon, however, the law had to be revoked, for caterpillars and other insects caused such destruction that the clamors of the farmers and gardeners became general. Since that time the sparrows remain unmolested, though they are not more protected than any other birds.

I cannot contradict those American enemies of sparrows who assert that they are most quarrelsome birds, and drive away ducks, geese, catbirds, etc. I can only state my experiences here in Europe. The sparrow is a nuisance, a little fellow, but I never yet saw it quarrel with other birds, except sometimes with swallows, which also build their nests under the roofs of houses. The sparrow not rarely takes possession of a forsaken swallow's nest, and refuses to give it up on the return of the lawful owners in summer. I frequently observed the war going on between both parties. The sparrow maintained his position inside the fort, and I never noticed that other sparrows assisted him. But it was different with the swallows. The injured couple-companions of the sparrow, when they returned with a whole lot of friends, which attacked the robber defending the narrow entrance of his castle. The swallows becoming convinced that it is impossible to drive out the usurper, they very frequently execute a diabolic stratagem: Each of them carries in its bill some clay or mud, and the entrance to the nest is very soon strongly walled up by the cruel, skillful masons. It is by no means rare to find a dead sparrow in such a walled-up swallow's nest.

Flinches, linnets, red-pollars, nightingales, etc., build their nests on trees or shrubs, and I saw them never molested by sparrows; these did not even quarrel with the redpolls, which build their nests also in houses. In winter you can see wood larks, fancies and yellow-hummers mixed up with sparrows in the streets, and I never saw them quarrel.

It is asserted that sparrows nip the hair from the fur of trees. I must say that I never noticed such a practice either, and do not believe in it. In spring, when the trees are budding, many small insects collect around the buds, and it may occur now and then that the buds of them are accidentally damaged by the sparrows, searching for insects; but, more true that sparrows like grain, but little is done in spring; and, moreover, it would be the luckiest of the sparrows require soft food, insects, caterpillars, etc., and the like, and it is astonishing what quantity of this is required for half a dozen of such young gluttons. When the breeding time is over, and the young sparrows are able to swallow grain food, the harvest is nearly brought in, and the fields are a most empty. The damage they can do is, indeed, not very great, and not to be compared to that which would have been caused by the caterpillars and other

Insects which the sparrow swallowed in the breeding time. More serious is the damage done by sparrows to the cherries and grapes, which always have to be protected against their greediness, especially in city gardens. But not only sparrows are lovers of cherries; many other kinds of birds have the same taste, and we call them, in general, cherry birds, though there are amongst them starlings, thrushes, etc., and a variety of other kinds.

After all, I think you had better leave the sparrow alone, else you might repent it. However, this world belongs to men because we appropriated it, and not to sparrows; therefore, we would advise to subject this bird to the game laws, and permit its shooting during a certain time, in order to prevent its numbers from increasing immediately. I assure you, a sparrow-soup is a most excellent dish, and, even eaten roasted, I think it quite as good as any roe-bird. To conclude, I shall give you a prescription for such a soup, and, at the same time, one to get easily the material for it.

When snow is covering the ground, lay on it a long board, put on it some oats or barley, and place yourself in such a manner as to look over the whole length of the board. Load your fowling piece with the finest shot you can get—we call it "Vogelstunt"—and you will kill ten or twenty sparrows at one shot. After having properly feathered and cleaned the birds, have them roasted in butter rather sharply. These roasted sparrows are crushed in a mortar to a pulp, and from which soup is made. This soup is strained through a fine hair sieve and served hot. Of course a skillful cook will know how to improve it, but I assure you it is good, and people here believe that some of the most admired qualities of the sparrow are transferred to the eater of such an invigorating dish.

CORYN.

HABITS OF RATTLESNAKES.

CAMP THOMAS, A. T., Oct. 11, 1878.

EDITOR FOREST AND STREAM:

I will be glad if you will tell me how the rattlesnake of the eastern slope wears its rattles. My impression is it is with the broad side down; here it is with the edge or narrow side. A gentleman connected with the Atchison, Topeka and Santa Fe R. R. Survey recently asked me if I had observed that rattlesnakes always coil to the left. I had not; but since then my observations and those of my friends whom I have asked confirm it, and I believe it as constant as the law which determines the direction climbing plants take. I do not know whether it has been noticed before or not. The reason for observing the habits of reptiles is about over, I am glad to say; one gets a little too much of it. On a March 1 made in July and August I killed eight rattlesnakes without leaving the road, and often heard them rattle when it was too dark to see them. The day before I got back to my post I killed two large rattlesnakes—one with seven rattles, the other with nine—at one shot with a carbine, something rather unusual. Arizona is rich in reptiles and poisonous insects, but the ugliest brute I have seen is the Gila Monster. It is a lizard, I think, and grows to be about two feet long; it is black, and curiously marked with pale yellow & gray lines. It will bite anything it can reach, and holds on to a stick until lifted from the ground; but is not at all poisonous. It lives on insects, young rabbits, or anything of the sort it can get, and is a voracious feeder. I forgot to say I stuffed a rattlesnake a short time ago, which measures six ft. 2 in. in length, and six in. in circumference at the largest part; number of rattles, seven. I lately killed one half the size with fourteen.

G. H. MORAN, M. D.

We believe that the rattlesnake of the East carries his sounder broadside to the ground, though we have never seen one of these snakes east of the Missouri except when coiled and ready for a fight. The coiling always to the left has not, we think, been previously noticed.—Ed.

THE GOOSE-FISH.

MALDEN, MASS., Oct. 22, 1878.

EDITOR FOREST AND STREAM:

Please send enclosed a little sketch which I made of a most remarkable looking fish which was taken at Wells Beach, Me., while on a shooting trip last month. He measured 43 in. in length; width of head, 1 1/2 in.; weight, 52 lbs.; color, very dark brown, and belly white. The local fisherman pronounced it a monk-fish. Is that the correct name for it? What are its habits, etc.? Any information you can give me will be thankfully received.

A. H. JONES.

The fish is the Angler (*Lophius Americanus*), sometimes also called goose-fish. It occasionally attains a weight of seventy pounds. It is extremely voracious, and devours great numbers of fish. Sea birds, too, are often captured by it, and we call to mind one instance in which no less than seven large ducks (*Oidemia*) were taken from the stomach of one of these monsters.

This reply has been unavoidably delayed, for which accept our apologies.—Ed.

The Kennel.

MR. DAVIDSON AND HIS ACCUSER.

THE editor of a Western contemporary has brought a direct charge of fraud against Mr. John Davidson, one of the judges at the late Minnesota Field Trials. The charge is that Mr. Davidson so altered the judges' scores as to bring a certain dog from the position which he fairly occupied to another to which he was not entitled, while another dog was thus placed below where he, or she, should have been. This charge, strange to say, does not emanate from the owner or owners of any of the dogs entered and presumably wronged; nor does it originate with any officer or member of the Minnesota State Sportsman's Association, under the auspices of which the trials were held. The accuser is that great upholder and defender of public morals, the editor of our esteemed Western contemporary. Notwithstanding the fact that the columns of our esteemed contemporary have contained several of those anonymous communications for which our contemporary is famous, and which have the impress of never having been burdened with one of Uncle Sam's postage stamps, and in all of which the tenor is loyal in conformity with the original accusation, we believe that the sportsmen of the country who investigate dispassionately the evidence in the case, and are aware of the animus which exists on the side of the accuser, will be satisfied of Mr. Davidson's entire innocence. For four or five years past no man has been so prominently

before the public, or at least that portion of it interested in dogs, as John Davidson, and no man ever earned a more honorable record for sterling integrity and unswerving honesty. Why, it has passed into a proverb almost that he could be better coaxed not bought, and that his dearest friend stood no better chance of receiving an award from him than the merest stranger. Now we are suddenly confronted with an accusation which, if it could be sustained, would at once shatter this fabric and cause men to ask, "Whom can we trust?" But there are wheels within wheels, and those who are enabled to read between the lines can see plainly into the whys and wherefores of these charges. There is a "ring" in this country which seeks to control everything connected with dog matters, field trials and bench shows, and which would even dictate the stud dogs to be used by breeders. John Davidson was a man whose independence placed him beyond the reach of this ring. They could not use him for their purposes, and his popularity and influence were such that he was a thorn in their sides. So the fat went forth that he was to be crushed, and hence this accusation. For ourselves, our confidence in him is unshaken, and we are greatly mistaken if this confidence is not shared by a large majority of sportsmen in this country. Our contemporary suggests that his days of judging are over; we do not believe so, and confidently expect to see him appointed to judge the sporting classes in the large bench shows that will be held in Boston, Philadelphia and New York during the coming spring. Not long since, when an English judge was proposed for the New York show, our esteemed western contemporary energetically protested, and it published a letter from one of its firmest adherents, in which he—the firm adherent—stated that none of his dogs should ever be exhibited at any dog show where John Davidson was not judge. We can see no reason, as yet, why the writer of that letter should have reason to change his mind.

Our esteemed western contemporary seeks to revive the almost defunct National American Kennel Club, and in accordance with the policy shadowed in the accusation against Mr. Davidson, suggests to exhibitors of dogs that they should decline to show them at any show not held under the jurisdiction of the N. A. K. C. This is dictation with a vengeance. We believe that had the National American Kennel Club been originally organized upon a proper basis, and could it have secured a membership of several hundred, so that breeders and exhibitors could feel as though they had some representation, it might possibly have been productive of some good, and its committee appointed for the purpose might have acted as a court of arbitration whose decisions might have met with respect. But we have it from the lips of one of the founders that it was intended to be a close corporation. We were informed last spring—and the information came from the secretary—that the N. A. K. C. was composed of nine members. This was previous to the election of members at the meeting in this city in May. Where are the many persons whose names have been proposed and who have been elected members? The inference is that, not having paid their dues within the time mentioned in the constitution and by-laws of the club, their names were dropped from the list. This being the case, we believe that the meeting at Syracuse, in June, 1877, for the purpose of electing officers, when, after much tribulation, the necessary quorum of five members was obtained, was not legally constituted, and that at least two of those present were not members at all.

We apprehend that at the principal dog shows, which will be held at Boston, Philadelphia and New York, under clubs the membership of any one of which exceeds that of the N. A. K. C., the rules in force will be those which seem most satisfactory to such clubs, or shall have been prepared and adopted by a committee composed of delegates from the Massachusetts Kennel Club, the Philadelphia Kennel Club and the Westminster Kennel Club.

DETROIT BENCH SHOW.

DETROIT, Mich., Nov. 16, 1878.

EDITOR FOREST AND STREAM:

I inclose you the prize list of this show. I have no doubt we shall hold a very successful one. Detroit was the first to hold a regular classified bench show in this country and it was very successful. We have changed rule 7 to read that all the progeny of imported sitters shall go into the imported class, also that no dog is to be entered in more than one class, except that they can enter in the special classes. This we think is a very good beginning for the next year. Our vice-president and committee are composed of the best sportsmen, who will do all in their power to make the show a success.

All the railroad companies have been written to with the view of getting the dogs transported free of charge, a full account of which I will forward you for next week's paper. The prize lists are now ready and can be had by addressing me at room 15, Merrill Hall. Entries close Dec. 31.

Since writing you last week, we have received replies from the railroad companies which we communicated with. The following railroad companies will carry dogs free when accompanied by their owners, viz: Penn. Central, Erie, Wabash, Grand Trunk, Great Western of Canada, Mich. Central & Canada Southern. Lake Shore and Michigan Southern charge 25 cents for the first 100 miles and 10 cents for any additional miles or any fractional part. The New York Central has issued very important instructions to conductors and baggage masters, saying that the company do not make any charge for dogs when accompanied by their owners, but the baggage man cannot demand more than \$1. The Great Western and the Grand Trunk Railroads will also issue return tickets for one fare and a third to all parties who wish to visit the show. Certificates must be previously obtained of me for presentation to the ticket agent.

The committee will publish a separate Special Prize List. The following specials have already been promised: M. Coers.

M. S. Smith & Co., jewelers, etc., will give a very handsome silver cup, value \$50; Messrs. Parker Brothers donate one of their fine guns, value \$150, they will name the class of dogs which it is to be given to at an early date; the Dead Shot Powder Co. and the Austin Powder Co. each donate a keg of their best powder.

The committee wish through your columns to invite all dealers in sporting goods to make an exhibition of their goods, as a room will be assigned to them for that purpose. I will send you some prize lists, which please give out to any parties who wish them.

Yours truly,

CHAS. LINCOLN, Supt.

The rules and regulations of the show are about the same as those in use at previous shows.

DIVISION 1.—SPORTING DOGS.

- Class 1—Imported English Setter Dogs.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 2—Imported English Setter Bitches.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 3 (From imported stock)—English Setter Puppy, Dog or Bitch, under 12 months.—For the best, silver cup or \$10 00.
- Class 4—Native English Setter Dogs.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 5—Native English Setter Bitches.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 6—Native English Setter Puppy (Dog or Bitch), under 12 months.—For the best, silver cup or \$10 00.
- Class 7—Imported Irish Setter Dogs.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 8—Imported Irish Setter Bitches.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 9 (From imported stock)—Irish Setter Puppy (Dog or Bitch), under 12 months.—For the best, silver cup or \$10 00.
- Class 10—Native Irish Setter Dogs.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 11—Native Irish Setter Bitches.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 12—Native Irish Setter Puppies (Dog or Bitch), under 12 months.—For the best, silver cup or \$10 00.
- Class 13—Gordon Setter Dogs.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 14—Gordon Setter Bitches.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 15—Gordon Setter Puppies (Dog or Bitch), under 12 months.—For the best, silver cup or \$10 00.
- Class 16—Pointer Dogs over 55 lbs. weight.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 17—Pointer Bitches over 50 lbs. weight.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 18—Pointer Dogs under 55 lbs. weight.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 19—Pointer Bitches under 50 lbs. weight.—For the best, silver cup or \$20 00; second best, silver cup or \$10 00.
- Class 20—Pointer Puppies (Dog or Bitch), under 12 months.—For the best, silver cup or \$20 00.
- Class 21—Irish Water Spaniels.—For the best, silver cup or \$10 00; second best, silver cup or \$5 00.
- Class 22—Retrieving Water Spaniels (other than Pure Irish).—For the best dog or bitch, silver cup or \$10 00; for the best dog or bitch, silver cup or \$5 00.
- Class 23—Cocker Spaniels.—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.
- Class 24—Field Spaniels (other than Cockers).—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.
- Class 25—Fox Hounds.—For the best couple (dogs or bitches), silver cup or \$15 00; second best, silver medal.
- Class 26—Beagles.—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.
- Class 27—Dachshunds.—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.
- Class 28—Fox Terriers.—For the best dog or bitch, silver cup or \$15 00; second best, silver cup or \$5 00.
- Class 29—Greyhounds.—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.
- Class 30—Scottish Deerhounds.—For the best dog or bitch, silver cup or \$10 00; second best, silver medal.

DIVISION 2.—NON-SPORTING DOGS.

- Class 31—St. Bernards.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 32—Newfoundlands.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 33—Shepherd or Collie Dogs (Rough or smooth coated).—For the best dog or bitch, silver cup or \$10 00; second best, silver cup or \$5 00.
- Class 34—Bull Terriers.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 35—Black and Tan Terriers.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 36—Skye Terriers.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 37—Yorkshire Terriers.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 38—Scottish Terriers.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 39—Toy Terriers. (Bough or smooth coated, under 6 lbs. weight).—For the best dog or bitch, \$5 00; second best, silver medal.
- Class 40—Pugs.—For the best dog or bitch, \$10 00; second best, silver medal.
- Class 41—Miscellaneous.—For any breed of dogs that have not been assigned a regular class silver medal will be awarded.
- Class 42—Irish Dogs.—For the best performing trick dog the Judges will award a silver medal.

THE PITTSBURGH DOG SHOW.—In answer to inquiries regarding this show we would say that it will be held about January 8 and last three days.

A HINT FOR BREEDERS.—Whether a bitch should be served more than once is a question which is very frequently asked, and has been answered in the negative by most noted breeders, as Laverack, Llewellyn, etc.

The reason for this answer, except that a second service is usually unnecessary for impregnation, we have never seen in print. For the sake of preserving the strength of dogs used in the stud we will give the physiological reasons for supposing the extra service of no avail if attempted before an interval of at least twenty-four or forty-eight hours, and consequently being an unnecessary drain on the dog's strength.

Contrary to the commonly received notions, the spermatozoa of the male (see article on "Breeding for Sex" in issue for October 24, 1878) is not ejected at the time of intercourse from the testicles, but are being constantly developed by these organs, and pass forward through the spermatic cords

August 1, **Harlem**; **22 Race for Dowling Cup** (to be presented by yacht winning it five times—won on Sept. 13, 1877, by **Empire**—**D**—open to 20ft and under, 4 entries, **Emma D** wins.
 August 1, **New Market**, **N H**; **Regatta**; 7 entries, **Phantom** wins.
 August 1, **Provincetown**; **21 Race for Dowling Cup**. First class, 2 entries, **Dauntless** wins; second class, 5 entries, **Katie Grey** wins; third class, 4 entries, **Minnie A** wins.
 August 3, **Swampscott**; **D Y C** 40th **Regatta**, 23 Championship. First class, 5 entries, **Ariel** 1, and takes champion pennant, (sailing with **Francis**); second class, 3 entries, **Rancy** 1, and takes and holds champion pennant, **Avon** 2; third class, 6 entries, **Mirage** 1, **Bessie** 2. **Mirage** takes pennant, (sailing with **Psyche**.
 August 3, **Provincetown**; **Prov Y C** **Regatta** (**Union**). Sails, 3 entries, **Provincetown** 1, **Provincetown** 2, **Provincetown** 3; second class sloops, 3 entries, **Fairy**, **Boat Y C**, **Camellio**, **Race**; 2; third class, 8 entries, **Provincetown** 1, **Ina**, **May**, 2; fourth class, 8 entries, **Sam**, **Weller** 1, **Eva**, **May** 2.
 August 3, **Longbury**; **Long Y C** **Regatta**. First class, 5 entries, **Pericles** 1, **Pericles** 2, second class, 3 entries, **Alice** 1, 2; third class, 3 entries, **Eddie** **C** 1, **Minnehaha** 2; special class, **Little Charlie**, **w. o.**
 August 3, **San Francisco**; **S F Y C** **Regatta**. First class, 7 entries, **Vision** 1, **Vision** 2, **Vision** 3, **Vision** 4, **Vision** 5, **Vision** 6, **Vision** 7, **Vision** 8, **Vision** 9, **Vision** 10, **Vision** 11, **Vision** 12, **Vision** 13, **Vision** 14, **Vision** 15, **Vision** 16, **Vision** 17, **Vision** 18, **Vision** 19, **Vision** 20, **Vision** 21, **Vision** 22, **Vision** 23, **Vision** 24, **Vision** 25, **Vision** 26, **Vision** 27, **Vision** 28, **Vision** 29, **Vision** 30, **Vision** 31, **Vision** 32, **Vision** 33, **Vision** 34, **Vision** 35, **Vision** 36, **Vision** 37, **Vision** 38, **Vision** 39, **Vision** 40, **Vision** 41, **Vision** 42, **Vision** 43, **Vision** 44, **Vision** 45, **Vision** 46, **Vision** 47, **Vision** 48, **Vision** 49, **Vision** 50, **Vision** 51, **Vision** 52, **Vision** 53, **Vision** 54, **Vision** 55, **Vision** 56, **Vision** 57, **Vision** 58, **Vision** 59, **Vision** 60, **Vision** 61, **Vision** 62, **Vision** 63, **Vision** 64, **Vision** 65, **Vision** 66, **Vision** 67, **Vision** 68, **Vision** 69, **Vision** 70, **Vision** 71, **Vision** 72, **Vision** 73, **Vision** 74, **Vision** 75, **Vision** 76, **Vision** 77, **Vision** 78, **Vision** 79, **Vision** 80, **Vision** 81, **Vision** 82, **Vision** 83, **Vision** 84, **Vision** 85, **Vision** 86, **Vision** 87, **Vision** 88, **Vision** 89, **Vision** 90, **Vision** 91, **Vision** 92, **Vision** 93, **Vision** 94, **Vision** 95, **Vision** 96, **Vision** 97, **Vision** 98, **Vision** 99, **Vision** 100, **Vision** 101, **Vision** 102, **Vision** 103, **Vision** 104, **Vision** 105, **Vision** 106, **Vision** 107, **Vision** 108, **Vision** 109, **Vision** 110, **Vision** 111, **Vision** 112, **Vision** 113, **Vision** 114, **Vision** 115, **Vision** 116, **Vision** 117, **Vision** 118, **Vision** 119, **Vision** 120, **Vision** 121, **Vision** 122, **Vision** 123, **Vision** 124, **Vision** 125, **Vision** 126, **Vision** 127, **Vision** 128, **Vision** 129, **Vision** 130, **Vision** 131, **Vision** 132, **Vision** 133, **Vision** 134, **Vision** 135, **Vision** 136, **Vision** 137, **Vision** 138, **Vision** 139, **Vision** 140, **Vision** 141, **Vision** 142, **Vision** 143, **Vision** 144, **Vision** 145, **Vision** 146, **Vision** 147, **Vision** 148, **Vision** 149, **Vision** 150, **Vision** 151, **Vision** 152, **Vision** 153, **Vision** 154, **Vision** 155, **Vision** 156, **Vision** 157, **Vision** 158, **Vision** 159, **Vision** 160, **Vision** 161, **Vision** 162, **Vision** 163, **Vision** 164, **Vision** 165, **Vision** 166, **Vision** 167, **Vision** 168, **Vision** 169, **Vision** 170, **Vision** 171, **Vision** 172, **Vision** 173, **Vision** 174, **Vision** 175, **Vision** 176, **Vision** 177, **Vision** 178, **Vision** 179, **Vision** 180, **Vision** 181, **Vision** 182, **Vision** 183, **Vision** 184, **Vision** 185, **Vision** 186, **Vision** 187, **Vision** 188, **Vision** 189, **Vision** 190, **Vision** 191, **Vision** 192, **Vision** 193, **Vision** 194, **Vision** 195, **Vision** 196, **Vision** 197, **Vision** 198, **Vision** 199, **Vision** 200, **Vision** 201, **Vision** 202, **Vision** 203, **Vision** 204, **Vision** 205, **Vision** 206, **Vision** 207, **Vision** 208, **Vision** 209, **Vision** 210, **Vision** 211, **Vision** 212, **Vision** 213, **Vision** 214, **Vision** 215, **Vision** 216, **Vision** 217, **Vision** 218, **Vision** 219, **Vision** 220, **Vision** 221, **Vision** 222, **Vision** 223, **Vision** 224, **Vision** 225, **Vision** 226, **Vision** 227, **Vision** 228, **Vision** 229, **Vision** 230, **Vision** 231, **Vision** 232, **Vision** 233, **Vision** 234, **Vision** 235, **Vision** 236, **Vision** 237, **Vision** 238, **Vision** 239, **Vision** 240, **Vision** 241, **Vision** 242, **Vision** 243, **Vision** 244, **Vision** 245, **Vision** 246, **Vision** 247, **Vision** 248, **Vision** 249, **Vision** 250, **Vision** 251, **Vision** 252, **Vision** 253, **Vision** 254, **Vision** 255, **Vision** 256, **Vision** 257, **Vision** 258, **Vision** 259, **Vision** 260, **Vision** 261, **Vision** 262, **Vision** 263, **Vision**

September 4, Philadelphia; Handicap match. Wm O Eckenbush beats Lulu.

September 6, South Chicago; Ch Y C Regatta. First class, 2 entries, Cora wins; fourth class, 3 entries, Irtius wins.

September 7, Chicago; Handicap match. C B's (second class), Irtius w; third class, 7 entries, Pen wins; skiffs, 3 entries, American Girl wins.

September 7, Toronto; I C Y C Regatta, 5 entries. Price of Waterbury, Commodore Cup and Holder Cup for C B's, taken by sch Oriller; Holder cup for deep boats, taken by Brier.

September 7, Lachine, Can; Race. Cabin boats, 3 entries, Sappho wins; open boats, 2 entries, Panama wins.

September 7, Beaver; N S Y S Open Race, 4 entries, Maiz, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796

tries, Viking, S Boston, J. Shadow, E Y O, 2; second class, schrs, 3 entries, Brezo, Boat Y, 1, Mist, D Y G, 2; third class sloops, Eureka, S Boston, w o; fourth class sloops, 2 entries, Annie, S B Y O, 1.

October 10, Harlem; 5th Race for Dowling Cup, 6 entries, Emma D wins.

October 10, S Boston; Match. Fancy, B Y C, beats Scamp, B Y C.

October 11, S Boston; Match. Scamp, B Y C, beats Fancy, B Y C.

October 11, S Boston; Match. Fancy, B Y C, beats Scamp, B Y C. Best two out of three.

October 12, Haverhill; Riv Y C, Match for Champion Flag. Lizzy Warner beats Ellipse.

October 15, New York; Match. Gracie and Vision, both N Y C sloops; both disabled, no race.

October 19, Marblehead; Second handicap match between Foam, E Y C, and Rebecca, E Y C. Foam wins; third match postponed till next season.

October 22, New York; Match. Gracie beats Vision.

October 23, Quebec; Match for \$100. Enid beats Leontine.

November 5, New York; Nerens Y C Regatta. Queen Mab beat Rebecca, Alice and Annie.

—G. A. Badger, of West Quincy, Mass., has patented a registering device for magazine guns, whereby the user can tell how many discharges have been made. Write to him and find out about it.—*Advs.*

Sea and River Fishing.

FISH IN SEASON FOR NOVEMBER.

FRESH WATER.
Black Bass, *Micropterus salmoides*. Pike or Pickerel, *Esox lucius*.
H. pallidus. Yellow Perch, *Perca flavescens*.
Muskellunge, *Esox nobilior*.

SALT WATER.
Sea Bass, *Scorpaenopsis ocellatus*. Cero, *Cybius regale*.
Striped Bass, *Morone saxatilis*. Bonito, *Sarda regalis*.
Weakfish, *Cynoscion regalis*. Kingfish, *Menticoccus nebulosus*.
Bluefish, *Pomatomus saltatrix*.

MOVEMENTS OF THE FISHING FLEET.—The number of Bank arrivals reported at this port the past week has been 13. Six of these were from codfishery trips, bringing 300,000 lbs., and 6 were halibut, with 40,000 lbs. The number of Georges arrivals has been 7, and the receipts 100,000 lbs. codfish. Eight arrivals have been reported from the Bay St. Lawrence, bringing 1,500 blbs. mackerel. The receipt of shore mackerel for the week have been about 800 blbs. The boat and dory fishermen have met with good luck when the weather favored, and will reap handsome returns from the inshore visit of the codfish schools. The number of fishing vessels absent on voyages in different branches of the fisheries last Friday was as follows: Georges, 46; Banks, 33; Bay St. Lawrence, 25; potato voyages to Prince Edward Island, 12; Shore fishing, 30; Newfoundland, 4. Several of these have arrived during the week, but others have left port, and with the exception of the Bay fleet, these figures may be taken as representing the proportion of vessels now engaged in different branches of the fisheries. The Shore mackerel fleet hesitate to haul up lest there should be a spurt of fat fish for a day or two to close the season. The fleet are doing little, though one Swampscott vessel reported a good fare one day last week.—*Cape Ann Advertiser, Nov. 22.*

CONNECTICUT—New London, Nov. 21.—There has been on exhibition the largest black bass ever taken in Lake Konomoc, weight 44 pounds. Have had a new experience in fishing for hickory shad at Niantic, and was agreeably surprised. Hook them and then have a care for your tackle. With a rush they are off, then up, then down, and leap higher and often than black bass, and require more delicate handling. *MISAL.*

NEW YORK—Shelter Island, L. I., Nov. 21.—The bunker fishing is over for this year, and the yachts and steamers are laid up, and factories closed and men paid off. It has been a rich year for them. *SALAO.*

TENNESSEE—Nashville, Nov. 21.—O. E. Hillman and a party of friends have just returned from a week's fishing expedition in Caney Fork, a tributary of the Cumberland River, about 150 miles above this place. They had magnificent sport, taking a large number of jack, some of them weighing as much as 7 pounds each. Mr. Hillman says the best jack fishing to be found in the country is in the Cumberland River above Point Isabel, which is the head of navigation, and so far from a market that the stream is not pillaged by pot fishermen. Jack up there are often taken weighing 12 and 14 pounds. *J. D. H.*

ARKANSAS—Jacksonport, Nov. 10.—Some fine strings of black bass (big mouth) from 1 to 64 pounds weight. Striped bass (*M. chrysops*) in fair abundance, mostly taken by trolling. Jack salmon are beginning to take the minnow. Altogether the brethren of the angle are having good times. *YEEL.*

ILLINOIS—Illinois River, Nov. 6.—The Illinois is remarkable for the quantity of fish in its waters. They sell here at two cents the pound undressed. But I wish specially to notice a new feature. This is at the "new lock and dam across the river just at these hunting grounds, completed last year by the State and United States jointly for navigation purposes, vast quantities of black bass and other large fish have been caught throughout the summer and fall with the rod and hook fishing. Bass weighing from one to ten pounds are sometimes caught almost as fast as the spoon drops to the water, and I am reliably informed several hundreds are caught by one person in a day. They congregate below the dam and bite at almost anything thrown over. The reports are truly wonderful. *H. W. MERRILL.*

FLESH AND SKIN TINTS OF TROUT.

THE English papers are assiduously investigating the causes of varied tints in the flesh of trout. Any information which can be added to that already known on this point will be much appreciated by ichthyologists. We append what a late copy of the *Country* (London) says on this head:

Trout, when of small size, are generally distinguished by slate-colored bands or blotches on the side, resembling those on the parr, which has rendered it difficult for an inexperienced eye to detect the difference between the two fishes. The distinguishing features between them consist in the parr possessing a more delicate and rounded form, a shorter nose, a smaller mouth, and in having the caudal and tail fin more

deeply forked; while the larger size and great muscular power of the pectoral fin forms in itself a complete distinguishing feature. The slate-colored bands on the sides are also narrower in the parr than in the trout; the general spotting rarely extends beneath the central line; and two dark spots on the gill-covers are an inseparable mark of distinction between the two fishes. It is worthy of remark that the dusky bands in the young trout usually disappear by the time the fish attains the length of five or six inches, and are never met with in one of three ounces weight.

But the trout, when in prime order, has a small head, thick shoulders, a hog back, well rounded about the dorsal fin, and bright scales on the sides that present a resplendent cast of gold, studded with vermilion spots, which, contrasted with the rich brown and black exterior coating, lovely beyond description. But this beauty wanes by degrees as the year advances; and by the time winter arrives the whole appearance is so changed that an inexperienced observer would scarcely suppose that the meagre, cadaverous specimen he then beholds is the identical trout he had gazed on with so much satisfaction a few months before.

The deep pink color of the flesh in a trout is a certain proof that the flesh is in good condition; but this tint is not usually found in very small trout; it is also peculiar to the fish inhabiting certain rivers—generally those the waters of which are limpid, where the bottom abounds with aquatic insects and small crustaceans, and the banks are plentifully supplied with flies, particularly the green drake and stone flies—but in small brooks, and in most hungry waters, the flesh of the trout never acquires the slightest tinge of pink, but when in best order appears of a rich cream color, with a dark brown coating just beneath the skin.

The age of a trout may be detected by the shape of the tail fin, the extremity of which, when the fish is very young, is deeply forked; but as it increases in age the central rays and membrane of the fin grow out, and while those at the extremity remain nearly stationary, so that the tail becomes in course of time, not only even at the end, but at last acquires even a convex form.

The exterior coloring of the trout is regulated in a great measure by that of the bottom of the waters they inhabit, and to which these fish seem to have the chameleon-like power of adapting themselves, which proves a means of securing them in some degree from the sight of their numerous foes, to which a strong contrast of color between themselves and surrounding objects would constantly expose them.

REMINISCENCES OF EARLY DAYS IN BOSTON.—*Editor Forest and Stream:* I am pleased to read in your fruitful columns capital fishing articles from the pen of that ancient angler and sportsman, Samuel C. Clarke. Few writers of the present day give such entertaining and scientific papers on the fishing delights by brook, river and sea shore, as does your valued contributor, S. C. C. Samuel and myself were cousins and playmates together many years ago, and enjoyed in company our earliest experience of rod and gun, and he is now equally instructive whether he casts his line in the streams of New England, the lakes of the Great West, or the placid waters of Florida. A veteran now, he has well nigh laid aside his gun, but still follows the less laborious pursuit of the angler. Long may he continue to please and instruct us with the recital of his fishing successes.

As school-boys and playmates we first began our sporting career together in the handling of the old carline gun and the rustic willow wand, at the hospitable home of our dear old grandfather, Gen. William Hull, at his old farm at Newtown, near Boston; and never elsewhere were such blissful days or such unalloyed pleasures. There, by the brook that ran through the meadows, or at the neighboring mill-pond, we caught our first bass, and, as was the product of the exploit as any successful salmon fisher of Labrador. We also rejoiced to continue our sport at the wharves and bridges of dear old Boston, and every pleasant holiday afternoon found us, rod and basket in hand, either at the old rope walk at the foot of Boston Common (waters now reclaimed and covered with garden and mansion), or at Cambridge Bridge, the old Mill Dam, or down at Central, India or Long Wharf, where the pellock and mackerel and cod and smelt were most abundant. We were then both of us inculcated with the love of sport which has so much contributed to the pleasant and vigorous health of both of our lives. In recalling the joys of these school-boy days, we are reminded of many names, afterward distinguished in art and literature, such as Sumner, Motley, Greenough, Hillard, Sturgis, Bellows, James E. Clarke, Willis, Winthrop, Aldrich, Whittier, Blake, Curtis, Austin, Loring, and very many others, many of whom have departed, many of whom survive. And while reading these angling papers of genial "S. C. C.," we are reminded of those early days, and prompted to jot down in verse these few lines, hoping they may be acceptable to him, and also to the *FOREST AND STREAM* and its editors and readers, lovers of rod and gun.

TO "S. C. C."

Yes! here where once we used to swim,
And where aye sailboats used to skim,
And where our holidays were passed,
And baited hooks and lines were cast,
Where golden hours and youthful joys
Were 'till too short for us, joy days,
Rise stoutly, brook and mill and pond,
Remember! trail flowers and drooping trees;
Where crowded streets and busy squares,
The city's crowded shops and busy trades,
And gentle rivers' promenade,
Have long unshared, and long ungraced,
And left of our old haunts no trace!

Of all those schoolmates few remain,
Few links of the long-sundered chain;
Few of that group that loved to pass
Over the old Common's sacred grass,
Or gather where the old Elm stood,
The latest patriarch of the wood;
Who down the Beacon slope would ride
On snow shoes, or with swift skates glide;
Who loved in summer afternoon,
When leaves were green and buds in tune,
To gather where the Hopewalk gave
Its welcome to the tidal wave,
Just where the Hudson's river flows,
Springs' flowery bowery and leafy boughs!

A marvelous, vast change, I ween,
Is there where the old joys have been;
These days I love how to recall—
The days of youth and of the old;
The days of merriment, to stand knee,
So brimful with peace and delight!
The days of fishing, sport, and chase,
At Cambridge Bridge or Long Wharf pier;
The days of old, when life was new,
When joys were more, cares so few!

Few of that bright, joyous train,
In all the walks of life remain;

And in that few I haply meet,
On stately square or crowded street,
I see no long-familiar trace,
In snowy hair and wrinkled face!
The limbs that used to run like deer,
Are crippled in life's long career;
The hands once skilled to pull the oar
Or swing the rod are strong no more,
Some sleep in dust of native land,
And some repose on foreign strand;
Some by the palm trees of the shore,
Where Indian billows rave and roar;
Some where Pacific billows wave,
Long since have laid them down to sleep;
And some are rovers' presences now,
Of 60 years' sleep and thoughtless brow,
Or merchant princes, rich in gold,
The playmates of those days of old;
But all are mindful of the joys
Of that far time when they were boys.

Shelter Island, L. I.

ISAAC McLELLAN.

There is no person of whom we would more cheerfully print a tribute so well deserved than the subject of the above lines. The apostrophe of one veteran angler and comrade to another, both of them now far on the shady side of life, is a touch of the same nature which inspired the sentiment of "Auld Lang Syne." We hope the lines of our esteemed contributors may long continue to fall together in pleasant places.—*Ed. F. & S.*

Other variations.

Game No. 33—RUY LOPEZ.

The subjoined game was played by correspondence in the International Tourney, and is the second which Mr. Loney has lost to his skillful opponent. It is far from our intention to question the fairness of Mr. Belen's pairing of the players of the American team, as we can only too easily conceive of the difficulty that he encountered at the outset, without even attempting to closely scrutinize the actual skill of each competitor; then divide them into classes, and give to each player his position in a class. As a whole, we think that Mr. Belen displayed excellent judgment, and should it be the contest result in the defeat of the American team, which we do not think improbable, we feel confident that it cannot be justly attributed to the want of good judgment or the lack of discernment of the American manager:

11—Kt-Kt	11—Kt-Kt	22—Q-Kt	22—K-Kt

NOTES.

(a) A weak defence, which, with the best continuation, must leave the second player in a very cramped position.

(b) P-K5, though very unsatisfactory, would undoubtedly have been better.

(c) Perhaps 10—Kt-Kt would have been better, but in any case Black must suffer some loss.

(d) Perfectly sound, for if Black takes the Kt, White plays 13—B-K4, and either wins the Q or gives mate in two more moves.

(e) The best move under the circumstances.

(f) A strong move; the game is now entirely in White's hands.

(g) It is remarkable that this is the only move to prevent the loss of his Q. If Q-Kt4, there follows Kt-B3 dis. ch.

(h) At first sight this appears to be a weak move, but I believe it is the best at his disposal. 15—P-K3 would be followed by—

16—Q-K5 16—P-K3 (best) 16—Q-K5 16—K-Kt

17—Kt-Kt 17—P-Kt (best) 17—B-K4 20—Q-Kt Q P

18—Q-Kt 18—K-Kt 18—Q-Kt 18—K-Kt

19—Q-Kt 19—K-Kt 19—Q-Kt 19—K-Kt

20—Q-Kt 20—K-Kt 20—Q-Kt 20—K-Kt

21—Q-Kt 21—K-Kt 21—Q-Kt 21—K-Kt

22—Q-Kt 22—K-Kt 22—Q-Kt 22—K-Kt

CURTIS JOTTINGS.

—The handicap tourney of the Manhattan Chess Club is progressing nicely. Messrs. Bloch and Baird lead the score, closely followed by

THANKSGIVING UNIVERSAL.

THE observance of the time-honored New England festival is rapidly becoming widespread, though not with the unction of the forefathers. It is scarcely forty years ago that the voices of the pious Governors of Massachusetts and Connecticut were almost the only ones who proclaimed thanksgiving to the Good Giver and death to predestinated goblins and barnyard chautiquers. Those were solemn occasions then, when grandpa and Aunt Maria mounted the old chaise in the van, and the rest of the family stowed themselves into the six-seated carryall, and all plodded their silent way up the long hill toward the meeting house to listen to the sermon. We remember how the youngsters shuddered as they looked askance at the wicked boys who desecrated the special holy day by kicking foot-ball in 'Squire Jones' ten-acre lot; and how the old folks pointed them out as a striking example. Much more sinful was that conscience-smitten young man who quietly drew his gun through the fence rails as he sneaked into the rustling thickets of the November woods! The morals of the country had not at that early period become corrupted by turkey-shoots; and prophets had not prophesied the mission of Bergh. Those who then hoped for the millennium, would have shuddered at the latter day saints as we see them now.

What beautiful homilies the Ministers used to read on gratitude and benevolence and the pleasures of giving! How they dwelt upon the fulness of the past harvest, and the prospective abundance of the big dinners to come—after the sermon! Ah! those promises were like the pillar of cloud to Moses, to guide their hearers out of the desert of starvation into the beatitude of mince pies and the indulgence of repelition. Meanwhile, as the good people listened to the long-drawn applications which emphasized the text, the cavities of their stomachs grew empty and emptier; the comforts and duties of self-denial became weaker and less imperative; until at last the benediction came like a blessed release, and all the spring wagons and carryalls under the meeting house sheds clattered off down the hill to the base level of carnal appetites and natural desires. To the boys the only redeeming feature of Thanksgiving Day was the privilege to eat without stint. The older people, too, as well as the Minister himself, recognized this special Providence, and thanked God for their capacity of enjoyment. With that comfortable dreaminess which comes from the complete satiety of a full belly, they folded their hands and eyes in their easy chairs after dinner and blessed their good fortune that they were not born in heathen lands where there was no Christian Thanksgiving.

Gradually, in course of years, Ohio and other neighborly States drew into line, and proclamations from the Western Reserve began to repeat the utterances which came out of the East. Then this good President who placed the proper estimate upon the character of the Holiday, and realized the necessities of the American people for more recreation and more public festivals, nationalized this New England Anniversary and proclaimed (bless him!) universal thanksgiving throughout the land. And now we have it from shore to shore! But, as we said at the beginning of this short chapter of reflections, the day is not celebrated any more as in the olden time. Truly, in many New England homes,—in quiet nooks of the Green Mountains, and along the pastoral shores of Cape Cod,—the ancient sanctity prevails, and the time-honored forms of observance are held as sacred as the day itself; but in most all other sections of the land the day seems set apart for excursions and promiscuous amusement. No more do even the descendants of New England people gather in family assemblages as of old. In vain do they send out their summons to the clans. Not even the odor of the steaming turkey nor the groans of weighted mabogany lure them to the hearth. Individuals plead previous or more congenial engagements; and so perchance the stockaded and ruffled portraits of our ancient grand-parents look down with mournful visage out of their gilded frames upon the empty seats and broken circles which love and kinship ought to keep forever warm and full. The foreign elements of the great cities give new shape and feature to the day's observances, while those to the manor born take down their guns and hunt for partridges, quail and ducks! How many appointments for a Thanksgiving hunt are made weeks before the day is designated! What allotments are set upon! For weeks our readers have been asking us where they shall go for game on that eventful day. Most of them have but the day to spare, and the customary demand is for some place (confidentially indicated) within an hour's ride of New York where they can go and fill their bags. Poor men! the pipe of the quail is no more heard within the environs, and the voice of the wary goose soundeth high over head. Were the vicinity covered with game, there would not be a bird for each gun. Every line of wagon and horse road leading to the prairies would be lined with gunners like soldiers on a review. We fear those who have but a single day to spare will have to forego their shooting. However, there are pigeon shoots, and glass ball shoots, and turkey shoots innumerable, and at these popular sports the knights of the trigger may while away their time.

In these progressive days it is not for ministers or governors to designate what observances shall apply to the Holiday we celebrate. Foreigners will have no sympathy with the primitive sentiment, while descendants of Puritans have outgrown their swathing clothes. So each of us must choose for himself that pastime which seemeth most congenial, and whatever that may be, or by whomsoever of the readers of the

FOREST AND STREAM it may be chosen, we wish for each and all of them a comfortable Thanksgiving.

A BONNIE SCOT.

CAPT. A. WILLIAMSON, of Edinburgh, Scotland, a veteran gentleman hunter, who was introduced to our readers last September on his way to the Far West, returned to New York this week full of trophies and admiration of our grand Rockies, and will sail for home to-day. Not "from the bonnie highland heather to the modest lily of the vale" has he found such crags, such evidences of good shooting, and so many Indian sign, as he has done in the Eagle and Piney Ranges. Among those depths, passes, and mountain parks he slew 13 bull elk, 10 black tail deer, and 2 grizzly bears. Two other bears would have slain had they not carried off within their lacerated hides two dozen hollow Express bullets, which are of no account on big game, he thinks.

Mr. Williamson speaks with a friendly feeling and a warmth of interest regarding that kind Providence which smiled upon his secluded camp at all times, excepting when John Hines, of Georgetown, charged him \$40 for jacks and an extra tariff on hams and general provisions.

One of the biggest elk he killed stood 16 hands two inches high, measured 8 feet 9 inches in length from nose to tail, and 6 feet 4 inches in girth. Its horns alone weighed fully 60 pounds, measuring 53 inches in length of horn, 51 inches in span, and 15 inches around the burr (where it joins the occiput). Wonderful but not at all improbable are the stories he tells of the vitality of the great denizens of the wilderness which he visited. The hollow Express bullets which he used could not do the necessary execution. One of them struck a bear at 25 yards squarely in the shoulder and the bear thought it was a humble bee. He rolled over on the ground to scratch the place, and then the Captain gave him a second barrel in the other shoulder at the like distance. Up got the bear and ran five miles without halt; then took to the shallow bed of the Piney creek for half a mile and came ashore at the foot of a big pool, with the trail lost so that the hunters never found it again. Such sagacity was never known among such vermin. Even old Bill Williams of '49 would have wondered at his "savez."

The way they hunt bears is this: "Skinners" hunt mostly for the skins; gentlemen hunt for heads and horns. In either case the stripped carcass is generally left as bait for the grizzlies whose pelts are worth \$18 the plew. Plews are an object. In the darkness of the night the hunters lie perdue, within easy range of the bait, down the wind, so as to get the scent and sound. With a good solid ball which weighs 500 ex. and 108 grains (4 drachms) of powder, Bruin is made to do his *coup de grace* without ado—usually. But "best laid schemes gang aft aglee," and this is how one of them went:

Topsy is an 8-months old pup which can scent a bear as easily as most dogs smell an Indian. The hunters were posted one night not more than ten yards from the bait (the carcass of an elk), the wind being fair for the bear, so that Topsy's nose was "flat," and wholly discounted, out of use. Now Topsy, the Captain says, never growls at anything but bears. On this occasion he growled! *Brye* a bear. But the bear took wind and sloped in a jiffy. The problem remains: how did Topsy discover that the creature was a bear? Had he an intuitive perception that his master was hunting bears? and having heard a step or snapping of a twig, surmised that it was a bear? or was he like a young lady of Brooklyn who can see things without eyes and perceive things which are hidden?

One more incident the Captain relates of two bull elks which were fighting for conquest. He waited for the decision of the battle, and killed the victor; then chased the other a good distance and captured him.

The woods are full of romances like these. The only drawback, the Captain says, is that there are too many hunters. Six months ago at a certain hillside ledge there was not a solitary inhabitant. Now, after six months, there are said to be 30,000. The new city is a mining town, and is known as Leadville. The number of men hunting for the Leadville market is what diminishes the game.

We congratulate our friend upon his success. He was unattended except by an old mountain man as guide.

A CURIOUS BOOK.—We have recently received from Mr. D. N. Allison, of Fulton, Illinois, a very interesting little book, which we imagine few of our readers have ever seen. The title page tells us that the work is—"A Natural History of a variety of Birds and Beasts, Extracted from the best Authors. New York. Printed by W. Durell for Benjamin Gomez; 1800." The volume, which bears evidence in its appearance of its age, is about four inches long by two and one-half wide, and contains but twenty-eight pages. It is possible, however, that it is incomplete, for the covers and the sewing are gone. Twelve different kinds of "Birds and Beasts" are described in it, and the remarks upon them are extremely quaint and in the light of our present knowledge, amusing. We are told in this volume of the cunning of the fox, the ferocity of the tiger, the obstinacy of the ass, and the intelligence of the dog. Besides, each article is illustrated by a wood cut representing the animal treated of, and these venerable engravings are not the least amusing portion of the work.

Mr. Allison, with an interest in our behalf for which we cannot too warmly thank him, has considerably sent us this volume; with what motives he has done so his note subjoined plainly shows. He says:

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE EDUCATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 28, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

ESTD Trade supplied by American News Company.

ALBATROSS AND CAPE PIGEON.—Was the bird which the Ancient Mariner killed an Albatross, or was it a Cape pigeon? To be sure, Coleridge ought to have known, but then he was writing poetry, and for the poet's purpose, so far as the demands of romance, rhyme and rhythm go, Albatross is by all means preferable to Cape pigeon; it rounds a sentence better. And could Dore ever have given us such effective pictures if for that great wide-winged bird he had substituted a petrel? But after all it is barely possible that we must give up the Albatross. Old sailors say that it's all nonsense, and they know. Albatrosses are first-rate eating if they are not too old and the cook understands how to fix them up. Let an Albatross come within range of a sailor's gun and there's no superstition to save it from the pot. Superstition at the expense of a good dinner is too dearly bought. But it is unlucky to kill with cross-bow or blunderbuss the beautiful Cape pigeon, which is not edible. The offending ship will go, or ought to go, straight to Davy Jones' locker, where many a staunch and gallant ship has gone before her. Seamen are very careful about these things. The British bark, *J. Walter Scamell*, bringing a cargo of nitrate of soda from Iquique, Peru, arrived in this port last week with Daniel Maguire, the second mate, in irons. The testimony in the court was somewhat conflicting, as such marine testimony always is. But Maguire himself confesses that when rounding the Cape he tried his new revolver on a pigeon. The bird escaped, otherwise we should never have heard of the bark at all. The offense, even as it was, was grave enough, as any orthodox sailor knows, and it was perfectly just that the man of the revolver should be hand-cuffed into the irons he went, and when he was smart enough to wriggle out of them and cast them down to the bottom of the sea, sea, sea, the ship carpenter, equal to the occasion, devised a pair of stocks where the fate-defying tar languished without much of anything to eat until he reached New York. Like the Ancient Mariner, he now, with his skinny eye, holdeth not the wedding guest but the willing reporter. Queer clowns these sailors.

I enclose you a book on Natural History which may be of some use to you as a book of reference, as it is extracted from the best authors. The chapter on the dog may help you in replying to dog questions from some of your numerous correspondents.

ALLISON.

A few extracts from this work may serve to give our readers an idea of its character. Of the peacock, it is said, among other things, that—"The flesh of this fowl, though ever so thoroughly dressed, yet when it is cold it appears as perfectly raw." Speaking of the "Cuckoo," the book tells us that this bird "neither builds a nest nor hatches its young;" and, having described the method by which a foster parent is secured for the egg, we are informed that "if the Cuckoo's egg be first hatched, she immediately destroys the eggs of the small bird; but if the small bird's eggs be first hatched the cuckoo allows the young to live till its own egg is hatched, and then destroys the young belonging to the small bird, which still feeds and brings up the young Cuckoo as its own when some say (it) ungratefully kills and eats its nurse."

Sportsmen will be glad to be informed that "Partridges and Quails are taken with a net by the help of a setting dog trained up for the sport, who finds out the birds, and, when he sees them, stands still or lies down on his belly, not going very near them; but looking back on his master, wags his tail, by which he knows the birds are near the Dog, and so he and his assistant run with the net and cover both birds and Dog." Farmers will be interested by the chapter on the ox, where it is stated that, "At the age of three years the horns of the ox fall off and new ones arise, which continue as long as they live." The last chapter in this curious little book describes the ass—his humility, his patience, and the great attachment which he "discovers to his master," and concludes with this pithy sentence: "Whatever be the pace he is going at, if you push him he instantly stops."

Cannot some bibliophile among our readers give us some account of this little volume besides what is furnished by the title page?

PERIPATETIC IDIOTS.—A man named Porter recently wheeled a barrow from Albany, N. Y., to San Francisco, Cal. He was not an idiot for doing this, but in our estimation, the man who paid him a good round wage for his achievement was an idiot. Now two more candidates for blistered feet and newspaper notoriety have started out from San Francisco for a foot passage to New York. In this case, too, they are not the idiots. The men who pay them for their tramp are idiots.

GAME SUPPER.—The fourth annual game supper of the Rod and Gun Club, of Springfield, Mass., was held at the Old Tavern Stand, West Springfield, on Thursday evening, the 21st inst. The bill of fare comprised the usual assortment of game of every description, and the affair passed off in the enjoyable manner characteristic of these occasions. We acknowledge with thanks an invitation to be present, and regret the hard fate which prevented us from participating.

MISSED THE TRAIN.—As we go to press one day earlier than usual this week, several scores, etc., which would otherwise appear, have been necessarily deferred.

ALADDIN'S WONDERFUL CAVE.

WE read in the "Arabian Nights" of a cave where Forty Thieves were discovered by a fortunate youth, who, from his hiding-place in the top of a palm tree, heard them pronounce two cabalistic words, and saw the famed robbers quickly disappear in the depths of a rock-bound hill. The passport he found both useful and convenient to remember, and when on their return and departure the way was made safe for his descent, he experimented with it "by way of a little diversion," as Mickey Free hath it; and to his amazement, at the "Open Sesame" the rocks moved apart and invited entrance into a cave so entrancing and wonderful that he stood spell-bound at the sight. But not long, for being of a frugal mind, the jewels and bars of gold, amassed at such an expense of time and labor by these obliging Forty Directors and Stockholders (their old surname being too ugly a word for ears polite in these days, besides being long obsolete), were of far more interest to his youthful but calculating character. With an acuteness worthy of the nineteenth century, he appointed himself Receiver, and placed the valuables where they did most good—to himself.

Such is the story in that most beguiling and wonderful book ever written, and yet fact discounts fiction, as it often does in life, and Ali Baba's cave, springing from the vivid, impassioned fancy of the Eastern romancers, cannot equal the reality in the chambered galleries and the vaulted halls of this newly discovered cave in Luray.

From a thorough examination of the place I have just come, I visited it in a coolly critical humor, which nothing but a succession of marvels might satisfy. I returned bewildered, dazzled by the most wonderful and beautiful work ever fashioned by the cunning fingers of Nature.

When I reached the vicinity of the cave a large crowd was clustering about the entrance, for the cave is not in the mountains, as one might suppose, only set in a moderate sized hill not over seventy-five feet high. To the foot of this hill the people would come and then disappear as mysteriously as did the children following the Piper of Hameln, who sank out of sight in the depths of the ground, never to return. The cave was discovered by accident last August by a Mr. Stebbins, who knew by the indications that there must exist a cave near at hand; and finding a small hole in a bunch of birch bushes, proceeded to investigate the orifice; widened it;

then, feeling the cold air rushing through, lowered a companion down by a rope, so discovering the greatest curiosity in America, if not in the world. Its existence was never dreamed of. It is true that many a time sportsmen, in starting old hares and flushing partridges, would see them fly to a bunch of briars on a barren hill, and on going up could never flush them. Many a puzzled head has been rubbed to get the perplexity out of it, wondering where the d—l the things had gone. The descent is about sixty feet, and you enter a large arched room, rugged and rough, that seems to have been formed by volcanic action. From this there open several vaulted passages that extend into others, which lead away and away into chambers and seemingly interminable labyrinths, each one varying with a distinctive and bewildering beauty of its own. Every day the prospect widens to explorers, who, breaking the stalagmites and crawling through crevices, enter upon new realms of marvel. These stalagmites hang from the roof in endless variety; some like the folds of a heavy curtain, with cords and tassels complete; others drop like furred flags over the military bier; while the roof is studded with pendant icicles, some light green, blue, purple, or like gleaming like silver in the lamplight, and flashing out like diamonds.

Further on you come to a grand chamber that surpasses anything mortal hands could shape or mind conceive. It is an immense apartment, oval in shape, with a lofty roof fretted by millions of designs in frost work and sculptured tracery, all in the most weird, fantastic carvings. In the very centre of this place, that resembles the interior of a grand cathedral, there arises a massive pillar of white rock that is a marvel of perfection and beauty. It looks like bas-relief, and is worthy of hours' study. From all portions of this chamber there rise shadowy, indistinct, half-carved forms and figures of the purest white, like as one would see in an artist's studio were he to half work out his conceptions, and then in a caprice throw his chisel away, leaving them all designed, yet all unfinished. Words cannot describe the solemnity of the place; it must be felt. The immensely lofty ceiling, the fantastic gleaming statues, the stately alabaster pillars, the trailing vines, the drooping drapery all in spotless, pure adamant, the unfathomable vastness, the deep stillness that fills the soul with a shuddering awe, no language can do them justice. One could easily imagine himself in a vast cathedral for purer beings than our coarser clay of earth, and half expect to hear unearthly music float away through the chancelled aisles and pillared domes. A lady tourist with us sang in her pure soprano the "Evening Hymn to the Virgin," and the effect was unutterably grand. The voice rang out clear and sweet, filling to the vaulted roof the air with rich melody, while the intermingling corridors sobbed and wailed back the refrain in a sad echo, that died away in tremulous murmurs, faintly and more faintly, in the far off distance. Then the deep, heavy, sacred silence, for centuries old, crept back once more and held its royal sway. Yes, one could swear he beheld the stoled monk flitting along the vestibule and disappearing behind the shadowy pillars, silent, noiselessly absorbed telling his beads, and thinking not of earth.

Clear limpid springs are found in many chambers. In one a series of springs, each varying in size and distinct from the rest. The loveliest thing of all is one which is hollowed out in the floor of the cathedral, and lies there limpid, cool and pure. Around it is a framework of stone, whiter than Parian marble, and embossed with the most exquisite carvings in Nature's softest touch. Delicate leaves in fragile designs, as softly pure and delicately beautiful as frost work, yet as durable as tempered steel. No human hand, however gifted, might catch in a life time the secret of this marble carving; it is above everything earthly and beyond. And the spring itself—well, Hebe handing up a cup of nectar from the immortal spring; Venus drinking her libation to the sovereignty of Pluto; Titania, queen of fairies, attended by her train, spring from earth, sea and air; Ponce de Leon, dreaming of the Fountain of Youth—never beheld aught lovelier than this. Even as the fabled water hid in the grotto under the sea, that Areosto saw in his vision when the mermaids combed their golden locks, and the three old blind crones passed a single eye around that each might glance once at its magical beauty, so one stands by the lovely creation and feels that Mother Earth keeps hidden in her depths greater wonders than ever mortals wot of.

We kept on descending steadily downward, new beauties opening to the enraptured eye. In one cavern there looms up a grand pulpit of white stone; in another the walls were so smooth and polished that we saw our faces in them as in a mirror; again, in a large round room, there spread out beneath it naught but the clear, still waters of a lake—was ever lofty room so carpeted before?—while around in interminable distances were immense masses of blocks, columns, walls, pillars, set with diamond springs, flashing and reflecting the light in dreams of beauty too numerous for the telling. Can it be our pure lost Eden laid away in its silent crypt? Drops of water, filled with mineral properties, filtering through the ground for ages, solidifying and crystallizing, formed through centuries, under the mighty hand of the Maker, these wonders and marvels of beauty. Footprints of wild animals, long since vanished, have sunken deep in the clay with heavy tread, and the impression yet so soft that it can be easily obliterated, tell of the great passing of time. Hour by hour, day by day, year after year, centuries upon centuries, before even primeval man was born, in age succeeding age, has this slow, amazing work progressed.

In its deep, silent slumber it lay, reminding one of the

vision John saw in Patmos of the city whose twelve gates were twelve pearls, and whose waters were as clear as crystal. Generations came and went, heedlessly passing over the fair realms beneath their feet. To us, as if the stone had been rolled away by angel hands, it bursts upon the startled gaze as a revelation. To our eyes it is sent in its calm, still glory. We receive it reverently "as a thing of beauty and a joy forever."

In the bridal chamber, a large, roomy apartment nearly oval in form, is the "Cascade." Imagine a torrent of water falling from the height of some twenty feet, and then as if struck by the wand of the enchanter Merlin, that every drop of water, each bubble of foam, the very spray itself, and the falling fluid were changed into pure marble and solid adamant, and you can picture to yourself this exquisite production of nature. The illusion is so perfect that the eye does not recognize the change, and only the actual visible touch shows the wonderful metamorphosis.

Perhaps the greatest curiosity is the skeleton of a man, which lies as it fell at the bottom of the deepest gulch in the cavern. The hair is gone, but the skull, jaw and lower limbs remain, and both of the thigh bones are fractured. Who he was, of what race and what period he came, none will ever know. Imagination shudders at his awful fate. Lost in this vast labyrinth—alone, surrounded by Cimmerian darkness, groping his way foot by foot, inch by inch; shouting, perchance, and hearing nothing but mocking echoes returning his despairing cries; hearing, in his distempered fancy, strange, fearful noises, and seeing gleaming spectral lights, and then losing his balance he fell to the bottom of a chasm and laid there with shattered bones and tortured sinews, dying by inches in lingering agony all alone, with no sound save the ceaseless drip of the water drops on the granite floor beneath. Surely the devilish cruelty of the holy inquisition never conceived a death more full of horrors than this.

There is a tradition told by the old inhabitants of this section of a man who disappeared from his home near here some forty years ago and was never found. His gun was discovered on the hill side, but he and his dog were never seen again. To my mind these bones are the remains of a race long extinct, and have been lying here for hundreds and hundreds of years. As for the ancient inhabitant who disappeared a half a century or so ago—well, he may have gone up the mountain like old Rip Van Winkle and his dog Wolf; and he may, for aught we know, be asleep on some mountain top to-day, and will yet reappear in the streets of Luray with his beard a yard long all spotless white, and inquire for his Gretchen, who had turned to dust this many a long day ago. Lord! how the ancient farmer will be surprised; he will see a huge cave, over which he has so often walked unconsciously, the interior illuminated by Edison Electric light; he will hear the hoarse scream of the locomotive; he will see lightning-rod peddler and three-card monte men, and, greater wonder of all, will hear the political orators blowing their political trumpets and boasting of how virtuous this present age is. No wonder if the ancient slumberer will turn his steps mountainward and try to go to sleep again or to die.

The great mystery to me is where the pure air comes from that sweeps through the cave. The temperature is not over 60 deg., and never varies perceptibly. I believe that this whole region will be found to be one vast cavern connected together by passages. Every day the explorers discover new rooms, which lead into others, and since the first explorations scores of other openings have been found that branch into apartments that have remained for infinite time untouched by the footsteps of men, or the black darkness rising like a pall, unlighted by the gleam of a lamp.

Then dozens of springs, pools and miniature lakes all throughout these caverns, from the depth of several inches to many feet; the waters are clear and opaline in tint, with a slight limestone taste, and cool as though drawn from a deep well.

I have written but a brief description of these caverns. I could say much more, but no pen can convey the wonderful, weird, fantastic loveliness of the place. Only a thorough personal examination can do that. I recommend a visit to this cave for all lovers of the beautiful and to all tourists who love the strange and marvelous in nature.

I wish I could recommend also the accommodations for travelers in the ancient town of Luray; but I cannot. The hotel beats the ancient hostels of Spain, and serve up to the hungry guests real Barmecidian feasts. Travelers are taken in and done for; the fare is execrable, bread like brick-bats, meat tougher than a money-lender's conscience, and, as for the coffee—well, we feel like saying with the famous John Randolph, of Roanoke, "Waiter, if this is tea, bring me coffee, and if this is coffee, then, d—n it, bring me tea."

Luray is a moral, virtuous town, either before or behind the times. There is not a bar-room or restaurant in the place. Drinks can only be had by the prescription of the doctor, and the amount of sickness that prevails in Luray is appalling. Cramps and neuralgia of the stomach are an epidemic there, and the physicians are kept at work day and night in filling out permits. There is but one remedy used in these complaints, and it always cures, and that remedy is a pint of whisky, taken with a little sugar internally.

I am indebted to Mr. Broadus, editor of the *Page Courier*, for many favors.

CHAS. STEVENS.

FOR FOREST AND STREAM, will be sent for fractions of a year as follows: Six months, \$3; three months, \$1. To clubs of two or more, \$3 per annum.

ADIRONDACK DEER.—We publish herewith a letter from Mr. Charles Fenton, of Number Four, to the *Utica Herald*, relative to the extermination of deer by illegal hunting in the North Woods. The Number Four Association have an opportunity for no small effort in putting an end to this work. Whatever may be the opinion as to the use of dogs in some States, it is plain that such practice among the lakes of the Adirondack country is exceedingly destructive and reprehensible. Where are the game wardens whose duty it is to execute the laws, and where are the game associations of the North Woods? Let us hear from them. Mr. Fenton writes:

It may be asked what is done with this large amount of venison. The fore-quarters are generally thrown away or fed to the dogs. Of the saddles, those that do not spoil on the way by reason of the warm weather this fall, a large portion are sold to the Indians for their camp fires. The hind-quarters of venison that has been heated by the chase and suddenly chilled by the plunge into cold water, is totally unfit to eat. It is not only unwholesome, but is black and tasteless, unless it be a disagreeable taste which is sometimes nauseating if the deer has run a long time. Neither will it keep half as long as the fore-quarters, and the good meat is soon sold. The market until the last of November or December. Nearly all that reaches the market before that time from this State has been chased to the water by dogs and is worthless. No genuine sportsman will kill a deer in this way unless it be absolutely necessary to supply his larder while in the woods, in winter. The deer is killed by the hunter in the most insignificant at the person who takes advantage of the deer's winter slumber in the deep crusty snow of winter, when, by the use of nose-songs, he can walk up to the animal and kill him with a club as easily as with a gun. But wherein is the difference between this mode of hunting and driving into the water with dogs? In either case the deer is killed in his helpless condition. You can walk up to him and kill him with a club, as many do. Every boat crew is armed with a club, and one holds the deer by the tail while the other strikes him over the head with it.

I have been anxiously watching the columns of your paper for items concerning the progress of the migratory quail on their way south and their final location there for the winter. Won't some of our Southern friends keep a look-out for them and kindly let us know of their whereabouts through your paper. The last I saw or heard of them was Sept. 20, just at evening, when I heard one calling at Litchfield in this State. A letter just received from Mr. Carl J. Braun, of Messina—through whom our importation was made—says: "For the next spring I am ready to accept orders for any amount of birds, as I have made arrangements with several bird catchers, which enable me to get the birds cheap, and only strong and healthy birds." * * * I take great pleasure in the importation of our migratory quail into the United States for the enjoyment of a happy success." I can cheerfully recommend Mr. Braun to any fellow sportsmen who desire to import birds. Our birds last spring all came over alive and in good condition. His address is care United States Consulate, Messina, Sicily.

The following letter from the Chief Game Commissioner of New Brunswick gives in the true light the very sensible and equitable reasons for the enactment and enforcing of the game laws of that Province. It, moreover, exhibits the perfection of the system adopted by our friends across the border, who have waked up to the importance of strict measures, and are most commendably exercising them :

BRANSWICK, ST. JOHN, N. B., NOV. 18, 1978.

EDITOR FOREST AND STREAM:

Referring to a communication in your issue of the 14th inst., criticizing in a severe manner the new game law recently passed by the Legislature of the Province of New Brunswick, will you kindly make room for a reply in your valuable journal? Your correspondent, who is a Portland man, states that measures have been taken for the "purpose of excluding American sportsmen" from the enjoyment of our hunting sports. There is nothing in the letter or spirit of the law to call for such a remark, and were it not that New Brunswickers, and especially St. John men, hold Americans in high esteem, particularly sportsmen, I suppose, this communication would have been omitted. In 1934, in 1935, and in 1936, I have been in the province, its object being to prevent potholes destroying the rare and magnificent game of this country. Moose, caribou and deer have been, in and out of season, snared or indiscriminately slaughtered, while the pelts and flesh were sold in Canadian and United States markets. Wild ducks

The society so far have paid all the expenses incurred in their laudable object of game protection, and in the order that others should contribute who wished to share their sport, a license fee of twenty dollars is exacted from all non-residents, the proceeds arising from the fines, penalties, seizures and licences to be appropriated in carrying out the law. Is it unreasonable to ask foreigners to contribute as well as ourselves toward sustaining and preserving the game of the country? We hope to have by January 1 upward of three hundred county wardens, parish wardens and deputy wardens in the province to arrest and punish any persons found resisting the law, and we mean business. Your country is the only one that has a discriminating law, it also exists against Americans in the salmon fishing. You know the inconsistency of this statement, and can refute it if necessary, and can defend the province from these unjust aspersions. You have resided here, enjoyed our sports, possibly received a share of our hospitalities, and should resist charges known to be false. A copy of the Act 41, Vic., chap. 45, now in type, will be mailed to your address very soon. To this please give such publicity as will bleach out the grave imputations expressed by your contributor.

I am, sir, yours very truly,
 Chief Game Commissioner for the Province of New Brunswick.
 We have never lost an opportunity to defend the good
 name of New Brunswick in the prosecution of these com-
 mendable efforts of hers, either through our journal or other-
 wise.—ED. F. & S.

PARTELLO'S CHAMPION SCORE.

Creedmoot may properly be proud of the long-range achievements which have taken place on its broad lawn. In team shooting, at any rate, results have been reached there which fix it as the champion shooting spot of the world, but in single score work Benning's range, near Washington, D. C., seems to lead the van in the scores of J. M. T. Partello, a young department clerk, and a member of the Columbia Rifle Association. In a practice shoot, on the 1st ult, with several other members of the association, he ran up the phenomenal score of 234 in the possible 225. A doubt having been expressed about the score, the marksman put the record of his score-book into an affidavit, as follows:

[illegible]

That no sighting shots were had after the score was begun, and that no shots were omitted, and that forty-six shots were all that I fired on that day, the one extra being fired before I began my score. This extra shot I took to get the elevation for the new position of my Vernier, having changed it from the grip to the heel of the stock. J. M. T. PARTELO.

October 21, 1878.—Subscribed and sworn to before
[L. S.] JAMES LAWRENSEN, Notary Public.

For ourselves we have never seen any reason to doubt the fact of the score. Perfect scores at each of these ranges had been made before by various riflemen, and it only remained for some lucky fellow to pool his good fortune, and put his perfect scores into one day's work, and with the perfect score since made at 900 yards, Mr. Partello is too shrewd a young man to suppose for a moment that a score made thus in practice can or will carry with it the same weight as a record that a match score does. The 221 of Mr. Sumner in the walk-over at Creedmoor is *de jure* the champion record of the world to-day, while the score of Mr. Partello is *de facto* the top figure. In a narrow technical view the minor score would take precedence, while for comment and as a record of scientific value that of Mr. Partello is acceptable. It shows that the rifles now made are to all intents perfect, and if they vary from the true mark at all, the variation must be sought outside of the weapon. Mr. Partello was coached by Col. Burdette in his big score, in the way that any two friendly shots would help one another at the firing point, and when a mere lad, as Partello would appear beside some of the veteran shots, can drop into place, and with a good, steady hand and clear eye, pile up such a line of "bulls," English riflemen may begin to understand something of the merits of the American Team system. Had Mr. Partello been compelled to rely on his own judgment in wind and elevation matters, the chances are that his score would not have been reached before years of practice. But that mutual helpfulness which is so characteristic of American riflemen receives a remarkable exemplification in his case, and in his victory all his fellow-riflemen are honored, since he is as much the result of a system as of individual talent and advantages.

The cut above will enable readers and riflemen to form a perfect idea of the position assumed by Mr. Partello in taking aim. Under the "any position" rule it is allowable and for ease and steadiness cannot well be excelled, and would only need modifications in cases of peculiar personal build.

It should be recollected that there is no great antecedent improbability that better scores will be made year after year. This has certainly been the case in team-shooting, especially in America, and skeptics should remember that it was at first very hard to believe that there was not some error in the telegraphic accounts which came to us of the first great match at Creedmoor. But the scores then made have been exceeded over and over again.

And the New York *World* says that: .

Where a man has a trick of making seventy-five at one range there is good reason to doubt that he may repeat the feat three times in succession. Indeed, we think several of our riflemen will yet achieve a score of 255; as they have attained such precision of marksmanship that the occurrence of some little failure in matters of detail is almost inseparable from the firing of so many shots at long range, defects them rather than failure in skill. As matters stand even now the target must be diminished in size so as to afford an opportunity for a nicer discrimination between our foremost marksmen.

An unpleasant incident and annoying sequence of the shooting was a very uncomplimentary expression of doubt by one of our well-known Creedmoor riflemen who spoke in a boorish manner of the "improbability of the affair," and used other language of a similar tenor, closing up with some sort of a money offer for an opportunity to display himself beside Mr. Partello. This drew out from the President of the Columbia Rifle Association a cutting reply, in the course of which Col. Burnside said :

We had hoped that the fascinating and gentlemanly sport of target shooting with the rifle, in all of its stages, as indulged in on the various ranges of the country, and which is gaining such healthy favor among our young men, would be kept free from the taint of the gaming-table and prize ring proclivities that are entering into and tending to destroy all proper outdoor sports. Thus far we believe the rifle associations of this country have kept themselves entirely free from permitting such an abuse. It is one of the laws of our own association that any wager, in any form, whether on a match or otherwise, is strictly prohibited. In fact, the very nature of the practice, subjects the offender to fine and imprisonment. Our association may adjudge. We encourage the shooting for appropriate prizes, but our rules and regulations are so formed as to perpetuate, if possible, the sport as a gentleman's recreation, and not for profit or gain.

The English authority above quoted speaks on this point with admirable caution and duly considered words when it says:

We are sorry that Mr. Hyde offers to shoot a match with Mr. Partello for a large sum of money. Rifle shooting has prospered here just because we had the wit to discourage matches made for money, and we hope that Mr. Hyde and his countrymen will not take to them. As surely as they do, rifle shooting in the United States will become a matter of betting, and ultimately of cheating, and the days of the Palma and such honorable contests will soon be numbered.

Suffice it to say that the proffer to discredit Mr. Partello's score was very properly scorned by him, and he remains today with the best record in the country.

Some interest has been felt in regard to Partello's manner of loading his Remington Creedmoor rifle, and on this point he says:

"You should put as much powder in the shell as it will hold. If you just pour it in it will settle and leave a vacuum before you are ready to use them. Now, I use a long tube, about 3 or 4 feet in length, and when I weigh my powder I pour it through this tube and it settles down solidly. I find I can get 13 or 15 more grains of powder in the shells by adopting this method. Usually I weigh out from 103 grains to 116, but use my judgment as to the amount, according to the day. The object is to fill the shell and fill it solidly."

Mr. Carl Dittmar writes on the Express Rifle question, and is most earnest in pushing the claims of the Borchard model of the Sharps company. Of it he says:

In it we have as good an Express rifle as ever has been made in England, if I understand that the flattest trajectory or longest point blank range and greatest penetration makes

considerate of a hunting rifle, besides greatest accuracy, absolute safety and rapidity of firing. It depends only on the amount of charge, kind of powder and bullet. In the steel expands and does its work so fast that it is impossible in Sharps the shell can be used with ease any number of times, besides at the mouth the bullet always disintegrates. I fitted a telescope sight to a military musket, Borchard's model, and I think it cannot shoot better; it will compare with the most expensive rifle. You need only different sights on any of the Sharps models and change the bullet, and you have a Creedmoor, a military or a hunting rifle in one. For Express rifle I prefer the .45 cal., Borchard's model, as I can have it cut for my 25 ft. range, and the shell will expand to 100 grains of powder. In one of my Sharps rifles I use steel shells, which carry 5 drachms powder, and with that charge and a Creedmoor bullet I penetrate 35 inch bass wood, which, I think, is penetration enough for anything living, and which cannot be surpassed by any of the English Express rifles. I wish one of the cartridge Companies would make a brass shell for 5 drachms powder, as the steel shells are too expensive, although they last forever. For long range with this heavy charge the common brass minimum weight is 70 grains, and with a 550 grain bullet it will shoot well at 1,500 yards. Charge 5 drachms for a regular Express bullet and you have the best Express rifle you may wish for. I do not think it is necessary to have a larger calibre than .45 for Express rifle, and for longer ranges a larger calibre would not do as well. With the heavy charge and Express bullet no elevating sight is necessary for hunting distances; it makes no difference whether you shoot at 10 yards or 150 yards, aim just the same; over 150 yards take a little more course and, for a very slight aim, a little higher. For use around camp, or for a few small game birds flying objects I use a round ball, a pearl very little larger than the bore, and can do splendid execution up to 150 yards, over that the ball goes wild. Bullets and ball must be of hardened lead same as Creedmoor bullets. For rapidity of shooting, if the lever of the safety catch is removed, it is easy to make 10

PENNSYLVANIA.—*McVeigh*, Nov. 21.—After an absence of some weeks I again reappear as a contributor to you columns. Since my last report I have taken a hunt for deer in Licking Creek mountains, a well-known deer resort. The inclosed is the account of the trip I gave the *McVeigh Journal*. Perhaps you will consider it sufficiently for your columns: "Last week there was a party of five of us went to the Seven Mountains for a hunt which will be extended about two weeks. They sent out their first deer last Monday. I suppose there have been ten deer shot near this

place within the last few weeks, principally in Licking Creek. The turkeys have been shot off in large numbers. Five or six were shot last week. Rabbits have been shot without number. Pheasants are killed in considerable numbers. Today there were three wing shots from the Susquehanna region, accompanied by their setters, who went into Licking Creek to remain a week. Ducks have afforded considerable sport. A party of six went deer hunting in the Licking Creek and Black Log Mountains hunting grounds the other day. But one deer was seen, and that was a prolegis biped arrayed in petticoats.

TENNESSEE—Nashville, Nov. 21.—Buckholz, Mitchell and Turner in one day's shooting got 93 quail. Another party, consisting of John Carter and Dr. Griggs, had some excellent sport within a few miles of this city; they bagged 57 quail. A gentleman from Mitchellville, on the Louisville and Nashville Railroad, killed 120 in a day and a half's shooting. Miss Peyton, daughter of the late Col. Bailey Peyton (a once celebrated member of the part), reports very large numbers of quail upon her beautiful farm Peyton, in Sumner County. On last Saturday evening I met a man from Dixon County with a string of 35 squirrels, which he had killed that morning and which he was trying to sell at six cents apiece. It is a great shame that our game laws are so poorly enforced. Great quantities of quail are being caught in traps and nets and brought to market and openly offered for sale, without the offenders being molested. On Tuesday saw a number offered for the low price of \$1 per dozen. Would not the Tennessee Sportsmen's Association do well to look into this matter? A German resident of this city has just completed the task (on a \$50 wager) of eating one quail a day for 30 consecutive days. He says he will bet the same amount that he could continue eating one a day until the end of the season. J. D. H.

Fayetteville, Nov. 22.—We are having splendid sport partridge shooting; birds were never more plentiful. I went out the other evening, was gone just two hours, and bagged 22. In less than one mile from town I found as many as five coveys in one field of about ten acres, a thing that has not been done for years before. J. E. O.

GEORGIA—St. Mary, Nov. 21.—Partridges are more plentiful this season than I have ever known them. In places where there were none last spring, not even a stray whistling cock, they are abundant. And one thing strange to me is frequently finding a bevy of different sizes, part fully grown and part young. One bunch of five, for instance, were of different sizes. I thus I always find them together, and there are not enough of them for two broods. Ducks are scarce; I hope they are yet to arrive. Squirrels so abundant in places as to be troublesome; but shooting them, I must confess, is poor sport to me. The old hunters of Southern Georgia are strong advocates of the Florida belief that deer feed by the moon. Short.

ARKANSAS—Jacksonport, Nov. 19.—Game prospects good. Many fine bags of quail; turkeys in moderate abundance; venison coming in; bear hunters cleaning up their rusty guns; ducks coming in about on account of warm weather; a few woodcock, also a few snipes brought to bag. Wet weather to fill the lakes and swamps, produce a moderate degree of cold, will help us. Squirrels so plenty as to be in the way. YELL.

TEXAS—San Antonio, Nov. 14.—Quail abound in every direction around San Antonio. I saw one on the main street on the 10 inst. Turkey are on the Medina River fifteen miles from San Antonio. On the Frio, 39 miles distant, deer can be shot with a fair degree of certainty every day of the month. I notice hunting parties going out every day. ALMO.

ILLINOIS—Illinois River, Nov. 6.—These celebrated hunting grounds, lying about twenty-five miles below Peoria, and accurately described in "The Sportsman's Gazetteer" have lost none of their former attractions this year. The fall has been one of unsurpassed beauty, and hitherto have come from every point of the compass the numerous sportsmen to enjoy their annual hunt. The duck shooting has been usually good, and from Sept. 1st until the present date there has been no cessation of hostilities against the feathered race. As I write, the numerous lakes, ponds and sloughs are dotted with the winged hunters, and from morning till evening the air is filled with the dark shades, naught is heard but the booming of the gun and its echoes through the forests. To these I should have added the muffled cadence of the oars, the rippling of the waters and the soft murmuring of the winds. Over all these and much more besides, the Indian summer prevails, and who would ask for more? To be, contents his natural desire. The number of ducks (and lake geese) shot has been so large, and the sport so good, that it is impossible to say how many have been shot. A few thousand only fall at the hunter's crack, while an untold number in due time pass on to their next stopping place. All is well that it is so. When large, yellow, fat mallards, and delicious at that, go begging at thirty cents a pair, and the exquisite juicy teal at twenty and twenty-five cents a pair, it is well that no more are killed, but that the great bulk of them should be spared to the sportsman. With keen eyes, acute hearing and swift wing, they are quite equal to man in his warfare on them. They soon learn to measure a choke-bore with precision, though in experimenting many often tumble to the ground very unexpectedly. H. W. MERRILL.

Quincy, Nov. 14.—Two of us drove out the other day for a turkey and quail hunt. After going two miles we stopped at a farm house in the afternoon and spent the time until supper in the field, Tip bagging 18 quail and myself 13 in two hours' shooting. The next morning, accompanied by a cur dog, we started out before daylight and soon came across our game. The day's bag was 4 turkeys and 41 quail. A. B. B.

A CHICAGO GAME DINNER.—A great game dinner was given at the Grand Pacific Hotel, Chicago, to which an envied 500 guests sat down, were served by 125 colored waiters, and took their choice of 124 delicacies on the bill of fare.

BRASS SHELLS.—A correspondent gives his individual experience as to brass shells, as follows. The new shell he alludes to is intended for a certain distance. It is manufactured by the Union Metallic Co., of Bridgeport.

Philadelphia, Nov. 24.—The Sturtevant people are getting up a brass shell, especially adapted for holding wads tight. I find that the fibre wad is the only wad to use, and one size larger than the shell used. Brass shells ought not to be cleaned on the inside if you want to make the wads stick. The Sturtevant is in my opinion the best shell (brass) made.

I have used them for four years, and have not had one get out of order. I have bought over 1,000 of them for different friends, and have yet to hear of the first complaint or the breaking of an avul.

R. T. C. S.

OLD-SQUAW CALLS—Illness, N. Y., Nov. 19.—In the last number of FOREST AND STREAM your correspondent, "S. G. S.," of Bridgeport, asks if any duck call is for sale with which the note of the old squaw duck may be imitated. Such a thing would be impossible; but if "S. G. S." will go to some good point where he can hear the ducks calling frequently, and will repeat in a loud voice and on a high key the syllables, on-on-on-on, at short intervals, he will be able to imitate them perfectly. I am not especially favored in being able to imitate birds' notes, but have called old squaws over my decoys for hours at a time. Geese also may be called as readily with the voice as by having a honking gander among the stools. The duck calls sold in the stores are very good indeed for calling black ducks and mallard, and also teal, if you are in a locality where there is a large flock of them. The note of feeding together. The old-squaw call will be of no use in fresh water, as the ducks very seldom call until on the sea. I have called to them a great many times on our inland lakes and have never known them to take any notice, when, if on the sea, they would have been turning back and pitching into my decoys every few minutes. R. T. M.

NATURE AND ART.—New York, Nov. 20.—Thinking some of your readers may be reminded of pleasant times spent on the Great South Bay, I place the following (told me this fall by an old gunner at your service: I had just remarked to him that his decoys were in first-class shape. "Yes," he said, "but nothing like what they were. Why, you know, when I first got 'em I stored 'em up in the loft, and if my old cat didn't get up there and eat the breasts and a third of 'em 'fore she found they were wood." W. T.

SPORTSMEN AT DINNER.—The stockholders of the Blooming Grove Park Association have an excellent dinner at the Hoffmann House last night, partly for fun and partly to discuss the condition of the club. A telegram was received from President Dudley Field, who was detained at Philadelphia, and Mr. John Avery, the Vice-President, took the chair in his stead. There were present M. B. Brown, the silent but liberal member; William F. Jones, the staid and abstemious gentleman; E. Sandford, the traveler, who has slaughtered foxes in Russia and assisted at pleasant excursions in every preserve in Europe; John McGinnis, of Wall street, the wit of the club; William H. Fearing, the financier; the brothers Washington S. and C. Andrews, the solid men of the association; A. A. Drake, the punster; T. E. H. Curtis, the solemn man; John Avery, the scientific member; Cassius H. Read, the confidential treasurer; H. H. Wolfe, the impulsive man; S. B. Eaton, the professional man; T. E. W. Clarke, the "up in a balloon" man; the venerable Gen. John G. Anderson; S. M. Nash, the Adirondack explorer; George S. Greene, Jr., the special consulting engineer; George H. Glenney, the oodological genius; Ronald Thomas, of an inquiring disposition; George H. McLean, D. L. Bartlett, Frank Reynolds and Count D. B. Monzilly. A long report of the Executive Committee, with suggestions, was read by Dr. E. Bradley. The reading was frequently interrupted by well earned applause. The report showed that the association had a balance in hand of \$288, with \$2,115 uncollected dues. If these were all paid, together with dues of April, the debt of \$3,600 could be extinguished, with \$1,600 to spare. After some discussion it was resolved to appoint a committee of nine, consisting of Messrs. Greene, McGinnis, Eaton, Count Monzilly, Thomas, Bradley, Avery, Sandford and Anderson, to report within thirty days upon the best means to relieve the pressing necessities of the association, as well as to further the improvements proposed of the preserve in Pennsylvania in the shape of a wind mill, laundry, more gamekeepers and additional protection to game.—N. Y. World.

SHOOTING IN ENGLAND.—At Rhiwla, Bala, North Wales (the seat of Mr. H. J. Lloyd Price), on the 11th, the bag was 307 pheasants, 159 partridges, 122 hares, 140 rabbits, 8 grouse and 14 snipe; and on the 12th, 256 pheasants, 21 partridges, 1 woodcock, 10 hares and 27 rabbits. Game is plentiful in Richmond Park this season, and there are a fair number of pheasants and rabbits in the inclosures. H. R. H. the Duke of Cambridge had, one afternoon, from 12 to 3:30 amongst the ferns, when three quail were bagged by well carried shotguns, and 2 rabbits. H. H. the Maharajah Duleep Singh, the Earl of Leicester, Earl de Grey, Lord Walsingham and Lord Huntingfield shot at Elvedon Hall last week, killing on the 15th, 934 head of partridges, pheasants and hares, and on the 16th, 753 head, on the 17th, 897 head, and on the 18th, 589 head.

WHERE CARIBOU ABOUND.—A friend of mine who visited Newfoundland on an exploring expedition, informs me that there the caribou holds almost exclusive domain over an unbroken wilderness of nearly 30,000 square miles, in a country wonderfully adapted to its habits and bountifully supplied with his favorite food—the reindeer lichen.

The caribou is possessed of much curiosity, and does not readily take alarm at what he sees. Where his haunts have been un molested he will unconcernedly trot up within range of the rifle. I am inclined to believe that a great deal of this apparent fearlessness is due to defective vision. If this is so, he is compensated by having a marvelous gift of scent, quite equal, if not superior, to the moose. The wandering habits of the caribou make it very uncertain where one will find him with his eye, even in his accustomed and well-known haunts. When once started, the chase is sure to be a long one, and its results doubtful—in fact so much so that an old hunter seldom follows up a retreating herd, but resorts to strategy and tries to lead them off, or at once proceeds by the shortest way to some other barren in hopes of finding them there. The caribou in jumping is more than the equal of any other deer.—O. G. Ward, in Scribner.

THE BOHEMIAN GLASS COMPANY are now placing 250 glass balls to the barrel instead of 300, so as to allow more room and less breakage. They also make an allowance for breakage. The company is also fully prepared to furnish chimneys for Argand burners when especially ordered by friends.—[See adv.]

A MOON LOST MAN.—Editor Forest and Stream: I often hear sportsmen talk as if they knew what was lost meant. The writer as a boy, well instructed in woodcraft by some of England's best deer stalkers, was bound to be lost; many a twenty miles, on the Yorkshire Moors, to see a house away in the distance, footsore, tired and hungry, to reach that house by dark to know which way the Leads Road was, to stop all night, with a tramp of 10 to 20 miles to home. I was lost in the Norfolk Woods, now owned by the Prince of Wales, to

stay all night in a rabbit burrow. America found me a healthy boy of 18. I wanted to hunt the prairie chicken to the State of Illinois. I went, to be the worst lost boy I know of. I filled my pockets with chickens, then to find I was not on a Yorkshire Moor, but on the west plains of Illinois; as far as eye could reach, tall grass. Four days and three nights I fed on chicken. Bless that farmer who was hunting his lost horse. He took so much interest in me and my breech-loader as to drive me to the nearest depot. I was lost on the Wabash, in Indiana, to sleep in a snipe bog all night. The Union Pacific was being built. I wanted a buffalo. I joined a party; cleaned up my rifle; a spirited pony and plenty of 10-shells completed my outfit. We struck Buffalo. I hit one; I chased him and I got the largest game I had ever seen; I skinned him, and I got lost. I lived three days on that buffalo and I got lost. I was lost on a cattle drive. I was lost on a hundred yards of camp on the Trinity River in Texas. I was lost on the Pineys in Colorado Co., Texas, at a turkey roost; to eat turkey two days, and had to guard my game from wild cats. My trusty breech-loader laid out ten wild cats that night. I was lost on the Sandies amid cane-brakes; could not see ten yards ahead; bear and wild cat after me and I was lost. I was lost on the time. I was hanging up for 500 yards off, still I had to get supper and breakfast on wild cat. Found by a pack of hounds, whose owners directed me home. I was lost on Miller's Creek, where I had killed a fine doe. I died and breakfasted on her, and found myself. I was lost on the Frio, Bear Co., Texas; died on jack rabbit and guarded my horse at night from Indians. Always carry matches and tobacco. I play the lost sportsman who does not know where he is, but is sure to get lost. I am sure it is good company in the canebrake or the thick woods. Lost people. I have always been told, go in a circle. I go in a bee line from where I want to go. Some carry a compass; I have never found of much use when I did not know from where I started. Creeks always run toward the river, but suppose you do not know if you want to go up or down? Trees are always heavy on the south side, but suppose you do not know whether you want to go north or south? The only way I know how to get lost is to stay at home. I love the woods and plains alone with my gun and dog; I pleasure is not to be had without pain, and do not laugh if I get lost again. ALMO.

San Antonio, Texas.

SHOOTING ON THE WING.—Poor Sothern, the actor, is in a bad way in England; softening of the brain, or something of that sort, they say. It is feared he will never play again—nor fish, nor hunt, as he used to do. Sothern devoted a part of each summer's vacation to fishing and hunting in Canada. F. G. de Fontaine, in his inimitable biography of the actor, relates a little incident which occurred at Quebec, when Florence, Geo. Holland and Sothern were rambling through the town waiting for the steamer. They had started down the principal street.

Suddenly Florence commenced to yell: "Hi, hi, there! You—man with the birds! Hi, hi, come here!" Sothern and Holland turned to see what the bluster was all about, and observed Florence gesticulating to a man on the other side of the street who was carrying a lot of birds on a string. Florence said:

"Florence, what the mischief is the row?"

Florence replied: "Sh-b-b-b! Birds, my boy, birds. We'll buy them from this sportsman and take them down with us; it will be a pleasant change of diet—broiled birds on toast, you know."

By this time the "sportsman" had crossed the street and was standing before the trio. He was rather a singular sort of a fellow, and with a German. His face was about as expressive as a Bologna sausage, and though not deaf, it seemed to take minutes for each inquiry to reach his understanding. This at first made Florence think he couldn't hear. Billy opened the negotiations by asking:

"Do you want to sell your birds?"

The Teutonic sportsman, after a long, dull look, replied: "Vot?"

"Vot," repeated Billy, much louder, "do you want to sell your birds?"

The same long, dull look from the man, and then he drawled out: "Vell, yes, I dink I sell dem."

"Well, how much for them?"

"Vot?" with same stolidity as before.

"I say, how much for them?" howled Florence.

"You buy dem?"

"Of course I'll buy them; how much do you want for them?"

"You buy dem all?"

"Yes, yes, I'll buy them all. Come now, let's finish the bargain."

"Vot?" with the same stupid look.

"Oh, Lord!" said Billy, got getting red in the face.

"What a stupid fellow! Look here! how much for the birds?"

The vendor of game for the first time seemed to understand, for he commenced very slowly and in the most expostulating way, to deliberately count his miserable bunch. Florence was getting impatient, and just going to bawl out again, when the man looked at him as before, and slowly remarked:

"Vell, I sell dem for two dollar."

"All right," said Billy. "Now, where did you shoot them?"

"Vot?"

"I say, where did you shoot them?"

"Vero I shoot 'em?"

"Yes, where?"

"I shoot dem out mit der woods. Would you dink I shoot birds in my front parlor?"

This rather staggered Billy, and they all commenced to laugh heartily, for he was now the color of a boiled lobster, but yelling at the top of his voice, he replied:

"Why, of course; I suppose you shot them in the woods, but how did you shoot them?"

"Vot?"

"I say, how did you shoot them?"

"How I shoot 'em?"

"Yes, how?" Did you shoot them on the wing?"

"Vot?"

"Did you shoot them on the wing?" howling in his ear.

"I shoot 'em on der wing?"

"Yes, on the wing." Here Florence went through a pantomime with his arms to describe a bird using its wings.

The sportsman gravely looked at Billy for a moment, and then replied:

"Vell, I dink I shoot dem on der wing, some I shoot dem on der head, and some I shoot dem on der tail. I dink it's all right."

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Rifle, which weighs about one pound, and most instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

£100, and a money prize of £700, the greatest
prize ever shot for at Monaco, was competed for by
sixty-six of the best shots of all nations, and won by
Mr. Cholmondeley Fennell, with a full-choke bore
Wedge-Fast Gun by W. W. Greener, killing 11 birds
of 12 at 23 yards and 1 foot and 3/4 yards. He
also won the second event, killing 8 birds in succession
at 33 yards, making a total of 19 birds out of 20. This
he acknowledged to be the best shooting on record.
The winning gun at the choke-bore match, 1877, beat-
ing 17 guns by the best London makers, and winning
the silver cup, valued at 50 guineas, presented by Mr.
J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and
Mr. South for \$500 a side, South killing 38 birds out of 100, using one barrel only.
The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest
and most durable ever invented, and is the most successful gun of the period. Intentioned in the United
States, Oct. 5, 1875; No. 163,393. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England.

H. C. SQUIRES, Agent, No. 1 Corlandt Street, New York City.

CHIPS.

A New Expansive Concentrator, with wire wad, for use in breech and muzzle-loading
guns, making straight-bore shoot as well as choke bores are supposed to. Cheap, convenient,
safe and sure. For sale by gundealers generally at \$1.25 per hundred for 10-gauge, and \$1.10
for 12-gauge; 10 and 12-gauge now ready; other sizes to follow. Packed 50 in a box.

Sent by Mail, Postpaid, for 75c. per Box.

**Buck and Heavy Drop Shot Cartridges for Long-Range,
Deer, Duck and Goose Shooting.**

**IRA A. TALLEY'S
FEATHER FILLED GLASS BALL.**
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we
would respectfully caution the dealers against laying in a stock of unsuitable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.
No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.
Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.
Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Glass Balls are now made even, and carefully packed, with
30 in each barrel, and by having a rough surface strengthen the ball for
flight, and prevent the glancing of the ball, while the smooth ball has to be made so
thin to break successfully when hit that sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now,

**I Will Warrant my Balls Against Breakage by
Transportation,**

and will pack 10 extra. I have had 5,000 shipped out West since my return from
England, and used them myself. I sometimes would not find a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where glass used them you can readily see which is the hardest shooting. In
matches reported in papers, saying Bogardus' rules and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots and further, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upheld the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a marksman and experienced man. I will return the money to any one who has bought
the book and thinks they do not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4. "Field, Cover and Trap Shooting," \$2.
HEADQUARTERS FOR BALLS, HAGERSTY BROS. & CO., 10 Platt Street, N. Y. City.
"TRAPS, HART & SLOAN, Newark, N. J."

COME BACK.

SHRIETER ISLAND, L. I., Nov. 14, 1878.

EDITOR FOREST AND STREAM:

I have received lately a letter from one of the many admirers of Frank Forester in Chicago, who incloses to me several slips from papers published at the time of his death. Among them he sends a poem (which I inclose) attributed to him, and supposed to be addressed to the wife who had left him, and which was the probable cause of his death.

ISAAC McLELLAN.

Come back and bring my life again

That went with thee beyond my will!
Restore me that which makes me man,
Or leaves me wretched, dead and chill!
Thy presence was of life a part;
Thine absence leaves a blank of death;
They wait thy presence—eye, and heart,
With straining gaze and bated breath.

The light is darkness, if thine eyes

Make not the medium of its ray.
I see no star in evening skies,
Save thou look up and point the way.
Nor bursting buds in May's young bloom—
Nor sunshine rippling o'er the sea—
Bears up to heaven my heart's perfume,
Save thou my monitor can be!

There are two paths for human feet:—

One bordered by a duty plain,
And one by phan'oms crooked, yet sweet—
Bewildering heart, and maddening brain,
The one will right and reason urge,
But thou must walk beside me there,
Or else I tread the dizzy verge,
And thou some guilt of loss must bear!

Come back! There is no cause on earth—

No word of shame—no deed of wrong—
Can bury all of truth and worth,
And sunder bonds once firm and strong.
There is no duty, heaven-imposed,
That, velvet-gloved, an iron hand
Upon my heart-strings crushed and closed—
Thy hate should all my love withstand!

Days seem like ages—and, ere long,

On senseless cars the cry may fall;
Or, stilled by bitter shame and wrong,
The pleading voice may cease to call.
Come back! before the eyes grow dim
That keep but sight to see thee come;
Ere fall and falter hand and limb,
Whose strength but waits to fold thee home!

For Forest and Stream and Rod and Gun.

Field Sports in San Diego Co., California—No. 2.

BY T. S. VAN DYKE.

BETWEEN the Santa Margarita and San Luis Rey rivers there runs through the high table land a lovely valley some three miles long, and so filled with majestic live oaks and sycamores that one can walk in places for half a mile under a continuous shade. In the choicest part of this is the apary of Mr. V. O. Reche, now known as Fall Brook Post-office, and here I have anchored my roving bark. Mr. Reche does not undertake to keep boarders, but any one who is fortunate enough to find room with him will fare far better than he would dream of in so wild a place, and find better treatment than he will be apt to get in most places with far ampler facilities for making things pleasant.

The quantity of quail in this valley is amazing, but hares and rabbits are not so plenty as in El Cajon, while in a few miles of easy drive is the best duck shooting in the county. The quail shooting I have already described in a former article, and the ducks and geese I will leave until winter. But there is one kind of hunting of which I must tell you fully, because it is not only one of the finest of American field sports, but one to which I think no approach to justice has been ever done by the very few who have attempted to describe it—still hunting in San Diego County.

As this is no place for either natural history or methods of hunting, I shall give but one or two points about the deer of this section before we start on a hunt. It is generally supposed to be the black-tail, but is in fact a variety of the mule

deer, a point already fully explained in this journal. It is a shorter-legged and shorter-tailed deer than the white-tailed or Virginia deer, and is not on an average quite so large. Few does will dress as high as 100 pounds and few bucks over 150, although I have shot two estimated at 200 that would surely have gone 225 if as fat as deer often are at the East. Though never as fat as the Eastern deer often get, this deer is still very good eating, and though not quite as wary as deer that are incessantly popped at by market shooters, is quite smart enough to make you polish your wits up bright to see him, and when alarmed, whether wounded or well, can do 100 per cent. more of "gittin' out" per second than any other animal that runs. It rarely runs with thelope or canter of the white tail, though it sometimes does, but its usual gait is a perfect bound or bounce like a ball, all four legs striking the ground at the same instant and grouped close together with the legs almost stiff. Though they soon tire, they will run this way for half a mile or so as fast as a horse, up hill, down hill, over or through brush, over rocks, fallen trees or anything—all ground seems equally easy to them—their feet making all the time only one regular "bump, bump, bump, bump" on the hard dry ground.

He has no flaming white tail to wave adieu to blighted hopes, yet he has a complacent wiggle of his little stubby tail as he dissolves in the chapparal or fades over a ridge that operates as an equally effective stimulant to the ejaculatory tendencies of mortified humanity. He has also a very neat but intensely annoying little trick that I never noticed in the white-tailed deer—that of sitting or crouching in brush. Dropping its head and crouching low, it will often stand concealed in brush but a few yards from you, and all the noise you can make will not start it sometimes. When wounded it can skulk out of your sight in brush only four feet high, and unless you can get above it you often cannot get a second shot. The quantity of small bullets this deer can get away with is astonishing, and a small-bore is utterly unfit for this country unless the ball be made expansive, and even then you will lose about one-quarter of your game without a dog, and some even with a dog.

The "Burro deer," or Colorado mule deer, is found on the desert slope of the mountains, but not on this side, except very rarely. No other variety of deer is ever seen here. There are a few grizzly bears and panthers in the mountains, and in two or three places is yet a small band of antelope, but none of these are plenty enough to hunt with much prospects of success. The black and cinnamon bears, the elk and mountain sheep are not found here.

About twice a week a camp hunt is in order, for Reche is an old sportsman and quite as fond of hunting as I am. After dinner it is the work of a few minutes to toss into the wagon a couple of saddles, a box of *brio-a-brac* for the internal "whatnot," and our blankets, etc., and a drive of about an hour amid splendid scenery brings us to our ground. Good deer range is abundant on all hands, as the saddle of the average deer borne to the square league, and few of them hunt much. We will go to-day, however, to the high bluffs of the Santa Margarita. These are about 1,000 feet high and break away on the top into gulches, basins, canyons, ridges and peaks of various sizes.

In and along these little gulches and canyons, and especially around their heads, some favorite resort of the deer by day, where, ensconced under the thick green shade of the sumac or some other evergreen, they chew the cud of calm content through the heat of the day. About sundown they move about and browse, descending to the river during the night and loading lazily back toward the top of the bluffs after daylight in the morning and lying down from seven until ten o'clock, according to the moon and the heat of the sun.

Imagine yourself with me above us to our ground. Good buckskin moccasins, overalls, shirt and hat instead of the fire-torn pounds of sudorific oppression you pack over the Eastern hills; a dress you can wear 340 days in the year here, and which makes 100 per cent. difference in the comfort of shooting. We saddle up the horses, and, after climbing 700 or 800 feet, tie them to a bush while we go on to find a lead for them. Owing to the unusual growth of vegetation last winter, which now lies dead and brittle, still hunting is this year very noisy hunting, and deer cannot be approached as closely as usual. Running shots, and long ones at that constitute about two thirds of all the chances we will get, unless extremely cautious and keen-eyed. For the same reason tracking is this year such a very difficult and slow operation that it scarcely pays. The best way is to visit such places as the deer lie down in and depend on jumping them, or seeing them from a long distance while on foot in the morning or evening.

We take a trail that winds up the side of a ravine. It is one made by the wild cattle, and will allow us to travel softly and easily. After winding around the heads of two or three gulches and the base of a small peak, it descends into a basin some 200 yards wide and 150 feet deep, the bottom of which is cut up into gulches and ridges, with plenty of sumac and other evergreen bushes scattered thickly here and there. It will never do to enter that in this trail, for it goes down a ridge in plain sight of anything that might be in it. You swing clear around it and get on the opposite side, and then I'll enter it by this little swale that runs down to the left and come across to you. There is almost certain to be a deer lying in there, and we must figure sharp to get a shot at it. Before you get half around there's a rapid bump, bump,

bump, accompanied by the smash of brush. Run for that point that makes out there a few yards ahead and ply thy moccasins as though a grizzly mother were racing close upon thy rear, while I run with equal speed for the point over which the trail goes. Arriving at our points almost together, we see about half way across the bottom of the basin careering wildly over bushes, wide gulches and heavy boulders, with high and flying bound—what? The regulation big buck, that inevitable blank-blank-dead-blank-blank of a blank-blank old buck? No. *Mirabile dictu*, it is not, but only a couple of what the high-minded, noble-souled sportsman always disdains to butcher (with the quill)—two poor little innocent baby-deer. The poor little things are only about two-thirds grown, and of course we'll be magnanimous enough to let them live and hunt up something worthy of our lead. Yes, if I know anything about fawns I think likely we will, under present circumstances, anyhow. Of all nonsense the idea that a fawn is necessarily easy to kill is one of the greatest. A spotted fawn is quite another matter; but, three times out of four, a fawn two-thirds grown will test the wits, nerve and skill of a hunter quite as much as that everlasting old buck, who, especially in the fall, is much more likely to be an old fool than a fawn is to be a young fool.

Bang! whang! go our two rifles, both bells passing just over the rump of one as he comes down from a high spring. Hold lower and farther ahead next time. Another jump and they disappear in a gully that makes off to the right and leads into a patch of heavy chapparal. Scramble now as fast as your legs will bear you for the side of the basin above that, while I go down and follow up the gulch. They will probably skulk now in that thick brush, and I will drive them out. Keep a sharp watch from above and send a ball into the first patch of gray that moves in the brush. We soon reach our place, but all is still. The noise of bouncing hoops and crashing brush has ceased. Perhaps the poor little babes are exhausted and are waiting for us to walk up and blow their heads off.

After thrashing around in the brush for eight or ten minutes I reach you. You have seen nothing and heard nothing, and neither have I. Where in creation can they be?

They may be yet skulking in that brush or—. Look on your ridge some 500 yards off behind you. Do you see just over the low chapparal two delicate heads and two pair of long, gray ears turned toward us. Raise your 250 sight and pull away; it's the only chance now.

Before the sight can be adjusted and the rifles raised the heads disappear, two dim gray spots bob up and down once or twice in the chapparal, and all is still.

Can those be the same two? Let's circle around a little and see. Yes, here are the tracks coming out of the head of this little brushy gulch. They have gone out on a trot, you see, and doubtless crouched so low that the brush concealed them.

And so were we cured?

Even so. It's utterly useless now to follow them. Let them go, then. Who would kill such poor little babes? Verily, who would? More properly, who could?

The sun is now sinking fast; the silver sheen of the far-off Pacific is changing into burnished gold; the distant peaks of green and gray are reddening into crimson and purple; the soft green of the chapparal slides into a dark velvet blue; the humming-bird and bee are humming on their homeward way, and the roaring wings of hundreds of quail going to roost resound like distant thunder from the long, green canyon 1,000 feet below. Something must be done quick or we are "Chicagooed."

Hark! that is the crack of Reche's Maynard in the next basin. Run quick, for he may have jumped more than one, and it may come this way.

A dash of 200 yards along a cattle trail that follows the ridge brings us in sight of the basin from which the shot came, and up the right-hand side, rises from the previous bounding down, a gray race, a long-eared mass of gray, with glistening horns projecting high above his head. He looks as round as a mule and shines with sleekness. He is 175 yards away, and rising at least three feet at every jump. No mortal rider can touch him on that gait except by chance. We'll try him, though. Pull ten feet ahead of him and fire, not when he is in the air, but when the hind legs are just on the previous jump, for it is necessary to shoot a whole jump ahead of him.

Bang! bang! ring the two rifles in succession, and the dirt flies just under him and just behind him. Bang! goes my second barrel, held a little higher to avoid my previous error, and the dirt flies just over the edge of his back. Bang! goes your rifle, and again the dirt flies behind him. And still that buck goes on, goes on. A way he scrambles with crashing hooves, up the side of the hill, just around the corner, and behind him, yet still his days go on, go on. In a moment more he vanishes in a pocket of the mountain's dark green rest, and we are—Chicagooed?

Even so; for the short twilight of the South will leave us no time to find another, and it's quite useless to follow this one. Reche whistles a signal on an empty shell that he has one and sends the right-hand side, rises from the previous bounding down the mountain, undulating on the wretched case with which deer can slip through a hunter's fingers and the immense amount of space there is outside of one.

After a supper of chocolate—the best thing to sleep on—smoked venison, quail, biscuit, pie, grape and peaches, surrounded by the piper amount of lingual music and tobacco smoke, we go to rest under the only tent needed here for

about nine months in the year (and two-thirds of the time in the other three), the starry blue tent of night.

At four o'clock Reche pipes up to breakfast, and by the time it is light enough to shoot we are on a high spur near where that old sinner of last night disappeared. I have little hopes of seeing him again, but we may see him, and this is as good a place as any to see others.

Slowly we steal along the heads of the high gulches that run up from the river and the points that jut out into the basins. Fast the dim gray of morning silvers into gold, and yet we see nothing.

Hist! Down low! Now raise your head cautiously and look in the edge of the chapparral just below yonder peak. Do you see that spot of dull gray?

Peep down that rifle. No trying long shots if we can get closer. We must make the top of that peak. That spot is browsing and suspects nothing.

Swinging carefully around and out of sight, in a few minutes we reach the top of the peak, some 125 yards above where the gray spot was. The morning sun now floods the dark-green hill with golden light and glimmers on something bright in the edge of the dense chapparral below. We see it move, and several times close beside it. And now we see it! The long, gray ears on each side of the glittering lines.

Keep cool now until we can see his body. Just take it easy and make no noise or motion. We must have a sure shot on him if we have to wait an hour.

In a few moments he moves out and stands in the open, about 130 yards from us, proudly erect, with massive neck, shining coat and glistening horns—a grand picture on a grand background. Fifteen hundred feet below, through its immense and rugged banks, the river whirls its sparkling mica sand; the deep gorge, with sides robed in a thousand evergreens, is filled with a hundred hues and shadows; the aged oaks and sycamores, and even the old, gray granite boulders, that hang along the slopes, seem to smile with new life as the rising sun strikes them. There stands the buck snuffing the morning air, watching keenly every approach, and apparently puzzling himself over our movements.

Here, take my rifle. That chap must be killed dead, for if he can run for two minutes he is lost to us, and to-morrow the buzzards will be wheeling above him. Sit down and rest your elbow on your knee; take it as coolly as if shooting at a target, and hold a very fine sight middling high in his shoulder. There, he starts off on a walk. Pull a few inches ahead of him and let go.

Bang! go five drachms of lightning powder from my .63 calibre Nichols & Lefever Express. A distinct "whop" comes back on the air; the buck humps his back into an arch, walks a few feet, staggers, and lies down.

Sit right still. You wouldn't believe me about holding ahead, and have hit him too far back. He can't stand that 600 grain expansive ball, anywhere, and will soon die if he gets alone. By if he sees us he may make a plunge and get into the brush. Hold ready to give him the second barrel if he rises.

But it's not needed; for see! his head droops, he gives two or three convulsive kicks and rolls over, dead.

He is soon loaded up on a horse and we return to camp, where we take another lunch and some coffee, then break camp and get home by seven o'clock, the whole hunt requiring more time than much less for many an ordinary "chicken hunt" back on the Western prairies.

For Forest and Stream and Rod and Gun.

GEESSE, BRANT AND DUCK NEAR ABSECOM.

DUCKING UNDER DIFFICULTY!

I HAD been for a week too sick to try cases, but well enough to be out of bed, when I received a telegraphic summons from Albert Adams, the jolly good fellow who, till last Tuesday, filled the office of Sheriff of Cape May County, N. J., to come and shoot ducks at Lead's Point.

The dispatch took me in the humor, for the sight of pleas, bills, narrs, replevins and replications had become extremely disgusting to me, and even politics, which Seward (the great Wm.) said was the "sum of all the sciences," failed to charm me.

Stein, the prince of gunsmiths, got ready my double-barrelled Westley-Richards, and I hauled out my R.R. pass, intent on brant, duck and wild goose, and struck the 4:15 p. m. train at Camden, on the Atlantic Road for Leeds Point, Atlantic County.

A six-mile drive over a good road, in a country stage by the moonlight, on as sweet a night as that upon which Jessica sat and sighed her soul away toward the Grecian tents," led us up to the door of Joab Sooy's hotel. Joab, who is a double-fisted, warm-hearted, big-browed Jerseyman, welcomed us right royally to the freedom of the hostlerie, and to a supper of buckwheat cakes, Jersey sausages, and coffee the color of Samory Bettie's (Quaker) coat; coffee as cheering to the eye and the taste as Blanchard's "eruberry"—that Shenstone might have envied.

High Sheriff Adams, as brisful of mother wit as an egg of meat, had provided himself with an overcoat pocket-full of Irish potatoes, one loaf of bread, a bag of salt, and a demijohn of old "hibson."

Like the Western woman, I never could abide the taste of corn, but when it took the shape of corn-jelly I could worry a little down.

Adams knew this, and knew that I was really too sick to go a ducking, but had enough of the mitching mallecho, or mountain devil, in him to desire much to see how a Jersey lawyer would behave at 4 o'clock in the morning on the dreary, dreary moorland, with a carbuncle on the back of his neck—too sick for the labors of law, but well enough to seek brant and duck with a fowling-piece at the early hours of the morning.

Aber Doughty, the best gunner in the bay, called for us at 8 A. M. at the coldest November morning I had ever appreciated. Joab, feeling sympathy for me on account of my resemblance to the Job of the Bible—he of the many boils—gave us a hurried cup of coffee, which, like the gold which Tenyson says made the hurt that honor feels, sweetened and braced us up for the toils of the day, which I knew would be considerable, as soon as I sniffed the morning breeze of as bracing a day as ever welcomed a skater on a winter's rink. There were four of us; besides the High Sheriff, with the "skipping spirit" Adams, came Doughty and his assistant, all loaded to the teeth with "traps," as well as our heavy guns.

We slashed through the "marsh," as the countrymen call the marsh, for three miles before we struck our boats, two in number, beauties to look at, fair and frail, but so light that in an hour or two of our hard hunting we could drag them single-handed out on the beach. It had been many years since I had seen the sun rise—in fact, I never remember having seen it rise before; and as the rosy-fingered god of the morning went up the sky, like a bride blushing for her bridegroom's coming, I thought of Chaucer's happy line—

"Up rose the sun, and up rose Emily."

A long pull and a strong pull landed us two miles from where we started, on a shelving beach, which our little boats no sooner touched than the company of Skipper Aber Doughty, who heeled them up high and dry, and quick as willing hands, a little numbed with cold, could do, we had dug a trench, planted our boats in them, and built up a breastwork as high, perhaps, as those of Bunker Hill, when our ancestry saw the white of the British eye.

Aber planted his decoys swiftly as I can write the account of it, and then kindly loaded my double-barrel *secundum artem*, and told me to sit down in the little boat and keep still. Alfieri Adams (for so we had named him for the burning-red of the hair of his head) clamored for a cocktail, gazing with pathetic tenderness at the demijohn which seemed as near and dear to him as the apple of his eye, albeit it was not apple-jack. The demijohn had to be opened, as he swore no duck should fall till one swallow (of Gibson) had helped to make a summer in his stomach. I am habitually a temperate man, and like John Alden, the noble Governor of Massachusetts, of blessed memory, not a total abstinent; but the truth of history must be told when I say that that cocktail caused gladness of stomach all around the board. We had not crawled into our boats five minutes before a flock of brant (a bird always seeming to me to be half duck and half goose) circled around our decoys in easy distance of our shooting irons as we cautiously bent the pregnant hinges of the knee. Alfieri Adams blazed away, dropping two brant, simultaneously, just as my great ducks were about to let drive both barrels, and down tumbled three royal gold ones. Well, it might have been "ag'in" the rules of the game," but I think the shout which went out of that red head (A. A.) and from the vicinity of the carbuncle of M. S., could have been heard at Barnegat.

Aber Doughty looked disgusted, but "scopped in" the ducks by hauling on the light barrel and casting it into the quick as lightning. Our success warned us up. Even Alfieri cast no longing glance at his big demijohn, and said "Gibson" not once. He patted his paunch of plethoric size, with fat capon lined, and asked permission to build a fire, roast some potatoes, as it was eight of the clock in the morning and before breakfast. "Some drinking, but no eating," said the sententious Doughty, "till this ere duck shooting is done."

We relapsed into our respective boats. An hour passed, and we could see the flock of brant and ducks, thousands in the distance, for the bay is dotted with islands, and apparently from every island came the most sweet voiced "honk" of the wild goose. It had become a question of endurance between me and the red-headed sheriff—one of the best fellows, too, to travel with the world ever saw—which could stand the longest. The longer we waited, the more I told me the side-splitting anecdote which the brant would be slowly coming down toward us with the tide; then he would quickly slip beside his gunner, who had all he cared to do to keep the sheriff quiet. "D—n it," said the gunner, "all lay still for them brant; you can't take them with no sort of *Hocum Pelius* like you can them runaway buggers around the Cape May Point." Alfieri subsided.

I sat shivering with the cold and wishing myself as strong as Dr. Maginn's wild Irishmen, the "calves of whose wicked-looking legs were three feet about, my dear" (*Noctes Ambrosianae*). Presently our pulses warned, and the laymen, at least among the gunners, felt their hearts begin to beat against their ribs, for an immense flock of brant we had watched with eager eyes for one hour rose and came straight toward our boats. When they signalled us upon we were to let eight barrels go into this flock—four barrels each to light and four as they took wing after the first four doses. You could have heard a pin drop in the bay (almost). I don't think I breathed for a space; I was so deliciously frightened; shooting at my first buck in Tennessee was nothing to it. Bang! four times, close as two successive flashes of lightning. They rose again, but this resurrection was the crack of doom to them. Aber Doughty yelled his loudest and chorons this time himself, then dragged the smallest boat out, sculled her rapidly among the dead and dying, and gathered them in to the number of fifteen brant. The state of the weather absolutely demanded a drink all round.

It was only a question after that of how long we could wait. Pluck sustained me, and I prayed for hunger and a good digestion to fit me to wait till four p. m., and then an appealing look from J. M. S. toward the semi-complacent and carnivorous Sheriff decided the day, and we folded our tents, gathered our ducks and brant, and paddled away. The Greek host crying, "Hallata! Hallata! he thou greeted thou infinite sea!" when Xenophon stole toward that historic sea-beach, did not express one-half the exuberant joy my aching body felt to end this lucky, but much-enduring day. One more hour of waiting, and we were on our way to the political career inside of a week. I was completely numb, unable to lift my gun, chilled from centre to circumference.

We killed a goose on the wing on our way to the main-land, and counted the spoils of war. We had bagged 35 brant, 17 ducks and 1 wild goose. We made the gunners carry the game, for Adams' stomach yearned for dinner equally with that of the writer. I had watched the rising sun, and as we toiled home we saw it set, surrounded by the semi-complacent bastions fringed with fire, and, as I picked up the dry leaves half crimson and still beautiful, I murmured the sweet lines of the German Ululands, a painting in themselves:

"A deep and crimson streak
The dying flames disclose;
As on consumptions' waning cheeks,
Mid ruin blood the reds show."

But luck had not deserted us. The honk, honk of a tremendous flock of wild geese sounded over the tree-tops as we walked homeward. Aber handed me the only loaded gun we had, and as the flock was high above the trees and straight overhead, seemingly among the clouds, I fired, and, on the oath of an honest barrister, down came, directly at my feet, the biggest goose I ever saw. (N. B.—Shall I except Alfieri when in love?) Our lappets were now complete. Nothing daunted us but the long, weary walk back to Sooy's.

Aber Doughty, with a stroke of genius, said, "Come to my cabin and I will cook this goose." Alfieri, the Sheriff, jumped for joy at the thought. We were soon there—a little frame shanty, with a good fire burning in it. To us a Mecca

of the mind. Only a house on piles in the inlet, three feet above the water.

Delmonico and Welker have "whacked" some hundreds in cash out of me in gastronomic pleasures; but never did I enjoy *liberal* or *edible* as the one I ate the lone goose at Aber Doughty's homely but homelike fireside. On a November night it was. And I slept—I think it was the sleep of the just—and I dreamed that the ex-Secretary of the Navy did not get elected to Congress in my district, that J. M. S. was the "coming man," and was sitting in Speaker Randall's chair. This sudden joy brought out a profuse perspiration, and the morning light, or Alfieri's melodious voice singing, "I love my cocktail in the morning," and the fact that the Sheriff, the gavel upon the Speaker's desk and declaring that the "Richard" and "Hartridge" Associations were both defeated. Like single-spoken Hamilton, I won my spurs, as a fighter by a single contest with a bunch of flies. One "Ducking Under Difficulty" sufficed.

As a duck shooter, successful and even brilliantly so for once, I said with the farmer, from whom death snatched two boys at once, "Institute archer, would not one suffice?"

I have ducked no more. When Alfieri suggests another trip after brant, geese and ducks, I suggest, "Alfred, is it not a trifle cold?" Yours tenderly, J. M. S.

For Forest and Stream and Rod and Gun.

EDISTO RIVER FISHING.

YOUR inspiring pages of fishing and hunting, here, there and everywhere, from our great lakes and rivers of the wealthy and happy States of the North and West, are now constantly perused by me with much interest. Your untiring efforts to multiply your supply of fish, your game laws, and the gusto with which your young, and even old, men prepare and fix up for a hunting and fishing maroon, either on land or water, or for birds or beasts, all tell me how your people are enjoying life, and increasing the energy of their constitutions as well as their muscles in your great States, acquire in my mind as a reader, much admiration and sympathy. Do not, however, for a moment indulge the idea that you alone have these fascinating sports and reunions, for away south of you in the black waters of the Edisto, rising in the "middle country" of South Carolina from springs of clear and delicious water, our trout, and rock, and jack, and perch bite as lively as crickets, and pull as heavily and with as much activity as any fish do in any portion of the Republic. The Edisto River is a bold, deep, considerable stream, abounding with islands, covered with (the fagus) *hick*, the *alga pumilus* (the white oak), the pine (*Pinus palustris*), the *Magnolia grandiflora* (magnolia), and many other smaller trees of less note, but in the general aspect they offer a panoramic coup d'œil to these islands which invite their visiting sportsmen to go on shore and enjoy their *sietas*, spend their nights, use "old John Barley Corn" with a freedom that "disturbs with mirth the drowsy car of night," and sets ago the "moping owl that to the moon complains of loneliness" as hunting specialists wandering near her secret bower, molest her ancient, solitary reign.

Now we allude to our Southern bird of this species, the *Syrinx* *acclamator capiti levi, corpore griso*, or the whooting, whooping owl, and occasionally the screech owl, *Syrinx apia, capite aurato, corpore ferrugineo*. The great white or snowy owl (*Nyctaleus*), seldom ventures so far in Dixie, though I have seen one specimen in this State, and one or two in Rapides Parish, Louisiana. The owl, I have all have curiosity, and come some up to browse to see and hear the new and never before failed to join in camp revelry, and laugh and hurrah like the rest of the company. The owl, however, never makes for, keeps by, watching passing events. I have sometimes known that they enjoyed these (to them) extra soirees. The owl was, by the ancient people, considered a bird of wisdom, and he was promoted by Minerva, and engraven upon her shield, but the demands of modern people look upon her as an omen of evil, a harbinger of misfortune, and as the new and vulgar creature, and hated. So it is "Oreutes" but I pass her over, her parole, in contradistinction to the general verdict of the "brutem fulmen," on the assurance of Audubon, who asserts that she possesses a large share of the organ of philoprogenitiveness.

Well, we went to the Edisto on the invitation of Dr. J. G. Guinand, and in company with C. J. Tobin, General John E. Tobin, Luther White Williams, and Dr. J. Morgan—a nice party you will say if you only knew them. They were carrying fishing tackle, guns and many other descriptions of groceries; paramount, John Barley Corn, tobacco (the *Nicotiana tabacum*) the Virginia tobacco plant; yes, and the celebrated "Perique" (smoking tobacco), made in its highest perfection in the parish of St. James, Louisiana, and after a liberal potation at the island in honor of Bacchus, old John Barley Corn and Minerva, we sat down to a hearty meal of boiled trout, fried perch and hashed jack fish, or, as the French would say, *Attacapas*, pronounced "Tuckapaw," or man-eaters; "Court Blaim," John Baptist (*Battus*), "Pisces," illustrated by one of the (12) twelve signs of the Zodiac.

Then we drew forth with pious regard and in solemn form, our guns, and, as before referred in the American Metropolitan, New York, by Dr. Julius Kaulbach, in a small box 91, and filling them with Perique tobacco, filled the atmosphere with an exhalation that would have thrown the Count of Monte Cristo higher into the upper spheres of an Elysian phantasy than his far-famed "Ratchis" ever did, say nothing of your Powhatans, or your Durhams. They are nowhere; they are mere incorporeal hereditaments, and as far behind the times as "B. B. B." The water boatman, after his passing through his twenty years of existence, is a relic of the mountains in old North Carolina. Thanks to the Great Architect for giving us tobacco!! For, taken in moderation, it calms restlessness, and produces a state of languor of a most agreeable class, inclining to repose upon a series of delightful phantasmagogias, which elevate the soul, calm the senses, and relieve us of all worldly anxiety and selfishness.

As a long, flat-bottomed boat, with a fine tent over it, tables, benches, curtains and furniture for the credentialed, and three bateaux for the division of our party, and our barge was our store-ship; took about two hundred pounds of the fish, the trout averaging from one pound and a half to five pounds, the jack about the same, and the perch from three-quarters of a pound to a pound and a half. Killed several quivers (*Silurus*), smelled a train (beard), and snubbed an alligator (*Chelydra*). The water boatman, after his passing through his twenty years of existence, is a relic of the mountains in old North Carolina. Thanks to the Great Architect for giving us tobacco!! For, taken in moderation, it calms restlessness, and produces a state of languor of a most agreeable class, inclining to repose upon a series of delightful phantasmagogias, which elevate the soul, calm the senses, and relieve us of all worldly anxiety and selfishness.

Had joined them in a bateau I changed my seat and put a copper frog, which exceedingly disgusted the angling civilian, Franklin. I got a rise, and pulled out a five-pound jack from under his canoe. "See, Joe, you talk too much, make such a noise you'll scare the fish away," but I continued talking and spitting the juice of my Virginians' delight into the river; they backed off and proceeded on down the river, singing "My poor Lucy Neal." I soon took five or six more, and being desirous of disabusing them of the idea of scaring fish by talking or moving the waters, which I did as soon as I reached, by commencing to catch them as soon as I boarded the boat, greedily to their amazement they all voluntarily "at discretion," and I was left with a good old family conversation, the *onus probandi* of which was the "likelihood of rainy weather." We were successful, however, and toward sunset my old friend, Joshua Keadle, joined the association with a large supply of fish, butter, fat bacon, and three gallons of buttermilk. A hearty hand-shaking, and "Well done," smartly connected with "Here's luck," for—

"Food fills the wame, an' keeps us livin';
Tho' life's a gift no worth receivin'
When heavy dragged we pine and grievin',
But oild by thee
The wheels of life gae down hill scrievin'
Wi' rattling glee."

We got in shore, as I said, and concluded from the cloudy appearance that we were going to have a bad night. By one consent we stretched our tent on the island, staked it down, our servants got all things ready, gave us a fine supper, and after smoking Gen. Tobin, C. F. Tobin and myself played violins, and Mr. L. W. Williams accompanied us with his guitar, until the owls, finding themselves repudiated, withdrew from our society, and low, distant, reverberating thunder began at about eight miles away to the southwest, getting louder and coming closer until the whole covey got in and it began to rain about ten o'clock r. m.

This "raised a corner" in the grocery department as far as old Barley Corn was concerned, and it was soon visible that the oftener we paid our respects to him the less we cared for the murky night beyond our pavilion, and it was also observable that the hilarity was on the increase.

About this time, in the midst of the general role of discoveries that we had pitched our tent under an immense dead tree that was old, rotten and hanging right over our sleeping lodge, this required another invocation to Bacchus and Old John Bailey Corn, which gave us more confidence, and we began in the idea of predestination to think what was "to be" for us. So, Phillips and Keable concluded that they would take the boat and the canoe, and the two big rafties of that crooked dead tree, got out on the bank of the Edisto River, and, carrying two large benches, got under them and prepared for a night's repose—the best they could hope for. One of the hands that was a son of temperance and a follower of Gen. Curry, of Cincinnati, Ohio, saw with much concern that grim Death was staring us all in the face, and he thought that he would save us from our fate. He edged, pulled out a canoe, opened it from under ward, got under it to keep the rain off, and went fast to sleep. Gradually, one after another, each individual began to hunch up and get in charge of Morpheus. The fiddling ceased, the drinking ceased, and the smoking ceased. At three o'clock a. m. a loud noise came from the riparian proprietors. Each one in his sleep had tried to get as far as he could under the two benches, and the canoe, which was in the middle of the biggest man being next to the island, pressed the one rank man or fire-closer a little too hard in his sleep, and he gravitated like the stone of Sisyphus after the order of "*Facilis descensus avernæ*," or, in vernacular language, went down against the canoe sleeper, "knocking his canoe forked," scaring him to death; thinking an alligator was about to preempt on the dust from whence his body was made. He riz up, and, as he was about to get up, he saw that he was accused of running from the Indians when they got after him as he was out hunting near Tuskegee, Ala., during the Creek war, which he denied, but his friends pressed it home.

upon him so tightly that he said, "Boys, I didn't run, exactly, but damn me if I didn't do some mighty lively walking." This canoe man spread all sail for high land, Willis hunted for the bottom of the Edisto after the style of Sir John J. Ailsaith from the buck-busker into the River Thames, saying afterward, "If I had been a buck-busker, I would have been a good one." The whole affair was accompanied with such a noble and noble noise that we in tent, fully expecting that bears had attacked them, and supposing them to be *in articulo mortis*, each grabbed for his gun, knocking each other down in every corner of the tent, over table, bench and trying pans of fish, etc., that two guns fired off in the confusion, and Dr. J. J. Ailsaith, a quarrelsome fellow, before him and taking it for the bear, charged, and his gun and knocked down the canoe man as he ran into the tent, as he thought, from the pursuit of the alligator. Day broke slowly upon them in that buck island, and as the morning rays began to illuminate that tent each man therein had both barrels of his gun loaded with musket powder, cocked and pointed at his friend to the right and the left, and he squatted in the corners as low as they could, so as to catch the line of the horizon. A rapid explosion ensued, arms in the tent were wounded, the "long roll" was beaten, the wounded looked after, the party assured that no bears were likely to invade them, a general recalcitrance, and there was another explosion, and each man gave his own opinion of the intellectual views of what was the matter.

We got a whaling breakfast, and put in down the Edisto with heavy weather on our port bow, sails furled and running under top square sail. The rain was intermittent from heavy to Scotch mists. The Admiral telegraphed for a board of visitors, and as the Edisto was muddy and rising, though trout were still patrolling our party liberally, we arrived at Winborn Island, where the crew were paid off, dismissed honorably and adjourned *sine die*. J. DUNCAN ALLEN,
Trial Justice in and for the County of Barnwell, State of South Carolina, and United States Commissioner for the Circuit and District Courts of South Carolina. Nov. 11.

Genner's "Go. n. - "Jim Jim Geritly" was a goat, which had been a character of the Fourth Ward (city), for years past. It was an habitual frequenter of a saloon on South street, and had acquired great popularity among the bipedal goats who there guzzled their daily modicum. Jim had a taste for theatre posters, newspapers, old shoes, discarded tin cans, barrel hoops, bottles, and the various other delicacies upon which city goats thrive and grow plump. His peculiarity, however, was an acquired habit of making away with innumerable wilskey cock-tails and kegs upon kegs of beer. There was an old chap, calling himself "Wild Jim", who used to come to the saloon every morning, and everyone used to drink beer with the goat. The animal died last week, and was buried Thanksgiving Day with copious funeral libations of beer and brine.

Fish Culture.

THE CULTIVATION OF SMELTS.

THE smelt, a most delicious anadromous fish, affording really good sport to the angler, can be easily acclimated in fresh water, as is well known. Fresh water smelts are found in Nova Scotia and New Brunswick rivers, in certain portions of Lake Champlain, and in New Hampshire, Massachusetts, and possibly many other places. They are identical with the sea smelt (*osmerus mordax*). It is said that Jamaica Pond, in Massachusetts, was stocked with them as long ago as the close of the last century. Quite recently, within three or four years, efforts have been made by the Maryland Fish Commissioners and others to propagate smelts artificially, and no doubt such persons will be interested to know how corresponding efforts have succeeded abroad.

We are pleased to give them the experience of so valued an authority as Francis Francis, Esq., Naturalist Director of the Brighton Aquarium. He says, first, that it is one of the most difficult fish to keep in health for any length of time; referring to the cucumber smelt (*osmerus eperlanus*), known in London markets, and not to the Argentine or sand smelt of the South Coast. There is no difficulty in keeping a stock of the latter on hand; indeed, they are kept for the dories to feed on. The dories will eat nothing else while confined. These two varieties of fish, called smelts, though very much alike in general appearance, belong to wholly different genera, the cucumber smelt belonging to the salmonide, having the small soft adipose fin common to that family, while the Atherine is destitute of it, as it is also of the cucumber odor, which so strongly marks *osmerus eperlanus*. We quote from a late issue of London *Field*, of which paper Francis Francis is also an editor. Speaking in his capacity of Naturalist Director of the Aquarium, he says:

"We have here a good many small consignments of this fish, but have never succeeded in keeping them long, the difficulty being to get them to feed. If that be got over, there should be no difficulty in keeping this lovely and striking fish in confinement, because it will live and thrive in almost any kind of water—salt, fresh, brackish, or in the dirtiest sewage. It is a voracious little fish too, and feeds upon almost anything. I saw Mr. C. O. Smith, of Battle Bridge, and Mr. Melcher, of Concord, take the aquaria to market to give us any number fresh from the water if we would send for them. Mr. Lawler went down and drew the mill tail, up to which the snells made their way from the coast, and secured some two hundred of them, the greater part of which he managed to bring back safely, and a lot of them have been put in the table tanks in their new position in the eastern corridor and in other tanks. Mr. Lawler sends me word that they are doing very well, and that the snells are dying. I see yet those in the table tanks are beginning to feed, and, as those tanks are now in a far more favorable and healthy place, having purer air, less variation of temperature, better light, an excellent fresh and salt water supply, with a heating apparatus under each for delicate specimens, I have hopes that we may succeed in naturalizing them. The herrings are a handsome brilliant fish, but are not so common; but the snells far exceed them in the flashing gleam of their scales, and are so very rich and beautiful; they are quite a fine spectacle in the table tanks."

There can be no doubt, surely, of the identity of the fish in question. They are closely allied to *osmerus mordax*, our sea smelt. And if these things can be done in England they are equally possible in America. We extend to our industrious and aspiring fish culturists the hand of encouragement.

POUND NETS.

EDITOR FOREST AND STREAM:

It is time that some proper legislation was had to supplement the efforts of the Commissioners of Fisheries in increasing the supply of fish. In no direction is there more necessary than in controlling and limiting the use of pound nets. As it is probable that there are among your readers many who have never seen a pound net, I will describe in general terms its construction and method of operation. In its simplest form it consists of a "wing," a wall and a "pound" or trap. The former arrests the fish in their travels and guides them into the latter, from which they cannot escape till they are taken out by the fishermen. To set this engine, a large row of stakes are driven into the bottom leading from the shallow water out to the channel, if there be a channel, or if not into deep water at such localities as the fish frequent. The wing is set on these stakes, and, being of fine mesh, forms an impassable barrier to the fish which, either in their annual migrations or in their local movements, come in contact with it. When the fish, being stopped by it, naturally try to pass around it by going to the outer end, where they are led into the pound. The pound is composed of two parts, the first being like a heart with its rounded arches approaching the wing which is introduced between the arches and most protruding into a "bowl" or round trap. The fish, following the outer corner the "heart" and afterward into the bowl, and as it is not in their nature to turn a short corner, they never get out. There they stay, little and big, food fish and manure fish, good and bad, valuable and worthless, till they are laded out by the fisherman who visits them every day or two. This is the case here, and although he is fishing all the while, day and night, he is taking everything that comes over his net. I described its simplest form, which may no have been more than a wing of a few hundred feet in length, but I have known of their being twelve miles in length, with a pound at every mile. They are tremendous engines of destruction, and have exhausted the fishery wherever they have been used. Nothing can save them, and they constitute a complete barrier to the fish. So long as the fishery exists, it is vain to legislate. Absolutely in Canada, where of late years wise and intelligent attention has been paid to protecting and increasing the yield of

salmon and other fish. It is only a few years since they were introduced into the South Bay of Long Island, but in that short time they had utterly ruined the fishing until not only did no one go out with rod and line for weakfish, but it was found useless to troll for bluefish. They have nearly exhausted the Great Lakes, and will inevitably do so unless promptly restricted.

It would seem an easy matter to secure such necessary legislation to limit the dire effects of what is practically a monopoly confined to a very few hands, but in fact nothing has appeared more difficult. In the South Bay it was found by investigation that there were not over thirty owners of pound nets among a population of 30,000, all of them more or less engaged in protecting and saving the fisheries. But those thirty men, and the few others, and the huge number of the folk who were twice turned over politically, from Republican to Democratic and then back to Republican on the question. Finally the act was passed forbidding pound nets, only by the active efforts of Senator Wagstaff, who, although a resident of Long Island, was elected to the State Senate from the city of New York. As the evidence of the wisdom of this legislation was so obvious, the passage has resulted in the finest fishing known in the bay, for many years 230 bloody kingfish have been taken by a single boat, and from thirty to fifty kingfish in a day's fishing last summer.

In the Great Lakes pound fishing has been extended and extended as it exhausted the fishing which was within easy reach till it has assumed gigantic proportions. Not only are these nets with wings six miles long and a pound at every mile, but the stakes are driven in water forty feet deep. Such stakes are an obstruction to navigation and as dangerous as a sunken reef to sailing craft, which have to go miles out of their way to avoid them. They are a foot in diameter and would sink a ship in the middle of the lake in any heavy sea, and, if there is no other means of getting rid of them, they should be torn up by the general government for this reason. But why cannot we obtain proper legislation about the whole business? Why must we go indirectly about effecting what has at most a few hundred individuals in its favor and the entire rest of the community against it? When shed poles eighty feet long were planted in our harbor, in stead of passing laws to forbid such a monstrous infraction of public right, the people left the matter to the Harbor Commissioners, who pulled them up on account of their injury to navigation. The New York Fishery Commission, in its official reports, condemns the unlimited use of pound nets year after year, but no result will follow unless the sentiment of the community is aroused. Somebody should make this business of protecting everybody and everybody's fish their own. We will soon have no fish in the Great Lakes if they do not. It must be remembered that wild animals are not like domesticated ones: there is a limit to the supply that no amount of demand will increase. Something can be done by artificial means, but protection of the spawning take to the yield must be added, and this measure will only succeed if the fish are raised, still more may be fished out if the appliances of destruction are increased faster than the means of production.

ROBERT B. ROSEVELT.

ROBERT B. ROOSEVELT.

SPERMATOZOA IN EELS.—Mr. E. G. Blackford informs us, that Dr. A. S. Packer, of Brown University, Providence, R. I., has found the male eel with the milt or spermatozoa. This is added testimony to what has already been published in our columns, and the "eel question" may now be considered practically settled. Mr. Blackford says: "Now give us something new to work at." Well, how about the sea-serpent?

A NEW FISH-WAY.—Colonel McDonald, Fish Commissioner of Virginia, has invented and patented a fish-way which he thinks cheap, and which will let down the volume of a river over a dam of any height with such gentle flow that shad in ascending it will only encounter a current of a velocity no greater than six miles per hour. The Colonel is very sanguine that this way can be successfully employed, and that with it the migratory fish that are so valuable will rapidly stock our upper waters and become abundant. We hope the Colonel will send us a diagram soon, with any accompanying suggestions he may be kind enough to give us.

FISH-WAYS IN MICHIGAN.—President Miller, of the Board of Fish Commissioners, makes public complaint by request of the Governor that fish-ways have not been erected in places where required throughout the State, in accordance with the Act of May, 1877. It is the business of the township Supervisors to look after these matters and compel compliance with the law. The construction of these fish-ways for the passage of fish through our streams would seem to commend itself to all good citizens (whether interested in dams or not) as a just and wholesome requirement. The plans were furnished by the board last spring. It is encouraging to see our public officials so alive to their own duties and the public benefit.

NEW HAMPSHIRE.—Manchester, Nov. 23.—*Editor Forest and Stream:* I am very happy to report to you that the California salmon sent to the State of New Hampshire by the United States Fish Commissioners, 250,000 in number, together with 100,000 for the State of Massachusetts, destined for the Merrimack River, have been all hatched very successfully. The loss by dead eggs when received was not over four per cent., and we have lost less than one per cent in hatching. Of the fish 200,000 will be placed in the Pemigewasset and Baker's rivers, and the other 150,000 in our large inland lakes—Winnepesaukee, Squam, Saugape, etc., where they can go to the sea if they like, or take out their naturalization papers and remain in fresh water. We are also much gratified at the proof of the success of our former operations, as evinced by the fact that the California salmon have been taken by the Warden B. B. Hodge, of Plymouth, of some of the young California salmon of last winter's planting, and also of part of the *Salmo salar* in their first year's growth, evidently the young of the salmon, which, for the first time in thirty years, ascended the Merrimack last summer, and which have propagated in the natural way. Here is some evidence of success in the hatchery. The California salmon taken at the hatchery taken at the Plymouth Hatching House this month 50,000 brook trout eggs, which are laid down in the boxes for hatch-

ing, and the fry from which we shall distribute to such places as may seem most advisable in the spring of '79.

WM WEBBER.

FISH CULTURE IN TENNESSEE.—Geo. F. Akers, State Fish Commissioner of Tennessee, seems an energetic official, but his efforts do not appear to be fully sustained, as will appear from the following plea which we find in the *Nashville American*:

"By proper game laws the whole region from Nashville to the Tennessee River might be perpetually filled with fish, not only sufficient for the wants and diversion of the population, but an overplus for export. There are numbers of streams well suited to the propagation of the best varieties of game fish, passing through this section, tributaries of the Tennessee and Cumberland rivers. Just now the waters are too low and clear to afford good angling. Hence, it is only occasionally that we are able to strike a 'hole' that rewards our efforts. Yet I find game fish more abundant in this stream than any I have visited for years. The reason for this is it is less seined and gilled and trapped than any other Middle Tennessee stream that I know. This insures a fair chance for the fish to multiply. If our Legislature will give us efficient fish laws, and furnish the comparatively small means necessary to stocking the streams that are now almost without fish, in a very few years there would be an ample supply. This is an important question, and I hope, by the aid of the press and of public sentiment, to obtain from the Legislature recently elected an appropriation and the passage of stringent laws for the protection of fish and game—if not throughout the State, then at least for all such counties as may desire. As Fish Commissioner, appointed by the Governor, I am free to say that without protective laws, and without money to pay for restocking our streams, I am powerless to do anything in his respect for the general public good."

Geo. F. AKERS.

A HISTORIC SALMON.—*Niles, Mich., Nov. 24.*—*Editor Forest and Stream:* A fish (*Salmo Gleri*) commonly termed land-locked salmon, was speared in Log Lake, Nov. 19. Log Lake is a small lake, some thirty acres in extent, fed by springs and is located about two miles from Kalkaska, the county seat of Kalkaska County. On the 19th of May, 1876, there were deposited in this lake 6,000 land-locked salmon fry, the fry having been hatched at the State Hatchery at Pokagon, and our captured fish some two years and six months old. It is a male and a magnificent specimen of his tribe, weighing 8 pounds strong, 2 feet 4 inches in length. He is sleek in his appearance, bay beautiful and peculiar color, and of the aldermanic proportions. It is stated that the climate of this lake are now spawning. Mr. Eli R. Miller, the president of the Board of Fish Commissioners, has gone to Kalkaska, and will make as vigorous a push as possible to secure the fertilized ova, and it is believed he will succeed. The salmon has created a wonderful enthusiasm hereabouts, it being the first land-locked of any size caught in the State. Its marvelous growth brings universal praise as well as wonder. Photographs and a plaster paris cast of the fish have been taken. Its corpus will to-day be served up in princely array at the Burdick House in Kalamazoo, and of course will constitute the item in to-day's menu of that popular hotel. Our fish culture friends far and near are invited to come up and partake of the rare entertainment. The capture of this fish is proof positive and positive success of our mischievous and presages, quite plainly enough, "some things will come as they come." (Cavilers and the whole tribe of doubting Thomases are now most respectfully invited to take seats nearer the door.

Geo. H. JEROME.

We congratulate the Michigan Commissioners upon this proof, tangible and positive, of the assured success of their efforts. This salmon is such an evidence of the wisdom of their work.

SCHODDIE SALMON IN MICHIGAN.—*Detroit, Nov. 26.*—While at Kalamazoo last Saturday I had the pleasure of seeing a schoddie salmon that weighed 8 lbs., 28 in. long. It was planted in Long Lake, Kalkaska Co., Mich., two years and six months ago. It was speared while making a trench with its under jaw for the female to spawn in. The female was following it and saving. Larger ones were seen by the gentleman who caught this one, but as we only wished for a specimen no more were taken. It was a beauty.

Yours truly,

A. J. KELLOGG, Fish Com.

A DETROIT RIVER FISHERY.—I visited yesterday the fishing establishment of the late George Clark, our very dear and lamented co-laborer in the State Fish Commission, and think a short description would be interesting to your readers in the interior. It is located on what is called Grassy Island, near the middle channel in the Detroit River at Ecorse, eight miles below Detroit and three-quarters of a mile from the home of the Clarks on the mainland. Grassy Island was "made" land many years ago by the enterprise and energy of Mr. Clark. Where originally was only shallow water, grass, and weeds, there is now there quite a village. Houses, barns, boat and net houses and sheds, covering an area of an acre and more, and large pear and peach trees growing in the garden were planted there by Mr. Clark. A force of 17 men are now employed by Mr. Clark, under Mr. Lacy, foreman, divided, working 12 hours each, hauling a seine once in 20 or 30 minutes the entire 24 hours. This is done by horse-power, four horses being kept upon the island, two working constantly upon a windlass at each end of the net. A pound of an acre or more was constructed by dredging to the depth of about 15 feet, and inclosed by a net driven in the water, the current being in the fish, with a gate at the place where the net is brought in, five wide and as many deep, and fastened at the bottom by hinges, so that the top of the gate floats at the surface of the water, and as the net is drawn in the fish are discharged from it just over the top of the gate, without having been baulded or removed from their native element or injured in the slightest degree. They are now ready to be placed upon the market at the pleasure of the owner in such times and quantities as is desirable. The provision made for the housing and care of men, beasts, boats and nets, all show that a kind and careful mind was here employed, to which all who enjoyed the acquaintance of Mr. George Clark will cheerfully testify.

Eli R. MILLER.

Detroit, Nov. 9, 1878.

SALMO QUINCY IN FRANCE.—*Mr. Editor:* Concerning the transportation of the eggs of the Quinoy salmon to France, to which you refer in your last issue, the following letter gives

not only a good account of the condition of the eggs, their subsequent hatching and destination, but is also decisive concerning the question of credit for which you so gallantly couched a lance in my behalf.

SOCIÉTÉ D'ACCLIMATATION, Paris, Nov. 14, 1878.

Mr. FRED. MATHER—

Dear Sir: I take pleasure in informing you that we received the salmon eggs in most splendid condition. This excellent result is evidently due to your skillful care, for which we feel very much obliged. Almost all these eggs are now hatched; the fry are very lively, and it seems almost certain that they will thrive. In good time they will be turned loose in several streams, as the Rhone, the Herault and Yonne by our Société with the assistance of the "Legende des Saix et Chaussees." Again praying you, dear sir, to receive the assurance of our thankfulness. I remain very truly yours.

HARVEY WATTEL, Secretary.

I wish to say, however, that part of the credit is due to Mr. Stone, who procured and packed the eggs in California; for it is certain that if the eggs had not been received by me in splendid condition I could not have delivered them so matter how excellently I put them up or how cold they were kept.

FRED MATHER.

Natural History.

ABOUT OUR GROUSE—No. 5.

THE willow grouse bears a considerable resemblance to the red grouse of Scotland, and it is commonly called moor cock by the inhabitants of Newfoundland, many of whom are, of course, old country people, and thus familiar with the British bird; partridge is another and less appropriate name by which it is frequently known here. This species is the only ptarmigan that is ever hunted for sport, and this one only, as far as we know, in Newfoundland. The birds are usually found on the open barrens, where grow the plants and berries on which they especially delight to feed, and which give to their flesh in the early fall a peculiar excellence. When found in such situations the sport must, we imagine, resemble pinnated grouse shooting on the prairies; certain it is that all who have tried it are enthusiastic on the subject, and speak and write as if there were nothing like ptarmigan shooting. Sometimes a late family are found by the dogs, the young of which are not yet able to fly, and in such a case it is most touching to see the efforts made by the old ones to draw their pursuers away from the brood. If these efforts fail the male will not hesitate to fly at dog or man in the most courageous manner. Few sportsmen, we hope, would have the heart to destroy either parents or young under such circumstances. Both Cannister and Dale, who found this species abundant in Alaska, notice the strong attachment which the female has for her eggs and brood, and state that the affection of the male for the female is equally strong, for he remains with her during the period of incubation, and even refuses to leave her when in danger. The same explorers mention that these birds in winter form regular paths through the snow among the willows and along the river banks, and that the Indians by means of snares set in these paths capture great numbers of them.

The willow grouse commences to lay early in June and it is said that an egg is deposited every day until the full number is reached. The eggs are curiously marked with dots, scratches and blotches of deep reddish purple on a ground of dark cream color, and are usually ten in number. In September and October the various broods are said to gather together in immense flocks, but when winter has fairly set in they separate again into small packs of from fifteen to thirty individuals.

The males of this species are said to assume their red plumage as soon as the rocks and higher ground become bare, and at this season they spend a part of the day perched on large stones or the stumps of trees calling to the females in loud guttural croaking tones. The females assume their summer dress early in June. It is an interesting fact that the sharp tailed grouse sometimes utters a rough guttural croak which answers admirably to the description above given of the call of the male willow grouse. We have heard it only once, but it seemed so curious a note that it made a strong impression on our minds. While traveling in Dakota in 1874, an old female, with a brood of well grown young, was started on the prairies, and the individuals of the family separated and flew in all directions. It happened that we remained on the spot whence they had flown, for about half an hour, and during the whole time, we heard this strange call uttered by the old hen which was trying to collect the brood, and soon the young began to reply by a similar note. That there might be no question about the matter we followed up one of the young and shot it in the act.

The extraordinary abundance of the willow grouse in the Hudson's Bay Territory and along Mackenzie's River often enables the Indians to live in plenty, even when large game is very scarce. Hearne speaks of seeing flocks of "upward of four hundred," of seeing thousands in one day, etc. An extract, which we quote from the writings of this quaint old author, will give our readers some idea of the great numbers of these birds in the Far North, as well as of one of the methods employed by the Indians in their capture. The ptarmigan in winter feed entirely on the buds of the willow, whence the name of willow grouse, and Hearne says:

"Their food in winter, being so dry and hard, makes it necessary for them to swallow a considerable quantity of gravel to promote digestion; but the great depth of snow renders it very scarce during that season."

"The Indians, having considered this point, invented the method now in vogue among the English of catching them in nets by means of that simple allurements, a heap of gravel.

The nets for this purpose are from eight to twelve feet square, and are stretched on a frame of wood, and are usually set on the ice of rivers, creeks, ponds and lakes, about one hundred yards from the willows, but in some situations not half of that distance. Under the centre of the net a heap of snow is thrown up to the size of one or two bushels, and, when well packed, is covered with gravel.

"To set the nets when thus prepared requires no other trouble than lifting up one side of the frame and supporting it with two small props about four feet long; a line is fastened to these props, and the other end being conveyed to the neighboring willows so that a man can always get at it without being seen by the birds under the net. When everything is thus prepared the hunters go to the adjacent willows and woods, and, when they start the game, endeavor to drive it into the net, which at times is no hard task, as they frequently run before them like chickens; and sometimes require no driving, for, as soon as they see the black heap of gravel on the snow, they fly straight toward it."

"The hunter then goes to the end of the line, and when he sees that there as many about the gravel as the net can cover, or as many as are likely to go under at that time, with a sudden pull he hauls down the stakes and the net falls on the snow and incloses the greater portion of the birds that are under it. By this simple contrivance I have known upward of three hundred caught in one morning by three persons, and a much greater number might have been procured had it been thought necessary."

"It is common to get thirty to seventy at one haul, and in the winter of 1736 the master of a sloop at Churchill River actually caught two hundred and four at two hauls."

They are by no means equally plentiful each year, for in some winters I have known them to be so scarce that it was impossible to catch them in nets, and all that could be procured with the gun would hardly afford one day's allowance per week to the men during the season. But in the winter of 1785 they were so plentiful near Churchill and such numbers were brought to the factory that I gave upward of two thousand to the dogs.

Large numbers of these birds are no doubt devoured by hawks, owls and foxes, but their numbers are so great that the depredations committed by these enemies do not perceptibly reduce their numbers. We are told that when pursued by hawks or the great white owl the ptarmigan will dive into the snow and work their way along beneath its surface with considerable speed. Their color at all seasons serves in a great measure to protect them from their enemies, for it is said that it is almost as difficult to see one of them when crouching on the bare ground in summer as it is to discover them in winter when hiding on the snow.

The white ptarmigan is abundant in Scandinavia, and Løyd in his "Game Birds of Norway and Sweden," gives a very full account of the methods there employed for their capture. The principal ways of taking them seem to be by shooting them from the trees when feeding, stalking with a pea rifle, snaring in the same manner employed to take ruffed grouse here in the East, and calling—the latter method being the same which our turkey hunters make use of in spring. Great numbers are thus destroyed, and at present we are told that the ptarmigan are scarce in most parts of Norway and Sweden.

To such of our readers as desire to know more about our grouse we would recommend the admirable work on "North American Birds," by Messrs. Baird, Brown and Ridgway, and Dr. Coues' "Birds of the Northwest." The few notes which we have contributed to the recent issues of *FOREST AND STREAM* contain, besides much that has already been noted, a few facts that have never yet been published, and which we have accumulated during eight summers of travel and observation in the broad domain which lies between the Missouri River and the Pacific coast.

A STRANGE BIRD.—*Editor Forest and Stream:* I left for identification a curious bird, shot on Friday, Nov. 8, on Greenfield Hill, Conn., by Talman B. Bradley, who has shot in that region for many years. Both of us have hunted for thirty or forty years, and neither have seen the bird. I attempt now to describe: The shape is like a rail, but much larger; the plumage on the back resembles that of the meadow-lark, while the wings are mottled like a quail; the breast is white, slightly mottled with black; the bill is about an inch and a half long, and straight; the legs resemble a quail. I incline to the belief that it is a specimen of the Scio quail, some of which were loosed near Boston. The flight was somewhat like a plover, and the dogs treated it as a game bird. We were hunting for quail at the time on ground where a few days before we had found a bevy. If any of your readers know about this anomaly it will be of interest to yours,

T. P. C.

[Our correspondent's description does not answer at all to that of the migratory quail. We cannot tell with any degree of certainty what his bird was, but incline to the opinion that it was a wader of some kind—perhaps the Upland Plover (*Actitis bartramia*).

If any of our correspondents who shoot birds or mammals with which they are unacquainted would only take the trouble to preserve their specimens they would receive satisfactory answers to such queries as the above. From the head, wing and leg of a bird it is easy to tell what it is; but the general descriptions which usually accompany these inquiries seldom help much in determining the affinities of a specimen.

—Ed.]

A PARTIAL ALBINO.—Our correspondent, Mr. Geo. Lyman Appleton, of Savannah, Ga., writes us, saying:

A friend of mine killed a jackdaw some time since with several white feathers in each wing and in the tail. It is a singular thing for this part of the world. Did you ever hear of another such case? He has the bird stuffed.

We presume that by jackdaw our friend intends to designate either the crow blackbird, or the boat-tailed grackle, and if we are right in this assumption we can say that it is by no means unusual to find white feathers on these birds. We have occasionally seen specimens in which the white feathers preponderated.

THE RATTLESAKE'S RATTLES.—We are indebted to a Peekskill correspondent for the following valuable information. The photograph is a capital one:

MR. EDITOR:—Noting the inquiry of your *Arizona* correspondent in the last issue of *FOREST AND STREAM*, I take the liberty of sending you a photograph of a rattlesnake that was killed at Lake George, last August. In this specimen at least, as is plainly shown in the photo, the rattles were worn with the narrow skin to the ground. This snake was killed while swimming across Lake George, near Black Mountain, and measured 4½ ft. long and 8½ in. in circumference.

E. ANDERSON.

HABITAT OF SMELTS.—*Germantown, Phila., Nov. 27.*—Please advise me, through your columns or by mail, the lowest waters the "smelts," such as caught in the Kennebec River and waters north of that, have been known to school and be caught. I do not mean the black backs, such as have been caught in New Jersey waters, which are a different species from those which are now in market from the Kennebec River. An answer will oblige. I have a bet with a party who insists they have been caught in the Brandywine Creek, Delaware, identical with those of Kennebec.

W. W. F.

The smelts of the Raritan, Passaic and Delaware rivers (*Osmerus mordax*), are believed to be identical with their northern congeners of Maine and near latitudes, while the Potomac smelts, which are found in the Washington Market, are the *Hybognathus regius*. Attempts have been made by the Maryland Fish Commissioners, within three years past, to cultivate smelts artificially. By obtaining specimens this winter you will be able to make comparisons.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR THE WEEK ENDING NOV. 23.—One pair mounted ground dogs, *Georgium myastaca*, Hab. Guatemala, brought North by Mr. F. A. Ober, presented by George N. Lawrence, Esq., N. Y. city; one pair Scented badgers, *Arctomexia*, presented by Major E. D. Wadsworth, N. Y. city; one white turkey cock, *Meleagris gallopavo*, presented by Mr. C. B. Gauthier, N. Y. city; one zebu, *Indus indicus*, born in the Menagerie; three jaguars, *Felis onca*, placed on exhibition.

W. A. CONKLIN, Director.

Woodland, Farm and Garden.

ON A COLORADO CATTLE RANCH.

MY first visit to a Colorado stock ranch brought me in contact with a dozen booted, spurred and bronzed men, who wore flannel shirts, wide hats, and no collar. They were riding over the country, showing a rich Englishman "the cows." My host had one of the finest ranch houses in Colorado, and they had brought the gentleman down from Rabbit Ear Ranch to call.

There was no fence about the house; its piazza faced the mountains, 70 miles off, the prairie blossoms being almost at hand. As though the dwelling were a big thistle grown up in their midst; the sod had not been disturbed; there were no trees, no rock bushes, no grading—none of the litter and rubbish of a new house at home. Neat and complete as a pastoral house, it stood alone in the vast prairies 30 miles from any other dwelling. The big herds of the owner were nowhere to be seen. They with the horses and mules were out in care of the cowboy. The cowboy, a young fellow, tall and lithe, with a bell of the leader, the weird songs and shouts of the herders, now here, now there, as they headed off some refractory animal with wide detour and whizzing folds of the lariat, was one of the most peculiarly Western and fascinating of the many strange experiences on the ranch.

In Colorado there is a class of highly educated men engaged in the cattle trade. The men are subordinated in flannel shirts while on the ranch, but none can mistake them for common or ignorant persons. They are, in very many cases, gentlemen of culture and standing. In the circle of ranchmen whose acquaintance I have formed during my stay, there are several men of large wealth and scholarly attainments, who, traveling in the West for health, become interested in the cattle business, enchanted by the wild, open air life, and have invested in stock, roughed it, and enjoy the climate, the domineering and the excitement, as well as the money it brings. One gentleman—mine host—was in the navy, but likes the billowy prairies better than the deep blue sea. A neighbor is one of the finest special geologists in America. Traveling in pursuit of his profession, he saw there was money in cattle, and so left his aesthetic Boston home for a tent on the plains. Another scientist, whose name is known on two continents, has, during the past year, gone heavily into the business. Two Harvard graduates are on ranches, and two young men, fresh from Germany, herd their own flocks and live temporarily in a dugout. At the ranch where I was entertained I saw three youths, brown and bashful, come every evening home with the horses, and ride away in the early dawn, at break-neck pace, after the snorting herd. They looked like my farm boys; yet in the evening, when work was over, and they sat on the steps with the family, they were as well as fully bright and interesting. Two of them had traveled in Europe. One was the son of ex-Senator Connors, of California; one was Mr. Pope Yeatman, nephew of Gen. Pope, U. S. A.; the third was the son of Fred Law Olmsted, of New York. They are as well read boys as one can find anywhere. In delicate health from city life and study, they came out here to "rough it," are stout and well, busy from morning until night, riding all day over the blossoms and the fresh grass, and, learning the cattle business from the beginning, no doubt, in a few years own ranches and herds of their own.

The man wishing to engage in stock business here buys so many head from a Texas herd, from men just in on the trail—that is, who have just driven a herd up from Texas. So many yearlings, either male or female or steers; so many two, three years old, or heaves, cows, yearlings, or two years old, are called "stock cattle," three years old are "separate stock cattle," over three years old are "stock bevers." The yearlings this year average \$30 apiece; for two years old and cows, \$18; for three-year-old steers, \$15; for beaves, \$20. The stock man selects his range, builds his corral and shanties by contract, takes his cattle there, brands them, turns them loose, pays his herders \$30 to \$40 per month, foreman \$75 to \$100. Prices are higher in the north in the Indian country, but around here this is the average.

The ranches are Government land. Anybody can graze their herds thereon, but by common custom the man who has long had range in a certain place is not driven away by new comers. A man can if he chooses, pro-empt 160 acres near a

stream, build his house there, and allow his herds to range around for forty or fifty miles. The general pasture land of this region is in immense triangles, bounded by the mountains, the North and South Platte, and the Arkansas. Very few cattle ever get over the mountains or across the rivers, therefore practically this range is enclosed by these natural boundaries.

The customs concerning the range vary in different localities. On the Arkansas a man owns a certain number of miles of river front, back of that he claims his range. Here the custom is different. The country on the South Platte is older, well settled, and every man's range is as well known as if it had a high wall about it.

In the winter the cattle graze on land where the lack of water prevented their pasture in summer. In winter the snow quenches their thirst, and under the snow the nutritious grass serves them as their only food. They are never sheltered or watched, or herded during the winter. Left to take care of themselves, they never leave off the stampede. The cattle come from home, and by spring scattered over the whole triangle enclosed by rivers and mountains. Every man's herds are mixed up together. Then comes the grand round up.

In Colorado the time and places of the round ups are established by law, or rather determined by County Commissioners, who publish in the spring the places for the round ups for every day during the six weeks, usually beginning in the middle of May. Every cowboy and his horse and his outfit are out a squad of men to go and pick out their own cattle. Generally a neighborhood club together for the great spring frolic. There are busy times times there after the long winter's rest and isolation. The mountains are white with snow from top to toe, but the crocuses are as thick on the prairie as in the garden borders at home; a profusion of the daintiest wild blossoms keep them company, and from the black plains which stretch as far as the eye can see, the hardy flower pioneers lift brave and beautiful heads out of the tender grass. The harness is overlooked, wagon covers mended, provisions laid in, and at last, on a bright spring morning, the wagons and outfit are seen starting from every ranch in the country toward a common meeting-place on the unfenced plain. For an outfit of 150 men thirty wagons are the average number, and at the round up at least 700 head of horses are seen—good cow horses—ridden by No. 1 cow punchers.

Each squad elects a foreman or captain, and all the captains are under the control of the commander-in-chief, who, for the nonce, is a greater man than a major-general of the army. The men are picturesquely clad in warm flannel shirts and buckskin trousers, and present a gay appearance dashing off in advance of the canvas-covered wagons, which contain the beds and food. Each outfit has its distinctive name. One is known as the Lone Tree outfit, another is the Wild Cat Outfit, another the Lone Tree Company.

The places of round up are usually about twenty miles from each other. Among them are "Big Crow," "Little Crow" and "Gerry," named for the grandson of Elbridge Gerry, Governor of Massachusetts, from whom the word "Gerry-mandering" was derived. The grandson Gerry was one of the old settlers in this country; he died not long since at Evans, Colorado, leaving a large property, and four squaws to inherit it.

The men from the ranches, on the edges of the grazing land, i. e., at the foot of the mountains or nearest the rivers, sweep around the boundary and start the cattle toward the center of the range, the main place of the round up. It takes weeks to get them together. During that time, with driving wild steers by day, and night herding or keeping them from scattering at night, and so on, the cowboy and his outfit of the twenty-four, after arriving at the place of the round up, the commander issues his orders: The Wild Cat men are to take the outer circle, the Owl Creek men the next circle of cattle, and so on until the herds are subdivided into patches on the plains, and are more easily handled. The cattle are roughly sorted on the way to the place of the next day's round up. The confusion is lessened each day. In line each neighborhood gets its own place. The local men of the neighborhood squad separates his brand from his fellow's, so that by the time the home range is reached every ranchman brings along his own brand, and the young calves which run by the sides of the branded mothers. After the home range is reached the first thing is to brand the new addition to the flock.

Sometimes a calf old enough to leave the mother is with the herd, its parents not known, it is an alien, and a subject of dispute, and is known as a "Maverick." Mr. Maverick, a Texan, had a small herd on an island, where they remained until the close of hostilities, scarcely thought of. When he went to look after them they had increased to that extent that the small island was crowded. He had them conveyed to the main land, where they broke away and scattered over the whole State. Every quadruped, unbranded, or whose owner was unknown, was all the time coming on, turn them back, and the name coming hither with the Texan drovers has rooted in the grazing plains of the West. The law directs in this section that all Mavericks shall be turned in for the benefit of the school fund.

After the round up the work is not all done, although the cattle business differs from some other undertakings in the fact that the work is all during the summer. In the winter no brand of the work of the stock. They roam off and take care of themselves.

In the season the ranchman lives in his wagon the most of the time, and is going over his range constantly. A wagon, ten men, a foreman and cook, fifty saddle horses, provisions for two weeks, and they start from home and go from one end of the range to the other. As they go along they collect the beef and unbranded calves, take them to some corral, and brand the calves there. All the time coming on, turn them out, select beef for shipment, and keep an eye on the general condition of the herd. They move about ten miles a day. When beef enough is started for a train load of twelve to twenty-five cars, containing from 250 to 400 head of beaves, they take them to the nearest railroad point, ship them to the Union Stock Yards, send along with them a trustworthy man, who delivers them over to a commission merchant of the yards, who sells them and sends the money by draft on New York to the owner.

A few days after my arrival I witnessed what they called "cutting out." A drove of two thousand cattle that had been selected as beaves from the herd, stood in a close bunch on the plain a couple of miles from the ranch house. We drove over to see the fun, and, standing well out of the way of the racing horses, swinging lassos, and scattering cattle, watched the men select the best of the herd. Some of the men from the herd and driven into a separate bunch that was guarded at a little distance by watchful horsemen. One by one the finest cattle were separated. Some thirty horsemen were riding in all directions, swinging the long horse-hair

ropes from their saddle horns in an inextricable tangle, digging their spurs into the horses' flanks, heading off the steers that were running, for us, to bring them from the herd, driving them toward the bunch across the plain as though there was not a moment to lose.

One of our party, excited over the chase of a rebellious cow that bore down upon us, waved her handkerchief and came near causing a stampede. In a moment after the white signal was fluted every cow was facing her, heads up, horns high in air. The foreman shouted for her to hide the handkerchief. He told us afterward that an unusual sight, especially of anything white, sometimes causes a great herd to break away and run for miles. At such times they will sweep over every obstruction, tramping down men and horses alike. The way to turn a herd is not to head them or dash up in front of them, but by wide circling detours turn them gradually into a semicircle.

One man alone can't handle cattle at all. It takes four mounted men to herd seven hundred; it takes eight men to drive and night herd a bunch of two thousand to three thousand cattle at one time. Mr. Ishli's herd of forty to fifty thousand has sixty men employed, and a proportionate number of wagons and horses.

The cattle man has to be moving from the time the grass is big enough to feed a horse from the length of his tether until snow comes in November. The stock not shipped is turned off the wagon pens, and the shed calves, hauled up, men discharged, except two or three to take care of the horses and do chores about the place, and the ranchman, brown as a berry, stout, hearty and vigorous, goes into winter quarters at home, or puts on his store clothes, takes a run East, and there meets old friends. The stockmen to whom I have talked say too many men are crowding in. From a profit of from 50 to 100 per cent, it has gradually dwindled down to 20 to 35 per cent. The old-time want plenty of room. When ranchmen are settled nearer than thirty miles apart, it crowds too close for comfort. The dealers have, in the past few years, been improving the increase of the West by the introduction of thoroughbred Durhams among the Texas stock.

The assessment returns count Colorado, 500,000 head; Wyoming, 355,000; Utah, 350,000; Washington, 500,000; Montana, 200,000; Oregon, 175,000; California, 650,000. Then it is about the time the assessment is over over 50 per cent of the total amount, an idea may be had of the immense cattle trade in the country west of the Mississippi. The great feeding grounds of the world are transferred from Texas to the wide buffalo ranges of the plains, and the sheltered mountain parks, and the fertile pastures of the Pacific slope.

Those who see cattle only in the crowded stock cars, or in the narrow yards of cities or villages, can have no idea of the good time the cows have here. Running under an unlimited range of juicy buffalo grass, and a new bed every night of velvet prairie blossoms, what more could the most fastidious bovine desire? And yet to this is added air pure and clear as nectar, winds balmy as the breath of heaven; in winter, shelter from the mountains; in summer, freshness from their snows.—Sun.

THE INTERNATIONAL DAIRY FAIR.—The great International Dairy Fair was opened at the American Institute building, this city, last Monday, and is now in progress. There is an immense display of dairy products, and the whole process of the manufacture of butter and cheese. The tables and stands on the right of the building are devoted to cheese, those on the left to butter. Near the centre two pyramids of cheeses have been erected. The pyramidal exhibit of H. K. & F. B. Thurber & Co. of this city, comprises samples of every variety of cheese made in the United States, including the Cheshire, Derby, Wiltshire, Somersetshire, and other varieties from England; the "Couda," from South Holland; the "Monk's Head," from France; the "Ballini di Gravina," and the "Balle di Tuglio," from Italy; the "Cacia Cavilli," from South Italy; the "Mistrella," from Sicily, and many other curious varieties, including the "Stilton," which looks like a length broken from a buried stone column out of the bow of a ship. Around the base of the pyramids are ten specimens from a Whitesboro, N. Y., factory, each weighing close to a thousand pounds. The exhibit is surrounded by a life-size figure of a cow with a crumpled horn. The most extensive part of the fair is devoted to cheese. There are cheeses from all over the world. From Theresa, N. Y., comes the mammoth specimen—a huge cheese four feet in diameter, two feet high, weighing nearly a hundred pounds. There are cheeses of all sizes, small in diameter but so awfully powerful that they have to be confined in one of Herrings' strongest safes. The butter comprises some two hundred entries, coming from all the great dairy districts of the country and from Ireland, Denmark, Friesland, Holland, Wales, Normandy, England, the Isle of Jersey, and all other oleaginous countries. There is a dairy-maid carved in butter and a real live one, too, in the part of the fair devoted to the dairy work. Here may be seen the whole process of manufacture. A handsome display of cows furnish the milk, which, under the hands of skilled workers, in due time comes forth as golden butter and cheese. There are dairy implements, models of whole establishments, and in short everything that can interest people who make butter, people who sell butter, and people who eat butter, and that is everybody. Here are some samples of the great variety of butter exported by the United States, which are fancy will be new to most people: "There will be exported this year from the whole country 130,000,000 pounds of cheese and 25,000,000 pounds of butter. There are 13,000,000 cows in the country, or twenty-three to every 100 persons. This is six times as many as in Great Britain, twice as many as in France, two and a half times as many as in Prussia, and more than in England, Ireland, Scotland, and Wales. Germany exports 1,000,000,000 lbs. of butter. Austria, Hungary and Switzerland combined; altogether these countries contain four times the population of the United States. The value of the land and cows in this country employed in furnishing milk, butter and cheese is \$1,800,000,000. More than 3,000 factories are engaged in the manufacture, besides numberless private dairies. One manufacturer in Western New York has more than thirty factories, and others in different sections have from five to thirty each. The best counties in Pennsylvania, Northern Ohio, Michigan, Northern Illinois, Wisconsin, Iowa and Colorado are devoted to dairying. Ten year ago California imported these articles; now she exports them. Fifteen years ago Chicago bought cheese from the East; now 100,000,000 pounds pass through that city for New York annually. Canada bought of the States until now have a large export, and export to the States. The best counties in Pennsylvania in Vermont and New Jersey, the States other than those mentioned buy more than they produce; the entire South buys and largely from merchants in this city, who handle annually about \$3,000,000.

DEFERRED.—A large number of interesting communications have unavoidably been deferred. They will appear at earliest opportunity.

—We make the following additions, etc., to our List of Races published last week. In the list of abbreviations J. C. stands for Jeffries Club.
May 18, Q Y C. Annie V wins 2d prize, not Annie.
June 22, Chi Y C. There were 9 entries in all, not 9 in first class.

July 20, N Y C. Sadie, S B Y C. not Boast Y C.
July 22, Phila Y C. Thomas Ledyard, not John Ledyard.
July 24, S B M F. not C P M F. and Lena won 2d prize instead of first.

July 20, match set down for this day was called some time in July, date not known.
August 20, D Y C. Thiebo, not Thistle.
October 2, S B M F. The keel class was omitted. It should be 2 entries; Starlight wins.

FRONTIER THE DOG.—“A young man of this city,” says the Rochester Union, “was recently in a part of the country where game is very abundant, and was invited by two of the best shots of the town to a day’s partridge shooting. He neglected to tell them that he was no sportsman, but accepted the invitation with apparent glee. A gun and a first-class dog were provided for the guest, and he set out with the two friends who were to take him over the ground. They made the brush and had separated but a short distance, when the dog went on a staunch point. The hunter knew little about guns and less about setter dogs, but thought that a dog that would stand still so early in the day must be very lazy and deserved punishment. After waiting a short time to let the dog start again, and seeing him rigid as a statue, the gunner picked up a stone and gave the poor beast a blow that made him howl, and at the same moment up went a brace of partridge from under the dog’s nose! The other shooters were not far away, and heard the birds rise. The explanation given by the guest was not very satisfactory and he was invited shooting no more.”

The Kennel.

NASHVILLE FIELD TRIALS.—The following are the entries for the various States in the Nashville Field Trials, the running for which commenced on Monday of this week. It cannot be said that the interest in these trials equals that of former years.

Puppy Stakes, Under 18 Months Old.—D C Sanborn enters blik, w and tan bitch Whitley; D C Sanborn enters blik, w and tan dog Dan; W A Whitley enters young guide, V Y V. Whitley enters Prairie Rose; J F Nicholson enters blik bitch Belle; J H Dew enters Mr Milner’s bitch Pearl; Geo W Campbell enters white bitch Fannie; Capt Pat Henry enters Lorna; Capt Pat Henry enters Breckinridge; L H Smith enters Lass O’Gowrie.

Champion Stakes.—D C Sanborn enters blik, w and tan Nellie; D C Sanborn enters Dan; W A Whitley enters Mack; J F Nicholson enters blik Jet; J F Nicholson enters blik Belle; B H Bryson enters blik, w and tan Gladstone; J H Dew

of a single watch dog on a farm, and of a sheep dog or cowherd's dog where ten beasts or forty sheep are kept. Foresters, cattle dealers, butchers, and night watchmen are also allowed one dog a piece free from tax.

BADGER BATTING.—The second trial of a somewhat novel kind of sport was held on the outskirts of the city on Saturday last. It was a trial as to whether a smart bull-terrier could pull a badger out of his box twice out of three times. On the first trial, a week ago, the dog won; in the last rubber the badger won. In other words, to make the statement fully plain, the dog baited the badger and the badger bate the dog.

DOG PORTRAITS.—We have engravings of the following celebrated dogs on cardboard and will send any one of the same on receipt of twenty-five cents, or any six for one dollar: English Setters—Pride of the Border, Fairy and Lark. Irish Setters—Rover (Macdonald's), Elcho, Dick (Jarvis) and Dash (Salters). Gordon Setters—Lou, Lang and Dash (Colburn's). Cocker Spaniel—Witch. Pug—Rex. Bull Dog—Duke. Daschunde—Fritz and Diana. Bull Terriers—Targuin and Napper. Dandy Dinmonts—Doctor and Tib Mumps.

FOX, DOG AND DUCK.—Mr. Anthony, on the St. Lawrence River, has a large and sagacious Newfoundland dog, and a neighbor has—or rather had—a baby fox, which was allowed to run at large. The fox made daily calls on the dog, the two playing together during the day, when the fox would return home. As the fox grew to fox estate his appetite grew with the exercise, and one day a duck was missing. Being caught in the act after three or four ducks had disappeared, he was deprived of his liberty. The dog next day watched and waited for his playmate, and on the second day, he not appearing, called on the fox. Another duck was gone at night and the dog was caught next day with the duck in his mouth and carrying it to the fox, who ate it while his canine friend looked on. Sequel: Dog tied up and fox shot. Moral: Never play ducks and drakes with your neighbor's property.

poses. One is a red Irish setter and one a Gordon, and both prize winners and of noted strains.

A PHANTOM DOG.—Some months ago we published a harmless little story of a dog in New Zealand who, morning and evening, ferried across the river a porcine companion to and from the pastures green. Now that same dog has reappeared in a dozen different quarters of the earth—if the earth has a dozen quarters. He has been reported from Panama, where the intelligent paragrapher has mixed him up with a dog who barks to scare away the alligators. Another paper places him in California, a third in Labrador, and another among the Tongan Islands. Is this a real, material dog or a phantom canine, appearing at odd intervals to the favored ones of every clime, creed and nationality? We don't believe in spiritualism, but how else can it be explained?

—Major Francis de Winton, R. A., Secretary to the Marquis of Lorne, the new Governor-General of Canada, was in Canada seventeen years ago with Sir William Fenwick Williams, of Kars, and was very popular. He is a prominent turfman, and was Master while in Canada of the Montreal Fox Hounds.

DETROIT DOG SHOW.

DETROIT, MICH., Nov. 30, 1878.

EDITOR FOREST AND STREAM:—The following express companies have agreed to carry dogs to the Show on the pre-payment of their usual rates, and return the same free, viz.: The New York, Baltimore & Ohio, American, and United States.

The Adams Express Company have not yet been heard from, but no doubt they will do the same.

The following additional special prizes have been donated: W. H. Holabird, of Valparaiso, gives a fine duck suit for the best Irish setter puppy under 12 months old, native or imported; Mr. Zimmerman, of St. Paul, gives a pair of his celebrated pictures, "The Tight Shell" and "Trying for a Double"; the Batavia Manufacturing Company give one of Mole's Patent Glass Ball Traps; the Columbus (Ohio) Kennel

run his dogs, as at Hampton Nello won the championship by the figures being changed from those made in the fields; and what was there decided to be a flush was, by the decision of two judges, changed to a point, and by dividing first and second prizes between Nellie and Black Ned, she secured the championship. Also at Nashville, in 1877, it was given out at night that Nellie, Jr., had won first, Pride of the South second and Countess third, but the next day the judges had changed the prize a tie between Countess and Nellie. This seems a little singular, but undoubtedly is the kind of treatment that suits Mr. Sanborn, and I was not at Minnesota Field Trials to render such decisions. My motto is "Let the best dog win," no matter how it may affect any particular strain or how indignant any editor may get who has never yet seen fraud where a bloodhound is concerned.

MONROE, Nov. 30, 1878.

DUNDEE DOG SHOW.—A dog show was held for the first time at "bonnie Dundee," Scotland, on November 8th and 9th. The judges were, for sporting dogs, Rev. Grenville F. Hodgson, North Peltherton, and Mr. T. H. Scott, Kilvington, Thirsk; the latter officiated in the place of Mr. Dalziel, who was absent, owing to a domestic bereavement. Dr. Gordon Stables, R. N., took the non-sporting classes single-handed. The London Field says: "We did not hear many grumblers, excepting in the case of a few locals who had never been to a dog show before, and consequently thought their own mongrels perfect. One gentleman worked himself up into a state of almost frenzy, and declared that another year English judges should not judge Scottish dogs. We also heard such remarks as the following: 'Eh, mon, what will ma guidwife say when I gang hame and tell her our beastie has na' got a prize?' and a more wretched man than the owner of the first prize greyhound bitch I never saw, because his other entry, an animal with bad shoulders, did not win. But, of course, at a first show there are sure to be local grumblers and a fair sprinkling of rubbish; but it must not be understood that there were more of either at Dundee than usual, for this was not the case, and it reflects the greatest credit on the management to have got together an entry of 420 dogs, including some of our noted English specimens." The following were the prize winners in the sport and pointer classes: Pointers, above 40lbs.—1st, J. M. Keller, Bertha; 2d, J. Bishop, Rap; 3d, J. Ashworth, Rap. Under 40lbs.—1st and cup, H. G. Foster, Juno. Other prizes withheld.

Setters, black and tan.—1st, C. G. Macrae, Fan; 2d, Admiral W. H. M. Dougall, Duchess; 3d, W. Keir, Mina. High com., Mrs. H. B. Gibb, Nora III.; A. Cleghorn, Cora; and W. Keir, Grouse. Any other variety.—1st, L. Forster, Meg; 2d, J. Henderson, Ruby; 3d, W. B. Avery, Fred. High com., S. W. Wildman, Kate.

—Mr. D. P. Bosworth, of this city, claims the name of Bertha for his liver and white cocker bitch, whelped November 3, 1878, out of Clare by Mr. Goff's imported Dandie.

—Mr. O. W. Donner, of Brooklyn, claims the name of Sly for a liver and white pointer dog pup, by Sensation out of Mr. A. E. Godefroy's Queen; also the name of Carmen for a black and white pointer bitch pup, out of Messrs. Lincoln & Hellyar's bitch Gipsy by Snapshot. Carmen was whelped September 21, 1878.

Sea and River Fishing.

FISH IN SEASON FOR DECEMBER.

Black Bass, *Micropterus salmoides*; Pike or Pickerel, *Esox lucius*.
M. pallidus; Yellow Perch, *Perca flavescens*.
Sea Bass, *Sciaenops ocellatus*. White Perch, *Morone americana*.

FISH IN MARKET.—RETAIL PRICES.—Bass, 20 cents; smelt, 15; bluefish, 12½; salmon, 25; mackerel, 20; green turtle, 20; terrapin, \$15 per dozen; frofish, 8 cents; halibut, 18; haddock, 6; codfish, 6; blackfish, 15; flounders, 4; sea bass, 18; eels, 15; lobsters, 10; sheephead, 25; scallops, \$1 per gallon; soft clams, 30 to 60 cents per gallon; whitefish, 15; pickerel, 15; yellow perch, 8; salmon trout, 16; black bass, 16; red-snapper, 18; hard crabs, \$2.50 per 100.

HOW TROUT TAKE A FLY.

WASHINGTON, D. C., Nov. 23, 1878.

EDITOR FOREST AND STREAM:

Mr. Prime, in his book, "I Go a-Fishing," states in several places that as a rule trout, in taking an artificial fly, strike it with their tails before they attempt to take it. Is this true? My experience in fly fishing is quite limited, but I have taken them frequently in perfectly clear water where I could plainly see them rise and take the fly directly into the mouth without any preliminary striking with the tail. This question is, perhaps, of no capital consequence; still, as I am interested in the subject, I should like to be satisfied. J. A. H.

Without wishing to be brought into conflict with so high an authority as the distinguished author of "I Go a-Fishing," we are willing to place ourselves in antagonism with him sufficiently to say that we were not aware that trout had any such peculiarity as our inquiring correspondent refers to. We know that they are a capricious and festive fish, and have often watched their antics and capers, when they seemed to turn full somersaults every time they rose to a fly. We think the experience of many of our readers will recall to mind the fact that at such times trout were the most difficult to hook. At all events, it has been with us an exciting endeavor to hook the fish by the angler's wrist-knack; and we have often done so in various parts of the body, and frequently in the tail. The movement of the tail in making the somersault would certainly seem to render the fixing of the hook in the fish's mouth more difficult, instead of facilitating the operation. At other times, when the trout were not playing near the surface, but seemed sluggish in rising, we have seen them dart toward the hook, turn tail at the instant of apparent contact, and as suddenly return to the bottom. The flirt of the tail upward did not certainly help to fasten the hook in those instances. We cannot conceive by what mechanical action it is possible for a trout to so use his tail, on a straight or withdrawing line, as to get the fly into his mouth. To us the accomplishment

RORY O'MOORE.

WE print this week a portrait of the fine red Irish setter dog Rory O'Moore, owned by Mr. W. N. Callender, of Albany, N. Y. Rory O'Moore is about three years old and was sired by Rufus, his dam being the imported red Irish bitch Friend. At the first New York dog show he attracted much attention by his beauty and was placed first in the imported class. In the special prize for the best setter of any breed in the show he was selected by Mr. Macdonald and Capt. Taylor as their choice, the other two judges fixing upon Mr. Smith's Paris. Dr. Strachan was finally chosen referee and gave the decision in favor of Paris. Rory was next shown in the champion class at Syracuse, when he was V. H. C., the winner being Mr. Whitman's Ranger. At the New York show in 1878 he was shown in very poor condition, but received a V. H. C. He is said to be a capital field dog.

ANOTHER CURE FOR MANGE.—We are greatly indebted to a Boston correspondent, who writes us that having in three days cured mange on a horse by the use of petroleum soap, he tried it also on a bull terrier that had been doctored with every known remedy, and the mange was cured in a week. Subsequently he bought a gallon of crude petroleum at a cost of twenty cents, and with it cured mange on a setter puppy, the hair growing out in a week's time. This is a most simple remedy, but it should be used carefully, and only on the parts affected.

STUD DOGS IN THE CITY.—We have very frequently inquiries regarding good stud dogs in this city or immediate vicinity. We are now informed regarding two excellent dogs whom their owners propose to keep in town for stud purposes.

give a fine pointer pup out of champion Fan, by Native or out of Nellie (Dilley's Ranger-champion Fan), for the best brace of pointer pups under six months old. The Columbus Kennel will not compete for any prize in this class.

The entries close December 31. Prize lists are now ready. Yours truly, CHAS. LINCOLN, Superintendent.

[We have prize lists at this office, and can forward them on application.—Ed.]

THAT MONUMENT.—We have received a number of letters from correspondents regarding the question of sour milk for worms and a seton for distemper. Mr. J. R. Housel, of Watertown, Pa., who first suggested to us the use of sour milk for worms, writes:

I ask no monument for the information I have given our fancier friends, and all the return I hope to have is that it will prove, as it has for me, a perfect eradicator of worms, as it is simple and at the same time nutritious to the dog, and can easily be obtained by all. I discovered its merits through necessity. I have tested it thoroughly and give it in the true spirit of a friend to the dog. I hope it will be tried by the fraternity.

A correspondent from Bath, N. Y., writes:

Seton in the back of the neck to cure distemper was tried on a Newfoundland pup here about twenty-five years ago. Should you choose to forward that monument I will see that it is put as nearly over that pup's grave as the traditions of a quarter of a century will permit.

MR. DAVIDSON TO MR. SANBORN.—*Editor Forest and Stream:* In reply to Mr. Sanborn's letter in Chicago Field of Nov. 30, I would say there were undoubtedly many things said at the Minnesota Field Trials that perhaps he did not hear. He might not have heard it said, when Jennie had finished running in the champion stakes, that she had run in two stakes at the meeting without making a point, but the facts show such was the case. I do not feel that Mr. Sanborn received the show he had at other trials at which he had

of the act would appear like an acrobatic feat, and its apparent accomplishment a trick of legerdemain. Ordinary trout which are hungry make straight for the lure. They have always been known as bold biters. We have fed them with worms attached to a hookless string, and seen them invariably come head-on to the bait; and we have watched them under all conceivable conditions, when they seemed to bite naturally, the tail having nothing to do with the operation. In short, we have seen an elephant poke his food into his mouth with what some persons have supposed to be his tail; we have seen John Chinaman chuck his food into his mouth with a chop stick; and we have seen a dexterous Jap toss up an object with his foot and catch it in his mouth; but we confess we never saw a trout knock a fly into his mouth with his tail—never!

✓ **THE EDGAR BARBLESS HOOKS.**—Mr. C. F. Orvis, of Manchester, Vt., has sent us a sample of this "odd thing," with the following note. Our opinion is, that for small fish, or fish hooked in the lips, this will answer very well, as it is a sure catch, it being quite difficult to detach it after it is once fastened, as we have learned by testing it; but for large fish, or fish hooked in the side, it would not fasten, and would not hold as well as hook with a barb. The accompanying cut will help explain: if the part hooked into the spring is pressed back to the shank and is held there and not allowed to re-act. To press back the spring will require a pretty sharp bite.

I noticed in your last week's paper a short article from the pen of my friend, Mr. W. David Tomlin, of Chicago, in relation to the Edgar Barbless Hook. Mr. Tomlin sent me the first of these hooks I ever saw, asking if I could tie a fly on them. I made a fly on the hook he sent and returned it to him. He was very much pleased. Enclosed please find a sample fly. I never have tried this hook, so can't say how good or bad it is, but I don't think your collection would be complete without one of these odd things. Yours truly, C. F. Orvis.

ELEGANT RODS FOR FOREIGN ANGLERS.—There is no doubt any longer of the superiority of American fishing rods over all others, and acknowledgments of the fact daily reach this country in the shape of orders from all parts of Great Britain, and sometimes from the Continent. The well known firm of Conroy, Bisset & Malleson, of this city, are the recipients of a large share of such orders; very frequently trans-Atlantic visitors to this country take specimens home. Last week Capt. A. Williamson, of Edinburgh, Scotland, whose hunting exploits in Colorado were mentioned in the last issue of **FOREST AND STREAM**, sailed for Europe with two beautiful salmon rods made by the firm just alluded to. Both were of split bamboo,—one an 18 ft. rod, weighing 33 ounces, intended for use in the elating heavy waters of Norway, and the other a 16 ft. 16 ounce rod for the more pastoral waters of Scotland. The weight of the larger rod was much increased by a metal reel-seat which weighed 9 oz. Capt. Williamson feels sure that these light affairs will do as heavy and efficient work as the mightiest Kelso or Castle-Cornell.

Another rod made by Messrs. C. B. & M., is for A. E. Douglas, Esq., of the Hazard Powder Manufacturing Company, 88 Wall street, a veteran angler who enjoys the placid estuaries and channels of Florida in mid winter. It is of split bamboo, 16 feet long, and built especially for work on red-fish, or channel bass, as the same fish is often called. Quite recently Dexter A. Hawkins, Esq., of 10 Wall street, returned from an extended tour through Europe, and having handled and inspected the working-tools of some of the best rod-makers there, determined upon his return home, to show his people over the water what we can do here in America; and he has accordingly sent to a distinguished gentleman three of Conroy Bisset & Malleson's best split bamboo specimens. The first is an 18 ft. salmon rod, 32 oz.; second, a 16 ft. 16 oz. grise rod; third, a 14 ft. 7 oz. trout fly rod. The cost of these rods was \$50, \$35 and \$25 respectively. There is a growing English demand for American rods, lines and reels. Mr. Bisset is now about abroad expressly to establish an agency in England and Scotland for his manufacture.

—The fishing season is over on Long Island—all the vessels hauled up and the oil factories closed.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals continue small, but a limited number of vessels finding employment, as is usual at this season. The salt bankers have all arrived, leaving a fair stock of Bank codfish on the market, the demand being moderate and prices well maintained. The more mackerel fleet have hauled up, and the baymen are nearly all in. The weather has continued unfavorable for shore fishing, and it has been difficult for fishermen to avail themselves of the advantage of the large schools of codfish running inshore. The number of fishing arrivals reported at this port since our last issue has been six from the Banks, with 85,000 lbs. halibut, 21 from Georges with 300,000 lbs. codfish, and seven from the Bay St. Lawrence with mackerel. Total number of arrivals, 34.—*Cape Ann Advertiser*, Nov. 30.

PENNSYLVANIA—Erie, Nov. 23.—We have enjoyed the finest muskellunge fishing this season ever known in our beautiful bay. Over two hundred and fifty of the beauties have been taken from October 1st to date—all with spoon hook and and trolling line. The biggest fish we have taken was forty-two pounds. There were three caught yesterday that weighed one hundred and twenty pounds in the aggregate. **SNITE.**

VIRGINIA.—A salmon was caught last week, Monday, in the north branch of the Shenandoah River, and was hailed with much satisfaction as the first taken in the vicinity. A number of these fish were placed in the river at Strasburg and Mt. Jackson about three years ago.

LOUISIANA—Abbeville, Nov. 25.—Fish and oysters are abundant along the sea coast, in the bays and salt water bayous. In Vermilion Bay are mullet, redfish, sheepshead, turtles and crabs, and other kinds; in the Vermilion River and all the other rivers or bayous, are catfish, buffalo, sun perch and bass. **JAKE.**

"NO FIN NO FUN."

CHATHAM VILLAGE, N. Y., Nov. 15, 1878.

EDITOR **FOREST AND STREAM**:

I have just spent a short account of our club, which you did me the honor to publish in your excellent journal. I then advocated the introduction of a little competition, for the sake of awakening some extra enthusiasm in fishing. The prizes adopted this year were: A trout rod, for the heaviest trout taken with hook and line within a radius of seventy miles of the Village; a handsome reel for the next heaviest trout, and a basket for the heaviest bass. The trout that won the rod tipped the beam, and scored 11, 13oz.; a 1 lb. beauty took the reel, and the basket fell to your humble correspondent for the heaviest bass. Pardon me for being too modest to tell the weight; suffice it to say that he was caught in Onondaga Lake, which is becoming more and more celebrated for its magnificent black bass. I have it from good authority that in the month of August, this year, two men, fishing together out of the same boat, caught in one day 105 of these splendid fish, some of them weighing above 2 lbs. I have myself seen the sun set on several beautiful strings of bass caught in this beautiful lake. Our club took during the season 150 lbs. of trout.

In Flat Brook, Green River and Oxford Creek the trout are just numerous enough to make the pursuit of them interesting. I suppose you know that it is possible for a stream to have too few fish in it to make the fishing a pleasure—no fin, no fun. Then again the fish may be so plentiful—as, for instance, in unfrequented primeval regions—as to soon surfeit the angler. I was made sick of pickerel fishing in a single day among the Thousand Isles in the St. Lawrence for the same reason that poor Artemus Ward declined the offer of marriage by the seventeen young Mormon widows, "on account of the muchness."

There is a great deal more pleasure—that is, if pleasure is your motive—in catching ten fish an hour than thirty. Of course, if your motive is commercial profit, why then your pleasure will be proportioned to the plentifulness of the particular tribe of fish that you are in pursuit of and their willingness to be caught. In the one instance it is a question of dollars and cents, or bread and butter; and in the other the question is—How much pure fun and recreation can I get out of this pastime? The object sought determines the amount of pleasure experienced in the achievement of that object. The object contemplated by our little club was pleasure rather than profit in any financial sense, and pleasure we have had in the success which has crowned our pleasurable pursuits during the season of 1878.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

"GLENS FALLS SUBSCRIBER."—No time, no answer.

J. V. L., Philadelphia.—The cost of such a gun as you describe should be about \$125.

G. W. W., Soughton.—For a ferret send to Reich Bros., Chatham St., New York.

TOMKINS AND JACK CUNLEW.—Please send address to this office—not for publication.

J. A., Rawsonville.—Write to Pennsylvania Central Railroad, Broadway, New York.

G. H. W., Titusville.—The elbows or shoulders in the chambers of nearly all guns are made tapering.

J. B., Frederick City, Md.—We should continue the Dover's powder, giving one each night and morning.

E. M., Ballston Spa.—From the meagre description given we judge that your dog has been poisoned with arsenic.

D. S. W., Millerstown, Pa.—Please give me the address of a dealer in horse-timers. Ans. Tiffany & Co., Union Square, N. Y.

W. A. R., Kokomo, Ind.—The duty on archery bows is 35 per cent, and other charges, shipping, insurance, etc., bring it up to 40 per cent.

J., Baltimore.—Your bitch is evidently not in whelp. The circumstances related by you are not at all uncommon, and sometimes very deceptive.

H. P. D., Goldsboro, N. C.—I have a setter dog, 5 yrs. old, that nobbles all the while. Please give me a remedy. Ans. We do not believe there is any cure for snobbering.

A. B. C., Pleasantville, Pa.—On principle we should prefer the higher price, expecting thereby the best work. But the smaller price is what is asked by gunsmiths in this city.

E. A., Greenpoint.—Which is the best place for ducking, Prince's Bay or Long Island Sound? Ans. No good, duck shooting at either place. Go to Shinnecock Bay, east end of Long Island.

NEUBAUER.—If Moses Weaver, of Vinal Haven, Me., will send his post-office address to D. W. Cross, 90 Euclid ave., Cleveland, O., a box of neolumbium seeds will be sent him by express.

T., Farmington, Conn.—At what place in Massachusetts is the Massachusetts Kennel Club situated, and what is the address of its Secretary? Ans. Boston; John Foster, Jr., of that city, Secretary.

S. J. C., Sandy Springs, Md.—It is possible from your description that your dog may have been shot and give her area put in the usual manner. The castor oil which follows it will be beneficial any war.

J., Martine's Ferry, O.—How will the guns made by Hepplethwaite, Leeds, England, compare with Green's? Ans. We are not familiar with the former's guns, and certainly Mr. Green's have a more extended reputation.

Rss., Lynn, Mass.—You never make a fortune hunting alligators in the Cape Fear River. Better go farther south, where the hides write to Marehoblot, Broadway, N. Y. You can ascertain fare by showing at Lynn railroad offices.

LESTER, Greensboro.—For full descriptions of one of the best sections in Louisiana for settlement address A. D. Mans of Vermilion, La., who has recently printed an eight-page pamphlet setting forth its attractions and industrial resources.

C. S. S., Cincinnati, O.—Do you know a gunmaker by the name of S. Suberland? Ans. We have never seen the guns of such a maker, but there very probably is one—possibly in Scotland, as the name does not appear in the list of London makers. The targets made are excellent.

F. S. M., Hamilton, Ont.—"Deadrise" is a technical term, indicating the rise or angle with the horizon made by the door timbers of a vessel

generally indicated by so many inches rise to the foot in length, measured on the floor timber. Much deadrise indicates a sharp bottom, and little a flat bottom.

J. R., Woodville.—Our oft-repeated recipe for aquarium cement is: Powdered litharge, two ounces; dry white lead ground, one ounce; boiled linseed oil, three ounces; copal varnish, one ounce; in like proportion, all by weight. This will make a thick paste and will keep several days to "set."

C. A. B., Elmira, N. Y.—What kind of a dog would be the best for hunting partridges, quail, woodcock and rabbits; where can I get one, and how much would it cost? Ans. A setter would probably be best for your country. As to where to get one and cost, we must refer you to our advertising columns.

J. A. B., Boston.—We should give the dog, twice a day for two weeks, 8 drops of Fowler's solution of arsenic. Change diet entirely, giving oatmeal and plenty of vegetables. The trouble is evidently in the blood, and the Fowler's solution should correct it. If any of the Boston fanciers have Benbow's "London mixture," get a bottle of it, and give him.

GORDON, Philadelphia.—Your dog undoubtedly has worms, and possibly a tapeworm. We should give him arsenic, and some powdered pumpkin seeds in his food. We believe that Burlington Co. is not included within the jurisdiction of the Society, but you can ascertain positively by addressing R. T. Miller, Esq., Secretary, 100 Market St., Camden.

D., Concord.—1. Do the Greenet hammerless guns shoot as strong and as the ones with hammers, same make? 2. Who is the champion walker of the United States for short distances, from one to seven miles inclusive? Ans. 1. Yes. 2. Lester C. Dale, of New Haven, Conn., is professional champion, and G. H. Armstrong, of this city, amateur champion.

ENGLISHMAN, Brooklyn.—Is champion Snapshot the same dog that appears in the English K. C. Stud Book as No. 1029; also, please state his age? Ans. The same dog. He was entered at the first New York dog show by his then owner, J. R. Lloyd Price, Esq., as having been whelped Sept. 17, 1859, which is evidently a mistake, as he won 1st at Birmingham in November of that year.

W. M., Jersey, O.—There is a lot of guns for sale here with Wm. Moore stamped on them. Where are they made, and who made them, as you say Wm. Moore is dead? 2. Can I get a good serviceable gun for \$15, made in this country? Ans. They are made in Birmingham, but as there are probably fifty makers there, and we have never seen the guns, it would take even us to say who made them. 2. You can.

J. C. K., Brooklyn.—Cornell beat Harvard Freshmen and University in 1875 and 1876, and again the Freshmen in 1878. The present crew of Cornell is, however, composed of new men, while Harvard's present eight has never been beaten. They defeated Yale and Columbia in 1877, and Yale again in 1878. We do not think Cornell can equal her former achievements. Her men have neither the finish nor the discipline of Harvard, and their former victories were rather phenomenal than normal.

W. M. P., Newark, N. J.—A setter came to me the other day, evidently a stray dog. He is about a year old; dark brown, with white breast and toes. His sides are covered with a dead, yellowish hair, much lighter than his other coat, and looks rough and dry. Can you tell me what is the matter with him, and what I can do to restore his coat to its proper condition? His nose is cold and moist. As he would first endeavor to restore him to his owner, a few far capsules and raw eggs will bring his coat all right.

B. F. L., Fairfield, Ill.—1. Is Capt. Bogardus at home, or where shall I address him for quick reply? 2. Have a Parker gun, had it choked by our country gunsmith; does not shoot evenly; is there anything can be done for this? 3. I have a fine setter dog, well trained. Do not know his stock. In what way shall I describe him for information? Ans. 1. Astor House, this city. 2. Send it to Parker Bros., West Meriden, Conn. 3. A general description, color, shape of head, etc., will enable us to determine his breed, but not the stock.

R. J. G., Dunkirk.—I have a medium-sized black and tan house-dog about 3 yrs. old, that is becoming quite annoying on account of what appears to be a deep, hard cough, accompanied with gagging, as though caused by some obstruction in the throat; but he can make no discharge from the mouth. Coughs continually, day and night. Ans. The age of your dog has much to do with his condition. The following expectorant may relieve him: Friar's balsam, 10 drops; syrup of poplar, 3; diluted sulphuric acid, 5 drops; mullein, ½ oz.; water, ½ oz. Mix, and give a little two or three times a day.

O. L., Yareham, Mass.—A young sportsman was out shooting one day last week, when he by chance discovered a quail's head about 100 yds. from the side of a large stump. Without dashing the bird, he fired, and when he approached the spot he found sixteen dead quail. The question is—Was that strictly sportsmanlike? Ans. This is a question of sportsman's ethics, which the reader may answer for himself. "Sportsmanlike" is a word of very doubtful significance. It may mean much or little. To shoot the birds on the ground was not "sportsmanlike" in the sense which we presume our correspondent means.

J. A. P.—At what time or date, and by whom was wing shooting first engaged in as a field sport or pastime? Ans. The invention of fire arms is attributed to Schwartz, a German, in 1378. Ten years afterwards the gun was introduced into England. Quail like birds were then used by some hunters on running game, just as the bow and arrow had been before them; but as to wing shooting, it must be of comparatively recent date. Dogs, we know, were used to point birds so that hunters were enabled to ascertain their presence and throw nets over them. This must have been anterior to wing shooting, but long subsequent to the use of guns on game at rest.

F. L., Santa Rosa, Cal.—For rough-water use the cat rig is exceedingly dangerous, especially when off the wind. In a 22 ft. boat would advise the use of the common sloop, with short stout standing bowsprit and pole topmast. In a somewhat larger boat you might introduce the schooner, with three sails only—mainmast, foresail and single jib, same as for sloop. Also, pole topmast only, or topmast at the main and none at the fore. We do not advise the use of a traveler, and you will have no more to tend than in the sloop. When you get beyond 40 ft. water line would advise the cutter or yawl rig as superior to the sloop, but for that sized craft you need an additional hand.

W. B., St. Catharines.—1. What constitutes a professional? 2. Will the fact of a man's shooting in a tournament in which the professional has participated bar him from future amateur competition? 3. Will the answer to No. 1 apply equally to a pigeon shot, an oarsman, a runner? Ans. 1. A strict application of the term "professional" as applied to pigeon shooting, has never been made out, and it would probably only apply to Bogardus, Paine, Carver, and perhaps one or two others who have made shooting a profession or means of livelihood. 2. No. 3. It will not, as the rules governing each are very different. All amateurs who shoot pigeons in sweepstakes, etc., shoot for money, and yet are not professionals.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAMES, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[Post Office Box 2332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 5, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

HOLIDAY GIFTS.—You can make your children a no more useful and acceptable Holiday present than a year's subscription to FOREST AND STREAM. Think of the suggestion and act.

INTELLECTUAL REFRESHMENT FOR MINISTERS.—The New York and Brooklyn Baptist ministers discussed "Pastors Habits of Study" in their meeting last Monday morning. There was one pastor who built churches, and so had no time to study; another read, what little he did read, while traveling around on the street cars; another thought ministers didn't study the Bible enough, and a fourth thought something else. But the most sensible speech of the day was that of the Rev. Wayland Hoyt, who said, "I read the FOREST AND STREAM every Saturday night. It refreshes me for Sunday." Of course it does, and that's what it's meant for. And our word for it, Mr. Hoyt's Sunday morning sermons are the better, more cheerful and vigorous.

A DAY OF SPORT.—Our news columns show that last Thursday was celebrated all over the country with out-of-door sports. Athletic meetings, shooting matches, rifle contests, courings, pedestrian excursions, and all the other forms of sport to which the bracing weather of the day was so well adapted, engaged the attention of a large share of the devotees of these amusements, and every one is better for the recreation and the feast.

ETHEREAL MILDNESS.—Delightful autumn weather we are having so far, and sportsmen as well as others are making best use of it. Geraniums and other hardy plants are still blooming in suburban gardens in this vicinity. There has been no heavy frost. Lingering summer spreads herself all over the lap of autumn.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

NATIONAL SMALL ARMS MANUFACTURE.

THE old question of the proper scope of Government effort comes up in practical shape in one of the memorials presented to the Joint Committee on the reform and reorganization of the Army from the Association of Manufacturers of Arms, Ammunition and Equipments of the U. S. This Association, of which Eli Whitney is the President, are prepared to speak understandingly on the question of small arms, and the suggestions which it offers to the Committee are backed by figures against which it will be very hard, even for the most expert of official place-holders, to offer any satisfactory argument. On general principles it may fairly be questioned whether Government functions should go further than the preservation of peace between its subjects and their protection against foreign invasion and in carrying out this the collection of an appropriate and sufficient revenue. Instead of doing this the Government has entered into a sort of smothering competition with private manufacturers, and while allowing all ready appliances for action to fall into disuse has cumbered its departments with a quantity of "plant" of little value with itself and an obstruction to private makers of small arms. Last year the Government placed a valuation of \$60,000,000 on its arsenals and armories, and of this it may without fear of contradiction be said that fully five-sixths represents capital sunk dead through the misdirected policy of the government in attempting to do for itself what can be so much better done for it by private companies and firms.

There are peculiar reasons why this country should of all others abandon the traditions which make it necessary to go on putting vast sums into arsenals and armories. Our manufacturing firms can and will supply all the arms of any description that they may be called upon to produce. They do not urge government patronage, with the fact kept in the background that the arms they offer are inferior to those made by the government. The facts point the other way and foreign buyers, looking with an unprejudiced eye for a good weapon, come to our American workshop and buy largely, while our own government go on building great shops for the manufacture of material and pieces which to all but those actually engaged in their making up are second rate and antiquated. The rifle range with the open competition there in vogue is doing wonders in showing up the relative results of the close conservatism of the government shops and the open, keen competition of the private armories. To be sure our government is not now making muskets on an ante-revolution model, but it is years behind the best effort of our time, and the people at large in this line of manufacture, the masters of the government, if you wish, have a right to be assured that they are getting a fair *quid pro quo* for the great outlay made and a reasonable return on the money now sunk in the government shops. There is a danger that the government without such reliances might find itself the victim of rings and forced to bleed heavily in times of urgent need. The bugaboo of "rings" may have some effect, but it is a poor cry for government advocates to set up, since such knavery can only flourish through the connivance of trusted government officers. The fact that our own government was a profitable customer to the gun companies would have a consequential benefit, in that such expenditure would so encourage and stimulate invention and improvement in their materials of war as to wonderfully increase the foreign trade on those articles. It is needless to reiterate what our private armories have done in the way of supplying other nations. The Turkish contracts come first to mind simply because they are among the most recent, and comparatively large in amount. With the English market open and the European armories accessible the choice fell upon an American weapon, while in fixed ammunition the capacity of our Connecticut works and the quality of their supply has never been questioned.

In the course of the memorial above spoken of these points are strongly urged and in addition it is shown that any claim for greater economy in the making of government weapons is entirely erroneous. Comparing the work accomplished at the Springfield Armory and that at any private armory it is shown that during the fiscal year ending June 30, 1877, the total number of rifles and carbines fabricated at the national armory was, according to the report on the subject, 7,050; the valuation of the armory property that year was \$7,000,000. Allowing 10 per cent. as the proper rate to be charged on this sum for interest, taxes, repairs, insurance, etc., all of which indirectly has to be paid, it gives \$700,000 to be added to the cost of the arms produced; this sum, divided by the number of arms manufactured, gives \$99.29 as the proportionate share of each rifle in these expenses; thus the probable cost of a Springfield rifle or carbine, made in 1877, was at least \$115. There are private arms manufacturing companies in this country that would contract to make Springfield rifles, identical in every particular to those made at the national armory, for \$15 each.

The recommendations finally made by the memorialist are that

Firstly. There shall be a board for the examination of small arms, small arm ammunition and accoutrements, appointed by the General of the Army, subject to the approval of the Secretary of War; the said board to consist of at least five officers, who have seen the most active service during the greater part of the three years previous to their appointment. Notice of the time and place of the meeting of the board should be published in the newspapers; and manufacturers, inventors and patentees should be invited to submit arms, ammunition and equipments for examination. The board should carefully examine the arms and munition submitted to their

inspection. From the rifles presented they should select different patterns, to be the standard arms of the Army and militia. These arms should be contracted for at private armories and issued to the troops. The different systems would induce competitive trials and the superiority of one system over another would be proved. This plan of causing different patterns of arms to be issued should also be applied to the issuing of ammunition and equipments. All the patterns of arms, however, should be so constructed that the ammunition purchased can be used interchangeably among them. The board should fully report upon the various small arms and munitions which they have examined, and such report should be made public.

Secondly. The law of April 23, 1868, for arming and equipping the militia, should be carried out as its originators intended, and the annual appropriation should be increased in the same ratio that the population and the revenue of the country have increased. The difference in the cost of arms and munitions made in 1868 with those manufactured at the present time should also be considered in deciding what shall be the sum of the annual appropriation. The sum appropriated should be expended as it was formerly, in the purchase of arms and munitions from private manufacturers. By doing this active competition among the private armories will tend to improve the quality and reduce the cost of these necessary articles; also, it will foster industries of national importance and will so sustain American manufacturers of arms and munitions that they may compete successfully with foreign rivals in the markets of the world.

THE HORATIAN SPIRIT.

In my leisure I often take up the works of the old Roman poet Horace and read and study him with infinite gusto. To me he is the most delightful fellow that ever lived—not even excepting that prodigious fellow Shakespeare. He was a true country gentleman, and if good shot-guns and pointers had been known in those days I have no doubt he would have been an enthusiastic sportsman as the editor of FOREST AND STREAM himself. He gives us a hint of this in his first ode of his first book:

—Manet and Jove trigido

Venator, lenacis conjugi immemor, etc.

That is to say, translated broadly: "The sportsman in his enthusiasm, utterly forgetful of his young wife, stays out all night in the snow," etc. If we all had more of the Horatian spirit it would be better for us. Let us cultivate it. The 81st ode of the first book breathes all over with the Horatian spirit. I have fallen so much in love with it that I make a translation of it, which I inclose to FOREST AND STREAM, though perhaps not exactly in its line:

What shall the poet, when he builds his shrine,
Ask of Apollo, the divine?
What shall he pray for when he pours
His first libation and the god adores?
Not the best roast Sardinia yields
From her ever fruitful dale,
Not for the pleasant herds that feed
On hot Calabria's flowery mead;
Not for glittering herds of gold,
Or ivory from India old;
Not even for those best retreats,
Whose soil the silent Siles eats.
Let those by Fortune greatly blessed,
Of showery villages possessed,
Duly attend the gift divine,
And prune with crooked blade the spreading vine.
Let the rich merchant, from his cups of gold,
Quaff Falernian, choice and old,
Dear to the gods themselves, since he,
Three or four times a year,
Sails to the Atlantic Sea,
Swindling without fear!
For me, content, a staid board is spread,
On olives, acornies, and light mallows fed.
Son of Latona, hear my prayer:
Good health, I pray thee, be my share,
And spirit to enjoy, with proper zeal,
The goods of fortune wherewith I am blest!
A mind unbroken and serene, I pray,
Preserve to me through all my little day;
And when I can no longer sound the lyre,
Son of Latona, let the bard expire!

Thus the Horatian spirit is a calm and beautiful philosophy which envies none and loves all; which seeks none but the loftiest happiness to itself, and none but happiness to all others. Let the rich merchant drink his old Falernian from his cups of gold; let every man enjoy himself as he chooses; but give me my quiet country life, my olives and my mallows, my good health, a spirit to enjoy my possessions, and a mind that loves intellectual thought. When this latter falls me and the lyre is no longer responsive to my touch, son of Latona, let me *canon*!

I have been looking over my dictionary to learn exactly what Horace meant by mallows, but they have not made the subject clear. Didn't he mean okras? Certainly when served hot with butter and pepper they are splendid, and very nutritious and digestible. *Seesquey molto!*

In that verse where Horace speaks of the rich merchants who drink wine out of cups of gold and go three or four times a year by ship to the Atlantic Sea, returning *impune*, being dear to the gods, he evidently intends a quiet thrust at both the gods and the merchants. He evidently meant that the merchants got their fine wine by swindling the barbarians, and then appeased the wrath of the gods, on their return voyage, by occasionally leaving overboard a cask of their best as a present to them—having referred particularly to Neptune, Castor and Pollux, the gods of the sea. In other words, that the merchants were cheats and rascals and the gods no better than they, inasmuch as they would wink at rascality and let the rascals go unwhipped—*impune*, through influence of a bribe; that is, an occasional cask of wine heaved over to them. Truly they had a jolly old set of gods in those days. Horace

despised everything that had the odor of meanness or dishonesty, and wasn't afraid to "go for" it even in the highest places.

If this new treading into an old field prove pleasant to the editor and his readers I may from time to time, as leisure allows, send them other things from Florac. But, on account of the remarkable terseness, purity and beauty of his language he is the most difficult fellow to translate and do anything like justice to that ever wrote. Even the best translations of him are as faint, compared to the original, as the sound of the sea as heard in a shell.

N. A. T.

FURS.—Last winter was not such a season as gladdens the heart of the fur dealer, and as yet there are but few indications that the coming one will be in any way different. Still, ladies must have furs, and we devote a few lines to telling them what is the "correct thing." Probably the largest fur establishment, and the most fashionable in the city, is that of Messrs. C. G. Gunther's Sons, No. 184 Fifth avenue. From them we learn that the seal-skin still holds its position as favorite, notwithstanding the popularity of fur-lined wraps. This winter they are made more closely fitting to the figure, with an average length of about thirty-seven inches. The front should be double-breasted and may lap from the throat down or turn back at the top like the lapels of a coat. For fineness of fleece and depth of color the Shetland seal-skins are chosen; but these are very scarce and very high, as no Shetland seals have been taken for several winters. The strong Alaska skins, with thick warm pelts, are preferred for garments that are to be subjected to hard service, as they are more durable.

Seal-skins have at length become the popular fur in Paris, and consequently the greater demand for them has increased the prices in London. The prices have not advanced here, though they probably will do so next winter. Untrimmed sequoas cost from \$50 to \$800, but those of fashionable length are never lower than \$100. Those sold at \$125 are especially commended, but the prices vary according to the quality of the skins and the depth of the garment. A border will add something to the expense. The fashionable borders are brown and silver beaver (which the French call castor), plucked and unplucked otter, wool seal, black marten or Alaska sable, colored lynx and chinchilla.

Fur-lined cloaks are worn in a variety of shapes this season. In selecting garments the purchaser should keep in view the probability that full draperies will be revived, and select an ample garment. For this reason many ladies are buying circulars instead of the newer shapes. Circulars are made with the deep Russian collar—hoods are out of date—and may be either bordered or plain; if the sum to be expended is limited it is better to omit the border and buy the best quality of silk and of fur for the cloak and its lining. Cheap linings of fur rub off on the dress beneath them, and the low-priced silks soon become "shiny." Repped silk of heavy quality, Sicilienne, armure, and a new fabric called Messine, are all used for the outside of the cloak.

The rich dark Russian sable sets are always valuable, and always in fashion, no matter what novelties are offered. The boas are round and long, with two tails finishing each end. Handsome dark sable mufflers cost as high as \$400, but there are light shades of sable made up in mufflers for \$35. Since the fashion favors all furs with white tips or silvery points, robes of this kind have been used, though formerly they were rejected. Muffs of this silver-tipped sable are lined with white silk, and made very dressy; they cost \$85. Of the Hudson Bay sable the boas with a dark stripe down the middle are handsomest, and can scarcely be distinguished from the medium qualities of Russian sable.

LADY PEDESTRIANS AND SOFT REPORTERS.—When the Ladies' Saturday Morning Walking Club, which "represents some of the most exclusive circles of New York society," goes forth to the hills of Jersey for the rambles prescribed in its unwritten constitution, lo! the reporter Jenkins is there also, and seeth what he may see and hear what he may hear to spin it out in the next day's gush. And this is the way he does it:

Quite early in the morning a half-dozen demure looking persons of the gentler order of creation approached the wharf at the foot of Twenty-fourth street, on the North River, and the moment that their feet touched the dock, and they felt certain of having so far escaped the observation of the average metropolitan reporter, they partly threw off the mask of reserve and merry ripples of laughter broke from their scarlet lips. The morning's keen breath had already kindled a glow on their velvety cheeks, and their eyes sparkled with the

Then he takes the office dictionary and crams up something about Acteon and Diana; that gives him a chance to work in "the pitiless though lovely eyes." The Amazons, Theseus and Athens rather round off the classical part of this boss, and sundry references to the Revolution show Jenkins' familiarity with American history fully equal to his more recondite erudition. And you can buy all this the next morning for three cents—scarlet lips, velvety cheeks, lovely eyes, Acteon, Diana, Athens, Theseus, Amazons, British infantry, charming creatures and ambrosia—3 cts.

BROOKLYN ART ASSOCIATION.—The thirty-seventh exhibition of the Brooklyn Art Association was formally opened in that city on Monday evening, with a brilliant and appreciative assemblage. For merit the collection is not fully up to some previous ones. One of the most noteworthy and conspicuous

objects in the collection is a life-size portrait of Gen. Robert E. Lee, late of Virginia, in citizen's clothes. It is a most speaking and truthful likeness and attracts much attention.

THE ANIMATED STICK.—Regarded in any other light than as a dispensation of Divine Providence, the Animated Sticks are an unfathomable mystery; an irreconcilable infiction. Now an ordinary stick you may stand up in the corner and have it out of the way, or cast into the fire and extract from it a genial glow. But the Animated Stick won't stay put; and is neither genial nor warm. He may be green—a sap-head; or, dried-up—a block-head; but never dry in the sense of bright and witty. Aaron wouldn't turn him into anything lively. Some sticks, too, are pithy; but no one ever knew an Animated Stick to have any pith in his heart. It were useless to look upon him save as a rod of chastisement. Better is it to be slain by the cudgel of a Fiji, than to be bored to death by such a Stick; better be stuck like a hog than stuck on the Animated Stick. And we're not stuck up either.

GONE TO FLORIDA.—That office boy of ours has gone again. This time to Jacksonville, Florida, on the steamer *Western Texas*, of the Mallory line, Captain Hines, and if he don't get the soundings as she crosses the bar, he may expect a good trouncing when he returns, unless he brings a few oranges for office use.

FOR FLORIDA.—Dr. J. A. Henshall, of Cynthia, Kentucky, well known to our readers, will presently start for the Indian River country and Discoyne Bay, in Florida, and is good enough to promise us some facts relative to the ichthyofauna of that section. We notice that Professor Jordan has paid him the compliment to reprint from *FOREST AND STREAM* for October 26, 1873, his article on the *Micropteri* for his (Jordan's) coming report on the Ohio fishes.

—To died of Potassium.

GAME PROTECTION

MAINE.—*Kennebunk, Nov. 30.*—At the first annual election of officers of the Kennebunk Fish and Game Protective Association, on the 6th inst., the following gentlemen were chosen for the ensuing year: President, J. S. Saunders; Vice-President, George P. Lowell; Secretary, George C. Lord; Treasurer, W. H. Cloutman; Executive Committee, Z. M. Cushman, C. W. Stanley, George W. Larabee. The association is in a flourishing condition, and has done a good work in protecting our game and enforcing the game laws of the State, prosecuting any infringement coming within jurisdiction of the association.

G. C. L.

GAME LAWS OF NEW BRUNSWICK.—We are indebted to a thoughtful correspondent for the following digest of the leading features of the Provincial game law passed last winter: Mr. Zorros: Jas. J. Fellows, of St. John's, is Chief Game Commissioner for New Brunswick, and issues "Sporting Licenses" (\$20 each) to persons not having their domicile in New Brunswick. Penalty for violation of this section of the act, not less than \$20 nor more than \$50, in addition to the license fee and costs of prosecution.

Sec. 16 recites: "No person shall take or kill any partridge, snipe or woodcock between the first of March and the first of September in any year, under the penalty of \$4 for each such act, etc."

Sec. 1 recites: "After the passing of this act (April 18, 1873), no person shall hunt, take, kill, wound or destroy any moose, caribou or deer from the first of January to the first of August, under penalty of a sum not exceeding \$20 nor less than \$10 for each and every such act; any person who shall hereafter hunt, chase or pursue with intent to kill any moose, caribou or deer with dogs, shall be liable to a penalty of \$20 for each such act, etc., and dogs may be destroyed by any person."

Sec. 2 recites: "No person or number of persons forming a hunting party shall, during the time hereby allowed for killing moose, caribou or deer, in any one year or season, kill or take more than three moose, five caribou or five deer."

Flesh of animals, moose, caribou or deer, killed shall be carried out of the woods within 10 days after killing, except killed in latter part of December, when must be carried out within the first five days of January.

The hunting, trapping, etc., of mink, otter, fisher, sable or beaver is prohibited between the 1st May and 1st September in any year, under penalty not exceeding \$20 nor less than \$5, for each such act.

It is provided, however, that any person may catch alive at any season of the year any number of minks for the purpose of breeding and preserving them in any box, tray or modification of the same.

These are the material parts of the act of public import and such as you might require for your readers, the rest of the law is principally devoted to proof, etc., of violation of different sections. I might remark that a Warden is appointed for each county, and that licenses are in force for one year from the first of September in each year.

Geo. M. S.

The Rifle.

MASSACHUSETTS.—*Boston.*—The Walnut Hill rifle men, on the 27th ult., drew out a good company of spectators, and despite a changing wind, of a fish-tail sort, good scores were made. The firing at long range was in the regular classified match, the fifteenth and last of the series as originally announced; but as, owing to the rain then prevailing, only one competitor had appeared on a previous trial, it has been decided to have one more contest, which will be shot Wednesday next, and will close the match. The standing of the two leading competitors for first place in this match, Messrs. Jackson and Sumner, their five best scores being given, is as follows: W. H. Jackson—220, 218, 210, 215, 214; total, 1,087; average, 216.6-10. J. S. Sumner—216, 216, 215, 215, 213; total, 1,075; average, 215. The contest in the second class is between Messrs. J. F. Brown and Lewis Saunders, with the chances in favor of Mr. Brown. The scores of the fifteenth shoot stood:

William H. Jackson.											
800.....	5	5	5	5	5	5	5	5	5	5	5
900.....	5	5	5	5	5	5	5	5	5	5	5
1,000.....	5	5	5	5	5	5	5	5	5	5	5
J. S. Sumner.											
800.....	3	5	5	5	5	5	5	5	5	5	5

1,000.....	5	5	5	5	5	5	5	5	5	5	5

For Thanksgiving Day no end of off-hand shooting was provided before the butts here.

Boston.—The rifle men are not abating the least in their enjoyment of range sports at the near approach of the cold weather. The fine fall weather has admitted of the best sort of scores, and encouraged by success. On Thanksgiving a favorable morning drew out a good representation of shooters and lookers-on, though the day ended in a disagreeable down-pour of rain. The "Winter Shed" match, with 80 entries, at 200 yds., resulted:

D Kirkwood.....	4	5	5	5	5	5	5	5	5	5	5
O M Jewell.....	5	5	5	5	5	5	5	5	5	5	5
J B Jackson.....	5	5	5	5	5	5	5	5	5	5	5
W Poland.....	4	5	5	5	5	5	5	5	5	5	5
A W Howland.....	4	5	5	5	5	5	5	5	5	5	5
V S Guernsey.....	4	5	5	5	5	5	5	5	5	5	5
J B Osborn.....	4	5	5	5	5	5	5	5	5	5	5
H Tyler.....	4	5	5	5	5	5	5	5	5	5	5

In the amateur series match, at the same distance, the leading scores stood:

O M Jewell.....	5	5	5	5	5	5	5	5	5	5	5
J B Jackson.....	5	5	5	5	5	5	5	5	5	5	5
J B Parker.....	5	5	5	5	5	5	5	5	5	5	5
F R Shattuck.....	5	5	5	5	5	5	5	5	5	5	5

The comforts of the new winter shed were enjoyed again on the 30th, though the weather was charming for outdoor sport. The winter shed match was the popular one, and with 100 entries and re-entries some excellent shooting was shown, 60 of the scores made standing above the "centre" average. The light was good throughout most of the shooting, and the wind, which blew somewhat fiercely during the day, finally settled down into a reasonably steady breeze from the northwest, ranging from "10 to 11 o'clock." The leading scores are:

W Poland.....	5	5	5	5	5	5	5	5	5	5	5
J B Osborn.....	5	5	5	5	5	5	5	5	5	5	5
W B Jackson.....	5	5	5	5	5	5	5	5	5	5	5
J A Lowell.....	4	5	5	5	5	5	5	5	5	5	5
E B Southard.....	4	5	5	5	5	5	5	5	5	5	5
L Hubbard.....	4	5	5	5	5	5	5	5	5	5	5
C Edwards.....	4	5	5	5	5	5	5	5	5	5	5

Boston, Nov. 23.—Jackson's Gallery, 25 Beach street, weekly shoot, 75 feet, 10 shots:

W Hunter.....	48	V L Secho.....	42
D F Small.....	45	W J Griffiths.....	41
H Collins.....	44	M L Pratt.....	41
E Emerson.....	43	F H Harrison.....	42
H Hogan.....	43		

Medford.—The members of the Medford Amateur Rifle Association had a special match on the Bellevue range during Thanksgiving Day. Messrs. Richardson and Teale chose sides from among the members present, and the firing was close enough to make the match an intensely interesting one. Firing ten rounds at 200 yards, the scores stood:

Richardson's Team,			
J H Eames.....	42	C R Dawson.....	35
H K Richardson.....	42	E S Piper.....	34
E W Hayes.....	42	H S Foster.....	38
John Grady.....	39	H W Perkins.....	20
J W Vinlug.....	37	O D Archibald.....	14
N P Ames.....	36		
Total			270

J B Osborn.....	43	E F Kendrick.....	36
H H D Cushing.....	41	W V Gibbs.....	33
R Sawyer.....	39	W P Metcalf.....	33
J B Vail.....	38	J W Tootell.....	33
D N Howard.....	37	G O Foster.....	18
C H Russell.....	36		
Total.....			363

The Bellevue range on the 80th, was occupied with the return match between the Wakefield and Medford teams. Favorable weather and the keenest sort of competition brought out the best efforts of the men; but the visitors slipped to the front by a single point. The firing was at 200 yards, off-hand, and the full score stood:

Wakefield Team.											
O Corcoran.....	4	4	4	4	4	4	4	4	4	4	4
R Howard.....	4	4	4	4	4	4	4	4	4	4	4
D Walker.....	4	4	4	4	4	4	4	4	4	4	4
J Houston.....	4	4	4	4	4	4	4	4	4	4	4
J Ogilvie.....	4	4	4	4	4	4	4	4	4	4	4

J W Vail.....	4	4	4	4	4	4	4	4	4	4	4
H H D Cushing.....	5	5	5	5	5	5	5	5	5	5	5
J Grady.....	4	4	4	4	4	4	4	4	4	4	4
J R Teale.....	4	4	4	4	4	4	4	4	4	4	4
J H Eames.....	3	3	3	3	3	3	3	3	3	3	3
Total.....											427

—56 in a possible 60 was the best score made at Spear's Gallery, Quincy, Mass., during the past week. Harry Southard was the marksman and a silver-plated castor his reward.

MEDFORD VS. WAKEFIELD.—A correspondent explains about the match between the Medford and Wakefield Rifle Associations as follows:

A month ago the Medford Amateur Rifle Association challenged the Wakefield Association to a friendly contest, each team to consist of seven men, ten shots off hand, 200 yards. On account of two of our best shots being residents of Boston, they declined shooting with us, making the most unreasonable excuse that if the above two members were allowed to shoot the team would not represent the name of our association. By a little persuasion on the part seven of our members went to Wakefield and shot their team and their own responsibility. Our association as much had no interest in the matter whatever.

WHAT IS TRAPPE?—A correspondent sends us the following queries:

"The other day while out quail shooting on a farm that I had permission to shoot over my dog found birds at the line fence. When I flushed the birds they flew out on the adjoining farmer's property. I killed a bird and it fell on his land. I sent my dog to retrieve the bird, when the farmer on whose land it fell came out and threatened to shoot the dog, and the only way of preventing him from carrying his threat into execution was by threatening to shoot him if he did it. Will you be kind enough to advise me what action to take should such a thing occur again or in case I or my dog should go on another man's ground by mistake? Also, has an owner a right to shoot my dog or to fine me for trespass without asking me to go off his land?" E. G."

A certain portion of our correspondent's letter could be better answered by a lawyer, who would probably be better posted as to the State laws than we are. We can say, however, that no man has the right to shoot another's dog under any circumstances unless it be one which places him in fear of bodily harm from the dog. If you trespass on a farmer's land who has duly complied with the law regarding posting or advertising his land he can cause you to be arrested for trespass, but he cannot touch your property in any way.—Ed.

MASSACHUSETTS—Wareham, Nov. 27.—The Briggs boys—Charles and Frederick—in four hunts this season have killed five raccoons. The two last were taken near the old Federal Furnace, some eight miles north of our village, on the 21st. Their weights were 17½ and 21 pounds. C. L.

Wareham, Dec. 2.—The game register at the Kendrick House, Wareham, Mass., for the month of November foots up 37 partridges, 152 quails and 1 woodcock, notwithstanding the inclement weather of over one-half a month and other causes distracting the game, such as bull dog hunters, and a high mortality among partridges caused by ticks. It is believed that the wild house cats are making ravages among the coveys of quails, as a large number of the feline race of enormous size are seen in our surrounding forests, even at a distance of eight miles from human habitation. The huntsmen, however, have turned their special attention to that class of marauders by unloading their firearms in the direction of wild puss.

Boylston, Nov. 23.—A. G. Larkin went out hunting this week, and his dog soon found a track which Mr. L. supposed was that of a fox. After chasing the animal for one hour and a half, he overtook, on the edge of Northborough, a large wild cat which he shot. The animal weighed fourteen pounds, and was nearly four feet in length, and is a "rare bird" in this section.

Salmon, Nov. 29.—Quail are about, but need to be diligently sought. Matters generally are quiet. NEWCOMB.

NEW YORK—Hornellville, Nov. 25.—So far this season there have been eight deer shot within a few miles of here. Ruffed grouse are getting more plentiful. John Penwell bagged ten in one day and Burt Elliott six in one afternoon. L. T. Scoville, of Portageville, captured an eagle recently, which is pure white in color, measures seven feet three inches from tip to tip of wings, and weighs 59½ lbs. JOHN.

Shelter Island, L. I., Nov. 23.—The fowl shooting here now is poor enough; few birds and those few very wild, so that it is hard to go for them; but during the winter they may be here in good numbers, as they were last winter. A few flocks of wild geese have passed over, but they make no stop and fly too high for the gunners. ISAAC.

NEW JERSEY—Barnegat Inlet, Nov. 24.—Shooting been very poor past week. Only fowl here worth noticing are black ducks and broad bills. Brant and geese have not made their appearance here are they?; the oldest gunner has not known them to be so late before. Only shooting worth reporting was done last week by Professor J. M. Ladin, the champion athlete, who scored some 17 on Monday and 10 on Tuesday last. The professor, from personal observation, is a No. 1 as a shootist. B.

MARYLAND—Baltimore, Nov. 30.—A large number of gunners spent Thursday in the field. Those who went out to the country about Perrymanville and Edgewood report excellent fun. The partridge and hare are very abundant there. A number of sportsmen went down by boat to the lower counties and met with good success.

PENNSYLVANIA—Mr. A. F. Clapp, the sporting editor of the *Sunbury American*, has recently been out on a deer hunt to the Snow-Shoe range of the Alleghenies. There were six in the party, not counting the dogs. They camped at an old house on the Black Moshannon Creek, and early in the morning started out, and one shot at a flying white flag and the loss of a valuable dog was the result of the day's sport. The next day's chase was more successful, a fine five-pronged buck gracing the return to camp. Two days of rain and one of snow followed, and the hunters returned to their homes well satisfied with their experience.

Titusville, Dec. 2.—Our surrounding woods have been so thoroughly hunted for the past three months that game was never known to be so scarce before. Ruffed grouse have all been killed or left our woods; was out all day Saturday; saw but two. Last week eight different hunting parties passed through this city for Forest County. Deer is said to be very plenty in this county. Nearly every meat shop has from one to three hanging in front. G. H. W.

TENNESSEE—Nashville, Nov. 23.—The largest bag of quail made to one gun, this season, was that of H. S. Gettings, of Baltimore, Md., at present near Dixon Station on the N. W. R. R., where he is training Mr. Nicholson's Jet and Bella for the coming field trial; Mr. G. killed 74 birds.

LOUISIANA—Abbeville, Nov. 29.—There is at times an abundance of game in this (Vermilion) parish. Deer and bear as well as turkeys and prairie chickens have been well high exterminated; but there are plenty of partridges, squirrels and turkeys. In winter, geese and ducks by the millions flock to the marshes along the sea coast and bays, and to the prairies. These geese, brant and ducks get very fat, and are excellent for the table. Great numbers of woodcock resort to this region in winter, and remain throughout the winter season; from twenty to forty brace may be bagged per day by a good gun. The Wilson snipe and three or four other varieties are

found throughout the prairies during the late fall and winter. Many varieties of plover and curlews and sandpipers are found here in abundance. The Bartram's sandpiper arrives here in August and is very fat and of extreme delicacy; they surpass anything of the kind to be found in the United States for delicious flavor. With the exception of short intervals, good shooting is to be had throughout the year.

ILLINOIS—Carthage, Nov. 27.—Wild game, which for the past few years has been so scarce in this vicinity, has lately made its appearance in unusual quantities. While there are large numbers of ducks, geese, rabbits, quail, etc. The "crop" of prairie chickens is truly astonishing. Thousands of these birds can be seen any frosty morning flying among the cornfields near town, and our sportsmen are having some good shooting in consequence. Large numbers of these birds are being killed in this county and shipped to eastern markets. GAR.

Vienna, Nov. 25.—Ruffed grouse, quail and rabbits quite plenty here, but the grouse are very wild. In part of two days I bagged 19 quail, 6 rabbits and 3 grouse. RON.

Onto—Hamilton Co.—Few sportsmen would admit that ducks—wild ones—can be seen within seven miles of the city of Cincinnati. But such is the fact, especially since the completion by some heavy ice companies of "reservoirs" of many acres in extent, near Carthage, O. The sight of the wild fowl, perfectly at home, but wary, upon these miniature lakes, is one most refreshing to the eye of the sportsman, reminding him of former joys in the Northwest. The premises here referred to are, unfortunately, "posted." W. McK. H.

MEMPHIS—Detroit, Nov. 23.—Nov. 19 Frank Blakely was out for a hunt, and returned with 6 partridges and 1 quail. Nov. 20, Chas. A. Osborne was out ducking, and bagged 16 ducks. On the 18th inst., Walter Congreve made a bag of 15 quail. Nov. 21, W. H. Myler and A. H. Bachman took a trip to Redford for a day's recreation and a little sport. They bagged 7 squirrels and 3 coons. The coons were all found in one tree, weighing 23, 19 and 18 pounds. The smaller one was captured alive; all being males. DEWIN.

Detroit, Nov. 30.—Nov. 25, E. H. Gillman, of this city, and James Skuse, of Windsor, Ont., were out for a day's sport and made a bag of 12 partridges and 28 quail. Nov. 29, Frank Nall and Frank Eldy, in company with J. W. Jardine, returned from a five days' shoot in the woods north of Alpena. The following is their bag: 13 ducks, 33 partridges, 7 white rabbits and three hundred pound black bear. Jardine had quite a tussel with a buck who had a hind leg broken. Jardine ran up to cut his throat and the deer went for him, knocked him down, bruised him quite severely, and making a serious wound in his left wrist. He says he will never try collar and elbow hold with a deer again. DRUID.

—Deer are reported very abundant in Alpena County. Between 300 and 400 have been killed already this season.

—A party of six Pittsburgh sportsmen sent home more than 600 ducks as the result of a week's hunt on the St. Clair Flats.

—A brakeman of the Great Western Railway recently encountered a bear, and the local paper says that his "face is embellished with more cuts than ordinarily accompany an illustrated newspaper."

—A large wildcat was shot in one of the streets at East Saginaw on the 24th inst.

MINNESOTA—St. Paul, Dec. 2.—Migratory game has mostly left our hunters are mostly engaged with deer, of which the forests are full; some quail and ruffed grouse in market. Next year I trust you will make a longer visit here and look at Minnetonka. C. P.

IOWA—Algonia, Nov. 20.—I note the letter of "Nimrod" in your issue of the 14th inst., and have been much interested therein. A party of five of us bagged 267 ducks at the duck pass he speaks of, near Spirit Lake, about the first of this month. I can corroborate all he says about the game, accommodations for hunters, etc., but wish to set the people right on one subject he speaks of. Having been a resident of this country for twenty-three years, and knowing intimately nearly every man that shoots near here, I must say that the person who told him "that prairie chickens had been shot by hundreds and left lying on the ground" imposed greatly on his credulity by making up a lie "out of whole cloth." I have never known of one chicken being left that could be found by diligent search. There are more chickens lost by the nests being burned in the spring every year than are shot in five years. Every person here who has paid any attention to the subject will bear me out in this assertion. I shall never see them so plenty as they have been, although very fine sport can be had now. Our present game law is a failure—in this part of the State, at least. I do not know of over six men in this county who observe it, of which I am one. It defeats itself by its very stringency and unconstitutional provisions. Ducks have been very plenty this season, but geese not so plenty as usual. ALGONIA.

THE CHAMPIONSHIP.—The gold medal given by Captain Bogardus, possession of which is to carry with it the title of champion pigeon shot of the United States, is to be shot for at the Brooklyn Driving Park on December 25. On the following day another medal will be shot for to decide the championship at glass balls. On December 27 there will be a match to be shot at both glass balls and pigeons. In addition to the medals there will be added on the first day \$500, on the second \$200, and on the third \$500.

MR. FERGUSON'S IMPROVED JACK LAMP.—We have several times, we believe, given some praise to Mr. Ferguson's Pocket and Jack Lanterns, which we have been glad to recommend for their lightness as well as their light. Most lanterns are cumbersome and bulky, although very efficient illuminators. Ferguson's weigh so little that they are a comfort to carry. We have been the possessor of one of them for six months past, and know their value. The new improvements, which we are now called upon to notice, consist in larger illuminating power, with the same compactness as those first offered to the public. Besides, the adjustments are more simple. It is 7½ inches high, 4½ inches wide, 2½ inches deep, burns either kerosene, or signal oil for eight hours without filling, cannot be extinguished in a gale, and weighs only one pound without its attachments. Can anything be more perfect? It can be adjusted to the head, buggy, boat or staff by suitable fixtures. No one ought to camp without one. See his advertisement.

PARTRIDGE WITHHOLDING THEIR SCENT.—Philadelphia Nov. 23.—Editor *Forest and Stream*: Have just returned from a hunt in the Lehigh Valley, between Hellertown and Allentown. The dogs we had were A No. 1 in every respect. The first field we struck the dogs ranged and quivered elegantly, but failed to find a covey. As I walked down the centre of the field I kicked up a covey of 7; missed with my first barrel, knocked one down with my second; called dogs to find "dead bird," but they both failed in the attempt. At last I discovered the bird crouching low and holding his wings close to his body. As I supposed, this position would be termed holding his scent; the dogs came up and passed within a foot of the bird, backward and forward, and failed to discover him. At last I stooped to pick the bird up when he flew away about 70 yards, and the Bismarck bitch Tan came to a dead point with the other dog, Frank, backing in elegant style. I walked up and killed him. In the three days' hunt neither of the dogs ran over any birds, and found us a great many coveys among which we did severe execution, killing, between four of us, 156 partridges, 3 woodcock, which I consider a fair bag. Would advise any of my fellow-sportsmen to stop and see Mr. Michael, who keeps the Hellertown Hotel, and they will find him a genial gentleman and true sportsman, anxious to show those who come there where they can kill the most birds. R. E. S.

ANOTHER MAN WHO WANTS TO DO FLORIDA.—Danville, N. Y.—Editor *Forest and Stream*: You can't fancy what a comfort it is for me, stretched out on the old lounge under the mild rays of the student lamp, with naught to break the silence of my "Den" but the swish of the hemlocks against the weatherboards outside or the twitters and mutterings of Daff who, lying at my feet, half-lost to the beach in wood fire, dreams over and over again the last grouse he pointed to his death. What a comfort, I say, when one is among the "Can't-go-aways" to read "Al Fresco's" letters! How full, how graphic, and withal how modest—no fish stories, no imaginative frills, no "letter" Nimrod or lightweather sailor is he. One follows him through all his exciting and interesting adventures and regrets that another week must elapse before the trip is resumed. What idea of man is he? Would he not shake hands with a tyro and repeat for his benefit a few of the valuable hints his letters contain. Doubtless he would, recognizing in the act the masonry that exists among true sportsmen. Heaven speed the time, when with my nineteen-foot cut, impedimenta, striker and Al Fresco's sailing directions, I may realize what now is most vividly imagined, a trip among the Keys. ST. EMMES.

LUBRICATORS FOR GUNS.—Editor *Forest and Stream*: Will you permit me, through your valuable paper, to say a word in defence of the lubricator so rudely attacked by your correspondent. "L." It is stated that they are advertised as absolutely guaranteeing immunity from rust, and advises the use of mercurial ointment, which is a very dangerous compound. This is undoubtedly a very thorough rust preventer; but woe to the man who has a scratch on his hand, or in any way uses it carelessly—besides which, it is as old as the hills and known to all sportsmen. I would advise a coating of beeswax or tallow, which is just as effective and perfectly harmless. I have never seen the advertisement mentioned above, and would consider a person so advertising as hurting his own business; for such a compound cannot be made as long as sportsmen are so careless with their own weapons. I have used Ferguson's and Eaton's Rust Preventer, also the Belmonty oil, and found them most excellent. I have shot all day in the rain, both for wild fowl and upland game, and my guns have never been troubled to any serious extent by rust. But I do not expect these (the preventers) to be used. I have not used I do mine and keep my guns clean. I heard of a gentleman the other day, who on being asked how a certain rust-preventer worked, replied: "Not worth a blank." "How so?" asked the maker.

"Oh, my gun got covered with rust. I was out in a boat and got it sprinkled over with salt water, and when I looked at it a few days after it was black with rust all over the barrel."

"Did you wipe it off when you came in?"

"No, I was too tired."

Probably if it had not been for the abused article the gentleman's gun would have been ruined instead of having a few rust spots on it. I will now state how I clean my guns and rifles: I first drive a wad, one size larger than the bore, through each barrel with a rag moistened with benzine or any oil handy; then polish out with a thick flannel rag, and finish with Ferguson's or Eaton's Rust Preventer, and the gun is all right. If not used within a few days, the polishing and oiling should be repeated once or twice at intervals of a couple of days, and then the gun can be put away for months. Before going on the salt water fill all corners, engraving and screw-heads, with tallow or beeswax. If the gun is to be put away for a long time, it is well to give it a long sea voyage, fill the barrels with molten tallow. Never put a gun away dirty, particularly if used on a damp day. But remember, it is better to leave the powder dirt in than to half clean with a dirty rag. W. H.

New York, Nov. 26, 1878.

CHILLED SHOT AND PENETRATION.

HOOSIER HALL, Ind., Nov. 21, 1878.

EDITOR *FOREST AND STREAM*: The subjoined table shows the result of experiments with chilled and soft shot. The facts of the targets used were forty inches square, built of inch pine, and filled with a mixture of tallow and benzine. The target-board is a hole six square inches in size, the rest of the target box is arranged cardboard 1½ in. apart. The cardboard used measure 1-24 in. in thickness, so the penetration of twenty-four boards shows an inch of solid substance traversed by the shot. The target for getting the pattern or distribution of the pellets is a paper, 35x38 in., divided into consecutive circles of 2, 6, 12, 18, 24 and 30 in. in diameter, and the space outside of the 30 in. circle is designated "outer." This paper is tacked upon the face of the target-board, the centre being lashed directly in front of the penetration box, so that the pattern and penetration of each shot is taken at the same time. The tables below show the number of pellets penetrating the first board in the box, and also the number penetrating each successive board, and gives also the number of pellets entering each circle and in the "outer." No shot was counted unless it penetrated entirely through the pastboard. I discovered in a previous trial that by hammering the wads over the powder snare, I got an increase of from two to five boards. The superior penetrating power of the chilled shot was beautifully demonstrated in the manner in which it rattled the strips of tin nailed upon the end of the box for its protection; whereas, the soft shot never cut through the tin, but flattened out, thin as water, upon the surface. The chilled shot, after passing through twenty-five of the boards, were discovered

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London, who, it will be remembered, received the highest award at both Vienna and Philadelphia, have secured the most perfect machinery for gun making ever set up in any factory in England. The result is, that they can now turn out guns perfectly uniform in excellence, and in such increased quantity as to greatly reduce the cost.
Their specialties this year are their BEAUTIFUL TREBLE WEDGE GUNS, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has fine Damascus or Laminated Steel Barrels, Rebounding Bar Locks, Pistol Grip, Extension Rib, Lever Forepart, and Treble Hook. It is a new thing to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience, or excellence in shooting, at the price of ordinary guns.
In addition to the Treble Wedge Guns, we have on hand about fifty of Webley's Breech-Loaders, Top and Side Lever, Single and Double Bolt, of various grades, which arrived last year, after the season was over. These guns we are rapidly closing out at greatly reduced prices. It is fair to say that as regards soundness, durability, and perfection in shooting, these guns are in no way inferior to the Treble Wedge Guns. Many of them are from \$15 to \$11 lbs. Weight, and are splendid guns for duck, shooting or for killing large game at long range.
The fifty guns mentioned above are all that now remain of a much larger number referred to by us in the FOREST AND STREAM in October, and as the season is now well advanced we will allow an additional discount upon the few that are left, provided they are ordered in December.
WEBLEY'S GUNS are remarkably Strong, Close Shooters, and do not need any additional choking.

PATENTS

In connection with the publication of the *Scientific American*, we constitute to act as Solicitors for Patents, Caveats, Trade-Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. In this line of business we have had thirty-three years' experience.

Patents obtained through us are noticed in the *Scientific American*. This large and splendidly illustrated weekly paper shows the current progress of Science, is very interesting, and has an enormous circulation. Subscriptions \$3.50 a year, postpaid; single copies 10 cents. Sold at all Book-stores and News-offices.

Can I Obtain a Patent? The quickest and best way to write to us (Allyn & Co.), describing the invention, with a small sketch. All we need is to get the idea. We will immediately answer, and give the necessary instructions. For this advice we make no charge. We also send you our Hand-Book about the Patent Laws, Patents, Caveats, Trade-Marks, their costs, how procured, with hints for obtaining advances on inventions. Address ALLYN & CO., Publishers of the *Scientific American*, 37 Park Row, New York.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound almost instantly a breech-loading shot-gun can be converted into almost accurate rifle. THE AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 22, 28, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

(TRADE MARK.)
STILL TRIUMPHANT.

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first prize in twelve of them, and good prizes in the other four. Among them the

Inter-state Military Match.

The New York State team, using the Sharps Military Rifle, won with a score of 974. Best score by any other rifle, 960.

The International Military Match.

New York State Team, with Sharps Military rifle, 1,044. Best by any other rifle, 903.

The Inter-state Long-Range Match.

Average per man with Sharps Rifles, 213. Other rifles used averaged respectively 193 and 197. The WIMBLEDON CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a possible 150 at 1,000 yards. THE LEECH CUP, won at Spring Meeting with a score of 205. Best other rifle, 197. For the Grand Aggregate Prize at Fall Meeting, three competitors each, with Sharps Rifles—Mr. Frank Hyde, Col. W. H. Clark and Capt. W. H. Jackson—fired on a score of 340 points.

THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. B. Barton, with a Sharps Military Rifle. All prizes in this match were won with Sharps Rifle. — J. S. Sumner made, with a Sharps Long-Range Rifle, the extraordinary score of 231 points out of a possible 225 at 800, 900 and 1,000 yards.

THE SPORTSMAN'S ROUTE.

Chicago & Northwestern R.R.

Embraces under one management the Great Trunk

Railway Lines of the West and Northwest, and with

its numerous branches and connections, forms the

shortest and quickest route between Chicago and

points in Illinois, Wisconsin, Northern Michigan,

Minnesota, Iowa, Nebraska, California, and the

Western Territories. Its OMAHA AND

FORTA LINE is the shortest and best route for all

points in Northern Illinois, Iowa, Dakota, Nebraska,

Wyoming, Colorado, Utah, Nevada, California, and

the Pacific Coast. Its ST. PAUL AND MINNEAPOLIS LINE is the short

route for Northwestern Wisconsin, Dakota and all points

in the Great Northwest. Its WINONA AND ST.

PIETER LINE is the only route for Winona, Lake Superior,

St. Peter, New Ulm and all points in Southern and Central Minnesota.

Its GREEN BAY AND MAQUETTE LINE is the short

route for Green Bay, Watertown, Fond du Lac, Osh-

kosh, Appleton, Green Bay, Escanaba, Negaunee,

Marquette, Houghton, Hancock, and the Lake Super-

ior country. Its FREIGHT AND PASSENGER LINE is the only route for Big Lake, Rockford, Free-

port and all points via Freeport. Its CHICAGO

AND MILWAUKEE LINE is the only Lake Shore

route, and is the only one passing through Evanston,

Lake Forest, Highland Park, Waukegan, Racine,

Kenosha to Milwaukee. PULLMAN HOTEL CARS

are now running regularly between Chicago and

Council Bluffs, on the California Express Train for

Chicago & NORTHWESTERN RAILWAY.

Hotels and Resorts for Sportsmen.

THE GUNPOWDER,

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

HAZARD'S "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

HAZARD'S "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 63 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

HAZARD'S "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 63 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

HAZARD'S "Kentucky Rifle."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 63 lb. kegs. Also, in cans of 5 lbs. and 10 lbs. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

HAZARD'S "Sea Shooting" FG, in kegs of 25, 12 1/2, and 63 lbs., and cans of 5 lbs. and 10 lbs. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

HAZARD'S "Sea Shooting" FG, in kegs of 25, 12 1/2, and 63 lbs., and cans of 5 lbs. and 10 lbs. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

HAZARD'S "Sea Shooting" FG, in kegs of 25, 12 1/2, and 63 lbs., and cans of 5 lbs. and 10 lbs. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

POOLER & JONES, PATENT BOSS

Cartridge Holders and Belts.

The only practical cartridge holder in use. Will carry brass cartridges, and positively prevent wads from starting on shot. Suitable for either paper or brass shells. These Cartridge holders can be easily attached to any hunting vest or coat front. A vest will hold 30 of the cartridge holders. Two dozen of these holders only weigh 5 ozs. One belt complete, with 30 holders attached, only weighs one pound. The belts can be perfectly adjusted to fit either a slim or large man. Will deliver to any address, and prepay postage on belts or any number of loose holders on receipt of the following prices: Spring brass cartridge holders, per dozen, \$1.25; adjustable belts with 30 spring brass holders, complete, \$4. Elegant nickel-plated holders and buckles, the gayest and nicest in use \$5. We solicit correspondence from dealers. All our belts are made of the finest Russian leather, and have Neck-Straps on (not shown in cut). Cash must accompany orders. Send money by registered letter on Serena, Ill., or P. O. Money Order on Ottawa, Ill. Send to cent stamp for sample holder. Address all orders to POOLER & JONES, Serena, La Salle Co., Ill.

\$5 [to] \$20 per day at home. Samples worth 10c free. Address CRUTTENDEN & Co., Portland, Maine.

United States Cartridge Company,

LOWELL, MASS.,

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS, AND CARTRIDGES.

Adapted to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES and several Foreign Governments. Kim-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

Send for Illustrated Catalogue.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 80 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 165,323. BEWARE OF INFRINGEMENTS ON IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England. H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

CHIPS.

A New Expansive Concentrator, with wire wad, for use in breech and muzzle-loading guns, making straight-bore shoot as well as choke bores are supposed to. Cheap, convenient, safe and sure. For sale by gundealers generally at \$1.25 per hundred for 10-gauge, and \$1.10 for 12-gauge; 10 and 12-gauge now ready; other sizes to follow. Packed 50 in a box.

Sent by Mail, Postpaid, for 75c. per Box.

A. B. KAY & CO., Newark, N. J.

Buck and Heavy Drop Shot Cartridges for Long-Range, Deer, Duck and Goose Shooting.

IRA A. PAINE'S FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsuitable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is so beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent-though Glass Balls are now made even, and carefully packed, with 200 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now

I Will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where clubs use them you will find which is the hardest shooting. My matches reported in paper, saying Bogardus's rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot will find the instruction laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and upheld the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus's Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & Co., 10 Platt Street, N. Y. City.

HUNTING THE ANTELOPE (Antelope Americana).

WHERE sweeps the illimitable plain,
Far over prairie pastures green,
And fast by rocky ridge and cliff,
With dark ravine and chasm between,
Where short and sweet the juicy grass
Carpet the mountain's lonely pass,
The antelopes, in browsing herds,
O'er all those grassy uplands rove,
To taste the rill or crop the leaf,
In the sweet freedom of the grove.

So shy that man, almost in vain,
May seek to ambush their retreat,
So swift that matchless steed may fall
To overtake their speeding footsteps neat;
Yet stratagem and Indian wile
The timorous herds to death beguile.

The savage, hidden in some bush,
Whose leavy clumps the prairies dot,
Shakes its green foliage, and attracts
The prey within its arrow's shot;
And oft the lawless Shoshonee,
Or Mandan warrior, stark and grim,
Circle the herds on dashing steed,
Fleet as the birds the air that skim,
And charging with a reckless speed,
With brandish'd spear and twanging bow,
And whooping their demonic yell,
They lay the panting victims low.

The den wolves of the wilderness,
Gaut, gray and grizzly, famishing,
With loping stride or crouching gait,
Stround them with their narrowing ring;
Then, with a rash, the quarry gain,
Tearing with fang the bleeding vein,
Till soon there scarce remains a bone,
Amid the trodden grasses thrown.

ISAAC McLELLAN.

For Forest and Stream and Rod and Gun.

Field Sports in San Diego Co., Cal.--No. 3.

BY T. S. VAN DYKE.

IT is not my purpose at this time to go into any dissertation on deer hunting; for to do it half justice would require a volume. But there is one more kind of it here to which I must introduce the reader even at the risk of being considered tedious by some who take little interest in hunting with the rifle.

It is later in the season than the time of our last hunt, and the acorns are pattering on the dry, hard ground. Between rugged mountains robed in sombre green, runs a long, low vale from 200 to 500 yards wide, with numerous small branches which break away into the adjacent mountains. Its bottom is covered with vast live oaks that were monarchs when Charlemagne was a baby. Their immense trunks, their long arms, resplendent with ever shining green, their broad massive heads and their hoary beards of trailing moss form a striking picture of dignity, grace and strength. In places they cover the ground with an almost continuous shade, and with the smooth open ground beneath suggest an old English park. Along the sides where the valley breaks into mountain are low hills and knolls dotted with white oaks that were pioneers before Columbus set sail; and the acorns of these the deer particularly love.

At this time of year the deer concentrate from the neighboring hills upon such ground as this. During midday they lie in the bushy heads of the side gulches or in the heavy chapparral upon the mountain's breast, where it is quite useless to try to still hunt. But about 4 o'clock in the afternoon they move down to these valleys to feed and lounge until after sunrise in the morning. Is this a hunt or only an evening stroll in a park? We could scarcely tell did we not know that they are miles away from man or any of his works, but for the numerous deer tracks along the cattle trails, and but for a strange mysterious track occasionally seen in the sandy bed of the slumbering stream like a huge misshapen human foot with uncommonly long and narrow toe nails. We loaf slowly along in the cool shade and almost forget

what we came for, when we are reminded by a sudden bump—bump—and the crash and smash of two gray streaks 100 yards ahead, into the chapparral.

"Like the rainbow's lovely form
Evanishing amid the storm,"

not of bullets, but of well-deserved maledictions on that stupid law of California that forbids the killing of does. When will the American people ever learn that the sportsman and the settler ought not to shoulder the whole burden of restrictions for game preservation? Why should not the pot-hunter and the epicure bear his share too, and the sale of game in market be limited to only a part of the open season? But no; the palate's royal prerogative must be held sacred, and thousands of law-abiding sportsmen and settlers must have their sport abridged to a minimum in order that the plutocracy of San Francisco may revel in venison that they are too stupid or too lazy to hunt for themselves.

We saunter along a cattle trail for a few hundred yards when we suddenly discover walking across an open place two hundred yards ahead two more deer, a fawn and something that looks like a young buck; rather queer company for this time of year. The first thing to do is to do nothing, but keep cool and see what's best to be done, for they will not leave the valley at this time of day. In a moment they disappear behind some rolling ground. We must now reach that high knoll to the left of where they disappeared. This will give us a good out-look, and besides it is always best, where it can just as well be avoided, not to follow directly upon a deer's fresh track; as they are more apt to be watching in that direction than in any other, and if much hunted or if started by anything will be almost sure to watch their back track.

Climbing cautiously up the knoll we take off our hats and peer over the crest. This care is not always necessary, but they will quickly see a broad hat, and it is always safest to act upon the presumption that your game is the wildest and sharpest of its kind. A deer is sometimes careless, but never presume upon that fact in hunting. Some two hundred yards away in a side gulch filled with scrub oak along the sides, we see them eating the scrub oak acorns, raising their heads and taking a long sharp look all around while masticating one.

Put down that rifle. They are too far for a sure shot. It must be a dead centre shot, or you'll be apt to lose him in that brush, even with a dog. We must get to that ridge behind them.

Swinging around, so that neither our wind nor noise can reach them, we gain the back side of the ridge and ascend it slowly and quietly as possible. When near the top a dead stick snaps under an incautious step of your foot, which is at once followed by a bump-bump-smash-bump from the other side.

Run for the top, quick! We may get a shot yet. We reach it just in time to see two white buttocks, each surmounted and flanked by glistening gray, waning swiftly in the chapparral on the top of the next ridge. The waning process is considerably accelerated by a vain cannonade of snapshots, almost always useless at any considerable distance.

But not yet are we outgeneraled, for close to our feet winds around the head of the gulch, like a horse-shoe, a well-beaten cattle trail. Swiftly our moccasins skim along the dusty path, and we gain the next ridge just in time to see our game careering up the head of the next gulch, with the everlasting bump-bump-bump of their stiff, steely legs. At the crack of the rifles the powerful legs of the largest one wilt and down he comes, stumbling with a crash into the brush.

Going up to the place where he fell, we find nothing. There is no blood, and the ground is too hard, too stony, too mossy and the brush too thick to follow tracks not made on the jump. An old story this is, and a terribly provoking one.

Three long whistles on an empty shell bring Reece from a neighboring valley with Diego, a Scotch terrier. Diego snuffles a moment around in the brush, and, with a sharp yelp, bounds away up the hill. Very soon there is a mixture of yelps, barks and crashing brush one hundred yards or so above and beyond us. In a moment the noise shifts and the bushes break in a rapid line downward into another gulch. Downward goes the racket, no longer with the regular bump-bump-bump, but a confused clattering discord of crashing brush, yelping dog and stumbling hoofs.

Plunging and thrashing our way through as fast as possible, we come in sight just as they reach the bottom of the gulch, where the nimble Diego bounds ahead and grabs the deer by one of his long, mulish ears. In a twinkling he shakes him out and narrowly escapes a thrust so vigorous that one time of the sharp horns is broken off by striking the stony side of the gulch. Again the dog grabs him, but, like lightning, is thrown to the ground by a stroke of one fore foot. With one hind leg broken high up and entrails hanging out from where the ball just scraped his paunch in its onward course, the buck stands at bay with hair erect and eyes of a savagely bright, greenish glare, and makes a last stand that would finish a much larger dog. The plucky little terrier dodges and grabs again, now dangling in the air from one ear as the buck tries to shake him off, now letting go with a yelp as the buck hock hits him, until a shot from Reece pacifies the savage hoofer.

After a sound sleep under a royal live oak and a starlight breakfast we again tread the same valley of the night before

Gliding swiftly along in the gray of morning, we reach a point a few hundred yards beyond where we were last night. All over the oaks stand like an immense orchard. Here and there long vistas appear, down which we take a long and can full look, and sometimes we have to stoop down for a long range of sight below the hanging branches. On we go until the rising sun, breaking through a gorge in the mountains, glistens on the bright green leaves and lights up with golden torch the dead white grass and leaves beneath. Below a distant aged oak the slanting beams gleam on the polished lines of a pair of branching antlers and the sleek gray coat of a round, plump body behind them.

There must be no fooling now with this chap, and no long or uncertain shots; so keep down that long-range sight. He must be dropped within twenty yards of where he stands and not sent hobbling into the brush, for a dog cannot always be depended upon in this chapparral. He is now two hundred and fifty yards off at least, and you must get one hundred yards closer, anyhow. You'll have to approach him in his sight, too, a task one of the hardest in the world, but also one of the easiest if you do it right. Leave your hat here and get down as close to the ground as you can. Keep a close watch on the deer, and the moment he raises his head to look, lie still. Move only when he is feeding, and keep that tree between you as much as possible. In the meantime I'll back out of here and swing around to the side toward which he'll be likely to run if he should start.

Fifty yards you pass at a slow and painful pace, when you find that an open slope must be crossed that is directly in plain sight of the deer. Now your chances of getting closer are less than your chances of guessing your distance, and you resolve to shoot. A wise resolve, generally, but you forget just now that you want to make a centre shot, and not cripple that noble fellow. You'd better try fifty yards more. In the meantime I have gained a position on a knoll some 200 yards to one side of him and between him and the mountain, toward which his head is turned, and I am watching him quietly, when suddenly the buck springs in the air as your rifle speaks out far and wide, and starts at a heavy, but rapid gait, on a slanting course toward me. On he comes, not with the high elastic bound, but with the lumbering gallop of an old cow, with head down and horns projecting forward. I raise the rifle ahead of him and coolly await his coming, when, with a plunge and a lurch, he falls, gives a kick or two, and all is over. A good shot as ever was, and square through the heart. A good 150 yards he ran, much further than usual, though deer have run nearly half a mile when so shot.

Such, dear reader, is a sample of deer hunting as it usually is in this country, though not quite as it has so far been this year. For some reason, which no one seems to understand, the deer have been scarcer than usual in their ordinary haunts, though it is certain that they have not been killed off nor left the country. Reece and I have quite a good success in spite of it, but it is only by hard work, patient toil, and by extra good fortune in making the most of every chance. All other game is more abundant than usual, and quite as easily found as at any time. To the sportsman who would seek a refuge from the winters of the North and would slum the enervating heat or malaria of other sections, who would follow his favorite sport during the greatest number of days in the year and with the least amount of toil, I can confidently recommend San Diego County. For such reasons I have sought it, and though I find it, like all of California, far below the asinine hyperbole (to use the mildest term) of Nordhoff, I am still fully satisfied with its fitness for my purpose. For reasons before given, no market hunters need apply at present. In fact no one should come here, or indeed to any part of California at present, with any expectation of making a living with either head or hands, either directly or indirectly, out of the country. It may, perhaps, be done, but the chances are five to one against one, especially when out of health.

I must add another word or two of caution, which, absurd as they may seem, experience has taught me are sometimes needful.

1st. That there is supposed to be but one perfectly warm and dry climate in the whole universe, and in judging any terrestrial climate you must consider not what is desirable, but what is attainable.

2d. That climate is never a medicine, but only a condition under which one not too far gone may recover.

3d. That California is not to blame for your hard fate in being thrown out of business and banished from friends and home.

4th. That the felicities of heaven are not to be enjoyed without the formality of dying, and California is not a heaven anyhow, Nordhoff to the contrary, notwithstanding.

To the average tyro in hunting I find it necessary to say: 1st. That though the hunting here is by far the easiest I have ever seen, it is nevertheless hunting, and not merely displaying a gun and picking up game.

2d. That the word "plenty" does not have the same meaning when applied to every kind of game, and it nowhere means so thick that you cannot by diligent and judicious search find in the course of a day a bare spot to eat your lunch on.

3d. That game here has the same trick of getting out of the way of a bungler as it has elsewhere, and that this annoyance can be avoided only by learning to hit it and not by abusing California.

tailed hornet" and "yellow jacket" are good examples, while the mud wasp may stand, as being so familiar to all, as a type of the latter. It is with the solitary wasp that we have to do at present. These insects are provided with a poison which stupefies or paralyzes the insects upon which they prey and which of course they secure by stinging them. The female blue wasp—for there are no workers (nouters) in this genus—having partially completed her nest of mud, deposits an egg, and in the same cell with it places a number of small spiders which it has stung and which, although paralyzed and quite incapable of motion, still retain life. The cell is then walled up and another one built adjoining it in which the same thing takes place; this is continued until several eggs have been deposited, when the last cell is finally walled up and the nest completed. A similar nest is constructed for each set of eggs which the female deposits. When the grub appears it feeds on the spiders prepared for it until ready to undergo its transformation, and finally, when it becomes a perfect insect, gnaws its way out through the wall of clay.

Another large wasp, somewhat similar in general aspect to the blue wasp, but larger, is common in our latitude; but as it does not appear about the dwellings of man it is seldom observed, except by those who are on the lookout for insects. It belongs to the genus *Spheg*, and its nests are placed in holes in the ground, which it excavates with much care and patience. It feeds its offspring on crickets, grasshoppers, etc., and an incident which once came under our observation well illustrates the power and perseverance of these little creatures. While walking one day in mid-summer along a well beaten path we noticed several small but deep holes, which we rightly attributed to these insects, and at length, just after passing one of these excavations, we came upon a large *Spheg* which was at that moment engaged in transporting its prey to its nest. But for the fact that the insect was directly in our path and we were looking for it we should have missed a very interesting scene. The burden with which our *Spheg* was struggling consisted of two of the large black and yellow winged "grasshoppers," whose sharp and loud crepitations are so frequently heard during the scorching days of July and August. The two orthoptera were firmly fastened together, one clasping the other by the back and each of them was half as long again as their captor. Poor *Spheg* was really in great trouble. She would seize her burden by the head, and by great exertion drag it along the smooth path for about six inches, when her strength would give out and she would fly off to a little distance and rest for a minute or two, walking briskly about in the sun the while, then she would return to the spot and renew her efforts. Had the journey been through the grass it seems as if it would have been impossible for the wasp to drag her load, but the path, worn smooth by constant travel, offered no impediment to her progress. The distance from the spot where she was working to the hole which she desired to reach was perhaps twenty feet, and though her advance was slow it was steady. At times she would fly off to quite a distance, fifty feet or more, but her absences were never long continued, and when we were obliged to leave her she had transported her burden to within three feet of the hole. We greatly regret that we were unable to witness the close of the scene and watch the method by which the "grasshoppers" were introduced into the hole, for they were certainly too large to enter it without being considerably reduced in size. Here then was a very considerable provision for the expected larva, and we thus see that even in our own latitude there are examples showing that different genera of solitary wasps feed their young on different insects. A European genus, *Ammophilus*, employs the larvae of moths for this purpose, while *Chlorion* of Mauritius, as has been said, feeds its young on cockroaches.

It might be supposed that the wasps secure their prey by hawking about over the ground, trusting to chance to throw the insects they need in their way, but we have some evidence that these little creatures possess special senses which enable them to follow the objects of their search when not visible, perhaps somewhat as the hound follows the fox. In a recent number of *Nature* we find a letter from Mr. C. L. W. Merlin to Henry Cecil, Esq., narrating a curious occurrence to which the former was witness and from which we may quote, in closing, an extract or two. Mr. Merlin's account is as follows:

"I was sitting one summer's afternoon at an open window (my bed room) looking into the garden, when I was surprised to observe a large and rare species of spider run across the window-sill in a crouching attitude. It struck me the spider was evidently alarmed or it would not have so fearlessly approached me. It hastened to conceal itself under the projecting edge of the window-sill inside the room, and had hardly done so when a very fine large hunting wasp buzzed in at the open window and flew about the room, evidently in search of something. Finding nothing, the wasp returned to the open window and settled on the window-sill, running backward and forward as a dog does when looking or searching for a lost scent. It soon alighted on the track of the poor spider and in a moment it discovered its hiding-place, darted down on it, and no doubt inflicted a wound with its sting. The spider rushed off again and this time took refuge under the bed, trying to conceal itself under the framework, or planks which supported the mattress. The same scene occurred here; the wasp never appeared to follow the spider by sight, but ran backward and forward in large circles like a hound. The moment the trail of the spider was found the wasp followed all the turns it had made till it came on it again. The poor spider was chased from hiding-place to hiding-place—out of

the bed room, across a passage and into the middle of another large room, where it finally succumbed to the repeated stings inflicted by the wasp. Rolling itself up into a ball the wasp then took possession of its prey and, after ascertaining it could make no resistance, tucked it up under its very long hind legs just as hawks or eagles carry off their quarry, and was just flying off to its nest when I interposed and secured both for my collection.

"I am certain the spider left no web behind it. I cannot be sure, however, that, as it had evidently been attacked by the wasp before entering my room, a small quantity of liquid may not have exuded from its wounds, which may have helped the wasp in tracking it. I have no doubt myself that insects have the sense of smell, and probably much more developed than our own. No one * * * who has engaged for moths, or seen the largest *Sphingidae* hovering over the strongest scented flower at night, or employed a caged female moth as a lure to her male admirers can, I think, doubt this. If so let them put a saucerful of honey in a corner of a room opening into a garden, throw open the window and see how soon the bees, wasps, etc., will be attracted to the honey.

"There is a tradition in the East that one of the tests by which the Queen of Sheba tried to prove the wisdom of Solomon was placing on a table before him two bouquets, one of artificial and the other of natural flowers and requiring that he should say which were the real and which the artificial, without moving from his throne. Solomon ordered the windows to be thrown open and in flew the bees, etc., which went at once to the real flowers.

"Whether the senses of insects, birds and what we call the lower creation are similar to ours in every respect it is very difficult to say. No doubt a dog, if he could speak, would say a man had not the sense of smell, and would prove that his nose was worse than useless to him. An eagle, or hawk would say that men and moles, etc. have only the rudiments of eyes, and so on.

"Man, with five very imperfectly developed senses (who can say that there are not twenty senses?), is the only animal that is dogmatical and denies all he cannot understand. The oracle of Delphi said, "Socrates was the wisest man in Greece, because he was the only man who knew he knew nothing."

ORIGIN OF THE SCIENTIFIC NAME OF THE BLACK BASS.

MR. EDITOR: Professor Jordan has said so well and so fully what is pertinent to the "Scientific Names of the Black Bass" in *FOREST AND STREAM* for November 23, that nothing further requires to be added. A few words may be acceptable, however, respecting the possible reason for that appellation "black-bass" which has suggested to Lacépède the name *Salmoides*. The popular names applied to our various animals and plants furnish material for much interesting study, and I hope some day to be able to enlarge on the subject. Suffice it now to state that the names have originated or been altered re-applied on account of a great variety of circumstances: (1) in the case of fish, as in the instance of the soap-fish, *Rhyptidris saponaceus*, etc., and butter-fish, *Poronotus triacanthus*; (2) in others by the noises emitted, as drum-fish, *Pogonias chromis*; catfish, *Ambloplites castris*, etc.; (3) in others by certain functions performed, as the salt water and fresh water suckers, *Echeneididae* and *Catostomidae*; (4) in others by the time of their appearance, as harvest-fish, *Poronotus triacanthus*; (5) in others by voracity, as wolf-fish, *Anarrhichthys lupus*, etc.; (6) in others by color, as robin, *Fritonotus*; black-fish, *Myoxocheilus*, etc.; (7) in others by the nature of the food, as ghost-fish, *Cryptopterus thodes novatus*, etc., and (8) finally, because in habits the species recall certain others. To this last category evidently belong, among many other species, the mossbunkers, *Breitoria tyrannus*, and the true black bass, *Micropterus salmoides*. The former resembles the mossbunker of the Dutch, *Trochurus amia*, in that it associates in immense schools, the latter is too well known as a game fish, and as, in this respect, the rival, if not superior of the trout—to need comment. In this attribute, then, is unquestionably to be found the reason for the designation—trout—given to it in some sections of the country. Trout was the name applied to it, not because it was thought to be at all like that fish in appearance, but because it resembled the true trout in its excellence as a game as well as a table fish. In this respect the true black bass is superior to the Oswego large-mouthed black bass, and with this understanding the name will probably be conceded to be not so bad after all. The true black bass is the game species of its genus, the trout-like representative of its family, and hence *Micropterus salmoides*, or *salmoides*; the large-mouthed species is the paler form—*Micropterus pallidus*.

Washington, Nov. 30, 1878.

Bedford, O., Dec. 1.—Dear *Forest and Stream*: D. S. Jordan's extended review of that much-named large-mouth black bass is well timed and to the point.

Stamp out all the old names as soon as possible, also that odious misapplication of the name trout, applied by our erring brethren of the "angle" at the South; and still one more misnomer, calling the *Lucioperca* of the Ohio River a salmon. At the time I named the large-mouth bass I searched diligently all the authorities I could find, and inquired of my dear old friend, Dr. Kirtland, if this fish had ever been described, and we both came to the conclusion that it had never been described, and of course not named. I called it *Grytes megastoma*, from two Greek words, to wit: *megas*, large, and *stoma*, mouth, and thought I had hit the nail square on the head. I am content to have the names wiped out with all others, except its new name, which I hope he will wear until something better is found.

But I fail to see why Mr. Jordan considers the name I gave it a "meaty" name, certainly *megastoma* has no reference to meat. Well, he is a poor fish, at best, but has a very wide distribution. Lake St. Clair, Maumee and Sandusky bays are fairly slopping over with them, as all our little lakelets in Ohio, Michigan and elsewhere are. So good-bye to all the old names, and hereafter we will call you *Micropterus pallidus*, a better name than you are a fish.

T. GABLETOR.

BIRD NOTES FROM FLORIDA.—My friend, Mr. T. W. Wilson, has taken at my place on Lake George, during the past season, the following birds not before seen by us:

Glossy Ibis, male. Red, *Ibis phoeniceus*, var. *orealis*; scarlet ibis, male, *Cyanopterus*. I have also seen one of the latter since my return from the North. During four years collecting there are the only specimens seen or heard of by me south of Palatka. Mr. Wilson also collected a fine specimen of the striped skunk, *Nephtis bicolour*. This is the first specimen of this beautiful little animal that has been taken in this part of the country (to my knowledge) since Mr. C. J. Maynard reported them as rather common near Demment's. A few days since I observed within a few yards of my house two beautiful and to me new (in Florida) sparrows. I captured one, which was a female, and was not so plainly marked as the other. The latter flew away after my first shot, and I was unable to take the bird. I am unable at present to decide whether my specimen is a *Coturniculus passerinus*, or a *O. passerinus*. The measurements are as follows: Length, 4.7-5 inches; extent, 8.1-10; wing, 2.1-2.3; tail, 2.1-2.4. Mr. J. A. Allen, in his list of the winter birds of Florida, does not mention the *C. passerinus* as having been seen, but supposes it might occur. The same authority gives Audubon as his authority for *C. passerinus* being "abundant" in the grassy pine barrens. As I have no means of comparing this specimen with others of both species I should like to ask our naturalists if *C. passerinus* has yet been reported from Florida? Mr. Wilson reports having seen several specimens of the black and white creeper (*Atalapha varia*) in August on Lake George. Unfortunately he examined no specimens, and therefore cannot tell the state of their breast feathers. It would be very interesting to know whether this little bird breeds in this State. I saw and collected a female in the first part of this October. A few days since, as three of us were sitting on my veranda, Mr. C., who had a rifle, pulled it up and sighted (as I thought) at an imaginary object. After a moment he lowered his rifle, and after placing his eye against the house remarked: "I could have shot that deer." I said, "What deer?" He then said, "Haven't you got a tame deer?" I said, "No." He turned quickly, and taking up his rifle said, "There is one here." We jumped up quickly, and on looking around the house saw a yearling deer jumping off over the palmettos. It seems Mr. C. first saw the deer feeding with my cow about fifty yards from the house, and supposed I had brought it. I had never seen the deer, and supposed it, that the deer followed my cow up from the pasture, as it was toward night.

WM. K. LENTH.
Lenth's Landing, Lake George, Florida, October, 1878.

[*Coturniculus passerinus* has been found in Florida.—Ed.]

PERSEVERANCE OF PEWEEES.—Summit, Union Co., N. J., Nov. 25.—Editor *Forest and Stream*: To-day in looking over my field notes I found one which I think might interest some of our readers. On the day of last May I discovered the base of a pair of bridge piers built under a culvert near this village in which there were seven eggs, they were hatched in about two weeks. After the young birds had become strong enough to fly a short distance they and the nest were taken. Nothing daunted, however, the pwees set to work and built another nest in the same place in which three eggs were laid. These and the nest were also taken. They built another nest which was hatched in about two weeks. On the day of last May I discovered the base of a pair of bridge piers built under a culvert near this village in which there were seven eggs, they were hatched in about two weeks. Woodland, Farm and Garden.

TREES FOR TANNING PURPOSES.

IN discussing the subject of trees whose bark can be used in tanning our English contemporary, *The Country*, says:

"When we consider the comparatively small amount of tannic acid which exists in the bark of the oak, it is really somewhat surprising that it should be mainly employed both in Great Britain and on the European continent for the purposes of tanning. The fact is, we suppose, that leather curriers take what is brought to the market, and bark merchants are content to collect what is procurable nearest home, rather than go roaming in fresh woods and pastures new for a superior article. It would be easy enough to open up a new industry in this connection. With the countries of South America, where so much British capital has been sunk in the formation of railways and tramways, which have not sufficient traffic to enable them to return substantial dividends. Probably when the 'country of the future'—Africa—is thrown open to our capital and enterprise, being nearer home, we may seek and find among its hitherto unknown arboreal treasures vast stores of suitable bark trees as well as gold dust and ivory. Meantime it is worth while considering whether the scanty knowledge we possess of South American woods may not be utilized. Already we receive considerable imports of leather from that quarter, notwithstanding that the climate is generally unfavorable to the curing process. It often happens, indeed, that the hides begin to putrefy while the tanning is in progress. Doubtless this may be partly due from the fact that the routine observed is very much less scientific than would pass muster in Bermuda. Whatever the native process in the Argentine Republic, for instance, may be, we are unaware, but certain it is that it is not lack of suitable material that interferes with the success of the currier in these regions. Investigations carried out by the National College of Buenos Ayres have indicated a large number of trees, the bark of which contains a considerable proportion of tannic acid. Among them may be mentioned the red and black Cebill, the black and white Algarroba, the Algorobillo; the red and white Quebracho, the Espinillo, Lechero, Tipa, Lapacho, Chauri, Ylla, Curupai, Guayacan, as also walnut, coco, and cedar. In the Argentine provinces Salta, Tucuman, and Jujuy, vast woods of both the black and red Cebill, clothe the mountains and people the plains. The red variety, *Alseodaphne*, yields the largest quantity of tannin, the leaves containing about half the proportion afforded by the bark. On account, however, of this kind imparting a color to the hide, it is not highly valued, as it is important, as far as possible, to retain the natural hue. The bark of the white cebill is more easily dried than that of the red, and when ground the proportion of tannin is but slightly less. Chemical experiments show that the bark of the cebill yields about 15 per cent. of tannic acid, which is greatly in excess of the produce of oak bark. The Quebracho is also very rich in tanning matter, the leaves containing 27 per cent. It is found in Cordoba, Salta, Chaco, and Paraguay; but the different trees which go by this name in these districts are scientifically diverse. The red quebracho of Paraguay is used in considerable quantities locally, as well as being exported to the United States and to Europe. It yields from 10 to 20 per cent. of acid, which is capable of being applied to hides and to purest state. The white quebracho found in Salta produces a high proportion of colorless acid, the leaves being especially rich. If a moderate proportion of this acid be mixed with that of the red cebill, the color of the latter is neutralized. The Salta quebracho somewhat resembles the German oak. The so-called quebracho which obtains in Paraguay, the bark of the Curupai has been employed in tanning from time immemorial. Another Argentine bark tree is the Espinillo, well known by its fruit, sharp thorns and delicate leaves. Both wood and leaves contain tannin. The bark is thin and not easily removed; it yields but 6 per cent., but the husk of the fruit yields 33 per cent., and the seed 12 per cent. The Lechero, or milk tree, in appearance is something like our willow, and the bark contains tannic acid in the same proportion as the oak. The trees locally called Molis are very rich in tannin, yielding from 20 to 25 per cent. There are three varieties, one of which is used in the manufacture of ink. The Algarroba was once plentiful in every part of the Republic, but it seems now to be fast disappearing.

OUR APPROACHING WINTER.—Mr. Henry G. Vennor, whose success in forecasting weather has earned for him a widespread reputation in both the Dominion of Canada and through a large part of the United States, has now in press his almanac for the winter of 1878-79. From summaries of this which have appeared in Canadian papers, we observe that we have in store for us some very severe weather and heavy snow falls for the month of December and a part of January. Following this there is to be a lull or great break in the winter, during which the weather is expected to be unusually moderate, causing a very rapid melting of the snow and possibly extensive floods. In March severe weather will again set in and will be accompanied by more snow falls. The spring of 1879 is pictured by Mr. Vennor as wet and backward, ushering in a cool and wet summer season. So successful have these forecasts been in the past that implicit confidence is placed in Mr. Vennor as a "true prophet," and although there are—as there ever is when new theories are first started—many scoffers, these are altogether lost in the crowd of staunch followers of the "Weather Prophet." The *London Times*, Eng., in a recent long editorial, attaches great value to these forecasts of the weather.—*Adm.*

HARTFORD POULTRY SHOW.—*Hartford, Dec. 9.*—*Editor Forest and Stream:* The first poultry exhibition of the season is now being held in this city by the United Fanciers club, a new poultry organization formed this year. Nearly all varieties of fowls are represented, and also a large variety of pigeons and pet stock. Upon entering the building the visitor's attention is first attracted by the large and meritorious show of game Bantams, there being some very fine specimens of this pugnacious breed. In contrast with the Bantams is the

exhibit of Asiatic fowls, some specimens weighing 12 and 15 pounds. My attention was particularly attracted to the fine display of dark Brahmas by J. S. Gilman, of Hartford, and light Brahmas of P. Williams, Taunton, and B. S. Woodward, Newington, Ct. The black Cochins were few in number but fine in quality, P. Williams winning first in both fowls and chickens. In the Spanish class Geo. E. Strickland's brown, and E. F. Porter and C. Cushman's white Leghorns were first-class. The largest exhibitor is C. L. H. Hayward, of Peterboro, N. H., a portion of his exhibit being a pair of both golden and silver Chinas, Honen, Wood, Mallard, Cayuga and white call ducks, Egyptian, Embden, African, wild, gray Chida, Toulouse and Hong Kong geese. The game class was small, the most noteworthy being the whites bred by Geo. S. Merritt, and the red pikes bred by Curtis & Chapin of this city; these gentlemen have a faculty of breeding the high station birds. I almost forgot to mention the beautiful blue Hamburgs exhibited and bred by J. M. Duetin and the silver gray Dorkins of V. A. Blakeslee. The pigeon class is a large and interesting feature of the exhibition, comprising all the different varieties. The club is entitled to a considerable praise for affording the public so fine a display, and its effect cannot help being beneficial to the poultry interests of this section. On the 31st of this month will be held the ninth annual exhibition of the Connecticut State Poultry Society, which will be the event of the season to poultry fanciers in these parts.

—The Western Poultry Club will give an exhibition of poultry and pet stock at Chicago, Jan. 17th to 30th prox. The Secretary is C. J. Ward. The show promises to be very large.

HOW TO STRENGTHEN A HORSE'S FOOT.—A correspondent writes desiring to know how to strengthen and straighten a horse's foot. If by this he means how to strengthen and straighten the wall of the hoof and also the sole, as we presume he does, we would say that the only way to do it is first to take out all fever or inflammation there may be in the foot. This fever or inflammation in the foot is what prevents the growth of the wall and sole. Remove it, and the deposit becomes much more rapid and the wall and sole then thicken, and grow strong rapidly. With the increase of size the foot can be shaped little by little until it takes the desired form. In cases where the wall and sole of the foot were deficient, or had any of the imperfections brought about by inflammation, we have found that the use of the Clark shoe remedied the disorders quicker than any way that veterinary practice could suggest. The packing used with the shoe rapidly removes all inflammation and gives the hoof a normal circulation. The deposit of hoof material is vastly increased; brilliancy departs; contraction is expanded, and a permanent cure effected. We cordially recommend it to all horsemen. What our correspondent means by "straightening of the foot," we do not apprehend, unless it be expanding a contracted foot till the proper curvature of a well made, natural foot is reached. In cases where the contraction is severe and the expansion speedily desired, the Dunder system of expanding, tried by mechanical pressure, where the operation is properly performed, we have found safe and successful. But great care, foresight, and some degree of skill, is necessary in weakening the hoof on either side of the frog preparatory to the operation. We should not recommend it as a safe operation in inexperienced hands.—*Golden Rule.*

HOW TO FEED COLTS.—Feeding of colts should receive the most careful attention of the breeder. Our own opinion is that in large fashionable breeding establishments too much grain is fed to the colts, and that it does so to "pull" a colt through the pressure of the corn-crib or the oat-bin. Good wheat shorts are probably the best food, in connection with hay and roots, that can be fed a colt. We have fed on our home farm with great success boiled rye reinforced with a strong sprinkling of wheat shorts. The boiled rye alone, if fed in any but limited quantities, is apt to make the bowels loose. With rye at 50 to 70 cents a bushel, and shorts at 12 to 14 dollars a ton, no cheaper feed can be obtained. We shall experiment more than we have done the coming season on wintering colts without any grain at all. So far as our experience goes we think that good, clean, bright hay, carrots and potatoes, with good fresh water and a lump of rock salt in the bin, which they can lap at any time, will bring colts through a winter season as well as all the high pressure feeding that can be given. To the above diet we should have added plenty of outdoor exercise. If the colts could be allowed to wallow around in the snow and nibble at the occasional patches of turf. Colts shouldn't be fed like old horses, any more than babies should be fed like men.—*Golden Rule.*

—"Snugging up things generally," as the sea-farers say in anticipation of a storm, is a part of the November work on a farm. Teams are generally in good condition, and drawing stone and the like is easier for a yoke of oxen, when the ground is a little frosty in the morning, than it is when the thermometer stands at seventy degrees. A farmer of our acquaintance intends to take all the surface stone from three acres of a stony farm each year, and November is his month for doing it. Pleasant warm days he gives to digging them out of the ground, and in colder weather he does the moving, and if a little snow comes, all the better. The cellar must be protected from the cold by an ample outside banking. Missing shingles on the house or crib or barn, must be replaced by new. Corn fodder stalks and haystacks must be re-trimmed, and perhaps the old-fashioned straw-covered stalls in which like woman's work—never done, and until winter sets in and thus make work of this sort impossible, it should have considerable and constant attention.

—Many of the disappointments which come to young farmers are the result of miscalculation. Because the buildings are tidy, the fences up, and the location desirable, they are betrayed into buying a worn-out farm. This is especially frequent in old settled communities. For years the hard-dest owner, who didn't believe in "new-fangled notions," kept on skinning the old farm, until it was good for nothing but to help hold the world together. For a young man to take hold of such a farm as that is as discouraging an experiment as to pump all day, under a broiling July sun, at a dry well. To re-fertilize it is about as much as the farm is worth. Look over your prospective land-purchases with a view to find out what they have yielded, if you don't know the owner has been one of the skinning sort.—*Golden Rule.*

—First snow of the season in this city, Dec. 9; a half inch fall, turning to rain.

The Kennel.

MASSACHUSETTS KENNEL CLUB.—At the annual meeting of this club, held in Boston on the 4th inst., the following gentlemen were elected officers for the ensuing year: J. Fottler, Jr., President; F. B. Greenough, Vice-President; J. F. Curtis, Vice-President; T. T. Sawyer, Jr., Treasurer; E. J. Forster, Secretary.

DOG POISONING.—A correspondent writing from Newport R. I., says that there were five valuable dogs poisoned in that town on one morning. One of them was saved through his owner administering four raw eggs to him and the next day giving a dose of Brandreth's pills. The other dogs died.

A CORRECTION.—In the list of entries for the Nashville Field Trials, which we published last week and which we received from Nashville, there were one or two errors which we desire now to correct. Manda was reported as entered by W. W. Ackerman while the entry should have been in the name of Dr. S. Fleet Spier. The latter gentleman's Romeo was also black and tan, white and tan, whereas he should have been black and tan. Dr. Spier's entries were, in champion stakes, St. Elmo, Romeo and Maida; in brace stakes, St. Elmo and Maida. Mr. E. S. Sanford, of this city, entered in the brace stakes Spiero and St. Elmo, and should have been credited with them.

THE BIRMINGHAM DOG SHOW.—The nineteenth "national" dog show was held at Curzon Hall, Birmingham, on the 2d, 3d, 4th and 5th of this month. The number of entries has hitherto been limited to 1,000, but as the hall has been found too small for even this number, on the present occasion it has been reduced to 975. The entrance fee has also been raised to seven shillings and sixpence, but we believe that exhibitors must also be members of the association, at a cost of one guinea. Exhibitors in this country should not, therefore, complain of having to pay an entrance fee of \$3, particularly as the prizes are much more valuable. The hall was lighted by the electric light. The following list gives the number of entries in each class:

Bloodhounds 11, deerhounds 25, greyhounds 31, other hounds 4, harriers 6, baggies 9, fox terriers 110, pointers 68, English terriers 41, black and tan setters 31, Irish setters 31, retrievers 53, Irish spaniels 6, water spaniels (not Irish) 7, Clumber spaniels 9, Sussex spaniels 13, large spaniels 32, small ditto 7, Dachshund 37, foreign sporting dogs 8, mastiffs 43, St. Bernards 40, Newfoundland 18, sheep dogs 78, Dalmatians 7, bulldogs 38, bull terriers 32, smooth-haired terriers 11, black and tan terriers (large) 21, small ditto 9, Skye terriers 18, Danes 11, Dandie Dinmonts 18, Bedlington terriers 17, Irish terriers 13, wire-haired terriers 35, broken-haired terriers 4, Yorkshire terriers 4, Pomeranians 13, pug 28, Maltese 7, Italian greyhounds 10, Blenheim spaniels 3, King Charles spaniels 3, smooth-haired toy terriers 4, broken-haired ditto 5, large-sized foreign dogs 6, small-sized ditto 2.

THE DETROIT DOG SHOW.—*Editor Forest and Stream:* Now that the Nashville Trials are over, greater interest is being evinced by the sportsmen of the country to the success of this show. Special prizes are still coming in, and still more are promised, so that we will not be able to get them classified till next week. The additional specials received are from the Le Roy Shot Co., of your city, who donate 250 pounds of their famous tin shot; Schellenburg, of New Brighton, the Eastern sportsman's clothier, gives one of his canvas suits and hats for the best native setter bitch; the Union Metallic Cartridge Co. have given through your correspondent, L. F. Whitman, of this city, a handsome prize, consisting of 1,000 No. 10 paper shells, 1,000 No. 13 shells, two dozen boxes of No. 10 and No. 13 (250 each) make edge shot, C. W. Bogart, with his usual liberality, gives one of his patent glass ball traps; S. W. Goodhue, of Grafton, Vt., generously donates one of his hand-made trout rods, which will be on exhibition during the show. Last, but not least, we have to acknowledge the receipt of your handsome offer of a silver cup, through Mr. L. F. Whitman. The "Forest and Stream and Rod and Gun Cup" will no doubt be highly esteemed by the winner. The committee sincerely hope to receive a good representation of Eastern dogs. The railroad facilities are all excellent. As we anticipated, the Adams Express Co. will carry dogs on the same terms as the other express companies.

Detroit, Mich., Dec. 7, 1878.

CHAS. LINCOLN, Supt.

Hartford, Dec. 9.—There is a growing interest in our canine friends in this vicinity, and we hope eventually to have as fine stock as is to be had. I read with interest your article on "Dog Taxes" in the last issue of *FOREST AND STREAM*, and trust that some day breeders will adopt some plan which will remedy the matter concerning the sale of bitches.

NUTMEG.

SPRATT'S DOG DISCOURT.—The highest award for dog biscuits and the only silver medal in the class was given at the Paris Exhibition to Spratt's patent meat fibrous dog cakes. The order for feeding the dogs at the great International Dog Show, held in conjunction with the great International Exhibition at Paris, was given to Spratt's patent by the Minister of Agriculture, and the dogs were sent home, after twelve days confinement (the longest on record), in perfect health and condition.

—Mr. John Fottler, Jr., President of the Massachusetts Kennel Club, has sold his Irish setter Red Hugh to Mr. Richard T. Fay, of Boston, for a good figure. Red Hugh was imported by Mr. Fottler, and is by going's Bob out of Niall's Pan, and has a double crop of Hutchinson's celebrated old Bob's blood in his veins.

DOG LOST.—A red Irish setter, sixteen months old, ran away from his breaker, Mr. S. S. Pease, near Bridgeport, Conn. Any information regarding him sent to Mr. Pease, at Bridgeport, Conn., or to Mr. Tleson, at this office, will be thankfully received.

—Dr. Wm. Jarvis, of Claremont, N. H., owner of champion Elcho, has presented to Mr. Alex. Pope, Jr., author of "Upland Game Birds," etc., an Elcho-Rose puppy, which is said to be remarkably handsome. By the way, Mr. Pope will be in this city next week and would like to make studies of some celebrated dogs.

—Mr. H. Lymn Bingham, of San Antonio, Texas, claims the name of Don for his Irish setter puppy, whelped May 14, out of Rosalind (Kennel name Nellie), Rauger-Ploss, by Bronie, bred by L. H. Smith. Also the name of Rod for a red Irish setter puppy whelped July 4, out of Carrie L, by St. Louis Kennel Club Berkey.

—Mr. Malcolm Greene, of Boston, claims the name of Doctor for his red setter puppy by champion Elcho out of Mr. J. Fottler Jr.'s Elchen.

—Mr. W. H. Barnard, of Wilmington, N. O., claims the name Carolina Duke for a black and white St. Cloud-Dream pup, purchased of E. P. Welsh, York, Pa. St. Cloud is by Rob Roy.

—The Irish setter bitch Vic, owned by Mr. Charles Colt, of Greenfield, Penn., whelped on the 3d inst. eight puppies—five dogs and three bitches—to Major Hess' Gordon setter Judge. The puppies are all black and tan.

—Mr. A. S. Guild's (Lowell, Mass.) native English setter Belle (Codman's dog Nellie-Pay stock) whelped, Nov. 20, two dogs and four bitches, sired by George A. Thayer's Daniel Yacht, winner of first prize native English class, Massachusetts Kennel Club Bench Show, 1878.

—The red Irish setter bitch Nell II. (Pinnick-Nell), owned by Mr. J. I. Schuyler, of Bloomsburg, Pa., whelped, November 23, eight puppies—five dogs and three bitches—sired by Elcho.

—The fox terrier Vixen, the property of A. Watts, of Boston, whelped to his Turk (Rag-Vanity), December 2, 1878, four pups—two dogs and two bitches. Turk was first prize winner at Boston in '78.

THE DOGS I HAVE OWNED AND THE DOGS I HAVE KNOWN—No. 1.

BY PODGERS.

AN early education was with dogs, having, as it were, been brought up with them, my first recollections dating to a period when old—then young—Lion and myself rolled together on the rug in front of an old-fashioned fireplace of a winter's evening, two unsophisticated, happy young pups, little caring for or heeding the admonitions not to roll into the fire, doing it so often that a screen had to be improvised to save Lion's tail and my hand from being done to a turn. Lion and myself formed then and there an undying friendship, encouraged by the sober nod of approval of old Betsy (Lion's mother) and smilingly approved by my own, inasmuch as it kept me from other mischief; while old Sport, a black and white foxhound, looked on with grave face from his corner, being of a serious turn of mind and somewhat lethargic in habits—a lazy dog, as he was denominated. But when my father took down the old, curly maple-stocked rifle, with its improved lock, having been, after much deliberation and many misgivings, sent to New York to be converted from a flint-lock to a percussion, the copper traps affording no such amusement as threw them into the fire—and, by the same token, got nicely warmed for it, the associations in my mind being a combination of rattan and caps; I say, when that much revered rifle was taken down from the crochets over the mantel preparatory to being overhauled, then you should see Master Sport. He whined; his tail was as rigid as an iron bar; his eyes flashed, and every nerve and muscle came into play. He was all excitement and action. He saw in the note of preparation a day in the woods—a run for deer. Old Betsy would rouse up and be no less excited, while Lion and self looked on and wondered, looking at each other inquiringly. Lion would answer my inquiry with a short, quick bark, a spasmodic movement of the tail, which, translated, meant, and I understood him as well as if he talked, "Hang me! I know what is the matter with me and the old governor, Sport!" As Lion said, "As Lion said, the older he came, the more I knew about it—especially when I was promoted to an old-fashioned smooth-bore and the responsibility of putting the dogs out—and a merry time I had of it, with those three dogs in a leash (why not a leash of three as well as two, critical reader?). Once on top of Cold Mountain, bordering on the banks of the Susquehanna, not very far from Otsego Lake, my work began, and especially after the first once caught scent. I generally made them follow the first half-mile in a spread eagle position, being "snaked" through bushes, dry brush, pine limbs, projecting knots of falling trees, vainly endeavoring all the while to release the dogs, who were tearing frantically along, and only when choked down and nearly suffocated did they let me get near enough to cut the straps and "let 'em go," while I sat down on a log to recover breath and wipe the blood from my lacrated hands and face, and contentedly to remain of my clothes; then to follow the trail back to the place I dropped the old smooth-bore, and, according to instructions, I then trotted off a couple of miles, may be five, to a station or "runway," generally the most unlikely one for a deer ever to put in an appearance. But I remember on one occasion, having laid the old rifle down, I was pleasantly occupied in paddling my naked feet in the cool waters of the creek, and I was also fooled. He knew the habits of the deer too well and the direction of the dogs, that the deer must have gone down through the canyon where I was stationed.

I required a whole year of industrious attention to the worms on the early corn, bug hunting in the cantelope and water melon patch, and kindling wood splitting to eradicate the disgrace before I was allowed to place a hand on any gun

in the house, an especial hardship in the wild pigeon season, when I groaned in spirit not to be able to tie me to the freshly cleared and newly sowed ground, or the wheat stubble, the first limbs of the old dead trees showing big flocks of the blue beauties waiting for me, and the old single-barreled fowling-piece, that was at least thirty-eight inches long in the barrel and was religiously supposed by every boy in the town to be a dead certainty for a pigeon or crow on the highest branch of the tallest pine tree in the country, and with a charge of nine buckshot was death to a deer a half mile away. How well I remember its old, dark, time-stained stock and hickory nuzzle, and the pounds of tow for wadding that I have shot away in it. Ammunition was a more serious matter as boys in those days did not rejoice in an allowance to be able to chink veritable gold coin and buy velocipedes at twenty-five dollars each as in these heinous days. Our coins were copper, and our ammunition generally obtained by raids on eggs, putting away a few at a time until accumulating sufficient to constitute a respectable negotiation at the village store much to legal company. My father being a lawyer, ran a law office in the village, and I can remember with what awe I peeped in at the window or half-open door and contemplated the highly-brushed, straight-up white hair of Chancellor Kent, De Witt Clinton and Judge Livingston, the latter a relative whom I revered to an extent to render easy any such thing as to be washed and scrubbed to a presentable degree with a prospect of being introduced; and shaking hands with a real live governor filled my soul with awe, and promises of wedding rings, splitting cords of wood and being otherwise and generally "good," hardly got me clear of that dreaded ceremony. Once a year these old buffers gathered at my father's house for their week's deer hunt, and then the whole village quit business and devoted their time to these honored guests. Such game dinners and such fun and laughter over their wine as these old boys had. Huge roasts of venison garnished the ends of the table as my father sharpened the carver. Good apples, gained by a day in the woods, made all draw their chairs closer, and then followed stories and jokes, and the dignity of the bench, the gubernatorial chair was thrown aside—they were boys again as they had been in their younger days, companions at school and as law students. We boys peeped in and wondered. But what of the dogs, I fancy you say, what has this to do with it? Much; for it was always a rule that when they came limping hours after the hunt was over, their feet were first washed, their chests and limbs rubbed with a good oil, and then before the fire in the dining-room, and they dined with their equals—the best blood of the land. I have seen the kind-hearted old Chancellor call Lion to his chair at the table, pat him on the head, and call him "Good old dog, brave old dog," and give him the choicest morsel from his plate; while old Sport laid his head on the knee of Governor Clinton and received his pat on the head with a dignity and air of equality that only blood truly gives, and I can remember how and now comes the sad duty of chronicling the end of these beloved members of the family.

Old Bess died a peaceful death of old age. Sport met his death at the hands of an old curmudgeon of a farmer, who charged him with going for his sheep while the dog was searching for the scent he had lost as the deer dashed through a field of scattered sheep. The man mistook his house for his gun, and shot the dog, who, though seriously wounded, dragged himself home to die. Loving hands nursed him, which he would lick in gratitude and appreciation, and when at last death put an end to his sufferings, the house was hushed and not a face appeared, nor was there a dry eye in it. We buried him at the roots of the old old elm in the garden, and planted a climbing rose over his grave, which, when I last saw it, had twined itself with its long, supple arms around the tree, and its leaves were as green as emerald, and yearly does it shower its white leaves on the old dog's grave, the one as fresh in my memory as the other in its verdure.

That farmer, what of him? Listen to the deserved fate of a man that kills a good dog. Old Chlo, our superannuated old family nurse and cook, limped three miles to the man's house to harrow up his soul with mild curses, i. e., prognostications that no child would be born to him, and so come to him, his crops were all cut and his sheep all die. My father mounted his horse and rode over to notify him that he should commence legal proceedings, and then sat down and wrote to the owner of the farm which the man leased. That farmer's misfortunes fell thick and fast. First he married, and that trouble did not end there, for his wife thrashed him as a daily pastime, and then the superior attractions of the village shoemaker were too much for him, and he got into with him, taking on the two of them and his sheep all die. His sheep died, the lease of the farm was cancelled, then he took to drinking, and coming home one night, drunk as usual, drove off an embankment and broke his neck. Thus did an incensed Providence remove a man who wilfully killed a good dog. We boys wrote on his tombstone: "This is the man that killed old Sport," and nobody ever obliterated it.

Old Lion, when the family broke up, went to live with the old nurse, and together they lived a life of ease and quietness, growing old and fat together, until one day they both died peacefully, honored and respected. And thus ended the dogs and dog days of my youth, dear old companions of the sunny days of childhood.

For Forest and Stream and Rod and Gun. CANINE SKIN DISEASES—ECZEMA.

BY MOHMAN.

OF all the diseases of the skin which afflict dogs this is the most common. It assumes many very different forms—in fact, by studying it we can see almost every variety of lesion found upon the skin; at one time the integument is found dry and scaly, at another moist and watery, and still again pus, or matter, exudes, which, drying, forms crusts and scabs. It is only quite recently that these various appearances have been recognized as the different phases of the same disease, and the most accurate and intelligent definition is that thus given by Prof. Duhring:

"Eczema is an inflammatory, acute or chronic non-contagious disease of the skin, characterized at its commencement by the appearance either of erythema (redness), papules (pimples), vesicles or pustules, or a combination of these lesions, accompanied by infiltration (thickening of the skin) and itching, terminating either in discharge, with the formation of crusts or the production of scales."

The cause of this trouble may be an hereditary disposition to it; it may be the accompaniment of dyspepsia, the condition of the blood found in gout or rheumatism, the latter, being a common complaint with old dogs, is favorable to its development. It may be produced by the external application of various drugs—such as mercury, sulphur and turpentine—

used for the extermination of fleas. Irritants generally, as strong soap, the presence of parasites, sudden changes of temperature, will often be found the primary cause of an eczema.

When it is clearly understood that the causes are thus varied, and that any irritation of the skin is liable to be followed by an eczema, the confusion which exists and persists in calling almost all skin diseases mange is hardly to be wondered at, for true mange is due to either an animal or vegetable parasite, the irritation of whose presence often calls out a secondary eczema.

Eczema is not contagious unless the disease is caused as just stated, when, of course, the transference of the parasite might be followed by a similar eruption. Of the four varieties of mange, that caused by the vegetable parasite—the *trichophyton* fungus—is the only one which is commonly seen. This is the form known unscientifically as dry or scruffy mange, and is rarely accompanied by an eczema, unless persistent scratching has been indulged in. We can therefore safely say, in most cases of skin diseases, where matter, crusts and scabs are present, that we have eczema and not mange.

When more than one dog is afflicted, or there is any suspicion of contagion, a careful search should be made for the presence of a parasite before treatment is begun.

[For information as to searching for the parasites and the subject of mange generally, we refer to a somewhat extended article of ours printed in the *Country*. We will, however, simply state that the "shingled" appearance of the hair in tinied tonsurs or cup-shaped crusts in favas are generally diagnostically characteristic of these two forms of mange.

Treatment.—The cause, if known, should be removed, a rheumatic dog should be treated for his rheumatism, dyspepsia should be overcome by change of diet and due judicious use of tonics, and the system generally brought as near par as possible.

The very many forms which this disease assumes renders it very difficult to offer any plan of treatment equally applicable to them all without writing an entire chapter, if not a full book, instead of a newspaper article.

Crusts and scabs should be carefully removed by first soaking with oil and then using castile soap. All dirt and other extraneous matters should be carefully removed, cleanliness being of the greatest importance in attempting a cure.

If the parts are moist, secretion still going on, the following applied at night after washing may be useful, allowing it to dry on. Zinc oxide, 10 grammes; glycerine, 10 grammes; liquoris rhinbi subacetatis, 6 grammes; aque calcis ad, 200 grammes. Mix. Use as a lotion.

The best "all round" remedy is without doubt the oxide of zinc ointment applied once or twice a day. The objection to its use being its greasy character, as it is soon rubbed off and soils the kennel. Should a week's careful trial of the foregoing fail to show any marked improvement in the case, we should advise consulting a regular physician and ask him to treat the dog in the same manner as he would a human being.

We advise going to a regular physician rather than to a veterinarian, for we believe that as yet the latter have given but little attention to diseases of the skin.

[FROM OUR SPECIAL REPORTER.]

TENNESSEE FIELD TRIALS.

NASHVILLE, Dec. 5, 1878.

As was announced, the Field Trials, under the rules of the Tennessee Sportsmen's Association, began on Monday, the 2d, at Belle Meade, the farm of Gen. W. G. Harding, about six miles from this city. The place had been closely preserved during the fall, and in addition about 500 quail had been turned loose to doubly insure good sport. Great interest was felt in these trials by sportsmen in all parts of the country, and in consequence the attendance is larger and the number of dogs greater than at any former meeting of the Association. There are at least 50 dogs here, almost all the different kennel clubs are represented, besides a large number of amateur sportsmen.

THE NURSERY STAKES, for puppies under 18 months old, closed with eleven entries. The whole of Monday was occupied with them, the race not being finished when 5 p. m. arrived. The weather was bright, but the stormy weather of the preceding days had caused the birds to lie very close, and take refuge in the woods and thick covers, so that they were hard to find, and hence rendered the work very slow. Tuesday morning was cloudy and cold with considerable wind, which was very unfavorable, though by 10 o'clock the puppy stakes were decided in favor of Pearl, with Fannie, 2d, and Dan, 3d.

PUPPY STAKES.

Names.	Bucking Point, 5.	Backing 0 to 5.	Staying 0 to 5.	Summing up 0 to 10.	Summary of Points.	Rank.	Each Other.	Bucking Shot.
Pearl 11088	15	8	8	31	43	1
Fannie 11089	10	8	8	26	44	2
Dan 11090	10	8	8	26	45	3
Lass O'Gowry	10	8	8	26	46	4
Drake	10	8	8	26	47	5

Brook	10	8	8	26	51	9
John	10	8	8	26	52	10
Colm. Doon	10	8	8	26	53	11
Belle	10	8	8	26	54	12
Gold	10	8	8	26	55	13
Relie	10	8	8	26	56	14
Gulld.	10	8	8	26	57	15

The falling to make points is called by the rules "Lost Opportunity." Pearl, the winner, is out of Daisy by Luke. She was sold to Mr. John Nichols, of Syracuse, N. Y., for \$200.

THE FAVORITE STAKES.—For this there were 21 entries, including some of the finest dogs in the country, such as Gladstone, Bow, Joe, Joe Jr., Buck Jr., Drake, Whip, Nellie, Lincoln and Romeo. The first two dogs cast off were Erin and St. Elmo. They worked for at least an hour before finding birds. Erin finished one, which according to rules, was marked against him. His owner became so angry at this that he withdrew him, but after some time he claimed that he did not know that any change allowed to put down his dog again with the mark of demerit to remain against him. The judges agreed to allow him to do so. While this question was being discussed Mr. Adams' dog Drake was called and cast off. Drake is a handsome white dog with black and tan spots and was hot in finding birds, and made the first points in a few minutes. He finally scored 5 and was taken up. St. Elmo, at this time, was without a single point, and penalized with two false ones, his owner therefore withdrew him. Erin was then put down for the same time, and St. Elmo was replaced by Mr. Bryson's Whip. Whip is also a white and black

her bow is hollow, and extremely long and sharp; her midship frame is nearly straight, from the bilge until within a few planks of the garbol, at which point it takes a sharp downward curve; her forefoot is all cut away in order to prevent gripping; but the most noticeable part is the keel, which is rocker shaped, with an inner keel set in that weighs about 6,800 lbs. As before stated, she is cutter rigged, and although this rig is not regarded with favor by Boston yachtsmen, still it must be acknowledged that for cruising it is very handy, as when you are caught in a blow you can hoist both topmast and bowsprit, and any yachtsman knows what a great advantage this is. *Enterprise* has sailed in but one race, and that was unfortunately during a light and variable wind. The race was a close one, but her opponent, the centredboard sloop *Madcap*, was victorious. Had it blown a stiff breeze, it would probably have ended differently. Although *Enterprise* has not done much in races, in private sailing she has proved to be very fast, a rail breeze to windward being one of her strong points.

Viking is 34ft. water line, 38ft. Gnt. over all, 14ft. Sin. beam, with 6ft. draught of water; her bow is sharp; she has a hollow, floor and a V stern; her keel is about the same as *Enterprise's*, with an iron shoe that weighs about 1,600 lbs. She was built at City Point, South Boston, the headquarters of the yachting interest. From the time her keel was laid till the day of her trial trip her model was abused by the yachting men. She was "too wide"—"had no forefoot, and couldn't go to windward"—were among the objections put forth by the critics. A few—a very few—recognized her fine lines and great power; but the popular opinion allowed her anything but speed. After her trial trip there was considerable change in the tone of the criticisms. Persons who were loud in her condemnation before, were forced to acknowledge her ability in a breeze. She has sailed in but two regular regattas—one on July 4, during which she carried away two of her rigging, thereby losing all chance of a prize; her next race was on October 9, in which she was compelled to sail against centredboards without receiving any allowance—an unusual thing in most of the races in these waters. Her principal opponents were the sloops *Shadow* and *Violet*, modeled and built by H. H. Henshaw, of Bristol, R. I. The course was about 25 miles in length, and the race was given under the auspices of the Dorchester Club, the object being to develop the cruising model. The boats were obliged to sail in cruising trim, carrying tender, stove, etc., as if on a cruise. The race was a flying one, and for the first five miles, dead before the wind. All the boats were reefed, as it was blowing a gale of wind, with an ugly choppy sea. *Shadow* started first, followed in 2m. by *Viking*. Before the wind *Shadow* increased her lead, but when the sheets were trimmed *Viking* gained until the boat got about even, in which position they remained for a good 10 miles with the sheets a little started. For the last three miles of the race it was close hauled; and just as the sheets were trimmed flat *Viking* took the lead. Through a slight accident *Viking* was compelled to stand out in the tide while beating through Dull Gut, the boats crossed the line almost together; but as *Shadow* started first, *Viking* was declared the winner by a couple of minutes. The result of this race caused general surprise throughout boating circles; for although it was well known that *Viking* was fast in a breeze, it was not to be expected that she could sail with *Shadow*, the latter having beaten all the clippers under the same circumstances.

In regard to the comparative merits of *Viking* and *Enterprise*, my observation of the two boats has convinced me that in a light wind, *Enterprise* can beat *Viking*; but to windward in a breeze, *Viking* is the better boat. The latter is sloop rigged.

NEPTUNE.

YACHT MEASUREMENT.

BELLEVEILLE, Canada, Nov. 13, 1878.

EDITOR FOREST AND STREAM:

Having read with interest, and I trust not without profit, the remarks on the subject of yacht measurement in the issue of your journal of Oct. 7, I, as an enthusiastic yachtsman—as one who has had not a little to do with yacht measurement as Secretary of a yacht club for the past four years, and as having thought considerably upon the matter, desire to have my say upon the subject.

You say a change is needed in the present rule which is in use in these waters, exactly as quoted in the article referred to. But the difficulty is to determine in what direction the alteration shall be made, considering that it is indispensable that the rule for the measurement of yachts shall be a simple one, and easy of application; one, in fact, by which the tonnage of a yacht can be determined in a few minutes. Any such rules of measurement as are applied to vessels for commercial purposes would be too complex, as in but few yacht clubs would there be found a measurer thoroughly acquainted with the necessary formulae, or who would be inclined to spend the time necessary for the measurement of a large fleet of yachts, which such operations would render necessary. Therefore, as in the case of standing keel yachts the present rule offers a premium to length, and places a heavy handicap on beam, an alteration whereby fairer treatment is accorded to wide vessels of that description is desirable. I say in the case of standing keel yachts, because the present rule is about as fair as can be devised for centredboard craft, which must have great beam in order to carry canvas safely. The rule proposed by Mr. Dixon Kemp, of which you speak approvingly, would not answer at all for centredboard yachts, as the premium which it offers to beam would produce some ridiculous results, of which I will give you an example, taken at random from the fleet of the Bay of Quinte Yacht Club here:

Yachts.	Length.	Beam.	Old Rule.	Proposed Rule.
	ft.	in.	ft.	ft.
Katie Gray.....	27	8	9 33-94	4 13-70
Kathleen.....	29	10	10 6	5 13-70
Gracie.....	25	9	8 88-94	2 43-70

I could give a good many more examples, but the above is sufficient to demonstrate the utter absurdity of Mr. Dixon Kemp's proposed rule if applied to vessels of great beam, which under it would escape with about one-fourth of the tonnage which they measure under the present rule. That the present mode is preferable for centredboard boats who can deny, when the further fact is stated in substantiation of its justice, that any of the above yachts will carry upwards of 15 tons of dead weight, that *Gracie* will carry as much, if not more, canvas than all *Katie Gray* or *Kathleen*? Will, therefore, any man in his senses tell

me that a rule which places beam at such a premium as is shown above is either just or right?

Thus I am led to the conclusion that there should be two rules for measurement, one for centredboard yachts and another for standing keel craft. The reasons which I have to give for this idea are that in my opinion a correct rule of measurement ought to take into account the depth of a yacht as well as her length and beam. Such a rule could not be applied to centredboards, otherwise the generation of yachts exceeding its enactment would be built to evade measurement in depth, just as the English craft are now constructed to evade measurement in width; and the result would be a class of "skimming dishes" infinitely more dangerous than many of the "racing machines" which now skim the surface of many rivers, bays and other inland waters. The present rule is good in this respect, that a builder may make his centredboard boat as deep as a draw-well if he chooses, and the result is a class of craft in which the happy mean seems to have been struck.

The construction of the keel boat being widely different, the builder is obliged to give his model a certain draught of water in order to obtain stability and weatherly qualities; and as the draught must necessarily increase with the narrowing of the hull, the depth could with excellent results be taken into account in measuring yachts of the standing keel class.

Therefore, as the centredboard yachts derive their stability and sailing qualities from sources entirely different, and indeed opposed to, those from which the keel yachts do, I hold that there should be separate rules of measurement for each—that for the former taking no account of depth, and that for the latter measuring draught of water as well as length and breadth.

Hoping that some of your able correspondents will consider and discuss the ideas above set forth, and that the result will be of benefit to yachting generally, I subscribe myself

ONTARIO.

In making an application of the new rule proposed by Mr. Dixon Kemp to the yachts mentioned in his letter our correspondent, "Ontario," has come to conclusions which are justified by what we had published concerning the proposed change. We should, however, have added in our remarks concerning the innovation proposed, that Mr. Kemp foresaw this anomaly, and consequently made the proviso in his proposition that whenever a yacht's beam exceeded two-sevenths of her length on water line, in other words, when the yacht has less than three and a half times her beam for length, then for measurement for time allowances two-sevenths of the length is to be taken as beam in the formula. Thus *Kathleen* would measure 27ft. Gms in length; two-sevenths of that is 7.86ft., which is to be regarded as her beam. Subtracting twice this from length leaves 11.78. This multiplied by the assumed beam and again by one-half of that figure gives 303.88, which divided by 70 results in the racing tonnage of 5.20. Similarly *Katie Gray* will ton 4.73 and *Gracie* 4.34. This places the matter in a better light. Our correspondent, however, deserves to be credited with having discovered the omission of the limiting clause from our article. The rule was mentioned rather as an evidence of a gradual giving way of the strict conservative feeling hitherto hedged about the old Thames Rule in England, and which was steadily and surely producing a class of inordinately narrow vessels abroad, than as a rule to be applied without modification to American yachts. In general, however, we countenance any system which will modify the tendency toward shallow racing vessels at a sacrifice of seaworthiness, even though such rule may be theoretically imperfect. If that of the Seawanhaka Club—area of load water line—were assured of permanence, its influence upon model could not fail to be beneficial, for it encourages an easy, deep form, and taxes the dish model, working, therefore, in exactly the right direction.

BOTH TYPES PRACTICALLY CONSIDERED.

NEW JERSEY, Dec. 1, 1878.

EDITOR FOREST AND STREAM:

I have just been reading a most interesting little book, called "Down Channel," which gives a literal description of several cruises from London to Land's End, in Cornwall; and one completely round Great Britain—the latter in a cutter of the following dimensions: 32ft. over all, 9ft. Sin. extreme beam, and 6ft. draught of water aft. I wish friend "Podgers" would read this little book, and see how such a craft behaved in a severe gale in the North Sea, so severe that large vessels felt obliged to lay to, and one large schooner was thrown on her beam ends, and only righted by the loss of her mainmast. He will there see that all his talk about diving-bells, etc., must be the result of mistaken impressions; for it seems to be pretty evident that *Sirius* and *Orion*—two of the finest vessels, the former 32ft. and the latter 42ft. over all—were as dry boats in a heavy sea as could be desired; for in the owner's account of a night passed in a very heavy gale, laying to most of the time, he tells us how the top of one sea, "not looking where it was going," sprinkled him with its spray; and with this exception; she took no water aboard; yet a very heavy sea was running, as may be judged by the spirited illustrations of the scene. With the bowsprit run close in, and no overhang of stern to speak of, she always lifted cleverly, in time to clear everything. Could any boat do better? I fail to see how she could. Now on the other hand, take a New York boat of the same length—"Podgers" boat for instance—30ft. long, and 13½ beam; 4½ hold, with a draught of about 3ft. to 3½ft. aft, and half of that, or less, forward. Place her in the same position, and how would she make out? Would she do as well, think you? (There can be no question of doing better, for a little boat which will carry safely, and always be under perfect control in such weather, cannot be excited by anything that floats.) My impression, judging from what experience I have had, is that she—"Podgers" boat—would be in great danger, from her extreme buoyancy and great beam, of being tossed up by some of those seas, and coming down again wrong side up, which would be certain to occasion more discomfort for her passengers than to run the chance of a little spray being thrown over them occasionally, in consequence of their boat

being less broad and less buoyant. But different situations call for different things. In San Francisco Bay seas are perhaps the best boats; but I am not yet converted to the belief that scows in the English Channel would be much of a success.

Even crossing Sandy Hook Point I saw an improved scow—the *Mohawk*—make her bow—not gracefully, either, but very abruptly—to a couple of not very bad seas, when away went her bowsprit, and she had to turn tail instantly, or lose her masts. If she had been cutter rigged, she could have done better than that; for she could have run that abominable bowsprit in, and saved things. Do you think dear P., that if *Vision* had 8 or 10 ft. more beam, she could have won that cup a few weeks ago? I have seen her try to sail to windward in a seaway, and fail; and I think I know what's the matter with her, but I don't think that it is want of beam. On the other hand, I must say that I don't want such a machine as *Muriel*. Forty-six feet over all, 9ft. 2in. beam—no cockpit, no house! Where the dence is a fellow going to stay on this thing, with such a very narrow strip of deck, and no rail to speak of? If I failed to grab the tiller, I should have to sling myself to the mast, or go below, or overboard. No; this doesn't suit me either. I like the rig very well, theoretically, but I want what I call a decent boat under it.

Now let me say what my notion of a boat is. Thirty-six feet keel, about 45ft. over all, 6ft. to 6½ft. depth of hold, and 12ft. 9in. extreme outside beam; centredboard, because I have not water enough for a keel, which otherwise I should decidedly prefer, and to draw 4ft. Sin. to 5ft.; cutter rigged, probably, all but the top-sail, which I would prefer jib headed, and to full aloft. Now, if the owner and a boy or a friend can manage "Corinthian's" boat, I think they could as easily manage this, and be very much safer. At all events, I think very seriously of trying it, and am only waiting till this little matter of the perfect dimensions is settled to my satisfaction to begin building.

"Podgers" thinks he has settled it, but he hasn't with me; for according to his creed, I should be obliged to be over 16ft. beam. Well, I don't want it, for I have just parted with one which, with 16ft. Sin. beam, has 4½ft. keel, and but little less than 60ft. over all; and yet when she got in a heavy sea she wellocked about so that we couldn't keep our sea legs anywhere under us, and she would not come in stays until she went stem first a while, and was maneuvered round by a skillful manipulation of that huge rudder, and with the jib to windward. She was a splendid working boat, too, in smooth water, and very smart; but make a boat bulky enough, and with sufficiently small displacement to suit about here, and in a seaway there is only one direction in which she can sail, and that is to leeward. If the coxswain has to lay to, well, that is a good thing for them; for they certainly must have to do it a great deal of the time—that is, if the wind is ahead, and the water a little rough; and I guess I had better follow their example. So, au revoir.

HARD-A-LEE.

A REPLY TO "ROUGE-CROIX."

NEW YORK, NOV. 20, 1878.

EDITOR FOREST AND STREAM:

In your communication headed "A Few Words to 'Corinthian's' your correspondent," "Rouge-Croix" has evidently found a more'st nest in my letter of Oct. 23; whereas, a little thought upon the words he quotes therefrom would have shown him that rig was not treated of at all in my communication, but American and English types of vessels—one designated large bulk and small displacement; the other, small bulk with large displacement, or English cutter type. I beg to inform your correspondent, "Rouge-Croix," that I am familiar with the schooner rig, and have had the pleasure of viewing the *Cambria*; also, that I have done considerable sailing and yachting, principally in schooners, for the last twenty-five years, and know the difference between bobstay and dumpy pennant. However, as he hails from Halifax, I am glad to see his interest; since, perhaps, the Dominion may again be a competitor for what is known as the Queen's Cup, and send his approved type of vessel to contend with our crafts instead of a nondescript. I am also glad to see my old acquaintance, "Podgers," to the fore. As to his centredboard in the run, I believe it a good thing, having seen it tried thirty years ago.

CORINTHIAN.

ORGANS AND PIANOS.—The celebrated instruments of Daniel F. Beatty, the great piano and organ manufacturer, of Washington, N. J., are unrivalled in purity of tone, action and excellency of finish, being the result of years of indefatigable labor, the aim of which was to make only the very best, and at the least possible profit. This course has resulted in the name of Beatty becoming a household word in every State and Territory of the Union and Canada, and familiar to numbers of the residents of England, Germany, France and Italy. The special offers of Mr. Beatty, which appear in our columns to-day, mean just what they say. The instruments are all and more than is claimed for them, while the prices are barely one manufacturer's cost, for Mr. Beatty is determined to place his unequalled instruments in the hands of the entire music-loving population. No one contemplating the purchase of an organ or piano should fail to take advantage of his offers, as a neglect to do so will be a matter of regret. Remember these offers are only good during the next thirty days. The illustrated catalogue of Mr. Beatty is detailed and full of information interesting to every one. It will be mailed free on application. Send for a copy to Daniel F. Beatty, Washington, New Jersey.—*Advs.*

AN IMPROVED STEAM ENGINE.—THE "DEAD-CENTRE" OVERCOME.—It is a well-known fact that steam has always worked at a disadvantage. In the Steam Engine now in use there is no leverage except at the loss of an angle; and there are two points in each revolution where there is "no power" none. These points are called the "dead centre." In an engine having but one cylinder and stopped here, has no power to move. To do away with these "dead centres" and give steam a chance to work directly on the long end of a lever, was the idea had in mind by the inventor of the "Double Action Ratchet Engine," which has just been perfected; and a working model built, which promises nothing less than a revolution in the manufacture of engines. The advantages gained are many and important. Among them such as perfect adaptation of steam to all farming purposes, such as ploughing, mowing, stump and rock pulling, etc., also to road wagons, where such are needed; to street cars and elevated railways. A model of this improved engine will be on exhibition in this city early in December, due notice of which will be given.—*Golden Rule.*

Sea and River Fishing.

FISH IN SEASON FOR DECEMBER.

Black Bass, *Micropterus salmoides*; Pike or Pickerel, *Esox lucius*; Yellow Perch, *Perca flavescens*; Sea Bass, *Sciaenops ocellatus*; White Perch, *Morone americana*.

NEW HAMPSHIRE—Dover, Dec. 4.—Fishing on our coast is quite good at present, and the fishermen are getting good fares. Twelve hundred pounds of striped bass were taken from our river one day last week by two young men of this place. A very good day's work. W. A. G.

MOVEMENTS OF THE FISHING FLEET.—The weather has been unfavorable for the shore fishermen the past week, and very little has been done. The number of arrivals in other departments has been unusually small, and this week has been a dull one for the fishing interest. The whole number of fishing arrivals reported at this port since our last issue has been 17—7 from the Banks, 86,000 lbs. halibut; 1 from Georges, with 84,000 lbs. codfish; and 3 from the Bay St. Lawrence with light fares of tuckered.—*Cape Ann Advertiser*, Dec. 6.

CONNECTICUT—Farmington, Dec. 5.—We expect some fine fishing through the ice with tips this winter, for pickerel are now running up the stream. During the winter '76-7 over five hundred pounds of pickerel were taken in our small river, the Farmington. None last winter—no ice. TUNNIS.

KENTUCKY—Hickman, Dec. 4.—Having taken up so much of your valuable space already I fear I will be trespassing, but the fishing is so very good it can't be overlooked. Reelfoot Lake furnishes goggle-eyed perch, silver perch, black bass, striped bass, and, in fact, the whole species of bass indigenous to fresh water: croppies, Buffalo, rock horse, sunfish, etc., etc., for the week it seems at least one would think so to see the quantity brought here for shipment. Nearly every day there are no less than a thousand pounds leave here for the different markets, the most of them being trapped, I am sorry to say. The Mississippi furnishes about the same species as the lake, with the addition of salmon, which I am informed are getting very plentiful. The fishing in the lake continues good (for hand lines) until the first of this month from the first of April. The following are the prices here. Wholesale, for rough fish or drum, Buffalo, red horse, etc., five cents per pound; trout, bass and perch, eight and ten cents per pound. VAL.

FLORIDA—St. Augustine, Dec. 4.—Francis Beut, while out fishing last Saturday, caught a monster jew fish, weighing over 300 pounds. These fish are seldom caught in our waters, and this is the largest of which we have any record. Mr. Ed. Disbush lately captured a monster saw fish, having a saw over 4 feet long. He also recently killed a whippoorwill having a tail over 4 feet long, at the end of which were five stings, being an unusually large number. P.

SALMON FISHING IN NEW BRUNSWICK.—We find in the *Weslman*, Carmarthen, Wales, a very interesting report of a gentleman angler who has recently returned from a two months' excursion to America. A large portion of two columns is occupied with a description of the Metapedia, Resigouche and Nepisiguit Rivers. One of the best places for fishing in the last named river is what is known as "The Ledges," and as the mode of fishing there is rather peculiar a description thereof forms a pleasant episode in the narrative. The writer says:

The fish rest alongside and almost touching the rock; carefully concealing yourself, you cast your fly very delicately on to the smooth water above the ledge, and let it float gently down the point into the eddy. You must strike somewhat sharply the moment you see the rise, or you will certainly miss your fish. The Nepisiguit is a very quick, and rarely take the fly when below the surface, and after trying a variety of methods, I found that the most effective plan was to fish with a free line, and strike quite sharply; fine casting is also necessary, as the fish rise almost invariably in the smooth, glassy, but rapid water at the head, and rarely in the tall or broken water of the pools, nor does the fly require to be worked up and down as is usual in trout pools. I could be allowed to fish the fish generally rush, and under the stream and kept on or close to the surface; and, from what I was told, this mode of fishing succeeds best in all the Canadian rivers.

Following this is a bit of the standard technical description of handling the fish, "giving them the butt," etc., which though somewhat hackneyed, shows the angler to be an expert at the business; a complimentary reference to his French Canadian canoe men; some accounts of roughing it in camp; mosquitoes, expedients, incidents, and the like, with instructions as to places and methods of fishing, selection of flies, etc., from which we reprint the following extracts:

The principal casts at the Great Falls are the Falls Pool, the Camp, Pool, and Rocky, besides others of lesser note. The first is a difficult place to fish; one has to cast up stream, and let the fly float down with the current, keeping the line in as vertical a position as possible, so as to avoid slack and be enabled to strike quickly. It is a very troublesome place to kill a fish in, as there is a wild current pouring out at the foot of the pool, down which the fish generally rush; and unless you are very quick in following in a canoe, as the rocks are sheer to the water's edge, rendering progression along the bank impossible, the weight of the water on the line, together with the struggles of the fish, will in all probability cause a breakage. The Camp Pool is a glassy piece of water, and the fish generally rise from the sides of a tongue of rock that juts out into the head of the pool. Rocky is a strong stream of most beautiful angling water, running between rocks with a gentle current. Every yard should be carefully fished, as there are resting places for fish all over the pool. "Switching" is a very useful mode of casting, especially from the south bank, as if you attempt to throw overhead you are almost certain to break the points of your hook against the rocks.

The best time for fishing was in the morning, from about seven to ten or eleven, and the fish do not, as a rule, rise well until the sun is fully up. The evening fishing is very uncertain, as before sunset the salmon apparently leave the upper pools and retire into the deep water of the basin for the night. One peculiarity of the fish is that they seem to like sunshine; and as long as you fish finely with small flies, and keep your-

self concealed, a bright day is by no means unfavorable, especially if a light breeze ruffles the surface. "I had one remarkably good morning's fishing on the 6th of July in Rocky," between 11 and 12, and I was hooked and killed six fish, the largest being 26 pounds, the smallest 11 pounds. All were taken on one fly; wings mallard, hackle and body black, tail golden pheasant topping, and a twist of silver tinsel in the body. After killing my sixth fish I went home, but my companion took three more out of the same pool before one o'clock. All nine were taken in a space not exceeding 200 yards in length. In the order of size, the fish kill well in a Canadian stream. "Jock Scott," Silver Doctor, Duff Miller and the Butcher, especially the latter, are all good. The local flies are plain ones, tied with dark turkey or mallard wings, with a bit of blue in the shoulders, bodies and hackles varied according to the size and color of the water and whim of the fish. Gray, black, and claret with silver tinsel all kill in turn; attention too must be paid to the size of the fly, which should be small, and the size of the stream, and be gradually diminished to a small sea-trout size for low and clear water. I killed many fish on a Welsh fly, plain turkey wings, with a body of blue and claret, pig's wool, silver tinsel and gold topping for tail. Casting lines should be as fine as is consistent with strength; but the latter element should not be risked for the former.

The writer then enumerates the principal salmon rivers, and the means of reaching them, all of which information has of course been repeatedly given in our own columns, but it is as well to repeat it again:

The principal rivers on the south side of the Gulf of St. Lawrence are the York, Cascapedia (two) Metapedia, Restigouche, Miramichi, Nepisiguit, and on the northern side the Marguerite, Goudbout, Moisie, Romaine, Natusquan and Mingan. Those on the south side are most accessible, as, landing from the Allen line steamships at Rimouski, you are at once on the inter-Colonial Railway, which runs down the coast line of New Brunswick and along the bay of Chaleur. The northern rivers are not so easily reached, and arrangements would have to be made for hiring a schooner either from Gaspe or Rimouski to convey a party to their fishing-ground; the rate of freight depends, of course, upon the state of trade, but from \$20 to \$30 is about the price for the trip to and fro. The Chesapeake Island of Anticosti also furnishes a good field for the adventurous sportsman, and I was told by a gentleman who had been there that he had killed as many as thirty salmon on the Jupiter River during twenty-four hours. Bears, too, abound. The island, however, is not only very inaccessible, but there is no harbor also; so provision would have to be made for a long stay, to guard against the possibility of starvation, which late nearly overtook a party of guardsmen, who had made an expedition there some few years ago.

Regarding the weight of fish the writer says:

The average weight of fish differs materially in different rivers. In the larger ones, such as Cascapedia, Metapedia, or Romaine, they will average quite 24 lbs. to 26 lbs.; but on the smaller streams, such as the Marguerite, Jupiter, and Nepisiguit, 14 lbs. will be about the usual size. Again, in the larger rivers, grise are rare, but in the smaller ones, especially in the Nepisiguit, they abound, and seldom exceed 4 lbs. I was unable to get hold of any satisfactory theory to account for these peculiarities, and offer no opinion, but simply state the facts.

Then he gives the following hints as to equipment:

For all the rivers two canoe men for each rod and a cook for the party are necessary. The outfit must be made up in a day, and 25 cents for use of canoe. Good men are obtainable at most of the stations, and by many Indians are preferred. Of course tents are necessary; Y-shaped ones, about 12x6 feet, with the tops laced to and not hanging over the centre pole, are best. The question of supplies is entirely a matter of taste. If there is a wagon track along the banks the angler may indulge in fancy luxuries; but, if everything has to be taken on a canoe, he will find it much better to cut down his kit to the smallest possible dimensions, as 50 pounds is a good load for a bark canoe when carrying passengers. However, pork, molasses, tea and flour are essentials, and I may add that the quantity of pork and molasses a canoe man will get through is simply amazing. Preserved soups and vegetables are very portable and handy, and a few pots, pans with long handles, and canned tomatoes and apples should be taken; nor on any account should axes and an auger be forgotten. With these simple tools a backwoodsman will furnish your camp with chairs, tables and what-nots of all sorts and sizes. A pair of colored blankets and a horse-rug should also be taken. No spirits should be given to the men except on the rarest occasions, and firmness must be shown in keeping them up to their work, as the unaccustomed good fare soon makes them fat and lazy. Camping out is, however, so thoroughly understood throughout Canada that a stranger will have no difficulty in getting practical hints from the Government overseers or any of the respectable timber merchants, who send large gangs of men up into the woods every autumn.

I am happy to be able to add that the fisheries of New Brunswick are gradually improving. Nowhere are the good effects of close time, preservation, and pisciculture more apparent; but watching rivers where the course runs through dense forests is no easy matter. The Indians, too, are innate poachers, and when we were on the Nepisiguit we more than once came across evidence that spearing had been going on during the night in the shallows below our camp.

In the course of this very conscientious article, the writer refers to the questions of leases and privileges which have so long proved a vexed problem to the Government authorities, riparian residents, native anglers, and strangers.

BAMBOO BOWS AND FISHING RODS.—Bangor, Maine, Dec. 7, 1873.—Mr. Editor: I notice on article in your paper on split bamboo archery bow manufacture. I have been in the same shop for many years, and have seen many bows made, and demand for them, and several were made and liked much better than those of Luncewood. The foreign demand for our split bamboo rods is increasing. My rods were first introduced into England six years ago by Messrs. Andrew Clerk & Co., of 48 Maiden Lane, your city, and the demand for them has steadily increased. Last September I shipped two trout rods to the East Indies. I am now finishing a salmon rod 31 feet long for a gentleman in London. H. L. LEONARD.

A NEW USE OF THE ATLANTIC CABLE.—Messrs. Abbey & Imbrie received last Friday a cable despatch ordering one of their "best" six-section trout fly rods, an Abbey reel, a waterproof fly line and a set of samples of their finest trout flies. The instructions were to deliver them to Mr. Alexander

Koch, late Secretary of the United States Warehouse Co. Mr. Koch sailed on Saturday's steamer, taking the tackle with him. Messrs. Abbey & Imbrie have been constantly sending their section bamboo rods and highest quality reels to Great Britain and the Continent; this is, however, the first cable order they have ever had for this class of goods. Surely the world may be said to move when Europeans are so anxious to get a Yankee rod that they cannot wait the ordinary course of the mails. Messrs. Abbey & Imbrie ask forty dollars for their best trout rods, and have no difficulty in getting their price. Mr. Koch supposes the tackle is for a Christmas present, and thinks the fortunate recipient will use it in the Pyrenees.

HOW TROUT TAKE A FLY.

NEW YORK, Dec. 7, 1873.

EDITOR FOREST AND STREAM:

In your last number (Dec. 6) you say you never saw a trout knock a fly into his mouth with his tail—never! Well, now, I think I have. Until this statement of yours I had no doubt but that I had seen them take a fly in just that way. The trout would turn over on the top of the water, slap the fly with his tail, and I have instantly caught him with the fly in his mouth. I have caught many that way; and there comes back to my mind's eye and ear a pool, below a twelve-foot dam on the Dry Brook, in Delaware County, N. Y., where late one summer afternoon I laughed with glee at the constant recurrence of this acrobatic feat on the part of the trout, and at the sound of their tails as they slapped the water.

The trout did not use their tails "on a straight or withdrawing line" so as to get the fly in their mouths. The trout would strike the fly with his tail one way, and carve his head around from beneath, in the opposite direction to the tail, almost in a circle, and very like a capital C or G.

In your amusing remarks you say: "To us the accomplishment of the act would appear like an acrobatic feat, and its apparent accomplishment a trick of legerdemain." That's a nice bluff for you, father! Slapping a fly with its tail would be sleight-of-hand in a trout, would it? For it cannot be that you mean it would be legerdemain on your part if you were to apparently accomplish the act, elicit You say: "Ordinary trout, which, as I hunger, make straight for the fly." True, they may; perhaps they always do. But ordinary trout are not always hungry, and ordinary trout usually act in a different way every time. Sometimes they play baseball with the fly with their tails, knocking it into centre field while they make a home run, and sometimes they catch it on the fly, as it were, with their tails, or again with their mouths; and then they'll bump their noses against it and push it away; or they'll take it and spit it out at you, as I have, at standing all your "wrist-knock" or they will come up and look at it and laugh at you; and I have known them to come up like lightning, two feet out of water, turn a full hair circle, and come down head first and pounce on the fly as it lay on the surface of the water. It did not take any wrist-knock to hook them then (this was in Willowbrook Lake), but it did take several trials for me to learn to keep my hand still for a second after that lightning flash, until the trout could turn and get down on the fly. At first I jerked the latter away too quickly, but, after I had watched a little, I caught a good many in just that way. Then, again, they will not bite at all. I have, in the clear pools of the Big Indian, as low water, seen twenty trout together at a time, all lying motionless, head up a rear, and I have put my fly and grass-hopper and cricket and worm under the nose of each one, and they were not "bold bits," and did not come head on to the bait. The most I could elicit was a faint wag of the tail. It seemed to me a sort of wag of recognition, as it were. The fact is, that the only thing that you can count on in a trout is that you can't count on him at all. I do not say that as a rule trout strike the fly with their tails, but I agree with Mr. Prime so far that I have often seen them do so, and get caught in the same way. Now, my dear sir, don't carry your reel in a bag, and don't fish any more for elephants nor Chianum nor Japs. Besides, the habits of the latter differ from those of trout.

Yours, cordially, GEO. W. VAN NICKLIN.

We calmly await the proof of our correspondent's assertion that he has seen a trout flop a fly into its mouth with its tail. He must possess an electric quickness of vision; the trout a gift of dexterity most amazing. With a fish-line all in a heap or coil on the surface of the water, the feat is easy enough; but fishing as good anglers fish it doesn't come natural to the trout. It is only after years of practice that *Salvelinus* is able to accomplish it, and most trout die before they have acquired the art. A trout in the act of making a somersault would knock the fly away from, and not into, his mouth. Let us illustrate:

Rational Pastimes.

HOW TO DRAW THE BOW.

CRAWFORDVILLE, Ind., Dec. 2, 1878.

EDITOR FOREST AND STREAM:

During the past summer the pastime of archery has been practiced by the American people in a crude way, with all sorts and kinds of manner of bows, and all varieties of arrows. We would naturally expect to find many enthusiasts, some disgusted, and some indifferent. While the bow is the natural weapon of man, yet, paradoxical as it may seem, there is no weapon requiring so much of art in its manipulation. Without instruction one always begins wrong. I began shooting eighteen years ago, using all four of the fingers of the right hand to draw the string, holding the arrow between the forefinger and thumb. After shooting in this way for two years, I found by experiment that a better way was to hold the arrow between the first and second finger; then, again, by experiment, I discovered that the assistance of the thumb was not necessary; and lastly, that the little finger should not be used, for the reason that the string was drawn farther back by it than the point where the arrow was nocked, and conse-

B. C. B. Riddle, Milan.—We don't know Gordon Cummings' age, nor the time he held his used-out Goat. The Indian method of tanning buckskins is: Stretch the skin on the ground or on poles, and remove all the flesh. When well dried the skin is washed in soap and water to cleanse the fur; the brains or some animal are then taken and mashed and rubbed into the skin. The skin is then washed in water, and is then washed, and the skin hung out to dry. When dry it is scraped, and exposed to the dew one night, and the next morning rubbed and pulled until soft. Buckskins are made by rubbing off the hair with a horse rib while the skin is fresh, or after soaking in a weak lye; then dressed with brains, and stained with a decoction of wassatch bark. The skin is then dried in the sun, and is ready for use. It is made by Albert Ogawwell, New York. Write to Captain Mayne Reid, near London, Ede. The ride you inquire about is a sporting arm.

A QUARTERLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

NO. 111 FULTON STREET, NEW YORK.

(POST OFFICE BOX 2887.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 12, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

FOREST AND STREAM.

Clubs can obtain subscriptions to FOREST AND STREAM AND ROD AND GUN at \$8 per annum. Now, at the beginning of the year, is the time to start new clubs; subscriptions to begin Jan. 1. The circulation of FOREST AND STREAM is now distributed among 2,400 post offices in the United States and Canada, and over 100 in foreign countries. Twenty-nine foreign countries are represented.

FRIENDS WHO STOP.—Come to think of it, the firm of Schuyler Hartley & Graham, whose very striking advertisement appears upon the outside of our cover, have constantly advertised with FOREST AND STREAM since the very beginning of the existence of the paper! This is one of the very heaviest and shrewdest firms in the United States, and their constant patronage shows how much they value our paper as an advertising medium. We hope they have received a ten-fold benefit from their outlay and investment in printer's ink. Remington & Co. is another firm which has stuck to us from the outset; and so have J. B. Crook, Abbey & Imbrie (late Andrew Clerk & Co.), Barton, Alexander & Waller, and Wm. Read & Sons, of Boston. Of almost equal duration is the patronage of Kimball & Co., the tobacco manufacturers; Thomas Sparks, shot maker, of Philadelphia, and the house of Conroy & Co. There are a score of other firms which have appeared intermittently during the period, the combined patronage of which has been to us a valuable and substantial support. We have come to look upon these friends as fixtures, not only in our columns, but in the public business—fixtures which revolutions do not seem to shake, but which we trust will stand "as long as grass grows and water runs." It gives us great pleasure to make this reference to them.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$3; three months, \$1. To clubs of two or more, \$3 per annum.

—Our usually estimable contemporary *The Turf, Field and Farm*, flatters itself too much when it charges us with appropriating one of its editorials as our own. We challenge it to the proof, and will turn over a whole week's net earnings to its treasurer if it will establish its point. Our real crime was in copying into our column of selected miscellany an article which we found floating without credit in one of our exchanges.

—Mr. Wm. M. Tilston, of this paper, has been appointed by the Harlem Railroad Company, owners of Gilmore's Garden, sometimes known as the Hippodrome, agent for the property, and will manage the same in their interests. The lease of Messrs. Shook & Gilmore having expired, the railroad company, have purchased of them all the furniture and appurtenances of the building, and applications for leasing it for athletic meetings, etc., must be made to Mr. Tilston at this office.

—The New York *Herald* publishes a resume of scientific discoveries during the past half century, and exults over the progress and development of knowledge. Now, knowledge is life, and spiritual life is the exaltation of knowledge. If we in the flesh are made happy by the acquisition of knowledge and its application to our personal desires, and are only to a limited extent capable, how much will this enjoyment be enhanced hereafter when our corruptible bodies no longer clog and obstruct the movements of thought! When the body dies true life begins.

CHICAGO AND NORTHWESTERN RAILROAD.—The hundreds of our readers who have accepted the considerate services of this popular sportsman's route, whose advantages have long been set forth through the advertising columns of FOREST AND STREAM, will be glad to know that the company has just declared a dividend of three and a half per centum on the preferred stock, and two per centum on the common stock of the road, payable December 23, 1878. The half-yearly statement of the road, with the earnings and expenses to November, 1878, show that the net earnings were \$3,987,414.07; the expenses, \$2,417,846.96; and the net profits, \$1,569,567.11. We take pride in the assurance that our efforts have contributed a large mile toward the aggregate revenue.

SPORT IN ASIA.—The growth of modern civilized sport is forcibly instanced in the fact that a new and handsome sportsman's journal has just been started in Calcutta, India. It is called the *Asian*. The number before us comprises fourteen pages, larger than those of *London Field*. It has a characteristic vignette title, composed of jungle, tigers, elephants, native hunters, etc., and altogether presents a very respectable and encouraging appearance. The local advertisements show that there is a large sporting interest in India, centring in Calcutta. The field there is immense for the tallest and biggest kinds of sport. Every year statistics are published of so many thousand persons having been killed by wild beasts in this or that Presidency, and sportsmen will find abundant occupation in thinning out the varmints and protecting the lives of the population. Under the impetus which the "Asian" will undoubtedly give to all residents fond of adventures in the field, a decline in the price of tiger pelts and lion-skin robes may reasonably be anticipated.

DEFUNCT CREEDMOOR.—The abandonment of the range at Creedmoor has been forced upon the directors of the National Rifle Association. Such a contingency should have been foreseen from the start, but with every train out off, the management at last conclude that something should be done, and have taken the first step to the securing of a new site. They will leave behind them many advantages, much sunk capital in improvements and plant. There are petty disadvantages connected with the Long Island range, but the supreme discomfort of want of access, ready and reliable, is sufficient to blast its future. *Per contra*, it may be that the choice of a new location may permit the laying out of the range according to some one of the plans which more recent experience has shown to be more satisfactory than the line and line plan of Creedmoor. The defects of that plan have been sorely felt on many a match day, and with care in the planning of the new home, it may be the change of location will be the beginning of an era of permanent prosperity for the National Rifle Association of America.

PROFESSIONAL RIFLEMEN.—The subject opened by Professor Chas. E. Dwight, of West Virginia, in our rifle columns has long been a matter of talk on the ranges. Without giving our own views of the topic or of the questions involved, the feeling is certainly growing among a large class of gentlemen-shots, that their efforts are dwarfed by the exploits of these gun-agents. The growing of this system of rifle distinction and strife for supremacy is seen in the loss of that mutual helpfulness which at one time was so marked a feature at Creedmoor. It was this long, strong pull together which enabled Col. Bodine and his companions on the first and second American teams to do such magnificent work; for, taking conditions and opportunities into account, no succeeding American team has done anything approaching it. That cordiality is leaving Creedmoor, and the keen calculation and shrewd watching of points, a *la mugh-hunter*, is seen more and more. The remedy which Professor Dwight suggests of private shooting clubs will meet the difficulty in his case, but it is a confession of weakness when such freedom of exercise as he will find in his clubs cannot be met with on any rifle range.

ANCIENT HOUSES IN AMERICA.—The antiquities of North America antedate the occupation of the country by Uncle Sam. Yet the United States have now become old enough to have a history, and can boast of buildings nearly two centuries and a half old. Our valued correspondent below gives us a brief history of three of them. Long may they stand and be regarded with the veneration due their respectable antecedents:

JAMAICA PLAIN, MASS., Dec. 3, 1878.

MR. EDITOR.—In FOREST AND STREAM, for Nov. 25, I find the statement, which has been often repeated in the newspapers, that the Horton House, at Southold, Long Island, is the oldest in America, having been built in 1639. There are two, perhaps three, houses in the vicinity of Boston older than this. First, the "Plantation House" of Gov. Cranch, at Medford, Mass., built of brick in 1624. This house, S. A. Drake, good authority, calls the monarch of all houses in North America, and believes it to have been the first brick house erected within the government of John Winthrop. Second, the Fairbanks House at Dedham, Mass., built of wood in 1618, and still occupied by the descendants of the builder. Third, the Catlin House at Jamaica Plain, Mass., built in 1638-9, as appears by the Records of Mass. Bay. This is of wood, and is in good preservation. It is occupied by the descendant in the sixth name of the seventh generation from William Catlin, the builder. All these oldest houses are found in rural or suburban districts, and in the large cities being too valuable to allow of its occupation by ancient buildings. Some suppose that St. Augustine being the oldest settlement in the United States must have the oldest houses; but this is not so, that town having been twice destroyed by fire in the seventeenth century. Besides which, the Coquina House, of which St. Augustine was built, is not a durable material.

S. C. CLARKE.

WESTERN INDUSTRIES.—The Hon. David W. Judd, who recently returned from a two-months' tour of the Far West, is now publishing in his paper—the *American Agriculturist*—most valuable notes of his extended observations relating especially to stock raising and farming, but covering all the industries of that vast and really productive section which lies along the foot hills of the Rocky Mountains, from the Laramie Plains to the Rio Pecos in Texas. In the December number of the *Agriculturist* is a half page engraving of a Nebraska stock farm, and in another number is a similar illustration of a cattle range and stock ranch in Colorado. Besides these special articles there are editorial notes which give the readers an intelligent idea of many things in the regions which he visited, of which they have hitherto been ignorant. It is fortunate that gentlemen of such intelligence and discriminating observation as Mr. Judd are willing to take time to investigate these new fields which are being so rapidly settled by immigration from the East. All information on these important subjects will be most eagerly read by Eastern men whose eyes are turned westward. As a sportsman Mr. Judd has not allowed the game of the West to escape his attention. He notes with approval that during the past few years the far Western States and Territories have taken measures to preserve the game, the result of which is seen in a very perceptible increase in game, especially in Wyoming and Utah Territories. Employees of the Union Pacific Railroad say they never before saw so many antelope on the plains, while back in the foot hills and mountain ranges elk and deer are abundant. In riding, during the month of October, from Rock Creek to Laramie, antelope, wolves, mountain grouse, sage hens, wild geese, ducks, etc., were to be seen from the cars almost constantly. The favorite point for English hunters in this country is about seven hundred miles west of Omaha. Here they leave the railroad track and strike back forty miles to the Sweet Water regions. Having procured a guide and spent a few days at the hospitable ranch of Mr. Tim Foley, who is one of the largest and most successful cattle growers in the world, they push on to the Wind River country northward in quest of the larger game there is to be found in that region. A small party of these English gentlemen returned from the Wind River country a few days ago with twenty-one bear skins and the heads of numerous elk, mountain sheep, etc., which they were conveying to England as trophies of their American hunting excursion.

LOST RIVERS REFOUND.—We read in the current literature of the day that an interesting experiment has been made to determine whether the head waters of the Danube found their way through subterranean passages into the Aach. Some fluorescein was placed in the waters of the Danube, and in three days the splendid green color and golden reflections were quite distinct in the waters of the Aach. Ten kilos of fluorescein had colored at least 200,000,000 litres of water.

Very good! Now let us adopt the suggestion of our trans-Atlantic savans and apply a few kilos of fluorescein to our own mysterious, erratic and undetermined streams, of which we have so many all over America. Let us put a few kilos into the St. John's River in Florida, and see whether its vivid green boils out of the huge fresh water spring off Matanzas; let us empty a little of the fluorescein into the Gila and the lost rivers of Texas, which start from the mountains in full and sparkling volume and finally disappear in the sand. Let us discover what causes the intermittent tides in Lake Superior, and ascertain the supply sources of the reservoirs of the Great Lakes. Let us ascertain whether the great volume of the mighty Saguenay flows, and whether its subterranean discharge does not cause the mysterious currents which vex the shores of Antioch. Let us learn whereabouts in the river St. Lawrence the volume of Montmorency's waters reappears. Let us trace the origin of the subterranean flow of caverns; the outlets of mountain lakes which have no bottom; the secrets of the Florida sinks; the source of the boiling ocean spring in the Gulf of Mexico. Let us find out for certain if the waters of Backs and McKenzie's river and the Yellow-

does not act plunge into the earth ice-cold and apart from the geysers of the National Park boiling hot. Yes; and we can also find out "how far the Tombigbee River runs up!"

Here is a field for investigation as broad as the continent. There are hundreds of enterprising students now idle, who are longing to undertake the work. The Government will no doubt sanction it too. The only difficulty at present seems to be that we cannot obtain fluorescein enough.

A PHYSICIAN IN TEXAS.—A year or more ago a young physician, a Brooklyn gentleman who migrated to Mexico, Texas, wrote us a private letter about hunting, fishing, sheep-grazing, and the resources of Texas, which we thought of sufficient general interest to publish, and took the liberty to do so. Now, please note the result. We quote from a letter just at hand:

BRACKETTSTVILLE, TEXAS, Nov. 24, 1873.

FRIEND HANCOCK: The last letter I wrote you, to my regret, was published in your paper, which brought innumerable letters of inquiry from all parts of the States, all of which I took pleasure in answering. In course of time a correspondence generated between a Mr. Garrett, of Wilmington, Del., which has resulted in my entering into partnership with the Garrett Bros. and Maj. Stotsenberg, of Wilmington, Del., in a sheep ranch in —. They came on to Mexico, where I was practicing medicine, and there we bought three horses, wagon, etc., and started out to hunt a location for a ranch, and after weeks of travel all through the State, we settled here. On that trip we have hunted everything almost, and have had lots of adventures up to the present date. I think I am probably on my way to make money, and I owe it all to FOREST AND STREAM, for it was your paper that brought me before the eyes of the capitalists and brought them out here. If you or any of your friends are out in this direction, come and make us a call and we will try to make it pleasant for you all. We can take our rifles out and kill deer, turkey and all kinds of game on our own land, while the Pinto River rises on our land, and in it are plenty of trout, bass, perch, catfish, and almost all kinds of fresh water fish. I have killed so many turkeys that we are almost sick of them. Well, I will close at present. I was very successful in my practicing medicine in Mexico, and have many friends who want me to come back.

JOHN G.

In connection with the foregoing letter we ask permission to say a word for ourselves. We are as sensibly impressed as many of our patrons affirm themselves to be, with the growing value of FOREST AND STREAM as an advertising medium. There are many journals devoted to special objects, through which it would be supposed the public could be reached more directly, yet we find that when solid business transactions of any kind are looked for, men turn to our columns as naturally as the experienced miner does to the gold-bearing mountain ranges. And they seldom fail to find a placer, or at least pay dirt! Men pin their faith implicitly on the overtures and business chances which we advertise, and especially upon our editorial representations and endorsements. We can sell a wheat farm or a sheep ranch as easily as we can sell dog biscuits, guns and fish-hooks. No inquiry was ever started in our columns upon any subject whatever but that it immediately attracted attention in highest places. We have brought about a large number of valuable commercial transactions, for which we neither expected nor received any fee or reward. With regard to Texas, we know that there is a rapidly increasing interest and migration toward the State, and what information we can gather of practical value we shall print from time to time. One of the best informed writers in the State is the gentleman whose letter we publish in this issue. He has promised to show up the resources of the State and the advantages which the State offers to settlers. No doubt there is much money at present in stock grazing and sheep raising; but there are other pursuits just as lucrative, and the cotton and grain fields, the sugar plantations, the mines, the quarries and the timber lands of Texas offer an aggregate of inducements not found in any other section.

CANADIAN DISCRIMINATING GAME LAWS.

IN our issue of November 14th we printed a communication from the gentleman whose signature is appended to the letter below, in which he claimed what he now reiterates, that the game laws of New Brunswick were framed expressly to discriminate against Americans. He thinks this a great grievance, and utters his most feeling protest. Protest No. 1 (Nov. 14), elicited a reply or defense from Chief Game Commissioner Fellows, of the Province of New Brunswick, disclaiming any intention to "discriminate." The Commissioner admits the letter of the law to protect game and the general efforts made to that end, but denies that the laws were framed to exclude American sportsmen, and calls upon us to refute such an imputation.

Well knowing the value and weight of *ex parte* statements, we contented ourselves with a simple endorsement of the Provincial game laws and approval of the present most commendable efforts of Canada to prevent the total extirpation of the much diminished game. We held that Canada had a right to make discriminating laws against foreigners, just as the States of Iowa, Florida, Kansas, and some others had the right to discriminate against their brotherhood of neighboring States. Such laws might be impolitic, ill-advised, and obviously unjust, aggravating and alienating friends and working retroactive damage upon themselves; but none had the right to arraign them for an act which was eminently a prerogative and an affair of their own only. This position being too conservative for our correspondent, he has again sought the use of our

columns for the following reply to the New Brunswick Game Commissioner:

PORTLAND, December 2, 1873.

EDITOR FOREST AND STREAM:

One word in reply to the somewhat harsh communication from the Chief Game Commissioner of New Brunswick.

It is truly gratifying to hear from the Chief Warden himself that Americans were not intended to be discriminated against by this new law, for the impression had most certainly been given me and my friend by the people with whom we talked while in New Brunswick last October (and in a sense, I suppose, the Chief Warden was quoted, though, I am not glad to know, through error, that this \$20 tax was for the purpose of preventing or hindering Americans shooting there.

All true American sportsmen, I am sure, would be most happy to aid in enforcing the game laws of any country, and eager to bring to account any one slaughtering game by illegitimate means; but why should we be called upon to pay to support their game laws when they do not pay to support ours? What would New Brunswick people think if they were called upon to pay an annual tax of \$20 to every State in which they shot "to support the game laws?"

In this not all a subjective? And since the matter has been referred to, I will say that it does cause a blush of humiliation to think that after Americans have sent tens of thousands of dollars to help the poor of St. John, that they are not willing to show us the same courtesies that we extend to them.

The Chief Warden loses sight of the object when he lays so much stress on the slaughter of game out of season. If the laws are transgressed, he well knows how to punish; but does not the fact still remain, that in making this discriminating tax of \$20, he does to us as we do not to him. As I and my friend have shot in New Brunswick in the past, and as we expect to shoot there again, we are perhaps as zealous advocates of the game laws as the Warden himself; and it might not be out of place to call his attention to the slaughter of salpae near Sackville, early in September, when, as I hear from the people there, "the birds are half grown, and so blue with fat feathers that they are unfit for the table," simply, as I am told, "to kill them before they are ripe."—Yankees get fishing."

In regard to salmon fishing, I will not enter into a controversy with the Chief Warden. I did not say there was a discriminating law, but if he will make some inquiries in regard to the way some Boston gentlemen, leasing salmon rivers, have been treated, I think he will find that Americans have been discriminated against, although he is unparliamentary enough to characterize it as "false."

Yours, very truly,

SAM'L HANSON.

Our readers have now heard in full the charge preferred by our indignant correspondent, and we leave it to their common sense to answer whether a great province like that of New Brunswick, having the most intimate commercial relations with its neighbor, the United States, would, from jealousy or any imaginary grievance, or spirit of retaliation, stoop to so petty a reprisal as to tax American sportsmen \$20 per head for the express purpose of keeping them out of the country? The idea is so absurd on the face of it that we at first refused to entertain it; but, since we are pressed for an opinion, we shall decide against the plaintiff in toto. Our correspondent has lived so long upon the border and enjoyed such unlimited reciprocity, that he is evidently taken aback by the slightest restrictions upon his will or actions. He should not forget that New Brunswick is just as much a foreign country now as it was during our late civil war, when firearms were interdicted and seditious acts when once fairly over the border. What right has he to question the license to shoot any more than England has the tax on her products imported to France?

The Chief Warden, Mr. Fellows, has explained that the law was framed to protect pot hunters from destroying the game, the greater part of which was destroyed by citizens of the United States and found its market in that country. The expenses of enforcing the laws are met by fines, penalties, seizures and licenses at home, and by a license fee exacted from non-residents. The Game Commissioner ingeniously asks: "Is it unreasonable to ask foreigners as well as ourselves to contribute toward preserving the game of the country?" Our correspondent thinks it is, and asks "why we should be called upon to pay to support their game laws, when they do not pay to support ours?" If any reader thinks this question is fairly put, let him answer and defend it.

From the fact that friend Hanson has specified New Brunswick, he does not seem aware that similar laws obtain in the other Provinces, and that in the adjoining Province of Nova Scotia, for instance, there is a like tax of \$20 on all non-resident sportsmen; not merely non-resident Americans, but non-resident New Brunswickers, Englishmen and all. And the same is reciprocally true of the New Brunswick game law. No better evidence can be adduced of the sincerity and unprejudiced impartiality of the Nova Scotia law than the fact that British officers of the army and navy have repeatedly been prosecuted from court to court to exact the fine which they disclaimed they had an obligation to pay; for it seems they too are required to pay a license of \$5, although they are temporary residents.

The arguments in favor of the system, as set forth by its promoters, are: That the game is appurtenant to the soil, and belongs to the people of the Province, just as much as in England it belongs to the lord of the manor. Their forests are their preserves, and they have the right to regulate the way in which they shall be used. The inhabitants have to contribute to the general revenue of the Province, in order to carry on the different departments of the public service. Out of these revenues a certain sum has been expended to defray the expenses of preserving the game. Is it fair, then, for outsiders, who pay nothing, to step in and enjoy the benefits resulting from this protection, equally with those who have to bear the burden of the expense and the responsibility and trouble of enforcing the laws?

Probably when the State of Maine, of which our correspondent is a citizen, finds it expedient to enact similar laws and regulations, it will do so. If such laws would accomplish the consummation for which we have so long devoutly wished and earnestly worked, we would be willing to submit to special

discriminating laws as applied to every State in the Union, until the result was reached.

As respects the fishery licenses and regulations to which our correspondent refers, we must defer that part of the subject for want of space here. It is a question which involves different conditions.

(FROM OUR SPECIAL TEXAS CORRESPONDENT.)

TEXAS NORTHERS—HONESTY—ORANGES AND LEMONS IN TEXAS.

EDITOR FOREST AND STREAM:

We are having such a furious spell of weather that I can do no mischief outdoors, and am therefore driven to seek some occupation indoors. For several days we have been enveloped one of those singular north winds of Texas—shot undoubtedly from caverns in icebergs somewhere—accompanied by a pelling rain. All of winds that blow this is assuredly the most villainous—a Texas "wet norther." To walk or ride against it is excruciating torture. The drops of rain hit you like bullets, squaring in the face, and I doubt not you could hear them sing like rifle balls on a skirmish line, as they flit past your ears, if it were not for the continual whizzing and howling of the wind. When such come there is nothing to do but to "snook" round one's fireside and engage in whatever mischief may come to hand. And yet this is the very weather when one who loves his gun and dog can find the most sport if he can stand the pelling and the whizzing. The ducks and geese leave the bays and bayous and swarm on the prairies, reinforcing the curlews, grouse, sandhill cranes and jacksnipes. And blackbirds or grackle come by the literal million, though none but the "small boy" ever shoots them. I take up my shooting irons and look upon them with a melancholy look. Then I look out of the window and see the scudding mists, the cedars tossing their boughs as if they were frantic, and hear the howling of the tempest. I then lay my irons aside with a sigh. This sort of weather is calculated to make folks crazy unless they have some resources for mischief within themselves. Well, my pipe never fails to give me solace under affliction, and I have lots of books and paper and lead pencils. With these accompaniments I can from my heart say: "Howl, howl, ye breezes!"

But let me suppose that this norther is really Arctic, though it does come from caverns in icebergs, or from the regions of perpetual snow. This one has been piping about a hundred hours, yet the thermometer on my gallery, exposed to its full fury, points ten degrees above the freezing point. Yet this is cold enough when driven into a fellow with a forty-horse power. And how brilliantly the skies will sparkle when the norther is gone! The air will literally dance with delight. Nothing can exceed the beauty of these Texas days which succeed a norther. It makes a fellow feel ten years younger; like jumping over fences, riding wild mustangs, turning somersaults. All nature, animate and inanimate, laughs with electricity. Indeed, these Texas northers are most admirable institutions, and nothing could induce me to live in any country where they do not blow. And they blow nowhere on earth save in Texas.

But let me suppose they are usually accompanied by rain. Usually they are not. Usually the skies are as clear as a silver bell; but then, Mr. Editor, they are cold, I tell you, for a fact. Then they'll make a fellow jump Jim Crow, who gets caught out in one. They'll pinch him blue; they'll buffet him; they'll wallow him, and if he don't go to shelter they'll turn the marrow of his bones to icicles. They are snorters; they are terrific. There is nothing like them in this world, to him who rides on a vast uninhabited prairie, and there never will be anything like them. And yet I would not give one of them for all the perfumed zephyrs of Araby the Blest.

But I had to engage in some mischief indoors during this embargo on locomotion outside, and I fell to reading Horace, as I often do when the weather is inclement or the nights long. I hit upon that celebrated ode, "*Intiger vite ceterisque purus*," the 32d of the First Book, and it amused me so much that I make a translation of it, literally where I could and paraphrastically where I couldn't help myself. Here goes:

The man who leads an honest life,
Free from crime and not some squire,
Don't need the ponderous Moorish spear,
And nought beneath the skies need fear;
Even though his wandering footsteps turn
To where the Syrian deserts burn:
Where Albanian mountains lift the snows,
Or famed Hydroses current flows,
For late, as carelessly I strayed,
Unarmed, beyond my rural shade—
My Lalage's sweet name repeating
To his amorous breezes round me meeting—
A wolf—and such he'er Afric bore
Or howled upon the Apulian shore—
Fled from me in the Salvia wood,
And sought the deepest solitude.

Place me in those dread regions where
No tree withstands the icy air—
Where endless night and vapors dwell,
And storns the scudding clouds impel;
Place me in realms where the blazing sun
Witnesses all that he glares upon,
In silent deserts waste and wide,
To human residence denied.
And still, with thought serene and free,
The flying hours beguiling,
I'll love and sing my Lalage
Sweetly speaking, sweetly smiling!

tion; hosts of old bachelors, not to say married men, who would never have dreamed of them! Modern morality shudders to contemplate what developments are yet in store if such things are allowed to go on. We know that our voice is feeble and our influence slight, but our duty is plain, and we are scrupulously and unswerving in the performance of it. We have little expectation that the virtuous secretary of the Society for Suppression will venture to act officially in the matter, and have therefore decided to place the offense of the Fashion Plate Publishers squarely before the public, and herewith hold it up to the open light that they may the better determine its true character, (which see).

We are well aware that a nice sense of perception has enabled the aforesaid Secretary to affirm that circumstances may be so altered cases that the bad may sometimes appear the better thing, and that indecencies become indecencies only according to the purposes they are intended to serve, or the light in which they are regarded. Profoundly impressed by this philosophy, we have felt that the public good might be best served in the instance before us by turning the facts to the best account and adapting the odious suggestions to the requirements of sportsmen. In the accompanying diagram we have a com-

bination of the best devices of Holabird and Cording. Made of waterproof fustian, we secure a garment for hunting and fishing almost as impervious to water as a Boyton swimming suit. Being all of one piece, it can be slipped on over one's ordinary clothing, (except the coat,) with great facility. Three yards of material should make a suit. Buttons need not come below the waist. Boots and shoes two sizes large can be pulled on over the feet; approved wading shoes for anglers are made for the very purpose, with lines of holes punched in their sides near the soles. For wading streams, or for work in marsh and swamp, nothing more satisfactory can be imagined. For horse-back riding through wet underbrush and in rain storms, the combination suit would prove most comfortable and serviceable. For hunting, their great advantage would consist in dispensing with heavy rubber or leather boots, and keeping the feet dry. Shoes are just as practicable for hunting as for wading. We have long used the English wading pants and have always kept dry although in water to our waist for hours. Manufacturers of waterproof hunting suits are welcome to our ideas if they choose to adopt them.

NEW HAMPSHIRE—Nashua, Dec. 2.—The shooting season is about over with us. Woodcock have been fairly plenty, Phillips, of the "club," having shot 120 in October, and added more to his score, last Nov. 1. Partridge have been unusually scarce; snooks have about finished them in this section. Ducks gave us the "go-by" in their southern flight, but few have been seen. Some fine bags of gray squirrels have been taken. On the whole, the past fall shooting has been rather dry. The fishermen are laying in their annual supply of shiners for winter fishing, which about here is excellent. A few coveys of Bob White's have been bobbing around here this fall. Happy to say that but few have been shot.

DOVER, Dec. 4.—Game has not been very plenty around here this fall, especially beach and marsh birds. Now and then a good bag is brought home by some lucky sportsman. Quite a number of foxes have been killed this fall on the outskirts of our city. Two were shot a few mornings since by Mr. Wesley Beck and one by Capt. J. S. Dame.

MASSACHUSETTS—Salem, Dec. 9.—Game with us at present is somewhere else where one is after it. There are some quail in Foxford and vicinity; also some in Wenham, with a fair lot of rabbits, and some partridges in both localities. I have seen two partridges, one quail and a rabbit brought to bag the past week. Salem harbor quite bare of birds. A few auklets about since recent gales.

WORCESTER, Dec. 9.—There is some big game still left in old Massachusetts. A large wild cat shot in the East Princeton woods, Nov. 5, by Mr. George H. Cook, has been set up and placed on exhibition. It measures 36 inches from tip to tip and stands 14 inches high, while the girth is 20½ inches. Last Monday Mr. Charles E. Johnson, of Northborough, captured one of the finest fur otters ever seen in this vicinity. This is the third he has captured within a few days. The weight of his last one was twenty-three pounds. It measured six ft. in length. The same day Mr. Johnson captured two minks, two muskrats and a partridge.

RHODE ISLAND—Newport, Dec. 2.—Coots, old squaws and some black ducks have been shot in our bay the past week. They are reported by the gunners to be very abundant in the neighborhood of Providence and Hope Island.

CONNECTICUT—Farmington, Dec. 5.—Grouse and quail have been rather scarce here this season, but woodcock have been quite plenty and the shooting good. Three of us bagged in one day's shooting sixty-eight woodcock, five grouse, eleven quail, which, in this locality, comes once in a lifetime.

NEW LONDON, Dec. 10.—Black ducks are quite plenty around Black Pond, Niantic, and numbers have been shot. Saw a flock of wild geese flying this morning during the snow storm, heading about southwest.

NEW YORK—Shelter Island, L. I., Dec. 5.—Yesterday, the 4th, being a remarkably calm day, with smooth water for battery shooting, a score of call boats were out for food. Probably there will not be such another chance this season, unless the winter months are as mild as they were last season. I was not very fortunate in anchoring my boat, but I got 13 fowl, all killed singly on the wing, though hit chiefly on other places than on the wing. My friend Al. Tuthill gathered them up in another while the writer did the shooting. The weather being so very favorable for the sport, some half dozen other batteries and a score of call boats were out for food. Payne and Bruce got 18; Flagg and Congdon, 14; Captain Cartwright, 10; a white yacht, 5; and others not reported. There are but few quail on this island, but the two Conklins got 21 yesterday. Rabbits very plenty, but of low price.

NEW JERSEY—Ashley House, Barnegat Inlet, Dec. 7.—Shooting has never been as poor for years at this time of year. Such a scarcity of wild fowl of all descriptions never was known. I have not heard of a dozen geese being killed up to date. Very few flocks of brant have been seen. We are all looking for cold weather hoping an improvement.

KENTUCKY—Hickman, Dec. 4.—Reelfoot Lake being only 12 miles distant, wild fowl shooting is splendid, the lake being the feeding-place for ducks and geese in their southward flight. Deer and turkeys are abundant. Squirrels and quails are found in great numbers, but little attention is paid them, however, as the splendid shooting of larger game attracts both the attention and ammunition of the sportsmen. There were shipped to-day to Columbia, Miss., 73 black ducks, being the lake made by Col. Johnston in one day's shooting on the lake. The man who brought them to town said the Colonel killed 60 that he did not get—pretty good day for ducks. A party from Madison, Ind., on their way back from Little River, Mo., about 40 miles south, brought 55 ducks, 21 deer and 5 turkeys with them, the result of four days' hunting. Among the notables now at the lake are E. S. Wheat, U. S. Marshall, with Messrs. Friel, Perkins and others on the Nashville, comprising one party; and W. A. Knight, Trustee Davidson County, and Mr. W. L. McKay, also of Nashville. On my way here from Columbia I met Mr. H. S. Gittings, of Dickson, Tenn., with his black setters Jet and Belle, on his way to the fields near Gillem. He told me he killed over 200 birds in three days' shooting over them. A party from Illinois River en route for White River, brant hunting, gave us a call, and showed a very nice lot of brant on the river above. They had a boat fixed up for the occasion and were taking the world easy. One of the party killed the largest brant last year that was ever killed on the river. Undoubtedly this is the sportsman's paradise. He can find anything he wishes to shoot, and the mild winter makes camping out very pleasant, and for those who do not want to camp there are good accommodations to be had on the lake.

TENNESSEE—Piney Fork, Dec. 7.—The principal game in northwestern Tennessee is deer and turkeys, but the deer are fast diminishing in numbers, in consequence of the detestable practice of hunting with snare traps. Southern hunters are addicted to, and not a single month in the whole year is exempted.

MISSOURI—St. Louis, Dec. 6.—In the history of States or individuals there occurs some notable event as a kind of climax. Our Nimrods concluded to put the cap sheaf on their fall shooting, by organizing a grand match hunt for Dec. 5. On the evening of the 4th, quite a respectable company convened at the gun store of Mr. A. B. Dempsey, and soon arranged the preliminaries. There was but a single prize offered to the one making the highest score, for the very exclusive privilege of "bragging." Other prizes were talked of, but the party seemed to be entirely free from any bare desire for filthy lucre, and were only intent upon that exhilarating sport that makes us start

Dr. Majors and Mr. F. Houston were selected captains of the respective squads, and chose their men as follows: Capt. Majors—T. Newton, L. Krenon, J. Parmelee, S. O. Gold, Wm. Brandon, W. R. Thomas, C. H. Gauss. Capt. Houston—J. G. Sloan, W. A. Sloan, W. Baker, Dr. Evans, A. B. Dempsey, Ed. Smith, Arthur Hall, and J. B. D. Early Thursday morning they started to the four winds, and late Thursday evening the returns began to come in, and by 11 p. m., without any build-up, the votes were duly counted. Capt. Houston's party summing up 144, Capt. Majors' 181. Capt. Houston had the largest score, 86 birds. Two turkeys were brought in, but nothing was said about who pulled them off the roost. Taking it all in all the party seemed to enjoy themselves, and many a pleasant incident could be related in connection with the day's sport.

ILLINOIS—Charleston, Coles County, Dec. 9.—The sportsmen have had considerable fun this day hunting two deer with four bounder, four miles west of here, near the Indianapolis and St. Louis Railroad, on Riles Creek. The second day, the 4th inst., there were 25 men and eight hounds; John Rice had his four hounds, Scott Dowling two, William A. Jeffries two—all excellent fox hounds. They jumped up only one deer the second day, a fine doe. She took a circle of two miles. Late in the evening William A. Jeffries gave her a load of buckshot in the side and stopped her wild career. Weight, about 100 pounds; age, about one year; she was very fat. J. B. D.

WISCONSIN—Baraboo, Dec. 5.—Baraboo is a small place, of about 3,000 inhabitants, but there is a remarkably sport for the other side team. The former have a shoot once or twice every week. Deer hunting is the main sport at present. Snow fell the other night to the depth of two inches. Some of our sportsmen started the next morning, and, before night, eight fine deer were killed. One buck weighed 190 pounds.

IOWA—Pomeroy, Dec. 12.—Large fowl are all gone, but ducks still linger in countless myriads around the larger bodies of water like Twin Lakes and Big Deer Lake, the gradual approach of winter having driven them from the smaller ponds by freezing them up solid and hard. But they come from the freezing lakes in clouds to the cornfields for their morning and evening feed. They are very wild, so that a large amount of strategy is required to make a good bag. I was at Twin Lakes yesterday and found it partially frozen and all the open water literally black with ducks and more coming in large flocks from the north and lighting continually without any preliminaries.

With a good sick boat and decoys there would be no end to the sport there for the next week or two. Two of the boys from Dubuque were here a short time since. They arrived in the morning, went north of town and got three ducks and then went home in the evening, despatched, when at the same time there were millions of ducks at the lakes and a market hunter there killing fifty per day. Deer are quite plenty back seven or eight miles, and every day one or two are brought in.

KANSAS—Delphos, Nov. 30.—Quail and grouse very plenty, even nearly as plentiful as before our hard winter of '74.

COMPLIMENTARY.—A benefit will be given to Mr. Bubser at the Arcade Theatre, Jersey City, on the 19th inst. Mr. Bubser is a well and favorably-known sportsman of that city, who was injured not long since by the premature discharge of a cannon at a salute given him by his sporting friends. Captain Bopards has kindly tendered his services for the occasion, and the programme will be an interesting one.

THE CHAMPION QUAIL EATER.—Here is a chance for a betting undertaker. If he lost the \$500 he would at least bury the man who had buried the 90 birds:

On the 28th of October, says the Nashville (Tenn.) American, Alex. Ament made a wager of \$50 with Charles Deschaw that he could not eat 30 quails in 30 consecutive days. Deschaw was to commence Nov. 1, and every succeeding morning, between eight and nine o'clock, devour his quail. He experienced no sickness until Nov. 25, when he threw up his bird. On the 27th he again became sick, but retained his quail. He was all right after that date, and instead of eating one, Nov. 30, he finished two, making 31 birds instead of 30 he devoured, and so he won the wager. He will commence Jan. 1 and eat 30 more birds in as many days, and will bet \$500 that he can eat 90 in 90 successive days.

THE LAW OF TRESPASS.—We are indebted to a Philadelphia correspondent for the following very clear elucidation of the law of trespass, which he sends in response to a note in last week's issue. The writer is a lawyer, who therefore speaks with authority, and gives legal advice, without fee or hope of reward, to thousands of interested readers. The instances mentioned are certainly very curious. In the courts we know little of the troubles and vexations of the trespass laws which so vex the landowner and intruder in the closely settled counties of England and other countries. Our correspondent writes under date of Dec. 6:

In your issue of the 5th inst. I noticed a question propounded by a correspondent, as to "What is Trespass?" Birds rove over the dividing line of the land, and a dead fell on the adjoining premises. Apparently the bird at the time it was shot had crossed the line. Trespass was undoubtedly committed by sending the dog on the neighbor's property to retrieve the bird. If a wild bird flies from my land to the land of another, and I shoot that bird after it has crossed my line, I have no right of property in the bird so shot. It belonged to the neighbor, and he has the right to sue me for the ownership of beasts (*feræ naturæ*), and the maxim of the law being, "*Cujus est solum ejus est usque ad celum*" (He who possesses land has an interest in, and exclusive right to, that which is upon or above it; to an indefinite height), gives the person over whose land the bird was flying an ownership in the bird for so long a time as it remained in the air over his land, and so, under the common law, the correspondent really did not own the bird at all. (No offence is intended to him.) The question of "What is Trespass?" is very interesting, and some curious cases are to be met with in connection with this subject. For instance, it was decided in England many years ago that a person shooting a rifle ball high in the air committed trespass against all the property owners over whose lands the rifle ball had passed, and it was also a reported case of a person sailing over the land of another in a balloon, who was in consequence of his act adjudged a "trespasser."

It would seem then, if the correspondent so pointed his gun that the shot not only passed through the air over the farmer's property, but actually fell upon his land, he was a trespasser before he thought of calling his dog to retrieve.

This will explain how a person may commit trespass without being liable for damages.

THAT OFFICE BOY ORON MORSE.—Just home from Florida; he has been to Jacksonville on the steamer *Western Texas*, and, heartily enjoying the trip, thus describes it: He sailed from this city on the 23th of November, which was the third trip of the first and only ocean steamship that ever crossed the bar at St. John's River. She was built by John Roach & Sons and is measured at 1,121 12-100 tons thirty-ton. She is well equipped and has accommodations for thirty-two first-class passengers and twenty steerage. She was in charge of Captain I. Rince, who is one of the best sailors on the ocean and knows his business to perfection. Of the mates, purser, steward and crew he says enough cannot be said as to their kindness, discipline, etc.; but the captain was the noble king of the ship, and a generous king at that. The boy says he had no sea sickness on the way out, and passed Cape Hatteras at 4 a. m. Sunday, but off Crystal Palace Shoals they encountered a heavy gale, but it did not trouble the steamer any, although the water swept the main deck. They passed several steamships during the day, among which was the *City of Dallas*, the sister ship of the line. He passed Charleston Light about 11 a. m. Monday, and 7 p. m. was in Port Royal, where all there was to be seen were grocery stores and negroes, and passed Cape Fear River at daybreak, where three or four longshoremen would do the work of twenty of them, and not make half the fuss about it either. But it was very amusing to see them labor unloading, etc. At 9 p. m. they left, and at 9 a. m. Tuesday they were at Brunswick, Georgia, where they remained about one hour, and from what he could see of it thought it a very pretty place and nicely laid out. At 3:30 p. m., same day, they anchored off the bar at St. John's River, and had to wait 28 hours before they could go over, as the tide was down and wind from the north, which blew the water out of the river. The steamer drew 8½ feet of water and went over the bar as soon as 9 feet were shown by the soundings, which was a little more than low tide, on account of the west wind. The boy has brought all the soundings, which shows that the report that any steamer could go over the bar has been proved to be an utter impossibility. Mr. Ament's yacht *Ambassadors* lay off outside the bar drawing 10 feet of water, and could not get into port until after the *Western Texas* sailed on her

THE CAPITAL OF ARIZONA.—Prescott, the capital of Arizona, one latest El Dorado, is situated in a small valley or basin, surrounded on all sides by mountains, and has a picturesque location. At the first glance it strikes the tourists as being an extremely home-like place, recalling many of the features of a New England or Western New York village. The population is now about 4,000 and is increasing with wonderful rapidity, as the fertile valleys adjacent and the rich mining districts round about are filling up. Most of the houses are of brick and wood, two or three stories in height, solidly constructed, and exhibiting good architectural taste. There are few Mexicans and Indians, save in consequence of the street scenes are novel. The city is 175 miles east of the Colorado river, 250 miles northeast of Yuma, and about the same distance northwest of Tucson, the second city in the Territory. The center of the city is a large plaza, now square, which is to be occupied by substantial public buildings. All the churches in Arizona are in Prescott, and besides the Catholics there are three Protestant ministers there. The largest of the seventeen public school houses in the Territory, a two-story brick, costing \$20,000, is in the city limits. Yavapai county, of which Prescott is the county seat, is not only the largest in area but the best populated of the five into which Arizona is divided. Within its borders are some of the finest settlements as well as the most notable evidences of prehistoric life.

DUCKS CATCHED WITH SALT.—We have more than once heard of the wonderful properties of the waters of Deep Spring Valley Lake, but, until the present, not with sufficiency of detail to give the story full credence. Lieutenant Wetherpoon, Company D, Twelfth U. S. Infantry, in command of the relief party for Captain Joe's Indians, passed several days last week in the valley, and he and his men the literal truth of the remarkable phenomena. These are, that at certain times the ducks, which visit the lake in great numbers, become so loaded down with crystallization of borax, salt, or some similar substance, that they are unable to fly, and while in this condition become an easy prey to the Indians, who wade into the water and pick them up in their hands. In fact this substance often collects upon the birds' bills in such weight as to actually drag their heads under water and drown them. As asserted by Mr. Beasley and family, who have lived near the lake for years, the ducks are often loaded with several pounds weight of this substance; not less than ten pounds in some instances. During the first stages the crystals are quite evenly disposed over all the birds' feathers above water, sticking them together as firmly as if glued. Then it accumulates in bunches or strings, forming drags or rafts with which the bird can swim but slowly, if at all, and if formed from the bill or head soon causes its death by drowning. —*Inyo (Cal.) Independent.*

NEW AND STALE BREAD.—The nature of the difference between new and stale bread is far from being known. It is only lately that the celebrated French chemist, Boussingault, instituted an inquiry into it, from which it results, that the difference is not the consequence of desiccation, but solely of the cooling of the bread. If we take fresh bread into the cellar or into any place where it cannot dry the inner part of the loaf, it is true, found to be crumbly, but the crumb has become soft and is no longer brittle. If stale bread is taken back into the oven again it assumes all the qualities of fresh baked bread, although in the hot oven it must undoubtedly have lost part of its moisture. M. Boussingault has made a fresh loaf of bread the subject of minute investigation, and the results are anything but interesting. New bread, in its smallest parts, is so soft, clammy, flexible and glutinous (in consequence of the starch during the process of fermenting and baking being changed into mucilaginous dextrine), that by mastication it is with greater difficulty separated and reduced to small pieces, and in its smallest parts is less under the influence of the saliva and digestive juices. It consequently forms itself into hard balls by careless and hasty mastication and deglutition, becomes coated over by saliva and slime, and in this state enters the stomach. The gastric juice being unable to penetrate such hard masses, and being scarcely able even to act upon the surface of them, they frequently remain in the stomach unchanged, and, like foreign bodies, irritate and incommode it, inducing every species of suffering—oppression of the stomach, pain in the chest, disturbed circulation of the blood, congestions and pains in the head, irritation of the brain and inflammation, apoplectic attacks, cramp and delirium. —*The Miller.*

SEVERE ON THE BOSTON WAITERS' GUILD.—There is no more striking likeness of things than a table set by a good Boston public dining room. The cream pitcher is at one end of the festive board, the sugar bowl at the other; the napkin lies half in, half out of the meat dish, and soaks up the gravy; the butter is a yard away from the would-be diner, and the bread plate occupies the place that should be held by the dinner plate. As for the carter, knife and fork, potatoes and rail, they are dropped in anywhere, "promiscuously like," and it is not easy to refrain from

rising and deliberately setting the table over again. Even if all the girls be duchesses in adversity and do have to submit to a great deal of impertinence from rude women, there is no reason why, having undertaken to be waiters, they should not do their work as well as men. They can best show that they are ladies by surpassing those who merely claim to be good servants. —*Boston Transcript.*

A WELL-PRESERVED OLD GENTLEMAN.—The English papers republish the story of how Bob, the dresser of McCullough, the American actor, once asked his master to give him a holiday. "Where are you going?" inquired McCullough as a preliminary. "Going out with my girl, sir." "H'm!" quoted genial John, "going out with your girl, eh? I thought so. Where are you going with your girl?" "Going to see her grandfather, sir," said Bob, readily enough. "She goes to see her grandfather every Sunday." "Where does the old fellow live?" inquired McCullough, absently. "He doesn't live anywhere, sir," rejoined Bob. "He's a skeleton in Wood's Museum at Bellevue Hospital."

THE ROUTE OF A TELEGRAM.—A cable despatch recently sent from Hartford, Conn., to Australia, consisted of thirty-three words, and cost \$64.98. "The course of the message was as follows: From Hartford to New York; to Heart's Content, N. F.; to Valencia, to London; through Germany, Russia, Siberia, to Vladivostok, a point on the coast of Manchuria; thence through the Japan Sea to Nagasaki, on one of the Japan Islands; through the Yellow Sea to Shanghai, China; thence down the coast to China, through the China Sea to Saigon, Siam; to Singapore, Malay; thence to Batavia, on the coast of Java; thence to St. Darwin, on the northern coast of Australia, and to Sydney."

—The man whose lame back prevents him from splitting a stick of wood or building a fire is the one who leads an attack on a pile of ten cords of wood to help uncover and kill a frightened rabbit. —*Detroit Free Press.*

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussall with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Giorini's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

FOX'S PATENT BREECH-LOADING SHOT-GUN

Wonderfully Simple, Wonderfully Strong.
First Prize Over All Others at the Great St. Louis Fair.

There never was a gun easier to handle, easier to clean, less liable to get loose or out of order, or one so good for the money. Prices range from \$30 to \$50.

WARRANTED IN EVERY RESPECT.

Send stamp for circular to

The American Arms Co.,

1012 11 BOSTON, MASS.

CHARLES GREEN,

Maker of the breech-loading shot-guns. Muzzle loaders altered to breech-loaders. Repairing and boring guns to shoot close and strong done in the best manner. I also keep a good stock of ENGLISH BREECH-LOADERS. Prices from \$30 up. Send for price list. No. 3 West Main street, Rochester, N. Y. 1017 11

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can not get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1875. Send for Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,
NEW HAVEN, CONN.

221. "OLD RELIABLE" 221. STILL TRIUMPHANT.

(TRADE MARK.)

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first prize in twelve of them, and good prizes in the other four. Among them the

Inter-state Military Match.

The New York State team, using the Sharps Military Rifle, won with a score of 974. Best score by any other rifle, 960.

The International Military Match.

New York State Team, with Sharps Military rifle, 1,044. Best by any other rifle, 933.

The Inter-state Long-Range Match.

Average per man with Sharps Rifles, 213. Other rifles used averaged respectively 193 and 197. The WINDMILL CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a possible 150 at 1,000 yards. THE LEGION CUP, won at Spring Meeting with a score of 203. Best other rifle, 197. For the Grand Aggregate Prize at Fall Meeting, three competitors each, with Sharps Rifles—Mr. Frank Hyde, Col. W. H. Clark and Capt. W. H. Jackson—led on a score of 3-0 points. THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. S. Barton, with a Sharps Military Rifle. All prizes in this match were won with Sharps Rifles. AMERICAN TEAM WALK-OVER (First Day)—J. S. Sumner made, with a Sharps Long-Range Rifle, the extraordinary score of 321 points out of a possible 325 at 800, 500 and 1,000 yards.

221. SHARPS RIFLE CO., 221.

BRIDGEPORT, CONN., UNITED STATES.

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London who, it will be remembered, received the highest award at both Vienna and Philadelphia, have secured the most perfect machinery for gun making ever set up in any factory in England. The result is, that they can now turn out guns perfectly uniform in excellence, and in such increased quality as to greatly reduce the price. Their specialties this year are their BEAUTIFUL TREBLE WEDGE GUNS, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has an Damascus or Laminated Steel Barrel, Rebounding Bar Locks, Patented Riv. Lever Forearm, and Treble Bolt. It is now finding to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience, or excellence in shooting, at the price of ordinary guns.

In addition to the Treble Wedge Guns, we have on hand about fifty of Webley's Breech-Loaders, Top and Side Lever, Single and Double Bolt, of various grades, which arrived last year, after the season was over. These guns we are rapidly closing out at greatly reduced prices. It is fair to say that as regards soundness, durability, and perfection in shooting, these guns are in no way inferior to the Treble Wedge Guns. Many of them are from 8 1/2 to 11 lbs. weight, and are splendid guns for duck shooting or for killing large game at long range.

The fifty guns mentioned above are all that now remain of a much larger number referred to by us in the FOREST AND STREAM in October, and as the season is now well advanced we will allow an additional discount upon the few that are left, provided they are ordered in December.

WEBLEY'S GUNS are remarkably Strong, Close Shooters, and do not need any additional coating.

**W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.**

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and
Mr. South for \$500 a side, South killing 39 birds out of 100, using one barrel only.
The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and
most durable ever invented, and the most successful gun of the period. Patented in the United
States, Oct. 5, 1875; No. 165,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England.

guns, making straight-bore shot as well as choke-bore are opposed to. Cheap, convenient,
safe and sure. For sale by gundealers generally at \$1.25 per hundred for 10-gauge, and \$1.10
for 12-gauge; 10 and 12-gauge now ready; other sizes to follow. Packed 50 in a box.

Sent by Mail, Postpaid, for 75c. per Box.

A. B. KAY & CO., Newark, N. J.

**Buck and Heavy Drop Shot Cartridges for Long-Range,
Deer, Duck and Goose Shooting.**

**IRA A. FAIRBANKS'S
FEATHER FILLED GLASS BALL.**

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Fairbank Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we
would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with
250 in each barrel, and by having a rough surface strengthens the ball for shipping,
and prevents the glancing of shot, while the smooth ball has to be made so
thin to break successfully when hit that sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now,

**I Will Warrant my Balls Against Breakage by
Transportation,**

and will pack 10 extra. I have had 5,000 shipped out West since my return from
England, and used them myself, and sometimes would not find a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where clubs and men you can really use which is the hardest shooting. It
matches reported in paper, saying Bogardus rules and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and, further, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upheld the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of glass balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4. "Field, Cover and Trap Shooting," \$2.

No. 111 Fulton St., N. Y.

ARIZONA IN VERSE.

THE following beautiful stanzas are from a rough old soldier, who is now serving his country in Arizona. We assure our readers that in his attempt to delineate the charms of his abiding place, he *does not go beyond his station*, either as soldier or rhyme singer. We will not attempt to place too high a standard upon his effusion, as he seems to have a modest opinion of it himself. It is rather long, and would have been longer had we not mercifully cut it short, perceiving that he was going on from bad to *verser* (as a German might pronounce it). His description of the country is very truthful, and will be valued by all our readers who propose to migrate to his section.—Ed. F. & S.

To Ma's I bid a glad farewell,
And turn my back upon Bellona,
To photograph in doggerel
The features of sweet Arizona—

The stinging grass, the thorny plants,
And all its prickly, trochiloid glories;
The thieving, starved inhabitants,
Who look so picturesque in stories;

The dusty, hot, long dreary way,
Where 'neath a blazing sun you totter,
To reach a camp at close of day
And find it destitute of water;

The dying mule, the dried up spring,
Which novel writers seldom notice;
The song of blood the mosquitoes sing,
And midnight howling of coyotes.

Taratulas and centipedes,
Horned toads and mesquit daggers,
With thorny bushes and sharp weeds
To bight the traveler as he staggers.

Why paint things in a rosy light,
And never tell the fact, thus:
How one sits down to rest at night,
And often squats upon a cactus?

The night bird's music, sweet and clear,
Is ever pictured, not a little;
A search might prove, quite lying near,
The habitation of a beetle.

And oft at night the sentinel,
Who, dozing, dreams of distant battle,
Is roused in fright to hear the yell
Of Indians who have nipped his cattle.

As desert, mountain, rock and sand,
Comprise the topographic features,
There's little left at my command,
Except to paint the living creatures.

In point of energy and sense,
The wild Apaches are the head men;
And so, in fairness, I commence
To tell you something of the red men.

Each mountain chain contains a live
Of these marauding sons of thunder,
Who somehow manage and contrive
To live upon mesquit and piñon.

From lofty crags they watch the route
O'er which a train is slowly creeping,
And, with a wild, blood-curdling shout,
Across the desert come they sweeping.

But here their valor takes a turn;
With carbine raised from off your saddle,
The "noble red" will take to flight,
Nor blush to think he must skedaddle.

Too long my pen has dwelt upon
These foes to railroads, soap and labor;
A few short years and they are gone
Beyond the reach of gun or sabre.

Now, turn we to another race
Inhabiting this sunny region:
I calm and fearless stoop to trace
Their manners, habits and religion.

There is no fairer law than that
Which gives to Caesar what is Caesar's,
Yet this is not a land of fate
Because the people are called "Greasers."

The women dress upon a plan
Resembling French Zouaves or Turcos,
And thus God's last great gifts to man
Appear but little else than scarecrows.

With face concealed from human sight,
And legs exposed to all that passes,
Their color varies, in the light,
Between new leather and molasses.

Upon their heads, in triumph reign,
Great swarms of vermin, fat and saucy;
These rovers on the Spanish Main
Cruise heartless o'er the ocean gassy.

Their mode of travel on the road
Would frighten one who never met a
Dirty, screaming, stupid load
Of greasers in an old corral.

Great wooden wheels devoid of grease,
And oxen rushing with a vengeance,
With noise like forty thousand geese,
Or like a score of new steam engines;

They plow the earth with forked logs;
For fuel dig the earth with shovels;
Cut grass with hoes, chain up their hogs,
And keep their horses in their hovels.

When Gabriel blows his final trump,
And all the nations are paraded
For grand inspection in a lump,
This breed will prove one most degraded.

An earthquake which should sink the land
(Some great subterranean motion),
And leave this tract of barren sand
The pavement of a heaving ocean.

Some huge convulsive water shake,
Some terrible spasmodic movement,
Subsiding but to leave a lake,
Would be a most desired improvement.

Their language is a mongrel tramp,
From which the meaning seems to vanish
Like strength from lager beer or wine—
A parody upon the Spanish.

On what they live besides the air
You may perhaps be interested;
They have as queer a bill of fare
As human stomach e'er digested.

They eat frijoles and dried corn,
And on a hog's intestines riot;
Tortillas, sheepheads (hair and horn),
With chile for the favorite diet;

Pinocche, water-melon seed,
Bad eggs, strong onions and pinola;
But when hard up for other feed
They live on beans of mesquit solely.

The greaser little cares or feels,
So he bat apes the Spanish hero,
With monstrous spurs upon his heels
And on his head a wide sombrero.

He looks so grim and full of fight,
You might suppose his temper soured;
But danger turns him nearly white,
And proves his hero but a coward.

He grimly scouts at gringo jokes,
Though he has not a single tlaço;
With dignity he calmly smokes
His cigarette of bad tobacco.

They tell a thousand barfaced lies,
To all the saints in heaven appealing;
Confess their sins with fearful eyes,
Devoutly pray, but keep on stealing.

They go to church, believe in hell,
Where their own torments must be hot ones;
They play on addies, ring a bell,
And worship God with drums and shot-guns.

I've not, in picturing this class,
Been either brilliant or pathetic,
But told of facts, in simple rhyme,
By far more truthful than poetic.

If any think me too severe,
Or call my yarn a wicked libel,
I'll take, to prove myself sincere,
My davy on a Mormon Bible.

Camp Verde, Nov. 15, 1878.

For Forest and Stream and Rod and Gun. Sketches from a Miner's Camp.

"BOYS, do you notice how bright the stars are at this altitude?"

For some moments there was no reply from either of the other four weary miners, or rather prospectors, who were stretched before their camp fire, on one of the many plateaus that form the main divide of the Rocky Mountains. A hard day's work with pick and shovel in a prospect hole, had tired us so that even the usual camp fire just and badinage was foregone. At last Old George drawled out:

"Hank, how der yer account for it?"

"Don't know, George. Let's all smoke a little cigarette, and Petee, you give us the science of it."

"Well, the science of it is very plain. We are above the timber and on the snow line. Take Venus there for instance, that very bright star: if you were looking at her from the plains your vision would have to pierce ten thousand feet of air, but here you are looking at her from that altitude and through a rarified atmosphere that you can scarcely breathe in. Well, you all saw how it was to-day. There is Hank, the strongest of us, could not swing a pick for five minutes at a time; the air is so fine and rare that you loose breath, and of course it is easy for the eye to penetrate it. How unnaturally bright they seem. What would the dwellers below say if they could look at the beauty of the heavens as we are seeing them to-night? I doubt whether Ingersoll, with all his infidelity, could stand on these rocky heights, look at those glittering beautiful worlds and deny the existence of a God. There is some great power, some divine hand guiding them. Take for instance the moon: see she is just peeping up behind that peak, her orbit—Hello! what is the row now? Here come the pack mules as if they were crazy from eating loco or as if the devil was at their heels! What's up?"

Old George, after peering through the darkness, stepped toward the tent, with the remark: "Git yer rifles, it's varmint. Come away from the fire later the dark."

The three pack mules and little Jock the donkey, stood near the tent, showing every sign of terror. Harry remarked: "There is something wrong, for there is that box of crackers open and little Jock is too badly scared to steal them. We are on the old Ute reservation and I would not be surprised if some of them good boys were around. But what would an Indian want up here?"

Just then there was a sharp clatter of hoofs over the rocks, the mules dashed into the darkness, and a huge shambling mass of hair approached the cracker box and upset it. No body fired; it was not from fear, but sheer astonishment. In another instant Old George's rifle cracked, bruin gave a sharp growl of pain, stood up on his hind legs only to receive four more balls and fall over the pile of crackers, changing the color, giving them a new flavor and scattering them to the four winds in his death agony. George, sticking a new shell into his Sharps, walked up to the bear, growing out:

"Well, I'm darn'd if ever I seed such importance in all my long life in these yer rock piles, a bar coming within a hundred feet of a camp fire. Mule Ear Bill used ter tell about how he went ter bed one night and saw er shadder come atween his fire and his tent, and when he looked out a big grizzly was a settin' there warmin' hisself. He didn't shoot, out er respect to the bar's feelings, and if he hed had champagne he would hev asked him in ter take a drink; but he hed nothin' except a bottle of Mexican Frank's whiskey, and he didn't like ter offer that kind of stuff ter a bar, for it was rifle, and the bar might hev thought he was wounded in the neck, and then yer know he would hev been dangerous. I allers thought Mule Ear Bill was a liar when he told that story, but I believe him now. That pesky varmint war after that donkey colt, and that drew him onto the crackers, and a nice mess he has made of them; but, boys, he hev got a mate around here somebair, and to-morrow we will hev a bar hunt. There em mules will take care of themselves and, if that colt gets chewed up its no loss, he steals everything about the camp, sugar, flour, green coffee, and yesterday he stole all the dried apples. I was a hopin' they would swell up and bust him like the government mule what ate a bushel, but they didn't; he grunted, yanked his back up and down, rolled around and blowed off enough wind to run a blacksmith shop or Congress. Harry, sing that song about holdin' out yer hand to a brother that's down, and we'll turn in."

And Harry's splendid tenor voice ringing out through the clear air was our lullaby, and the next morning we threw off our blankets on hearing the same voice singing

"Morn amidst the mountains."

A hearty breakfast of fresh bear steak, corn dodgers and coffee, and we were ready for the hunt. Hank, Harry and Cooper took the gulch, whilst George and I climbed the spur, intending to go down into the valley. We had proceeded but a short distance when George stopped his dissertation upon the proper way to attack *Ursa horribilis*, or his nearly as dangerous cousin the cinnamon, and said:

"Petee, we will strike the lake, and if one on us had a shot gun we'd get er goose or bunch of ducks for a change from buck rump. No use er wasting ball-cartridges and shooting just one at a time." Knowing that I was the one meant to have the shot-gun, I started back and exchanged my Sharps for what we called Harry's bible—his No. 10 Parker. My old sporting friend Poist used to say that when I pulled the trigger of my little English gun I shut my eyes. Well, those were tender-foot days, and I had no faith in the gun; but when I bring a Parker to my shoulder I know there is a breach behind the shell. Crossing the spur we came in sight of the valley, a Rocky mountain park five miles long and half as wide—one of nature's beauty spots—surrounded on all sides by granite walls and towering peaks. The lake gleamed like silver in the sunshine, while three or four mountain

place," the last house and clearing we should see for a week. We here renewed our stock of potatoes, butter and eggs. This place is used as a hotel during the winter and early spring months by the lumbermen. We found Sawtelle and wife very cheerful and obliging people.

Dragging the reluctant Mel, into the canoe, we bade adieu to civilization and turned our faces toward the wilderness in earnest. Chesnecook is a bulge of the Penobscot, eighteen miles long and three wide. Far as we could see, to the base of Caribou Mountain, its shores are densely wooded. Spence's prediction was verified, and we had head winds for the entire distance. Paddling lost its charms and became not only monotonous, but tiresome. We made good time, however, and noon found us with more than half the distance accomplished. Going ashore we had lunch, and Bricktop stepped into the woods a few paces and returned with a fine brace of partridge, which proved a valuable acquisition to our larder.

Paddling was now succeeded by poling, and poling by paddling again, before we got plainly in sight of Mt. Caribou and its stream, the wind still blowing fresh, indicative of storm. Spence and William proved staunch canoeists, and we made such good progress that our accomplishing the trip was doubted by an old guide when we found encamped with a party at the falls. We reached the falls and our second camp in good season, and while the camp was being put in order we tried the trout in the falls, returning with a handsome string, none weighing less than one and a quarter pounds. Our camp on the mountain was a good one, and the night was doubtless by an old guide when we enjoyed the quiet night and our wild sense of freedom to our hearts' content.

Sunday morning found us in rain, and raining hard, rather discouraging to less hardy fellows, particularly as this was to be our first real carry, one and a half miles. Getting on our rubber clothing, and after taking fourteen drops of Jamaica ginger, we picked up our traps and started. Right here I must express my admiration for the virtues of Jamaica ginger. Nothing in liquid form is one-half as good as the reliable extract of ginger. It is the only kind of tonic that is palatable in alcoholic, as you derive all the benefit of one without the ill effects of the other. It is warming after and during a day's work in the rain, good in case of sickness, and put into pond water makes a wholesome and palatable drink. We had everything over in two hours and were resting on the shore of Ripogenus Lake, a lovely little sheet of water entirely shut in by high wooded hills. A two miles run across it brought us to Ripogenus Falls and carry. Ripogenus Falls, as I have said, one of the wildest, most picturesque spots in the wilderness of Maine, and the scenery is most rugged, grand and impressive. Rugged cliffs rising perpendicularly nearly one hundred feet on both sides, now with just room enough for the water to tumble through in fantastic, wild and beautiful shapes, again widening into immense gorges, into and over which the water rushes in myriad forms. In one place these cliffs so nearly approach each other that one could almost jump across, forming an arch. To lie upon its top and look down into the boiling water ninety feet below, requires strong nerves and a firm direction. "Gib about trout," said Mac, who was good authority, declared that Niagara must pale before Ripogenus. While the guides were totting the canoes and supplies a mile on the carry to Carey Pond, we went down to the falls, catching magnificent trout. When we arrived at the camping ground we found that Vose had put in a canoe and gone up the pond. Returning for us, he could hardly speak for excitement; could just ejaculate "Trout!" and point up the pond, moving in the direction indicated, and we soon saw in the perfectly clear water great shoals of trout moving in that direction. "Gib about trout," said Mac, "trout! paradise—nothing but trout, and the water literally alive with them. In this little pond, covering perhaps thirty acres, with no visible outlet, fed by cold springs that find their sources in the high hills that encompass it on every hand, the water of which is so clear we could see the bottom entirely across it, we had trout in abundance, from one quarter of a pound to three and a half in weight. Some of these latter we caught, and what royal sport it was to land some handsome fellows with an eight-ounce rod and line, none that weighed less than five pounds. We had trout for breakfast, lunch, and supper—trout to look at and speculate upon, and every specimen larger and handsomer than the first.

Monday morning was cloudy and warm and we were much troubled by black flies. We remained in camp until after dinner, when we started upon our pre-arranged grand expedition against the trout. Getting quietly anchored on the best ground, we were soon gathering them in right and left, when, in changing our position, Mel, being perched upon the slawarts in that over-confidence he usually alighted to, the canoe suddenly rolled over. Hoops! A bucket, a piece, and what a freezing sensation! The water was cold, and what a shock! As Mel, who had reached the shore, what a ludicrous sight we saw! Mel, clinging to the slippery bottom of the canoe with all his might, his classic features depicting despair, desperation and resignation in varying colors.

The common created by Mel had frightened the trout beyond hope of further capture, so Tuesday morning early we broke camp and started on the carry. What a back-breaking, soul-stirring, patience-provoking carry it proved to be. The day was most uncomfortably warm, but after making many trips ahead with luggage and returning for more, we finally accomplished the distance with the assistance of fourteen drops of ginger, taken with due caution at regular intervals about noon. While dinner was being prepared we fished in

the falls, and were all greatly surprised at catching small land-locked salmon. Their appearance so far from any possible breeding-ground caused much discussion. We encamped that night at the head of Amjenackamak Falls and carry. We all agreed that this was the best place for the purpose. The theory that the fish were spawned in the falls was not supported. Wednesday was partially clear. We should have reached Mt. Katadin very near us here, but the clouds are shut down close along its sides, entirely obscuring it. This carry would ordinarily seem pretty rough and hard, but after our experience of the day before it appeared a pleasant ramble. We drove over safely in an hour's time, and the wilderness was soothing to the eyes. The country was not so much wild scenery and excitement as the trip to the head of the falls. The morning, until long after noon, we glided gently forward over an uninterrupted stretch of water. Coming to the mouth of Sourdhabuk stream, we entered and passed up its perfectly clear, cold water as far as the falls. Katadin was directly over us, but still heavily enshrouded in clouds. A short distance below we saw several cascades of very thick, black, sticky mud, and a few cones. All lamenting the habits of black flies and their luck in being unable to catch trout with fancy flies in the dead water about them.

We passed the mouth of the stream with the phonophons title of Aboljakkamegus, which runs at the foot of Katalindin, well stocked with gamy trout, and disappointed in making our contemplated trip up the mountain, made for the inevitable carry below. Mcl., being a little lame, started across and soon returned, reporting good path and distance a half mile. We got easily over it and pushed forward to Pockwocokanus falls, where we camped. The night was bright and clear, and at the cool twilight, the river opened up beautiful vistas of shore and bay at every turn. We soon had camp in readiness and enjoyed our supper and our sleep as tried sportsmen can. Thursday morning found us much refreshed, and as it was still cloudy we were obliged to push on without visiting Katalindin. We passed this camp safely and a little later on reached Weneke and the Mesagaganan falls. At the last named falls we went into and up a stream to a beautiful lake, having a remarkable echo, which was fully testified by Vose, Mel, and a scrub chorus.

We paddled across this lake two miles with the intention of entering the lake above, in which we were told trout could be found of fabulous size, but having found the route impracticable we started on our return considerably disappointed; but Brickston covered himself with glory by his well directed shots at ducks, otter and caribou. The latter he only succeeded in hurrying into the woods, but the others succumbed to his fatal aim amid the plaques of the entire party. We were now in the arms of the water, and the fall of the carry by the carry we made a rush in a wild sweep of water into Ambejeux lake. Now we could plainly see Katadin—its sides bare and rugged, its summit only enveloped in sunset clouds, glorious in shifting colors. We pushed on three miles across the lake, passing the "Brown House" used by lumbermen, and sailed into the dying sunlight to Millinocket carry. We had only twilight to make the carry in, and before we were aloft again the moon was shedding its soft radiance upon the still waters of the lake. The shore was wet and we rushed out for camp. The shores proved low and wet so we rushed out into the lake and skirted the shores of numerous rocky islands looking for earth enough to sleep on. In desperation we clambered up the rocky sides of one of them, and getting our traps ashore with no little difficulty, we soon had a fire and supper. No use in looking for boughs; even if we had found them we could not find a level spot among the rocks to spread them. Wrapping our blankets about us we lay down upon the rocks with nothing over us but the stars, and the moon, and the stars. The first sleep sound of the morning broke cold, cool and beautiful. Before us lay the loveliest lake in Maine, and on our left stood old Katadin alone. The clouds that had covered it so long were now entirely dispelled, and we had a grand uninterrupted view of it. Its top sharply outlined in the early light seemed but a short distance away, and we regretted much the necessity that compelled us to forego the rough enjoyment of climbing its ragged sides. We were aloft early, and passing the eastern extremity of the mountain we were again in the arms of the water. A description of getting lost in the snow with a house ten rods from him, for there right before us was one of the most charming camping spots we had seen.

Five miles of paddling brought us to the mouth of Sandy stream, up which we poled against the rapid current for two miles. Making camp for the day and night, we passed the day in catching handsome trout, in hunting, and fighting black flies. We saw recent deer tracks, but no deer. The flies disappeared at sunset, and when we gathered about the fire from our several expeditions we passed the evening in solid comfort. On Saturday morning gave provisions to the Indians, and, after a breakfast of salmon, we started again in a few moments. Leaving Mushadin behind us, and after catching immense pickerel in Mud stream, we made for the outlet, which we reached about ten o'clock. Now began our descent, going down hill, as Mel expressed it, at the rate of twelve inches to the foot, and this proved to be the hardest day's work we had encountered. Twelve miles of rapids and falls more boisterous than many of those we had carried by, over which we must go in some way. In many places the guides were obliged to cut the water waist deep and lift the canoes on their edges by which there was no other passage. We ran many of them together and enjoyed the wild excitement much, but at last began to wilt in sight of so much rushing water ahead. So we all walked around the rapids in solemn procession, while brave old Spence came boldly to the front and ran canoes and supplies safely over. We reached the end of them for the day as we must, reach the end of every thing else, and getting about the foot of the last and the last of the rapids, we lay along in the smooth, rapid stream until we reached "Fowler's" about dusk. This was the first clearing and building we had seen since leaving Chesuncook before. Procuring fresh eggs and milk, we made a royal repast, and, seated about the cheerful fire, recovered our spirits with our drying clothes. Sunday was bright and warm, and getting under way early, made good time, with the current to aid us. Passing several rapids during the morning, we arrived at Medway, where we had only about enough to get away. We proceeded without further incident to Mattawamkeag, where we arrived sound and well at the end of our memorable journey in canoes.

Getting a good supper at the hotel, and going to bed the first time for two weeks, we were in readiness at an early hour for the train which was to convey us to our several destinations.

F. C. P.

For Forest and Stream and Rod and Gun.
A TRIP TO MARYLAND.

ON the 24th ult., Drs. L. and C. and Capt. J., all members of the Jersey City Heights Gun Club, with your correspondent, took the 10 p. m. train for Washington, our objective point being some place down the Potomac, on the Maryland side, in pursuit of wild fowl. Big stories had been retailed in the club room of the farmers in that region being unable to sleep o' nights on account of the noise made by the myriads of the aquatics flying over their houses.

J. W. Thompson down the Potomac. We found the captain and purser both gentlemen, who did all they could in their way of information in regard to the country, game localities, etc., to make our trip pleasant. The purser seemed to be a friend of the Forges, and as a result we were especially pleased to have him as our correspondents. We expected that Thompson would land us at Abet's Wharf, and then we were to ride some three or four miles to Belvidere farm, the residence of one Abel Hammett, but, unluckily for us, the steamer stops at that particular wharf, and we are obliged to take a launch to Belvidere. So we got off at Colton's, some ten miles lower down the bay, where we engaged a colored man to take us over in his log-bottomed canoe.

We arrived at the farm early in the evening, and were most heartily welcomed by Mr. Hammett. Belvidere farm is owned by one of our Jersey City Heights citizens—Mr. Daniels—and is rented to the present occupant. It is a fine farm, of some 420 acres, very satisfactorily located on the Potomac River. About 200 acres are under cultivation in corn, wheat, tobacco, etc.

As it proved, we were much disappointed in regard to the wild fowl. As the ravens had come too early, owing to the mildness of the season. We saw quantities of swan and geese at a distance on the bosom of the placid Potomac, but even a Parker gun could not reach them. Later in the season the birds come up the bays and creeks and furnish some good shooting. But the quail shooting (partridge they call them there) was simply superb. The ravines (branches they are denominated by the residents), which run up into the farming lands from the river, are being more and less covered with small trees and underbrush, and will lastly with a growth of vines, and we several hundred of the new Winchester paper shells, and we were much pleased with them. They seem strong and compact and can be readily reloaded. We had not a single misfire. These, with the new pink edge wad from Schnyder, Hartley & Graham's and the tinned shot from the same place, proved very satisfactory. We found the tinned shot an excellent good article, and we prophesy it to be the shot for the future. As to the wad, it is a very good one, and we are now often, apparently, you may have discharged every piece, one or two pieces of your field-cannon will remove every particle of foulness.

The first two days after our arrival—owing, as the boys say to the presence of *Dr. Il.*—proved wet and rainy. It seems to amount almost to a moral certainty that whenever our accomplished druggist goes with any of us he is the *Jonah* of the party, and the fountains of the great deep are broken up; but his universal good nature, together with his conversational and vocal powers, make him a very desirable companion.

We found Mr. Hammett, the occupant of Belvidere farm, a very intelligent gentleman, and by himself and family were welcomed with true Southern hospitality. We had heard here as now of Southern chivalry and Southern open-heartedness as we were to find it in the South. To trip the warm feeling of heart coming out to us from the citizens of the South. Not only were their lands thrown open to us for free shooting, but we were cordially invited to their hearthstones and made glad by the cordiality of their greeting. After the first day or two, when they had learned who we were—sportsmen from the North on a shooting trip—they could not do enough for us. They gave us horses, traps, pointers, hunts and covey fights, to say nothing of the oyster roasts—and Potomac bay valves are not to be sneezed at.

This fox-hunting business is a big thing down there, and the excitement is heavy; but we had to be counted out, as our experience in the pig skin is not of a very flattering character. But the Lokers, the Bontons and the Beans of that neighborhood are famous in the business, and we were told that Loker, one of the hardest and most pertinacious riders of that section, has been in at the death of no less than thirty reynards in one season. I need not say that to shoot a fox ahead of the hounds would be almost an unpardonable sin. The fellow who did it could not stretch his feet under any table down in that region.

I need not try to detail to you the various incidents of our ten-days' sojourn. We lived on turkey (Mrs. H. feeds only about 100), geese, ducks and possum, and such corn cakes as must be tasted to be appreciated. The corn cakes down there are a decidedly different article from any we have been in the habit of eating. They are first of all made of a mixture of white, sweet corn, and somehow Bettie and Tennie (daughter and niece of Mr. H.) know just how to get them up every time. Soft and fresh, with that sweet home-made butter, which you vanished before us. It is an unsettled question, whether we should have been content to eat the corn cakes, or whether we should not have put away the largest number of an article after a binge.

It is enough to say that we had a right royal good time, that we made some acquaintances down there in Dixie land whom we shall not soon forget; that the cordial invitation from so many of its citizens to come down again next fall shall remain fresh with us until the November frosts turn the leaves again, when we hope to meet at Hammett's hearthstone his trusty boys, Tom, Spencer, Dan and Edmund, who made our days in the field so pleasant, and the girls who, with their songs and chat, caused the evenings to slip by so enjoyable.

Fish Culture.

The Eel's Eggs.—The long vexed question of the eel's mode of reproduction has now been set at rest. Mr. Fred Mather has reduced the evidence to the form of a "mathematical certainty," by actually counting the eggs in a specimen. Happening to be in Mr. Blackford's office a short time ago when a six-pound eel with spawn was brought for examination, Mr. Mather proposed a computation of the eggs. He took the ovary home. Under the microscope the eggs appeared to be of an octagonal form, but this is due wholly to their pressing upon one another; when separated they assume the globular form. The use of the micrometer failed to give satisfactory results because the eggs varied greatly in size. Mr. Mather therefore placed a number in line, measured and counted them and found them to average 80 to the inch. Then he took the whole mass of eggs, halved, quartered, and further divided, seventeen times in all, until the section small enough to count represented 1-131,072 of the total number. The count showed 68 eggs, or 8,912,896 in the whole. A second computation in the same way showed 77 eggs in the counted mass, or 10,092,544 altogether. And to make the computation still more certain, a third count was made, which showed 71 eggs in the last division, or 9,306,112 in the whole ovaries. From these results Mr. Mather fixes the number of c⁸'s in this particular eel at fully 9,000,000.

FISH PLANTING IN MASSACHUSETTS.—*Salem, Dec. 11.*—Last Saturday I placed 10,000 California salmon in Milk River, at Wenham Neck. This makes 17,000 in the past year at different points on this stream. In June, '77, I placed 2,000 *Salmo sebago* in Wenham Lake. I intend the boys shall have some good sport after I am gone. Have had my share, even though I get no more.

J. N. K.

HATCHING CODFISH.—The Fish Commission at Gloucester, Mass., are meeting with very satisfactory success in their work of hatching codfish eggs. New cones have been substituted for the ones formerly in use, and the necessary circulation of water is secured by the use of Mr. Ferguson's method of a lever and engine.

THOAT.—Superintendent A. W. Marks, of the Greene County Fish Hatchery, arrived in town on the 6th inst. from western New York with 20,000 California salmon in cans, hatched, with the sac yet attached; 100,000 salmon trout spawn, and 120,000 brook trout spawn. The California salmon were taken in Clear River, Cal., by Professor Baird, of the U. S. Fish Commission. The whole lot of very valuable fish and spawn was secured on very favorable terms, costing but a trifle. —*Catskill Recorder.*

Madison, Dec. 13.—*Editor Forest and Stream:* The State Fish Commissioners met in Milwaukee December 10 and received the reports of President Welch, of Madison, and Superintendent H. W. Welcher, of Milwaukee. Both papers report that the work of the past season was very successful, and that the various points had in view are fully stocked, as had been desired. The Commissioners received from the Milwaukee city authorities the right to continue hatching in the water works building on North Point. Beyond the reports routine business engrossed the attention of the board.

ROYCE.

Natural History.

WHAT A FOSSIL COST.—Our readers will no doubt remember the announcement of the discovery some time since of a specimen of *Archaeopteryx lithographica* in the Jurassic beds of Solenhofen. As but one specimen of this most remarkable fossil bird was previously known, and that specimen an imperfect one, there was of course no little desire on the part of paleontologists to secure this second one and to have the honor of describing more fully the bird which has proved to be so important in connecting those two apparently different classes of the animal kingdom, the birds and the reptiles. Letters and telegrams bidding for the fossil poured in upon the fortunate collector, who wisely refused at first to sell and has only recently parted with his treasure.

The purchaser of the specimen is Dr. Otto Folger, President of the Freie Deutsche Hochschule, who paid for it the sum of 35,000 marks, or about \$8,500. It is presumed that it will be handed over to some eminent German paleontologist for description, and the scientific public are anxiously looking forward to the publication of a memoir upon it.

The remains in question are said to be in several particulars more perfect than those now in the British Museum, which have until recently been unique, and which have engaged, at different times, the attention of the most noted British paleontologists, among whom in the first rank are Professors Owen and Huxley.

THAT HELMGRABITE.—In our issue of October 31 an unlucky correspondent, who innocently supposed that he was doing fishermen a good turn, gave a description of this insect, but, not being by profession a "bug hunter," some of his statements were a little wide of the mark. Through inadvertence his communication was printed just as it was received, and ever since the date of its appearance we have been fairly overwhelmed with letters correcting the errors of our contributor. In our issue of November 14 we printed a brief but pregnant note from "A Naturalist" which we had hoped would arrest the flow of ink upon this subject, but it seems that we reckoned without our host.

The following note corrects Isaak's statement that the dobson feeds on vegetable matter, a manifest error, for it has long been known that these larvae are decidedly predaceous in habit. We should say, however, that Isaak did not say that the dobsons are larval butterflies, but that it is "a theory of some naturalists" that they are. We would respectfully suggest that the non-scientific bass fishermen among our readers cut out the Latin name of the helmgrabite and paste it in their fishing hats. By carelessly using the term occasionally they can win great fame as scientists among those of their piscatorial companions who do not read *FOREST AND STREAM*.

The note of correction above referred to is as follows: In our issue of Oct. 31, "Isaak" attempts to give the natural history of the helmgrabite, but leaves the reader much the worse for the reading of his article. The helmgrabite (*Corydalus cornutus*) is, in the winged state under gauzy, grayish wings, the males having two long, black, curved horns. The female lays her eggs in a mass on twigs overhanging the water, and the young, on hatching, make their way to the bottom and hide under stones or logs. Here they remain for three years, subsisting on insects, etc., and, never, so far as is known, upon vegetable food. During the month of May the oldest larva may be found in abundance under stones, not far from the stream, and especially on warm sandy knolls. At other times they may be taken as "Isaak" states.

R. T. M.

A STRAYING SHARK.—There was discovered on the flats at the western part of Provincetown, Mass., harbor last Friday a fish which was new to even the oldest fishermen of that seaport. Professor N. E. Atwood, of that place, identified the specimen, which belongs to a remarkable species of spineous shark, *Le chien de mer bruno*, this name being given to it by Brossennet, who first described it. "Yarell mentions it in his History of British Fisheries. Its habitat is from the North Sea to the Cape of Good Hope, and from the shores of Italy into the Atlantic. It is very rare in British waters, there having been only four specimens of it known to science between 1838 and 1841. It has never before been seen in American waters, and what the Provincetown fish was doing

here now is more than we can explain. The Boston Herald thus describes it:

It is about eight feet long, has a thick body, smooth skin, except that there protrudes from the skin numerous horny, hooked and bony thorns, varying from one-eighth to one-half an inch in length. It has a good-sized mouth on the under side of the fish, with one row of flattened teeth on each jaw, pointing from the centre to each side, like the teeth of a carpenter's splitting saw; eyes not very large, one entirely blind; the snout flattened and rounded on the edge. The fishermen are puzzled, calling it a mongrel of shark and dogfish.

"Grouse-Ticks."—A contemporary, speaking of the lack of young birds among the grouse killed this season, says:

We mentioned in these columns a short time ago the fact of grouse having been destroyed by what was taken for ticks by casual observers. That it amounted to an epidemic is easily conjectured from the small number of young, or this season's birds that have been shot by sportsmen. Dick Christy, of Sussex County, owning a farm in the Sussex hills, and being a thorough sportsman, had his attention called to this thing by the number of young grouse he found dead during the months of July and August last. Upon examination he found in every instance a lot of grubs in their necks, just below the throat. At first he supposed they had gotten on after the death of the bird, but, finding this to be not so, he shot a few on purpose for investigating, and found in every bird these same parasites. He also found the fly which laid the eggs, from which were hatched the grubs in question. This fly he describes as about twice the size of our house-flies and of the same color—brownish gray. He found the selfie also on the old birds which he has shot this fall, but no grubs. The grubs, he informs us, have something the appearance of a tick, but that they are much more lively in their movements. They were in great numbers, and he found all the young birds terribly thin and emaciated. Their necks were bored in holes as the bark on an apple tree is encircled by a different one. He also thought that these grubs crawled, after hatching, into the ear openings and adown the throat, but unfortunately did not think of making an examination into the throat. That it had been more terribly destructive is seen in the fact of such small lots of these grouse being secured this season, upon ground that is generally found alive with them.

These remarks are very interesting, but we could wish that they were more detailed, and that the insect which causes the great mortality among the young of this finest of our game birds could be identified. We have never seen either the fly or the grub, but an old sportsman tells us that the larvae which do the mischief get into the young bird's throat, and that the symptoms resemble those of pip in the young of the common fowl.

We have several times called attention to this disease, and should be glad to receive any further information on this subject from those of our readers who may have had an opportunity to observe either the cause or effects of this lamentable epidemic.

A BIRD'S STOREHOUSE?—Cleveland, Ohio.—*Editor Forest and Stream:* While passing through the Lake View Cemetery of this city, with a friend last winter our attention was called to a fine clump of sumachs (*Rhus typhina*) in an open field, loaded with their bright red bark. With no other object than to crumble a few of the bunches in my hand and scatter the seed, I gathered one after another, but to my surprise, I found in addition to the usual quantity of seed one or more beech nuts in the interior of the sumach fruit, as you will mention in a specimen I send you. The lobes of the sumach fruit are quite open in the fall, but as the winter cold approaches they close up. Within forty rods of this clump of sumachs stands a number of bearing beech trees. I think some blue jay or other winter bird put the beech nuts in this unusual place for his winter store.

DR. E. S.

—In the Berlin Zoological Garden, on the night of the 7th and 8th of November, the royal tigress brought forth four young ones. Last year, within five months, she gave birth to the 2d of May and the 4th of September, to two strong cubs each time an event which would be unparalleled in zoology. After the first birth, on the 2d of May, she refused to suckle her young, and the director was obliged to place them with the Newfoundland bitch Minka, at that time nursing, who faithfully reared them with her own two puppies. The tigress nursed the cubs born Sept. 2 with the greatest tenderness. All four grew to be splendid animals.

LAND-LOCKED SALMON AND SMELTS.

EDITOR FOREST AND STREAM:

I wish to protest against the continued use of the name *Salmo gloveri*, Girard, by some of your correspondents for the land-locked salmon of the lakes of Maine and New Brunswick. There are two or three good and sufficient reasons why this name should not be used.

1. It is not the oldest name. *Salmo sebago* of the same writer (Proc. Ac. Nat. Sci., Phila., 1853, page 380) having nearly a year's priority, the date of *S. gloveri* being 1854, page 85, of the same series.

2. The original type-specimen of *Salmo gloveri*, which is still preserved, is probably merely a smolt, or the young of the common salmon, not a land-locked at all. This is also the opinion of Dr. Hamlin (on the salmon of Maine, Report U. S. Comm. Fisheries, 1872-3, p. 349). The species was probably, like many of Dr. Buckley's, a purely complimentary one, i. e., one named for a friend or correspondent without any expectation that it would prove valid. A doubtful compliment, in deed.

3. The land-locked salmon, in my opinion, cannot be considered as a distinct species from *Salmo salar*. It is simply a modified race of the latter species, having even a variety in the zoological sense. Dr. A. C. Hamlin, in the excellent article above quoted (p. 341), makes the Indian, Toma, say, "There, that fish brother to salt water salmon, only he forgot to go to sea, but stay in lake instead." And, with Dr. Hamlin, I think the Indian is right. In the lakes of Sweden are other land-locked salmon, which I have closely compared with ours, and I am unable to indicate the slightest permanent difference.

As, however, it is convenient to have a name for the land-locked salmon, we may call it *Salmo salar*, var. *sebago*, or after the fashion, desirable in many respects, which Dr.

Coues and others are trying to introduce, *Salmo salar sebago*, or even for short *Salmo sebago*, but let us no longer continue the galvanized life of the synonym, *Salmo gloveri*.

In regard to the American smelt, there are several land-locked forms in the waters of Maine which have been described as species, but which are probably local races. Mr. Henry F. Rice, of John Hopkins University, has lately compared the American *Osmorus mordax* with the European *Osmorus eperlanus*, and considers the two identical. After examination of a considerable series, the writer is compelled to agree with Mr. Rice in thinking that no permanent difference exists between them, although ours has on an average two or three more scales in the lateral line. Our smelt is, therefore, *Osmorus eperlanus*, L., or, if we choose, *Osmorus eperlanus* var. *mordax*.

DAVID S. JORDAN.

Frelington, Ind., Dec. 6, 1878.

Philadelphia, Dec. 9, 1878.—In regard to the question asked by "W. W. F." in last week's paper as to habitat of smelts, would say that I have known them to have been caught in tide water in the Schuylkill below Fair Mount dam. Sixteen and twenty years ago fish of different kinds were plenty at that place; eland, herring, catfish, eels, perch and striped bass in large quantities, the latter from pau fish up to twenty-pounder, caught trolling with live minnows, but fishing is played out here on account of gas tar covering the bottom from the dam to the mouth of the stream. Many a happy day have I put in trolling for bass. If "W. W. F." wants to know more about smelts caught in the Schuylkill let him interview Charlie Vogel or Bill Lark, frequenters of Uncle John Krider's sportsman's depot, old Philadelphia fishermen. He can get all the information he desires.

Yours respectfully,

H. L. LEWIS

Mr. Editor: In Professor Jordan's article on black bass nomenclature, he describes the large-mouthed bass as the one described by Cuvier, under the title of *Zoster nigriscans*, and the small-mouthed fish as the one spoken of in foreign books as the *Gryllus salmonides*. Reading that article set me looking over the plates of "Jardine's Naturalists' Library," and in the volume devoted to perches I find not only these two fishes mentioned, but another one, yelent the American black bass (*Centropomus nigricans*). This last is, according to the plates, a different and much more beautiful fish than either of the others. I would like to know what kind of a bass it is. I have only seen the large-mouthed bass, and hence do not know whether the plate of Jardine is correct or not with regard to the small-mouthed one; but if he is correct in his delineation of the third "American" black bass, we must have a fish which is not the one we are waiting for, namely, either *Zoster nigriscans* or *Gryllus salmonides*. Do you know anything about this fish? The letter-press description in Jardine says the fish is very abundant in the United States and highly esteemed for the table, but I have never chanced to run across a bass that fills the description. There are other fishes in the river here that come pretty close to the engraving in shape, but they do not possess such gorgeously colored scales as Jardine's specimen. What is this *Centropomus nigricans*, called nowadays?

GUY RIVERS.

AN EXPLANATION WANTED.

MR. EDITOR: Several years ago, in November, while following a cow path through a thicket of scrub oak and beach, I found, what is not unusual for like localities, a nest of the song sparrow; but what was a surprise was to find the nest filled with fine sand and gravel, although there was no sand of any kind within a quarter of a mile. I gave the credit of this unusual contents of the nest to the freak of some mischievous boys, and would have thought no more of the circumstance had it not been for a like discovery made two years ago last December. I had been waiting for a certain marsh to freeze over so that I could reach some button bushes (*Cephalanthus occidentalis*) in order to procure cocoons of the *Attila ceropha*. The morning finally came when the ice would bear, and I know that I was the first among those button bushes that season. While gathering cocoons, which could be counted by hundreds, I came across sparrow's nest, and this too was filled to the brim with fine gravel. Now the nearest gravel to this nest is a railroad embankment forty rods from the border of the marsh. The pond is neck deep in year round water, and it is impossible to get to the nest for a boat, owing to mangrove-like thicket of button-wood shrubs. Both nests referred to were new ones, that is of the previous spring, and contained nothing to indicate that they had been used for incubating purposes. This is an open question: How did the gravel find its way to these two nests?

DR. E. S.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO DEC. 1, 1878.—Two spotted hyenas, *H. cruenta*, one zoodad, *A. vagabunda*, born in garden. Two Humboldt's jaguars, *L. humboldti*, one tamarindia spider monkey, *A. leucelyth*; one black ape, *Cynopithecus niger*; five weaver capuchins, *C. capucius*; two brown capuchins, *C. fulvulus*; one three-banded douronout, *Axythya tricoloratus*; one hyacinthine porphyrio, *P. hyacinthinus*; three blue and yellow macaws, *A. ararauna*; twelve common boas, *B. constrictor*; purchased. One woodchuck, *Arctomys monax*, presented by Mr. R. Johns; one gray squirrel, *S. cinereus*, presented by Mr. G. Reiche; one ruffed grouse, *Zenaidura macroura*, deposited by Mr. J. Reiche; one scops owl, *Scops asio*, presented by Mercer Co. Shooting Club; one tiger, *Felis tigris*, deposited by Wm. Bros.; three prairie chickens, *Cupido cupido*, presented by Mr. W. Eiston; one herring gull, *Larus argentatus*; one scarlet fish, *Rib rubra*; one cock of the rock, *Rupicola corax*; seven crested ground parakeets *Calyptops nova-hollandiae*; four gray-headed parakeets, *Agapornis cana*; one lineas parrot, *Eolophus lunatus*; one intermediate parrot, *E. intermedius*, purchased; one loon, *Columbus torquatus*, presented; one zebra, *Equus indicus*, born in garden. FRANK J. THOMPSON, Act'g Supt.

TANGLE FOOT.—There is nothing very solemn about this, if it be true, and it probably is.

An Englishman was walking down Park Row, near Ann street—one of the most crowded places in the world. He had a black-and-tan dog at the end of a long, thin chain, and he was reading a newspaper as he walked. A horse, which had tangled anybody's legs with the chain the man would look around and say: "Aw, guess these Hamerians 'ave no heys."

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of five or more, \$3 per annum.

Woodland, Farm and Garden.

POULTRY.—In order to have fine fowls, whether the breeder desires to raise them for market or for exhibition purposes, it is of the greatest importance that he choose a good breed and have it properly cared for. If you raise fowls for market begin right by procuring at the outset some of the larger breeds, viz.: Brahmas, or Plymouth Rocks. The Plymouth Rocks, for market purposes, are generally favorites, having proved themselves good layers, and also a good table fowl, maturing earlier than the Brahmas. They originated, it is said, by crossing the black Java fowl with the American Dominique. In plumage they resemble the Dominique, but have a single comb. Suitable quarters for the fowls should be provided. Build your henry with a southern exposure, that it may be warm in winter, and do not fail to give it proper ventilation, as this is highly necessary to the health of your fowls. Do not keep too many fowls together in the same building if you wish them to thrive. Keep their quarters clean, and their bodies free from vermin. Give them a dust box filled with road dust, in which place a little sulphur, and place it where it will be exposed to the sun's rays. Occasionally apply a little kerosene to the roosts to destroy the lice. Give your fowls, if possible, a good range, and they will do at least 50 per cent. better than if you had limited them to a small run. Set your hens in the evening, and by the next morning they will be accustomed to the eggs, and more likely to remain contentedly on the nest. Early in the season do not place as many eggs under a hen as you would in warm weather. Nine or ten are as many as she can cover and hatch during January and February; later than this thirteen is the usual number. A great many breeders do not let the mother brood the chicks, but take them away when hatched, and after drying by the fire, place them under a false mother, and bring them up by hand. A neighbor who, this season, has tried this method, says his losses have been very small—much less than when he allowed the mother to care for them. I am expecting to use an incubator this winter to hatch eggs with, and thus do away with the trouble of hunting up broody hens, which always command a high price early in the season. Incubators thus far, I think, have been generally expensive, and most of them are so complicated, and require so careful management, that they are far from being a success. A gentleman in New Haven is now perfecting an incubator which is very simple in construction, easily managed, and can be sold at a price within the reach of all. For food give your fowls corn, rye, wheat and oats, and occasionally cooked soft food. To fatten fowls in four or five days, confine them in close dark quarters, and place rice over the fire with skimmed milk—only as much as will be consumed in one day; let it boil till the rice is quite swelled out; you may add a teaspoonful of sugar, but it will do without. Be careful and not give them sour food, as it will prevent them from fattening. A quantity of charcoal broken in small pieces will increase their appetite, promote digestion, and expedite their fattening. No food should be given for twelve hours or so before killing.

NUTRICE.

GARDENS IN THE SKY.—The Denver (Colorado) *News* gives the following brief summary of an attempt last summer to grow vegetables at Summit, Rio Grande County, an altitude of 11,800 feet; latitude 37 deg. 28m. 18s. north; longitude 106 deg. 30m. west. We do not remember to have seen any similar statistics published in respect to any part of the globe:

June 26.—Maine, Mexican beans, dwarf peas, Irish potatoes, beets, kohlrabi, nasturtium, parsley and spinach seed planted.
June 29.—Lettuce sown.
July 13.—Peas up.
July 20.—Potatoes up.
July 25.—Corn, beets and spinach up.
July 31.—Redishes ripe.
August 1.—Nasturtiums up.
September 1.—Frost destroyed maize, Mexican beans, nasturtiums and foliage of potatoes.
September 7.—Ground covered with snow.
September 9.—Heavy frost, blighting tops of beets and peas.
September 20.—Everything in garden dead, except lettuce and spinach, latter holding out best. Redishes grew to be five inches long and half an inch thick, turnips to be three-quarters of an inch in diameter, maize (stalks) to be three inches high, Mexican beans, three inches high; peas five inches high and blossomed, but produced no fruit. Potatoes (stems) grew to be six inches high. Three-quarters of an inch was the largest diameter of tubers; beets four inches long and one-third of an inch thick. Kohlrabi and parsley did not come up. Nasturtiums grew to be one and one-half inches high. Spinach and lettuce grew three inches high, and shows about one-half green and one-half dead leaves, on this date, October 1. No snow on the ground.

The growing season, it seems, is limited to two months and three days—from June 26 to September 1. The highest temperature during this period was 61 deg. and the lowest 20 deg. Rain or snow fell on eleven days, equal to a rain-fall of 1½ inches. The United States has a signal station at Summit, in charge of C. E. Robbins, who made the foregoing observations. He has concluded to buy what vegetables he needs and not try to raise any more.

BURNING GREEN WOOD GREATLY WASTEFUL.—Water passing into vapor absorbs and hides nearly 1,000 degrees of heat. A cord of green wood produces just as much heat as a cord of the same wood dry. In burning the dry wood we get nearly all the heat, but in burning the same wood green, from one-half to three-fourths of the heat produced goes off latent and useless in the evaporating sap or water. Chemistry shows this, and why, very plainly. Therefore, get the winter's wood for fuel or kindlings, and let it be seasoning, as

soon as possible, and put it under cover in time to be dry when used. It will, of course, season or dry much faster when split fine. A solid foot of green elm wood weighs 60 to 65 lbs., of which 30 to 35 lbs. is sap or water. As ordinarily piled up, if we allow half a cord to be lost in the spaces between the sticks, we will have a weight of about two tons to the cord, of which nearly one ton is water, or sap. Such wood affords very little useful heat; it goes off in the ton of sap. The great saving of hauling it home dry is evident, as we get the same amount of real fuel for half the team work. Beech wood loses one-eighth to one-fifth its weight in drying; oak, one-quarter to two-fifths.—*American Agriculturist* for December.

PACKING CUT FLOWERS.—"Cut flowers," says an English contemporary, "will travel safely hundreds of miles by rail in common tin biscuit boxes, if the stems are placed in water for an hour before packing."

The Kennel.

SETON FOR DISTEMPER.—A correspondent, Mr. H. F. Hyde, writes from Galesburg, Ill., that, having read in this paper the article recommending a seton for distemper, he was induced to try it upon a pointer puppy which he had almost given up, having first tried every remedy known to him. In a few days it commenced to discharge, the puppy was relieved, and is now as bright and lively as ever.

DAISY.—We print this week a portrait of the black setter bitch Daisy, belonging to Dr. E. J. Forster, of Boston, Secretary of the Massachusetts Kennel Club. Daisy was sired by Copeland's (late Jerome's) champion imported Gordon setter dog Shot, out of E. F. Chapin's Nellie (black and white). Nellie is by J. W. F. Willson's Scot (black and white) out of H. W. Smith's bitch. Daisy is "English" in shape of head, form, etc., and is jet black with the exception of a snow white spot on her heart. She was whelped April 8, 1877, and was bred on October 16, of this year, to Mr. Luther Adams' Champion Drake. She was broken by Fred A. Taft, of Dedham, who has used her in the field the past autumn, and reports her as very staunch with a good nose. The engraving is from a prime drawing by F. W. Rogers, of Boston, who has made a good portrait.

DAISY.

ENGLISH KENNEL CLUB DOG SHOW.—The dog show of the English Kennel Club, which has been held during the past week at the Alexandra Palace, near London, was one of the largest ever known, there being over 1,300 entries. Never were so many bull dogs or so many collies seen together, there being 47 of the former and 84 of the latter. The fox terrier class was, as usual, the largest, although the figures in this class did not equal those of former years, there being but 140. There were also 30 bloodhounds, 67 mastiffs, 65 St. Bernards, 80 setters, 30 bull terriers, 54 retrievers, 55 spaniels, 40 pointers, 34 dachshunds, 26 pugs, 18 Skyes and 41 litters of puppies.

TESTIMONIAL TO MR. LORT.—Mr. Lort's popularity as a judge in England was made manifest when on the 15th inst., at the Alexandra Palace, a testimonial subscribed for by breeders and exhibitors all over the country was presented to him. The testimonial comprised, in part, a full length portrait, painted by Charles Luytens, which is said to be a most excellent likeness. There was also a silver soup tureen and side dishes, and an illuminated address with the names of the subscribers on vellum. The many friends of Mr. Lort in this country will be pleased to hear of this public recognition of his worth as a judge and a gentleman. In this connection we call to mind the very pertinent remarks of the London *Fancier's Gazette*, where it says:

"Judges and breeders have their partialities; one prefers one type, another some other. While it is so, different men will never precisely agree as to the true type of beauty. But their honesty is not to be impeached on that account, any more than a mother may be called dishonest because she thinks her very ordinary baby the prettiest in the world."

INTERESTING TO FOX HUNTERS.—A case was recently decided in England which decides the question as to whether fox hunters in that country have a right to ride over anybody's land without making themselves liable for an action for trespass. Two horsemen, having been warned against crossing, a

certain field, persisted in doing so by force, and were summoned for trespass and assault. They were convicted by the magistrate, but appealed, and the case being brought before Lord Coleridge on an appeal, he confirmed the first decision. In delivering judgment, he said that the Game Act, 1st and 2d William IV., did not apply to the case of fox hunting, and with regard to the real question in this case, whether the circumstances justified the respondent in resisting the entry of the appellants after they had been forbidden, he was clearly of opinion that he was, and that fox hunting could not be exercised adversely to the owner of the land. No such right existed, but it must be carried on like all other sport, subject to the general rights of mankind with reference to the ordinary and established rights of property. There was nothing to justify a field of fox hunters entering a gentleman's garden, trampling it down, and destroying the flowers and plants. No such right existed at common law. The opponents of fox hunting in England—and they are increasing in number—will hold on to this case as a precedent in their arguments against the national sport. We believe, however, that many generations will pass away before any appreciable decadence in fox hunting will be perceptible.

CANINE OVARIOTOMY.—A correspondent in Bangor, Maine, writes: "I have read several articles in the *Country* on canine ovariotomy, the last one by a contributor signing himself 'M. B.' in the issue of June 8th. The procedure he recommends sounds extremely well, and I have no doubt is very good, but to those who, like myself, are unacquainted with canine anatomy, the question still occurs: 'How recognize the ovary when you see it, what relation of position does it bear to the uterus itself? If Mr. B. will kindly answer these questions he will much oblige the writer, and I doubt not many other readers, also.' W. W. S."

[We are of the opinion that any person not a surgeon would have great difficulty in performing the operation he alludes to, certainly until he had witnessed it done and had some practical instructions.—Ed.]

A LONG CHASE.—A Virginia correspondent sends us the following: As my neighbor, Mr. Edward Terrill, who keeps a small but very choice pack of fox hounds, was returning home from a neighbor's plantation last Thursday after-

noon his dogs struck the trail of a deer. They first ran to the southwest for nearly three miles, circled back to the starting point and then straightaway east into the heart of the Virginia Wilderness. The dogs followed the trail all night and killed the deer in the morning near Parker's store, which is eighteen miles from here as the crow flies. The dogs must have run at least thirty miles from start to finish.

I am fully convinced as to the merits of the *FOREST AND STREAM* as an advertising medium. A few weeks ago in the "Answers to Correspondents" column was stated the simple fact that I had imported some choice English beagles. In less than a week I received ten letters inquiring if I had any for sale. Unfortunately I have not, as I have only one litter as yet, and those I wish to keep. The advertising columns of the *FOREST AND STREAM* will be sure to announce the fact of my having any for disposal. Wm. L. BRADBURY, Mason, Orange Co., Va.

TRAINING THE COLLIE.—A writer in the *Poultry Bulletin*—D. Z. Evans, Jr.—gives the following description of how the collie should be trained:

There has been much said and written about the great intelligence and sagacity of the shepherd dog, particularly the Scotch collie, and yet his merits are not over-estimated in the least. We have known and have bred them for years, have sent them to almost all parts of the country, and have always received favorable reports from the purchasers. In all reasonable things the Scotch collie will give unbounded satisfaction, and no more trusty or faithful friend can be had than he will invariably prove himself to be; but those who expect him to do their work in their own particular way, without having first been taught how it should be done, will be disappointed. These dogs will herd, drive and tend sheep naturally, for they have been bred for this purpose for so many years that it had become an inherent propensity, but they must be accustomed to the stock and the stock to them, and must be brought to understand just how you wish your particular work done before you can expect them to prove entirely satisfactory. This is one of the greatest troubles which is experienced by purchasers of trained dogs, for they expect to have them start in, the first morning they arrive, and drive the stock well, and they disappoint their owner, as any one would well know they would if he would give the subject any thought.

Generally, much better satisfaction is experienced by purchasing a pup and then gradually accustoming him to your own particular work than in buying a well-trained dog. The

very first thing to do when you get your pup is to accustom him to your voice and command, and you will find you do this thoroughly you cannot commence handling your dog. The best and soonest way to do this is to always feed him yourself, and make it a point not to permit the pup to be played with and mauled while too young. Our advice to those who want to have a first-class dog is to let the pup run comparatively wild, so it does not get into mischief, until he is at least eight or ten months old, by which time he will have gotten staidier and more easily managed, though you can in the meantime take him with you when you go for your stock. Do not force your dog, but let him take to his work gradually, and by all means treat him kindly, for there is one peculiarity about this breed: If you break the will of the pup by harsh treatment, which is as useless as it is cruel, the dog will be useless. After he has once reached full growth with his courage unimpaired he is but little to be feared, having his mind cowardly and sneaking. Whether a dog be grown or not, it does not depend a great deal on the one who handles it, for a violent-tempered man will make a cowardly dog out of his pup, while a careful, kind and considerate man will soon have an animal which will repay him for all his care, for it will be invaluable in herding, driving and tending almost all kinds of stock; it will be invaluable as a watch dog, carefully guarding the premises at all times, and will be a source of pleasure to the members of his owner's family. We know of no dog which will better please the farmer, stock breeder, poultry fancier or country gentleman than a well-bred Scotch collie.

A BULLDOG SHOW.—The third show of the English Bulldog Club was held in London on the 20th ult. The prize list comprehended four classes, viz.: dogs and bitches over and under 40 pounds in weight, the first prize in each of the large classes being £5 5s. and the club's silver and bronze medal for second and third prizes. In the small classes a silver cup, value £5 5s., with silver and bronze medals, were offered for first, second and third prizes. This liberal prize list, says the *Live Stock Journal*, brought 60 entries, and, taken as a whole, it was perhaps the finest collection of bulldogs within the memory of any man living. In the class for dogs over 40 pounds there were 20 entries, and it is a fact worthy of notice that Mr. T. B. Burton's Crib (the finest bulldog living, and perhaps ever seen) is the author, directly and indirectly, of 16 out of the 20. The first prize was carried by Mr. T. Crincher's Slenclerman, a grand white dog, of the family "Donkey" group; he is long in the leg, and his tail is carried too high; his eyes resemble too much that of the bloodhound, and he stands on his legs instead of springing between them. The bitches in the large class numbered eight: Mr. H. Layton's Venom, bred by Mr. Berrie, came first; she is a bitch of rare quality and points, but with very bad ears. Class 3, under 40 pounds, presented eight, Captain F. Heworth's dogs were very justly taking first prize; this dog possesses extraordinary points, but even he is not faultless, being rather flat-sided, and his nose (which is very good) might be a little larger in proportion to his head, which, though well finished, lacks wrinkles, and has not the "day-back" so desirable in a bulldog; he also wants greater depth of chest, and he would be better if a little more out at shoulder. Class 4 was the largest in the show, there being 25 entries, and the prize was won by Mr. C. H. R. O'Brien's Rosalie, own sister to Doune Brae, and in many respects she is his superior. Mr. G. Kaper's Rosy Cross, second, is beautiful, but she has one faulty ear. Mr. W. H. John Smyth took third with Old Sugar, whose finest point is shortness of face.

SHEEP-DOG TRIALS.—The first meeting of the Northwestern Sheep-Dog Trial Association (open to the four counties of Westmoreland, Cumberland, Lancashire and the West Riding Yorkshire), was held on Barbon Fells, Westmoreland, last month, and appears to have been very successful. In fact, the working of the dogs was so interesting that we quote at length from our contemporary, the *Live Stock Journal*:

There was a large gathering of spectators, the weather being bright and fine, though very cold. The Countess of Beville and several other ladies were present, as were also the Marquis of Headfort, Lord Lonsdale, Lord Beville, etc. The "meet" was about two miles from Barbon station, on the London and Northwestern Railway. The road to Dent runs along a valley between the Barbon and Middleton Fells, and it was along this road that the spectators witnessed the trials. Some fifty yards in front of the space allotted to the spectators was placed a small sheep-pen, formed of open hurdles, having a 2 ft. Gin entrance, in which the dogs were required to bring and pen the sheep. Nearly a mile distant a reserve pen had been erected, in which 100 half-bred Scotch sheep were stored. At right angles to this was a smaller pen, into which three sheep for each trial were carried. At a given signal the three sheep were liberated on to the Fell, the man and the dog standing in the pen below. Then the owner instructed his dog to go up to the sheep, signalled it to drive them about a quarter of a mile along the breast of the Fell, take them round two flag-staffs, bring them down to the valley pen, and, assisted by himself, to place the three sheep in the pen. The shepherd, however, was not allowed to touch the sheep.

Underley Stakes, any age:

Dogs—1, Joseph Capstick, Howill (Hop), 4 years; 2, Robert Bracken, Howill (Climb), 6 years; 3, Michael Aikrigg, Ravenstonedale (Jack), 3 years.

Bitches—1, Martin Airey, Middleton (Flora), 3 years; 2, S. Downham, Sederberg (Fly), 6 years; 3, J. Winstler, Middleton (Bet), 3 years. Cup, R. Bracken's Climb, 6 years.

Mr. Scalfie's Brutus worked well and quietly to the pen, but after rounding the sheep, the sheep were driven through the spectators, and the dog was crossed out. Mr. Downham's Fly put in some beautiful preliminary work, driving in the sheep carefully to the pen. Mr. Tomlinson's Ned took his sheep a long detour, and worked fitfully. Mr. Airey's Flora went direct to her work, showed much sagacity and careful training. At the pen she worked beautifully, and penned her sheep in ten minutes. Mr. Downham's Laddie refused to ascend the pen, and several times, the sheep being Jack worked well at the commencement, but at the end of twelve minutes the sheep broke, and he was called off by the judges. Mr. Capstick's Hop opened very well, but missed the upper flag, secured the second, and displayed great sagacity and obedience to orders in the penning process, which was accomplished in fifteen minutes, the dog's beautiful working elicited much admiration. Mr. Airey's Brutus worked rather to his work, but arriving at the pen, he worked rather, and was called off. Mr. Winstler's Bet had some difficulty in getting on the track of the sheep, and was

called off at the end of thirteen minutes. Mr. Bracken's Climb went leisurely to his work, but as soon as he got to his sheep did some capital work, securing one of them in eight minutes, and the other two in ten minutes.

Underley Stakes (open to the district of the Association), any age:

Dogs—1, W. Eggleton, Penrith, (Teas), 5 years; 2, T. Harper, Sederberg (Bright), 24 years; 3, A. Cleasby, Sederberg (Mat), 34 years.

Bitches—1, Mr. Aikrigg, Kirkby Stephen (Fan), 2 years; 2, R. Atkinson, Bessendale (Gip), 6 years; 3, S. Downham, Uldale (Fly), 6 years. Cup—Dog: W. Eggleton (Teas). Bitch: Mr. Aikrigg (Fan).

Mr. Scambler's Duff worked too wildly, and failed to pen. Mr. Aikrigg's Fan accomplished a feat performed by no other during the day. As the sheep ran below the upper flag-post, her owner signalled her to take them back again, which she accomplished in beautiful style. She penned her sheep in 9½ minutes. Mr. Harper's Bright was wanted by a young dog. He went at a rapid pace to his sheep, and, having secured the upper flag, displayed some excellent manoeuvres, but failed to pen at the end of sixteen minutes. Mr. Eccleston's Tees went straight to his work, took the sheep carefully on the breast of the Fell, and penned in six minutes, amidst loud applause from the spectators. Mr. Atkinson's Gip, after she saw the sheep, went to her work in nice style, and penned two in twelve minutes. Mr. Cleasby's Mat went to the wrong side of the sheep, but soon recovered, and penned in ten minutes. Mr. Downham's Fly took her sheep almost to the top of the Fell, displaying some excellent working powers, but prolonging the trial. She penned one sheep in twelve minutes; at the end of sixteen minutes she was called off.

Lower Stakes (open to the district of the Association), any age not over eighteen months:

Dogs—1 and 2 withheld for lack of merit; 3, Peter Cummings, Howill (Snap) 17 months.

Bitches—1, Robert Huck, Kendal (Fly) 16½ months; 2, T. Stainton, Sederberg (Lassie), 17½ months; 3, prize withheld for lack of merit. Cup, T. Stainton's Lassie, bitch.

The young dogs were unfortunate in their trials in respect to weather, heavy showers of rain and sleet falling. Despite this, the winning bitch, Mr. Huck's Fly, made some of the best work of the day. She overcame the sheep a chance of breaking, and penned in 6 minutes. Mr. Cummings's Snap was not judiciously worked by his owner, who distracted him too much by a rapid accumulation of signals. Had this not been the case, we feel assured the dog would have taken first award. He failed to pen at the end of 13 minutes. Mr. Langstreth's Bob lost his sheep in the blinding rain, and as he failed to find his sheep he was called off. Mr. Stainton's Lassie was also unable to find her sheep at the opening, but ultimately penned in 7 minutes.

THE PITTSBURGH DOG SHOW—Pittsburgh, Pa., Jan. 15.—I see you announce the Pittsburgh Dog Show for the 8th of January for three days. It is incorrect, as their premium list issued to-day announces the poultry show for January 8 till the 13th inclusive, but the dog show dates are from the 13th to the 16th inclusive. The show has every indication of being a success. It is to be held in the new building, which is a better place could not be found. High on the bank of the Allegheny, it is well supplied with fresh air as could be desired. The premiums amount to nearly \$1,000, and consist for the most part in cash. Notable among the exceptions are a \$75 Parker gun, donated by Brown & Son, gunsmiths, for the best setter dog or bitch; also a handsome breech-loader for best setter dog or bitch; also a handsome silverware to the amount of \$50, donated by Walter E. Brown, engraver and jeweler. Have not heard who is to do the judging (a hankless labor, it seems, late ly).

AIRMAN.

TRAINING RETRIEVERS.

BUFFALO, Dec. 9, 1878.

EDITOR FOREST AND STREAM:

While hunting for ruffed grouse near Machias, Cattaugus County, I had, upon my return from a very successful day's sport, an opportunity to inspect two three-months old puppies, of a stock that was claimed by the owner to be the true English retriever breed. They were then at that age about the size of medium-sized, full grown cocker spaniels. One was a dark liver, of the peculiar shade only noticed in full bred cockers, while the other, a fair sister, was black and white, which seemed to me rather unusual. The coats of either betokened their being finely bred, as they were exceedingly glossy, with a slight tendency to curl. They were cooped up in the rear part of a barn, where they had commodious quarters and given now and then liberty to run about for exercise. Chas. Lyell, in his discussion upon inherited instincts, incidentally mentions the fact that a couple of retrievers of warranted breed, taken upon being taken out without first time, not only hunted fairly, but retrieved the first bird ever killed before them in most approved and handsome manner, and fully as well as could be expected of a first-class old and trained dog.

The behavior of these puppies recalled to my mind this passage in the works of the great geologist. Not only did they delight in picking up the bird, but they lay along the yard which bore some remote resemblance to a bird's nest, as dried up fragments of chicken wings, etc.—but they also retained their hold by carrying it firmly yet softly as long as I watched them, which must have been over a quarter of an hour. I have had ample experience in the training of young dogs, both setters and pointers, which made most excellent retrievers, so I do not remember of ever having seen so early a development of this valuable trait in such an extraordinary and pronounced manner. These dogs were then all ready, under systematic training, to develop another trait, which makes them doubly valuable in these rough and hilly parts of the country, all cut up with steep and almost inaccessible gulches—namely, not only to bark at birds when treed, but a very intelligent man in order to locate the bird, he fastens a long and fine string, such as a fish line. The light of it is thrown over the limb of any small tree of convenient size and shape, in such a manner that he may draw the bird quickly along the ground and hoist it up as swiftly before the dog as he can next taken to the vicinity of the apparatus, hid on, and when the dog finds himself checked in their endeavors to obtain the bird on account of his being

rapidly hoisted toward the overhanging limb, they set up a most violent barking, which they learn gradually to commence as soon as they see the bird standing along the ground, and later on, by scent only, which guides them to the bird they are allowed to see, although beyond reach. He who has worn out his clothing, boots and patience in pursuit of the ruffed grouse, the most wary and yet most royal of all game birds of the Northern States, will readily comprehend the saving of both time and maledictions by such valuable aids, and he is apt to find the capacious pockets of his hunting coat more useful after a day's hunt when no other game than partridge may be obtained, than by relying upon the success of his setter alone, the positive qualities of which are often set at defiance by the birds rising too far ahead. Nothing gives me more pleasure than a clean shot at a bird flying like an arrow across an intervening opening to the next thicket, and nothing next highest to this than a chance at least to make a miss. I have at times, however, used exceedingly plain English in black cedar swamps, when hearing, but not seeing, was the chief pleasure of the hunt, and I then have often wished for some brown, curly, eagerly-barking, never tired little four-footed sprite to aid me in my dilemma, and bag at least a brace of the many I hear whirring up from time to time.

DETROIT DOG SHOW.

DETROIT, Mich., Dec. 15, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN: Enclosed please find Special Prize List, for our forthcoming show. The number proves the great interest that is taken in this show. We hope to have a large entry from the East. Special provision will be made for all dogs sent by express. Mr. E. H. Gillman will give his supervision over all dogs that may be sent without their owners being present.

As many letters have been received asking if dogs will be allowed, for want of feather and condition, owing to being hunted all year, I beg to say a rule is specially made to give them due allowance.

Entries close 31st Dec.

Yours truly,

CHAS. LINCOLN, Supt.

[Probably Eastern exhibitors will be more ready to send entries when they have learned who has been appointed to judge.—Ed.]

SPECIAL PRIZE LIST.

No. 1.—M. S. Smith & Co., manufacturers of jewelry, etc., give a splendid silver cup, value \$30, for the best kennel of setters, to consist of not less than five, owned and exhibited by one person or kennel club.

No. 2.—J. N. Dodge, Esq., of Detroit, offers two dozen decoy ducks (weighted, anchored and strung) for the best English setter stud dog to be shown with two of his progeny.

No. 3.—Hon. Geo. C. Langdon, of Detroit, offers a handsome silver cup for the best English setter brood bitch, with two of her progeny under 8 months.

No. 4.—The Le Roy Shot Co. offer 125 lbs. of their celebrated tin shot for the best English setter brood bitch, with two of her progeny of any age.

No. 5.—The proprietors of the Russell House offer a splendid figure in bronze for the best native setter dog.

No. 6.—J. J. Snellingburg, of New Brighton, Iowa, offers a canvas suit and hat for the best native setter dog.

No. 7.—The Forest and Stream and Rod and Gun offers a handsome silver cup for the best English setter dog or bitch that has never won a first prize.

No. 8.—The Great Eastern Powder Co., through their agents, Messrs. Jno. E. Long & Co., offer a case of powder for the best brace of English setters.

No. 9.—Capt. Bogardus offers one of his patent glass ball traps for the best brace of setters to be shown with two of his progeny.

No. 10.—J. N. Dodge, Esq., offers two dozen decoy ducks (weighted, anchored and strung) for the best pointer stud dog to be shown with two of his progeny.

No. 11.—A. A. Holabird, of Valparaiso, Ind., offers one of his duck hunting suits for the best Irish setter puppy, native or imported, under 12 months.

No. 12.—Messrs. Parker Bros. offer one of their best breech-loaders for the best Gordon setter dog, a very valuable prize worth \$50.

No. 13.—The Batavia manufacturing Co., of Batavia, Ill., offer a Molee patent glass ball trap for the best Gordon setter brood bitch, to be shown with two of her progeny.

No. 14.—J. N. Dodge, Esq., offers two dozen decoy ducks (weighted, anchored and strung) for the best pointer stud dog to be shown with two of his progeny.

No. 15.—C. L. Mabley, of Detroit, offers a splendid smoking jacket for the best pointer brood bitch, to be shown with two of her progeny.

No. 16.—Geo. Paterson, Esq., manufacturer of decoy ducks, offers two dozen decoy ducks, nicely painted, etc., for the best brace of pointers, any age.

No. 17.—W. H. Goodrich, Grafton, Vt., offers one of his best handmade iron rods for the best brace of pointer puppies over six months.

No. 18.—The Columbus (Ohio) Kennel Club offers a fine pointer puppy for the best brace of pointers under six months.

No. 19.—The Le Roy Shot Co. offer 125 lbs. of their famous tin shot for the best collection of pointers, to consist of not less than five, to be owned and exhibited by one person or club.

No. 20.—A. A. Morgan, of Detroit, manufacturer of boots and shoes, offers a fine pair of hunting boots (winner to select from his case) for the best Irish or retriever water spaniel.

No. 21.—Lawrence Dewey, Esq., offers a box of the best Mocha (No. 25 lbs.) for the best spaniel in the show.

No. 22.—H. H. Hayes, Esq., offers a pair of silver paper rings, representing Rip Van Winkle and his dog, for the best cocker spaniel, dog or bitch.

No. 23.—The Great Shot Powder Co. offer a keg of their best powder for the best foxhound, dog or bitch.

No. 24.—Fred. Stenton, Esq., manufacturer of hats, etc., gives one of his best silk hats for the best harrier, dog or bitch.

No. 25.—The United Metallic Cartridge Co. offer 1,000 No. 12 paper shells and one dozen boxes (250 each) of No. 12 pink edge wads for the best brace of beagles that have never won a first prize.

No. 26.—Best beagle bitch, under 13 inches, with progeny, L. F. Dewey, Esq., offers the voice of a fine puppy by Burgess' Dred out of his belt on Moll.

No. 27.—Edward Macoun, the jeweler, offers a silver cup for the best beagle puppy under six months.

No. 28.—Geo. L. Angell offers a splendid picture, illustrating a sporting scene, for the best beagle, dog or bitch, under 1½ inches high.

No. 29.—Jno. P. Lovell & Sons, of Boston, give an elegant parlor rifle for the best fox terrier bitch with progeny.

No. 30.—The Great Shot Powder Co. offer a keg of their best powder for the best greyhound or Scotch deerhound.

No. 31.—Chas. A. Zimmerman, Esq., of St. Paul, offers a pair of his celebrated pictures, "The Tight Shell" and "Tying for a Dog," to be given to the best English setter bitch, to be shown with sucking progeny.

No. 32.—The United States Feed Mill offer a ¼ ton of corn for the best brace of horses and cattle to the best collie, dog or bitch.

No. 33.—Messrs. Leblanc & Merrill give a silver cup for the best setter puppy under six months.

No. 34.—Messrs. Barclay & Black offer a very handsome parlor rug for the best pet dog exhibited by a lady.

cutter they now too hastily condemn. The centre of gravity of the cutter is in the best position for all purposes, right at the load line. A great many popular misconceptions concerning the cutter are still in vogue, notably the current impression concerning her displacement being greatly in excess, and her above-water body, or spare buoyancy, considerably less than that of the sloop. To these and other errors, arising from a lack of the application of mathematics to yacht design, and the ready acceptance in consequence of pretentious and glib sounding, but generally meaningless, phrases of the knights of the thumb-rule, we will again recur at greater length when opportunity offers.

EVIDENCE FOR THE SLOOP.

New York, Nov. 25, 1878.

EDITOR FOREST AND STREAM:

That every one has a perfect right to build a cutter if he thinks he wants one I will not gainsay, but when any one says our sloop is unseaworthy I feel like screaming with poor Greeley, "Uli, Uli, villain, Uli!" To the proof." Our coast from Montank to Hatteras in the winter time, you will admit, is a tolerably bad one, and any one running it down continually from October to March can rely upon seeing some hard blows and rough water. Yet you will find our oyster sloops, such as Ellsworth's, the Rockaway boats, and those from the South Bay, come and go at all seasons, and the very nature of their business makes it imperative with them to go, and go quickly. With an intimate acquaintance with the majority of these boats I know of none drawing over 5 ft. loaded, and as a rule their draught is not over 4. Their rig is the sloop *pur et simple*, and they are all centreboarders. This to my mind shows that the sloop, properly built, rigged and handled, is without a peer for speed, handiness, comfort and ability. If you wish to prove it, just get one of the Rockaway skippers to give you a lift when they are going home some day with the wind S. E. and an ebb tide; and under these conditions you will find Coney Island point about as rough a spot as you will care to go around. As an old hand told me some two years ago, when I asked him if we were going to get to the Inlet, "If I can get round the point I can go to Bermuda." My word for it, you will have a better opinion of the sloop. (A good boat to try it in is *Orion*.) That *Vision* is no sea boat I admit, but one swallow don't make a summer any more than it makes a fellow drunk. *Gracie*, with proper treatment, is a good sea boat, though to my mind too big for that rig; but we have dozens of sloops, from *Midge's* 30 ft. to *Bunbury's* or *Orion's* 50, that can go in any company in any weather. As you have had some controversy about small Corinthians, let me call your attention to *Midge*—she was built by a friend of mine and yours—as embodying all the points sought for in a small boat. I have known her to work down the beach under two reefs when the sea was high enough to break from Duckbar to the point of beach at Rockaway, and not a patch of clear water in Fire Island Inlet. She is comfortable and roomy, as her owner and friends will testify; and as to speed, ask your friend Cary Smith how fast she is on the wind blowing a breeze and the water lumpy. Yet she is a sloop and a centreboarder—not built on the wave line or any other theory, but on the principle that you cannot get a good little boat without you have plenty of boat. The lines that are good for 30 ft. are not worth shucks for 40, and it is the overlooking of this important point that brings so many naval architects (?) to grief.

JACK CREW.

CHINA TO THE RESCUE.

Boston, Mass., Nov. 25, 1878.

EDITOR FOREST AND STREAM:

You have kindly said that your columns are open to all who may desire to advance ideas on the subject of deep-water yachting. I see that some of your correspondents have been pounding you with a heavy head sea, and I want to add my mite to the gale, by which we hope to shipwreck your theory. So let me have my say: I think that in the controversy now going on, most of your readers and the public are interested in solving the following problems:

1. How small a boat is it safe and proper for me to cruise outside with in summer weather without danger, and without carrying a crew?
2. What shall be the rig of my boat, so that myself and friend or brother can handle her ourselves in all weathers?
3. What is the best model for safety, combining speed?
1. A boat 30 ft. in length over all is sufficiently large for outside cruising, except in winter.
2. The rig should be a modification of the English cutter rig.
3. The model should be of the shallow, broad-beam style, with centreboard.

Every sailor knows the danger of an immense mainboom "taking charge of the quarter deck," and nothing perhaps is so frightful as to see this great stick of timber thrown skyward as the boat rolls to windward, when running almost dead before the wind; or if not cutting this angle, to see it plowing into the sea when she rolls to leeward. My first care would be to reduce the length of the mainboom, so as to make it perfectly manageable in all weathers, and small enough to be jibed in comparatively bad weather without endangering the boat.

To rig my centreboard, 30 ft. beam, with 12 ft. breadth of beam, I would place the mast in the same position as in the English cutter—45 of her length from forward at which point it can be pleasantly stayed, being so far aft as to be nearly in a line with the greatest beam of the boat. I would have nothing to do with bowsprit that rig, or topmasts that house or work on a Gunter's slide; but having reduced my mainsail by placing the mast so far aft, and having it so broadly stayed, I would see that the sail was made with two good reefs, and holes for a balance reef to lay to under in a summer gale if necessary.

I would have the bowsprit of good, solid timber, well fastened to the boat with martingale and stays. Three feet on to the bowsprit I would fasten the forestay from the mainmast head; to the end of the bowsprit I would lead another stay from the mainmast head, and on these two stays I would set two jibs—or jib and foresail, if you please—the outer jib to have pennants to work over the inner stay in going about. Outside of all this again,

the very extreme end of the bowsprit, should be fastened the topmast stay, upon which, in light weather, a jibtopail or balloon-jib might be set. The topmast should also be arranged so as to set a gafftopail in light weather.

Now what have we got? A boat that can be easily handled, free from all gill guys, with safe and compact sails. If you want to get under way, after hoisting the mainsail, run up the outer jib and east to starboard, or put as you may wish. When well under way and clear, up with the inner jib or foresail, and away you go. Remember that the foresails should work upon a traveler, as should the main sheet; and all in the world that you will have to attend to when close hauled and beating to windward will be the outer jib sheets—the other sails will take care of themselves. Should it come on to blow, in with the inner jib, and you will feel your boat relieved at once. If it still blows, lay the boat to, down jib and forel, it and clap a reef in the mainsail; then hoist up the foresail, and stand on your course. In very bad weather you have only to clap a second reef into the mainsail, and you are all snug; but if you should be caught in a regular snorer, your balanced reefed mainsail ought to enable you to lay to like a duck, the rest of your canvas being furled.

Now as to the centreboard: In unknown waters it acts as a lead, and gives notice of shallow water more perfectly than would be done by standing in the chains and "throwing the lead." The moment your board touches it is drawn up, and your boat that a moment before drew eight feet of water now only draws four, and you change your course, or go about and escape danger. There are several harbors in the neighborhood of this city notably situated—as Cut River—where, should it come on to blow from the eastward, a centreboard boat could find shelter at an hour's tide, while your deep-keel boat would be compelled to keep outside, and on a lee shore, too.

We laugh at the Chinese sometimes, although they have given us the mariner's compass, water-light compartments and the lee board, which is only our centreboard on the outside of the boat, and pulled up or let down on each tack on each side, and I cannot see why it could not be mechanically fastened so strong as to replace our centreboard, which now takes up all the room in our cabin. Its principle of action is exactly the same. Besides this, the Chinese know enough to bring all parts of the after leech of a sail to the wind, as well as the lower part, which we command by means of a boom. By small bamboos running across the sail at intervals, parallel to the boom, they are enabled to attach small sheets or vangs to each of these, and thus have a series of sheets up and down the after leech, drawing the upper part inboard as well as the foot. Besides this also, when they want to reef, they lower the sail into a series of standing brails, and the thing is done. Lowering away is all that is needed, and by means of the ballards one can reef the sail one inch or six feet, as may be desired.

Reef assured we have much yet to learn, and it is my ambition to own a 30 ft. boat rigged Chinese fashion, with a sail in one piece that will instantly brail, and the useful centreboard on the outside, and what you, Mr. Editor, will probably think extremely outrageous, the bows and stern "square-toed," as "Pod gers" calls the bows which he says "go outside all along the coast, and invariably outsize and outweather the round-bottomed craft." Such a boat shall I surely build "when my clipper comes in."

FEST.

Sea and River Fishing.

FISH IN SEASON FOR DECEMBER.

Black Bass, *Micropterus salmoides*; Pike or Pickerel, *Esox lucius*.
M. pallidus, Yellow Perch, *Perca flavescens*.
 Sea Bass, *Sciaenops ocellatus*, White Perch, *Morone americana*.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; smelts, 20 bluefish, 16; salmon, 35; mackerel, 20; shad, 60; white perch, 15; green turtle, 18; terrapin, 215 per dozen; frostfish, 8 cents; halibut, 18; haddock, 6; codfish, 6; blackfish, 15; flounders, 10; eels, 18; lobsters, 10; sheephead, 25; scallops, 81 per gallon; whitefish 15; pickerel, 12½; salmon trout, 18; black bass, 15; red-snapper, 18; hard crabs, \$3.50 per 100; soft crabs, \$1.50 per doz.

HOW TROUT TAKE A FLY.

Will those who maintain that trout sometimes, or at all times, flop the fly into their mouths with their tails, tell us whether they likewise flop the minnow, frog, worm, spoon or whatever other bait is trailed upon the surface. If not, why not? Why not the latter as well as the fly? Moreover, when a trout leaps clear of the water and happens to get hooked, is he ever hooked in the mouth? Is he not always hooked in the tail, or in other parts of the body, by the "wrist-knack." When trout do jump clear of the water, as they often do at evening, are they not then the most difficult to catch? The most certain to miss the fly? Then, if it be a fact, as asserted, that trout do frequently flop the fly (flop the fly, is good) into their mouths with their tails, what becomes of the real fact that so large a portion of their number are taken beneath the surface, and so few above it? Our diagram of last week was to show the impossibility of accomplishing the feat at all. The line of direct rise and the contact are supposed to be shown, immediately after which the trout turns tail and makes for the bottom, throwing his tail upwards as he descends.

The fish will succeed no better if he shoots clear out of

the water, turns a somersault (we were on the point of writing hand-spring), and falling to the water, hits the fly with his tail. If he hits it at all, he not only diminishes his chances of getting it into his mouth, but endangers the light tackle of the angler. We should not like to fish with the finest tackle if trout invariably took the fly in that way, and if the Beaverkill trout have that habit, we shall feel like declining our good friend's invitation to fish the stream. We will be content to see him fish.

Now, we have seen many other kinds of fish (mackerel for instance,) in the air by the hundred, at a time, in every possible curve and segment, and have "jiggered" them with a squid in the tail, and in every other part of the body excepting the mouth. Only those which took the bait fairly were hooked in the mouth. But salt mackerel are not fresh trout; and lest we get farther away from the subject, we pause here for the present.

✓

PHILADELPHIA, Dec. 10, 1878.

EDITOR FOREST AND STREAM:

Appropos of the method in which trout take the fly, a good deal of discussion necessarily goes on in such a sheet as yours between parties who have a measure of right on their side, and who, having seen part of the truth, think they have seen it all. I have captured trout with the fly for more years than I care to confess, and as it is the one sport which above all others delights me, I have tried to be observant of their habits and ways, and the result has been to impress me with this opinion: First, that trout do not ordinarily, by any device or movement, try to get the fly under the surface before they seize it; their power of rapid leaping upward in the water will enable them nearly always to cover with their mouths a fly on the surface, whether living or artificial. Second, I feel confident that there are exceptions to this rule, whether these occur because the trout does not know how to jump, or because of the particular fly proffered to him that he requires different treatment from the usual, or whether the state of the flow of the water on the surface seems to make him doubt if an assault with open mouth will be a success, or whether it is mere wantonness from exuberance of "feeling his oats," I don't undertake to decide. But I do say that I have in my time basketed sunfish which have slipped from my net under water before they seized it. I presume this movement is the same as the blow of the tail, for I do not see how otherwise it could be accomplished. On such occasions he gives about as much time for observation as it requires to wink one's eye. You can see the leap and move of his body, and your fly is under the surface before the hook has struck. One instance will live in my recollection. I was fishing on a clear mountain stream in Northern Pennsylvania, below a fall at a point where the fall where the water was full of rapid eddy and air bubbles. A beautiful trout rose; for three successive leaps he failed to seize the fly on account of the unsteady motion on the surface of the water. I halted, went to the bank, lit my duodean and smoked calmly for a quarter of an hour, at the end of which time I presented to him for the fourth time the winged devil. He came from the water with a rush that showed me his noble proportions, carried the fly down to a point just below his mouth, I feel sure, and the joyful tug came later when the fly was down some inches under the surface. He was a 16-inch, and one of the most beautifully marked trout I ever saw. My sum of the whole matter is that trout ordinarily take the fly on or near the surface with the onward rush of their leap; but that on some occasions, for reasons here known to themselves, they will take the fly under water before seizing it. No part of your valuable number more acceptable to me than the descriptions by intelligent observers of the habits of beasts, birds or fishes.

Joz.

EDITOR FOREST AND STREAM:

NEW YORK, Dec. 16, 1878.

Dear Sir—Your diagram on page 384 (last week's paper), is wrong; at least, it is not the way trout come out and strike the fly when they strike it with their tails and catch it in their mouths. If they struck from beneath with their tails you would be right, and undoubtedly they would knock the fly away. But they don't. The trout comes out of the water, turns his tail up in the air, his head apparently resting on the surface, and then he comes down, and with his head part of a capital G, and snipping the fly with his tail he flops the fly down to the surface of the water. Having struck the fly as described, he seems to reverse the action of his muscles, and with his head curved around from beneath (as I explicitly said in my former letter), in the opposite direction to the tail, and very like a capital G (here the head would be the lower right-hand corner of the letter), he shoots forward and takes the fly in his mouth. In this operation he is often aided by the tail. Trout frequently strike natural flies to the water in the same way. I have seen them do so. I cannot prove it. I do not possess an electric quickness of vision; but I have studied trout carefully, in their own haunts, with the lightest of tackle, and have taken many a basketful, always on a fly, for the last twenty-two consecutive trout seasons, and the trout have never given me a more deadly enemy than I have correctly remarked. I cannot tell how it might be with a fish-line all in a heap or coil on the surface of the water, as you suggest, because I don't throw my fly in that way. There are gentlemen enough who will read this who can prove that statement, I guess. And I think you are mistaken about it "not coming natural to the trout" to slap the fly into his mouth with the tail over his head, the trout that I have seen do it were trout, in their natural state, not domesticated on liver, etc.; and they were of various ages, but generally from seven to thirteen inches in length. And I can only wish that you would accept my oft-repeated invitation to go up with me to the Beaverkill and Willewence so you might, like Izaak of old, show me "fishing as good anglers fish." I'll show you fine trout, and maybe a few will turn somersaults for you. Yours truly,

Geo. W. Van Sicezen.

EDITOR FOREST AND STREAM:

Dear Sir—If you can spare the space I should like to have the chance to put in your excellent paper my ideas of how trout take a fly. As you are aware, I have made the painting of brook trout my study for several years, and have spent weeks and months watching their motions and habits; in addition to that, have fished for them more or less every season for twenty years past. I have lain on the banks of a trout stream by the hour watching their play, for they are very playful when not disturbed, and I have seen them hundreds of times taking natural flies, sometimes very deliberately and at others very quick, and I have yet to see them strike a fly with their tails, otherwise than in play, and very rarely then.

A trout on the feed, when it sees a fly fall on the water or come floating down the current, rises straight at it, takes it in his mouth and returns the downy turn, make what anglers call the swirl, and that is the moment to strike. On reaching his resting place he swallows his prey. If the fish suspects anything wrong in the bait or fly he blows or spits it from his mouth with considerable force. Once in a while a trout will jump clear out of the water in his eagerness to catch an attractive fly, and if he misses it repeat the jump a number of times. I could fill pages of queer circumstances connected with the feeding of trout, and I think all experienced anglers will agree with me when I say that the more one fishes for them the less certain one feels about their habits. The flies of one season are useless the next, the theories of last season are upset by the experience of this, and so on. Trout often miss the fly or become suspicious, and a quick strike will hook them foul as they turn to go down. I am afraid Mr. Prime's pen or theory cannot be sustained by any evidence. He brought the subject up at one of the meetings of the "Society for the Protection of Game," but, if I remember, the anglers present all differed with him.

W. HOLMES.

FISHING-ON-THE-HUDSON, Dec. 14, 1878.

EDITOR FOREST AND STREAM:

The discussion as to how a trout takes a fly, has in it some considerable interest. I have read Mr. Prime's very interesting book, "I Go-A-Fishing," and remember of his speaking of trout striking the fly with their tails before taking it. Mr. Van Sichen has seen them do it also. Probably owing to my less keenness of vision I never have, although I always thought my eye-sight was as good as the best. I have very frequently hooked trout and bass in the tail, and once hooked a trout in the tail when fishing with bait. In this case he might have tried to shovel the bait into his mouth with his tail, but as the water was very deep I could not say for a fact. I once hooked a pound trout in the tail while fishing the Luckawack stream in Ulster Co. He was in a pool, and I saw the motion of his tail, but he went for my fly, but he saw me too, I think, for he turned short and started for the bottom with the hook fast in his tail, but I don't think he had any idea of striking the fly, for he was evidently trying to get out of sight; and I think that if trout were in the habit of striking the fly with their tails there would be a good many more caught in that way. The editor gives the trout credit for being a bold biter, which he deserves, and Mr. Van Sichen thinks they are bold, but they are not, they are clear pools in low water, and has put grasshoppers, crickets and worms under their noses and they would not take them. I don't know what fish would under the same situation but a sunfish or minnow. I have always found that a trout could see me about as soon as I could see him along the stream, but a trout when he starts for a fly or bait and is not interfered with goes with a rush and strikes hard. Mr. Prime also states that he has seen a trout start from a point forty feet distant for a bait in the Penningswasset, and take it. This should be evidence enough that they are bold biters.

Yours truly,

FLAT FLAP.

EMIRA, N. Y., Dec. 14, 1878.

EDITOR FOREST AND STREAM:

Permit another lover of the gentle art to enter an opinion relative to the manner in which a trout takes a fly, particularly when he "takes it with his tail." I must corroborate the observations of your sprightly correspondent, Geo. W. Van Sichen, and state that I have seen trout strike both artificial flies with their tails. I doubt not that almost every angler has seen this performance. But I cannot say that the fly is knocked into the mouth of the trout, for you see that statement, to be verified, requires an acuity of vision not possessed by the subscriber. My impression has always been that the movement was intended to submerge the insect that it might the more readily be taken. Have you never seen a trout strike a fly lying in the water with his tail, and then, for an instant upon the surface of the water, then to disappear in a swirl made by the returning fish as he sucks him in? Eh? That performance is of such frequent occurrence that it certainly could not have escaped your notice. I have had this occur repeatedly during a day's fishing on the Lycoming to my artificial flies, occasionally capturing the sly gymnast by his caudal appendage, when he strikes was quick enough. By the way, he doesn't strike the fly in the manner illustrated by that double tailed fish in the last FOREST AND STREAM, but exactly the reverse of that. Flip him over the other way and make him strike downward, then you have his motion and the plan by which he captures his prey.

Piscatorially thine.

T. S. U.

ARE FISH NEAR-SIGHTED?

EDITOR FOREST AND STREAM:

We are led to believe by the investigations of anatomists that the organs of special sense in fishes are very imperfectly developed; but while this may be true in the main, as regards the special senses of smell, sense and touch, I am constrained to believe, from the observations of myself and many others, that fishes in general have the senses of sight and hearing developed in a much greater degree than is generally supposed. It is a popular idea that fish are necessarily near-sighted on account of the conformation of the eye, which is large, round and prominent; and the main argument adduced to support this theory is the readiness with which they will take an artificial fly, trolling spoon or other artificial bait which resembles in but slight degree the natural objects of food that they are intended to represent, if, indeed, they are intended to represent anything. It is very often the case that those anglers who are most certain of their theory that fish are near-sighted, stultify themselves by carrying a large and most varied assortment of artificial flies of all shapes and colors, in order to meet the "fastidious taste" of the fish that often refuse one pattern or color and rise eagerly to another, which could not be the fact were they so near-sighted as many believe. The consistency of these anglers would be more apparent if they would adopt Mr. Chubb's theory of the theory of artificial flies, and confine themselves exclusively to his three typical flies—brown, yellow and green back.

Now, I am not of those who believe that our brave game fish possess such extreme gullibility as to mistake an artificial lure for the genuine article upon the hypothesis of near-sightedness. My opinion founded upon numerous experiments, is that fishes see and hear as well in air as they do in water, and that the water is all practical purposes as the angler does through the medium of the atmosphere—the clearer and more rarified the medium, the clearer and greater the range of vision in both instances. In muddy or turbid waters the

sight of fishes is necessarily limited, as ours would be in hazy or foggy weather. It is neither fair nor logical to presume that fish in water ought to see objects in the atmosphere above, any clearer or plainer than we can perceive objects in the water while standing on the brink. We are altogether too prone to judge everything from our own standpoint, and to attribute to our own cleverness results that in all probability depend upon other and extraneous circumstances. Who of us could tell a skillfully tied artificial fly from a real one beneath the water, when its surface was ruffled by a brisk breeze, shadowed by drifting clouds, covered with the froth and suds of an eddy, or surmounted by the foam and bubbles of a rapid? Yet, there are those who contend, because fish fail to detect this difference through the same obstacles to clear vision, that they are of a verily near-sighted and easily fooled by the very poorest semblance of a fly or feathered nondescript; but let one of these persons try a cast of the best flies upon a bright, still day, when the water is perfectly clear and its surface like a mirror, and if he expects to get a rise under such conditions he himself must be very near-sighted indeed. On the other hand, any one who has seen a black bass dart like an arrow and seize a minnow swimming quietly thirty feet away, or a brook trout flash like a meteor for a dragon fly hovering near the water at the same distance, must admit that their visual powers are sufficient for all practical purposes.

I am well aware that scientists consider fish myopic or near-sighted; not, however, on account of excessive convexity of the cornea, as is popularly supposed, for it is an exploded theory in medical science that myopia depends necessarily upon this condition; indeed, in fishes the cornea is almost flat, while in birds of prey, which have a very extended range of vision, the cornea is quite convex. From the lack of analogy, from the great difference of construction of the ocular and auditory apparatus of fishes and terrestrial animals, and from the wide difference in the properties of the media of air and water, I am convinced that the organs of the special senses of sight and hearing in fishes are not well understood at the present day; and I am confident that future investigations will prove them to be possessed of much greater acuteness of vision and hearing than is now accorded them.

It is a well-known fact that fishes are attracted by any gay, bright or glittering object, such as a gaudy ring, a egleonnet, or a coin, and have deliberately swallowed such trinkets in the water. I have caught brook trout with watergreen and partridge berries, the bright scarlet color seeming to allure them, and I have even caught them with a naked bright fish hook; but all this does not prove that they were the victims of a myopic mistake, or that in their near-sightedness they mistook these various articles for something else; neither does it prove that they will grab at a trolling spoon, a bluefish snipe at a bone snipe, or Spanish mackerel seize a metal or pearl troll under the delusion that they are really choice shiners or delicate piscatorial tidbits. A camel, it is said, will bolt all sorts of substances, as metal, glass, stones, leather, etc., but when was his shortcomings attributed to short-sightedness? Our dogs will often refuse good, clean food and hunt up an old dry bone, a stone, an old shoe, or a stick, and will run the stick with delight, and even swallow them with evident gratification. Birds will peck at and swallow bright beads, colored threads, etc., and kittens will seize, claw and bite almost any moving small object; but these vagaries are attributed to the idiosyncracies of the animals mentioned, while in fishes they are ascribed to defective sight. Does a salmon or a shad at spawning-time seek out and ascend its native stream by instinct, smell or sight? It is very convenient, but not very satisfactory to give in instant credit for this truly wonderful faculty on the same principle that Coleridge accounts for the blindness of love.

"His eyes are in his mind."

But what are a fish's eyes for? According to our present knowledge they are to enable him to become "a snapper-up of unconsidered trifles" with hooks attached to them!

Now, as far as the artificial fly is concerned, when it is cast lightly upon a fretted surface, I think it is generally taken by a fish under the impression that it is a natural insect; but with regard to trolling spoons, bone snipes, Spanish mackerel, propellers, etc., and very often with regard to the artificial fly, I am of the opinion that they are taken through a spirit of mere bravado, curiosity or wantonness, and not with the idea that they are living objects of prey. They are seized by the fish because they are bright, attractive and in motion; not because they are hungry, but because they are in a biting mood; for we often find, nay, most always find, that fish so taken are already covered with fish, and that they are not seen—where the water was clear enough for observation—the bass seize his minnow through seemingly more caprice, and, instead of attempting to gorge it, would take it gingerly by the tail, toy with it, and finally eject it or spit it out, as it were; and this would be repeated several times in succession, or until the angler's patience became exhausted, when, while unjoining his rod, he would muse upon the waywardness of fish in general, and be convinced that Solomon never went a-fishing or he would have added another item to the four things too wonderful for his ken, or at least have substituted "the way of a fish with a bait," for the less puzzling proposition of "the way of a man with a maid."

EDITOR

STREAM:

You've all noticed how often a hungry fish will leap for your fly, regardless of warnings in sharp pricks of the hook, until at last he's laid away in your creel. I wasted much sympathy over fish I have caught with their jaws torn, thinking how they must have suffered; but when I caught a trout which had an old hook in his jaws, and later, one with a hook and nearly three feet of line attached, I felt easier, and more as if they had deserved it for their greediness. These fish were caught in a small stream, and therefore my chances of catching a fish previously hooked were not great. But in salt water, with the whole ocean before you, you will admit that the life chances are as slim as drawing the first prize in a lottery. A few years ago I was one of a fishing party on the smack *Guip*, Capt. George Harrison. One morning while casting off Shaganna Reef for codfish I fastened to a large one and succeeded in bringing him to the surface. The Captain stood by to take him, when away he went, with a new hook and six feet of line. I told the Captain I would know that fish again when I saw him. "Yes," he said, "when you see him you will." That night we lay off Port Folio, and the Captain told me that he had seen the fish on the south side of Long Island, and anchored a long distance off shore. Our lines were soon over, and almost the first fish I caught was the identical fish I lost on Shaganna Reef the day before, over twenty miles from our present fishing

grounds, with the same hook, with serving and finely filed point, and marked by his eye. I knew it well, I told this to one of our smacksmen here believing he would tell me, "I don't expect me to swallow that;" but he replied, "Yes! once I was fishing off Block Island; didn't have much luck; lost a heavy hook and some feet of line; thought I'd try a run down to Coxen's Ledge, when I'll be d—d if I didn't catch that same fish and he had my gear in his jaw." Another says, "I fell in with some swifish off Montank and got a couple and put the iron into a big one, but it tore out; the iron struck his back and cut it in two parts, and I looked pretty ragged. The next day we went off Block Island and I saw the same fish, and again off No Man's Land, and when I got to Montank I saw him again! I met the same fellow off the Cape, and finally ran afoul of him off Portland, where I got him. He was the same fish, if I am any judge, which I struck and lost off Montank, and his snail hadn't healed! It is well known that whales have been killed, having iron in them marked with vessel's name, years after thousands of miles from the spot where they were first struck.

THE YACHTSMAN'S HANDY BOOK. By W. H. Rosser. Chas. Wilson, 157 Leadenhall st., London, E. C., England.

As a rule, there is no branch of yachting less understood or appreciated than the science of navigation. An elementary work touching only upon such portions of the science as are really necessary and within the comprehension of an ordinary education, is, therefore, a book that is sure to be welcomed by the student who desires to acquire familiarity with his favorite sport in all its different phases. Such a book is the one now under notice. Prepared expressly for the use of amateurs by writers who are familiar with their needs and capabilities, the text has been confined strictly to the solution of a "day's work," other valuable information being incidentally incorporated wherever needed. We admire the system and arrangement throughout the book, and beginners will find the care taken in this regard a material help in their mastering what is too often considered as purely abstruse and of little practical value. The leading chapter enters upon the arithmetical of navigation. In it the relations of degrees, minutes and seconds of arc and time are explained. The conversion of time or hour angles into arc is then followed, with an elucidation of the scales employed. The compass, its variations, correction of courses to true courses; leeway and currents, and allowances for same; the log, common and patent, are all taken up in succession, and their working laid bare in plain, terse language, which can be understood almost for the trouble of reading. The next division treats of the "sailings" and working out a ship's position at sea by "inspection" or rules of thumb. But for purpose the construction of traverse tables is fully gone into, and departure and difference of latitude entered upon; and then a sample of a full "day's work" is given. For practical purposes the use of the chart is considered. Beyond this the taking of observations of heavenly bodies receives attention, including, first, a description of the construction and handling of the sextant, and the manner of taking an altitude, tides, time of high water, and magnetism of ships; and next, the method of finding latitude by meridian altitude, longitude by chronometer and sun's altitude, azimuths and amplitudes, the latter two for correcting the compass. In addition to this, some very handy and useful brief rules in navigation, the working of logarithms, and much other interesting matter is included in this volume, which, we need hardly add, should be found aboard every yacht whose owner lays claim to being a thorough yachtsman. Many a leisure hour can be profitably spent in its perusal; the interest will hardly flag, for the book has been so written as to make an easy and agreeable study out of what in less able hands would have become a deauntory mixture. Not the least valuable feature in this work is the International Code, with colored flags, and the Semaphore and boat signals which have been appended. These and the International Steering and Sailing Rules, and a catechism of fore-and-aft seamanship, serve to make the book very complete—and all within the size of a volume of a hundred pages. The fore-and-aft seamanship has also been published in the form of a separate pamphlet. It would do good to have it generally distributed among yachtmen's crews, who might pick up valuable points in the art of sailing from it. In the latter form it includes an explanation of the weather-glass for north latitudes and signs of the weather.

CRUISE OF THE ORION. By R. T. McMullen. Chas. Wilson, 157 Leadenhall st., London, E. C., England.

As the question of "Cutter vs. Sloop" is now agitating the yachting public, all information of a reliable character concerning the actual doings of the English cutter will be found of deep interest to amateurs on this side of the Atlantic. In the little volume now before us we have a well written account of a cruise in a twenty-ton yawl, made by the author in 1877, from London to Cherbourg and return. Starting with two hands before the mast, he was obliged to dismiss them in France on account of bad behavior, and there formed the plan of sailing the *Orion* home again single handed. How this was done, the work it entailed, and the successful ending of the undertaking, Mr. McMullen describes in a vivid and minute manner which carries the reader himself aboard the yawl, and makes him feel as though he were actually present upon the occasion. The author also branches off into a consideration of many other things intimately connected with a sailor's life; and though in some respects the reader may differ from him, especially in the relation of labor and capital, or employer and employee—master and servant, as they are still considered in England—the reflections of the lone cruiser will command attention. The chapter on lighthouses is one which cannot fail to elicit warm approval, and is one to which we call the officials in charge of our lighthouse system, as containing a great many valuable and exceedingly practical suggestions concerning the modification of the electric light as at present in use on foreign coasts. As we will sooner or later take to that light ourselves, it is well that all information bearing upon the subject should receive consideration; and from Mr. McMullen's book we conclude that few would be better able to give a clear exposition of the needs of small coasting craft in this direction. To our yachting readers the final chapter on small yachts will not be the least interesting, especially now that the cruising spirit is abroad to a greater degree than heretofore.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 3532.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 19, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

CHILDREN'S AID SOCIETY.—This society during the twenty-five years of its existence has been filling a most commendable mission, the value of which may be inferred from the work for the past year, in which alone there were in their lodging houses, 14,234 different boys and girls; 264,045 meals and 198,187 lodgings were supplied. In the twenty day and twelve evening schools were 8,616 children, who were taught, and partly fed and clothed (500,094 meals were supplied); 3,818 were sent to homes, mainly in the West; 2,370 were aided with food, medicine, etc., through the "Sick Children's Mission"; 2,356 children enjoyed the benefits of the "Seaside Home" (averaging about 300 per week); 628 girls have been instructed in the use of the sewing machine in the girls' lodging house and in the industrial schools. There have been 8,353 orphans in the lodging houses. \$7,149.41 have been deposited in the Penny Savings Banks. Total number under charge of the society during the year was, 31,906. We heartily commend the society and its aims to our readers. Gifts of money, food and clothing are acceptable, not only at this Christmas season of the year, but always, and should be sent to O. L. Brace, Secy. Children's Aid Society, 19 E. Fourth st., New York.

CHRISTMAS GREENS FOR THE HOSPITALS.—The ladies of the New York Flower Mission, whose admirable work we have already described at some length, propose this year to decorate with evergreens the city hospitals. The rooms of the Mission, 239 Fourth avenue, will be open all day to-morrow for the reception of evergreens, autumn leaves, grasses, berries, ferns and all the other decorations which make glad the Christmas days. These contributions, which may be very trifling to the giver, are joyfully received and appreciated.

—The Manhattan Turtle Club, of New York, held its eighth anniversary last week at the Knickerbocker Cottage, 454-8 Sixth avenue, in which the aldermen got the best of the soup thanks to Steward Fowler. The club's ball takes place Jan. 29, '79.

CONSERVATIVE TRADE AND ITS RESULTS.

NOTHING is so thoroughly characteristic of our maritime interests as the narrow conservatism which has ruled supreme ever since the decline of the ship-building and the foreign commerce of this country set in some eighteen years ago. While Great Britain was pushing the advantages which the change from wood to iron and cheap labor gave her before our war broke out, we, on the contrary, retired into our shell, and as yet have not again come forth. But for the efforts of the few iron yards on the Delaware to proclaim to the world the fact that we can and do build as cheap as any other nation, it would perhaps forever have remained a secret, known only to the few, that we build any vessels at all. Even among the iron men but two yards—those at Chester and at Wilmington—make known their business and capacity to the outside world at large, through the means of liberal advertising and the pushing of their wares. The natural result has followed. These two yards have stepped in and snatched from other older establishments the cream of the business, and they now launch three vessels to every one built by the sleepy proprietors of half a dozen other yards most favorably located on the banks of the future American Clyde. These latter eke out a commercial existence, which hangs between life and death; they vegetate on stray orders, few and far between; they complain of dull times and have not the sagacity to see the true cause of their limited patronage.

If our Eastern ship-builders—those of Belfast, Bath and Boston—would "blow their own horn" and let the public know that in Maine or Massachusetts fine Al wooden ships can be built better and cheaper than anywhere else, they might secure some of the patronage that now finds its way to Canada, to Sweden and to the Baltic Maine—yes, even back to England's shores, the very wood they use being sent from here. English ships and English inspection has been written up, advertised and pushed in every conceivable manner, until now the good American patriot can hardly convince himself of our ability to compete, and begins to cry aloud for "reform" in our registry laws. He wants to buy cheap ships abroad. Do our readers realize what this means? Do the wooden men of the East and the iron men of Pennsylvania know the consequences of the tampering with the registry laws as they stand? The move to "free" our commerce means foreign ships and the entire extinction of shipping interests in America, the wiping off the sea of our ensign, the closing of every busy yard on our shores, and the return upon public charity or public care of the thousands that now find employment in the construction of vessels, casual though their work may be.

If such a change should be made, the first to feel the pinch of want will be the hardy set of ship-carpenters in New England and the skilled men of Philadelphia, Chester and Wilmington, and the financial crash of the capitalists whose fortunes are sunk in plant and tool will not be long in following. But who will be to blame? None but the very ship-builders themselves, for they are without doubt the slowest and most short-sighted of business men. Strange that in our great country of restless energy and bustling drive, a community should still exist, which, in the barclane methods, the slothful benightedness, the stupid conservatism of its enterprise, or lack of enterprise, and the narrowness and selfishness of its views, would carry off the palm for decay and lassitude in comparison with any business concern in Persia or the Steppes of Tartary!

Though the drafting offices and the engineers' departments are filled with talent of which no mechanic need be ashamed, not a word do we ever see in print concerning the doings at our yards. Ships may be launched, the people hardly know where, a three-line notice in some local organ with a circulation of three, dismisses the whole subject as unworthy further attention; and, though another fine vessel may have been added to our fleet, though her model and rig may embody wisdom, talent, genius and beauty by the ton, no one ever learns the fact, nor does any one seem to care. The owners, builders and sailors belong to the class of limited energy we have referred to; from them nothing can be learned, nothing can be hoped; the lay press is not competent to discharge the duties of a technical critic, and so the false impression gets abroad: we cannot build ships, we cannot sail ships, we cannot own ships. And the average American, thoroughly in the dark about the true condition of things, in his last extremity appeals to Congress, and Congress, gored to something desperate by the free trade sophistries of would-be Britains, born against their will within the fair lands of the Republic, seriously thinks of ignominiously retiring the Stars and Stripes from the seas and hoisting in its stead the colors of an alien and a rival!

In the same class of conservatives with ship builders and owners the American yacht builder still belongs. Some honorable exceptions there are, it is true, but as a class the yacht builder is as blind to his interests as ever a person can be. He is thoroughly contrifed in the range of his reputation, and lives off the crumbs the fickle winds of popular favor may happen to blow his way. He makes no noise in the world, neither does he nor his intelligent friend waste time or money in laying before the general public his peculiar talent and fitness for the specialty he has chosen as the source of his livelihood. Generally a rotten ship, a tumble-down shanty for a shop, some primitive tools and a blisful ignorance of the scientific facts underlying his profession seem to be the acme

of his ambition, and to nail together a boat or two every season is the highest goal of business success he craves. The idea that by fully publishing his successes, his facilities for repeating the same, his location, the wares he can offer to those in search for such goods; that by stirring himself and keeping a weather-eye open to all avenues of increased fame; that by making himself heard and his influence felt throughout the community, he can surely, if slowly, attract to his vicinity a vast amount of business that now strays all along the coast and falls to the hands of many men incompetent to perform their tasks; in short, that by well-laid plans, he can rise to success, can climb above dull routine mediocrity, has never yet entered into the head of a single yacht builder in America.

One thing, and only one, as heretofore been against him. No periodical on this side of the Atlantic had made itself felt among the yachting fraternity as the organ of their particular sport, and the thousands of amateur followers of the sea took in what they could find in the way of yachting news and instruction in small dribbets through the means of numerous incomplete and precarious sources. The builder's pocket-book was seldom long enough to put forth in all these mediums his card to the public, and was vainly compelled to trust to good luck for an inquiry falling his way. But this grievance, however well founded in days gone by, he cannot now aver in extenuation of the absence of business tact in his operations. Since the FOREST AND STREAM has taken the subject in hand, and in one season swung itself up to the head of the list, leaving all competitors so far astern as to be out of the race, and since this journal now has a monopoly of the yachting interests of this country and Canada, from the Race to the Keys, it behooves all parties who are connected with the rapidly growing needs and desires of this pastime to give us that material support which we have a right to expect and which we think we have fairly earned by hard work in the advocacy and the resulting increased popularity of yachting among the masses. There is a great field before the builder and a flush time coming. He who does not stand in his own light, but follows out the course here indicated and avails himself of the recognized means of placing before the yachting men his ability to construct cheaply and well, will ere long feel the beneficial effects resulting from a liberal and at the same time judicious use of printers' ink. It was printers' ink that made Barnum—he will tell you so himself—it is nothing but printers' ink which makes the success of any honest work. The yacht builder who fails to make a note of this may one day learn to his sorrow the reason why his neighbor has his yard full of frames going up like the trees in the forest, while his own name is unknown to fame and the public alike.

The FOREST AND STREAM is the only recognized yachtsman's journal in America. It is accepted as indisputable authority at home and abroad; it is quoted by all in this and in foreign lands, it goes into the hands of every lover of the sport, and is seen in all places where yachtsmen most do congregate. We refer with pride to our columns in the past, replete with matter, useful and instructive as well as of interest to all concerned, and we can promise a continuation in the same strain in the future. To our many friends who have so readily contributed to our success, and who have shown their appreciation of our efforts to cater to their wants through the liberal support accorded, we return our best thanks and wish them all a merry Christmas, and what they probably relish more, an open and an early spring.

SPARROWS AND SKYLARKS.

A CORRESPONDENT, "Corvin," favored us with a communication on the first subject in our last week's issue. Believing that our readers may be interested in the method by which these brown British invaders captured our country, we give the following history of the proceeding: In the year 1846, Thomas Woodcock, Esq., the president of the Natural History Society of Brooklyn, L. I., brought over from England with him many specimens of the field birds of that country. The pairing season in the south of England being two months earlier than in this latitude (New York), he also purchased large numbers of eggs, which, on his arrival, were duly placed in the nests of our own little warblers by boys hired for that purpose. Among these were several sparrows and their eggs; and, since then, more have been imported by order of the Park Commissioners of New York.

The consequences of Mr. Woodcock's efforts were that, in the ensuing season, not only sparrows, but goldfinches, linnets, bullfinches, etc., were to be seen at Greenwood and in the suburbs of Brooklyn. At the Wallabout, then open fields, a colony of English skylarks was successfully established, and wintered two seasons.

In the spring of 1847, the Brooklyn Advertiser, a paper then published by Mr. Lee, contained an allusion to the circumstance last mentioned, which is here inserted verbatim:

THE HUMBLE APPEAL OF A COLONY OF BRITISH SKYLARKS TO THE SPORTSMEN OF NEW YORK AND BROOKLYN. SUNG AT THE WALLABOUT ON THE FIRST OF MAY, 1847, TEN MINUTES BEFORE SUNRISE:

Awake! 'Tis morning prime!
Ligh on a broken clime,
From an air-built crag, his crimson flag
Our monarch's waving proud:
Then list to the cheering calls
Ascend the skies, and sing,
His herald's we, with minstrel glee,
To usher in our King!

Chorus—Mount, mount the azure heights,
Our carol is begun;

Hail to the dawn of early morn,
Hail to the rising sun!
Far from our native land,
O'er stormy ocean's vast,
We're brought no trumpet but a peaceful pipe,
Which sounds no note of war.
Then list our carol light,
Nor seek to do us wrong;
In us you see no enemy,
The plowmen of song!
If, in its infant state,
Our colony you shield,
We'll pay our thanks in after years
From many a fertile field.
Manhattan's maids shall hear
Our tidely warbled strain:
Our tales of love, by dell and grove,
Shall cheer the western swain!
Now, at the eastern gate
Our monarch's coursers prance;
We know his heralds' chariot wheels,
We know his golden glance,
No daggling wings are ours,
Our voices clear and sweet,
And soaring high, from earth to sky,
'Tis thus our king we greet!
Chorus—Mount, mount the azure heights,
Our carol is begun;
Hail to the dawn of rosy morn,
Hail to the rising sun!

It may also interest our readers to know that the above beautiful poem was revised by William Henry Herbert. The author of it is Mr. R. W. Hume, of Long Island City, who was for a considerable time engaged with Mr. W. H. Herbert in the instruction of youth at the Rev. R. T. Hindnot's school in Bloomingdale, who testifies to the correctness of the above statement.

It is a melancholy pity that the design to colonize the skylark, the finest day songster of Europe, was not then accomplished. But, unquestionably, were the attempt made in southern New Jersey or Maryland it could hardly fail to prove successful. Unlike the sparrow, against which certain charges are brought, the skylark is known everywhere as the farmer's friend. Who will cover himself with fame by the importation of some of these unparalleled warblers, and, by following our suggestion, raise to his name a pyramid of song as high as heaven and as enduring as nature?

THE TWENTY-THIRD REGIMENT BALL.—The first ball this season of the Twenty-third Regiment, after an interval of six months, was held last Tuesday evening at the Brooklyn Academy of Music, which was suitably and handsomely decorated with gas jets, flowers, portraits and regimental battle-flags. These Twenty-third Regiment receptions are among the most agreeable social features of Brooklyn, and are always looked forward to with very pleasurable anticipation; without being pretentiously exclusive, they are most happy in their management, and uniformly prove the most successful events of the Brooklyn season. The attendance the other evening was very large and represented, not only the society of Brooklyn, but also nearly all the regiments of New York and Jersey City. The great capacity of the Academy was severely taxed by a brilliant gathering. The evening was one of thorough enjoyment, and the order of dancing was not finished until two o'clock.

"Dr. Carver, the marksman, broke, with his rifle, one thousand glass balls in an hour at Atlanta, Ga., last Friday."

Statements of remarkable feats with rifle and shot-gun, not only by Carver and Bogardus, but by some amateurs, have been made so frequently the past year that they no longer excite surprise or comment. Such feats are possible, and the public seems content in recognizing and accepting the fact. Yet, consider how marvellous they are! Contemplate the skill, dexterity, unvarying accuracy of aim, nerve, composure and endurance required to accomplish them. Does the reader realize the very brief measure of time allotted to each discharge of the rifle when 1,000 hits are scored in 3,600 seconds? Of course some balls are missed, and these misses reduce the time allowed for each shot to a minimum of 3½ seconds. It would take some potters the whole of this time merely to pull two triggers of an ordinary gun; but the professional shooter loads, extracts, cocks, aims and pulls the trigger, all in three seconds and a half! How quick and accurate his aim must be, scarcely ever to miss! What chance would a party to a duel have with such men, firing at the word? Coolness! Crowds of spectators pressing, people asking questions, careless persons pushing directly into the line of fire, directions to be given to attendants, appeals to the constables to preserve order and keep the crowd back—all these obstacles and interruptions interpose to disconcert the aim, and yet the scores go on: hit—hit; hit—hit; smash—smash; break—break; *one thousand and more times in a single hour*. Why, the arms of the amateur would become so weak in half that time that they would hang powerless by his side, the muscles would swell and inflame, and the sufferer have to be fed with a spoon for a week. Then think of the pounding and percussion upon the deltoid and biceps muscles, and the chest! What ordinary frame could endure it? But these marvellous athletes, Carver and Bogardus, have not only submitted to the hammering for an hour, but Carver has stood it for 7 hours, 35 minutes and 20 seconds (July 13, 1878), and Bogardus for 6 hours, 13 minutes and 45 seconds (Jan. 3, 1878). Both of the heroes are still alive and enjoying the pursuit of wealth and happiness. Of fame each has his "suffi-

ciency full," unless peradventure they step their feet into the realm of miracles and impossibilities.

Hereafter, when our readers see mention made of these performances let them think on what we have written; then their estimate of the gentlemen will be much increased.

GAME PROTECTION

KILL THE CATS.—In another column a Maryland reader tells us of a colony of wild house cats. It is not at all unusual for the domestic cat to revert to a wild state. English gamekeepers are almost powerless to stay the ravages of these animals in the preserves. Our correspondent should have killed the animals he discovered. They are very destructive to all small game. This leads us to say a word about the cat, which we believe to be a pest to sportsman and farmer alike. One cat will destroy more birds in a season than a dozen boys with shot-guns, and no fear of the game laws. Every farm has from one to a dozen cats, and just in proportion to their numbers will the orchards be full of worm nests, the fields with grasshoppers, and everything covered with caterpillars. We cannot have cats and insectivorous birds. They cannot exist together. We are convinced that these sleek pets of the farm are altogether too expensive. Central Park night patrols carry revolvers with which to shoot the hordes of cats nightly infesting the Park to prey upon the birds and fowl. If the farmer should follow their example and kill the cats of the neighborhood he would abundantly repaid for the expenditure of powder by flocks of worm-destroying birds, and fairer harvests. The cat as a bird destroyer is utterly bad. As such, kill it.

POUND NETS AND POOR FISHES.—*Barnegat, Dec. 19.*—Editor *Forest and Stream*: I can endorse Mr. Roosevelt's article on pound nets in your issue of Nov. 23. (That is necessary of immediate attention to these destructive engines, and our State legislators should see the necessity of prompt action. It will be a hard fight in some of our Atlantic States, yet perseverance will accomplish it. I have been through the mill—I write from six weeks' experience in our State Capitol. Since the law passed last winter in this State, although not as stringent as we desired, the result has been the past season the best fishing we have had for years, and letters received from collaborators in the cause in other countries on our coast admit the same. We apprehend no trouble in securing all the legislation we want next winter for fish preservation.

Will not Mr. Roosevelt favor us in a future number with his views on purse nets for menhaden, and explain the effect of their extermination on bluefish? This is the first fall my recollection of ten years that the menhaden and bluefish have not approached our coast. We attribute it to the increased use of purse-net fishing. If you destroy the bluefish food will they not seek other waters?

POUND NETS.—*Mr. Editor*: In your issue of the 5th inst. appeared an excellent article on this subject, of which too much cannot be said in opposition. A large portion of our fresh water food fish comes from the great lakes, and if these are not protected they will certainly cease to yield their harvest to hungry humanity. Take any of the many important bays that indent their shores, and you will find them well barricaded by these instruments of destruction. The proprietors of many of the large fish houses on the coast encourage many of the men in their work of destruction, and while there is no law to prevent, can we wonder why they look out for themselves to the detriment of their fellow-men. To show ourselves to the detriment of their fellow-men, I will relate an instance that came under my observation a few years ago. In company with two others I was fishing on Black River Bay (adjacent to Lado Ontario). It was in the middle of the forenoon, when rowing along we struck a couple of pike, and inside of a few minutes saw another party take three. We did not stop to fish more, but kept on our way to camp. In the afternoon the aforesaid party came in with a fine lot of fish, mostly pike and bass. After a few hours we returned from the village (Dexter) accompanied by a guide, who is employed by an ex-Senator from Oneida County in all his fishing excursions in that vicinity. When they returned they informed us a school of fish had struck in on the bar. By daylight next morning the aforesaid guide appeared, accompanied by a companion of congenial taste rowing a boat, the stern of which was filled with a net, which they at once placed across the bar. This guide is the individual who a few years ago discovered the mass of bullheads in Muscalonge Creek when cutting holes through the ice to set nets. But that was not what he said he was cutting the holes for, according to the accounts given in the papers at the time. It is such men as this who are doing the mischief, and unless a law is passed soon to either stop or modify it, one of our greatest blessings will be destroyed by an avaricious and ignorant few to the misfortune of themselves and multitudes of others. In opposition to our Legislature will take hold of the matter, I dedicate this epistle to them, and remain yours, hopefully,

H. O. KIRK, Dexter.

MAINE.—Bath has a new game society, known as the Sagadahoc County Association for the Protection of Fish and Game. The officers are: Dr. C. A. Packard, President; James H. Millay and A. G. Goud, Vice-Presidents; Charles H. Greenleaf, Secretary; George E. Newman, Treasurer; S. W. Carr, George E. Whitney, G. D. Willis, George H. Nichols, E. B. Mayberry, Executive Committee. The new society promises to accomplish a long-needed protective work.

NEW YORK.—Shandaken, Ulster County, is to have a game protective club. The members of this association will be mainly residents of the township—farmers, etc.—who wish to maintain and increase their stock of fish and game, and their natural resources are such as to amply require vigorous protection.

—On the 11th of December, Samuel Mason, David B. Clark and Frank Haines, of Pine Hollow, Gloucester Co., N. J., were arrested on complaint of an officer of the West Jersey Game Protective Society, and taken before Magistrate Charles Young, of Newfield, for snooding and trapping quail and ruffed grouse. Having been found guilty, and not paying the fines imposed, they were committed to the county jail at Woodbury for twenty days each. This association is very energetic, and its efforts deserve approval.

FIRST PROTECTION IN TENNESSEE.—*Nashville, Dec. 13.*—I have just had an interview with Col. George R. Akers, one of the Fish Commissioners of Tennessee, with regard to the chances of the next Legislature, which is to meet here on the 6th of January, 1879, taking any action in passing such laws as are necessary for the protection of fish in our many streams. He informs me that our present Governor Porter, whose time expires this year, in his message will strongly recommend the passage of such laws, and that he has been assured by friends of the Governor-elect, Marks, that he will indorse in his coming message all that Governor Porter may say. Colonel Akers is under the impression, from what he knows from different sources, that the laws will certainly be passed. J. D. H.

MICHIGAN STATE SPORTSMEN'S ASSOCIATION.—The annual convention is set down for Jan. 21, 22 and 23.

THE FISH OF THE ST. LAWRENCE.—Mr. R. H. Kilby, President of the Fish and Game Protection Club of the Province of Quebec, has called our attention to the following circular issued by his society, and which is to be presented to the Minister of Marine and Fisheries at Ottawa. The subject is an important one, and justly demands the attention of the Montreal society. It is to be hoped that interested game protective societies in the State of New York will take suitable action for seconding the Canadians in their efforts to preserve the young fish of the St. Lawrence. The petition reads as follows:

MONTREAL, December, 1878.

To the Hon. the Minister of Marine and Fisheries:

We, the undersigned, dealers, sportsmen, fishermen, and members of the Fish and Game Protection Club of the Province of Quebec, having noticed that the food supply, in the form of bass, dore and muskunge, furnished by the St. Lawrence and Ottawa Rivers, has year by year been diminishing in quantity at an alarming rate, and believing that if certain measures be at once instituted and scrupulously carried out the rivers alluded to will, in a few years' time, yield as much as they have done in the past, hereby respectfully submit our views, and pray that you will take them into your consideration:

1. To your petitioners proof does not seem wanting that the laws affecting the taking of these species of fish, at present on the Statute Book, are but little observed; fish being caught at prohibited times, and, in some instances, kept alive in boxes or pounds to evade the laws until the season opens.

2. It appears to your petitioners that the most destructive practice of all is the capture of fish by means of nets during the spawning season and in contiguous to the entrance of certain small streams which may be termed breeding rivers; and should this practice be persisted in your petitioners feel convinced that one inevitable result will follow, viz.: our large rivers will speedily and completely be depleted of the fish named.

Your petitioners would also humbly suggest that the following rivers be preserved as "breeding rivers," and absolutely closed against all netting, not only in the streams themselves, but within three-quarters of a mile of the entrances thereto, viz., the Chateaugay, Beaudette, Salmon River and North River; and, also, that such steps be taken to enforce the laws as will effectually put a stop to the netting of fish during the breeding season, in or near to the other tributaries of the St. Lawrence and Ottawa Rivers, notable among which are the River St. Louis, Riviere Rouge and the Rigaud.

That to enable your Department, as well as the members of the club, to have a more perfect knowledge and supervision of the net fishers it is desirable the law be so further amended that a list of all licences granted for nets, to be used in the Province of Quebec, be forwarded to the Secretary of the Fish and Game Protection Club at Montreal.

Your petitioners, moreover, humbly pray that—as these species of fish ordinarily spawn so nearly about the same time, as they swim in the same waters and can be caught by better means than the net character—the laws regulating their capture be the same for all; and would recommend that the close season for rod and line fishing commence April 1 and terminate May 28, and for net fishing to commence April 1 and terminate June 15.

CLOSE SEASONS FOR FISH AND GAME.

In a majority of the States the close seasons for everything but wild fowl commence on January 1. For the benefit of our readers we reprint in this issue a revised table of close seasons.

ALABAMA.—Deer, April 15 September 15; fowl, April 1 to October 1; quail, April 1 to October 1; wild turkey, April 1 to September 15. These provisions relate only to the counties of Mobile, Choctaw, Monroe, Clarke, Washington, Baldwin, Wilcox, Lowndes, Sumter, Escambia, Hale, Dallas, Montgomery and Greene.

CALIFORNIA.—Salmon, August 1 to September 15; salmon trout, November 1 to April 1; shad, April 1 to December 31; trout, November 1 to April 1; mountain sheep, elk, doe or antelope, until March 30, 1882; deer (huck only), November 1 to July 1; wild fowl and quail, March 15 to September 15, except in Los Angeles and Sierra counties; in San Bernardino and Los Angeles counties, April 1 to August 1.

COLORADO.—Elk, buffalo, deer, antelope, mountain sheep and bison, January 1 to September 1; pinnated grouse, pheasant and prairie hen or grouse, November 15 to October 1.

CONNECTICUT.—Black bass, May 31 to July 1 (in Connecticut and Farmington Rivers may be taken at any time); salmon, none taken until nine pounds; shad, June 25 to March 15; trout, July 1 to April 15; quail, ruffed grouse and woodcock, January 1 to October 1; wild fowl, May 1 to September 1.

DELAWARE.—Rabbit, partridge and pheasant in Kent and Sussex counties, February 15 to November 1; in New Castle county, January 1 to November 1; woodcock, January 1 to July 1.

FLORIDA.—No law for fish except one requiring non-residents to obtain a license; deer, April 1 to September 1; no sea birds or birds of plumage may be killed; wild turkey, April 1 to September 1.

IDAHO.—Fowl in Ada county, April 15 to September 1; pinnated grouse in Ada county, March 1 to August 1; quail, April 1 to September 1.

ILLINOIS.—Deer, February 1 to October 1; geese, May 1 to August 15; pinnated grouse, January 15 to September 1; quail, February 1 to November 1; ruffed grouse, February 1 to October 1; snipe, May 1 to August 15; wild turkey, February 1 to October 1; woodcock, January 1 to September 1.

INDIANA.—Deer, January 1 to October 1; wild fowl, April 15 to September 1; quail, January 1 to November 1; pinnated grouse, February 1 to October 1; woodcock, January 1 to July 1; wild turkey, March 1 to September 1.

E B Sonthor.....	5	5	5	5	4-2
E B Souther (re-entry).....	4	4	6	6	4-2

Some purple sandpipers and snow buntings, with shore larks, about Stagville Hill quail grounds have been much out of.

R. L. N.

New Bedford, Dec. 14.—The quail and partridge shooting has been superb the past month. The mild weather so far has brought large numbers of ducks into the large ponds in the western part of the county and also in the Middleboro or Uxbridge ponds to the north of us. Thanksgiving day a friend secured three specimens of the duck called by Audubon the "gadwall" or gray duck, a rare visitor in our waters.

CONOIA.

CONNECTICUT—Centre Brook, Dec. 14.—Shooting has been fair this season; over 200 woodcock shot in one locality here. Partridge season, more so than ever known. Quail shooting fair; three to four berries an average day's find. G. H. C.

—Frank Farley, a young man of the Thimble Islands, while in a boat gunning the other day drew his gun toward him, muzzle foremost, and was fatally injured by its discharge.

New York—Jamaica Bay, L. I., Dec. 7.—The shooting this season has not been as good as usual. Some nice bunches of shell-drakes came in, but they did not stop long. The season has been so mild that sailing parties and other parties have been so plenty, and in fact, poking around through the creeks and bay, that the birds did not have a chance to settle for any time. Black ducks have been quite numerous, but at the break of day they fly across the beach and go to sea, and stay there till dusk, when they come in again to feed during the night. So there is not much chance to get a shot at them. There have been very few of them killed this fall. Geese, both mallard and broodland so far have given us the slip, as very few of them have been seen since their usual haunts. There was quite extensive preparation made for bay shooting at Canarsie Landing, the terminus of the Canarsie Railroad from East New York. There are several gentlemen from Brooklyn who own boats, yachts, and decoys; also the Rod and Gun Club, of Brooklyn, who have a neat little club-house, and three single and one double ducking boat, and some two hundred decoys, which they had all ready to use, but the birds gave them the slip this season. Bob Clark, of "Clark's" House, had two duck boats built by Sellers, of the celebrated Stafford pattern, and purchased a good supply of decoys, for the accommodation of parties who would like to take a day's shooting near home, and easy of access to the city.

Eldred, Dec. 11.—Deer are more plenty here than for the last five years. Parties are here and there, and up at Bradley's have had one killed within one and a half mile of my house this season that I know of. Partridges are in fair numbers, and on open grounds now; rabbits very plenty. Foxes are very plenty, and if some sportsmen would come up here and help kill them it would greatly increase the small game next year. I have built a good house on purpose for the accommodation of sportsmen, and game from a quail to a deer can be found any time within a mile of the door; partridges, woodcock and rabbits are frequently killed within a stone's throw of the door. Daniel Hallock, of Eldred, killed two fine deer in one day last month, and six partridges. Daniel hunts for the market and profit.

J. M. BRADLEY.

PENNSYLVANIA—Uniontown, Dec. 17.—Quail, ruffed grouse and rabbits are in quantities sufficient for fair sport. Two men recently in one week's shooting bagged 326 quail, 17 grouse and 12 rabbits.

WEST VIRGINIA—Bridgeport, Dec. 12.—Though strangely overlooked by sportsmen, this is one of the finest hunting-grounds on the continent. All the land is full of grouse and quail, and the mountains abound in deer and bear. The pigs are fattened on trout in the wild, remote districts, where game laws are unheard of unless the valley of Gauley is filled with pump and bear; boarding in the mountain cabins is of cost, and the wild, beautiful land is the hunter's paradise. Not a house in thirty miles save, perhaps, the hut or cave of the moonshiner. The valley is the bed of an ancient lake, level and beautiful as any Texas prairie; the black water flows slowly among the tangled laurel, and the pines, the bear and the deer are seldom alarmed by the hunter's gun. The scenery is grand and beautiful among those mountains. The castellated rocks are like the ruins of old cathedrals, and the moss is deep and soft as Persian carpets. Flocks of wild turkeys feed under the "green-wood tree," a mass of emerald gold. Sometimes in autumn the white umbrella of the painter is seen by the waterfall or among the boulders in the mountain gorge; but the wild duck dreams on the river and the deer among the laurel, and the hunter comes not from the far North land.

J. M. McCANN.

SOUTH CAROLINA—Charleston, Dec. 14.—The weather up to this time has not been favorable for hunting, as it has been generally warm. Ducks are very scarce at present and will not make their appearance before we have some severe weather. A few fine deer have been brought into market during the past week, and a great many wild turkey. Partridges and woodcock are coming in slowly, but are reported in large numbers in some parts of the State. Preparations are being made for considerable hunting during the Christmas holidays, and I will no doubt be able to chronicle some good bags.

YONORA.

TENNESSEE NOTES—Nashville, Dec. 13.—After the field trials were over Capt. A. B. Woodson, of the Fifth U. S. Cavalry, accepted an invitation from Mr. McGowan to go on a chase and a day's shooting on his farm, some five miles from the city. The farm is situated on a narrow peninsula formed by the Cumberland River, which makes it a most charming ground for fox hunting; the chase can be followed closely, and the dogs kept in sight most of the time. Mr. McG. has a noted pack of fox hounds, which rarely fail to find Reynard. On the occasion of Captain Woodson's hunt, they killed the largest red fox the Captain has ever seen. The next day he went out shooting with the same estate. He had his own dog, but he had brought to the field trials, but which he did not enter. In company with General Jackson, he had a good day's sport, bagging 40 quail. Quite a number of deer and wild ducks are being brought to market. The deer are mostly killed in west Tennessee. Quail are still very abundant and very cheap.

MICHIGAN—Detroit, Dec. 14.—Dec. 5, Jerome Cannata was out for a few hours' sport and bagged five quail and four partridges. Dec. 6, Albert Schroeder was out after rabbits and brought six to bag. On the 9th inst. Wm. Smith bagged five quail. On the same date Charles Choate and Jno. Hunsaker took a trip to Canada for a day's sport, and made a bag of nine quail and five partridges. Game seems to be rather scarce in our immediate vicinity, but must be considerable

in the interior of your State, as our game depots and commission houses are as full as they can very well be.

DAVID.

—They had a big ring bust in Sunfield, Eaton County, recently. Four hundred hunters surrounded a territory about four miles-square, and closed in to the centre. Each man made all the noise he knew how, and they kept it up for four hours. One turkey, a few rabbits and one fox was the result. Four hundred men to one wish-bone may be the correct thing in Sunfield, but it would not do anywhere else.

GAME IN NEBRASKA.—A well-known Philadelphia correspondent, who has recently returned from Nebraska, writes us: "We had good shooting—ducks in Minnesota and geese and chickens in Nebraska. By the way, I see in your 'Close Season' table in FOREST AND STREAM that you say no shooting for quail, chickens, etc., in Nebraska in November. There was game enough about the State in November, and when I asked for the interpretation of the existing game law of Nebraska I was told there was none. Perhaps there is one that receives no attention. The one passed by the Grangers, forbidding chicken shooting on account of grasshoppers, has been repealed now that the 'hoppers have left, as the birds chew up the best part of the grain crop! In Platt County where we camped, in all my gunning I found but one man who was not a settler, and that he was an immigrant from Illinois—as the settlers preferred to see something bigger fall when they shot. Game must be thick when such a state of affairs exists. My cousin killed nine big Canada geese with one barrel one day, and it wasn't anything of an extra day for geese, either!"

L. MAGOON.

A BIG SCORE.—Salem, Mass.—I have just received a portrait of Mr. Cross, of the Winons Point Club, and now our introduction is complete. He states his score for the season at 1,028. Game ducks, 66; other game birds, of which five were geese. This is the best bag I have ever heard of for one gun, and that by a gentleman sixty-four years old. When a glorious fall he must have had, but what on earth could he have done with so much game, when others of the club must have done something. He stated in a former letter that the club one season (two years ago) bagged over 5,000 ducks and geese. There are thirty members; if the rest did their duty as well as he this season their aggregate must be something enormous.

C. T. J.

TRIAL OF GUNNS.—A correspondent writes from Dover, N. H., under date of Dec. 8:

Last week a trial of guns was had at Great Falls, N. H., a town some five miles from here. Two breech and several muzzle-loaders contended for a prize. One of the breech-loaders won, placing four shot in the target with the first barrel, and two with the other. The winner was made by Tipping & Lowe, of Concord. The other breech-loader took the second prize and was a Fox gun. The target was a ten inch ring and was placed at one hundred yards distance. The muzzle-loaders did not touch the target. No. 6 shot, 1 1/2 oz. and 4 drachms powder was used. The winning gun belongs in this city.

W. A. G.

MR. PAINÉ AT GLASS BALLS.—On December 11, at Suffolk Park, Philadelphia, Mr. Ira A. Paine undertook, on a bet of \$200, to break 51 glass balls out of 100, the balls to be thrown in any and every direction by James Devlin, the swiftest ball picher in America. Mr. Paine won easily, breaking 57 balls out of 90, and to his pleasure to see him do it. He used a pair of beautiful 16-bore Parker's weighing 6 lb. 2 oz. each, 3 oz. Tatham's chilled shot, and Dupont's No. 3 Eagle Ducking powder.

BEAR STORY A LA MODE PARISIENNE.—It is barely possible that American genius is to be outdone in a field hitherto regarded as peculiarly its own. We may some day go to Paris for our bear stories as we do now for our dresses. There is no accounting for the whims of the literary public; the plate, unvarnished tale indigenous to the American frontier, may lie unread while that capricious public stands agast in appreciative horror of *Le Figaro's* depictions. That Paris journal in a recent issue announces the tragic death of Mons. W. Benton, an American newspaper reporter who fell a victim to his heroic devotion to duty. The lamented W. Benton scattered abroad the dollars of his journal with princely munificence, was on intimate terms with all the political and military celebrities of Europe, spoke eight languages with perfect fluency, and assisted at all the wars of the Old World as a most conscientious spectator. He had gained admission to Prince Gertschakoff's presence as a tailor, to Bismarck's as a dog merchant, to the Congress of Berlin as a photographer, and had gone to royal banquets disguised as a waiter and to royal burials as a coffin-bearer. In 1867 he made the acquaintance of Mlle. Schneider in the role of a Brazilian diamond miner, while during the Franco-Prussian war he figured as a Turco (blackier than life), a Zouave or a Uhlan, according as the exigencies of the situation demanded. This accomplished journalist was about three weeks ago in a great German city, where the sensation of the time was a troupe of trained bears. There were six of them, and they went through their drills and other performances with such startling regularity that it was very generally suspected that they were not bears, but men disguised in bear-skins. W. Benton thought as much, and offered to wager with the manager that he would enter the den, but the manager declined to sanction the enterprise. W. Benton thereupon wrote all the journalists of the city, and had them to be present at the afternoon performance next day, when he intended to unmask the humbug. Having bribed an employe of the menagerie, Benton, disguised as a bear, entered the cage. His five companions seemed furiously excited, but he attributed this to their desire to fend off suspicion. The public applauded enthusiastically. It was then that the unhappy being, desirous of coming out of his plan, un-camped the circus by turning toward the press box, removing his bear's head and bowing politely. A tremendous roar of laughter, followed by an immense shriek of terror. The bears, on seeing this human face, precipitated themselves upon the unfortunate man. Before the tamer could take steps to save him, the reporter, frightfully mutilated, had breathed his last. This perished the poor W. Benton, whose editor-in-chief seeks vainly a man fit to replace him.

For Forest and Stream and Rod and Gun. THE BOGARDUS RULES.

FOR shooting pigeons from traps, the rules lately published by A. H. Bogardus are to be especially recommended, omitting as they do some objectionable features of various other

rules, and making some marked improvements over even his own previous rules.

His letter published in FOREST AND STREAM of November 28, giving reasons for these rules, suggests a conversation on the subject of trap rules that I had with its author and "Baring Blot" (Hon. J. H. Ackley in New Orleans at the time of the great tournament in the spring of 1876).

It was generally conceded that it was essential to the popularity of trap shooting in this country at least, that "trap shooting should be made as much like field shooting as possible." The tournament was shot under rules framed by "Baring Blot," and these rules were very comprehensive.

Yet in one notable instance, at least, were they defective, as acknowledged by their author; and I am glad that the defect, also common to some other rules, has been remedied in the new Bogardus rules, by that rule on double shooting, which requires that "both birds must be shot at, and if the first is shot at." And if in any case "no bird" is declared, "the shooter shall have two more birds to shoot at."

If I remember aright there are various club rules which require the shooter, in case one bird is killed and the other alights, to shoot at a single bird, sprung from the trap at three yards greater distance. To kill two birds thus is far from being a feat, and, as a rule, is not a fair test of single bird shooting. As a pigeon match should be a trial of the skill of the shooter, and not of the respective merits of guns, the enlargement of the boundary from 80 yards to 100 yards is a marked improvement, as also the rule requiring "ties to be shot off at the same distance as when shooting the match." Too often has a good shooter been defeated simply because some of his rivals, no more skillful in the use of a gun, have shot with guns that were superior to his for trap shooting.

I remember an occasion of two gentlemen, shooting off ties, when it was suggested that the distance should be increased at once from 31 yards to 81 yards. As one gentleman was shooting with a 10 lb. "full choke" bore gun, and the other with an 8 lb. cylinder bore, there was naturally some objection made to such an arrangement, whereby the match was so very unequal, and the result was a foregone conclusion. The rule, rather than by the respective skill of the shooter.

Another improvement to the credit of the Bogardus rules is in relation to birds shot on the ground. "If a bird is shot on the ground before it takes wing, it shall be scored as a lost bird; but if shot on the ground after it has taken wing, it shall be counted no bird."

This is justice in cases where a slow or low-flying bird is taken in the aim of the shooter, who catches the trigger on the trigger when the bird at the same instant unexpectedly alights.

Some of these new rules referred to are identical in both form and principle with what I have often advocated and urged upon the attention of sportsmen who shoot at pigeons from the trap.

Last year I happened to be present at the annual club match for the championship of Maine, and was called upon to officiate as judge thereof. The match was shot under local rules, the deficiencies of which were evident to the various gentlemen whose attention I called to them at that time, and those deficiencies and defects would be remedied by the adoption of the rules whereof I write.

The rule of using but one barrel for single birds, so generally adopted in this country, and which I claimed for that it will insure care at every shot. And an element of chance is excluded, which enters into the shooting with both barrels when the smoke may cause several losses to one shooter, and perhaps none to another.

Yet the privilege of using the second barrel, which obtains in England and quite generally in Europe, has great merit in at least one respect. It teaches the ready and accurate use of the second barrel, the lack of which readiness is felt by many sportsmen. Many sportsmen have I know who would be so flurried by a miss as to be unable to use the second barrel, or even attempt to. I can remember when I so affected myself, but by practice have long since entirely overcome this serious drawback. Very often in field shooting the second barrel will need renders more satisfaction to the sportsman than the first.

Believing, however, that the new rules are the most perfect and desirable one yet published, and that their own merits will commend them to sportsmen, I would suggest for them the name of "The Bogardus Rules," with the hope that they will be adopted generally throughout the country.

December 1, 1878.

EVERETT SMITH.

A THOUSAND WILD TURKEYS.

SAN ANTONIO, TEXAS, NOV. 26, 1878.

EDITOR FOREST AND STREAM:

There are many who anticipate a few months, or weeks, of Southern pleasure and recreation—I mean men living in the cold North. I can safely say that probably there can be found no place equal in all respects to Western Texas. I have resided in the city of San Antonio five years, and have enjoyed many pleasant hours in showing country, such as sportsmen know how to appreciate, to visitors from many Northern States. I will give a short sketch of a hour of twelve days, from which I, with a party of five others, have just returned.

Fully supplied with all necessary equipments for twelve days in the nest, we started from the Alamo City on Tuesday, the 12th of the present month, our destination being the neighborhood of Frio City. We brought up about fifteen miles beyond that place, leaving our camp at about 10 miles on the Yo-o-digo, fifteen miles from Frio City. There we settled down and went to work for deer, and spent two or three days, but found the deer rather scarce, only killing seven. We finally determined on a change of base, and began to retrace our steps, coming ten miles northeast of Frio City and camping on the Saco, where we said our attention to the turkey. I can safely assert that the Saco is one of, if not the most favorite, places for turkey in Texas. It is a small stream, and runs only a few miles, but the water is so pure, and the banks are so timbered, and all such streams are in Western Texas, with scattered clumps of live oak and other trees. The clumps of trees, especially where you find a water hole, are favorite spots for the turkey to roost in, and here is where the hunters go to shoot them. I am well aware that many consider this a barbarous way of slaughtering turkey; but let them come to Western Texas and I will stake my reputation as a sportsman they will do as we do. The idea of calling a turkey up to shoot him, is a very old one, and you have seen them do it all time, but we only shoot for camp. They usually wait until we start for home; then we have fresh turkey. I will assert that I saw in one roost, the night before we left, in one hundred yards distance, over a thousand turkeys. I killed at least twenty-five turkeys in thirty minutes. Our whole cul of turkey on the tramp was over a hundred, seven deer, innumerable quail, both the common and blue topped, one wild boar, four avocets, or wild muskrat hog. This section is the wildest I have ever seen in Texas. I could write pages upon many things, strange and new, which I saw on this

Game No. 89.

Played recently at the Divan, Black receiving a Knight. Remove White's Q Kt:

White.	Black.	White.	Black.
Mr. Macdonnell.	Dr. E.	Mr. Macdonnell.	Dr. E.
1-P-K4	1-P-K4	8-Q-Kt5	8-R-K
2-B-B4	2-B-B4	9-B-K6	9-Q-Q3
3-K-K3	3-K-K3	10-B-K3 (d)	10-R-K3
4-P-K4	4-B-Kt (b)	11-Castles	11-P-K5 B
5-B-Kt5	5-P-Kt5	12-P-Kt5	12-Q-Q1
6-Q-Q3	6-Q-Q3	13-R-Kt5 P	13-R-Kt5 P
7-Q-B-Kt5	7-Kt-Kt5 P		

- (n) Kt-Q3 is preferable. NOTES.
 (1) This is not advisable. He might safely play 4-P-Q3, but at the odds I consider 4-P-Q4 better still. Receivers of Kt odds would not want to note that P-Q3, when played early, is in almost all open games "anxious to the opponent."
 (c) Here he should most decidedly play P-Q4.
 (d) A very menacing move, especially against an odds receiver. I apprehend that Black's best play is B-K3.

CURSORY JOTTINGS.

The score in the International Tourney now stands: Great Britain, 14; America, 13; drawn, 2. Hur— but we had better wait awhile.

—Mr. Cook, President of the A. C. and P. Association, can find no authority in the laws of the Association empowering him to investigate the charges preferred against the managers of the recent problem tourney. Happy, voiceless McKim! If Mr. Loyd pocketed Secretary McKim, as the *Twit* broadly intimates, it is now time that the chess public petitioned that a single stitch be cut, and the Secretary allowed to escape. We are not inclined to be unkind, and we only await his reappearance astride a friend's "chariot wheel" rolling down hill, seeking "vindication" in order that we may applaud as well as laugh at a disgraced officer of the Association. That "chariot wheel" will, of course, be suitably decorated, and we further suggest that a motto be affixed to it. The following occurs to us as appropriate: *Sile et philosophia esto*.

—The *Westminster Papers* for December is an interesting and attractive number. Mr. W. T. Pierce contributes the first installment of his analysis of the opening by a table of reference to model games. The three pages devoted to this feature are also worth the price of the number. Address *Westminster Papers*, 8 Salisbury Court, Fleet St., London, E. C., England.

—The *American Chess Journal* for November is a decided improvement on its recent predecessors, and the management announce that more attention will be given to its preparation, and the typographical errors, so frequent of late, will be looked after in the future. The following are the prizes, rules, etc., of its first Problem Tournament: Prizes—1, volume of "Chess Strategy" and \$10; 2, volume of "Chess Strategy" and \$5; 3, *American Chess Journal* and "Strategy" 1; 4, "Cent. Prob. Book" and "Chess Strategy" 5; 5, "Chess Strategy" 6. Free to all the world; one problem (with solution) only should be mailed to *American Chess Journal*, 68 Cornhill St., New York City prior to Feb. 1, 1897; problems to be 3, 4 or 5 moves. "To give competitors a fair and equal chance, we will explain that the problems will be graded according to their actual difficulty—the number of moves, and how many pieces are employed in their construction. Every problem will be solved by a committee, and a record of time consumed in each problem will be kept. One-thirtieth of this time will be deducted for each piece employed in the construction of the problem, and the average balance will give the rating of each problem. We are compelled that a three-move problem should be six times as difficult as a two-move, and a four-move four times as difficult as a three; a five-move problem should be therefore as difficult as 120 two-move problems." The rating of each problem will be given at the time of its publication, and the awards will probably be published in February, 1897. A solvers' tourney is also announced in connection with the above problem tourney, and the prizes offered are well worth trying for. This programme is somewhat novel, but will doubtless prove an attraction to problemists. The manner in which the difficulty of a problem is ascertained, it seems to us, favors a class of problemists to the exclusion of others, who consider beautiful variations obtained by the use of additional force. In order that no one may misconstrue our remarks on this point, we state that we refer more particularly to the pieces employed for defensive purposes. The use of unnecessary or inactive pieces for the attack, in order to increase the difficulty of the problem, or to obtain unnecessary variations, although sanctioned by some, should be handicapped in this or a similar manner. The programme with this exception is very good.

ANSWERS TO CORRESPONDENTS.

R. S. F., Cincinnati, O.—The top of diagram, as you infer, is Black's side of the board, and the bottom White's, etc. The author's solution to No. 50 is as follows:

1-Q-Kt5	1-Q-P-Kt5 Q	1-Kt-Q3 ch	1-B-P-Kt5 Q
2-R-K5 ch	2-R-Kt5 P	2-B-K5 mate	2-K-Kt5 P
3-B-K5 mate			

J. A. G., Jackson, Miss.—In Game No. 84 the move of 20-Kt-K5 should read, according to A. C. J., 20-Kt-K5. We agree with you.

W. A. B., Montpelier, Vt.—We do not think that B-B3 will solve No. 15, or that Kt-K5 ch will solve No. 27. Examine No. 16 again. We give your solution to No. 27 below, hoping that our solvers and the author will point out to you the unsoundness of your proposed double solution. It cannot do so, as our time at present, as during the past few months, is fully taken up with other matters, much to our regret:

1-Kt-K5 ch	1-P-Kt5 P	1-K-Q4	1-K-Q4
2-R-K5 ch	2-K-Q4 B3	2-Q-Q4	2-Kt interposes
3-R-K5 mate		3-Q-Kt5 Kt mate	

H. A. A., Williamstown, Conn.—We have complied with your request. Should like to hear from you occasionally.

C. W., Winsted, Conn.—Your favor duly received. Sorry that you cannot devote more time to chess.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHEN TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

Dr. E. S., Cleveland, O.—The leaves and buds you send us, and which were found in the crop of a ruffed grouse, are those of the white birch.

P. O. B., Watertown, Conn.—Will a new model "Whitney" rifle, long-range, cal. 44, 71 grs., carry a distance of 4 miles or more? Ans. No.

Dick, Painesville, O.—The puppies probably have worms. We would suggest sanative in doses of one grain, to be followed by $\frac{1}{4}$ oz. of castor oil.

J. A. R., Woodville, Miss.—We believe Ritzman & Co. to be square dealers and a reliable firm. Shall be pleased to hear anything further of the movements of Messina quail.

G. N. R., Worcester, Mass.—For cheap trip to Indian River, Florida, we know of no better way than to go by steamer to Jacksonville, and then take schooner to the River.

BROOK BONES, New York.—My setter puppy six months old has a spot of red mange about the size of a silver dollar on his head. What shall I do for him? Ans. Rub it with crude petroleum.

G. L. W., Steubenville, O.—Please give me your opinion on decarbonized steel gun barrels. Ans. We do not consider them safe for large charges, and certainly not as strong as twist or laminated steel.

HARZ TATCHEL, Montreal, Can.—Bogardus offers the American championship medal for competition in Brooklyn next week. He has himself withdrawn from the championship. Any one can be a champion on paper.

J. J. APPLEBY.—Mr. H. J. Appleby, a resident of Meadville, Pa., disappeared from that city very mysteriously Sept. 21, 1878. Will any one knowing his present whereabouts send his address to this office, or to his wife, Mrs. Fanny Appleby, Meadville, Pa.

J. A. C., Wakefield, N. H.—What is the best medicine for tape-worm in a dog, simplest and most efficacious? Ans. Areas nat is probably the most efficacious remedy known, but should be freshly grated and given in repeated doses until the effect is produced.

SUBSCRIBER, Phila.—It is not necessary that the shells should fill the chamber when loaded; if you can turn them down with a reamer to the shot they will fill the chamber when discharged. You can use the sawdust as you suggest, or another way over powder.

T. H. ATLANTA, Ga.—Please examine sample of powder that you will find inclosed, and give me name, etc., and where it can be procured, also price? Ans. The powder is the Dittmar powder, and can be bought in this city for \$1 per canister from H. C. Squires, No. 1 Courtland st.

R. B. T., Orrville, O.—What length, weight, gauge and also pattern for each barrel would you recommend me to get for hunting pheasant, quail, woodcock and squirrel? Ans. 15 gauge 30 inch barrels, weight 3 pounds, lead barrel to make a pattern of about 200, No. 6 shot and the right about 170.

II., Philadelphia.—Can you give me the name of any party that understands making up leather goods, such as a buckskin coat, in a first class manner? Ans. Messrs. G. W. Simmons & Son, Boston, manufacture leather shooting suits, and so, we believe, do Thomson & Son, 301 Broadway, this city.

II. H. II., Philadelphia.—What would be the proper charge for a ten gauge Remington, weight eight pounds? What would be an average pattern for the charge. Ans. $\frac{3}{4}$ to 4 dr. powder and $\frac{1}{2}$ oz. shot for upland shooting. For a cylinder bored gun, 170 pellets of No. 6 shot in a 30-inch circle would be a good pattern.

C. H. II., Lynn, Mass.—Your dog has a very rare disease known as "turnside," which is an inflammation of one side of the brain only. He may recover if you put a poultice on his neck and give him nitrate of silver, say two grains, carefully powdered and mixed with crumbs of bread enough to make eight pills; give three pills a day, first giving a purgative.

S. D., Uniondale, Pa.—Can you give the address of some good, reliable firm in Michigan that could send me a few deer skins. I want to get a few untanned and tan them myself, or could I get them as cheap in N. Y. city? Ans. You would do better through the restaurant keepers and market dealers in New York city. See Van Nostrand's advertisement in our paper, Washington Market.

II. K., New York.—Please let me know whether the pointer dog Sensation, belonging to the Westminster Kennel Club, has produced any noted dogs in this country? Also, where can these be seen? Would you recommend him as a stud dog, or do you know of a better? Ans. Sensation is the sire of a number of very excellent field dogs, and from his own field qualities, breeding and bench-show successes we know of no better dog to breed to.

D. G. J., Cedarville, Ohio.—How should a minnow net about four feet long, to be pushed ahead of a single person, be hung? Should it be hung with the meshes at the braid closed or with the meshes open? I hung one the latter way, but the top and bottom lines have a tendency to draw toward each other in the middle, and the result is it does not lie close to the bottom of the water. Ans. If it will not work one way, try it another. Address the parties through the London Field.

J. W. S., Manfordville, Ky.—1. Is the Dittmar powder free from dirt and smoke, and what is the price? 2. Where can the best pin-drawers be purchased? We have trouble in finding a first-class shell No. 14. 3. Is there a brass pin-draw shell made? Ans. 1. Yes, comparatively so; price $\frac{1}{2}$ per can, equal in bulk to one pound black powder. 2. Nearly all dealers in this city keep them. You would be very apt to find an assortment at Schuyler, Hartley & Graham's A. S. No.

ELVERN GACON, Monroe, Mich.—What is the difference in pattern of 11 gauge muzzle-loader, 42 in. barrels, loaded (14) with wire carcasses, No. 1 shot, and (24) with same size shot, loaded in the usual way, 60 yds.? Please give me proper load for such a gun. Ans. As you could tell in ten minutes by firing two shots, and as we have never tried such an experiment, we can scarcely understand why you should ask us. As for a charge for a gun of 42 in. barrels and unknown weight, we cannot give it.

KNOWS HIM.—We were unable to answer a question regarding a gunmaker named Sutherland, but a correspondent, writing from Richmond, Va., kindly supplies the information. He writes as follows: "I noticed in last week's issue of your paper an inquiry for S. Sutherland, gun-maker. He manufactured guns here in this city for twenty-five years; some of them are used now by our best shots; he died two years ago and was succeeded in business by his sons, under the style of S. Sutherland & Sons."

DRAW.—Suppose A, B, C and D are playing draw poker. A bets a certain amount on his hand; B and C content themselves with "seeing" him. Does that fact prevent D from "raising," or is he also obliged to content himself to "seeing" the other three? Ans. Well, really, we are not up on this sort of thing, but we have it on the authority of a man who once made a small fortune in the business that D can "raise the whole party," whatever that may mean. We can conceive of no possible reason why he should not.

BICERS, Boston.—What way of exercising is the very best to enlarge the biceps? Ans. A blacksmith's hammer persistently wielded for 8 hours a day, "chinning" yourself on a horizontal bar, lifting iron barrels, and various other exercises are highly esteemed. If you have a pulling machine, the best way to use it is to pull it. There are several "professors" in New York and Boston who will teach you how to strike

from the shoulder. They advertise to enlarge the biceps very markedly, particularly just above the eye.

J. S. P., Albany.—For the book "Down Channel" write to Charles Wilson, late Norie & Wilson, 157 Leadenhall street, London E. C., England. Price about 4s., or \$1 in England. Can be sent to you by mail or we can procure it for you. Other books of a similar character are: "The Cruise of the Kate," by Middleton, price \$2; and "Orion," a cruise in a 10-ton yacht single-handed, price \$1.75. Both by same publisher. See our book reviews this week and next. Can order the above upon receipt of price. Time, about four weeks, as our dealer in America keeps such books in stock. The "Cruise of the Kate" is an account of a voyage around England in a little 30 ft. yawl, and interesting and instructive to Cornishmen.

T. S. S.—1. How many No. 8 Leroy shot, $\frac{1}{2}$ oz. with 4 $\frac{1}{2}$ dr. DuPont's ducking, two pink-edge loads on powder, one oz. shot, ought a good Parker gun put in a 24-inch circle at 45 yards; also at 30 yards, said gun being a 12-gauge 30-inch? 2. Is 3 dr. DuPont's powder (next grade to ducking) or 3 dr. dead shot powder, with 1 $\frac{1}{2}$ oz. shot, sufficient for quail, gun 5 pounds, same gun as above? 3. What book contains best instructions for an amateur shot, and where to be had. Ans. 1. The usual distance for testing guns is at 40 yards and at a 30-inch circle, with 2, 6 shot. Test your gun in this way, let us know the result, and we will tell you if the pattern is a good one. 2. We should, $\frac{3}{4}$ dr. at least. 4. "Bogardus' Field, Cover and Trap Shooting" to be had at this office.

POWNER, Pittsburgh.—My pointer scratches himself constantly when he is in the house and drags himself on his belly on the rugs and carpet. In his kennel he is not so restless, but he seems to be tormented, and can never be done with scratching. He has no skin trouble, and with fine-tooth comb can find no lice or fleas; eyes clear, bowels regular, appetite good; works well in the field. 2. What is the "Field Trial" dog, as now imported under that name? Ans. 1. There must either be some skin trouble or else worms. If there are no symptoms whatever of the latter, we should try Fowler's Solution—say ten drops twice a day. 2. The so-called "Field Trial" strain, now known as the "Llewellyn setter" comprises the dogs bred by Mr. Llewellyn (and their descendants) by his Dan out of Laverack bitches, or by a Laverack dog out of a sister to Dan.

"I O DIED OF POTASSIUM."

He's dead, then? Poor fellow; gone at last! I had no thought that he was going so fast, but knew he would come to it soon or late. For his credit was getting in a very bad state. I O was clever and good, and ever so kind; wouldn't slight even the lowest one he could find. He would borrow any sum he had money to lend; would owe him always rather than chest a good friend. Now, I O was a friend built on the adjustable plan. He could love or hate either this or that man, just whichever ever you said he was always your treat. He was a gentleman always. You say dead? Ah, well, be it so! Let him rest in peace. He was a jolly good fellow and lived at his ease; so well that he was a good deal of a success. That all who pass by may know I O died of Potassium. HALL HAZEN.

* Gender rather mixed, but purely from a motive of gallantry.

National Pastimes.

NEW YORK ATHLETIC CLUB.—The second annual winter meeting of this club will be held at Gilmore's Garden, this city, on the evenings of Jan. 3d and 4th. Full particulars may be obtained by addressing the Secretary, P. O. Box 3101, New York.

HARE AND HOUNDS.—The Westchester Hare and Hounds will hold their second meet Christmas morning. The start will be from Schroder's Hotel, near the entrance of Woodlawn Cemetery, and the run is to be across the country and of three hours duration. The hares will be Messrs. Frank Banham and W. S. Yeaburg; the master of the hunt Col. Delancey Kane, and the first and second whips Messrs. J. B. Haviland and James Lowe.

—The Queens County Hunt talk of building a club-house.

ARCHERY.—Cranfordville, Ind., Dec. 13.—Mr. Will H. Thompson shot the "York Round" with this result:

No. arws.	Yards.	Hits.	Score.
72	100	32	128
48	50	34	161
24	60	23	111
Total.....		89	400

SCISSORS.—In a newspaper office scissors are as necessary as pen and ink. Marx Bros., 480 Broadway, N. Y., manufacture Young's patent folding scissors, which are just the thing for an editor to carry in his vest pocket. Now let some one contrive a pair of scissors which will clip out a good dog, put a new head on it and give credit at the bottom. We will buy a couple of dozen for our contemporaries.

AN EGOTIC EARL AND HIS DOGS.—The Earl of Bridgewater lived in Paris during the last century, when, according to the *Kelco Mail*, the circus was new and they took place. He was a miserable-looking little man, unable to walk without the aid of two lackeys. He had an immense fortune, which he spent in gratifying every caprice. Was a book lent to him, it was representative of its owner, and returned in the Earl's hand, occupying the place of honor, and attended by four footmen in costly livery, who handed it to the astonished owner. His carriage was frequently to be seen filled with dogs, his special pets. On the feet of these dogs he bestowed as much attention as though they were human beings. He ordered them boots, for which he paid dearly as for his own. Not caring to entertain his own kind at the table, few people dined with him. Still, covers were daily laid for a dozen, served by suitable attendants. At this table he received and dined with no less than twelve favorite dogs, who seemed to comprehend the comfort of them, as they occupied their chairs with decorum, each with his white napkin tied round its neck. They were so trained that should any, by an instinct of appetite, transgress any rule of good manners, he was banished from the table, and degraded to an ante-chamber, where he picked his bone in mortification, his place remaining empty until he had earned his master's pardon.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

PATENTS

In connection with the publication of the *Scientific American*, we continue to act as Solicitors for Patents in America, Trade-Marks, Copyrights, etc., in the United States, Canada, Cuba, England, France, Germany, etc. In this line of business we have had thirty-three years' experience.

Patents obtained through us are noticed in the *Scientific American*. This large and splendidly illustrated weekly paper shows the current progress of Science, is very interesting, and has an enormous circulation. Subscriptions \$3 a year, postage single copies 10 cents. Sold at all Book-Stores and News-offices.

Can I Obtain a Patent? The quickest and best way to obtain a satisfactory answer without expense is to write to us (Munn & Co.), describing the invention, with a small sketch. All we need is to get the idea. We will immediately answer, and give the necessary instructions. For this advice we make no charge.

We also send free our Hand Book about the Patent Laws, Patents, Caveats, Trade-Marks, their costs, and how procured, with full and complete information to inventors. Address MUNN & CO., Publishers of the *Scientific American*, 37 Park Row, New York.

THE AQUARIUM, BROADWAY AND 35TH ST. CINDERELLA.
Grand three-act Spectacle, performed by an army of children, in new and splendid costumes of the time of Louis XIV. Magnificent Ballets, Scenic, Floral Displays, Baroque Characters, etc., etc.

Also the Trained Thoroughbred Horses.
Daily at 2:30 and 8 o'clock P. M.
Admission 50 cents. Children half-price.

PHOTOGRAPHIC APPARATUS, latest invention. Anybody can operate it with perfect success. Complete outfit from \$5 to \$50. Chromo Photography outfit, \$5; Kellorograph, \$2.50. Send stamp for full information to E. HACKMANN & CO., Manufacturers, 278 Pearl St. N. Y.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. THE AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1878. Send for a Circular and Price List.

PHILADELPHIA.

WEBLEY'S TREBLE WEDGE GUNS,

WITHOUT A RIVAL.

Messrs. F. WEBLEY & SONS, Birmingham and London, who, it will be remembered, received the highest award at both Vienna and Philadelphia, have secured the most perfect machinery for gun making ever set up in any factory in England. The result is, that they can now turn out guns perfectly uniform in excellence, and in much increased quantity as to greatly reduce the cost.

Their specialties this year are their BEAUTIFUL TREBLE WEDGE GUNS, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has fine Damascus or Laminated Steel Barrels, Rebounding Bar Locks, Pistol Grip, Extension Bolt, Lever Fore-piece, and Treble Bolt. It is a new thing to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience, or excellence in shooting, at the price of ordinary guns.

In addition to the Treble Wedge Guns, we have on hand about fifty of Webley's Breech-Loaders, Top and Side Lever, Single and Double Bolt, of various grades, which arrived last year, after the season was over. These guns we are rapidly clearing out at greatly reduced prices. It is fair to say that as regards soundness, durability, and perfection in shooting, these guns are in no way inferior to the Treble Wedge Guns. Many of them are from 5 to 10 lbs. weight, and are splendid guns for duck shooting or for killing large game at long range.

The fifty guns mentioned above are all that now remain of a much larger number referred to by us in the FOREST AND STREAM in October, and as the season is now well advanced we will allow an additional discount upon the few that are left, provided they are ordered in December.

WEBLEY'S GUNS are remarkably Strong, Close Shooters, and do not need any additional choking.

W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and
Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest,
most durable ever invented, and the most successful gun of the period. Patented in the United
States, Oct. 2, 1873; No. 163,493. BEWARE OF IMPERFECT IMITATIONS.

PURE TIN-COATED & BURNISHED
DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

No Black Lead polish used. Perfect cleanliness. Will not foul or corrode the gun, nor taint the
game. Not affected by dampness or moisture. Excellent for loading shells. Size, uniformity,
weight and quality of the "EAGLE BRAND" remain as heretofore, but its Range and Penetration
are increased by the bright

BURNISHED TIN COATING.

ALSO

Drop Shot, Compressed Buck Shot and Balls, Bar Lead,
Chilled Shot, Lead Pipe and Sheet Lead.

THE LEROY SHOT AND LEAD MFG CO., NEW YORK.

IRA A. FAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.
The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Patent Feather Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore it
would respectfully caution the dealers against laying in a stock of unsuitable articles for the Sporting Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.
Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with
250 in each barrel, and by having a rough surface strengthen the ball for shipping,
and prevent the glancing of shot, while the smooth ball has to be made
thin to break successfully when hit. Just sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by
Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from
England, and used them myself, and sometimes would not find a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where clubs use them you can readily see which is the hardest shooting. I
matches reported in paper, saying Bogardus rules and traps used, you do not
see all the balls broken. Amateur and young boys who want to learn to shoot,
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become car and wing shots, and, further, patronize the man
who introduced this sport to the public, and who has been to England twice and applied the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting." \$2.

Price of Ball, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2.

[No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun. MAXINKUCKEE.

Here is a scene for a painter—
A gleaming and glorified lake,
With its framing of forest and prairie,
And its echings of thicket and brake;
With its grandeur and boldness of headland,
Where the oaks and the tamaracs grow
A-league with the sunlight of heaven,
And the spirit-like shadows below.

Where the swallows skim over the surface,
And quaff as they touch the clear wave;
Where the robins seek out the cool waters,
And warily venture to lave;
Where the sandpiper toys with the plashes,
And whistles his passionate note,
And the water-bugs sail like a navy
Of faeries for battle ahead.

Where the blackbirds go noisily over,
And the mallards wing rapidly by,
And the heron that flies like a snowflake
Comes down from the clouds in the sky;
Where the bobolink lights on the rag-blade,
But so proudly and swiftly swims,
Or watches advance the prettily minnow
That out of his element springs.

Where the lilies-a-bloom on the surface,
Held down by their cable-like stems,
And the tails of the bright cardinals
Have the semblance of loveliest gems;
Where the mosses and festoons are hanging
In the richest of fashion and fold,
To decorate submarine dwellings
O'er pavements of amber and gold.

Where the soul of the mortal may worship
In the freedom of unwritten creeds,
Hearing many and joyous responses
In the music that comes from the reeds;
And where in my fancy I've pictured
A temple that's builded so high,
It reaches in grandest proportions
From the beautiful lake to the sky.

—J. C. BURNATT.

For Forest and Stream and Rod and Gun.

Three Weeks Among the Moose and Beaver.

ON Saturday, the 12th October, 1878, Foster and I started from Sherbrooke at 4 p. m. At Scotstown we had tea, and then embarked on the engine of the gravel train to go as far as the end of the iron, our luggage having been deposited, dogs, rifles and all, upon the gravel ploy. On the same car was an Indian, his squaw and boy, two more dogs, traps, a huge basket, nearly large enough to have contained the party, but of which the contents were a mystery, a couple of guns and a birch bark canoe. Al. Warner, the engineer, behaved like a brick, and after arriving at the gravel pit, and taking out the loaded train and bringing it back to be refilled, he kindly ran his engine and ploy on to Spring Hill, where we arrived about 11:30 the same evening.

Routing out T. W. Odell, who has charge upon a contract at that point for some miles of road construction, we stayed the remainder of the night with him and the "boys."

Stepping out early in the morning, we saw the Indian family camped by the side of the track. Odell was going over the same road as we for some distance; so after loading a wagon with our things, we started ahead to walk six miles to John Boston's, where we arrived about 8:30, where John and his estimable wife got us up a glorious porterhouse steak for breakfast. While we were waiting for our meal, John's little daughter came in and sang "Pull for the Shore" for us. Just as we were going into breakfast our team of splendid "grays" dashed up. We gave the driver his breakfast with us, and then drove up the Lake Road to Myers' Mills, on Lake Megantic, some eight miles from Boston's, where we arrived just at noon, watered the horses, paid the driver, and hired an immense canoe, into which we got our two boy oarsmen, another boy, ourselves, Fee—the dog—and our luggage. It was pretty rough crossing the bay—some three miles. We landed at the old "Pamy Camp," and "toted" our things a

mile through the woods to Denison Ball's, on Spider Lake (so named from its resemblance), where we arrived at precisely 2 p. m. on Sunday. Then we returned three times, and finally managed to "pack" all our stuff through.

Den (or Dan, as he is always called) had gone off a day or two before with Mr. Ryan, of Megantic, who helped to bring in some wood, and Mrs. Ball got us up a splendid supper—partridge, rock buns, tea with milk in it, and a fine three-pound trout slightly salted, etc., etc. After tea, at Mrs. Ball's instance, we fired a couple of blank cartridges in quick succession, as a signal in case Dan might be within earshot. Not getting any reply, and after waiting a couple of hours, we made up our minds to turn quietly in. Just at this moment we heard Dan's signal to his wife—a single blow of the paddle against the side of the boat. (Nothing will frighten game more quickly than this—not even a gunshot—and great care should be taken to avoid its occurrence.) "Whoop! hurrah! here's daddy and Mr. Ryan!" cry the five children; and going out, there they were after all. They had been detained on account of the roughness of the lake, and had waited for the wind to go down, arriving at about nine o'clock. It was a beautiful moonlight night, so we went to the landing to meet them. They had had "mighty" poor luck, and only brought seven musquash, which were handed over to Master Willy, the eldest boy, to skin. Then we had another grub and talked over the prospects, and piled into bed shortly after.

Monday morning—up bright and early. Foster and I slept like whippersnappers in our comfortable beds (in a home-made bedstead of Dan's handiwork). As Dan had to go to Myers' mill for flour and supplies for the house before we left for the woods, I decided to accompany him and help to "pack" things back through the woods from the other lake. So, after a jolly grub at daybreak—6 a. m.—we started, Mr. Ryan in his boat on his way home, Dan and I for the mill in one of Dan's boats.

Scarcely as we found three covers from Vermont, waiting to get Dan to guide them in the way they should go. After some "talkee-talkee" they left for Rush Lake, at the head of Megantic Lake, and we saw no more of them. I succeeded in finding and purchasing a stone pitcher, some matches, and a piece or two of maple sugar. Mr. Myers had another piece of maple sugar, which he would not sell, as he was keeping it as a present to the bishop.

Dan got his buck when about 105 lbs. in a bag, making a pretty "soggy pack," as he expressed it. Before crossing we rowed up the shore a mile to call upon Mr. Ryan *en passant*, and I had the pleasure of meeting Mrs. Ryan for the first time in their comfortable home. Their house stands upon a high bluff overlooking Lake Megantic, and the view is grand. There we were cordially welcomed and entertained with various good things which were most acceptable after our hot pull. We then returned to our boat, recrossed the lake to the Old Pamy Landing, where the road to Balls leaves the lake shore.

At Mr. Ryan's we obtained a crock of most beautiful butter, and on making up our packs across the lake we discovered that Mrs. Ryan had quietly slipped a huge loaf of home-made bread into our basket (I take this opportunity of thanking her for it). We unwisely packs upon our backs through to Spider, had dinner, and then went on. We took him for partridge and he would frighten any deer we might see, got our things together and we all three left for Upper Spider at noon; stopped at Dan's camp on Spider River, took some blankets, etc., of Dan's, and then proceeded in the boat as far as the water would permit. Here we decided to spend the night, but before dark we carried our heaviest packs up to an old lumber camp about half a mile further up the stream. There we left them and returned to have supper of baked beans, boiled mutton and toast and a huge tin cup of tea, and feel better, thank you.

We are now rolling around the fire smoking, this fine Monday evening, waiting for the moon to rise to try for a deer down the stream and pay a visit to a camp of two trappers, Messrs. Hoyt and Nagle. After being out about four hours we returned, colder than charity, Dan with a wet limb which he had thrust into the mud.

While down near the lake we distinctly heard a moose close to us, near enough to hear his feet making a sucking noise as they were withdrawn from the mud. This began to be exciting. The moon was very bright, but his majesty was among the thick alders and we didn't get a shot at him, much to our chagrin. We also heard a deer in the bushes at another point, but did not see him either. Next morning we were up and off betimes, Dan carrying a load of steel traps. This looked like business, and so it proved before night, as I shall relate further on. After trudging about setting traps and seeing several partridges, which Dan forbade shooting, we stopped at a likely looking spot for lunch. Dan had seen fresh sign of moose and offered to bet fifty cents that we would see a moose before night. Had we taken him up we should have lost the wager. Shortly after lunch we separated, Dan and Foster taking one direction, I another by Dan's advice. They kept up the stream; I went off at right angles through a horrible windfall and swamp to a clearer place beyond. There I stood for some minutes perfectly quiet, gazing about. Soon I fancied I saw a dark object among some dead trees about a third of a mile distant. For a while it remained perfectly stationary, then I thought it had moved a little, then I was sure of it. It was either a bear or a moose;

and it was some time before I could make out in what direction it was going. Approaching me it certainly was, as I soon saw, and then I perceived the huge antlers of a large bull moose—a magnificent old fellow. He was coming leisurely along browsing upon the fireweed. The wind was blowing almost directly from me to him, and fearful lest he should scent me, I made my way as quickly as possible to one side, out of the line of the direction of the wind. This increased the distance between us, and I several times lost sight of him among the rocks and bushes, and hoped died within me. However, he reappeared. Between me and the point to which he was going was a lot of dead-fall timber, a *brute* (brute, i. e., fallen trees through which fire has run), making it impossible for me to head him off before he should reach the heavy woods, and I soon saw I must put faith in my sporting Snider for a long shot. Nor had I any time to lose. So taking a hasty aim I pulled trigger and had the satisfaction of seeing the huge brute give a heavy lurch forward and drop in his tracks. I crept cautiously closer, knowing well how formidable a wounded moose is, and found him still breathing and making an effort to rise, but failing in it. I hid myself behind a rock with a spare cartridge in my teeth ready in case of a charge, and in one of his huge efforts he managed to raise himself half up. At this moment I fired a second shot, but he lay tail toward me and the shot did not kill him outright; he still breathed but did not attempt to rise again.

It was now just fifteen minutes past two. I was to meet the others at the Beaver Dam at three, and besides it began to rain; so, after deliberating, I made up my mind there was nothing for it but to shoot him through the neck at the "atlas joint" next the head and put an end to him. I was loth to have to fire the two latter shots, but at that time I was not aware of how true the aim had been in the first instance. This stretched him out lifeless, and I then found that both shots had taken effect immediately behind the shoulder, but a couple of inches higher than desirable, just above the heart; both were fatal, but not instantaneously. I then went to meet the two at the dam. I arrived first, and as the others approached on the other side of the stream, I heard Dan say, "Hullo! here's Ned—in first!" In answer to his inquiry what had I shot, I pulled out of my pocket some of the beautiful long mane of the moose and allowed it to fall into the water, being careful to avoid showing any feelings of joy or excitement, well knowing with what contempt any such weakness is regarded by the trappers. I merely remarked, "I've got him, Dan."

"So you have, sure enough." And so we then returned to our quarry. Dan cut his throat and partially dressed him, and we "streaked" for camp in order to get in before dark. The others had less exciting sport, though probably more fatiguing. While watching for game they saw several partridges in the trees close by. The birds seemed to be aware that shooting them was strictly forbidden by our guide.

Wednesday—Raining; started from camp at seven a. m. to where our meat lay; skinned the "critter" and cut him up; dined royally on choice moose steak and tenderloin. Then we each loaded ourselves with the meat—in all 130 pounds, of which Dan shouldered about 70. This we carried by means of a thick stick thrust through the enormous lumps and thrown over one shoulder. It was rather a moist, uncomfortable job to have on one's back, and nothing between to protect one's clothes. However, the guide "toted" his in this way and his example was enough. The walking was none of the best, and the load seemed double the weight when we arrived at the boat, some four miles off.

Foster and I then went back to camp, and Dan paddled home with the meat for the use of his family.

Next morning, when we two reached the spot where the moose lay cut up with the raw skin thrown over it, the day had turned out very warm, so we set about carrying the remaining three-fourths of the animal (which weighed some 1,100 pounds as he walked, so the guide said) down into the woods out of the hot sun, fitted up some poles, and prepared to smoke him.

The whiskey-johns kept hopping about as bold as could be, picking up pieces of raw meat and the bluish blue-jay, and are the very persnickiest (a terrible word to bring out into the woods, as Dan quietly remarked) of impudence, and while Foster and I were at work one of them came and pecked a bit of meat off the former's boot.

While idle in camp on Sundays the lumbermen amuse themselves by killing these birds in the following way: A pole is thrust through the side of the log ship, and a short portion of the pole inside. Upon the end outside is tied a piece of meat. In a second or two a bird is sure to alight, when the short end of the pole within the camp is struck a violent blow with the back of an axe, which kills the bird and throws its body high into the air. This is called "bird flip."

At 3:30 Dan returned just as we were preparing dinner; after which, as fast as he slashed out the steaks with the new knife I had given him, we hung them over the fire, and before dark our task was completed. A portion of the shoulder was useless, having been so mutilated by the bullet, which had partially flattened itself in passing through the body of the animal, and which we found next the hide on the opposite side. We then brought in wood for the night, had tea, and lay talking till eleven p. m.

Friday opened fine; however, the day turned out showery. We skinned off the hocks and pasterns and then breakfasted,

and Dan and Foster started off on an exploring expedition. As I had chafed my instep on the previous day, I remained to smoke the meat.

It is now dark and raining, so Dan and Foster won't be back this night. I have placed the hide upon poles for a roof. Midnight—I have just been awakened by a noise which rather startled me. Seizing my rifle I sat up, found it still raining and the fire nearly out—"Cold on the hearth, the last faint sparks expire"—and the night as dark as a stack of black cats. I tossed on some dry wood which I had stowed under the hide, and, as I was looking at my watch, I heard something prowling about and breaking sticks quite close. It was probably a bear, and he smelled the fresh meat and the hide, which lay all around. As I was in hopes the beggar would come within the circle of light shed by the fire, but he did not.

The morning was showery. We saw a rainbow, which made a very fat arch (because we were so high up in the mountains, I suppose), and was intensely brilliant. Dan and Foster turned up at 8. After breakfast we packed the smoked meat, Dan carrying the monstrous head, and off we went en route for Dan's house, miles away. Although Dan's load was far lighter than our packs, it proved to be almost unbearable, as the antlers kept catching in every bush; however, "per tota disciplina rerum," we at length arrived at the boat, and, like "Christian," gladly threw off our burdens.

Nothing occurred of any moment till our arrival at Dan's, where we had supper. Shall I ever forget that supper and the breakfast next morning. We had fresh fish, potatoes, pancakes, *ad libitum*, cream, butter, home-made bread, tea and milk (sugar was finished, and none could be obtained at that distance from the settlements), pepper, salt, mustard, tomato catchup, hard tack, and last, but not least by any means, a gigantic juicy moose steak, steaming hot. This, with a dish of stewed wild cranberry sauce, composed as rare a meal as it has ever my luck to enjoy. I spent the evening in preparing the moose head, Dan and Foster repairing rents in boots and trousers. Fortunately we had taken a few "waxed ends" and an awl from Sherbrooke. We turned in and slept until rooking.

The next day was Sunday. All hands up at 5 A. M. Snowing hard, and blowing from the northwest. The wind was in our favor as we ran up the lake. Dan had several musquash in his traps. It was just night when we reached camp, close to the boundary line between the States and Canada. We came upon some fresh tracks of moose, and if this flurry of snow contained any look for sport to-morrow. The region here is elevated, being near the summit of the water-shed between the two countries.

On the way we stopped where we had smoked the meat; carried off enough to last several days. This upper camp Dan and Foster built the day before yesterday of boards, which they split from the balsam tree (the favorite of hunters for this purpose, and for building traps, making paddles and canoes, and for their furs). It was just snowing as we go to sleep. Monday turned out clear and colder. Dan and Foster looked at my watch at 4 A. M., and we set about preparing our breakfast by moonlight and firelight, getting off at 6 (day-break), and each taking a different route. Mine lay due north. During the morning I flushed and might have bagged a large number of partridges at different points, but nothing smaller than moose or bear was allowed, so I passed on. About noon, strolling up the bank of a mountain stream, I suddenly saw a look for my very first of the lake, a beautiful swamp grouse (*Perdix de savanne*). These birds are a little smaller than the two other birds—the wood grouse and the ptarmigan—are of a rich, dark bluish gray, spotted with white, reddish brown and black marks, have no ruffs, and are especially to be distinguished by a handsome scarlet comb over either eye. So tame are they that they can be caught by a noose on the end of a pole, and, knowing the fact, I at once put a long rod, fixed to a long pole on the end, and, with caution, up I "roped" the beauty, and he is at this moment, cozily seated between me and the fire. Dan turned up shortly before dark; saw no moose, but says he has a mortgage upon a beaver, and promises us beaver liver for supper to-morrow. He also had noosed a swamp partridge, but not upon the ground as mine was. We had the two birds for our supper. Going to freeze hard to-night. We are off at the crack of day to-morrow.

Tuesday day. Dan split out some balsam stretchers for his furs, and off we started. Foster going by himself, Dan and I to the beaver dam. In one of the traps we found caught a portion of one of the beaver's feet. Nothing of any moment occurred until the evening, when Foster didn't turn up, so I went off in search of him, and at dark, returning unsuccessful and thinking he would have to remain out all night in the woods, I found him at camp all right, having heard Dan's axe. In the morning we struck camp and returned to Dead River Lake, bringing down the hide, hocks and hoofs. The latter, when properly arranged, make very pretty ink bottles, pin-cushions, etc. On the way Dan found several of his musquash and one trap carried off by some creature. It began to blow hard from the southeast, and that night such a storm came up as shook the solid black house, and the rain poured in torrents. We were not sorry to be under Dan's hospitable roof.

Thursday it was still raining. Dan and Foster started round the lake, setting traps, and at evening returned, bringing with them the culprit who had stolen the musquash and carried off the steel trap—a magnificent gray horned owl, one of the largest size, with eyes that appeared as big as saucers. This they tied by the leg to a stick and placed in a dark room. Two days after he picked the string, smashed his shadowy wings, and, like a bird taking to flight, he flew out of the hoofs, cleaning the moose head, and skinning and stretching the jackets of several musquash for Dan.

Next morning Dan had to repair his house; so, after lending a hand till 9:30, Foster and I went over to Megantic, took one of Dan's boats and pushed on to Rush Lake. Shot a snipe and missed another; saw fresh sign of beaver. Foster is at this moment paddling the boat after black duck—a fine black bird. While I was taking the boat to the shore, we returned to Spider Lake just made my first attempt at cutting hair, and later myself I acquitted myself, considering the circumstances. Dan's head of hair was something enormous, and made his head ache; so I was made barber, and had to use a very blunt pair of scissors to hack off his locks. Besides, it was getting almost too dark to see. That evening we spent in looking over illustrated papers and chattering about nothing.

Friday, Oct. 26. Dan woke me early. We had breakfast by lamplight, and started for the Upper Camp at 5 A. M. bidding adieu to Foster, who was to put in the day fishing with the boy Willie, and then return next morning to Sherbrooke, his leave of absence having expired. On the way we stopped at the camp of Nigle and Hoyt to give them some

leaves of bread which Mrs. Ball had baked for them early in the morning, before we had our breakfast. They received us cordially and showed us the skins of two beaver "kittens," as they are termed by trappers, a sable and a small mink, all prime furs. We proceeded up the stream, leaving our boat at 10 A. M., several miles up, then carrying our packs, guns and traps on our backs some five miles across country to the Upper Camp. Just as we approached, three deer partridges flew up, two of which we bagged (as it was close to camp, where a shot or two would do no harm), and a few steps farther we came upon a very large sable, caught and killed in one of the dead-fall traps we had set a few days previously. This was a good beginning. We made some tea, and went to inspect the beaver traps, our packs, guns and traps on our backs searching for one that I strolled off for moose. On my return to camp at dark, there sat Dan stretching his sable skin, and hanging on a small birch was a splendid beaver, four years old, and weighing not far short of ninety pounds, making a heavy load for a man to carry for any distance. My eye! what a feast we shall have upon his liver! A beaver's liver is very large for the size of the animal, and is considered a delicacy by trappers, and also by the visitors of the place. We have been feasting every day since we shot the moose and smoked venison; to night we are each having a partridge "to his cheek," as Dan elegantly expressed it, and are to have liver for breakfast. As we have had a hard day I shall bid you good-night.

Sunday turned out a lovely warm day. At 5 A. M. we breakfasted on smoked venison, biscuits soaked in our cups of tea, then popped into the hot frying pan with some salt butter. We had not yet dressed the moose, so the visitors of the previous evening of liver suffered a postponement. While strolling about, doing nothing, I came upon one of the larger or "ruffed" grouse, apparently very cold, sitting near the edge of a pool of water. These birds are much more difficult to approach than the swamp partridge, but since he permitted me to come within a few feet of him, I thought perhaps I might noose him. Fumbling in my pocket, I found a piece of soft antler, and, with a deft hand, I cut the long alder pole, attaching the noose to the smaller end. To my chagrin I found that, although I could come within reach of the bird, the aggravating noose would not remain open long enough for me to pop it over his head, but kept twisting upon itself, the string being so limp. After several attempts, whereby the bird became somewhat alarmed and began to move slowly off, I succeeded in my endeavor, when, giving the pole a jerk, the noose flew over his head, and I drew a short distance; but being chilled by the white frost, I still lay on the ground, he permitted me to approach him a second time. I now took a piece of deer skin which I wore as a watch guard. This answered better, and I had no difficulty in placing the thing over his head; but, having fastened it carelessly to the smooth small end of the stick, it pulled off, and away flew the bird, noose and all. This was to aggravating for anything, so I started to return to camp. As I was trying to dispose of my now useless watch guard, I saw a short piece of brass wire (that I had vainly looked for in the first place) in my trousers pocket. I decided to make a third attempt, and followed him up. There he sat among the stiff lower dead branches of a balsam fir, too high to reach from the ground; and, as I was about to have been an end to the matter, I took a flick of my wrist, and there was another balsam which the wind had broken off at the stump and blown against the tree in which sat perched the partridge. The bird could only be approached from this quarter, and many dead twigs and branches intervened, and I almost gave up. However, after scratching my hands and face, and with a deal of patience, I at last managed to pass the noose over the bird's head, he pecking at it. There was my watchguard still about his neck, and with a wriggle of his leg I gave a jerk. For a second "times were in a wobble," and I was again in the air. For a second or two I was hanging by my arms from the wire, which became kinked and—broke! Ghost of Cesar! Had you been there, gentle reader, you would have seen a disappointed man. There was nothing for it but to crawl down and prepare to be laughed at by Dan on my return. So much for not going to church on Sunday.

On my return, however, I found that Dan had been there, had dressed the beaver and left again. It was about 3 P. M., and I began to feel "the keen demands of appetite," so lighting the fire I made some tea, cooked some beaver tendon and liver and fried some biscuits. While I sat in the camp eating my dinner the wiskey-jobs were bolder than usual, and I noticed that upon alighting on the carcass of the beaver they invariably perched upon the same spot, and I thought I would catch one by way of a canary to sing for me. I fired my gun, and, upon the meat I had a bird in my hand in less than 30 seconds. The voice of the bird did not seem at all put out by his captivity, but ate pieces of meat from my hand the moment he was caught.

I heard a noise shortly after, and looking up saw Dan approaching. He had strolled up the stream looking for signs of game for the morrow. Our supper consisted of a "laiz saturo," of beaver head, beaver haunch, beaver liver, beaver tail and beaver kidneys, all boiled together, and biscuits soaked in our hot tea and butter. I had a new record of old ever enjoyed their nectar more than we did our classic dish. Here is the hunter's recipe for cooking beaver tail: Hold it in the flame of the fire for a few moments and the skin will peel easily; then it must be boiled, not fried, till cooked through; seasoned well with pepper and salt, and eaten on hot toast or biscuit. It then resembles marrow fat is not a bad thing, of a generous nature and is excellent. I cut up the remainder of the beaver, and now hangs over the fire to smoke. I am intending to give them a treat at home of smoked (or jerked) moose and beaver.

Monday—Wet snow and rain in the morning. I had hoped we should have snow that would remain on the ground in order to do a little still hunting, but it soon cleared up and turned cold. I accompanied Dan on a trapping tour. We set up traps, and, at lunch in the woods and a long tramp across the meadows of several miles, returned to camp hungry. We were soon regaling ourselves on fried musquash, some of the beaver tail and a partridge that I pinned in the neck with a bullet as we neared camp. I am now cleaning the beaver head for the sake of the teeth, and boiling dried meat to take with us on a tramp across the boundary line for a couple of days.

Tuesday, Oct. 28. We left the upper camp just at day-break, and, after an en route to the waters of Dead River, which are on the other water-shed and across the line, we passed through the forest we easily distinguished the boundary when we came to it, the trees having been cut down for a space of forty feet in width, and the open space having since it was cleared grown up with a different kind of wood, par-

ticularly noticeable among the spruce timber where we crossed it. The line runs along the height of land, or "divide," between the two countries from peak to peak of the mountains. At this point we happened to strike one of the square-tapered iron posts which were planted along the line in 1842, about a mile out in accordance with the Ashburton treaty, and we wrote our names and date on the white point on the post. In block letters, cast in relief, are the following words:

On the east side, Treaty of Washington; west side, Boundary, Aug. 9, 1842; north side, Lieut. Col. J. B. B. Escomer, H. B. M. Comsar; south side, Albert Smith, U. S. Comsar.

These posts stand three feet high, and are, as regards shape, Bunker Hill Monument in miniature.

We stopped for lunch at a place where a mountain stream flows through a split granite boulders which we named "The Strainer." Saw a fine black popping about lower down the stream. Visited a small pond with a shore of which two years ago we traced a deer we had wounded. Then, intending to take a shorter route back to Canada, we climbed up a cliff of loose granite rock covered with fallen trees, through which the fire had run, a most fatiguing scramble, and had the satisfaction of finding we had made a mistake, and that the great Duke of York who with his 40,000 men went up the hill, we then went down again. Finally we reached a beaver dam upon another stream showing fresh sign, and we set two steel traps (visions of liver and tail for breakfast). Biscuit and bread all done. To-night we are sleeping *a la belle étoile*, although there is a fine clean lumber camp (built in 1869 by Crosby's gang) just near the beaver dam, but we dare not remain there for fear of frightening the wary creatures. The night is very cold and we have left our overcoats, blankets and everything which might possibly do without, across the line in Canada; but we have made a long fire, and to prevent more noise than necessary by chopping, are "nigging off" some of the larger logs in the middle. Then, hunter fashion, we each take off our coat, lie down behind a wind screen of boughs on each side of the fire, and throw our coats over ourselves. Long practice shows this to be the warmest way of sleeping when one has no other covering.

At this point I saw the first of the line fifty-one inches in circumference actual measurement, which the beaver had recently gnawed down. The skill and *adresse* of these creatures is simply astonishing, and although their habits have been often ably discussed by naturalists whose observations have been read by most people, still I picked up during this trip a few interesting details which I can vouch for, and which have never seen in print.

As is well known, they work by night and are extremely wary and difficult to trap. Here is an instance which shows almost superior intelligence: Dan had had his trap sprung one night by an old beaver without catching him, and, thinking to succeed next night, he reset the trap in the same place. Judge of his surprise in the morning upon visiting the spot to find the trap drawn out of the water the whole length of the chain, high and dry upon the bank, and un sprung. Next night he was much less successful, but he was not so sure of the lower one should be carried away.

Their teeth are very peculiar, are very long, and grow far back in the head. The upper ones are the most curious, and are an exact semi-circle; in fact, placed end to end, they form a perfect ring about two inches and a half across. It is very difficult to obtain perfect ones, they break them so gnawing at the steel traps. The nail upon the third toe of each hind foot is, according to Buffon, their tooth-pick, and is of a most curious shape.

Wednesday.—How long the nights seem when one cannot sleep steadily through, but has to keep building the fire! Six A. M.—"Hail, snoring man!" Dan has just started to visit his two beaver traps. I am getting our breakfast ready, which is easily done, as it consists principally in putting on the tea-pot. Here comes Dan. As he approaches he sings out that something has sprung both his traps. This sounded disappointing. However, he soon appears, carrying a beaver skin and one of the traps and the largest musquash, both in prime fur. We were not long taking off the beaver, and then we rubbed plenty of salt upon the shoulders of the beaver and roasted them upon a stick in front of the fire, making a most substantial meal in spite of the want of bread or biscuit.

We struck across a spur of the range of mountains from Chain of Ponds, re-crossed the boundary line at a point where the wind had made havoc among the trees, throwing down a great one for a long distance and forming an almost impassable barrier, and, by way of improving matters, it was snowing and blowing hard at the time.

On the way back to-day we traveled for hours by compass, taking a direction that we thought would strike the headwaters of the streams in Canada, upon which Dan and I had set some traps a few days previously—the 28th.

It is simply wonderful how these old trappers and guides work with such accuracy and success through the forest. At the point where we struck the first snow-bank at 6 P. M. and on of these same traps. We followed up the stream for about fifty yards, and then took the "spotted" line through the woods the rest of the way.

Here we are back at the Upper Camp in Her Majesty's domains, wet and cold, but fast becoming the opposite under the united influence of hot tea and a crackling fire. Upon my word the smoke like a hawk is on one's nose. Dan had a smoke, rolled himself up in blankets at 6 P. M. and is asleep. I write. I am boiling dried meat for to-morrow. On the way to-day we caught two splendid sable, or marten. I must put some beaver oil on my gun, ride and boots, and then turn in also.

Thursday—6:30 A. M.—Dan slept clear round the clock; nothing but boiled meat for breakfast and a dish of tea; strike camp at once for a long day's work. We have more partridges. A brace of which I could not be pined at all from my rifle, as their heads were in line; saw fresh tracks of a cow moose and calf, but had no time to follow them, as we had a long way to travel. It mixed all the way to Dan's, where we had a glorious supper, and home-made bread!

horns were saved. We were close to the Wind River, and after an hour's ride we put our camp up on the bank of the stream at last, having crossed the dreaded Bad Lands. Now, being in a country where the Indians, both peaceable and hostile, roam around, we had to be careful and on the lookout; still, we slept through the night quite easily.

12th. Moved camp ten miles to the head of the Big Horn Canyon, where the stream ceases to carry the name Wind River. Here the Cheyennes killed, sixteen months ago, eight trappers. After dinner we had a rest, and then walked down the canyon one and a half miles.

13th. Started at 8 o'clock A. M.; tried to follow the river, but when we had made about five miles we had to stop; there were on both sides the almost perpendicular rocks 800 or 900 feet high. The stream was narrowed by them to about fifty feet, and had a considerable fall. Here we found an old camp, and two flatboats in good condition, left here, very likely, by an exploring party from Camp Brown. We had to turn to the right and eastward, following a deep canyon, which was about the roughest part of our trip. When we had reached the summit we followed a game trail leading northwest. At three o'clock in the afternoon we stopped for this day near a nice little stream, but without any game in it. We saw to-day two herds of buffalo—one band of about sixty elk and two sheep; we tried to kill one or the other, being short of meat, but did not get a shot. After dinner every one of us went on his own hook to bring some game home, but without any result, except that Frank reported to have killed a buffalo, but did not save any meat or trophies. I had a band of sixty-four elk, which could not get near enough to kill.

14th. Had a foggy morning; wind easterly; moved at eight, and riding 12 miles, we arrived at the Big Horn Basin at the foot of the Big Horn Canyon. This canyon, from 15 to 18 miles long, runs from south to north. On both sides it is lined by rocks from 500 to 1,000 feet high, in some places almost perpendicular. This was the first great canyon I saw, and I must confess that I was astonished at its grandeur. To describe it is an impossibility for me; one must see and so. The fall of the river is only 300 feet from head to foot, therefore I believe it is navigable for small boats. On account of possible Indians we agreed that only one party would hunt while the others had to remain at camp. Jack and I stayed at home, while Frank and Lancken went out hunting, without killing anything. During their absence I tried fishing, and landed two three-pound cat-fish, which were delicious.

15th. This was my day, so Jack and I went out together, but soon separated, and I killed two buck antelopes, wounded another, and Jack killed another one. Coming back, we found that the other party had also shot a buck antelope. In the afternoon I fished with grasshoppers and caught several fish that looked like large salt water herring, but with sharp teeth.

16th. At ten o'clock left this place, where we had such poor shooting, looked homeward. A heavy rain shower of half an hour made our traveling unpleasant. A 16-mile ride was enough for to-day, and, looking out for a good camping ground, we saw some buck elk at a distance. I shot one of them and Jack wounded another. The horns were not large, but the meat was fine. We saved both tender and sirloin and a good deal of tallow. Frank killed on this day's trip an antelope fawn and buck.

17th. F. and I left camp early. F. shot two antelope bucks. In the afternoon I succeeded in bagging two pair of antelope horn, and toward evening I jumped a large mule-deer buck. I got off my pony and advanced, the buck standing 60 or 70 yards away, broadside toward me. I thought he was mine, but, trying to cock my rifle, it would not go off. I tried it again and again, and found that there was something broken inside. The old buck did not move, always looking at the pony. I rested the rifle on my left knee, took sight, pulled the cock and let go; buck ran only about 50 yards; the same experiment with the same result; never saw him again. When I had climbed the hill I saw a large antelope buck just below me within 80 yards; fixed my rifle between my hands and killed him without trigger. It was nearly dark when I arrived in camp.

18th. We started pretty early, and after a tiresome tramp of about 25 miles or more we arrived at our old camping ground on Wind River. In the evening we saw lightning in the east, a bad sign for the next day; and so it was.

19th. It rained all day, and we could not move on—a nasty day.

20th. A cloudy morning; doubtful about rain; still we started back through the Bad Lands, hoping to make it in four days. A 20-mile ride brought us to an old Indian camp, where we found good water. The night was cold and we found ice half an inch thick in the morning.

21st. Was a very hot day; rode only 16 miles, and camped a second time near the duck pond. In the evening I shot seven gray ducks, which were very tender and nice.

22d. Cloudy morning, sharp wind, at noon rising to a gale. At three P. M. we camped at a little creek.

23d. Cold, fog, and a strong wind blowing up to a gale again. In the afternoon we found ourselves in the old camp of Rattlesnake Mountains. When we left this camp we put several of our canned fruits, condensed milk and other provisions in a bag and hung it pretty high up in a tree; we did the same with some antelope, elk and deer horns; but now we found all the things spread on the ground; the bag was open, the provisions were all spoiled and all the things empty. Uncle Geize had paid a visit to our camp and sucked the sweet juice. This time we made our camp up a little nearer to the spring. After dinner every one on his own hook went out hunting. I killed a very large elk buck that had the largest pair of antlers of all we shot on the trip. Lancken supplied our camp with a fat saddle of a young mule deer, while Frank came in with fur, a coyote around his neck, and covered with lots of little jumpers belonging to the pulch family.

24th. Windy but not cold. Our grubbing going to an end, and meals nearly reduced to meat, very little bread, thin coffee without milk. In the same condition was the quantity of our tobacco. To-day Fred killed an antelope. I saw different kinds of game, one of which was an old she bear with two cubs, but did not get near enough to shoot.

25th. We tried all our skill to kill as much game as possible to get enough meat to last us till Rawlins, having little chance

to shoot something after we left the Rattlesnake Mountains. Jack and I were successful, I killed an elk buck and one mule-deer doe, and Jack another one. Our ponies were so heavily loaded with the elk horn and the meat that we could not ride fast, and it was late when we reached camp.

26th. We left the Rattlesnake Mountains, and about noon we saw at Horse Creek four buck elk, of which Frank and I killed one and F. wounded another one. That night we camped at Sage Creek.

27th. About noon we reached Lancken's ranch, having saved our scalp. Here I have to mention that coming back through the Bad Lands one morning we found three large fresh trails running parallel and made by ponies of Indians on the warpath (no lodge poles dragging behind). The guides thought that they crossed here only one or two hours before us. At the ranch we heard that the Bannocks had killed several white people on the Wind River the same time.

28th. I did not like to sit all day long in the log house, and with Jack tried my last hunt, but did not get a shot, although a number of sheep and two big rams were seen by us.

29th. Leaving our ponies at Lancken's ranch, I drove us with a team of four to Rawlins. Jack, who was riding a pony, killed one antelope. This was the last piece of game we killed on our trip. I have nothing more to tell, only that we arrived at Rawlins the first of October, but half frozen to death.

After we had taken our mail we went to Fred Wolf's cosy little place where we had a glass or more of fine Rhine wine and a long talk with the kind-hearted and good humored landlord, Fred. The afternoon we were busy to pack our trunks, order boxes for our trophies, packed and shipped them. On the

2d Sept. we found ourselves in a car of U. P. R. R. Jack and I stopped at Chicago, while Frank went right through to New York. I stayed four days in Chicago and two days at Fort Wayne to see some friends.

Sportsmen intending to hunt in that part of the Rocky Mountains advise to write to Gus Lancken, care of Fred Wolf, Rawlins. He is certainly one of the best guides around there, and is reasonable in his charges. He supplies a party of two or three with himself and another as guides, four or five saddle horses, as many pack horses, all the saddles, etc., and tents, for \$12 to \$14 a day; grub and bedding is not included—it does not amount to much. If he should be engaged, take "Tom Gun."

F. S.—On this trip the elevations as well as on the first trip, but did not mention it, the average being only 6,000 feet, and highest point in Rattlesnake Mountains, 8,100 feet. In all, we hunted as gentlemanly as possible; we could have killed perhaps ten times as much.

Yours truly,

STIMMANS.

Fish Culture.

CALIFORNIA SALMON IN HOLLAND.—Capt. J. H. Taat, of the Netherlands and American Steam Navigation Co., made us a sociable visit last week, bringing from Prof. A. J. Boltemann, the eminent fish culturist of Holland, the information that of the 100,000 California salmon ova recently consigned to him at Berzenopzom by Prof. Baird, of the Smithsonian Institution, 70,000 have hatched out fine young fish. This is subject for congratulation, and we hope to hear of further results as satisfactory. The ova were sent out by the Netherlands steamer *Catland*.

SALMON-BREEDING IN FRESH WATER.—Editor *Forest and Stream*: One or more fish breeders have reported through your paper the hatching of the eggs of the trout impregnated by the milt of the salmon. Would like them report their success in raising them, and to start the ball rolling, will give my experience with them, as also with three different kinds of salmon. I have the hybrid, two years old. They have not made the growth that trout of the same age have. The male parents were California salmon. They show no signs of spawning, and as they are now as old as their parents were when they were bred, think they are going to be barren. Am now hatching eggs taken from the California salmon in our ponds—this only as an experiment, for I no longer prize either them, the Atlantic or land-locked salmon (have all three) as worth raising in ponds. Think the same food will raise double the number of pounds of trout; and while I sell them for half the price of trout, seldom get a second order from the same customer. Our Atlantic and land-locked salmon are now four years old, and but little larger than trout of two years. The California salmon made fine growth, and a large bill at the butcher's for offal to feed them on. Have not eaten of the land-locked. Think the fish of the pickled one as good as the other two. A. PALMER.

Biscobel, Wis.

SCREENS FOR OUTLETS.—*Forced River, N. J., Dec. 18.*—Mr. Editor: In your journal of 25th ult. I observe an article in regard to erecting screens at the outlet of lakes which have been stocked the past few years. It is a well known fact that the fish of the salmon species (which includes brook trout, lake trout, California and land-locked salmon) are fond of running water. If lakes which contain this species have not a proper screen at the outlet, they will to a great extent escape the second year. A law should be enacted by each State compelling every township to have screens erected where such lakes exist. The article by Mr. Porter on this subject was very timely, and should be enforced. It is a subject which all fish commissioners of the several States have neglected. C. A. SMITH.

ICE.—There need be no fear about the supply of ice this season. There was a jam over twenty feet high on the Pen obsoet at Bangor, Me., the other day.

—Mr. Robt. Bonner, of this city, has in his stable ten horses, each of which, with one exception, has trotted its mile in 2:20 or better.

—With each recurring New Years we all resolve to keep a diary, and generally go so far in the very commendable determination as to purchase a new diary. Most people would persevere in the task if they used the spring book books made by Francis & Loutrell, 45 Maiden Lane, New York.

Natural History.

AN ESSAY UPON RABBITS.

By JAMES S. BAILEY, M. D.

THE domestic rabbit is undoubtedly descended from the wild breed. Although familiarly known from time immemorial, its origin is shrouded in mystery. It seems to have been a native of portions of Africa and Europe, but was not known in America until introduced by Europeans. In our earliest records it is called coney, a name probably derived from some root common to most European languages. Varro says that his countrymen named it thus on account of its dwelling in burrows. The name rabbit was undoubtedly derived from the Gaelic word *rabaid*, signifying fruitful. Pliny speaks of their multiplying so rapidly in Spain that the inhabitants were obliged to destroy them in order to protect their harvest fields, and to prevent them from burrowing and undermining their dwellings. They became so great a pest that Roman soldiers were sent with ferrets to destroy them. In England the name rabbit was employed in the translation of the Bible before the reign of James I. In the "Privy Purse Expenses of Elizabeth of York" (p. 13), May 24, 1503, is entered the payment of two shillings "to a servant of the Abbess of Lynton, reward for bringing a present of Rabbits and Quayles to the Queen at Richemont." During the reign of Philip Augustus and Louis VIII., in the early part of the Thirteenth Century, some French nobles devoted certain localities to the breeding of wild rabbits. These places they called *arennes*, which in English means warrens, the name now employed to designate the place where rabbits are bred in an inclosure.

The rabbits, in their wild state, form winding burrows, in which they remain by day, and emerge in the morning and evening to feed on vegetation. When domesticated, and they regain their freedom, they return to their instinctive habits. They are frequently taken in nets and traps; also by ferrets and dogs. Their flesh by some is much relished as food. There is a strong resemblance between the rabbit and the hare, although there are distinctive characteristics. Their habits differ, and so does their flesh; that of the rabbit is white and delicate, while that of the hare is dark and highly flavored. Domestication, however, makes a difference in this respect.

Rabbits are liable to produce varieties in color, in form, and in the texture of the hair. It is supposed that the fancy rabbits of the present day originated in this way, and by continually mating such specimens, distinct varieties were established. We gather the first account of breeding rabbits in a domesticated state from the writings of Fusser in 1580, in "January's Husbandry," where this sentence occurs:

"Let doe go to buck,
With such good luck."

In 1631, Gervase Markham writes of a Way to Get, "Wealth." In this treatise the subject of rabbit keeping, feeding and breeding is given, and in so clear a manner that but few improvements have been made up to the present day. According to M. Mariot Didiex, it was not until 1830 that, in France, much attention was paid to the extension and profitable breeding of rabbits. At first, fearing opposition, the matter was conducted with secrecy, but this was soon dispensed with, and rabbit culture has made great progress, not only in France, but in Belgium and Holland. It is estimated from the official returns of the Custom-house statistics that in the Ostend market alone, 350,000 are disposed of in a single week; and notwithstanding this enormous consumption, the prices, instead of deteriorating, are constantly increasing. In the markets of Troyes there are annually sold 150,000 francs' worth of rabbits, which are used as an article of food, while in other locations the entire object in breeding them is for the profit from their fur. They have also been bred by respectable persons to furnish meat, for the poor, as well as employment, the sale of the fur being quite sufficient, together with the selling of choice specimens for breeding, to pay the expenses of the same. Among these may be mentioned the names of Count d'Albertas and Monsieur l'Abbe Fisseuse.

The rearing of rabbits, to be successfully practiced, should be thoroughly understood, as well as their peculiarities of habits and constitution.

The rabbit belongs to that order of the class Mammalia, or suck-giving animals, which is called *Insectivora*, because they cut their food with the front teeth of their upper and lower jaws. Some of these "cutters" are carnivorous—or, rather, omnivorous, like the rat; others are herbivorous in general, but occasionally insectivorous. The cutters of the first class (which the old French naturalists called *cutters of Indes*, or Indian rabbits) are the hare, feed exclusively on vegetables and grain, and the rabbit, unless under exceptional circumstances, is included in this latter category. The rabbit and the guinea-pig are the only "cutters" that have been strictly domesticated by man, though he has made pets of the squirrel, dormouse, the marmot, the albino mouse, and one or two others.

The male and the female are designated as the buck and the doe. Rabbits are polygamous. One male is capable of serving thirty does, though in warrens only one buck is allowed to one hundred females. The American wild rabbit bears more resemblance in color to the European burrowing rabbit, except that the latter changes in color when domesticated, which the American wild rabbit does not. It is also a little smaller and more slender. There is a striking contrast between the American wild rabbit and the cultivated varieties.

* NOTE.—The classification usually adopted for these animals at the last of the several families with gnawing teeth—hedgehogs, rats and mice, gophers, prairie-dogs, squirrels, beavers and the like—that, in the present order, is composed of *Indes*, or Indian rabbits; *Brachia*, *Vertebrata*, *form*, *Mammalia* (*Dicodonta*); order, *Rodentia* (*Lagomorphia*); family, *Leporidae*; genus, *Lepus*; species, *Capensis*—the jack-rabbit.—Ed.

* *Lepus sylvaticus*.

The habits of the American gray rabbit are so well described by Audubon that we give his language. He says that "it abounds in our forests, even in their densest coverts, also frequents farms and plantations, occupying the coppices and grassy spots in the neighborhood of cultivation, remaining in its form by day, concealed by brush heaps, a tuft of grass, or some hedge-row on the side of an old fence, from which retreat it issues at night to regale itself on the clover, turnips or cornfield of the farmer. It frequently diverts the young of the deer, by the ravage of their bark. It often makes incursions on the kitchen-garden, and the orchard, eating the roots, cabbages, etc. and doing a great deal of mischief; and when it has once had an opportunity of taking these dainties it becomes difficult to prevent its making a nightly visit to them. Although the opening at which it enters may be carefully closed, the rabbit is sure to dig a fresh hole every night in the immediate vicinity, and snares, traps, or guns are the best auxiliaries in such cases, soon putting an end to further incursions. When first started it runs with great swiftness and makes a few doubtless leaps, but the noise of the heels has advanced a hundred yards or more, it stops to listen. Finding itself pursued by dogs, should the woods be open and free from swamps and thickets, it runs directly towards some hole in the root of a tree or hollow log. When briar patches afford a place for concealment, and to elude the pursuit of dogs, it remains on foot much longer. When the males are engaged in combat, and when alarmed at night, they have the habit of stamping with their hind feet upon the ground. When the season is somewhat advanced, the male is heard at midday instead of as usual at early morn or late in the evening. Its voice is never heard except when wounded or captured, when it utters a shrill cry, like a child in pain. This rabbit breeds freely in warrens, but does not easily become domesticated, and always seems ill at ease when an attempt is made at domestication. In the state of nature it never burrows, but in trying to escape will dig to the depth of a foot or more to effect its object. When taken quite young, and properly reared, the animal is sometimes domesticated. The gray rabbit is very prolific, in the Northern States it produces about three litters during the season, from five to seven at a litter; while in the South it breeds "from February to October."

HABITS OF DEER.

EDITOR FOREST AND STREAM:

was raised in Western New York, and can remember when the whole western portion of that State was comparatively an unbroken forest, and seemed to be the natural home of the deer, the wolf, the panther, the bear and numerous other kinds of game, which at that early day were seldom disturbed by the crack of the white man's rifle. I have lived in the State since 1835, and it has since that time been so much thinned and broken up by the axe and the plow, that it has ceased to be a deer State, and the deer that used to roam there in untold numbers. The Northeastern Pennsylvania still retains some of its former glory in the way of deer hunting and trout fishing, but it is being fast encroached upon by railroads, coal diggers and oil producers. The elk that used to inhabit that portion of the State have gone the way of their ancestors, and might be left to mark the spot where they once lived, by the horns that are now half decayed horns that are occasionally found there. I have hunted and fished, and feasted and fasted on nearly all the sources and tributaries of the Allegheny, Susquehanna and Clarion rivers long before breech-loaders were invented. A breech-loading or repeating rifle would have been a fortune to me in those days. I have occasionally hunted the deer in the Allegheny mountains and the Susquehanna. The deer is about one size smaller here than in the Northern States, but the venison is of excellent flavor.

The horns of the deer are the most heavy and hardest of all horns, and yet they are grown and perpetuated in less than five months. The horns of a full-grown buck begin to grow about the last of April, and by the middle of June they will be ten or twelve inches in length with two or more forks, the points or ends being large, soft and spongy, and the whole horn being covered with a velvety skin with a thin coat of short, soft hair. By the middle of July the horns are gray, and then begin to curve, the prongs or points begin to grow out being the largest and softest at the extreme points, and gradually hardening toward the base as they continue to grow in length. By the middle of August, the full-grown horns in the velvet are developed. While this wonderful natural process is going on, the buck has been strictly non-combative, his whole business being to grow and to grow his horns from the velvet sensitive to the slightest touch, and to keep them from being in contact with any hard substance, as the slightest scratch will cause them to bleed profusely, especially if it be near the tender pulpy substance at the extremities. About the first of September the ends of the horns begin to flatten and shrink, the skin cracks and peels, the buck begins to rub the small saplings, and bloody strips of skin will hang from the ends of the horns. By the middle of October the horns are clean and polished, and the horns of October are very different from the horns of August. The nature of the animal seems to be suddenly changed; he knows that he has now got the weapons of war, and he is not slow to use them. The horns are so curved that when he curbs his neck for a fight every prong points forward and downward instead of upward. Remember, these are the facts, and the facts are the main facts. The man who is the State of Ohio is an old hunter being on a still hunt in the month of November (that being the rutting season), came suddenly close upon a big buck, and in the excitement of the moment shot carelessly and slightly wounded the deer. Before he was really aware of his danger, the buck made a sudden spring, striking him near the hip, ripping down pants, skin and all, and then, while all this was going on, he put his hind foot, near the instep, penetrating through the flesh, thence through the sole of the shoe, literally pinning him to the earth. At that moment his dog (a large cur) came to his relief, and catching the deer by the flank, turned his attention in another direction, otherwise it might have been still worse for the old hunter. We would naturally inquire what the hunter would do while all this was going on, gashing and pinning the leader, please inform me what you could do during the time it would take a streak of lightning to run down a man's leg?

By the 1st of January most of the old bucks have shed their horns. Some of the young bucks shed a little later. I am not aware that they ever bury their horns, and I have often found them soon after they have been dropped. I do not believe that they even notice the horn after it falls.

It is often asserted that deer get up and feed at moonrise, and lie down when the moon goes down. I know that deer are more likely to get up and feed when the sun goes down and lie down at sunrise or soon after, and especially so in the months of August, September and October; but in June and

July, the nights being short, they will occasionally travel and feed until ten or eleven o'clock A. M. But in November they will run more or less day and night, that being the rutting season.

is also said by the oldest deer hunters that fawns leave no scent in the track until after the spots are off. I have not been fully satisfied on that point, having never fallen into the horrid practice of worrying deer with dogs, unless wounded. Have shot some large bucks during my hunting days, and do not remember that I ever killed more than two that would turn the scale at more than 200 pounds each. It is not always the largest buck that carries the largest horns, and the age cannot be ascertained by the number of prongs. **ANTLER.**

Place Falls, Rhea Co., Tenn.

ON BEARS AND OTHER ANIMALS—
1718.

SALEM, Mass., Nov. 7, 1878.

EDITOR FOREST AND STREAM:

Since reading the "Two Bear Stories," by "Penobscot," published in your interesting journal, I have, through the courtesy of Henry Fitz Waters, Esq., of Salem, whose antiquarian researches are well known, been allowed to copy an original MS. by Paul Dudley, F. R. S., written about 1718, on the "Habits of the Bear and Other Animals." I give it to you as near *verbatim* as I can, as follows:

"Black Bears—When the snow is deep they den, and don't come out till the snow is so wasted as they can trail their food—nuts, acorns, frog, berries, crickets, grapes—and preys also. Don't carry food into their dens; generally den alone, unless it be a she with her cubs of the first year, sometimes in a Hollow Tree, a Hollow Log, under the Hoof of a Tree, or in a hole in the ground. They make tracks when they come out. But if the snow be deep they won't stir. Kill them, nothing in their guts but slime; they will put fire to the Hole of a Tree then the Bear will come Thundering out whether they are asleep or only mope, for they easily wake. Bear bring forth but once in 3 years. Suckle their young.

"Raccoon--goes to Bed at the Time of the Bears and den as the Bear. But more in Company from 3 to 7. Come out rather sooner, carry in food.

"Woodchuck--lives still in his Borough in the ground

"A striped squirrel will sleep--Mr. Lynde.
"A Turtle Boroughs in the mud--and so do frogs."

Paul Dudley, Fellow of the Royal Society, and son of Gov. Joseph Dudley, died at Roxbury, Mass., Jan. 24, 1761, aged 75. He was born Sept. 3, 1675, graduated at Harvard College 1690, finished his law studies at the Temple in London, and returned in 1702 with the commission of Attorney General of the Province of Massachusetts, which he held until 1718, when he succeeded Lynde as Chief Justice. Mr. Dudley published a number of articles in the transactions of the Royal Society. Am not sure that the above is one of them, but the "Discovery of the Hive of Bees in the Woods" was so published, and Mr. Waters has the original notes, of which I will send you a copy next week.

HABITS OF THE SILVER GAR.

WE clip the following correspondence from the Albany *Sunday Press*, which was headed "Sword Fish":

Editors Sunday Press: Your interesting article upon "Eccentricities of Sword-Fish," and especially one paragraph in which it is said, "Nobody on the American coast, so far as reported, ever saw a little sword-fish," makes one think the following circumstance will not be uninteresting:

In the month of August, while crossing the Columbia street bridge, a friend (captain of a steam tug) drew my attention to a school of sword-fish swimming in the basin. They were from six to eight inches in length, including the sword, and were very lively, darting with great rapidity upon the appearance of a head over the railing. I mentioned the circumstance to a gentleman in the habit of fishing in the river opposite the lower part of the city, and he said he also had seen one off the dock.

When we consider that they are salt water fish, and that this city is something like a hundred miles above brackish water, their appearance here is remarkable and worthy of being noted. Yours, etc.,

Editors Sunday Press: I noticed an article with the above heading in a recent copy of your paper, in which the writer speaks of a school of young sword-fish swimming in the Albany basin.

Having spent my youth in Albany, and since given much time to the study of ichthyology, I may therefore be pardoned for presuming to state that the fish in question were not sword-fish, although it was by that name they were familiar to me in boyhood.

I do not think that the sword-fish proper, the *Xiphias gladius*, ever enters fresh water.

The fish in question are the young of the silver gar or billfish, *Belone longirostris*, and are often seen in schools in the upper Hudson when from four to ten inches in length, and appear of a transparent green hue.

I have made some efforts to discover the breeding-place of this fish, as I am not aware of the adult ever entering fresh water, but so far have not succeeded.

The adults are perhaps 30 inches in length and are round bodied, about two inches in diameter, and are often found in New York markets.

They must not be confounded with the fresh water gar, *Lepidosteus*, whose habitat is the great lake and Mississippi basins, but has often been found in the Hudson since the Erie Canal was built.

The latter is a "ganoid," with almost adamantine scales in diamond pattern, and belongs to an order now nearly extinct.

I will feel under obligations for information concerning the silver gar, its breeding place, length of stay in fresh water, regular or casual appearance, in fact anything which will throw light on the habits and movements of a fish who its history is little known. Yours, etc., FRED MATTHEW

FROGS IN WINTER QUARTERS.—Our correspondent, Mr. Frank Schley, author of "Partridge and Pheasant Shooting," gives an interesting account of the finding of a lot of frogs which had retired to the waters of a warm spring to pass the winter. Writing from the foothills of Sugar Loaf Mountains Frederick Co., Maryland, he says:

out the first ravine. I came across a small spring, and not having my drinking cup in my pocket, I got down on one knee and drank and took a drink. When drinking, I observed a little cloud of smoke from the large stone partly covered with water in the spring, and embowered and surrounded with soft mud, nearly covered with leaves. I thought it likely there might be a snake under it, as I have often found snakes in springs late in autumn, and to satisfy my curiosity I got hold of the stone with my hands and turned it up. To my surprise, instead of there being a snake, as I fully expected, I found thirteen large frogs, all in one mass, and in a bed of soft mud, water and leaves. I removed them and threw them out of the water one by one, counted and examined them. Eight of the thirteen were large bullfrogs; the balance were of the striped species. All were very thin and semi-torpid, not having much life about them. The spring being the warmest water, all the frogs in the branches, no doubt, made their way up there and found shelter under this large flat stone for winter quarters.

THE REPORT: JOINTROUS—*Mr. Editor:* I see that friend Garlick objects to my characterization of his name for the big-mouth black bass—(*Arygates megastoma*) as "ineaty." I did not intend to use the latter word in the sense of "pertaining to meat," nor yet in the sense of Webster's definition of the word, "fleshy, but not fat." I meant simply that, like a nut or an egg, the name was "full of meat," or, in the words of Mr. Garlick, it "hit the nail square on the head;" or, without metaphor, was very appropriate, inasmuch as it expressed the most marked character of the fish.

THE FLORIDA EVERGLADES.

FEW persons, who have never visited the southern portion of our peninsula, have any definite conception of what is meant by the term "Everglades," or what sort of a country it is which is designated by that name in Southern Florida.

The writer, when a youth, used to look on the map and wonder, and dream, and imagine all sorts of weird and fantastic peculiarities belonging to this region, and now has a distinct recollection of making a boyish vow, that when manhood came one of his first journeys should be a pilgrimage to the mystic land of the Everglades. But, like most of the things that we dream of in our youth, this dream has been forgotten in the more serious concerns of life, and it was not until the winter of 1874-5, when, owing to failing health and an anxious desire to escape for awhile from business cares, we these dreams recalled and the proposed visit at length made.

Journeys from Jacksonville up the St. Johns to Lake Harney by steamer, thence across to Sand Point by mule power, thence by sail-boat down Indian River to Jupiter, where empties a narrow and tortuous stream, known as Jupiter Creek, the waters of which, though deep, are clear as crystal, and abound in a species of fish here called trout, but are really the well-known black bass, with which Seth Green, the enthusiastic pisciculturist, is stocking Northern waters. Up this stream some ten miles, propelled by oars and poles to the rapids, and the beginning of the Everglades is reached.

Imagine a low, flat savanna, a mile or more in width, over which the water is one to four feet deep, and entirely covered with a dense growth of mammoth saw-grass, which sometimes attains an altitude of ten feet or more, through which runs a channel, varying from a mere alligator's trail, scarce large enough to float an Indian canoe, to broad lagoons or bays, in which the water is deep enough to float a sailing ship. Lilly-pods or leaves of the dog lily, which here attain about the size and shape of an old-fashioned Quaker sun-bonnet, and are a serious impediment to navigation. These lakes are the natural home of the alligator, hundreds of which may be seen on sunny days stretched on the grassy banks or prowling lazily about in search of food and amusement, their ugly heads and repulsive bodies sometimes in much too close proximity to the water. The crocodiles, which are also to be met with, including the venomous moccasin, also find in the waste of water and reeds a congenial pleasure-ground, and curious and rare birds disport their plumage among the rank grass.

By dint of much rowing, poling and pushing, not to mention a vigorous use of inapposite words, a small boat may be forced through the eight or ten miles of this channel finally reaching the Haulover, a sandy ridge, some three hundred yards wide, separating this branch of the Everglades from Lake Worth, and over which boats and baggage must be dragged and carried as best they may. The settlers on Lake Worth designate the mud, perennially difficult of this kind, as the "Wog," each one of which is worse than the last. Indeed, it is a curious study—the mixture of courage and despair, of patience and profanity, in which these navigators of the saw-grass indulge in their frequent journeys this way.

Now fairly across the Haulover, and launched on the waters of Lake Worth, and a pleasant scene is reached. A beautiful sheet of water, some thirty miles long, by, perhaps, one and one-half wide, surrounded by the finest country the writer has yet seen in Florida, lies before you, absolutely below frost line, perpetually warm, and the temperature of the surface of the water runs from five-four to eighty-five degrees, much of the soil of excellent quality, tropical and semi-tropical fruits can be grown, which will not thrive in more Northern latitudes, and will make this section of Florida, at no very remote period, one of the richest portions of the State. It is claimed that the lake itself was originally fresh and without communication with the sea, until some few years since a Mr. Long, a German gentleman, bored a hole through the sand bar between the ocean, since which time the waters have been tinged with salt. Fish, in myriad forms, abound in the lake, and game, such as bears, deer and turkeys roam on its banks, or hide in its hammocks, and its ocean beach is rich in shells and other curious gems of the sea. But, as even the Garden of Eden had its serpent to destroy happiness, so Lake Worth has its mosquitoes, and during its summer months the green pools of slough, or cypress swamp, in comparison with the misery of its mosquito bites. They swarm in the air, they sail on the water, they ride in the breeze. The torments of the damned in "Dante's In-

Royal IV, is a superb young seltzer; Rover unnoticed! deserved better. It is a lovely breed 'un; Duxton show quality, but I don't think I'll be getting one. The next lively Cearé Frig is a good looking dog, and one of the most lively customers we know of; Ranger III, looked well; Prince Royal we thought as good as Rocket, who is a fairish dog. The Prince, however, was only very highly commended. The bitchies were a charming lot. Countess Fear did not show herself in her usual form, but Baffle and Novel were "all there." I don't think I'll be getting either, but I don't admire; she is too spaniel-headed. Mr. Abbott's Maud should have been noticed, and Nellie is a fine little bitch.

The Champion black-and-tan dog class had two competitors, Lang and Duke. Duke won. In tan and in coat he is superior to Lang. The champion bitch class had three entries, the best of which was not for competition, unfortunately; so the class was won. Nell was catalogued at ten guineas—cheap this for a champion. The open dogs class might have been won by Blossom won, and Mr. Parson's Bob was placed next, Marquie taking but a commendation. The bitches formed a poor class. Royal is very ragged, and Rosa was poor in feather. Duchess (passed over) has a good tan and a good coat, but Daphne was out of form altogether. In Irish champions, Palmerston in tan and in coat, won against all the rest. It is to be noted that is a good one for tan, but in the open dogs class, he is not so good. Count, won, and St. Patrick was placed next. Shot was only commended, and Dick looked very old. Mr. Abbott's Plunkett II. should have been in the list. The bitches were not pre-eminently grand. Kitty, however, is a good one; but Belle is too weedy. Farelle has a good frame, but shows too much of her ribs. In the open dogs, the best of the dogs are really too much of a good thing in the wrong places. Snipe is but a wiry weed.

For Forest and Stream and Rod and Gun.
BREAKING DOGS ON RUFFED GROUSE.

THE remarks published in FOREST AND STREAM of Nov. 19 under the above caption were intended to apply to young dogs, and were made upon the assumption that those dogs which had experienced work upon game, even if but for one season, were already broken. Therefore the criticism of your correspondent "Ruffed Grouse" is not to the point when he refers to the dogs that have been worked on the prairie.

[illegible]

primary lessons. I have seen sportsmen who were quite contented if the dogs found the game, pointed it staunchly, and never mouthed it after it was killed. My own dogs will do all this without any breaking whatever. No teaching whatever is needed for them in pointing and backing, and no caution required as regards mouthing dead birds. Yet I derive so much more pleasure from shooting over thoroughly broken dogs, that I am willing to devote the necessary time and patience to teaching the accomplishments which are such desirable accessories to the main work. I have known a dog who was impatient, from impatience, or because owing but one dog, will take a pup of six or eight months into the field for work, which too often results in mental and physical detriment to the dog.

So well convinced am I of the great advantages to be derived from having a dog thoroughly yard-broken ere taken into the field for work, that I allowed the autumn of last year to pass by without once taking into the field a brace of young dogs that were eight months old. Yet I spent three months of that year in shooting over dogs.

In a season of flood miles and miles of this region are submerged, and what at other times is a wilderness of grassy desert, then becomes a sea of water, and one may journey from the St. Lucie River to Lake Okechobee and to the Big Cypress, and thence to Biscayne Bay and back to the St. Lucie, and still find the same things. Though all this vast region is now in bloom as bright and gay as in the conservatory, birds sing as sweetly as when hung in gilded cages; the deer and the panther wander at will; the rattlesnake and moccasin here abound undisturbed by civilized man; the crocodile of the Indus and Nile dwells unmolested; and the laws of God are as fixed as the stars in the heavens. In this vast region, the State of Florida is in every part of the civilized world. — *Florida Agriculturist*.

drawn a number of prizes for persons who had been present at the fair. The prizes were as follows: Mr. W. W. Wick secured 1st prize for light brahmas, red Spanish chicks, golden Poland, bull and white Cochins. Mr. Coldman 1st for Plymouth Rock chicks; Mr. W. T. Johns took several 1st and 2d prizes with his bantam game and duckering games; other prizes were awarded to Messrs. Watson, Scruggs, Talley, Newman, Harris and Dandridge. The only lady competitor was Miss Ella Kirkman, she took 1st prize for gray Jordin, and 2d prize for black. The attendance was quite small, but yesterday, being a beautiful bright day, quite a number of admirers of fine poultry were present.

J. D. H.

EXISTENCE OF FORESTS ON CLIMATE.—Many trees have totally disappeared, or have been reduced to mere streams by an irrational and heinous felling of the forests. In the north-east of Germany, the Narp and Gold rivers exist only in name. The classic lands of antiquity are rich in sad lessons of deforestation. The springs and brooks of Palestine are dry, and the fruitfulness of the land has disappeared. The Jordan and Euphrates have been reduced to mere streams. Greece and Spain suffer severely to this day from the effects of destroying their forests. Many parts of the Kingdom of Wurttemberg have been rendered almost barren by the felling of the trees. In Hungary the periodically returning drought is universally attributed to the extermination of the forest. We attribute the present fruitfulness of Asia Minor and Greece to the preservation of the forests. The ruins and tombs have taken the place of what was the highest culture. Sardinia and Sicily were once the granaries of Italy, but have long since lost the fruitfulness sung of in ancient poets. On the other hand, man can improve the condition of the land in which he lives, more slowly indeed, but as certainly, by cultivating and preserving the forests. In the Delta of Upper Egypt, there were only five or six days of rain in the year, but that, since the time when Mehemet Ali caused some 20,000,000 trees to be planted, the number of days of rain in the year has increased to forty-five or forty-six. The Suez Canal has produced remarkable results. Ismail is built on what was a sandy desert, but since the Nile has been dammed up, and the water has been distributed and other plants have sprung up as if by magic, and, with the reappearance of the vegetation, the climate has changed. Four or five years ago rain was unknown in those regions, while from May, 1865, to May, 1869, fourteen days were recorded, and once such a rain storm that the natives looked upon it as a supernatural event. (Facts recorded in the *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich*, 1869, and in the *English Journals*.)

Austria herself has a very striking instance of a change of

The letter alluded to as published in *FOREST AND STREAM* of Nov. 18 was written some months ago, and was suggested by the well-known writer on canine matters, Mr. Arnold Burges, advocating the ruffed grouse as the best bird to break dogs on. I differed in opinion so widely as to make the assertion that it is the worst bird for the purpose. One cannot allow to select the game, but to answer the game may be upon which the young dog receives his initiatory lessons, he should first be well yard broken. When well yard-broken he will, at command, "lie on," drop to shot and signal, come to heel, and retrieve. Everything in addition to this that is taught in the yard, such as "toho," quartering to hand, etc., saves much patience and more precious time when in the field. First, and constantly, teach implicit obedience. The dog must understand the meaning of a command, and then obey without hesitation or delay in his part, or repetition of the command by his master. Teach him not only to drop instantly, but also in good form; and he should retrieve without mauling or dropping the bird, always holding to hand until receiving the command to deliver. My own dogs are exceedingly gentle, are very easily taught, and I have obtained great perfection in them. Upon seeing them perform in the yard many sportsmen have asked the pertinent question, "Will they do all this in the field?" I reply, "Yes, if they have been well taught and have learned perfectly the lesson of obedience, they will do all this and much more after the little experience which is needed to teach what can be learned by no other means. As a practical instance of the result of the system of breaking that I advocate and adopt, I will cite a young dog that I have initiated on game the present season. He was broken on woodcock and ruffed grouse, but for the sole reason that I was obliged to give the first field lessons in covert and on such game, or not at all until another season. He had already well learned all that I desired to teach him in the yard, and a few days devoted to his education in the field sufficed to render him a very superior dog on the game mentioned, rivaling the older and experienced dogs with which he was worked. I shall hope to give him a varied experience in the open, another season. Had circumstances permitted, I could now be shooting long trails along the Mississippi River, and perhaps in the good company of "Guido" and his friends, who would be well pleased by the natives in which I have the merited pride of breeder, breaker and owner. A friend at my side who has shot over dogs for many consecutive years, and has had much experience with ruffed grouse, entirely coincides with me in opinion as regards their fitness for the breaking of young dogs; and furthermore adds, that when cock shooting, if the young ruffed grouse is immediately called to heel, not allowing them to hunt the birds, but walks in and flushes. And his dogs have very superior noses and unexcelled staunchness. But after a dog has been well broken on other game, then break him on ruffed grouse, and in some localities good sport may be had without your dog acquiring bad habits. I have studied the habits of ruffed grouse, not only as a sportsman, but as an ornithologist, and well know how varied are their habits (as well as those of other birds) in various localities. Ruffed grouse are very abundant in Massachusetts, and probably nowhere will they be better dogs. The covert is generally favorable to this purpose, and also favorable for the sportsman, yet Massachusetts sportsmen will do well to first break their dogs on other game, unless they are to be used only in covert shooting. And when Mr. Editor, a correspondent asks what dog to get fortridge (ruffed grouse) and rabbit (saw) shooting, do not, I pray you, recommend a setter or pointer for such a purpose. To such uses and no other may they never be called as long as spaniels exist. EVERETT SMITH.

THE MINNESOTA FIELD TRIALS.

LETTER FROM HON. WM. MULLIKEN, ONE OF THE JUDGES.

EDITOR FOREST AND STREAM:

Having read the statement of Mr. Rowe in his paper regarding the circumstances wherein I read the rule to him during the Minnesota Field Trials, and said statement being wholly untrue, I desire in my own behalf a space in your columns in order to give your many readers the true history of the case as it occurred.

Nellie, landed by Mr. Sanborn, and I think Maggie May, by Mr. Waddington, were down. Five birds were flushed and settled some distance ahead of the dogs in the edge of a dry slough, there being a small patch of hazel brush on the right as we approached the locality where the birds went down. When we got into the slough Nellie came to a stand in good cover, and after waiting sufficient time for her to establish a point, being next to Mr. Sanborn, who was on my right, I requested him to allow Nellie to flush the bird. Mr. Sanborn ordered her on, and she worked upon the trail two or three rods, and then, instead of finding a bird, threw up her head and commenced roading to the right, making a circle and crossing the trail she had been on, came in front of Mr. Whitford, who was on the left, Mr. Davidson being in the centre. While Nellie was in front of Mr. Whitford Mr. Davidson was walking up, flushed a bird some distance from Nellie and to the left of the trail where she had been working. Nellie, at the time the bird was raised, was roading with head up, giving the judges no evidence that she was on a scent. Myself and Mr. Davidson at once gave Nellie a false point, whereupon Mr. Whitford dissented in language I do not desire to repeat. Mr. Whitford and Mr. Sanborn claimed the bird that Mr. Davidson flushed was the one that was on my right, and we had a hot controversy about it. At this stage of the proceedings Mr. Rowe, who had been riding in the judges' wagon for two days (saying he was placed there by Mr. Lincoln as "signal officer"), said to Mr. Sanborn: "Sanborn, if that was my dog I would take her up."

I then asked Mr. Rowe what business he had to interfere in the matter, and if he knew the rules governing the field trials. The respondent flushed the bird, and he replied, but it was so ungenerously that I was compelled by duty to read him part of rule 8, which is as follows: "No spectators are allowed nearer the handler of the dogs than seventy-five yards to the rear. No spectators or others shall make any remarks about the dogs or judges within hearing of the judges; such persons so offending shall be expelled from the ground by the judges, who shall order the special police to effect such persons leaving."

After much controversy between the judges it was decided to give Nellie a point in order to heal the disturbance, on the ground that the bird that Mr. Davidson flushed "might have been" the bird she had pointed, while there were four more birds known to have gone down in the immediate vicinity. Regarding my apology to Mr. Rowe his statement is entirely outside of the facts. He came to me on Friday evening

just before I left the camp and requested me to leave my tent on the ground over night for his accommodation, which was freely granted. I then said to him: "I hoped he had no hard feelings for what had occurred in the field that morning," and he said he had none. This is the only apology I made, and I will qualify it under oath.

It is notoriously known by all who attended the field trials that Mr. Rowe was very officious for a reporter, and entirely out of his proper place during the whole field trial. When not riding with the judges he was arm in arm on more than one occasion with one of the judges. Especially when Countess Royal and Nellie were down.

I am glad to bear witness that the representative of the *FOREST AND STREAM* knew his place and kept it in such a gentlemanly manner that it met the commendations of all who saw him tread warily and staidly. I have endeavored to keep out of this field trial controversy, and should have done so had not Mr. Rowe made statements regarding me that are utterly false. WM. MULLIKEN.

ACKLEY'S DOG.

BEDFORD, Ohio, Dec. 14, 1878.

EDITOR FOREST AND STREAM:

The death of "Old Sport," and the "Law of Trespass," as contained in late numbers of *FOREST AND STREAM*, remind me of a sporting incident that occurred many years since to my partner, the late Prof. H. A. Ackley. He was shooting ducks in the marshes of Sandusky Bay, and had an excellent retriever, that would retrieve all the ducks that fell, no matter who shot them. There was another person shooting from a point of land not far from where Doctor Ackley was shooting. Ackley's dog beat to Ackley's pile of ducks all the ducks that this fellow knocked down, which so angered him that he informed Ackley, that if his dog took any more of his ducks he would shoot you; Ackley replied, "If you shoot my dog I will shoot you; I do not want your ducks, but I cannot prevent my dog from retrieving all the ducks that fall." Pretty soon the fellow dropped another duck, and Ackley's dog "went for him," and the fellow blazed away at the dog and Ackley blazed at the fellow. The manner in which that fellow humped himself satisfied Ackley that he had better be off; so, gathering up his ducks he put out for his buggy and horse, which were back a short distance. Ackley delivered horse and buggy to the liverly man in the town of Sandusky and took the middle dog to Cleveland. The next day after a man called at our office, saying he had been out shooting duck the day before with a friend, who had carelessly shot some small shot into his body, and he wished to have them taken out. We took them out, eleven shot in all. "What is your charge, gentlemen?" "Twenty dollars." He said it, not knowing that one of the firm of Ackley & Garlick, was that "friend" who had lodged those shot in him.

Our bill of items was ten dollars for digging out the shot and ten dollars for that scamp shooting, though not killing, one of the best dogs I ever saw.

Very truly yours,

T. GARLICK.

TENNESSEE FIELD TRIALS FOR 1879.—The Tennessee Sportsman's Association have fixed the time of their next Field Trials for 1879 for December 1, at Col. Overton's farm, near Nashville.

CANINE OVARIOTOMY.—Editor *Forest and Stream* and *Rod and Gun*: As W. W. T., in your issue of Dec. 19, 1878, refers to a letter written by me, B., in reference to some article on ovariotomy, and had the honor of having printed in the *Country*, I feel called upon to answer him on account of my interest in all that relates to canine pathology. To his direct question: "How to recognize the ovary when you see it," I would reply: The ovary is a small body ranging from the size of a pea to that of a bean, according to the age of the subject, and in shape resembling the latter. W. W. S. will, if he has read the *Country* carefully, see that, I rather doubt the practicability of "M. B.'s" procedure, which doubt is confirmed by further investigations. To W. W. S.'s inquiry: "What relation of position does it (the ovary) bear to the uterus itself?" I would simply refer him to my original article and suggest that before he sacrifices a well bred pup he practice upon a dead cur of low degree. The operation itself is very simple, and provided an opening is not made of sufficient size to afterward collect pus by a hernia or protrusion of the bowels is rarely if ever attended by any untoward results. If any further information on the subject of spaying is desired none will give it with greater pleasure than

MOHICAN.

A SPANIEL SUCKLING TWO PIGS.—A correspondent of an English contemporary writes: "The other day, while walking in the country a few miles from Reading, my attention was drawn to a most singular incident—namely, a spaniel bitch sucking two young pigs. The owner, living at a small homestead at Knowl Hill, informed me that all the spaniel's pups had recently been destroyed, which appeared to greatly distress the mother. It happened about that time that a sow had a litter of pigs, and she shortly afterwards died, consequently the little ones would have shared the same fate had not succor come to them by the timely assistance of the spaniel, who, of its own accord, took the place of the sow, and is now suckling the pigs."

POISONED.—A liver colored cocker spaniel belonging to Isaac H. Folger, Esq., senior officer of the Brooklyn, Mass., *Advance*, was poisoned Dec. 7th at Nantucket. The dog was pure blooded, an excellent retriever, thoroughly trained and would perform a variety of tricks. Mr. Folger has offered a reward of fifty dollars for the detection of the poisoner. He has also placarded Nantucket with doggers reading as follows:

DO NOT POISON THEM!

One of them lives in Nantucket. I believe dogs go to heaven. If they do not it is unfortunate for the cur who poisoned Snyder, Saturday, Dec. 7, 1878. The poisoner betrays his guilt every time he talks about it. ISAAC H. FOLGER.

Brooklyn, Dec. 21, 1878.

—Jilt, pure Laverack, property of A. F. Huston, Coatesville, Pa., whelped six pups on 17th instant, by Carlowitz, two dogs and four bitches.

—The setter bitch Fanny Ellsler (Rob Roy-Pickles), belonging to H. K. Bostwick, of Atchison, Kansas, whelped, on December 15, eight puppies—three dogs and five bitches, by Topoke, Kan., Kennel Club Brussels (Leicester-Dart).

—Dr. Edward J. Forster's Daisy (Shot-Nellie) whelped, 16th December, 1878, two dogs and four bitches, by Adams' champion field trial winner Drake.

—Mr. J. P. Bigelow, of West Boylston, Mass., claims the name of Uno for his red Irish setter bitch puppy whelped July 12, out of Hosmer's imported Rose, by Moore's Sancho.

—Mr. J. P. Bigelow, of West Boylston, Mass., writes that his native English setter bitch Rumpus, winner of first prize at Worcester National Dog Show, May, '78, whelped Dec. 17th two dogs and four bitches, sired by Brewster's Don, of Butler Adams' Rock stock.

—E. Lavislette, of Binghamton, N. Y., claims the name Pat for his red Irish setter pup.

THE NOM DE PLUME "MOHICAN."

BROOKLYN, N. Y., Dec. 13, 1878.

EDITOR FOREST AND STREAM:

"Mine ear is open and my heart prepared,
The worst is worldly loss than canst unfold;
Say, is my kingdom lost?"

In your issue of December 12, 1878, I noticed a communication on "Canine Skin Diseases—Eczema."

In regard to the *nom de plume* of "Mohican," I would say that I have had possession, adopted and used it for the last three years or more, to the several articles communicated by me to the *FOREST AND STREAM*. There appeared in a Chicago paper in the year 1876, a communication from me entitled, "The American Shooter Fifty Years Ago," and bears my *nom de plume*, "Mohican" (the above article appeared in that journal for several weeks in succession); also to several communications on express charges on dogs, in which I upheld the American Express Company as the only express to be patronized by the sportsmen and breeders. These articles drew forth communications favoring my ideas from M. Von Culin, Esq., Delaware City, Del., and several others.

I think I have the full right to withhold and adopt the *nom de plume* of "Mohican," and shall use it to any of my future articles which shall appear from time to time in the sporting papers. But if your correspondent, "Mohican," can show and prove his prior right, I am willing to forfeit the same, and not before.

Communications published and signed "Mohican" are supposed to be from me, and if there are more than one by that name it will be apt to lead to misunderstanding. I would request your correspondent, "Mohican," in a gentlemanly way, to adopt another *nom de plume*.

"If you deny me, be upon your law!"

There is no force in the decision of Venice—

I stand for judgment; answer, shall I have it?"

JOSEPH E. FISHER (Mohican).

We have not the slightest doubt that our correspondent will do so at once.—Ed.

Yachting and Boating.

THE BRITISH YACHT FLEET.

THE wonderful growth as well as the peculiarly preferences of popular taste among the British yachting public is shown in strong light by some figures recently published by the *London Field*. The total number of yachts in 1850 was 503, consisting of 372 cutters, only 70 schooners, 45 yawls, 7 of other rigs, mostly luggers, and but 3 steamers. By 1864, the numbers had swelled to a total of 895, including 574 cutters, 207 schooners, 54 yawls, 27 of other rigs, and 38 steamers. In 1878 there were no less than 1,833 yachts regularly enrolled, and with those of which no records are available the fleet may be set down as having attained a total of 2,000! These are divided as follows: 754 cutters, 328 schooners, 328 yawls, 25 of other rig, and 238 steamers. What is most remarkable, at least in the light of our own experience, is the fact that even as far back as 1850 the average tonnage of all craft was as high as 44 tons, or very nearly as large as that of the modern fleet, which is 47. With us the average tonnage would fall very much below these figures, as we still have to draw very largely upon the small cat-boats and jib and mainsails for the make-up of our fleet. No doubt this can be traced to the lack of wealth and leisure, as well as the presence along our coast of large bodies of sheltered water, rendering possible a spirited devotion to the sport in craft smaller than would be of service abroad, where everybody's ambition is to go foreign in his yacht. Cutters are the most numerous in British waters, and very justly so. With us the sloop cannot supply their place on account of the unhandiness of its rig, and we have therefore made the schooner our "national rig," with the sloop relegated only to the smaller classes. Of larger sloops there are hardly a dozen in America, and the tendency seems to be to displace even these by the cutter and yawl, leaving the sloop to hold sway among the small smooth-water sailers, chiefly on account of its cheapness and greater efficiency for short river work. The schooner does not seem to hold so prominent a position in Europe as here, for the cutter outnumbered her two to one, and even the yawl runs her a close race. This latter rig has sprung into very sudden popularity for both cruising and racing, and the satisfaction it has given to those who have tried it on this side of the Atlantic assures it an equally prosperous future here. Steamers, as a matter of course, have increased in a rapid ratio with the spread of a knowledge of steam engineering; but we still fall very far behind our cousins in respect to sea-going craft of this description, there being really only two sea-going steam yachts in our waters, the *Isabel* and *Violetta*. In 1870 there were in Great Britain about 100 yachts under 5 tons, 300 from 5 to 10 tons, 403 from 10 to 20, 189 from 20 to 30, 90 from 30 to 40, 84 from 40 to 50, 50 from 50 to 60, 88 from 60 to 80, 6 from 80 to 100, 1 from 100 to 150, 1 from 150 to 200, 1 from 200 to 300, 1 from 300 to 400, 1 from 400 to 500, 1 from 500 to 600, 1 from 600 to 700, 1 from 700 to 800, 1 from 800 to 900, 1 from 900 to 1,000, 1 from 1,000 to 1,500, 1 from 1,500 to 2,000, 1 from 2,000 to 2,500, 1 from 2,500 to 3,000, 1 from 3,000 to 3,500, 1 from 3,500 to 4,000, 1 from 4,000 to 4,500, 1 from 4,500 to 5,000, 1 from 5,000 to 5,500, 1 from 5,500 to 6,000, 1 from 6,000 to 6,500, 1 from 6,500 to 7,000, 1 from 7,000 to 7,500, 1 from 7,500 to 8,000, 1 from 8,000 to 8,500, 1 from 8,500 to 9,000, 1 from 9,000 to 9,500, 1 from 9,500 to 10,000, 1 from 10,000 to 10,500, 1 from 10,500 to 11,000, 1 from 11,000 to 11,500, 1 from 11,500 to 12,000, 1 from 12,000 to 12,500, 1 from 12,500 to 13,000, 1 from 13,000 to 13,500, 1 from 13,500 to 14,000, 1 from 14,000 to 14,500, 1 from 14,500 to 15,000, 1 from 15,000 to 15,500, 1 from 15,500 to 16,000, 1 from 16,000 to 16,500, 1 from 16,500 to 17,000, 1 from 17,000 to 17,500, 1 from 17,500 to 18,000, 1 from 18,000 to 18,500, 1 from 18,500 to 19,000, 1 from 19,000 to 19,500, 1 from 19,500 to 20,000, 1 from 20,000 to 20,500, 1 from 20,500 to 21,000, 1 from 21,000 to 21,500, 1 from 21,500 to 22,000, 1 from 22,000 to 22,500, 1 from 22,500 to 23,000, 1 from 23,000 to 23,500, 1 from 23,500 to 24,000, 1 from 24,000 to 24,500, 1 from 24,500 to 25,000, 1 from 25,000 to 25,500, 1 from 25,500 to 26,000, 1 from 26,000 to 26,500, 1 from 26,500 to 27,000, 1 from 27,000 to 27,500, 1 from 27,500 to 28,000, 1 from 28,000 to 28,500, 1 from 28,500 to 29,000, 1 from 29,000 to 29,500, 1 from 29,500 to 30,000, 1 from 30,000 to 30,500, 1 from 30,500 to 31,000, 1 from 31,000 to 31,500, 1 from 31,500 to 32,000, 1 from 32,000 to 32,500, 1 from 32,500 to 33,000, 1 from 33,000 to 33,500, 1 from 33,500 to 34,000, 1 from 34,000 to 34,500, 1 from 34,500 to 35,000, 1 from 35,000 to 35,500, 1 from 35,500 to 36,000, 1 from 36,000 to 36,500, 1 from 36,500 to 37,000, 1 from 37,000 to 37,500, 1 from 37,500 to 38,000, 1 from 38,000 to 38,500, 1 from 38,500 to 39,000, 1 from 39,000 to 39,500, 1 from 39,500 to 40,000, 1 from 40,000 to 40,500, 1 from 40,500 to 41,000, 1 from 41,000 to 41,500, 1 from 69,500 to 70,000, 1 from 70,000 to 70,500, 1 from 70,500 to 71,000, 1 from 71,000 to 71,500, 1 from 71,500 to 72,000, 1 from 72,000 to 72,500, 1 from 72,500 to 73,000, 1 from 73,000 to 73,500, 1 from 73,500 to 74,000, 1 from 74,000 to 74,500, 1 from 74,500 to 75,000, 1 from 75,000 to 75,500, 1 from 75,500 to 76,000, 1 from 76,000 to 76,500, 1 from 76,500 to 77,000, 1 from 77,000 to 77,500, 1 from 77,500 to 78,000, 1 from 78,000 to 78,500, 1 from 78,500 to 79,000, 1 from 79,000 to 79,500, 1 from 79,500 to 80,000, 1 from 80,000 to 80,500, 1 from 80,500 to 81,000, 1 from 81,000 to 81,500, 1 from 81,500 to 82,000, 1 from 82,000 to 82,500, 1 from 82,500 to 83,000, 1 from 83,000 to 83,500, 1 from 83,500 to 84,000, 1 from 84,000 to 84,500, 1 from 84,500 to 85,000, 1 from 85,000 to 85,500, 1 from 85,500 to 86,000, 1 from 86,000 to 86,500, 1 from 86,500 to 87,000, 1 from 87,000 to 87,500, 1 from 87,500 to 88,000, 1 from 88,000 to 88,500, 1 from 88,500 to 89,000, 1 from 89,000 to 89,500, 1 from 89,500 to 90,000, 1 from 90,000 to 90,500, 1 from 90,500 to 91,000, 1 from 91,000 to 91,500, 1 from 91,500 to 92,000, 1 from 92,000 to 92,500, 1 from 92,500 to 93,000, 1 from 93,000 to 93,500, 1 from 93,500 to 94,000, 1 from 94,000 to 94,500, 1 from 94,500 to 95,000, 1 from 95,000 to 95,500, 1 from 95,500 to 96,000, 1 from 96,000 to 96,500, 1 from 96,500 to 97,000, 1 from 97,000 to 97,500, 1 from 97,500 to 98,000, 1 from 98,000 to 98,500, 1 from 98,500 to 99,000, 1 from 99,000 to 99,500, 1 from 99,500 to 100,000, 1 from 100,000 to 100,500, 1 from 100,500 to 101,000, 1 from 101,000 to 101,500, 1 from 101,500 to 102,000, 1 from 102,000 to 102,500, 1 from 102,500 to 103,000, 1 from 103,000 to 103,500, 1 from 103,500 to 104,000, 1 from 104,000 to 104,500, 1 from 104,500 to 105,000, 1 from 105,000 to 105,500, 1 from 105,500 to 106,000, 1 from 106,000 to 106,500, 1 from 106,500 to 107,000, 1 from 107,000 to 107,500, 1 from 107,500 to 108,000, 1 from 108,000 to 108,500, 1 from 108,500 to 109,000, 1 from 109,000 to 109,500, 1 from 109,500 to 110,000, 1 from 110,000 to 110,500, 1 from 110,500 to 111,000, 1 from 111,000 to 111,500, 1 from 111,500 to 112,000, 1 from 112,000 to 112,500, 1 from 112,500 to 113,000, 1 from 113,000 to 113,500, 1 from 113,500 to 114,000, 1 from 114,000 to 114,500, 1 from 114,500 to 115,000, 1 from 115,000 to 115,500, 1 from 115,500 to 116,000, 1 from 116,000 to 116,500, 1 from 116,500 to 117,000, 1 from 117,000 to 117,500, 1 from 117,500 to 118,000, 1 from 118,000 to 118,500, 1 from 118,500 to 119,000, 1 from 119,000 to 119,500, 1 from 119,500 to 120,000, 1 from 120,000 to 120,500, 1 from 120,500 to 121,000, 1 from 121,000 to 121,500, 1 from 121,500 to 122,000, 1 from 122,000 to 122,500, 1 from 122,500 to 123,000, 1 from 123,000 to 123,500, 1 from 123,500 to 124,000, 1 from 124,000 to 124,500, 1 from 124,500 to 125,000, 1 from 125,000 to 125,500, 1 from 125,500 to 126,000, 1 from 126,000 to 126,500, 1 from 126,500 to 127,000, 1 from 127,000 to 127,500, 1 from 127,500 to 128,000, 1 from 128,000 to 128,500, 1 from 128,500 to 129,000, 1 from 129,000 to 129,500, 1 from 129,500 to 130,000, 1 from 130,000 to 130,500, 1 from 130,500 to 131,000, 1 from 131,000 to 131,500, 1 from 131,500 to 132,000, 1 from 132,000 to 132,500, 1 from 132,500 to 133,000, 1 from 133,000 to 133,500, 1 from 133,500 to 134,000, 1 from 134,000 to 134,500, 1 from 134,500 to 135,000, 1 from 135,000 to 135,500, 1 from 135,500 to 136,000, 1 from 136,000 to 136,500, 1 from 136,500 to 137,000, 1 from 137,000 to 137,500, 1 from 137,500 to 138,000, 1 from 138,000 to 138,500, 1 from 138,500 to 139,000, 1 from 139,000 to 139,500, 1 from 139,500 to 140,000, 1 from 140,000 to 140,500, 1 from 140,500 to 141,000, 1 from 141,000 to 141,500, 1 from 141,500 to 142,000, 1 from 142,000 to 142,500, 1 from 142,500 to 143,000, 1 from 143,000 to 143,500, 1 from 143,500 to 144,000, 1 from 144,000 to 144,500, 1 from 144,500 to 145,000, 1 from 145,000 to 145,500, 1 from 145,500 to 146,000, 1 from 146,000 to 146,500, 1 from 146,500 to 147,000, 1 from 147,000 to 147,500, 1 from 147,500 to 148,000, 1 from 148,000 to 148,500, 1 from 148,500 to 149,000, 1 from 149,000 to 149,500,

80 to 100, 87 from 100 to 130, 48 from 150 to 200, and 40 above 200, all exclusive of 283 steamers of various tonnages from the launch up to the five and six hundred tonners. But what is of much more import, while almost every English yacht, no matter what her size, represents a strongly built, fully rigged and decked vessel, fitted out in a most complete manner with navigation and cruising implements aboard, too many of our craft are still under the influence of that neglect and incompleteness arising from a want of intimate knowledge with many of those phases of the sport which afford much more health, pleasure and instruction than merely trimming sheets or may be hauling down a reef and bobbing jib. For these evils time is the only cure.

ROUGE CROIX TO CORINTHIAN.—Editor *Forest and Stream*. Dec. 15: "Corinthian" says I "evidently found a mare's nest," in his letter of Oct. 25, as he was not speaking of rigs but of types. His words were: "When the plucky Ashbury brought his *outer yacht Cambria* to these waters, etc." and if that is not accepted as meaning that *Cambria* was cutter-rigged, all I can say is that every writer on yachting during the past thirty years has misused the term. Schooner yacht, cutter yacht, yawl yacht, sloop yacht—all these are terms which have never been used in any other sense than as descriptions of rig. Corinthian should not blame me for taking him at his word. **ROUGE CROIX.**

OUR WINNING LIST.—Says a yachtsman from the North: "I want to thank you for the valuable record of this season's racing. It is most creditable to your paper, and fills a need long experienced."

STRAIM LAXTON WANTED.—Parties having 30ft. cabin steam launch for sale at low price for cash may address Yachting Editor, this office.

THE COMING BOAT.

ROSEN, L. I., Dec. 10, 1878.

EDITOR *FOREST AND STREAM*:

I am well aware that there is a deeply-rooted prejudice against flat-bottomed boats, particularly among those would-be boatmen who condemn everything concerning which they know nothing, and who have not the capacity to investigate rationally for themselves. To such individuals I have nothing to say, except that they will not interest them to read what follows.

Being interested in the question of heavy draught *versus* shallow boats I have been led to make inquiries concerning the Fairhaven sharpie, and in the light of my own experience during years long ago, can also from facts kindly furnished by an old-time yachting friend, can say that I am convinced that for all the purposes of coast cruising, for seaworthiness, economy of construction and for speed there is no boat of equal tonnage that can approach the sharpie.

I am told, and have every reason to believe, that "one of these boats, thirty-two feet in length, ran ten knots off the wind on L. I. Sound in thirty-four minutes"; that "last summer George Smith's sharpie, of Milford Point, Conn., averaged sixteen knots per hour for three hours."

Minor Smith, whom I well know to be one of the best boatmen on our coast, says that "Many a time has he lain outside Montank in his sharpie, long after the deep keel smacks found it uncomfortable and unsafe to stay, their decks being covered with water, while his decks were dry." He also says that he never saw the time when he was forced to lie to, but that his sharpie would eat to windward no matter how bad the sea.

Another man, Mr. Roe, who had lived in and built these boats for thirty years, says that a "thirty-five foot sharpie will drown out any forty-five foot ordinary boat that sails, and will beat her in any weather, either on or off the wind." Also, that "she will lie at anchor, easy and dry, when a sixty-ton sloop will plunge her bow under every sea." Now, if these be facts, and I have every reason to believe they are, I would ask where can we find the craft that for cruising purposes combines more excellent qualities?

What do we want a cruising boat to do for us? In the first place, she must be able to carry us wherever we desire to go. Suppose, for instance, we wish a few hours of coast fishing, or shooting, well, our sharpie will take us just where both are to be found—among the rocks, along the meadows, or up the creeks.

In such places a keel-boat is but a nuisance and an incumbrance; even the centerboard sloop, drawing three or four feet of water, will often sorely try our patience by displaying amphibious proclivities just when those tempting snipe-flats heave in sight.

Then look at the beautiful simplicity of our sharpie's rig. Two gracefully-tapering masts, no standing rigging and but four lines, with the same number of single blocks in her entire running gear. Just compare it with the cumbersome top-hatop which must go with a boat of any other kind.

Another point in the sharpie's favor is that owing to her form, every square inch in her can be made available. She is also so light, from her peculiar construction, that if she should by any chance sink she will (to speak in Irish) float.

The first attempt I ever made at yachting was in a sharpie, forty feet over all, drawing ten inches of water. At that time I knew but little about sailing anything beyond a cat boat of small size, and the result proved that I was fortunately experimenting with a craft that could take care of herself, for just to the eastward of Faulkner Island we encountered a gale. Not knowing what else to do, and being headed for old Long Island, I just lowered my mainsail and "so she drove." Well, we found some land just to the westward of Plum Gut. Not seeing the wished-for haven I put her full tilt for the beach, through the breakers. She tried to climb over into Orient Harbor, but only succeeded in running two-thirds of her length out on dry land. Could any boat do more? T. C.

A DISSENTING VIEW.

Boston, Dec. 29, 1878.

EDITOR *FOREST AND STREAM*:

In your issue of Dec. 19 I noticed the heading "Two Boston Creeks." As I question their merit I doubt the application.

I have had the pleasure of a sail in the *Enterprise* on one of her severest trials and though it was a very heavy sea and strong breeze it must be nothing to what some of the English cutters have had

to undergo, from the accounts handed down to posterity, for in stance, "coming up to blow" occasionally, or passing through a breeze, when some one "will have to hold your hair on."

I also question "Neptune's" opinion that the *Viking* is the best boat of the two to windward.

I think "Neptune" is wide of the mark in observing the superiority of *Enterprise* over *Mallap*, and more so in assuming the *Viking* can go to windward better than *Enterprise*; that really makes *Viking* the best of the three, which is certainly not generally conceded.

From my own observation of the 9th of October regatta I feel certain that *Viking* could have done nothing with *Shadow* had the proper canvas been carried on her. And, strange to believe, I have lots of company (men who thoroughly understand yachting who believe *Shadow* could discount the *Viking* in any weather.

In rough water especially the fair lines of *Shadow* would tell amazingly on *Viking's* irregularities. That *Viking* has power no one will deny, that she is roomy and comfortable is also true; that she is fast remains to be proved.

When she piles up the admirable record of *Shadow*, or wins the most races from her we will admit her superiority, without being prejudiced.

I think *Viking* has got hard lines to straighten with boats of her own class before her aspirations tempt her from her sphere. To speak bluntly and honestly, the models of both *Enterprise* and *Viking* are objects of criticism and comment, and they make friends very slowly. Though the over-doing of square bilges and keels is evident to me, I do not wish to influence others to my way of thinking, but advise them to profit by observation and careful investigation.

There is a great deal of talk this way about scientific figuring in boats' models, but I fail to see the science displayed when the model does not sit in the water to a scientific load line. I also fail to see the science displayed in balancing sail when, after repeated trials, the forward or after sails have to be altered to make them steer easy, as circumstances require. I should like to see *Enterprise* rigged as an American vessel. I think she would develop more speed, and be just as comfortable. Although any narrow vessel makes a better rough water boat if she is provided with sufficient depth to steady her, I doubt the practical use of them as cruisers—you forfeit too much for weatherliness. I claim you can make a yacht more seaworthy with 38ft. length, 16ft. beam, 6ft. draught, than you can one of 38ft. length, 8ft. beam, 8ft. draught.

We have a veritable cutter here, 42x37, and I can produce a number of small centerboard craft that can go right away from her to windward in a rough time, and her only show is a free wind and a very light one, then she skims like a bird. She was imported from England.

We are to be treated again to the subject of marine insanity, but although I should not like to go through the undertaking myself, I cannot help admiring courage and wishing success to the individual in question.

Mr. Herbert Burrell, a man about 35 years of age, a native of Cape Cod, by occupation a painter, now working at Melton, Mass., is to make the southern passage of the Atlantic around the Hope across the Indian Ocean to far Australia. When one stops to think of days and hours and months of solitary confinement on board a miniature life-boat, we shudder to think what humanity undergoes for filthy lucre and unsatisfied ambition. Mr. Burrell selected Messrs. Hulings & Pryor as the one to give him the most satisfactory craft for his perilous adventure, and from observation I should say she was complete. She is 19ft. over all, 18ft. 3in. water line, 8ft. beam, and 2ft. 2in. depth of hold; she is framed of best New Hampshire oak, and planked with picked cypress; is timbered and planked heavy on bottom, with lighter top; has excessive crown of deck, without rail or any obstruction to prevent the water from running off; two masts will be stepped, one permanent, aft from the bow, on which is a boom-leg-of-mutton sail, 10ft. hoist, 8ft. gin. boom. A headstay is carried to stem of boat, on which a forestay sail will be set. On one side of the stem an iron strap will be rigged to push out a jibboom for light weather to set a balloon-jib on. The boom of leg-of-mutton sail will be rigged with studding-sail irons, to increase the size of sail in light weather. Twelve feet from the bow is a small cockpit, 2ft. x 20in., the seat aft of which forms a cover to after part of the boat; aft the standing room or cockpit. Her keel, including an iron shoe of 150lbs., will be 7 1/4 in. in depth, and the boat, loaded, will draw about 2ft. to 3 feet of water. The floor of the stand room is concave, and the scupper is in the centre, leading down perpendicularly, coming out on bottom one side of keel. About 3ft. from sternpost a temporary mast 7ft. 6in. high will be stepped to carry a dandy or jigger sail. The boat will be provided with two rudders in case of accident, two drags for laying to, and all necessary navigating instruments; suitable cans for stowing will hold the water, in all about two barrels. One of the modern kerosene oil stoves will do the cooking. I neglected to say that the boat's model is sharp at both ends, and somewhat of the pinkey style.

When you stop to think of a human being going so many miles in such a wee thing, and alone, you must say his courage is stout. The boat is to be placed on exhibition. The start will take place from the wharf of the builder, December 25, if everything can be got in readiness. Mr. Burrell formerly followed the sea for a living, having occupied the position of mate for seven years. If he succeeds in his perilous undertaking, he intends putting the boat on exhibition on reaching his destination. **KREDO.**

For *Forest and Stream* and *Rod and Gun*.

CANOEING ON LAKE SUPERIOR IN 1840.—No. 3.

August 3, *Two Heart River*.—We intended to sail early this morning for the Grande Morais, but the wind rose in the night so much that we had ourselves "degrade," as Pierre calls it, and compelled to remain for the present. I took my rod, and followed the little river up to the rapids, where the trout rose well, and I had killed half a dozen when my foot length and dice were carried off by a heavy fish. I had been so engaged in the sport that I had not noticed the attack of the sand flies, which stung me to such a degree as to swell my head to the size of a pumpkin.

The sting is poisonous to me, and creates a fever, which is disagreeable enough. I mention this annoyance the more as it is the only drawback to the pleasure of our journey. The voyageurs say that nothing but a wet blanket will keep off the "brutons," as they call them.

August 4.—Last night a heavy northwester came up, accompanied with thunder and rain, which nearly blew away our tent, and raised such a sea that we could not make a start this morning. I amused myself with making some trout flies.

August 8.—Still at Two Heart River. For the last six days the wind has blown with so much violence from the northwest that we have not dared to embark. We were encamped upon a narrow beach of sand and pebbles, which separated the river from the lake, and during the violence of the storm one night the ground actually trembled. We afterward removed our camp across the river, and found the site of an old Indian lodge, where we passed the time with more comfort. Near the river's mouth there is a picketed inclosure containing the graves of five Frenchmen who were drowned in trying to make the mouth of the river in a loaded canoe. The tall and gloomy pines and firs form an appropriate canopy for these poor fellows, taking their long repose after their weary life toils. We have amused ourselves during this detention by hunting and fishing. I have caught a good many trout, some of them up to two pounds weight, and my companions have killed pigeons and ruffed grouse—there seems to be no large game on the lake shore.

August 9.—The wind having abated, we rose at daylight, and after a good breakfast we prepared to leave the river; but on reaching its mouth we found it so clogged up with sand that there was barely water enough for the canoe, and that ran out like a mill-race. Pierre stood up in the bow of the canoe with his pole, his fine black eyes gleaming with a vigilant excitement. We shot over the rapid like a flash, and unmounted the breakers without shipping much water. Had we struck, a hole must have been torn in the side of the bark, and we should probably have filled and sunk. With a hearty cheer we bade adieu to Two Heart River, and pulled lustily for the next point. When about half way across the bay we thought we heard a man calling from the shore, and supposing it might be the party of surveyors whom we had met, on their return with provisions for their men, and examining the shore with a glass, we thought we saw a boat with men. We were about making for the shore when the canoe appeared in a loon, which popped up its head and saluted us with screams of derision. "Voilà l'arpentier!" said Pierre, and we heard from the shore called these noisy birds "surveyors." Presently an easterly breeze sprang up, and gaily hoisting our sail we ran on at a fine rate of speed to "Grand Marais," which is a small bay at the outlet of a river of the same name. Beyond this bay commences the "Grandes Sables," which are high and conical hills of sand, more or less bare. One of them is estimated by McKenney to be 500ft. high, and they seem to be a continuation of the pictured rocks in a state of abrasion. The country in the rear is a sandy desert, interspersed with a scanty growth of evergreens. Several miles back there is a beautiful little lake, to which the exploring party of Dr. Houghton gave the name of "The Diamond of the Desert." We traveled until a late hour in hopes of reaching "La Chapelle," or the Doric Rock, as McKenney calls it; but night overtaking us, we encamped about three miles from it, having made forty miles this day.

August 10.—Started at dawn for La Chapelle, and soon after leaving camp the pictured rocks commenced, although at first not so elevated as they are at the centre. For a couple of miles they averaged 100ft. in height, of a friable sandstone, and the storms have excavated their lower faces into a thousand fantastic caverns, which resemble arches, vaults and ovens, from which the dashing water reverberates with a singular hollow sound. Above these caverns, where the face of the rock is more level, it is stained with various colors, from black to white, by the dripping of water from above, where it is saturated with oxid of iron and other minerals, and they assume various grotesque figures. The voyageurs pointed out one which they called Manabouzo's portrait, and which certainly might well represent this Indian deity. Turning a point, La Chapelle came into view. This mass of rocks is the most curious freak of nature that I ever saw. Imagine an arched slab of rock resting on pillars of the most ponderous proportions, and the whole fabric washed and rounded off by the action of the waves into a general resemblance to the Doric order of architecture. The regularity of its appearance at the distance of a few hundred yards would almost make one believe that a race of Titans had piled up these masses as a temple of worship to some antediluvian deity. Jutting over the lake is a perfect pulpit of stone. It is octagonal in shape, and sprinzes from a pillar which supports it, and upon it lies a square block of stone, which represents the Book. This singular structure is surrounded by a heavy growth of evergreens, and from the roof and sides grow vines of large size. Near it a small stream finds its way to the lake, and on a small piece of pebbly beach at its mouth we encamped for breakfast. We coasted along, admiring these manifestations of the waves upon the friable rock, which extends an unbroken precipice for nine miles, when it is interrupted by the entrance of the Miner's River, which forms a break of half a mile. For this distance it is composed of sandstone, except in one spot, where there is a substratum of conglomerate. It is not in a regular line from east to west, but juts out into points and recedes into bays, like salient angles in a fortification. The whole length of the rock is stained in streaks of black, brown, blue, red, white and green, among which the brown predominates. At the Miner's River we stopped, and I went up to the rapids and caught enough trout for our supper. Then along the continuation of the pictured rocks, similar to those described before, except that they are not so high. From the point we made the traverse to Grand Island, which is separated from the main by a channel about a mile in width. On this island a man from Illinois, named Williams, has recently settled, and we assisted him in raising the frame of his house. He and his family suffered much from fever and ague in Fulton Co., where he lived, but have regained their health here. There is a vast quantity of large and delicious raspberries here, which are said to spring up wherever the ground is burned over. We set our gill-net at night, and the next morning—August 11—we found in it some twenty large suckers, which fish are very fine in these cold, pure waters.

August 13.—Went about twenty miles against a head wind to

the fishing station of Mr. Antrim, to whom we were welcome, he having heard nothing from the States for months.

August 16.—We have been detained here for three days by a head wind, and employed ourselves in exploring and hunting. The latter was not very successful; the game is scarce and wild, and the country impracticable. The wild fruit we found abundant—whortleberries as large as hazel nuts, and of fine flavor; also the wild pear, which is a fruit about the size of a musket ball, of a deep purple, and delicious flavor, similar to a pear. The fishing here has not yet commenced for the season. S. C. C.

Hunts and Trapping.

RATS TO THE RESCUE.—There is no better trap for mink rats and small fur-bearing animals than the contrivance known as the "Eagle Claw," some time ago advertised in our columns. It is also successfully used in catching fish. When set it is wide open with the bait in the centre. A tug at the bait springs the claw, which closes with a deadly grip. We set one the other night in our cellar for rats, which had become bold and troublesome, baiting it with a piece of meat and suspending it four or five inches from the ground by a stout cord fastened to an old window blind leaning against the wall. We have never seen that trap since, nor a trace of the cord to which it was attached! Traces on the sand showed where the trap had been dragged off. Had the trap been sprung without catching the rat which seized the bait, the rat would have run away and left the trap hanging. Of course the rat was caught by the head and transfixed by the eight or ten sharp points of the claw, and consequently killed. How then did he get away with the trap? Simply enough. His rodent friends removed him. They could not cut the cord above its connection with the trap, because it was too high for them to reach. Had they done so the portion of the cord so cut would have remained fastened to the blind. They merely climbed up the blind, gnawed the cord off, and then descending, carried off the corpse, trap, cord and all, leaving no traces except the tracks in the sand. There's fidelity for you! But [the trap cost 75c. Lesson—always fasten your trap with a chain.

GOOD COUNTRY FOR TRAPPERS.—*Editor Forest and Stream:* I left West Point, White Co., Ark., Nov. 5, on horseback, deeming it safest to go overland through the different river bottoms by private conveyance, it being the most pleasant time of the year for that kind of travel, and at the same time allowing me fine opportunity to look up prospects for game and trapping in this paradise of the hunter. At Bayou Desarc, at noon, I examined the banks for sign, and can say that I saw more coon and mink sign than I ever saw before. I think two good trappers could take at least 100 animals there per week, very little effort and no beaver. At 1 p. m. crossed White River. Half mile further brought me to "Surrounded Hill," very rich lands, cotton fields white; a number of hands in the several fields plucking the fleecy staple. They informed me that they received 75 cents per hundred, with board, too much for the present price of cotton. Game is plentiful there but no hunting—cotton-picking pays better. The "hill" is 4 miles wide, after which we descend into Cache River bottom that looks very much like from Coldwater to White oak. Saw plenty of squirrels, and was informed by an old hunter that beaver and deer abound there at this season of the year. The overflow drives them back to the high ground east of Cache, where the beaver struck about a mile below the ferry. Going up the bank I saw several flocks of ducks, and one lone wild goose stream about sunset. Two and a half miles beyond Maberly's Ferry, I stopped with Mr. Fennell (one and a half miles from Cotton Plant), whose charges were very light, and accommodations good. At sunrise was again on the road, passed a small tree on which a dog had two coons at bay. Cotton Plant is a nice little place of three or four stores, harness, shoes and blacksmith-shop. This village is three miles west of Brinkley, at which place I crossed the M. & L. R. Two miles west of Brinkley is Bayou Devine. On prospecting this place I found coon and mink sign—nothing more. Travelling 38 miles further, I stopped at Rev. Mr. Henderson's, three miles from Marvel Station on Ark. Cent. R. R., and 34 miles from Helena. Reached Helena next day, 1 p. m. Very ready just got on in time, and was greatly surprised to find A. H. Hudson, the king of bear hunters of the Coldwater regions. After landing on the Mississippi side, and as we rode along together to Austin, he told me of lately trapping three fine bears, and killing one in this way: Passing through the woods he found the carcass of a cow—there had apparently been a bear feeding on it, so going back a little ways he hitched his horse, and concealing himself behind the carcass, he had only to wait a short time for the brute to make his appearance. A half hour's unerring gun killed it, and it proved to be very fat, cutting 25 pounds of clear fat on the ribs. Lay over at Austin until the following day, when I made the balance of the distance, 148 miles east to Hudson, on the east bank of Coldwater. J. M. LINDLEY.

Hudson, Tate Co., Dec. 5, 1878.

THE SKUNK.—As the trapping season draws around every amateur thinks of his traps, and, if not convenient to engage in his favorite sport, naturally delights in hearing something relating to the art, or about the habits and habits of the different fur-bearing animals so numerous in many parts of our broad land. The skunk is considered a fit subject for the steel trap of every urchin, the spite of every cur, and he is given all the room needed when anybody meets him on the public highway or by chance he crosses their path after night. We might appropriately term him a wandering gypsy, as he is without any permanent abode, unless by chance he moves from a comfortable woodcock's hole. If the occupant chooses to receive him into the family, which sometimes happens, they occupy the same hole quickly and peaceably; but if, on the other hand, the woodchuck is too high-toned for such miscellaneous company, the skunk allows him to move out

without any feeling of malice whatever. The skunk is a great rambler, preferring dark, misty or foggy nights, when he will frequently visit a hen-roost or make and havoc among the young chickens; or, best of all, if he can find a nest of eggs he leaves nothing but the shells. They are quite easily taken in the steel trap or choke, and, in the thickly-set communities, form the principal animal for the farmers' boys catch. A number of "0" Newhouse trap is large enough, and should be placed in the mouth of a woodchuck hole and slightly covered with grass or leaves. When placed in like manner they need no bait; but if such a place is not convenient, a pen can soon be built and the trap set at the entrance, baited from within with a piece of dead chicken or other fresh meat, and no difficulty will be experienced in his capture. Approach him from behind and hit him a sharp stroke on the back of the neck, and there will be little trouble. The hide should be taken off whole and stretched over a board and dried in the shade. They command the best prices generally in February or early in March. SETHIAN-BOZNAI.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

ENGLISH SNIP.—See game notice at head of this column.

W. H. S., Bangor, Me.—You will find your original query answered in our Kennel column.

C. S. S., Cincinnati, O.—We cannot express opinions regarding the merits of different guns.

T. M. O., Woodstock, N. Y.—The *New York Price Current* is published at 4 Cedar street, New York.

B. J. H., Rome, Ga.—What do you understand by a blue belton setter? Ans. One that is ticked with blue-black spots.

B. F. L., Fairfield, Ill.—From your description we cannot, but if you send us a drawing of his head and tail we probably can.

A. G., New York.—It is probable that your puppy has worms. Treat him with aces nit as recommended to another correspondent.

MINGUS, Lafayette.—For the rearing and training of game fowls buy the very excellent treatise of F. W. McDougal, 64 South Illinois street, Indianapolis, Ind.

H. C. O., New York.—Will you please give me the address of principal agent of "Ruger Barless Hook"? Ans. Manufactured by H. W. Aul & Co., Bloomsburg, Pa. Western trade supplied by W. H. Holabird, Valparaiso, Ind.

W. A. B., Norfolk, Va.—Can you tell me anything about a gunmaker named Chas. Bell? whether he is reliable? Ans. There is an English gun dealer by the name of Bell, but we know nothing of the quality of the guns stamped with his name.

S. S. N. P., Yellow Mud, O.—The little instrument you mention is called a capper and is very useful with a muzzle-loading gun. The price is 75 cents for the German and \$2.50 for Dixon's. They can be had of almost any gundealer in this city.

F. H. P., San Francisco.—Give your dog twice a week 15oz. of sulphate of magnesia, with 10 grains nitre dissolved in sufficient water. If the discharge should be in the stomach alone, wash with 10 grains sulphate zinc dissolved in 1 oz. rose water.

ONKIDA.—Do you know of any place in the city where I can obtain a collection of pictures of fine horses, either photographs, lithographs, or steel engravings? If not, who would be able to know? Ans. Address *Spirit of the Times*, 109 Chambers street, New York City.

OLD SUBSCRIBER, Marysville, Cal.—Where can I obtain "The Kennel Club Calendar and Stud Book," vols. 1, 2, 3, 4 and 5? also, their probable cost in this country? Ans. You will have to send to the office of the *London Field* for them, and they will cost you, laid down here, about \$20.

C. V. B., Titusville, Pa.—On Saturday last I was challenged to shoot for silver on a 25 ft. I was on the ground ready to shoot; the other parties, six in number, did not come to time. I claim I won the cup the second time. Am I right? Ans. If you shot at the required number of birds you still would the cup.

G. F., Glens Falls.—Will you please inform us what is the best pattern made by a "cylinder-bore" as 6, 8 and 10 rods respectively, with 1 oz. No. 9 Talham shot, target 30 inches in diameter? Also, the best made by a "full choke" for same distances respectively, same charge and target? Ans. We have no record of such performances and therefore no means of ascertaining.

W. M. B., Newark.—A person belongs to a shooting club and joins another in the same county and State. There is a challenge passed between the two clubs and accepted to shoot a match. Does said person shoot in either club, or in both? or is he ruled out from one or both clubs, and for what reason? Ans. We should say that he should elect which club he is to shoot with, and shoot with that alone.

SUBSCRIBER, New York.—My dog seems to have lost his spirits; appetite variable and often vomits. He stands much of the time on his hind legs, with his head on the floor between his paws. He does not seem to be in pain. Ans. It is possible that your dog has worms. Give him a dose of aces nit, or a Nalidre's powder, which latter can be had at Caswell's. The powder should be followed by a dose of castor oil.

J. H. B., Delphi, Ind.—Your dog has chorea. From the treatment you have followed he will probably recover. "Stoneheng" recommends a general tonic treatment, with plenty of outdoor exercise and struts of silver in doses of one-sixth of a grain. 2. Your bitch is liable to come in heat now at any time, and you would have to keep her very carefully housed until over it. It would be very dangerous to have her spayed now.

T. H. K., Wheeling.—1. What is the proper charge of shot and powder for my Wesley Richards' muzzle-loader, 12 gauge 23 inch barrels, using Lizard's No. 3 or 4 powder? 2. Is the "Dixie" gun made now, and where? Is the \$45 "Chas. Wesley" breech-loading gun a reliable one? Ans. 1. Without knowing the weight of the gun we should imagine that 3/4 dr. powder and 1 1/2 oz. shot was about right. 2. Yes, by Dixon in England. 3. We have no reason to think otherwise.

PARKER, London, Tenn.—The experiments recently made at the Iowa Agricultural College show that the trunks of trees do not close.

gate. Tracks were driven into the trunks of various trees and the distance between them accurately measured. At the end of the season they were found to have neither increased nor decreased their distances. In the experiment tree trunks were selected of all ages, from one year up to five or six, and in no case was there any change whatever noticeable.

L. P., New York.—1. What is mercantile ointment, as I read in one of our back numbers that it was a skin rust preventer? 2. What would a good and complete buckskin suit cost, and where can I procure one in this city? 3. Can the Winchester cartridge be loaded with an Express bullet, and at what cost? Ans. 1. Go to the nearest drug store and you will find it. 2. See our advertisers. All dealers in sportsman's goods keep them. 3. Yes, but the bullet cannot be used in the rifle. We think the Winchester do not use the powder.

CONSTANT READER, St. Thomas, Ontario.—M is the holder of a club medal and if challenges him to shoot according to the rules governing the medal, ten birds each, 21 yards rise, 50 yards boundary. They kill 4 each. It did not have birds to shoot off the ties. M told H where he would get birds and that he would wait until he came back. If said he did not shoot off the ties, but in nine days he sends to M to come and shoot. M said he would not shoot until he had read the rules. After that he appointed a day, but H did not appear. Who holds the medal: the parties challenging had to furnish all the birds? Ans. M retains the medal.

LINNVILLE, Marietta, Pa.—My pointer bitch, between seven and eight months old, has been unwell for three weeks past. She is very thin in flesh, has a dry, hacking cough, also troubled with periodical spells of sneezing, and froths at the mouth after coughing. Her appetite is very good, and seems to be languid and lazy. What is wrong with her and what shall be done to cure her? Ans. Unless there are other symptoms which would indicate worms we should give her a tablespoonful of cod liver oil twice a day, together with a tonic composed of 3 grains quinine, 2 grains ginger and extract of gentian enough to form a pill, to be given twice a day.

BIORES, Boston.—Was it Dr. Stuckwipwell (I believe that is his name if it isn't ought to be) who answered "Biceps" in your last issue? Of course if it was there is no use wasting time replying to him, otherwise I will reply to that very clear and apt bit of information. Ans. If our correspondent can do any better he is at liberty to try his hand and "Biceps" too. The person, whom we presume is referred to, long ago severed his connection with the *FOREST AND STREAM*. The one who wrote the answer has no connection with the *FOREST AND STREAM*. Anglo-Afghan war. He sailed on the *Celtic* last Saturday. Address Caxo Khan, via Jelalabad, Or, send to us and we will forward via cable.

F. R. G., Laconia, N.H.—1. Does any maker of brass shells make them as small as 20 gauge; if not, can I get paper ones that gauge? 2. Regarding the trout caught in Lake Winnipissaukee, I have claimed that they were taken from the salmon trout, which trout, which way, which right? 3. Is a 35 cal. rifle large enough for deer hunting? Ans. 1. There are no shells of that size, either brass or paper, made in this country, but you can get them from England. 2. The Winnipissaukee trout, known as *Salmo symmetris*, is not sufficiently marked in its specific characteristics to indicate a distinct variety, although some scientists have claimed that it is such. See Hallcock's "Gazetteer," page 535. 3. Yes, but the heavier caliber is better.

NIMROD, Irvington, N. Y.—1. I have a shepherd dog and would like to know if he can be taught to retrieve, and the method of teaching him. 2. Have also a number 12 breech-loader and should like to know the proper load of powder and shot; also, whether the wad should be pressed tightly on the shot, or loose, and which way makes it scatter? Ans. 1. We cannot afford space to give directions as to how to make a dog retrieve. You will find them in the back numbers for the paper, or in Dinks, Mayhew, or Hutchings. 2. Without knowing the weight of your gun it is difficult to tell, but the ordinary charge for a 12 gauge gun is 3 1/2 dr. powder and 1 1/2 oz. shot. The wad on the shot should be pressed lightly. To make your gun scatter use more powder or less shot.

K., Virginia City, Montana.—I began working my setter puppy on chickens when he was five months old. He behaved splendidly from the start, as far as ranging, dropping to shot, stopping at the command "To ho," etc., falling only in this, that he has never made a voluntary "set," or point on a bird. He is now 10 months old. Will he take to voluntarily pointing his birds as he grows older? He never fails to come to a "stand" at the command and to hold it until he gets the word to "Go." Do not young setters rely more upon the eye than the nose? Ans. If your dog has never developed any powers of scent it is impossible that it may be deficient in this quality, but we should not despair for another season. Young dogs will point at sight, but when taken on game they should acknowledge the scent.

BOATMAN, E. M.—A small ice boat may be built as follows: Take a plank 15 feet long, 6 or 7 inches deep and 3/4 inch thick. Set it on edge. One-sixth from forward end run a plank across underneath at right angles. The latter may be 3 1/2 x 1/2 in. and some 7 feet long. Bolt to centre piece, or keel. Run two planks, one on each side from this cross-piece, or runner plank, to after end of keel, their forward end being about one-third the way out on each side of runner plank. Let them be about 3 1/2 x 1/2 in. They will brace the structure and by laying 1/4 in. slats, or boards across the after half will form the body, or cockpit of the boat. Around this work a rail of 3/4 in. stuff. Over the keel, where it crosses the runner-plank, run a short piece of thick stuff and bolt down through runner and side planks, putting a chock of hard wood in to fill up. Use 1/2 in. bolts. On the centre piece a hardwood chock, slightly cupped out to receive heel of mast. Bowsprit may be of stuff 3/4 x 1/2 in., strapped, lashed, or bolted on top of forward end of keel. It may be tapered at end. Place a runner or skate under each end of the runner, plank, and one stiff to act as a rudder. The forward two should be of oak, 3/4 in. long, 1 1/2 in. thick; the rudder 2 ft. long. Round up forward end, and shoot them into a screw or steel, 1 1/2 in. deep. Grind them to an angle of 90 deg. on the bottom, so that they will run on the edge. Fasten with 1/4 bolts to the oak portion, and then bolt right up through the runner plank, using large washers on top. The after shoe or skate is clamped by the forked end of a stout iron rod, say 1 1/2 in. diam., a bolt being passed through the lugs of the fork, and a collar being forged on the rod, just under the keel. Around the vertical hole in the latter put an iron plate 1/2 in. thick, to take the chafe of the collar. Curve the upper end of the rod, so as to serve as a tiller. Mast, 1 1/2 in. long, 3/4 in. diam., tapered at head; bowsprit, 10 ft. long; mainsail, 10 ft. hoist, 18 ft. foot and 1 1/2 in. deep. Boom, 18 ft. long, 3/4 in. in centre, tapered at ends; gaff, 18 ft. long, 1 1/2 in. diam.; jib, 9 ft. 3 in. 3/4 in. on luff. This will give a moderate rig. Bowsprit is staid with a wire boustay and a shroud each end of 3/4 in. wire. Mast steps in the cup, has two shrouds a side and a headstay leading to bowsprit end. Single halliards and sheets for jib of 3/4 in. manilla. Double purchase for peak and throat, rove all in one, and double sheet of similar rope. Lash luff stick to foot of jib. Or this plan may be simplified as suit. For a 12 in. boat use simply 1 1/2 in. mast, 1 1/2 in. bowsprit, 10 ft. long, 1 1/2 in. deep, and do away with bowsprit. In this case a shorter boom should be used, and a proportionally longer yard on the mast. One-quarter of the sail should be kept forward of the mast. For canvas use light duck. A line of reef points may sometimes be useful.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—A—

No. 111 FULTON STREET, NEW YORK.

[Post Office Box 332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 26, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

SENSIBLE HOLIDAY PRESENTS.

FOREST AND STREAM.

Clubs can obtain subscriptions to FOREST AND STREAM and ROD AND GUN at \$3 per annum. Now, at the beginning of the year, is the time to start new clubs; subscriptions to begin Jan. 1. The circulation of FOREST AND STREAM is now distributed among 2,400 post offices in the United States and Canada, and over 100 in foreign countries. Twenty-nine foreign countries are represented.

CHRISTMAS-TIDE.

THE antiquarians, those wrinkled and grizzled old fellows with great spectacles through which they are constantly peering into the past, complain that we do not keep Christmas nowadays after "the good old way." No, we have not preserved the merry festivities of old England. The yule-log, the mistletoe bough, the wassail bowl and the mummings are known to us only in the books. But FOREST AND STREAM is not among those who can see good only in what is antiquated. We have changed our mode of celebrating the holidays, it is true, but the better spirit of the season we have not lost, and Christmas 1878 is hailed with as much true joy in America to-day as ever it has been since the time, no one knows exactly when, that the early fathers made of the old Roman Saturnalia the Christian festival of rejoicing and good. Christmas was never more widely and more heartily observed than it is now, and who shall place a limit to its reign in the future? As FOREST AND STREAM goes forth to-day it finds everywhere the joy of the Midwinter Holidays, and in accordance with the honored custom of the season, it extends to each one of its many thousand friends the salutations of cheer and good will.

—A very general snow storm has prepared our people for Christmas, verifying the allegory of Santa Claus with his sleigh and reindeer team, coursing over the country through the falling snow. In Montreal on Monday the snow was three feet deep and the streets impassable. In the northern part of this State and through the Northwest generally travel is much obstructed by deep snow. In the city of New York, however, the ground is bare, and the biting cold makes thick glare ice for the skaters.

CANADIAN RIVER LEASES.

AS all anglers who visit Canada are well aware, there is really no free salmon fishing in the waters of the Dominion. The fisheries are held either by the lessees of the Crown or are in the hands of riparian owners.

Ten years ago, with a view to the protection of Canadian waters, which were becoming rapidly depleted, the Government assumed jurisdiction over them, established hatcheries for propagation, set apart close seasons, made regulations as to the kinds of nets and devices to be used and their disposition in estuaries and tide-waters, imposed penalties for violations, and exacted large licenses and fees for net and rod privileges, with a view to revenue for maintaining the service or wardens, overscers, superintendents of hatcheries, and for purchases of spawn and breeding fish. As none but the very wealthy could afford to lease whole rivers, or even thirds of rivers, for the mere purpose of sport with the rod (some of the rentals costing as high as \$300 per annum), they set aside sections of available rivers for what is known as rod privileges, to be obtained at the rate of \$1 per day per rod. Applications for river leases had to be made to the Chief Fishery Commissioner at Ottawa, while the rod permits could be obtained, on request, of any local overseer. To facilitate applications, an official list of available rivers—that is to say, of such as were in market not rented—has been published early in the spring of each year in Canadian papers, and also in FOREST AND STREAM, the latter journal being regarded as the best medium for reaching the American angler. It is needless to say that any person securing a lease of the whole or a portion of any river, secured the exclusive right to the same for the entire fishing season. As the rivers are not numerous—the whole number of those accessible not exceeding thirty—the great body of anglers, rich and impecunious, have been crowded together on the \$1 per day reserves. The result has been a scramble for precedence and best stands, with very small returns in the shape of fish, and a goodly proportion of disgust and dissatisfaction. We have seen as many as fifty rods together on the six-mile section of the Restigouche, and the same on the Rough Waters of the Nepisiguit, both New Brunswick streams. In this dilemma recourse was often had to riparian owners by gentlemen not disposed to forego their favorite sport; and just here a vexed question has arisen as to the respective rights of the Crown and individuals, especially in the Province of New Brunswick. The law at present does not seem very well settled. The presumption, however, seems to be as follows: "That where land, bordering on a non-tidal river, is granted without the bed of the river being reserved, the grantee has the exclusive right of fishing from his own land *ad medium filum aquæ*." Where, however, the bed had been reserved, the majority of the judges held that the Crown had a power of leasing; but the opinion was not an unanimous one, and is held by many to be at variance with the consultation of the Province.

In practice, the \$1 per diem system is a complete farce, as the river sections so assigned are systematically fished by every loafer who can swing a rod, and who sally forth at early dawn and carefully try each pool; but assuming that the right of riparian owners to fish from their own land is established, the fishery would lapse into the hands of several small proprietors, from whom the right might probably be leased. Should this be so, it would well repay hotel keepers to rent the water and have it properly protected, making a fair charge to a limited number of rods. Under some such system good sport, especially at the beginning of the season, would be obtained; and the fair law-abiding angler would be saved the annoyance of having his sport spoiled by men who have no right and title to fish in the water.

It will be apparent, from what has been said, that a great deal of vexation must inevitably be experienced, especially by strangers from whatever country, who attempt angling in Canada without having previously informed themselves of the conditions which we have explained. Of such class, presumably, is one of our correspondents who has had the manly courage to prefer his complaint through our columns over his own signature. But it is evident that a general sweeping charge of "unjust discrimination against Americans," by an American who imagines his countrymen the only class aggrieved, if noticed at all, would be promptly and indignantly met by a disclaimer of the Chief Commissioner of Fisheries, upon whom the responsibility of granting the Government leases rests; and we are not surprised therefore to receive from that conscientious official the following challenge, which we have been requested to publish:

EDITOR FOREST AND STREAM:

OTTAWA, Dec. 14, 1878.

Dear Sir—Mr. Samuel Hanson is hereby requested to specify instances of ungenerous "discrimination" against Americans "in the leasing of salmon rivers," to which his letters refer. That any such cases exist, at least within my knowledge, is distinctly denied.

Yours truly,

W. F. WHITCHER,

Commissioner of Fisheries.

Now, we have no idea that Commissioner Whitcher has been guilty of any misfeasance, or even of favoritism; nor are we willing to believe that our correspondent assumes that he has. Our correspondent only declares his grievance in a general way, without considering where the force of the accusation strikes. The whole question is in a sad muddle, as we have shown, and the only remedy that we can discover lies in a complete revision of existing laws or such a judicial construction of the same as shall definitely settle where one may fish, and from whom he shall obtain the right, or whether he

shall be permitted to fish at all. Meanwhile all anglers who are not wealthy enough to lease whole rivers may as well hang up their rods.

SHALL CREEDMOOR BE ABANDONED?

SHALL Creedmoor be abandoned, is now the live question among the members of the National Rifle Association, and the one difficulty on which the advocates of a change base their demands, is that of access to the range. To regular visitors of Creedmoor, as well as those who occasionally enjoy it as a shooting ground, the fact of the insufficient railroad accommodations must have strongly impressed itself. But then the railroad system of Long Island is peculiar in this respect, and long before the advent of modern rifle shooting this was an established fact, that for not doing what a railroad is expected to do the Long Island roads were especially noticeable. At present though Creedmoor is but thirteen miles from Hunter's Point, the trouble exists only on the last 7 miles where the Central Line track extends from Flushing to Garden City, and it is rather to the removal of the disabilities on these few miles that the energy of the directors should tend instead of rushing off to solve the problem, a hundred times more difficult, to find a new range locale.

In other words, the Association propose to begin, *de novo*, to throw over everything but its name, to sacrifice money and prestige, to break existing obligations, implied if not specified, and generally to lose almost every advantage gained by a half dozen exceptionally prosperous years, to secure what can be gained at Creedmoor by one tithe of the labor required for this new turn-out.

One of the committee on the selection of the proposed new range as secretary of the Association at the time of the purchase of the present grounds said in his first annual report in Jan., 1873, that, "the work of selecting grounds of a sufficient extent for a range, which should be at once cheap, safe and convenient of access, proved no easy task," nor will it prove one whit easier to-day.

The meeting of the incorporators of the Association was held on Nov. 24, 1871, and on Dec. 5 the first step was taken toward the securing of a range by the choice of a Committee on New Range, consisting of Alex. Shaler, A. W. Craven, Augustus Funk, F. A. Mason, John Powell, Jr., Henry G. Shaw, W. J. Harding, Geo. W. Wingate and Geo. Moore Smith. This committee divided itself into sub-committees, "who made a thorough canvass of the whole neighborhood about New York, consulted with the leading real estate agents, and advertised in the daily papers." New Jersey, Staten Island and Long Island were the localities inquired into. The state grant of \$25,000 to the purposes of the Association on May 14 shut off New Jersey, and Staten Island was abandoned as difficult of access, and also because no suitable grounds were offered there. Land from \$1,000 down to \$200 per acre were offered at various points. "After much consideration, it was decided to purchase the tract of land offered at Creed's Farm, as in all respects the best for the purposes of the Association, as well as the most desirable in location and the most valuable for the price." In July, 1872, a contract was accordingly made for the purchase of 70 acres at \$375 per acre, and this is now held by the Association in absolute title, free from all incumbrances.

To-day, were a sale attempted, it is the opinion of competent judges that it would not bring within \$10,000 of its original price of \$26,250, and then the loss on permanent improvements placed on the range would be even more than that. The new butts put up in these cheap latter days cost \$2,700, every cent of which would be lost by removal. The fence about the grounds would be worth nothing for removal, and though the grounds are in prime condition for gardening work, the fall in the price of real estate would more than counterbalance this. The great old butt embankment into which so many thousands of dollars were recklessly poured, would stand only as a monument of somebody's mistake, and serve in after years as an antiquarian puzzle, or perchance a lead mine. The building on the range, including the hotel now in position could only be left behind as hooting places for owls, and the valuation of \$100,000, which the last annual report put on the plant and property of the Association, would shrink away to a few iron target-slabs, whose cost, if not their value, would only be increased by freightage.

The Winchester Arms Company, in Sept. 1876, presented an admirable donation to the association in the Running Deer target, with butts and everything complete. Out of the \$1,417.17 spent on this, fully \$1,000 would stand behind as a monument to the folly of removal. It would be well if an officer of the association, familiar enough with its peculiar book-keeping to get order out of chaos, should make a report on the moneys sunk in plant and improvements upon the range, and which must be lost by removal.

As a *range per se*, independent of the railroad complications, the new committee can hardly expect to find anything superior. John A. Church, the engineer, who surveyed and mapped out the range, says of it: "The ground formed a perfectly even slope of close upon 20 feet in 3,000, or one foot in 150. This is entirely imperceptible to the eye, while its effects in placing the targets in relief, if it has any effect at all, will be to the benefit of the marksman. Certainly the most careful search could not have resulted in a more happy selection of ground in this respect than that which has been made by you." The verdict of thousands of riflemen from

all parts of the world, as of all who have paid casual visits to the range, have but corroborated this early professional opinion, and to-day Creedmoor stands as the model range of the world. As to healthfulness, it is fully up to anything to be found within the accessible area about New York. It has a soil easily drained, and when the trees now set out shall add their leafy shade to that already upon the range, it will be a not unpleasant summer resort.

The Association owe it to the life members that there shall be no diminution in the privileges offered them. Those who joined under the notion that a range was to be forever open to them, are not to be put off with some inferior shooting ground.

If the movement has for its motive only a feeling of enmity or pique toward the railroad company, it is even more unwise than it would appear on a first inspection. A sensible business-like treatment of the road and its managers would, no doubt, be met in a corresponding way, and a policy of mutual helpfulness would be inaugurated to the advantage alike of riflemen and railroad men. As certainly it is true that a change of base could only injure both classes—the range patrons to a large, and the road managers to a much smaller extent. To start the move as a sort of "bluff" game, on the railroad managers is simply ridiculous, since the affairs of the Association are known to all; and besides, the experience of the railroad people with Creedmoor and Creedmoor control is not such as to make them particularly anxious for its continuance.

There is another view of the case which may turn out to be a very important one: Creedmoor to-day is one of the designated State ranges; it has upon its grounds much State property, and has received a liberal share of State assistance since its first inception. All this has been done, with the unanimous concurrence of legislators, press and public, under the impression that it was to benefit the National Guard. Such benefit has followed, and there is not one word of complaint to be laid as yet; the troops have been abundantly accommodated by special trains on the days set apart for their practice on the range. In its appointments, in its size, and its easy accessibility, Creedmoor leaves nothing to be desired for the troop practice of the New York and Brooklyn divisions. It would be impertinent therefore, and should lead to some very sharp investigation if the N. R. A. managers, who are also officers of the National Guard, go to Albany with an application for permission to sell the present range. The Adjutant-General has but one interest in the matter, beginning and ending in that of the National Guard. When the militia are served well he can ask no more, and to discommodate the soldiery for the purpose of furthering other aims and ends, or merely as a matter of accommodation to subordinate officers, will not bring upon the Adjutant-General many utterances of praise.

It may be said, in short, that if the merest fraction of the time, money and labor which will be required in fitting up a new range be spent in securing for Creedmoor its one need—a good railroad communication with the metropolis, the difficulty will be solved, and a vast saving effected. It is one of those cases where "the more haste the less speed" rule can be properly applied, and whatever is to be done should only be after full consideration and discussion.

THE TONE OF SPORTING LITERATURE.

IN another column will be found the communication of a Boston reader, who takes very decided exception to the notion that there is any necessary taint of the whisky flask and brandy bottle upon field sports. In disclaiming any connection between true sportsmanship and spirituous liquors we join our correspondent fully and unconditionally. Such has ever been the tone of our editorial utterances. We are assured that no constant reader of the *FOREST AND STREAM* could infer from its pages that the enjoyment or success of a sporting expedition was to be measured by the amount of whisky guzzled upon the trip, or, indeed, that the bottle was at all a necessary adjunct of the sportsman's outfit. We have always opposed any such notion; how persistently, could be appreciated by the general reader only after a review of the manuscripts which are expurgated as they pass through our hands.

It would be a curious fact, did we not understand the influence which induced it, that very many sportsmen, who sit down to pen their reminiscences of camp and field life, feel obliged to make the most of what little liquor they may have carried with them. Our correspondents persist in doing this, despite our repeated excisions of objectionable passages. The cause of this it is not difficult to discover. It is found in the simple fact that one man's writings have been more thoroughly and widely read by the American sportsman than those of any other author in the same field. Their spirit and morals have as a consequence been more generally accepted, and amateur wielders of the pen have in large measure modelled their literary efforts in a similar vein. The sporting sketches of "Frank Forrester" and his school are redolent through and through with the fumes of the whisky flask. Whatever Herbert may have meant by "true sportsmanship" it is very certain that he did not recognize temperance as one of its elements; and that he did not is a matter of very serious regret, when we note the influence of his popularity. If there be a taint of the bottle upon field sports, "Forrester" and his school have put it there, and kept it there. An edi-

tion of these classics with the whisky element carefully expunged, might be an infinite improvement upon their present character, but they would no longer be recognized as "Frank Forrester's."

To overcome the effect of such models is not the work of a day. A pure sporting literature is necessarily a thing of slow growth. That the tone of what is recognized as characteristic American sport is constantly improving must be apparent to any one who will take the pains to give the subject a little careful thought.

We shall be disappointed, however, if we look for a universal ideal plane of morals where such does not exist. Conviviality is a feature of the woodland jaunts of very many men, whose knowledge of woodcraft, skill with rod and gun, and hearty enjoyment of the pleasures of the field entitle them to the name of sportsmen. To studiously ignore this feature were vain. That we do not attempt it must not be construed by our readers as an indorsement of it.

COLLEGE HAZING.

IN the January *Scribner's* Professor Charles F. Thwing, who has recently contributed to the magazines several intelligent papers on college topics, discusses College Hazing. The origin of the custom, Professor Thwing finds, we think rightly, in the artificial distinctions of rank which obtained in all branches of early American society with a despotic sway hardly to be conceived at the present day. It was natural and inevitable that these distinctions should be stringently observed in the institutions of learning. The evil influences of such divisions were further fostered by the adoption of the English fagging laws, by virtue of which the new student was little better than a serf subject to every caprice of his elders. As a direct imitation of European customs then, and as an outgrowth of the spirit of the times, it is not strange that hazing was grafted upon our American college system. It is more curious that now after the decadence of the spirit which originated it, and the obliteration of like institutions in other branches of society hazing has maintained itself.

To understand its persistency we must remember that the college student, who is strictly *sui generis*, neither boy nor man, is in a receptive stage. His life so far has been spent in hearing and believing. It is his duty to receive what is told him by his seniors. Upon entering college hails the student finds his religion even all out and dried for him, as it has been for scores of classes before him. In his studies the dicta of his professors are received in the same delightful faith with which years before his eyes had "widened at the story of Jonah and the big fish. And the sophomore he believes with a blunder faith than is accorded even to professors. These same sophomores are tyrants by a sort of divine right; giants in the path to fame, against whom he must wage as best he may. Happy freshman if he be not in the fray utterly consumed! And when a year has rolled around he too becomes a tyrant (he knows now it is not by divine right) and turns giant, which is but another word for coward. "There is nothing so very manly in clubbing together and sousing a poor fellow's head under the pump; everyone knows that, but," reasons the collegian, "my head was soused, and my father's head was soused, and his father's head was soused; it has always been the custom. 'The thing that hath been, it is that which shall be; and that which is done is that which shall be done,'" and our undergraduate philosopher says this with something of a different meaning from Solomon's. If our collegians would only think for themselves, as they are learning to do, such reasoning would soon be consigned with the practices it perpetuates to where they both belong—the slums. But reason or not reason, hazing must soon disappear. It is in its very nature cowardly and unjust, in its spirit directly opposed to the age. As such its days are numbered. A very potent factor in its abolishment is the healthy tone of public sentiment regarding it. The time has gone by when men may win a reputation as clever fellows by relating their barbarities, euphuistically called "college pranks." Nor can collegians afford to be ruffians and cowards when the newspapers are quick to publish their ruffianism and cowardice to the world. Only let this be understood and our colleges will be rid of the reproach. Amherst long ago abolished hazing, Harvard was next in line, and the Yale faculty have adopted effectual measures for suppressing the abuse at New Haven. Other institutions must follow their example. Ten years from now American college hazing will be a subject only for the antiquarians.

SOUTH CAROLINA ORANGES.—We read much of the delicious quality of Florida oranges, but that fruit equally fine can be grown in South Carolina, is proven to our own satisfaction by the boxes of choice oranges and grape fruit which we annually receive as a Christmas gift from our esteemed friend Chas. G. Kendall, Esq., of Palmetto Island, near Port Royal. The oranges measure ten inches in circumference, and the grape fruit twelve and more. For the latter a taste must be acquired, and when acquired one becomes passionately fond of them as he does for tomatoes. They possess a peculiar dietetic quality and act beneficially upon the liver. Mr. Kendall has devoted most careful attention to improving the quality of his fruit, and we are convinced that none better can be found in Florida. Specimens can be found at the commission house of Lichtenstein & Co., 83 Barclay street, carefully picked, with stems and glistening leaves attached, very charming for Christmas trees and holiday tables.

RETURN OF CAPT. BORTON.—Capt. Paul Boyton, the intrepid swimmer, who has been making an extensive tour in Europe, displaying the many excellencies of Captain Merriam's life saving suit under a great variety of circumstances, has recently returned to his home in this city. The tale of his adventures during his three years' stay abroad, the exciting and often perilous situations while descending rapid rivers or shooting falls, would form a narrative full of the most vivid and thrilling descriptions of skill, daring and endurance. It is needless to say that his life saving dress as well as his bravery have been highly appreciated abroad, and that he returns laden with medals and ensigns of honor bestowed upon him by the crowned heads and dignitaries all over Europe, and that his trip has not been without reward of a more mercenary sort. He will soon set out again for Europe in the fulfillment of contracts undertaken. Let us hope that he will have the time to spare, and that his modesty may not prevent his giving to the world the history of his exploits at an early date.

BROOKLYN ART ASSOCIATION.—The winter exhibition of the Brooklyn Art Association closed last Saturday, after a season of three weeks; but the great majority of the pictures will remain on view until after New Year's. As a whole, the Exhibition has been a success, although the aggregate of really meritorious works was not as large as usual. Many fine pictures have been sold at satisfactory prices, realizing fully \$3,000 altogether.

SKATING.—The "ball is up," and Brooklyn and New York are now enjoying such skating as they have seldom had before. The thermometer on Tuesday registered 16° above zero. Great preparations for sport are being made by the Curling Clubs.

BIRD FLIP.—This is a Canadian game at which two can play. We have never heard of it before. It is described by our vivacious correspondent in his article which we print to-day, entitled "Among the Moose and Bears." Perhaps some of our youngsters will try it.

—The Cuvier Club of Cincinnati have issued some tasteful and beautifully embellished cards of invitation to their annual reception, January 1, 1879. We regret we can't be there. Happy New Year and long life and prosperity to the Cuvier Club!

—Texas has been in a chronic state of mud and flood for a month past, and the weather is likely to continue wet all the winter season through. Sportsmen are disgusted, but the game has a better chance.

—The Erie Railroad has just completed its third (narrow gauge rail) from Buffalo to New York, and regular freight trains will be put on at the beginning of the year. This will give increased facilities for the Erie's enormous traffic.

GAME PROTECTION

THE GAME LAWS OF THIS STATE.

FOR several years past we have urged upon those authorities the necessity of so amending the game laws of this State as to make the dates during which game is permitted to be sold to correspond with the open seasons. At present quail and grouse can be sold for two months later than they can be shot, and the result is that the market is kept supplied with birds that have been netted or taken in some other illegal manner. In addition to the destruction carried on in this way the law as it now stands prevents many persons who desire to do so from turning out birds. While nets and traps are being set in every direction there is very little inducement offered to those who have the disposition to send West and South for birds with which to keep up the supply always made precarious by reason of the uncertain character of our winters. The letter of our correspondent, which we print below, is to the point:

NEW YORK, December 29, 1878.
Mr. Editor—In *FOREST AND STREAM* of December 12 you state that in most of the States the close season for game begins January 1. In this State, according to section 33 of the game laws, any person may sell or have in his or her possession prairie chicken and quail from January 1 to March 1, and ruffed grouse from January 1 to February 1, and shall not be held liable for any penalty, provided he proves such birds were killed within the period provided by this act, or were killed out of side the State at some place where the law did not prohibit such killing. How absurd these two latter clauses are and what a premium we offer to poachers and law-breakers in this and other States by having this open market for them. Until the date of selling ends with the date of killing, illegal shooting and trapping will go on in this and other States. At least there ought only to be a difference of five to ten days, to allow dealers to clear off their stock. All sportsmen throughout the country could not but be benefited by the change.

DE L.

A MIGRATORY QUAIL AT LAST.

IT gives us great pleasure to be able to announce to our readers that the migratory quail, which we owe so largely to the enthusiasm and painstaking efforts of Judge Everts, of Vermont, and Mr. Haggood, of Boston, seem to be on the increase. We had the pleasure, a few days since, of receiving a fine specimen of a bird of the year from a correspondent, G. H. O., of Centre Brook, Conn., for whose thoughtful care in preserving the bird and sending it to us we cannot be

CONNECTICUT—Centre Brook, Dec. 20.—Shooting, day before yesterday, 18th, two of us, and one dog, result: 25 quail partridge. G. H. C.

WATERMAN, Dec. 21.—R. Griffs, of this place, has killed even out of eleven deer seen by him this season. Quail shooting has been first rate in this county. J. R. H.

—John A. Waterman, of Deep River, at a shooting match at Rocky Hill on Thanksgiving Day, won ten chickens in fifteen shots and was then ruled out as being too successful. Mr. Wetherell also, at a match in Deep River the same day, won six chickens in seven shots, purposely missing the seventh. Both used Parker breech-loaders.

VIRGINIA—Highland, Dec. 19.—A party of huntsmen went out to Bull Pasture Mountain last week and captured eight leop.

FLORIDA—St. Augustine, Dec. 21.—With the opening of the hotels, the inrush of visitors, and all the liveliness of the winter season, the sporting interests are assuming importance. The St. Sebastian bridge is the favorite perch for fishing (it is not necessarily perch fishing) and boatmen are looking out to a very near river bank. The old time spots are now deserted, and our anglers must now seek new fields of conquest. Indeed, if we did not have the whole ocean here before us, we should fear the total extinction of our finny attractions. St. Augustine's hunters are not to be succeeded at. Many of them have been in the woods six days in the week ever since they could shoulder a gun; and when they start out for a deer, as a rule that deer may as well capitulate. J. O. Lopez killed 75 snipe and 5 quail one day last week. The most forlorn-looking hunter in town is the man with the trade, looking for some one to give him one hundred cents for it.

WHALES.

ILLINOIS—Warsaw, Dec. 15.—There is as great a variety of game in this vicinity as is usually found in close proximity to large towns. A fine buck deer, driven by dogs a week or so ago, made its appearance in the Mississippi in front of our city, and landed on a large island just opposite here, where it has been seen several times since. The undergrowth is very dense on the island, and affords fine shelter for game. Two wild turkeys were shot there a week ago, at the first snow fall. I went over to look them up, and got two shots at turkeys, one of which I brought down but lost in the dense thickets, having no dog to retrieve. I kicked out rabbits every few steps in some localities, and bagged a few quail. There are a great many turkeys across in Missouri, a short distance, so I learn, and large flocks of prairie chickens have been seen about seven miles out on the M. & N. R.R. I saw nine wild geese standing on the ice to-day, some 500 yards from the land, but too much ice running to reach them in a skiff. I saw three and a half bald eagles pass sixty yards over my office building yesterday. A good many ducks are seen daily swimming among the cakes of ice, sheldrakes, teal and now and then a flock of mud hens and mallards. There were a good many quail in some localities not far from the city, previous to the heavy snow we are now blessed with, but the market and pot-hunters are just murdering them by firing at coveys clustered together in holes in the snow. One man boasted of slaughtering fourteen at one shot. A. A.

IOWA—Vail, Dec. 17.—Yesterday I went out for a rabbit hunt and would have been quite successful (having killed six rabbits and two quail in less than an hour) when some hunters with no regard for my feelings, drove a deer right into the little brushy thicket where I was hunting. I missed the rabbits in all directions. After changing cartridges from .44 to buck shot I succeeded in bleeding him pretty badly, which claim I turned over to the parties who had been trailing him as they were friends and had been after him all day. Deer are getting scarce in these parts, while prairie chickens, quail and rabbits are very plentiful. E. B. B.

WISCONSIN—Baraboo, Dec. 17.—The father of all the deer was killed on the south bluff of Devil's Lake, one day last week. This deer has been seen by different parties for the last six or seven years, his hind hoofs had grown out about ten inches and lopped over, which made a queer impression in the snow, and many a hunter that came across his track wondered what it was. He was brought into town and was seen by many a spectator with curiosity. His horns were fourteen pronged. Weighed nearly 300 pounds.

BRASS SHEETS—I have given the Sturtevant Indented Brass Shell an honest trial, and find it fills the bill entirely. I loaded the right and left hand barrels with 5 drachms powder 1½ oz. shot, used a pink wad (No. 9) over shot; fired 10 loads out of right hand barrel, and found that wad over shot in the left hand barrel had not budged. You will admit that the loads were large, and therefore a strong test. Give me the Indented all the time. T. C. STREET.

WHAT IS A GOOD PATTERN?—A correspondent writing from Noroton, Ct., says: "In your last issue 'T. S. S.' wants to know how many pellets his Parker will put in a 24-inch circle at 45 yards, but he forgot to tell us if his gun is choked or not. As I have had a good deal of experience with Parkers I think I can answer him. If his gun is an open bore it should pattern at 24 in. circle at 45 yards with 1½ oz. No. 8, 100 to 120; if medium choke, 150 to 200; if full choke, 250 at least. Shooting has been very good here this season; I have bagged since Oct. 4 48 quail, 2 partridges, 26 woodcock, besides lots of rabbits and squirrels, but no ducks. Where are they? Yours truly, BACK ACTION.

LES BOTTES SAUVAGES.—A correspondent who has bought a pair of French Canadian moccasins, or bottes sauvages, writes:

I got a pair of them made in Quebec last fall, and they surpass anything for foot, year or canoeing that I ever tried on. They keep out the water as well as India rubber boots as long as they are kept oiled, and are both light, easy to wear, and above all, cheap. If any of my American sporting brethren would like to get a pair of these articles I will get them made for them and send by express at the maker's price. As I do not deal in this kind of goods, or in fact any other kind, they can address me through you. The prices charged by the habitants here are \$3 for a pair reaching to the knee and \$5 for a pair to strap around the waist. I will say that they are well made and sent in good order. Of course the buyer pays all expenses, such as express, duty, etc., in New York. The only measurement necessary is length of foot and girth of instep, allowing room for two pair of socks. J. W. D.

WHAT A SPORTSMAN OUGHT TO CARRY IN HIS POCKET.—Editor Forest and Stream: I received some weeks ago a shooting suit, made expressly for ducking in cold weather. It is made of the heaviest duck pants and coat lined with flexible leather, and, I must say, a most complete thing it is for the purpose. But there is something about the coat (in fact there is about all shooting coats) that I do not understand. Perhaps some of the makers of them would explain it through the columns of your paper. I have asked many sportsmen why they had so many pockets in their coats, and what they were all for, and none could tell. There are seven pockets on the outside of my coat; the two side pockets are used by some to carry shot; the two breast pockets are a nuisance, as for the butt of the gun catches on the flap when brought to the shoulder, and if you tuck the flap in it catches the pocket when taken down. Now, I claim that a man cannot do good shooting with everything stuffed in either of these pockets, and the less you have in a coat the better you can shoot, and the less days there will be to curl up and make the coat look bad after it has once been wet. JAKE.

New Haven, Dec. 18, 1878.

Our correspondent writes from Connecticut, but he is evidently no Yankee. Any schoolboy in the Nutmeg State could fill up those pockets in half an hour, and then, like Alexander, sit down and cry for more pocket-room. "What are the pockets of your shooting coat for?" Why, for the common necessities that would naturally occur to any one going out for a half-day's shooting: Shells, jack-knife, strap, pocket cartridge loader, twine, piece of chalk, hem-stitched handkerchief, half dozen tenpenny nails, pocket dictionary, shoemaker's wax, needles, thread, foot-rule, folding scissors, gimlet, lead pencil, screw-driver, court-plaster, pipe, tack-hammer, tobacco, powder dish, bag of shot, re-loader, piece of leather, Dixon measures, crackers and cheese, Bologna sausage, bottle of amica, re-capper, Spratt's biscuit for the dog, do-funny, microscope, salve, compass, screws, some rags, aneroid barometer, pedometer, chronometer, postal cards, pin-cushion, tourist's photographic outfit, field glass, a receipted subscription for the FOREST AND STREAM, bit of candle, photograph of your girl, auxiliary rifle barrel, some trade dollars, tweezers, microscope, Tennyson's Poems, bottle of flea powder, diary, Eaton's salt preventer, jack-lamp, fruit knife, mosquito netting, cigarette paper, drinking cup, tooth-pick, half-dozen buttons, the grocer's bill, gun oil, railroad timetable, pocket comb and brush and looking glass, receipt for rheumatism, postage-stamps, FOREST AND STREAM compilation of game seasons, apples, beeswax, watch-key, small bottle homopathic pills-for coughs-colds-sore-throats-and hoarseness-none-genuine-without-trade-mark-sample-free, license, razor, crimping machine, barrel of glass balls, H & T traps, man to pull 'em, bit of rope, celluloid collar, buckskin gloves, brand-al, match-safe, pocket photograph, file, birds if you shoot any, card with name and address for identification when they find your body, unlimited credit, half a dozen—but, psaw! when you come to New York give us a call and we'll tell you all about it.

LEAVE OUT THE WHISKY.—Editor Forest and Stream: I read with sincere pleasure, in your issue of Nov. 23, the remarks of Col. Burnside in reference to the desirability of keeping prize contests free from "the taint of the gaming table and prize ring proclivities that are entering into and tending to destroy all proper out-door sports." I wish one endowed with equal weight of influence, vigor of language and earnestness of purpose, would enter his protest against a style of sketch writing which is tending to "taint" the "taint" of the whisky take and brandy bottle upon the sports of the gun and rod. I am one of those who do not think, and do not want the public to think, that there is any necessary connection between quail shooting and rum-sucking; or that a whisky soak through the day and a drunk at night are absolutely requisite to the enjoyment of a day's fishing. I am not a total abstemious, but I am a total abstemious; and I don't think there is either sufficient interest or sufficient novelty in the fact of a man's taking a drink to warrant its proclamation in a paper devoted to field sports, however appropriate it might be in the police news columns of a daily. Neither is there anything so meritorious in a man's getting noisily drunk that it is entitled to a place of especial prominence in the description of a hunting or fishing expedition. Yet, it seems as if many writers thought they would not appear to have done up their expeditions in true sportsmanlike style if they did not notify their readers how much rum they took along and how often they drank of it. One would think from some of these writings that there was an inseparable connection between rum and field sports, and I fear the general public will arrive at that conclusion too, if such literature has its legitimate effect.

I respectfully submit to the writers of sporting sketches that such details would better be omitted, both because it is entirely uninteresting to the reader to know how often the narrator drank or how drunk he got, and because such items tend to degrade in popular estimation a class of sports which need rather to have all the support of public opinion that can be brought to bear in their favor, inasmuch as they have always had upon them some stigma of reproach in the minds of those who have never tasted their pleasures and experienced their benefits.

My attention is more particularly drawn to this matter by the perusal of your last two numbers—Nov. 23 and Dec. 6.—It isn't just the thing to put into articles intended to be read by gentlemen in a paper by which the true spirit of sportsmanship is inculcated. How far away such doings are from sportsmanship! I give you whose little book called "Manual for Young Sportsmen" is fragrant with its very essence. It says: "True sportsmanship consists in the vigor, manhood and science displayed—in the difficulties to be overcome, in the pleasurable anxiety for success, and the uncertainty of it, and lastly, in the true spirit, the style, the dash, the handsome way of doing what is to be done, and above all, in the unshakable love of fair play, that first thought of the gentleman sportsman. And that it never may be degraded into aught else is the ardent wish, as it shall ever be the teaching, of Frank Forrester." Amen! H. P. T.

Boston, December 9, 1878.

MARYLAND WILD CATS.—Editor Forest and Stream: On Monday, December 9th, I was pleasant shooting along the foothills of the Sugar Loaf Mountains, in Frederick County, Md., accompanied by my three pointer dogs, Dick, Duke and Nell. In this locality there are quite a number of springheads along the mountain side, and the spring branches into two hollows, extending out from the mountain, are principally the favorite resort and haunts of the pheasant. These mountain resorts are mostly grown up with forest trees and bushes of different species, and many of them are overrun with grape vine and large masses of cat, or green briars, a thorny, climbing shrub, and the ground is covered with small vines, briars, rank weeds and long grass. I was hunting down one of these ravines with my three dogs, in the hope of springing a pheasant, and had gotten almost to the end of the ravine without finding anything, when all at once I knew there had been something about. I noticed my pointer Dick looked strange. He trailed around on the ground, sniffed the air, and suddenly threw up his head, dropped his tail, and took off at the top of his speed, followed by Nellie, to a piece of wood and thick cover about fifty yards away. I knocked both barrels of my gun, and stood perfectly quiet, supposing the dogs had wended a red or gray fox, and thought they would bring him from out of the brakes, and I could get a shot at him. Away the dogs went, as fast as they could run, and on reaching the wood they gave tongue by two or three sharp, quick yelps, and I knew they had started their game. I still stood perfectly quiet, expecting every moment to get a shot, but was disappointed, and to my surprise I heard bark falling from the side of a tree. I advanced quickly up within range of the spot, and saw that my dogs had treed a large house cat, and on looking round among the trees, to my utter surprise and astonishment I found they had six full grown house cats up in a space of ground not more than twenty feet square, and all on separate trees; some of them were half way up hugging the side of the trunk, others were sitting in the forks quietly looking down and watching the dog. As to my knowledge, there was not a house within a mile of the spot where I found six cats were treed. What were they doing there? It is my opinion that these cats belonged to the woods, were born there, and subsisted upon young rabbits and birds and the wild game that was found in that locality. I did not disturb them, I called my dogs away and left them on the trees. FRANK SOWLEY.

WILD RICE CULTURE—ITS SUCCESS.

WE are pleased to read in the *Turf, Field and Farm* the experience of one of its Indiana correspondents who has been experimenting in wild rice culture. He says that he has been altogether successful and his statements seem to prove it. We think them of such importance that we are glad to reproduce them in our columns, although we might be accused of some slight feeling of jealousy because having first gotten his cue from FOREST AND STREAM as he admits, he did not bring his results to us direct. We quote:

Three years ago my attention was called to an article in FOREST AND STREAM advising Eastern sportsmen to procure wild rice seed from the West, and sow it in their barren lakes and ponds. The editor stated, as his basis, that the introduction of this favorite food of surface-feeding water-fowl would tend to attract them to waters containing it, even though not previously frequented by them. This article attracted widespread notice, and no doubt many gentlemen profited by it; but none of them, to my knowledge, have ever given the sporting public any account of their experience in the matter. As mine has been quite satisfactory, I hope an account of it may interest and benefit others. I live in a region over which pass in their yearly migration vast numbers of water-fowl. On my place I have a shallow pond, covering several acres, somewhat overgrown with reeds and water-grass, but prior to its introduction by myself containing no food for ducks beyond, perhaps, a few shell-fish, etc. I am quite certain of this, because the fact that few ducks ever visited it, and those only to roost. Immediately upon its introduction I made allude to the seed. Mr. Valentine, of Janesville, Wis., ordering a barrel of the seed (FOREST AND STREAM recommended that gentlemen). This was in the fall, and I very soon received my wild rice. Mr. Valentine directed me to soak it until it sank and then sow it that fall on ground always covered with water from two inches to five feet deep. I followed his directions implicitly, covering about an acre of my pond with the seed. The following spring I watched anxiously for the first sign of its growth, and was greatly pleased at its appearance above the water, and I got quite thickly all over the surface covered by the seed. My neighbors, who had been inclined to laugh at my "new crop," as they termed it, became as much interested as myself; and together we watched its progress through the summer and the growth of its long, slender seed heads as harvest approached. September came and I knew that the early teal ducks would soon put in an appearance. Would they partake of the feast I had so carefully prepared for them? I imagined how anxiously I waited for a practical answer to the question. The first birds to visit me was a large flock of blackbirds. They arrived one afternoon and played havoc while they stayed, but myself and neighbors opened such vigorous warfare that they found the place too warm and left in a body, and never returned, however, greatly encouraged me, for they had never done so before, and I felt that I had made me to look out for them. Thereafter I was out early every morning in my boat paddling around my pond on the lookout for ducks. For nearly a week nothing rewarded my search, but on the seventh morning as I was stepping into my boat I heard a suspicious quacking up the pond, and paddling slowly down the open water my eyes were gladdened by the sight of a flock of teal, and wood ducks, and mallards, and the floating rice which the wind had shaken from the stems. The ducks were in the edge of a narrow stretch of open water running through the rice, and from a safe distance, unseen by them, I watched their operations with great pleasure.

After half an hour I paddled toward them, being careful to make no great noise (I had no gun), and, when within a few rods, they took flight, but only to circle around and light in one spot on the pond, evidently thoroughly satisfied with the situation. Toward night they flew away, but next day returned with a considerable addition to their numbers, and that evening I killed seven flying about the pond. My "new crop" was a success, and I was as pleased as a boy with his first pair of boots. During that fall I had many roost ducks on my table, and my success stimulated my neighbors to order barrel and several most of it for their own use. I also bought another barrel and sowed most of it in my uncropped water. But I had an idea that fall sowing was not necessary; and, to try it,

THE TENNESSEE "MAN-FISH."—Dr. L. P. Yandell was among the medical men who took a look at the man-fish of Mr. Whallen, mentioned some time since in the *Courier Journal*. He gives in the *Medical News* the following interesting statement in regard to the wonder:

It is about five since the Tennessee and Kentucky newspapers contained a startling account of a wild man lately captured, with great difficulty, in the Cumberland Mountains. He was six feet ten inches high, extraordinarily fleet of foot and excessively savage. He fed chiefly on raw fish, which he captured without artificial aid. He spent most of his time in water, and after being captured he had to be frequently bathed. He was covered with shining scales, like those of a fish. His hands and feet were webbed like the feet of water-fowls—so the newspaper accounts, with many embellishments, ran. It is scarcely necessary to say that most of this story was only showman's talk, uttered to attract the attention of the curious and credulous public.

The physicians of Louisville were invited to visit the monster upon his arrival in the city prior to his general exhibition. Among others I visited the merman; but before seeing the case I had diagnosed it as one of *Ichthyosis*, and single glance was sufficient to verify the correctness of my conjecture. The man-fish presents a most magnificent example of the form of *Ichthyosis*, or fish-skin disease, called *Ichthyosis serpentina*, or serpent skin; and his general effect is more that of a serpent than of a fish. But upon different parts of his body may be found nearly all the varieties of *Ichthyosis*. The resemblance to the snake skin to the shed skin of a boa-constrictor lately brought from the Zoological Garden in London is almost perfect. About his joints the skin is loose and wrinkled, hanging in folds, and the scales are large, suggesting the skin of a lizard or alligator about their limbs and belly. His arms and legs remind one of the skin of a lizard, the carp, the perch, or other large fish. The cuticle everywhere is dry and harsh, and never perspires. There seems to be an absolute absence of fat, and the man is shrunken and withered, of dead ashen-gray appearance, except here and there, where he is brownish or blackish. Though only about fifty years of age, he impresses one as a very old man. The skin of the face is red and shining, and tightly drawn about the cheeks, pulling the lower eye-lids down to such an extent as to perfectly evert them, making a horrible case of ectropion. In some cases his scales are silvery, in others dark, and again in others small and briny. His hair is thin and dead-looking. The backs of his hands are discolored, and on his palms and soles the cuticle is greatly thickened. The fingers and toes seem shorter than natural, and the skin is drawn tightly back over both feet and hands. The septum between the fingers and toes seems to extend much farther down than usual, thus suggesting the webbed appearance before alluded to. He is considerably over six feet in height, and a man of a low order of intelligence. He is married and is the father of several children, none of whom, fortunately, inherit his malady, and as *Ichthyosis* is almost if not always a congenital disease, they are not likely ever to have it. The fish-man falls to present but a single variety of *Ichthyosis*, and that is the porcupine disease, as it is called. In this species, formed by hardened sebaceous material, protrude from the skin, closely packed together. Wilson states that he has observed them a quarter of an inch long. Willan reports having encountered them of an inch in length. I have never seen them longer than an eighth of an inch. Many years ago two brothers in England having this form of *Ichthyosis* were exhibited in the show as porcupine-men.

Ichthyosis is one of the rarest of skin diseases. I am under the impression that it is more frequent in Europe than in this country. In ten years I have seen less than a dozen cases. Its cause, as I stated in my report to the American Dermatological Association, in 1877, is scrofula, according to my observation and experience. It is found in all the walks of life. I have encountered it with equal frequency among the rich and the poor. It is commonly considered incurable, and only temporarily and partially mitigable.—*Louisville Courier-Journal*.

QUEERLY PUT TOGETHER.—A novel exhibition in man and beast was given yesterday afternoon to the students of Rush Medical College. At 4 o'clock the large amphitheatre lecture-room was filled with flegged and unflegged doctors, and in the arena stood Charles Warren, a man of about thirty years of age, of athletic appearance, and apparently joined the same as ordinary youths. But he soon showed that he differed from most men in his make-up, for there was hardly a joint in his whole body that he could not throw out of place, or at least give that appearance. He went through with his distortions, much to the amazement as well as the amusement of all. He commenced by giving a circulatory movement to the scapula, moving it once on each side at a time, and without any apparent motion of the shoulders. He then threw the humerus into the axilla, disjoined his elbow, wrist and phalanges. This was done merely by the contraction of the muscles of the arm, and not by the pulling of one member by another. In none of his feats was there any

such wrench of one joint from another. Without touching any part of his body with his hands, the joints would move out of position. He forced the femur from the thigh bone. This he could do while standing on one or both feet or while reclining. The dislocation caused an apparent shortening of the limb. Another striking feat was the turning of his feet so that he could touch the bottom of them while his legs were perfectly straight. Perhaps the most remarkable of all his powers was the wonderful expansibility of his chest. Medical works, upon the strength of examinations of thousands of men in the army and navy, generally give five inches as the maximum of expansion. The exhibition could expand his from nine to twelve inches. Those who did not take much interest in other performances were wonder-struck at this. This feat was performed by the remarkable degree of the compressibility of the chest and his power to force his heart and lungs into the abdominal cavity, and then of the power to force his viscera to his chest. The abdomen was hardly less curious when the viscera were forced upward by the diaphragm than was the inflated chest. At such time there seemed to be an entire absence of organs in that part of the body, and to be no distance at all from the front walls of the abdomen to the spinal column.

This subject proved a fine study in the anatomy of the muscles, because he could contract them so as to show the position of each one from origin to insertion. He had this power over the muscles in pairs or separately, and could make them as distinct as if dissected.

Mr. Warren concluded with an exhibition of his ability to contort his whole body, drawing himself through rings and performing other things, much to the amusement of the students and the professors if they had only felt at liberty to give way to laughter. Mr. Warren has a daughter who takes after herself, and can dislocate her joints with such ease that they sound like rattles.—*Chicago Journal*.

DISPERSAL OF SEEDS.—In relation to the dispersal of seeds, both natural and artificial for the dispersal of seeds, Professor Grant Allen gives the following in the *Popular Science Monthly*:—"The thistle, the dandelion and the cotton-bush provide their seeds with long tufts of light hair, thin and airy as gossamer, by which they are carried on the wings of the wind to bare spaces, away from the shadow of their plant, where they may root themselves successfully in the vacant soil. The maple, the ash and the pine supply their embryos with flattened wings, which serve them in like manner not less effectually. Both these we may classify as wind-dispersed seeds. A second set of plants have seed vessels which burst open explosively when ripe, and scatter their contents to a considerable distance. The balsam forms the commonest example in our European gardens; but a well known tropical tree, the sand box, displays the same peculiarity in a form which is most alarming, as its hard, dry capsules fly apart with the report of a pistol and drive out the disk shaped nut with a force frequently so great as to make a blow on the cheek decidedly unpleasant. These we may designate as self-dispersed seeds. Yet a third class may be conveniently described as animal dispersed, divisible once more into two sub-classes—the involuntary and the voluntarily aided. Of the former kind we have examples in those seeds which, like burrs and cleavers, are covered with little hooks, by which they attach themselves to the fur or wool of passers-by. The latter, or voluntarily aided sort, are exemplified in fruits proper, the subject of our present investigation, such as apples, plums, peaches, cherries, haws and bramble berries. Every one of these plants are provided with hard and indigestible seeds, coated or surrounded by a soft, sweet, pulpy, perfumed, bright colored and nutritious covering known as fruit. By all these means the plant allures birds or mammals to swallow and disperse its undigested seed, giving in as it were the pulpy covering as a reward to the animal for the service thus conferred."

A DOG STAR.—The piece was Miss Lina Tetterhorn's sensational drama, "Tina, the Milk Vender," which has been rendered with some success in English. This time it was given in its original German. In the principal scene a large dog is introduced, having the milk wagon of Hartina, the heroine of the play. The dog understands English thoroughly, but, having had only the advantage of a single rehearsal in German, he became somewhat mixed as to his business,—not understanding the language, and of course mistaking his cue. When the comedian comes on and says "Hartina, are you here?" is the dog's cue to stand still until Hartina and her lover embrace and then sing a duet. Then he follows Hartina around the stage with the milk-cart, and so on. On this occasion, when the words "Hartina, bist du hier?" were uttered, the dog made a jump for the comedian, who took fright and ran off the stage. The dog followed, barking furiously, and scattering the milk-pails all over the stage. Hartina screamed and took refuge among the opposite wings. The dog presently reappeared, and springing the prompter seated in his half-moon in front of the footlights, he made a plunge for him. The prompter dropped his book

and dived through the trap door. The dog, now thoroughly aroused, went after him, followed by the milk-wagon and what was left of the cans. Amid the yells of the audience an effort was made to rescue the unhappy and affrighted prompter. Seizing the tail-board of the cart, some of the people gave a strong pull, and a pull altogether, when up came the wagon, and then the dog, and finally the prompter—the latter in a helpless condition, with the fangs of the infuriated animal firmly fastened to that part of his garment which was the last to disappear from sight. A muzzle was procured, and the dog was led from the stage, yelping at the prompter, and looking dangerous in the direction of the comedian. Order was eventually restored, and the piece proceeded.—*St. Paul Globe*.

THE WAITING CHAMPION.—The championship-of-America craze is making fearful havoc among all classes in these days. Here is a victim, whose feat is thus told in the *New York World*:

William Stiegel stood in Clinton street yesterday and proclaimed himself the "champion American waltzer." A crowd gathered, and he waltzed against time till a policeman carried him off. At the Union Market station he offered to bet the Sergeant that he could outdance Professor Cartier, the eight-hour man, and laying hold of Doorman Perry danced him round the room. He was induced to go into the sitting-room, where he spent four hours dancing to his own whistle and then fell asleep on a chair. He lives at No. 172 Clinton street.

FEED BY THE RAVENS.—The California wood pecker's habit of dropping acorns and other nuts into knot-holes and hollow trees as a source of future supply is well known, and an ingenious Napa armer has turned it to good account by knocking out a knot in the side of his barn and placing a trough underneath. As the birds drop their acorns in his barn, the hogs seize them, and are thus fattened at no expense to himself.

A PARROT'S CALL.—A friend of ours has a mocking-bird and a parrot, which are on very good terms with each other. Occasionally their cages are placed together that they may enjoy a little social intercourse. The parrot will then thrust its poll through the bars and say, "Scratch my head," whereupon the mocking-bird will peck the parrot's head with its bill with an air of great gravity.

—An Iowa deacon went into his barn the other evening to milk a cow, and hung the lantern on a peg near the cow's tail. The foundation stones of the barn and some of the cow's bones were found all right next morning, but the deacon has not been heard from.—*Boston Post*.

—When a man gets bald in Colorado, they say his head has got above the timber line.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussil with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan inspired bronze glasses exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian Iridescent and enameled Glass and Limoges Faience of new colors.

Gunpowder,

GUNPOWDER.

DUPONT'S
Rifle, Sporting and Blasting
Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequal in strength,
quickness and cleanliness; adapted for Glass Ball
and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong and
clean; great penetration; adapted for Glass Ball,
Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong and clean Powder of very fine grain
for Pistol shooting.
DUPONT'S RIFLE, FG., "SEA SHOOTING,"

FFg and FFFg.—The Fg for long-range rifle shooting, the FFg and FFFg for general use, burning strong and moist.

SPORTING, MINING, SHIPPING AND BLAST

ING POWDERS of all sizes and descriptions. Special grades for export. Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 WALL ST. N. Y.
N. B.—Use NONE but DUPONT'S Fg or FFg
Powder for long-range rifle shooting.

Laffin & Rand Powder Co.
No. 26 MURRAY ST., N. Y.,

Sole Proprietors and Manufacturers of
Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,
For water-fowl, strong and clean. No. 1 to 5 in
metal boxes, 21 lbs. each, and cartridges of 1 and 2

Orange Rifle Powder.

Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb. All of the above give high velocities and less

residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER

Safety Fuse, Frictional and
Platinum Fuses.

are increased by the light

BURNISHED TIN COATING.

ALSO

**Drop Shot, Compressed Buck Shot and Balls, Bar Lead,
Chilled Shot, Lead Pipe and Sheet Lead.**

THE LEROY SHOT AND LEAD MFG CO., NEW YORK.

**IRA A. FAINE'S
FEATHER FILLED GLASS BALL.**
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the FINE PATENT FILLED BALL is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we
would respectfully caution the dealer in buying in a stock of unsuitable articles for the Spring Trade,
when you can purchase the Best Ball EVER made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURES of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Trapped Glass Balls are now made even, and carefully packed, with
229 in each barrel, and by having a rough surface strengthens the ball for ship-
ping, and prevents the glancing of shot, while the smooth ball has been made, and
also to break successfully when hit, but sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now,

**I Will Warrant my Balls Against Breakage by
Transportation,**

and will pack 10 extra. I have had 5,000 shipped out. West since my return from
England, and used them myself, and sometimes would not find a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where clubs use them you can readily see which is the hardest shooting. In
matches reported in paper, saying Bogardus' rules and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and, further, patronize the man
who introduced this sport to the public, and who has been to England twice and upland the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel. \$4; "Field, Cover and Trap Shooting," \$2.

NEW YEAR'S CALLS.

I.—12 M.

SO it's you! I began to be anxious;
You said you'd come early, you know;
Besides, I had counted upon you,
And it isn't like you to be slow.
Is that your new dress? How becoming!
- Pray how do you like mine, my dear?
Maid's grand in black velvet and diamonds,
Are you ready? Then walk right in here.
There's the table, Demmonico spread it.
- To said it wasn't worth while?
But what is the root of his money
If we don't have things done up in style!
I wish Fanny Harris could see it;
She'd be awfully jealous. But then
That's the worst of these New Year's receptions
Nobody sees things but the men.
They won't care for the fruit and the flowers.
Well, there's plenty of wine, I am sure.
Come, Neil, get yourself in position.
Be quick! There's a ring at the door.

II.—12 P. M.

Bring the card baskets in from the hall, John,
And put the dead-latch on the door.
Let Ned in; if any one else comes,
Just say the reception is o'er.
Come, Nell, have some turkey and salad.
I'm starved, and I hope you are, too.
I really believe everybody
Has been here that we knew.
Please count the cards, ma. The reception
Has been, I think, a success.
What a shame in that tipsy Fitzendoe!
To spill claret punch on my dress!
Then there was young Schumaker Fyndings
Could scarcely tell his heels from his head,
Mating love to me; it was disgusting.
He should have been home and in bed.
What was it you said, ma—three hundred?
Indeed, that will do pretty well;
Make us see that it gets in the papers,
And be sure that he don't forget Nell.

—Star.

For Forest and Stream and Rod and Gun.

Hunting the Sea-Elephant.

(From a forthcoming volume by Charles Lanman.)

"THAT'S a ship from Desolation and she's full of elephant oil!" The words were spoken by an old skipper, with whom the writer had been upon a fishing cruise in Long Island Sound, and it was prompted by the sight of a storm-beaten vessel while passing into the beautiful harbor of New London. The return of the ship after a long voyage I could readily understand, but the place and the commodity alluded to were to me involved in mystery. The brief explanation which followed from the skipper only tended to increase my interest in his casual remark; nor was it lessened when he told me that the Desolation Islands were more nearly identified with New London than with any other seaport in the country. In a short time, therefore, after my return from fishing I was busy among the ancient mariners of the town, asking them questions and recording their replies.

In the South Atlantic or Indian Ocean, about midway between the Cape of Good Hope and the western coast of Australia, are located two islands, lonely and inhospitable, and nearly three thousand miles from the nearest continent. One of them bears the name of Kerguelen's Land and the other that of Heard's Island; and although not very near neighbors they are known to the men "who go down to the sea in ships" as the Desolation Islands. The first mentioned of these was discovered by a lieutenant in the French navy, named Kerguelen, in 1772, and for his service he was promoted to the command of a frigate. He revisited the new land in 1773, gave it the name of La Fortune and reported to his government that he had discovered a new continent, in which opinion he was of course mistaken. Its exact location is lat. 49 S. long 70 E. In 1776 the famous navigator Cook, by direction of the English government, also visited this island; he gave its principal bays and headlands the names which they have since borne; and he made the assertion that, if it had not already received the name of its discoverer, he would be inclined to

call it the Land of Desolation. The other island to which we have alluded lies about 189 miles southeast of Kerguelen's Land, and although actually discovered by a Boston navigator named Heard in 1853, while on his way to Australia, the first man who set foot upon it was Captain E. Darwin Rogers, of New London; and the man who brought away from each of the two islands in question the first cargoes of oil was Captain Franklin F. Smith, also of New London. The Log Books and private journals of these men have been placed in my possession, as well as the Journal of Captain Henry Rogers, who was one of a small party that first spent a winter upon Heard's Island; and it is from these original records that the following facts have been chiefly compiled.

The most complete account of Kerguelen's Land comes to me from Captain Smith, and a word or two about the man himself should not be omitted in this place. He was born in New London in 1804, and before completing his thirteenth year became a sailor in a coasting vessel. In 1823 he went upon a whaling voyage to Patagonia; and on being promoted to the command of a ship in 1831, he entered upon a series of voyages which have been pronounced the most successful in the annals of whaling. The names of his vessels were the *Florio*, *Julius Cesar*, *Tuscarora* and the *Chelsea*; and in the course of ten years he made nine voyages, the first seven of them yielding 16,154 barrels of whale oil, and 1,147 barrels of sperm, the total value of which, according to present prices and without counting extras, would amount to about *six hundred and fifty thousand dollars*. These voyages were made in behalf of N. & W. W. Billings and of Williams & Haven. During four of them his wife accompanied him in his explorations around the globe; and his only daughter was born at sea, receiving the name of the ship in which the event occurred. He also had a number of sons, one of whom acquired distinction as a whaleman; and four brothers, who were all whale hunters. One of them was killed while fighting one of the ocean monsters in the Pacific ocean; and another was nearly as successful in the same sphere of enterprise. He made a number of voyages to Kerguelen's Land, and, as already stated, he was the first American who brought any oil from that remote region in 1837; and now, reserving some other particulars about him for another place, I come to his description of the island.

It is about one hundred miles long and perhaps sixty wide, and reputed to be the most barren spot in either hemisphere. It is of volcanic origin, rises in some places in terraces to the height of three thousand feet above the sea, with one pointed peak said to be nearly six thousand feet high, contains a number of lofty and picturesque headlands, is indented with bays or fiords, some of which nearly cross the island, and to the geologist it is especially interesting, as containing in its igneous formations a large amount of fossil wood and coal. Small rocky islands, to the number of three hundred, surround it on all sides; and yet it has several first rate harbors. During the entire year, the higher lands are covered with ice and snow, which, with the fogs and winds, dispute the honor of making the place desolate in the extreme. The vegetation, which is very limited, is antarctic; and although scientific men have described one hundred and fifty species of plants, the ordinary observer would only be attracted by four—a kind of saxifrage, a plant resembling the cabbage, a variety of coarse grass, and a plant belonging to the cress family. As to trees, there is not one to be found, and it is not probable that any ever grew on the island. But the sea-weeds which fringe the shores of the entire island, are particularly rich and rare, some of them growing to the enormous length of sixty feet. Of quadrupeds it is entirely destitute. In the way of birds, it is frequented by a few gulls, now and then by an albatross, and by penguins in the greatest abundance. In olden times, such portions of the coast as were accessible were frequented by several kinds of seal, and also by the sea-elephant; but they are now almost scarce. There are no permanent inhabitants on the island; and since it has ceased, for the most part, to afford a profitable supply of oil, it is chiefly interesting to seafaring men in these latter days as a secure rendezvous when overtaken by foul weather in their lone wanderings around the globe. During the period when England enjoyed the monopoly of killing seals on this island for their furs alone, it was estimated that the yield was about one million skins per annum.

But it is of Heard's Island that we desire especially to speak in this paper. It is about eighteen miles long and perhaps six or seven wide; and by right of discovery is an American possession. For many years the merchants of New London cherished the belief that there was land somewhere south of Kerguelen's Island, for in no other way could their captains account for the continuous supply of the sea-elephant on its shores. As long ago as 1840 Captain Thomas Long, then of the *Charles Carroll*, reported to the owners of his ship that he had seen land from the mast-head, while sailing south of Kerguelen's Land; but Captain Heard has received the credit of the discovery, although he did not land upon the island. The man who first did this was Captain E. Darwin Rogers. He was on a cruise after sperm whale; his ship was the *Corinthian*, and he had three tenders; and his employers were Perkins & Smith—the same Smith heretofore mentioned. Captain Rogers commemorated his success by an onslaught upon the sea-elephants, which he found very numerous on the shore; and after securing four hundred bar-

rels of oil, improved the first opportunity to inform his employers of what he had done, urging them not only to keep the information secret, but to dispatch another vessel to the newly discovered island. When the news reached New London, Perkins & Smith were without a ship or a suitable Captain for the enterprise. The second member of the firm had long before given up the sea and was hoping to spend the remainder of his days at home in the quiet enjoyment of an ample fortune. But the temptation was strong and he yielded. The firm purchased a ship at once, and the moment she was equipped, Captain Smith took command, and sailed for Heard's Island. With Captain Darwin Rogers as his right hand man he fully explored the island, named all its headlands and bays and other prominent features, made a map of it, and succeeded in filling all his vessels with oil. Two exploits which he performed with the assistance of his several crews, are worth mentioning: At one point, which he called the Seal Rookery, they slaughtered five hundred of these animals, and as was afterward found, thereby exterminated the race in that locality; and they performed the marvelous labor of rolling three thousand barrels of elephant oil a distance of three miles, across a neck of the island, from one shore to another where their vessels were anchored. The ship which he himself commanded returned in safety to New London with a cargo of oil valued at \$130,000, one-half of which was his property. On reaching the dock he was warmly congratulated by his numerous friends; was informed that the books of his firm never told a better story than they did then, and that good news had been received from all their thirteen whale ships, which were homeward bound from the Pacific and Arctic seas. In addition to all this, he found that two farms which he owned had increased in value, and that the ten or twelve thousand dollars he had invested in erecting the *Pequot House*, since become famous as a summer resort, would probably pay him a handsome interest;—but as the wheel of fortune would have it, in six months from the date of his arrival home from Heard's Island, he had lost all his entire property. The blow was terrible, and a desolation of heart fell upon him, which could not but remind him of the Desolation Islands in the Indian sea. After resting upon his oars for a few years, he made one desperate effort in 1862 to retrieve his fortunes, but the tide had turned against him, and he was unsuccessful. His friends furnished him with a new ship and he went upon another voyage to the Desolation Islands. Having secured a good cargo of whale and elephant oil, the ship was wrecked on a reef off the Sea Shell Islands, after which he obtained a passage to the Isle of France and by way of London, Liverpool and New York, returned to New London, where he subsequently resided a worthy and much respected, but disappointed man.

But it is time that we should be giving our readers an idea of the physical characteristics of Heard's Island. It is in reality an ice island, with only enough of solid land visible at different points to prove that it is not an ice-berg. From the centre of it there rises to the height of at least five thousand feet a broad breasted mountain, which is known to be perpetually covered with ice and snow, and its sides and summits are so cold and desolate that no living creature has ever been seen to harbor there excepting the albatross. Some of the points or head lands which are found along its eastern shore rise out of the sea in the form of perpendicular cliffs, and Captain Darwin Rogers alleges that he was once at anchor near one of these cliffs for an entire month without obtaining a view of the summit; and also that during that period his ship on several occasions was felt to quiver from stem to stern in a very frightful manner, the cause of which, as he subsequently ascertained, was the falling of immense blocks of ice from the cliffs into the sea. Alternating with those huge bulwarks of ice are some of the most beautiful beaches of black sand, where the surf perpetually rolls up fresh from the South pole. The only fish found along its shores is called the night fish and resembles the cod. There is not a tree or shrub on the island, and the vegetation is so limited that only two varieties are ever mentioned in the journals before us, viz., a coarse kind of tussock grass and the wild cabbage. The birds are about the same as those found on Kerguelen's land, viz., gulls, mollymoks or penguins, cack pigeons, and the albatross. In the way of mammals it boasts of but one creature alone, and that is the sea-elephant, but for these it is the most profitable hunting ground in the world.

What the lion is to the continent, the sea-elephant or *Morongo pyrodes* is to the pool—the mammoth representative. Though not uniform in size, they not unfrequently attain a length of thirty feet, and a circumference of fifteen or eighteen feet, the blubber of a single individual sometimes yielding three hundred gallons of oil, which is considered more valuable than that of the whale. The grown males have an elongated snout, which gives them the name they bear; their teeth are short and pointed, and the molars small and pointed, and the canines very large, and the power of their jaws so great that an angry male specimen has been known to seize a dead comrade weighing a ton and toss him a considerable distance as a dog would a mouse. When quite young they are called silver gray pups from their color, but as they mature they become brown, the males inclining to a dark blue and the females to yellow shade; their home is the sea, but they have a fashion of spending much of their time upon the shore, occasionally going inland two or three miles and luxuriating in fresh water marshes; they are sluggish in their movements and somewhat stupid, and in certain localities they con-

pregrate in large herds or coralls; their tongues are used by the sailors as a welcome delicacy, and by the Yankee boys frequently worked into mince pies; the scraps which are left after the blubber has been tried out are employed as fuel with which the trying-out process is conducted; their food is supposed to consist chiefly of cuttle fish and sea weed, and the instrument employed for this purpose is a large iron hook which is thrust into the throat and causes them to bleed to death. The bull elephants are the largest and fiercest of the race; the gallor parance the old males are called beach masters and bulls, and the females pupping cows and brown cows. During the season of courtship the bulls fight desperately with each other, uttering a kind of roar and inflicting fearful wounds, while the lady elephants in groups of from fifteen to twenty, are seen to be very tame and docile. When the bulls are ready with expanded flippers, to welcome the victor into their mist. The mothers usually remain in charge of their young about two months, and during all that time it is said that the lord of each harem occupies a convenient eminence, with his head generally toward the sea, and acts as sentinel to prevent the mothers from abandoning their young, or from leaving the island in quest of food. The bulls are very covetous individuals. The number of these animals which annually arrive to Heard's Island, coming from unknown regions, is truly immense. In former times the men who hunted them invariably spared all the cubs they met with, but in these latter days the young and old are slaughtered indiscriminately. We caught two cubs as they were the only pair of cubs seen; particularly young, and we knew that the men who follow the business lead a most fulguring and wild life, and well deserve the largest profits they can make. While Kerguelen's Land is the place where the ships of the elephant hunters spend the summer months, which season is literally the "winter of their discontent," it is upon Heard's Island, that the mammoth game is killed, and the ivory obtained. The men who hunt the elephants have the hardihood to build themselves rude cabins upon the island, and there spend the entire winter. Among those who first exiled themselves to this land of fogs and snow and stormy winds, was one Captain Henry Rogers, then serving as first mate, and from his journal, which he kept during this period, we may obtain a realizing sense of the loneliness and dreariness of this life. He writes: "I have been so long so long willingly, subject myself in the far off Indian ocean, and

Having taken a glance at the leading men who identified themselves with the Desolation Islands, and also at the physical peculiarities of those islands, we propose to conclude this paper with a running account of Captain Henry Rogers' adventures during his winter on Heard's Island.

He left New London in the brig *Zoe*, Captain Jas. Rogers, master, Oct. 26, 1856, and arrived at their place of destination February 13, 1857. For about five weeks after their arrival the crew was kept very busy in rafting to the brig several hundred barrels of oil, which had already been prepared and left by the *Zoe* for the *Enterprise* on the 23d of January. March the wintering gang, with Capt. Henry Rogers as their leader, proceeded to move their plunder to the shore, and when that work was completed, the brig sailed for the Cape of Good Hope. The gang consisted of twenty-five men, and after building their house, which was merely a square excavation on the ground, covered with boards and made airtight with mud and soap, they commenced their work. They were expert with the lance did most of the killing; the coopers hammered away at their barrels; and, as occasions demanded, all hands participated in skinning the huge sea elephants, or cutting off the blubber in pieces of about fifteen pounds each, and then, on their backs or on rude sledges, transporting it to the trying works, where it was turned into blubber oil. The game was not very numerous, and the "drugging to bag" a little game, and the number of elephants killed ranged from three to as high a figure as forty. According to the record, if one day out of thirty happened to be bright and pleasant, the men were thankful; for the regularity with which rain followed snow, and the fogs were blown about by high winds, was monotonous beyond conception. And when a high calm, after the snow had melted, and the racks away, the storm which followed was monotonous, and as the tired men wrapped themselves in their blankets for the night, there was a monotony in their very dreams—they were home of—wives and children and friends—far, far away, over illimitable sea—and that was a monotony which they enjoyed. When one of these men chanced to be wakened at the hour of midnight, and the moon shone from a cloudless sky, he would rise to go to the communal altar, with him how must the blackness of darkness and the wild wailing of the ocean, mingled with the screams of the penguins, or the moon and stars shining in their marvellous beauty on the tranquil deep, have filled him with awe! The great waves, perhaps, like beasts of prey, came careering out of the abyss of space, and as they dashed and perished against the icy cliffs, would rise up as if to devour him. The waves that were entirely across the island, only to be welcomed by an answering roar from the waves on the opposite shore.

Month after month passes away, and there is no cessation in the labors of the elephant hunters. Mist and snow and slaughter, the packing of oil, hard bread and saffron, fatigue and heavy slumbers—these are the burthen of their song of life. Those who chance to remember with pleasure the strains of Sabbath bells, may cherish a strange hope in their hearts, that the day of their attendance at the Sunday-school, in the far-off New England church, stern necessarily compels them, with lance in hand, to do battle with the sea elephant. But when the anniversary of their National Independence arrives, they must needs devote one hour of their precious time to the bidding of the patriotism, notwithstanding the fact that their cabin may be covered with snow and a snow storm raging. With the aid of their pistols for muskets, and a hole in a rock for artillery, they sing the national salute; with a tin pan for a kettle-drum and a piece of wire for a triangle, they have an abundant supply of music; forming themselves into a procession, the march with stately pace in front of a snow-drift, instead of grand hotel; and with the tongue of an elephant for roar of battle, and some ginger pop for Catawba wine, they have a glorious feast; and leaving their hunting to flap itself into a snow-drift over their island home, they pick up their lances and armor and march straight to the Cape of Good Hope, and perhaps two months have passed away, when lo! it comes the brig again, with the latest news from the Cape of Good Hope, but with nothing new from dear New England. The vessel drops her anchor; in a few weeks she is filled to the brim, by raftering and boating, with the barrels of oil which have been collected during the long and tedious winter (misnamed summer), and on the approach of Christmas, the sails of the brig are again unfurled, and away she goes, homeward bound; and as the sunset, on the Cape of Good Hope, the keeper of the Montauk Light points to the southeast, and says to his good wife: "There comes a brig from the Desolation Islands!"

For Forest and Stream and Rod and Gun.
SPORT IN THE SOUTH OF IRELAND.

WE reached London the last week in August, very well satisfied with our month's sight-seeing through the Continent, and rather pleased that the greater part of the last two weeks of our stay in the Old World was to be spent in Ireland, among some friends of my traveling companion, who were residents of the county where are situated the famous Lakes of Killarney.

We had already devoted two weeks to England and Scotland; so, when Fred said, "Here's a letter from my friend, the Doctor; it has been here a week. What do you say to our starting right away, asking him to meet us at Killarney?" "Hurrah for Ireland!" was my reply, and forthwith set about completing arrangements to leave for Holyhead that evening. Two days later we reached Killarney.

Yes; the scenery of Killarney is wondrously beautiful, and we enjoyed it to our heart's content—but I must remember that this is to be an account of our sport in Ireland, so I will not attempt a description of Irish scenery just now, but move right on to the scene of our exploits.

A ride on an outside jaunting car for about thirty miles brought us to the village of Ballyherilly, the Doctor's home, and the genuine, hearty welcome we received made us feel that our host was a real old Irish gentleman—one of the good old type, scarce to be met with in this age of the "motor." The river Scourie, three times, and my nerves fairly tingled with delight at the prospect of soon throwing a line over pools that looked like beaundified haunts of trout and salmon. However, there were visits to be made that would occupy the next day—and then for some fishing. But I am very much afraid, when Fred and I retired on the first night of our visit, it was with a decided mental reservation, that if next day I found my fishing companions were not equal to those whom I had just experienced, fishing would by mutual consent be indefinitely postponed.

My anxiety to have a chat with a real, simon-pure, unsophisticated Irishman of the laboring class, who, I felt certain would be found in his most unadulterated state in this wild locality, induced me to up and out very early next morning. A short walk brought me on two, who were at work near the road. They looked the very game I was after—knee-breeches and old hat, and, without doubt, the two coats on the fence near by were swallow-tails of ye ancient pattern.

"The top of the morning to your honor," greeted me the moment I came up. I returned the compliment, and immediately set my Yankee inquisitiveness to work. The simple question, "What are you sowing here?" I intended as an attack upon their actual pursuits but it was a little nonplussed when I was told that it was caraway seeds. I then undergo some moments of mental agony to recall what I knew about caraway seeds, with the hope of being able to disguise my ignorance of agriculture in general, and especially of the plant mentioned. Though the name was as familiar as oats, I felt that I was entirely innocent of how they grew or ranked as an article of commerce. I thought I had better turn to the subject of the caraway seed, for I had no other picture of willingness to impart information. A house some little distance up the road attracted my notice, from its peculiar situation. It was built so that its end faced a pretty view of the river and its ivy-clad bridge, while the front looked on a rather dismal piece of dwarfed woodland. There appeared no justifiable excuse for such want of taste, and my remark that this effect was "sacred" was a questionable one. "It is sacred," said the Doctor, "and I will rest his soul!—and now the priest lived there; so me and the boys, as soon as the turf was cut, were going up there to twist it around." To show that this matter was fully settled, he, turned to his companion, saying: "Isn't that so, Jim?" and was answered, "It's threr for you, Mickey." As the house happened to be of good size and built of stone, the apartment was well lighted, and the boys went to twist around, and, as I think, among other things, to twist around was about time for breakfast; so I wished my two unsophisticated friends good-day, and was about to retrace my step when it was mildly suggested that if I went across the field it would be a short cut to the Doctor's. I accepted the advice, and was hardly in the field when Mickey, flat in hand came up and asked if my honor wouldn't pay his footing. I saw that the Doctor was not far off, and that the condition of the face of the recipient caused very grave doubts in my mind as to Mickey's being quite up to ideas of the unsophisticated Irishman.

"At breakfast I was tempted to find out to what extent caraway seeds were used as an article of commerce in Ireland. The astonishment of my friends was at last relieved by a shout of laughter when they discovered my reasons for asking. The description of the men I interviewed left little difficulty in recognizing who they were. The Doctor simply remarked that "Mickey Bawn was a prime boy, and would never die in his bed." I must say that any information from Mickey and his co-freres I received with a large pinch of salt somewhat flavored with caraway seed.

The day's sailing and sight-seeing was over, most agreeable day in every way, and one that made us decidedly feel that we were enjoying Irish hospitality. Arrangements were made for an early start up the river next morning, and we were ready at the appointed hour. The weather was rather breezy, but the moonlight was so good that we went prepared to fish for trout. When we reached the river it was decided that trout fishing was to be the order of the day. Fred and I were kindly allowed to take the lead; the Doctor and Jerry who was the crack fisherman of the place—followed, allowing us such a start that we were soon in the lead. I looked for the angler could wish it to be splendid pools, but I saw only miniature cascades, and not a tree to impede the full sweep of the line. I had fished for at least an hour, and had experienced to its utmost that delicious feeling of expectancy that each pool engendered. I might possibly have continued "some time longer," but I was not so sure of it. I had not a trout, and hope deferred made the heart grow sick. I had not a trout that could turn the scale at six grains, and only had one or two times that looked at all respectable. I thought it was about time to stop. I had for the present enough of the feverish deceiver. I would wait till Fred came up. When he did come he was not much better off than I was. He had not a trout, and I thought that betokened a want of confidence in his abilities to promote a nearer acquaintance with the bright denizens of the lochs. He had also evidently let his angry passions

for in reply to my "What luck?" I received the emphatic reply, "Damn the luck!" We decided to halt, and wait till the Doctor and Jerry came along. We filled our pipes, and as we lay there on the sweet heather of Ireland, dear old Ramezey and the Schoodles were not forgotten.

When our friends arrived we did feel rather crest-fallen, for their baskets contained some the trout, many of them fully two pounds weight. We could not understand how this could be, for our ties were about the same that they were used to. We flattered ourselves that we did know something about fishing; but alas! the experience we had gained from many visits to the streams and lakes of New England, where we found our day's fishing in the afternoon, was not all sufficient for the more serious fishing of the Irish. We had to submit with the best grace possible to a lesson from Jerry, and then found out that it was absolutely necessary to keep as far as possible from the bank, and throw the line with a lightness that only the leader would fall on the water. Our rather nonchalant manner of fishing might do very well in the wilds of Maine, but it evidently was not the ticket in this old-fashioned country. We had every reason to be satisfied with our tackle. It was extremely light and handy, and impressed one with the feeling that very careful action would be required in a struggle with a two-pounder.

The flask we passed round, and with renewed spirits and hopes for better luck we resumed our old positions. When we next came to a halt we had a very different story to tell. Fred and I held our own very fairly with our friends; indeed, before we reached the rendezvous for lunch I had to transfer my hand to my knee, and my knee to my hand, owing to the afternoon a breeze springing up, and we had renewed our strength to its utmost capacity, we were glad to find that the "rig" that carried the hamper also contained the salmon rods, so we decided to try our luck, as some celebrated pools were close by. During the hours that followed Fred secured a magnificent trout, and I gave a stirring account of a short struggle he had, but unfortunately the fish was so small and it was pity, for I have little doubt from the description he gave of the fish, it well deserved to be stuffed, and hold an honored place among the heavy weights of the *Salmundina* family. Jerry and I had to act as audience. We had nothing to relate, and could only show a few additional good trout. Fred's was the best, and I think the most beautiful anguily he considered a good day's sport, yet the extreme fineness of the tackle made each capture look a prize.

[illegible]

"Where people went in to spend half-a-crown,
To meet with a friend and for love knock him down
With his sprig of shillelah and shamrock so green."

I felt that it was useless to pretend that I did not hear him, and I said as loudly as I could, "his gentle tapping at my window lattice would very soon be louder than before." So I jumped up to ask a respite, but Will's salutation, "It's a glorious morning, don't delay! Rattleaway is harnessed," put excess of excuses at an end, and I could only say, "All right," and hoped that my horse would be ready in time. I was not at all in mind the absurd idea that some friend's sprig of shillelagh had been playing along my head. Rattleaway did credit to his name that morning, and spun over the five miles in good time; and now, while breakfast is being prepared at the farm-house, I am writing this.

Master Will's "otter" as he is about to rig it here, to save time, is a slate-colored painted board two feet and a half long, eight inches wide and one inch thick, beveled at the ends in opposite directions, and with a leaded keel on its length, so that it will float on the water. Three inches from each end are two holes—through which run two endless cords—called the belly-bands—which are held in position by pegs; these b. b. when pulled tight extend about six inches from the board. To this pulley is fastened a light iron ring, which is fastened to the end of a foot long and working on swivels, so that when the line is held taut they hang straight and are not liable to foul.

Our breakfast of eggs and milk I enjoyed, and must say though the house was a very humble one indeed, I was struck with the natural courtesy and kindness of the people and the good looks of the charming little Nora Crena who attended the table.

After a pretty stiff walk up the mountain we reached the lake. The "otter" was placed in the water, head against the wind and immediately started out, when the line was held tight. As soon as the fly line was played out its end was attached to a line on a strong fishing rod, and Master Wily, walking along the shore, guided the "otter's" movements, though it was fully 40 yards out. In less than 30 minutes he worked it in and almost every fly was furnished with a trout. By the time he had made four hauls I was not surprised when he said he did not wish me to say anything to Mr. S. about our morning's fishing, as I have some idea that that gentleman was officially concerned in the welfare of the fish of the county.

Master Wind had just put his "otter" to keep when, down the far end of the glen, came the dogs in full-song; and what glorious notes those fifty harriers sent forth, echoed over and over again, the whole way up the hill. The wind was strong, but very hot, and it was only a hare that was seen. We had to tramp up hill and down for over two hours before the next "Mark away" was sounded; but the interest was kept up by the varied grandeur of the scenery that each opening in the hills displayed. We had almost given up hope of having another run, when one of our party interviewed a young herder who happened to come up, and was asked if he saw any foxes, or foxes' ears. "No," he answered, "but I saw a fox once, and it was very fine." "Where?" "Over there," he pointed to the westward. "It was very nice, but I don't know where it went." His vicinity was evidently not held in high repute, for I heard it distinctly remarked that he was a "notorious" liar, and that no very gentle terms was directed to "go over there and baste the eastern side of the brake." The fellow went, and to our astonishment out jumped a fox, who gave us a jolly good run, and fortunately in the direction of home. When we last day reached the "Barn" we were very much surprised to find ourselves better, or ever met a more kind and hospitable people, and when leaving Queenstown it was with an earnest hope that this would not be our last glimpse of Erin. T. D. E.

For Forest and Stream and Rod and Gun. GAME COVERTS OF NEVADA.

GOLD HILL, Nevada, Dec. 19, 1878.

As your columns are but very rarely interrupted upon communications from the "Silver State," permit me, for the benefit of those who make their home among sage brush and sand, and who would fain avail themselves of an opportunity to secure a few weeks' excellent shooting did they but know where to go. Our State is blessed with but little shooting grounds, but we have some, and allow me to say when found they are excelled by none that I have had the fortune to enjoy. Elk County, in the eastern part of the State, affords a better field for the sportsman than any in the State. I do not deny there are parts which afford as great a quantity, but not variety. For instance, the sink of the Humboldt River, which is a shallow lake of considerable extent, is at the time of year covered with myriads of water-fowl of all kinds, including ducks of many varieties, honkers, brant, swans, pelican, etc., etc., but that is all. Away from the shore everything is parched and dry, and for miles the eye encounters naught but sandy hills, alkali plains and a few stunted sage brush, but as we go eastward, following the line of the O. P. R. R., the country gradually assumes a more cheering aspect, and upon arriving at Elko, a pretty little burg and an eating station, you may stop with the assurance that any of the citizens can direct you to good shooting grounds. From there, east to Death Station on the river can be found ducks, snipe, prairie chickens (or sharp-tailed grouse), sage hens, etc. At Death Station the river leaves the railroad, and away northward after leaving the railroad some thirty miles, until you reach the Grouse Creek Mountains, is a hunter's paradise. All is solitude; no habitation for miles now; no hunters have been here, the crack of the rifle, the whistle of the bullet and the bark between—and the result, abundance of game and very gentle. I was up in this part one season with six companions, and I shall never forget those most enjoyable weeks. It was our fortune to find a few antelope, three or four of which were secured by our party. The river toward the head is an insignificant stream, merely a little brook, but abounding in trout. While there the stream was nearly dry and at intervals pools, in which a fly was taken as fast as you threw it in, but that was of course tame sport, mere coasting you the exertion to put the pretty speckled beauties from the water. The boys were banging away all day long in hearing of camp. At times a covey of grouse would go thundering over camp, when our "Wild Dutchman," who was acting in the capacity of cook, would grasp his six-foot (?) muzzle-loader with a broken grip and blaze away, and get—kicked over about twenty feet, and the joy of again patching up a stock, was set would invariably go to pieces at every discharge. From the day we first pitched camp until we started home "Dutchy" had a highly ornamented nose from his pet's mulish demonstrations. When far away from camp you could hear the "boom! boom!" of that old "broken back," and some one would sing out: "There, Dutchy has peeled his smaller again." I remember one evening returning down stream I shot a skunk and brought it along and deposited it on a little lead near camp. The wind was blowing from camp and all was lovely for the present. During the night the wind veered and blow directly toward us. "Dutchy" was the first to wake, and with one wild leap he was erect and shouting: "Poys, poys, got up." The roar that followed brought him to his senses, and when he realized the cause of the odor which pervaded the air he grasped the old reliable "and went in search of the cause, keeping a sharp eye for a skunk, and a sharp eye for a skunk, and in broken English. I guess he found it, for he shortly returned with vows of vengeance of who ever "put dot d—n smellin' cat out dare." We were disappointed one morning when some vaqueros passed and told us the Plutes had gone on the war path near Cherry Creek. "Dutchy" at once made preparations for a forced march, and we saw him no more until our return home. We remained there some time, moving up stream every other day, and at the little finding game and everywhere. Perhaps the desire splendid shooting could do no better than to give this locality a trial. I would advise them to procure their teams at Elko and a full camping outfit and drive to Death Station, and from there go north following Mary's River. After you get up it some ten or fifteen miles you will be surprised to see so much game and of so many varieties. You cannot step up to a pool without ducks flying up. Hardly a hundred yards of a running stream, and you are flushed. But I am intruding upon your valuable space. I will, as a parting word, say to the sportsmen of Nevada, "Do not leave your own State when the season opens, but take a little trouble and you will find many such places as I speak of. I have found them, why not you? Once found they are always there to visit each year." I presume the western portion must afford some excellent quail shooting when the snow drives them down into the foot hills. As I have never tried my luck in that vicinity I cannot express any decided opinion. Let us hear from some one else in this part of the world to aid me in upholding our "deserts" and "alkali plains" in the sportsman at large. J. M. B.

A BEAR DRIVE IN SOUTH CAROLINA.

ON the 11th of October—"the brown, the crisp, the best"—the Old Gang of Alken County, South Carolina, met once more at their time-honored tristing place, the Big Oak on Edisto River; not so much on account of the game, for it is very scarce, but for the sake of a reunion of the "old boys." But what we lacked in game we made up in gun, horse and dog talk, and a heap of fun. You may well imagine that after an absence of a year the reunion of a set of old rocks like ourselves, the first night, is a big one. The evenings were growing chilly, which made the light of the camp fire doubly attractive. The old spring of living water, a few steps down the hill, still rippled over the same white pebbles, and invitingly said: "Boys of the Old Gang, once more try me, I'm better far than gin or brandy." After Uncle Stephen, the cook, had given us supper, and the dogs had been fed, the camp fire was made big and bright under the spreading limbs of a huge old water oak, where this same Old Gang had regaled in their youth. Ben got seats on our own benches, to the rest spread themselves on pine straw, all in a huddle, to hear the arrangements for the morning hunt. Uncle Irvin, a man of sixty summers, was on hand, stepping around as lightly as a Guinea cock in May. A dozen pipes of all sorts and sizes were lighted, which, under

full headway, gave our sitting room the appearance of a young tar boiler. The hunt was soon arranged, old King William, as usual, being assigned to the stand known as "death's door." Then came the big talk and joke-cracking, all hands being called on for a contribution. About nine o'clock old Cronoma was resurrected and the Old King gave us some of those good old true tales, such as "No care how you shan't um," "Billy in the Low Ground," "Arkansas travel," and "Hell's Broke Loose in Georgia." The latter name I must confess is not very euphonious, but it is nevertheless the name of a rousing good old tune with us, and one well calculated to make a fellow git up and git it he has any music in his soul.

The back gate of a wagon was substituted for a dancing board, and most of the gang were called on for a jig. Some few were acquitted themselves with credit, but a majority were fairly put to their stumps you may believe. Uncle Stephen, the negro cook, was also called on, but respectfully declined, saying he had belonged to a Methodist and Baptist preacher, and had exhorted right smart himself; but some of the boys who were in for fun had got Uncle Stephen without much persuasion to put himself on the outside of a big snorter of big juice, and his "spere's" soon moved him. He took the board, and commenced singing, and went to beem down by a man who was at all inclined to the pulpit. When the fiddler got to the good places in "amarun," the old fellow fairly glimmered, and said, "Old Boss, play dat agin; dat's de best time dis nigger an herd sence freedom."

About that time Uncle Irvin, who had been rolled up in his blanket for an hour with a bundle of fodder under his head, sung out at the top of his voice, "Look or hear, boys, stop dat confounded foolishness and go to bed. You will all be heavy to-morrow, you can't shoot good, and we will have no venison for dinner." We took his suggestion and spread our blankets around that same old oak, said our prayers and went to rest like a happy family, with twenty fine dogs lying around the camp fire, Uncle Stephen, the cook, right in the midst of them fast asleep in a box, and no one to molest or make us afraid.

Next morning, just as old Sol began to show the first tints of his gray jacket in the east, Bill Cary sounded a long and loud reveille on his old horn; but not only made the dogs rear and caper, but many of the old boys who did not feel much like it had to fling their blankets. Uncle Stephen then gave us hot Java with toast and scrambled eggs, and we were ready for the first drive. Half of the pack was tied up for the second day—we usually ran about fifteen dogs—but in the last day we hadnap and turn loose everything, and I tell you, sir, they do make things pop and crack. It is just good enough to hear twenty-five ring tail roars baste an old buck for an hour in a big bay, and still better to see the old fellow come out riding the bushes with his flag up and horns laid back on his shoulders; and then if a fellow is not right good grit he won't get such meat every time he shoots. The first day we did not find one of Uncle Irvin's bucks, but soon raised a doe and yearling. This doe took the river, but the yearling stuck to *terra firma*, and after an exciting race for an hour and three shots, Uncle Irvin laid him on the cooling board with first barrel. For the next day (Saturday) we made big calculations on some old peafowl bucks, but how soon can one's brightest anticipations be blasted! We awoke in the morning to see the rain poring in torrents, which continued all day, and we had to return home after two day's hunt with but one little deer to report. But such is hunters' luck. Many things in this world that look bright only dazzle to lead us astray. ONE OF THE GANG.

Williston, S. C., Oct. 10, 1878.

For Forest and Stream and Rod and Gun.

TEXAS BILL'S LAST BEAR HUNT.

AND now I will tell you about Texas Bill's last bear hunt. One evening last fall we were sitting out on the piazza about nine o'clock, when neighbor Ford rode up and wanted me to go over to Rook Creek, about three miles, and help kill a bear. He said his wife's mother and a boy about twelve years old had been down on the creek that day looking for some bees, and they saw a bear run into the rocks. So I saddled up, took my dogs, and with Charley and Ford started for the bear. When we got nearly to the creek we found another man by the name of Russian waiting for us. When we got to the creek we went down about half a mile and hitched our horses and began to climb up the bank among the rocks and trees, and after fifteen minutes' hard labor we got to where the woman and boy saw the bear go in. It was a wild looking place in a small ravine with rocks on both sides piled up one above the other, and big boulders scattered all about. The place where the bear went in was large enough for a man to get in easy, and about thirty feet back of where he went in was a large hole that went down, and not the one that went straight in. All the time while we were building a fire we could hear a noise in the hole like a hoarse sissing or grunting, and thought perhaps Mr. Bear did not like his company. After we got a fire we could not look into the hole but a little way, and F. went about a mile and got a lamp about as good as a lightning bug. Russian proposed to stay all night and have daylight to work in, but I did not want to stay till I found out what I was sticking for. While we were talking F. took the lamp and went to the upper hole and got down to look in.

"H—!" says he, "I can see him!"

"Well," said I, "what is it?"

"It is a bear as sure as the devil!" Oome and take the lamp

and see for yourself, and got down and peked in, and there he was. But I could not see very plain, so I crawled in a little further. Charley wanted me to come back for fear he would make a dive at me, but I ventured carefully in a little more and then could see his head and shoulders a little plainer, but I could not make out what the device it was. His head seemed to be white and snout black, and what I could see of his shoulders were black. Finally F. says:

"What do you make?"

"Well, I think it is a—hog, and if you will hand me a gun I will try to put his eye out." They got my gun, and I ventured in a little more to get a good chance to shoot, but I got a little too near and it moved and hissed and grunted fearfully; but when it moved I could see it plain and tell what it was, and what do you think I saw? A couple of young buzzards! They stood side by side, their necks and wings back, their tails, heads and bills black, and in the dim light and the position they were in, looked like the head of some large animal.

R. says, "Why don't you shoot?"

I said nothing but crawled out, and F. says, "What are you going to do now?"

"Well, I think the best thing we can do is to go home."

R. says, "Why the devil don't you tell us what it is down there in the rocks?"

I bothered them a few minutes and then told them it was buzzards, and I don't believe you ever heard such a shout from a few months as went up through the trees from around that bare hole. We blew out our lamp, got into saddles, and went home, certainly wifery if not as happy as when we went out; and that is the last hunt I have had after bears.

W. A. L.

Fish Culture.

A MODEL TROUT HATCHERY IN MICHIGAN.

THE trout hatchery of Mr. Charles H. Holt is located at Cascade Springs, on the Thornapple River, two miles from Ada station, in Kent County. The stream is naturally formed for a successful trout brook. Right here in this gulch, the scene of former boring for gold, a few steps from the river, is the first pond or bowl, a new one, the water in which is clear, about eight feet deep, and discharging through a narrow sluice-way, first through a fine seine and then over a narrow board slide-way eight feet high. The object of the seine is to keep back the fish, and the object of the board slide-way just below it is to preserve the proper height of water. "Here," says Mr. Holt, "is my finished dam. It is 35 feet broad, about 40 feet long, about 8 feet deep, and fed by a sluice from the brook. In here are about 300 yearlings—that is, trout hatched a year ago last March. I keep the different sizes and ages apart from each other. I have been obliged to build new dams or reservoirs as the stock increases—just as a farmer increases his cleared land for new crops." Stepping along the side up we come to a second pond, about double the size of the first. "This pond," said the enthusiastic trout-breeder, "is the oldest on the creek, and, as you see, the entire water of the creek runs through it. In this is part of my young stock or minnows, hatched in February, 1878, and there may be 20,000 of them healthy and growing finely."

We now mount to the third pond, which is 12x30, four feet deep, and covered. Unlocking the door, and turning it, we behold a sight that is rare in this country. The 800 two-year-old trout, the majority of them females that spawned about three weeks ago. We dip a finger in the water and apparently a hundred speckled beauties fly for it, some seizing it between their sharp teeth. Mr. Holt draws his finger across the water, and such a flutter! "That's catching them with a fly!" These will weigh from four to twelve ounces. Next we pass on to another covered pond, 12x30, 3 feet deep, and 3 feet deep, and here is another sight worth beholding—400 two-year-old male trout! Such beauties! They are calculated for market next summer. Now we rise to another covered reservoir, 12x16ft., two feet deep, and here are the queens of this race, or 60 female trout, 4 years old, none weighing less than a pound, and some weighing two pounds, and many of them before spawning weighing three pounds. Says Mr. Holt, "It is difficult to handle; it takes a strong broad hand to strip them of their eggs, and to get such ones, but these will do for breeders for many years." They weigh each average say, 3,500 eggs. Now, added he, "you think you have seen some trout, but I will proceed to introduce you to some king trout."

Then stepping to another covered pond 12x16ft., and unlocking the door, he says: "These are my pets!" Here were 50 four-year-old male trout, the largest we ever beheld, and such "whoppers" as are not easily beaten anywhere. These have been fed for market, and about 50 have been disposed of, some of them weighing 33 pounds. Next came an open pond, 12x50ft., containing about 200 male and female fish, two years old. Next was open, 12x30, containing 1,000 of this year's hatch, and the next was of the same size, probably containing 4,000 of this year's small fry.

The next pond, 12x30, contained 500 male and female yearlings; the next, about the same size, contained 300 two-year-olds, and the last one, 12x16, contained 200 yearlings of both sexes. We have passed 12 ponds, containing 30,000 trout. We now come to the hatching-house, and from this house to the spring, which is the head of the stream there are wild trout that have got away from the ponds to the number of at least several thousands. The fall of this brook is 90ft., and from the spring, or head, to the Thornapple River, distant one-fourth of a mile, there are at least, in our estimation, 50,000 trout in brooks and ponds. Now we ask the question, How and when do you feed these fish?

"About three times a week, on minnows that I catch in the Thornapple with hook. I formerly fed on bee's liver and thick milk, but I now feed the young ones principally on thick milk—or lobbered milk—which I throw in to the fish. I don't believe in feeding them with any other food. Young fish are nature's food, and they do best on it. I calculate to feed regularly. They are a voracious fish. When first hatched they are perfect cannibals. I have seen one inch in length swallow one one-half that size, and one that was 12 weeks from the egg swallow one that was six weeks from the egg, or one that had just got its sac off. Put these small fish in with those big ones, and the former would soon eat the latter. If you treat them kindly you can keep them tame from the start. They all take food, as you see, from my hand."

Now, unlocking the door, we enter the hatching-house, a rough hut, 12x16, on each side of which are two rows of hatching-boxes, in which are the eggs, laid in small, uniform-sized gravel, and over which runs a small, clear stream of water, coming from the brook, through a narrow sluice, into the rear end of the house, and observing that the great object is first to attain the utmost purity in the water, then passes through a bed of gravel in the sluice-way, then falls and passes through two strainers of coarse bannet, and then one of fine. The hatching troughs are 16 feet in length and 16 inches wide, through which runs steadily a half-inch stream of water over fine gravel about an inch in depth. In the centre of the house is a basin of water three feet wide, one and a half feet deep, and the length of the house. We have thus the troughs, the sand, the water, the basin, all ready for the spawners.

As the spawning season approaches the females are closely

chiefly been to illustrate this "Ruddy Chamber"—for so, after the example set by old Rumphius, it might well be called—a considerable number if not most of the specimens therein figured or described being his own possessions. Yet he willingly accorded room in its pages to worthy contributors, among whom may be mentioned Mr. Dresser, Dr. Finsch, Messrs. Salvin, Schaler, Seeborn and Sharpe, and Lord Tweeddale, and his printer, a translation of Tsvetayev's important work on the birds of Turkestan, published in Russian, with copies of the plates, was a real boon to those ignorant of that language. Besides this he often wandered into the byways of ornithology, which frequently possess a curious kind of interest, and he gave views of many places remarkable for the birds which frequent them. Never did the contents of a work better justify its title, for anything in our miscellaneous pages can be more welcome to the laborer in this respect, as he himself only a few months ago stated in his concluding remarks, brought it to an end far sooner than he had intended. Setting aside the scientific value of some of the papers, the beautiful plates by which nearly all are illustrated make its cessation a loss to ornithologists; and those who knew that Mr. Rowley had for a long time been gathering information bearing on the history of the extinct gare-fowl (*Alos impennis*) had hoped that some useful labor in this respect would one day make its appearance. But this was not to be. More than a year ago a violent hemorrhage of the lungs gave warning of serious danger, and the attack was only too quickly followed by others of a like nature, under which he sank, in his fifty-seventh year, dying, by a singular coincidence, on the very same day as his father, who had long been an invalid.

NOT PINNATED GROUSE.—A correspondent, "J. M. B.," who writes to us from Gold Hill, Nevada, persists in holding to the opinion that the "prairie chicken" is found in that State. He says that these birds are abundant in the eastern portion of the State, and are quite different from the sage hen. Our correspondent says:

The sage hens are found upon the table-lands and foot-hills, amidst sage brush and stunted willows, generally in the vicinity of a spring or little stream. They are larger than "chickens," with a darker plumage—in fact, upon the breast almost dark. They have a heavy, "loppy" flight; their flesh is darker and coarser, and if not drawn shortly after being killed, they taste of mutton and become very litter. On the other hand, the chickens are found lower down upon the river bottoms and in the grain fields in Star, Ruby, and Lamotte valleys, and on the Humboldt River, from Carlin to its source, very few being found west of Carlin; but I believe they are working west, and eventually we will have them here in the western part of the State and in California. Utah, Montana, Idaho and Oregon also have them in parts where it is possible for them to exist.

The second species of grouse to which our correspondent refers is not the true prairie chicken, but the sharp-tailed grouse (*Pedicularis phasianellus* var. *Columbianus*). As we have many times repeated, there is as yet no evidence to show that the prairie chicken (*Cupidinella cupido*) has ever been west of the Rocky Mountains. Our friend, Mr. W. H. Reed, told us once that he had shot a single specimen of this species near Como, Wyoming; but as the skin was not preserved, it is possible that there may have been an error in the identification of the bird. A disputed point of this kind cannot be decided in the affirmative on the testimony of non-scientific sportsmen. It requires the dictum of some one who is known as a naturalist to finally settle such a point. If any one of our friends should kill what they believe to be prairie chickens west of the mountains, they can have the question settled by sending us a skin of one of the birds.

Woodland, Farm and Garden.

GRAZING LANDS IN TEXAS.

[The following correspondence will answer inquiries to many persons who have applied to us personally and by letter for the same information.—Ed.]

AUSTIN, Texas, Dec. 18, 1878.

EDITOR FOREST AND STREAM:

I often receive letters of inquiry about Texas; so many that I cannot answer all, hence I inclose the within, and may reply that others who are seeking homes or information in regard to the stock-raising region of Texas may be benefited.

S. B. BUCKLEY.

Prof. S. B. Buckley, State Geologist, Texas:

Dear Sir—Three or four of us intend to go to Texas in January or February to look for a large tract of land for stock-raising and tillage, but principally the former. My purpose is to get a tract of 10,000 acres, more or less, and fence it in and stock it with improved cattle or sheep, or both; and we wish to go to a county that promises well for improvement, where we can find good soil, water, timber, stone, coal, etc., at low prices. You will greatly oblige me if you will name a few of the counties best adapted to our wants, a healthy location being the first in importance. Truly yours,

W. ROBINNS.

Chicago, Oct. 30, 1878.

AUSTIN, Texas, Dec. 18, 1878.

Mr. William Robbins:

Dear Sir—In reply to yours of October 30 I can only give brief answers to your queries; yet if you visit the region specified, or only part of it, you cannot fail to be suited, and then you had better do not trust the report of any one.

If you wish for a moderately temperate climate, where nearly all the fruits and vegetables of the North can be grown, and also some of the semi-tropical, then the counties directly north of this as far as the Red River, and also the counties west of said line to the frontier near Fort Concho, all these are comprised largely of fertile soils, abounding in hill and dale, mostly prairie, clothed with the various native grass suitable for stock. It is a well-watered country, abounding in never-failing streams, rivers and springs. There is also plenty of wood for fuel besides, the larger portion of that region is composed of the regular carboniferous formation, where already several beds of coal at and near the surface, of very good quality, have been opened and used extensively by the blacksmiths of that region. Limestones and sandstones suitable for building purposes also abound. Besides, it is decked with fine scenery, presenting charming landscapes, which comfortable and beautiful homes can be made.

have traveled much and far, and have never seen elsewhere so much beautiful and picturesque scenery as abounds in Calahan and its adjacent counties. Thus I wrote in 1876 to Judge Anderson, of Memphis, Tenn., who had written me a letter of inquiry. He and his brother went there and established two stock ranches, being the first settlers of the county; but in less than one year 100 more families were there, and now all the land of that county is owned by settlers or speculators.

But I lived in western New York until in the winter time I was nearly frozen to death; came to Texas with impaired health, and now I am in vigor a year again. I still dislike cold weather, and hence I prefer a home not north of this latitude, 30 deg. in the winter, therefore, I would not start a ranch much north of this, also the counties west and south-west of Austin have the best soil and grass.

The climate is best, cold, and hence stock need less shelter, care and food in the winter.

A large portion of this country, indicated above, is already settled with a good class of people, who are mostly engaged in the stock business, people from the Northern and Southern States, and from Europe, Germany and England being largely represented. I met an intelligent Englishman with a sheep ranch in Park County, who told me he had dwelt several years in Australia in the bush.

This entire region is remarkably healthy—no malaria. The air is so pure that it is especially beneficial for all lung diseases. Austin, San Antonio, and other places in Western Texas are largely resorted to in the winter by Northern people. A Northern gentleman, a few days ago, bought 1,200 acres, suitable for either tillage or pasture, for \$1,200, situated on Onion Creek, in Hays County, about seventeen miles west of Austin. His main business will be the keeping of sheep.

C. B. BUCKLEY.

MIGNONNETTE CULTURE IN WINTER.—"Although one of the easiest things to grow when properly managed," says "S. W. P." in the *London Country*, "I know of nothing in the plant way which gives amateurs so much trouble as winter mignonnette, and more particularly is this the case if the damage happens to be at all defective, as no plants are more impatient of excessive moisture. Even when growing out doors in the open borders I have seen them go off wholesale after heavy rains, or look so wretched for days as to give but little hope of recovery. This unsatisfactory state of things is most frequent during their earlier stages, which is always the most critical time for them in pots, and until these become well filled with roots the only safe way is to keep the soil in such a condition as to prevent the plants from flagging by losing their green color. Mignonnette so treated makes a short-jointed, stocky, vigorous growth, and produces such flower stems as to be an ornament in any greenhouse or window, and a source of delight from the delicious perfume the sweet blossoms exhale. When getting toward this advanced stage liquid manure is of great assistance, the most suitable being clear soot water.

"Next to judicious watering, sweet pure air and plenty of light, whenever the weather is favorable, is the chief requisite with winter mignonnette, and if it gets up with an abundance of light at the same time, there is no difficulty in having it in a great state of perfection. The best situation for it is on shelves close to the glass at the ends of a greenhouse, where slight currents of air are always passing through between the laps, and where it gets an increased quantity by day whenever the ventilators are opened. A position of this kind suits a house, rather than a weak grower. Mignonnette, when in an atmosphere much closer and damper than that of a house, in the latter of which the temperature is less fluctuating and consequently more favorable, independent of the extra amount of light the plants there derive. To enjoy mignonnette later on in the spring of the year, another sowing should be made at once, and this is best done in the pots it is intended to flower in, as then there is no further disturbance in shifting. The handsomest and most suitable sized pots are in shape like the hands, and in which five or six patches of seed should be sown at equal distances apart, and the plants thinned out singly as soon as they are large enough to handle, leaving the strongest and most promising when doing so. As before observed, drainage is a very important matter toward the successful culture of mignonnette, as it is highly essential that whenever water is given it should be able to percolate through the soil and not rise up to the roots, which would render it sodden and sour. One crock over the hole, therefore, and a few pieces broken smaller and placed around it is the right thing, and on these, if it can be got, a handful of pigeons' dung should be scattered, on which the roots will feed just when they most require such assistance—that is, at the time the plants are coming into flower. As to soil, nothing suits better than good fire loam made tolerably free and open by using a little lime mould with it, or a slight portion of mild decomposed horse manure, and a sprinkling of sand, and if these are incorporated together the mixture will be as perfect as need be desired. The finest mignonnette for pot culture is the *Pyramidalis grandiflora*, a large form of the old *Ressedia odorata*, and quite as sweet. In addition to the first named, there are several other so-called varieties, but none sufficiently distinct to make it worth growing them, as the difference in them is very slight indeed."

HOW TO PRESERVE FLOWERS.—*L'Italia Agricola* gives these directions for drying flowers. The great value of the process is that it preserves the brilliancy of the color:

An ordinary box of suitable size for the reception of the specimen or specimens it is desired to preserve having been obtained, its wooden bottom is removed, and a thin sheet of metal loosely attached substituted for it. A quantity of sand, nearly sufficient to fill the box, is then taken, carefully washed, dried, passed through a sieve, and heated over a fire with a handful of part of its weight of stearine (such as is used for the manufacture of stearine candles), the mixture being constantly stirred the while, so as to insure the perfectly uniform incorporation of its component parts. A layer of this, about 1-3d of an inch deep, is placed on the bottom of the box, the flower or flowers are then introduced, and more of the preparation is gradually and gently added till they are completely surrounded and covered. The box is then filled up with sand, covered over, and placed in a warm place for two or three days. When it is desired to extract the contents, the metal sheet which forms the bottom of the box is partially detached, and the latter gently raised; the sand gradually runs out by the opening at the bottom, and the flowers will be recovered dry and perfectly unaltered in color. Our contemporary adds that in Germany and France large bouquets and garlands are frequently preserved by this method for an almost indefinite length of time.

THE BAMBOO.—Common as it is, there is no more graceful or beautiful object in nature than the bamboo in its native luxuriance, and nowhere is it seen in greater perfection than by the rivers and creeks of Burmah. As you round the bend of a Burmese river cluster after cluster of bamboo waves a graceful salute with its spray-like foliage, and I could tell of country roads flanked by a bamboo avenue like nothing so much as having Gothic aisle; the smooth pillar-like stems, jointed together with perfect regularity, and rising on either side of the road almost perpendicularly, so graceful is the arc described, meeting close overhead at a lofty height, and forming beneath a stillness which completes the parallel to the cathedral aisle. And when you turn to consider the uses fulfilled by this fairy-like plant, the wonder is scarcely less. Whether in his house, or on land, or the boat, in which half the Burman's life is passed, the bamboo is present everywhere in an infinite variety of forms. The main supports of the house are commonly of timber, but it is from the bamboo that the beams and rafters of floor and roof are made, the partition walls, the matting on the floor, the very strong which lashes rafter and beam together, and in many cases the mat-thatch which completes the house; while within the house so built hardly a vessel but is made from, or at least indebted to, the same. On board the boat the bamboo is no less important; it floats the fishermen's net, it is his shelter from the weather, and affords the rough bedding on which he lies; it is the stake to which his boat is moored, the pole which thrusts it from the shore, and even the anchor which holds it in the stream. Under more elaborate process it forms the substances of multiform vessels of lacquer work, which in Burmah takes so largely the place of the earthenware in other countries. It is the scaffolding of the builder, the laborer's basket, the child's toys, and from its branches are woven the fantastic structures so dear to the Burman, where the moony or drama is held, and it forms the fanciful canopy which covers the coffin in the funeral procession.

"FUSING" WITH FERTILIZERS.—A correspondent wishes to know if we don't think that we were a little hasty in our reprobation of the habit which some farmers have of "fusing" with so-called chemical fertilizers, of which they know nothing, to the neglect of manure making by utilizing all the wastes of the stables and farm-yards. Our friend says very truly that on many farms, especially in the older States, where fertilizers are most needed, there is not stock enough kept to furnish what the lands require, and that it is only a choice between commercial fertilizers and starvation of the soil. Very well; but it still remains true that a great many farmers could make fifty loads more than they do of unexcelled fertilizers by wastes of manure, leaves or other composting material, and the liquids and other wastes of their barns. It is true, also, that commercial fertilizers are used too much at random, and therefore extravagantly and foolishly. Some farmers have an idea that everything which is sold under the name of "fertilizers" is good for their land, provided it has a bad smell and is labelled with a learned-looking "analysis" and a few testimonials on the patent medicine advertising plan. This we call "fussing" of the most foolish sort. A dozen rows of corn or a patch of grain in the corner of the field will give a farmer an "analysis" of any fertilizer that is worth a good deal more to him than any chemist's report. Nature should be the farmer's consulting chemist, and the bushel measure his maker of certificates. In other words, let him find out whether a particular compound is what his land requires by the simple expedient of trying it before he loses money and wastes time in applying it wholesale. Every intelligent man's farm should be an experimental laboratory. The quality, quantity to be used, and the methods of applying a new fertilizer should be ascertained only by successive and varied trials, continuously made and carefully observed. Don't "go it blind," therefore, on the grab-bag, pig-in-a-poke, happy-go-lucky style of farming.—*Golden Rule*.

The Bammel.

SPANIELS.

IT is satisfactory to note that there is a rapidly-growing interest in this country in the breeding of spaniels and their use in the field. Unfortunately, in England, from whence we must draw our supply for stock purposes, the various breeds have become much mixed of late years, and with regard to cockers in particular it can scarcely be said that they exist as a distinct breed. There is little in the earliest records of sporting in England to tell us what sort of spaniel was used for hawking and netting before fowling-pieces came into use. That he was the progenitor of the setter there can be no doubt, and we have in our possession an old engraving in which is depicted what is evidently a spaniel pointing, or "setting," birds, while two wild-looking poachers, with lanterns, are about springing a net over dog and the birds ahead of him.

As a companion, or dog of all work, the spaniel is excelled by no other breed, and considering the nature of a large portion of our country, with its thick swamps filled with briars and dense lower thickets, we wonder that he has not long before this been more generally adopted for woodcock and ruffed grouse shooting. In classifying spaniels "Stonehenge" divides them into the Modern cocker, the Sussex and the Clumber, including in the first named the Norfolk spaniel, which is now somewhat rare, the Welch and Devon cockers and in fact every kind of field spaniel except the Sussex and Clumber. Many of the spaniels which have been sent to this country and which are commonly called cockers have undoubtedly a great deal of the Norfolk blood in them, as indicated by their colors, which in the old breed is a liver and white, black and white and rarely lemon and white. Very many that we now have show a cross with the Irish water spaniel which can easily be detected by the tendency of the coat to curl, and sometimes even by a topknot, or tuft on top of the head. The old-fashioned Welsh and Devon cockers are now rarely met with, having been crossed so frequently with other breeds. Formerly they weighed not more than 20 to 25 pounds, but the crossing has brought them up to 30 pounds. In color they were originally liver colored. Some of the best strains of cockers of the present day are all black, and it will therefore be seen that every latitude is allowed in the way of color. The

pleasure in receiving this presentation as it has afforded us in making it."

Mr. Lort, in reply, said: "Mr. President and gentlemen, I would most earnestly and gratefully thank you for the very great honor you have done me to day, but words are too poor and expressions too tame to convey one-hundredth part of the pleasure I feel at this demonstration of your friendship. I was told that in public life I should make many acquaintances, but few friends. I can assure you it gladdens my heart to be able to claim, after years of this public life, so many good, true, genuine and open hearted friends—ought I not to say open handed? For is not the munificence of this day a touching proof of it? so touching that it makes me on the verge of breaking down I may endeavor to express to you only a very small part of what, as a man, I feel, and what I should not be a man if I did not feel. I will hasten to say that I have friends I love and value. I would say more, but I cannot go on. I can only repeat the words, I thank you—from the bottom of my heart I thank you."

We may mention that the testimonial was subscribed to also by gentlemen connected with horse shows.

DETROIT DOG SHOW.

DETROIT, Dec. 22, 1878.

EDITOR FOREST AND STREAM.

The prospects for our having a good show are very flattering. What the Committee are striving for us is a representative one of the best dogs in the country. The judges selected by the Committee are: E. F. Stoddard, Esq., of Dayton, Ohio, for setters and pointers, and Dr. J. S. Niven, of London, Ont., for spaniels, hounds and non-sporting classes. Both are gentlemen of high standing, and excellent judges. The entries close 31st Dec.

CHAS. LINCOLN, Supt.

"A prophesy is never without honor except in his own country." One would have supposed that at a Michigan dog show, Mr. John Davidson, who has for years past been recognized as the leading judge at all the principal shows in the country, would have been invited to judge. Whether he would have accepted or not is another question. In passing him over without even the barren honor of an invitation the managers of the Detroit Show have displayed a want of independence, to use a mild term, of which we would not have deemed them capable. They have shown that they fear the criticism of one or two men, who not being able to use John Davidson as a tool, seek to ruin him. But we believe that as sure as the sun rises justice will yet be done in this matter, and that the truth will come out. Mr. Lincoln, if he seeks to retain his position as Superintendent of Shows, should speak. He is familiar with the proceedings.

FROM MR. DAVIDSON.—*Editor Forest and Stream and Rod and Gun.* In the Chicago Field of December 21 I notice a communication from R. B. Morgan, wherein he states that he thought I overstepped my position as judge at Minnesota Field Trials, and that such a person ought not to be encouraged. This is the person who quartered on the grounds reserved for the Minnesota Field Trials for a day or so previous to their commencement, and who was accused of shooting and shipping out game from the Field Trial grounds, and in whose defence the editor of the Chicago Field made his little address to the people on the morning before the running began, stating that he had been requested by Mr. Morgan to say that he had not done so. One good turn deserves another, and the straw show which way the wind blows. The books of the express company at Sauk Centre, also of a prominent hotel in St. Pauls, can show whether he did or did not. Had I made no objections to every man at Minnesota Field Trials running his dog and giving his score as he pleased, probably I might have been a qualified and just judge, but as I did make some objections, then I cannot be so.

Monroe, Dec. 31, 1878.

JOHN DAVIDSON.

WHOSE ARE THEY?—Some three weeks ago Dr. W. S. Webb, Secretary of the W. K. C., received by the Adams Express Company a box containing two lemon and white puppies about two and a half months old, a dog and a bitch. The charges were all paid, but there was no card or anything by which he could tell where they came from or who sent them. Any information on the subject would be acceptable to Dr. Webb, either through this office or at his own, 22 West Thirty-second street.

—We understand that Mr. Thos. A. Jerome—brother of Mr. Leonard W.—has been the recipient, through the great publishing house of Harper Brothers, of a grand picture of his prize winning pug bitch Puggy Dear. The picture was passed free at the Custom House by order of the Secretary of the U. S. Treasury, it being a present from a well-known American gentleman now passing the hunting season in England.

FOX HOUNDS.—*Editor Forest and Stream:* For our fox hunting, or fox shooting as some will have it, we need a slow running hound, of superior scenting powers, and for those of us who like to have our ears share the sport, a melodious voice. Will you please let us know whether the qualities are to be found united in any of the thoroughbred hounds of England or America, either fox hounds, harriers, beagles or what not, or in any strain of either?

R. E. R.

In England, where hunting is carried on for the most part over open country, hounds, of late years, have been bred as fast as race horses, and for that reason are hardly suited for our hunting. There are, however, in Pennsylvania, Maryland and Virginia still remaining many strains of old-fashioned slow going hounds, with voices like bells and keen of nose. The smaller varieties of hounds to which our correspondent alludes are used principally for hunting hares.—Ed.

—Mr. Wm. Vie, of St. Louis, has sold to Wm. Dangerfield, Esq., of Montreal, and O. Hull, Esq., of Houston, Texas, each one of his France-Zita puppies.

—Lieutenant Thomas Perry's (formerly McClellan's) setter bitch Fleet whelped, on Dec. 20, ten puppies, seven dogs and three bitches, sired by Margrave's (formerly Clason's) Royal Duke.

—Mr. L. F. Whitmore's blue belton English setter bitch Mell whelped on the 19th inst. nine puppies, six dogs and three bitches, sired by Mr. Burges' Druid.

—Mr. Max Wenzel, of Hoboken, N. J., claims the name of Yankee and Fox for two red Irish setter puppies by his Jack out of his Doe.

Pachting and Boating.

CLUB BOOKS.—This being the season of the year when a revision of books generally takes place, we would like to call the attention of committees or officials having the work in charge to certain omissions almost uniformly made in the compilation of the official books, and which we trust will no longer be permitted to interfere with the value of such very necessary works of reference. We have in mind more especially the neglect shown concerning the "pedigree" of yachts, their modelers, builders and sailmakers, date of launching and alterations, the various dimensions of yachts, including depth from underside of beams amidships to top of keel, draft with and without board, area of canvas, ballast, etc. These matters, together with a short historical sketch of the causes which led to the formation of the club and a review of its subsequent existence, full information, accompanied by small scale charts of courses for matches, and finally the location of club houses, secretary's address and those of other prominent officers, would, if incorporated in the club books, render them of considerably more service than they are for the general public as yet for the members of the club.

SEAWANAKA YACHT CLUB.—The series of lectures on yacht building which the club has arranged for will take place on the following dates: First lecture, on the Construction of Keels, by A. Carey Smith, Esq., Feb. 6; second lecture, on the Construction of Centre-boards, by A. Carey Smith, Esq., Feb. 21; third lecture, on Yachts' Iron Work, by Robt. Centre, Esq., March 8; fourth lecture, on Sails, making, trimming and taking care of same, by A. Carey Smith, Esq., March 27; fifth lecture, Centre-boards vs. Keels, by Henry Steers, Esq., April 8. The subscription to the lectures will be \$2, and are open to gentlemen introduced by a member of the club. The popularity of last year's lectures on yacht design, and which called forth over a hundred subscribers, will insure a very liberal support to the praiseworthy attempts of the Seawanhaka Club to inculcate in the sailing fraternity the science underlying their favorite sport.

HOW TO FIT OUT.—A correspondent writes: "The loss of my detailed log of former cruises is a serious blow, as I had made elaborate and numerous notes with a view to provisioning and fitting out in the future. I have never yet failed to take everything needed, but always have to devote several days to thinking on the subject to prevent omissions. To avoid this trouble I had made exhaustive notes as to just how long everything lasted in the way of provender, when it spoiled, whether satisfactory, etc., whereby I fondly imagined I could deduct a bill of fare just in proportion and have it engraved on steel and bricked into the wall with the face exposed and thus be in condition to start on a cruise by a glance at the 'writing on the wall.'"

YACHT BUILDING AT ISLIP.—Islip is situated on the South shore of Long Island, and readily reached by the South Side Railroad in about an hour and a half's time. The place is probably best known as a yachting port, and from the fact that many famous craft have been launched there from the building yard of Alonzo E. Smith. The *Comet*, *Sagitta*, *Onward*, *Windward* and *Niantic* and many others that left his slip have given a good account of themselves, and both for sound workmanship and neatness of finish can compare with the best. Mr. Smith has now a new craft on the stocks for New York City, a sloop of some 30 ft. long and 12 ft. beam and is now about ready for her planking. At his pier the sloop *Sagitta*, Col. Porter, 22d Reg., N. G. S. N. Y., has been berthed for the winter. This sloop, though about 58 ft. long, was built in the short space of ten weeks, her keel having been laid May 1, 1878, and by July 15 she was turned over to her owner. Her model is one of Smith's own, and is handsome and easy, especially forward, where the old-time flare has been entirely done away with, and an easy entrance secured. Her stern is elliptical and of a mold peculiar to her builder, and generally known as the "Smith stern." The *Christine* lies on the hard and with some other boats is offered for sale at low figures. As stated in his card among the yachting advertisements, Mr. Smith is prepared to build anything from the Corinthian up to a big schooner, and will furnish estimates, and information upon demand.

THE S. I. Y.—Not all the sailing is done aboard the yachts. So one would just could be reasonably glad to go upon the Society of Impetuous Yachtsmen of Brooklyn. For in its parlors, where the members muster strong, you may hear and learn more about yachts and yachting in an hour than you could elsewhere in a season. And, what is more, facts and figures are at hand to back up the arguments there brought forth, in quantity enough to make the landsman's head swim.

A CORINTHIAN CRUISE.—No. 1.

SAFETY NO. 6, A JOLLY LITTLE SLOOP, WITH ITS TWO GIN, OPENINGS AND A LICO ON—blankets, ad libitum, and provisions—and here comes in great ecstacy, if you have it. The question is submitted at the domestic hearth the day previous. Jim, the Chinaman-cook, is called in, and gets his directions as to a lot of biscuits, pies, doughnuts, corned beef pressed; a list is made out, and it is astonishing how long it is, and how many little articles go to comprise the necessities of even a limited cuisine; and unless you put a piece of paper and pencil at your elbow as you sit smoking in your den the evening previous, and set them down as they occur to you,

neck and another blank fool that is following in his footsteps? And the other one that is leaping the peaks of the Sierra Nevada Mountains? Have you not relieved my mind of the fear that that fisherman will break that scantling in his left-handed attempts to land that buck he is fast to? And that scared "Buffalo Bill," that rides the rocking horse, and shoots a pistol across his horse's neck and his own body at those buffaloes that were going head on, and bound to strike that fisherman when and where he least expects it. Giving relief to those two men in those shells, making one's back ache to see them forever in that position for "Go?" Let out the man with one square shoulder trying to shoot his dog? I say, have you not relieved the community and me of all those painful nightmares, and then ask me why "shake?" "Go to" for a dullard if you don't see the cause of all my rejoicing. Again I say, "Shake." If I was in the neighborhood I would invite you down stairs to the little saloon around the corner. If you only knew what a relief it is to an overworked soul to see the departure of your menagerie you would not wonder at my proposition to shake or drink. I do not so much object to those two gentlemen wasting their time idling on the rocks when they ought to be off. The two deer do not seem to be very apprehensive of the gun. They wear too good clothes to be bona fide sportsmen—never knew chaps with fancy shooting suits ever come home with the pockets full of game unless they struck a man shooting for the market and bought him out. The advertisement, or card, of Schuyler, Hartley & Graham, that takes the place of your former front—that remarkable sportive genius—may not be so characteristic of the contents of the paper, but it is more profitable, I imagine.

And now, having hammered you to my heart's content, I will let you up on your promise never to be again guilty, etc., etc.

I sat down to write you an "all sorts." My last was centreboard yachts, and going for the scalp of the cutter flend, and to the aid of "Corinthian;" but seeing that he has other assistance, and, besides, being pretty well able to fight his own battles, I will, by way of giving countenance and encouragement to Corinthians, give the log of a cruise I have just terminated, combining, as it did, both yachting and shooting. I want merely to show how much quiet enjoyment can be got out of this sort of thing in an inexpensive way.

As I promised in my former letter, I have been shipmate with all sorts and sizes of crafts, from 30-tonners down, and the bane and trouble of my yachting experience has always been the wretched apologies for a crew—composed of, generally, one man and a boy: the man, presumably, combining the duties of sailor and cook, performing neither, and the boy assisting him.

When all ready to start, after lurching to get everything aboard to save time, to go on board and find nothing "stowed," my crew astore and drunk, was the usual commencement; for be it known there never has been a time in all my yachting experience here when I could put my hand on a good, reliable man for a crew combining the necessary qualities, or if he did, the accomplishment was offset by a chronic disposition to get drunk before sailing and keeping so afterwards, if anything could be had; and I have yet to learn that any locker on a yacht ever defied the skill and energy of the average old, or more particularly young, salt with a morbid taste for Schnapps. While you are aboard it may be all right, but go ashore to shoot, and come back to find everything snugly locked as you left it, apparently, but your man drunk. On opening your locker, the fact being patent that your bottle was low and your man high—the one empty and the other full—a high, low Jack—suggesting a contradictory problem you do not always pause to work out, such discoveries being succeeded by a phase of indiscriminate profanity—so, for the salvation of my soul and pocket, this season I determined to do my own work, drink my own todd, and be generally independent, and proceeded to buy a condemned craft of 32 ft., with a view of patching her up for the winter's cruising in pursuit of the festive duck.

I put her on the stocks, and examined her. Her bottom was defective in the garboard strakes. Concluded to put on new ones. Then the balance of the plankings looked rough. Concluded to plank her all over. Then done her bilge-ways and deck looked badly. Put on new material. The centreboard case looked as if it would leak, so had a new one put in. When I examined spars found them too short—new ones and a new snit of spars. On summing up I find that, with the sole exception of the skeleton, I had built a new boat—and that is my experience generally in fixing up an old one—but, nevertheless, she stood me in much less money than I had contracted for in a new one; and for the benefit of Corinthians will explain how it was done—and here is the recipe:

Firstly, strike your boatbuilder when work is a little dull. Say that if it would not cost too much to fix her up you would buy the *Polly Ann*. Boatbuilder, in view of a job, says, "Oh, she don't require much fixing; won't cost much; I will do it reasonably." He offers to haul her out on his ways and examine her. All right. Examine, and fiddle garboard strakes to put in and oakum all over, etc. You make a bargain to have it done by the job—beware of doing it by the day. That is done. Say she looks rough above; if it did not cost so much would plank her, etc. Boatbuilder bites, offers to do it low down; and say you go on from item to item, and get your boat rebuilt for a very reasonable amount of money—half what the estimate would be if all were named at once.

Well, behold the *Miss Robin*, rechristened, everything neat and new, and the boatbuilder scratches his head, and wonders how you managed to get a brand-new boat out of him for \$500 when he would not touch such a job for less than \$1,000. You leave him working up the conundrum, and proceed to fit up. You give great attention to the matter of cooking stove, for you are going to do your own cooking for perhaps the first time in your life—going to make it a bona fide Corinthian cruise. You put aboard a "Safety No. 6," a jolly little sloop, with its two gin, openings and a lico on—blankets, ad libitum, and provisions—and here comes in great ecstacy, if you have it. The question is submitted at the domestic hearth the day previous. Jim, the Chinaman-cook, is called in, and gets his directions as to a lot of biscuits, pies, doughnuts, corned beef pressed; a list is made out, and it is astonishing how long it is, and how many little articles go to comprise the necessities of even a limited cuisine; and unless you put a piece of paper and pencil at your elbow as you sit smoking in your den the evening previous, and set them down as they occur to you,

you will forget one-half, and find yourself aloft without oil, candles, matches, or other equally essentials. At last all aboard but the milk, which has been omitted. No time then to get it. Someone suggests condensed milk—and right here let me pause, remove my smoking cap, assume a reverential attitude, and invoke a benediction on the head of Borden, the man whose cans bear the legend that he is the condensed milk man. Mr. Borden, in the name of all yachtsmen, huntsmen, sportsmen, duckmen, and travelers generally and otherwise, I thank thee. Thou art indeed a benefactor to thy fellow men—and women, too; for you have condensed all our lactical troubles into one handy little can. On your family coat of arms let there be a pyre of milk cans and pumps, and the proverbial milkman surmounting, and all burning; on the other side let there be a dozen kneeling women invoking their blessings, and the Goddess of Lactary emptying a large-sized cornucopia made of the biggest gunny sack of twenty-dollar gold pieces on your devoted head. Borden, long may you wave, and continue to condense cows into the brief space you now do, and never go back on the quality as you wax rich and greedy. The purity of the ballot-box is a secondary consideration—of none at all in comparison with your milk. For years have I worried with cows that clutter up and create noxious odors in my stables, and regularly dry up—just what I tell my old nig to do when he announces the catastrophe—a regular old-time plantation nig, by the way, rejoicing, as he informed me, when he came to run my cow department, in the distinguished name of Marshall O'Roberts. Through Borden, the present incumbent cow, will speedily lose her situation, and the old humbug of a nigger be turned out on an unfeeling world to dry up, in three weeks, some other man's brand-new sixty-five dollar cow. Pardon the lengthy babblings of a grateful soul, but I must do Borden justice if the heavens fall, which they probably have no intention of doing, even for Borden and his milky way.

And now let us see if we can get off, for the tide has turned flood these two hours. Firely let us run over the list, and see if everything is on board. Guns, cartridges, gun boots, old shooting coat, pipes, tobacco, liquids, tea, coffee, sugar, pepper, salt, bread, butter, biscuits, doughnuts, cold corned beef, sausages, head cheese, mutton chops, beefsteak, canned oysters, potatoes, ham, bacon, and lastly, Borden's compressed cow.

My companion du voyage—whom I will call Jones for two reasons: Firely, because it is customary to do so; secondly, because his name is Jones—is an amateur in yachting, his knowledge being more extensive in shells, pulling stroke out, etc. We have agreed on the division of duties—I am to sail the yacht and cook; Jones to wash dishes and keep the ship in order.

The wind, although light, is fair, and so is the tide. We get under way, and head up the bay bound up to the location of our floating shooting-box, our scow-house so cozy and comfortable, that has done good duty for the last five years. She lies up at Sherman Island in the "tubes," where the mallards and canvasbacks congregate to feed on the wild celery and young tube roots. The day is warm and sunny. A blue flannel shirt does duty, no coat being needed. A pleasant breeze fills our mainsail. We take slight cold bite, and lighting our pipes ask ourselves if there is anything specially the matter with this sort of thing. POGGERS.

CUTTER AND SLOOP.

NEW YORK, Nov. 8, 1878.

EDITOR FOREST AND STREAM:

Before commencing our promised cruise, I feel called upon to state that the incidents described will, as far as possible, be founded upon actual fact. And my intention is simply to compare the relative merits of the different types of vessels—the American and English—in a spirit of fairness, that the young, enthusiastic yachtsman may not be led by fashion into fatal or aggravating blunders, and thereby become disgusted with a manly sport; and in so doing, I will draw upon my imagination as little as possible:

It is the 15th of May. Our ideal cruiser has been built, launched, sparred and rigged during the winter months. In the same yard my friend, who has a main for every thing, a *L'Anglaise*, has insisted, in spite of my friendly remonstrance and ridicule, upon building a cutter yacht. She was designed by one of our celebrated yacht designers, resembles, and has all the elements of the celebrated and successful English cutter *Lilly*, and has been pronounced by the whole scientific corps a decided success, and a perfect sea-going craft.

This cutter differs from our vessel as follows: Six feet longer on water line, 3ft. narrower, and 4ft. deeper with flash deck; and in bulk is practically the same as our vessel, excepting she has her greatest width at or about water line, and well-sided, as usual in that type of vessel; instead of 3ft. 9in. draught she draws 7ft.; instead of our cabin house she has on deck two low boxes, forming seats with skylights over, two companion ways—one forward, one aft—and a hole aft to go in and handle the tiller.

Her owner, my friend, appears on deck, and calls to me: "Ed., come aboard and take a look. You don't seem to take much interest in my ship since you commenced your own."

"Well, John, old boy, it's a fact. I have not shown so much interest in your ship as I ought, considering we have been so many cruises together in our old ships; but you know I do not take any stock in the cutter type of vessel. Besides, I have been employed on my own vessel, and you know there are so many things to be looked after. However, I must say you have a fine, well-built craft. I expected the result of my ballast down this afternoon, but see it has not come yet."

"I say, Ed., speaking of ballast; you've got iron, I believe; how much did it cost you?"

"Yes, iron is good enough for me. I got five tons for my boat. I put on such a large rig I thought I would get an extra ton for cruising, as you know it is a good thing to have below sometimes. I have the bill with me; cost \$175, I believe."

"Jupiter! Ed., do you know that's an item I did not take into consideration when I started my ship? See the lead on my keel, besides, I have her run full of it. Jenkins, my designer, said she must have it, that iron would not, and he knows."

"Yes, I see your lead keel; it's a good job."

"Good job, yes; Jenkins furnished drawings, showing how it was to be put on and secured; but that little item cost me just \$900."

"Nine hundred dollars! Cheap, and less than I expected."

"Well, come aboard, Ed., say how!"
(Hegoes aboard.)

"John, you're pretty narrow on deck. You must be very careful, when you fall, to do so fore and aft. I see your cockpit. Do you like the idea of getting into that hole to steer?"

"I must confess I do not like it as well as I expected. My deck looks cramped, especially after being aboard your ship. But the correct thing for a cruise, Ed.; safe. Let's go below.
(They go below.)

"Ed., this is my saloon, this my stateroom, and the W.C. there; my saloon is aft, and I get to it from the hole on deck, as you call my cockpit."

"You've considerable more length here, but not much width."

"Yes; I confess it does not look so roomy as your cabin, but that I suppose is on account of the bulkheads across her. Do you know, I expect to carry two men forward, and to get accommodation for them I had to put in folding beds—something like those used in prisons, you know—to get room to pass, she is so fine forward; and the saloon does not amount to much, either, for the same reason. I admit she's a failure as far as genuine comfort below goes, but the correct thing after all, you know. Bye the bye, Ed., I see in your ship no stateroom, although you had room for two larger than mine each on your centreboard, besides a good saloon aft, and no W.C., either."

"I put in no bulkheads for staterooms, because in a little boat, the purpose is just as well obtained by means of curtains. As to W.C., I prefer a temporary to a permanent nuisance, as all such things are if the pipes cannot be placed above water line. I see you have a two-legged folding table, but it occupies scarcely less room than my centreboard case."

"Fact, Ed., that was one of the delusions. My floor is only 2ft. wide, and as my table takes up tin. of that when folded up, even then it is hard to pass; but I have sacrificed comfort below for the sake of other good qualities. But, Ed., tell me, what will your craft stand you in when finished?"

"I calculate about \$1,500, with furniture and fixtures."

"You cautioned me regarding expense of the boat, but I thought it some of your usual talk. I have already paid out \$2,500, and have no rig nor sails yet."

"Yes, my boy, you will find your rig and sails will cost you a pretty penny yet."

"Do you think so?"

"Yes, my rig cost me \$250; if you get off for \$100 you will be lucky, provided you make a full fledged cutter of her, which, I suppose, is your intention."

"Yes, I have gone so far I will go the whole hog; besides, every body tells me it is the perfect thing."

"Yes, John, put the full cutter rig on this craft, for if she goes at all, it will be under that rig."

"Ah, Ed., there you go again; always sneering at everything English, I think, just for the sake of so doing."

"No, John, I would advise nothing I did not honestly believe; and again say, put on the cutter rig, for she is not suitable for our sloop rig. In the first place you depend upon ballast almost entirely for stability, and your ballast, to be of service, must be centralized; consequently, should you place your mast far forward, as in the sloop, its weight on account of your fineness of lines, would have to be counterbalanced by weight in your run, and thus injure one of your good points. Besides, it is necessary that this type of vessel have a low rig, because she will not carry a high one. For the English yawlboat, however much I may differ from them in theory or opinion, I have the greatest respect. They, having this miserable form of vessel thrust upon them by their tonnage laws, have made the very best disposition of material possible."

"I see, Ed., you, as usual, have put a whacking rig on your boat. You hate to get outclassed. Besides, you have it high and short."

"My rig has caused me much thought. I made a draught of rig when I draughted my model, as you know, and hung it on my vessel to suit me. Then, in considering the matter, and how much easier it was to cut down spars and rigging than to enlarge same, I added a few clothes all round. After seeing the vessel in frame, added still more canvas. I know it is a whacker, thereby the extra ton of iron I ordered sent down. I made it short and high; it's handy and right for a craft like mine. Besides, speaking of quantity, Jenkins, the designer of your vessel, however handsomely he may converse and argue the beauty of an easy vessel and small canvas for speed, can go beyond any one I know of, and I do not doubt if your vessel is not fast it will not be on account of a want of that article."

"You're right there, Ed.; Jenkins, let him say what he likes, knows the value of the dimity."

"Yes, and he's not to blame for that. Do you recollect how often we used to wish, before you re-rigged your old vessel, that her rig was larger?"

"Yes; before we used to cruise together I never thought *Bella* was fast, and used to elude boats of my size—although not a racing man I disliked to get outclassed. Do you recollect your advising me against substituting a keel for centreboard, for fear of injuring speed? Since I have put plenty of sail on *Bella*, and found she went about as fast as her size can go, I am ashamed of no company, big or little—in fact, it is the spice of the sport."

"Yes, and if you had not caught the fashionable mania we would have built a vessel and continued to cruise together. I hope you are not disappointed in your center."

"Well, I am some six feet longer than your craft, and expect to outlast you anyway; besides, you must allow me two or three minutes by Seaway Club Rules."

"Yes, John, I know that Club; takes only two dimensions, length and breadth, in their rules—English and the perfect thing, you know—only much simplified in their case."

"You think it wrong, then?"

"I fail to see how bulk can be measured by superficial rule. Suppose you try to get the contents of your wood pile or coal heap by two dimensions? In my opinion they practically rule out any vessel except the cutter."

"You admit that I can outlast you, then?"

"No, I admit nothing of the kind—on the contrary."

"You have too much confidence—always had."

"I have taken every precaution to insure success; besides, I have a sanguine disposition. I got my model from Elsworth, who

modeled *Comet*; besides, I have seen quite a number of his vessels, and they are, without exception, fast. I draughted model and made calculations myself; so far, I know everything to be correct."

"Why did you not go to Jenkins, Ed.; you are an old friend of his?"

"While I respect Jenkins and his services, I did not employ him because I had ideas of my own, and would rather take the model of a practical man, with what little knowledge I learned from Marrett, for my chance of success, than to have quotations from Kemp pumped into me by the hour, when I could argue the cutter type of vessel, if so disposed, from the same source. Besides, did it ever strike you that none of our speedy vessels were designed by scientific men? Take George Steers, for instance, who designed the famous yachts *America*, *Julia*, *Una*, and many others; also the beautiful ship of war, *Niagara*. He made no failure as to speed. Robert Fish, who gave us *Vizen* and many other fast vessels; Herreshoff, *Orion* and others; Elsworth, who modeled *Comet*, *Walton* and others;—none of these are what may be called other than practical men, with great talent in their way. Now, I say, combine talent and practice with science, and you will approximate correctness."

"Ed., I know you always, whichever side you are on, argue in a plausible manner. But you cannot convince me that you have a sea going vessel; she is good enough to pling the Sound, I know. I expect to launch to-morrow."

"I'm for home; expect to see you soon. Good bye."

CORIN THOMAS.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 38.

Motto: Just So.

White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 34.

1—R tks R K
2—Kt tks K
3—K-K4 mates

1—Kt ch
2—Auy

(Game No. 92—GINOCO PLANO.)

The following is an International Tourney game between Messrs. Monck, of Dublin, and Frech, of Washington, in which Mr. Frech announced a win in twenty-seven moves:

White. Monck.	Black. Frech.	White. Monck.	Black. Frech.
1—P-K4	1—P-K4	13—P-K Kt3	13—Q R sq (a)
2—K-K B3	2—K-K B3	14—K-R Kt3	14—P-K4
3—B-K3	3—B-K3	15—P-K R3	15—P-K R5
4—P-K4	4—K-K B3	16—K tks R K	16—P tks R
5—P-K4	5—P-K4	17—P-K R3	17—P-K R3 ch
6—P-K5	6—P-K5	18—P tks R ch	18—P tks R ch
7—P-K Kt5	7—K-K5	19—Q tks Q	19—R tks Q
8—P-K Kt ch	8—P-K Kt ch	20—K-K R3	20—K-K R3 sq ch
9—P tks P	9—P-K Kt3	21—K-K R3	21—P tks R K
10—Castles	10—K-K5	22—P-Q K4 (b)	22—R-K R6
11—K-K3	11—Castles	23—K-K R4	23—K-K R5
12—K-K B3	12—P-K4	24—R-K B sq (c)	

NOTES.

(a) An excellent move on Black's part.

(b) This move almost completely blocked Black's game.

(c) This move gave Black the game, as it permits him to Queen a Pawn in twenty-seven moves thereafter. But as a problem of twenty-seven moves is equal to an entire game of ordinary length, White's ability cannot be called into question by it.

Black announces a win by the Queening of a Pawn in twenty-seven moves. The solution:

23—K tks R	24—R tks R	33—K-Q R3	35—K-Q R1
24—K-K R4	25—K-K3	36—K-Q Kt2	37—K-Q K5
25—P-K4	26—P-K4	38—K-Q B3	39—K-Q B5
26—P tks P	27—P-K B4	40—K-Q B4	41—K-Q B4
27—K tks P	28—P-K B4	42—K-Q B4	43—K-Q B4
28—P-K B4	29—P-K B4	44—P-K B4	45—K-Q B4
29—K-K3	30—K-K4	46—P-K B4	47—K-Q B4
30—K-K3	31—K-K4	48—K-Q B4	49—K-Q B4
31—K-K3	32—K-K4	50—K-Q B4	51—K-Q B4
32—K-K3	33—K-K4	52—K-Q B4	53—K-Q B4
33—K-K3	34—K-K4	54—K-Q B4	55—K-Q B4
34—K-K3	35—K-K4	56—K-Q B4	57—K-Q B4
35—K-K3	36—K-K4	58—K-Q B4	59—K-Q B4
36—K-K3	37—P-K5 ch	59—K-Q B4	60—K-Q B4

The fact that from the 10th to the 49th move Black does not make a move in a backward direction is evidence of the persistency of his attack.—*Hartford Times*.

CURSOR'S JOTTINGS.

—One of the games in the series in the International Tourney between Mr. R. L. Stranger, of North Moulton, Eng., and T. R. Bell, of Detroit, Mich., has been declared a draw. Owing to business engagements Mr. Bell was compelled to abandon all of his games, which Mr. Stranger, of the Times, afterwards conducted with the consent of Mr. Stranger. The above mentioned game was conducted by Mr. Stranger from the 15th move to the declared draw on the 57th move. In our synoptical table of the won and lost games in this tourney, published last week, the won games between Messrs. Brenzinger and Chaito and Messrs. Berry and Hanken, should have been scored in favor of Great Britain's

representatives aforesaid. The *Ayr Argus* of Dec. 14 submits the following "brief" summary of this tourney:

Decided games (2 B. 1; A. 9; drawn), 23	
Probable British wins, 28	
"American" wins, 17	
Doubtful and even, 40	
Unreported, 7	

Total number of games, 112

If it is all that they claim we are inclined to recall our previously expressed opinion on its probable result. This presentation of British "cliques" us amply.

—Mr. Siskman, one of the foremost problemists of to-day, edits the Problem Department of the *Holyoke Transcript* Chess Budget. Messrs. Teed and Seymour manage the Game and Riddle departments.

National Pastimes.

From *Lake's National Monthly*.

THE DEATH OF THE HERON.

The brown grouse mutts with his drumming
The footsteps of the archer coming,
The day is mute though one transgresses
The frontiers of his wilderness.
The sedge feels their land invaded,
But leave their lonely guest unaided.
The rushes hide from all observing
The long bow's sudden backward curving.
The lagging wind is slow in bringing
The twisted sliver's angry ringing.
The waves and willows drown together
The whisper of the arrow-feather.
The sharp wings shake, the gray throat flutters,
And strangles with the cry it utters.
The purple feathers puff and part
Above the heron's cloven heart!

—WILL H. THOMPSON.

THE O'LEARY-CAMPANA MATCH.—The contest between Daniel O'Leary and Napoleon Campana, at Gilmore's Garden, came to a close at 10:40 o'clock Saturday evening. The result was what had been foreseen from the opening day—a defeat for Campana, or "Old Sport," as he chooses to be called. O'Leary walked throughout the match with his square heel-and-toe stride, moving with machine-like precision, and never altering his gait until the final lap, which he ran amid great applause. His record for the last miles was as follows: 3:35, 12:30; 3:30, 12:30; 3:37, 14:55; 3:38, 13:50; 3:39, 10:31; 4:00, 12:05. His condition upon leaving the track was very bad; his heels are blistered, and the exceedingly injurious dust and smoke of the Garden, with a heavy cold, have induced a spitting of blood. He was in very poor condition when entering upon his task, having gone through no preparatory training whatever. During the 133 hours of the contest he had two hours and forty-five minutes' sleep. His diet has been principally chicken and oysters; 41 quarts of champagne, 44 bottles of ale, and an unlimited sea of cider helped him to tide over the struggle. But poor "Old Sport" was a spectacle to excite pity in anything less indifferent than the average bipedal spectator. His leg, from the knee to the ankle, was very much like raw beef; his ankle was badly inflamed, and at the last he had a general air of being wholly used up. He reeled and staggered along the last few laps, occasionally propped up into the perpendicular by an attendant upon either side, and sustained by a free application of bay rum. Emulating the example of his rival, he attempted to run, but a sorry effort it was. When he had finished the second lap of his 358th mile he kissed his hands to the judges, threw up his hands with the exclamation, "I'm done," and was carried into his hut. He had only 3 days 22 hours and 13 minutes on the track, and had only spent 1 day and 23 hours in his quarters. His 353rd mile was made in 16:15; his 354th in 16:35; his 355th in 17:15; his 356th in 21:45, and his 357th in 10:20.

TWENTY-SEVEN HUNDRED QUARTER-MILES.—Last Monday evening at Mozart Garden, Brooklyn, Madame Anderson, an English lady pedestriane, completed, at 9h. 18m. 43s., her 1,350th quarter-mile in her 1,350th quarter hour. This was just one-half of the task the plucky woman is engaged in; her task being 2,700 quarter-miles in 2,700 quarter-hours. We shall have more to say about this remarkable pedestriane and her novel undertaking. If no accident happens to her there is every reason to expect a successful termination of her undertaking.

ATHLETIC MEETINGS.—The New York Athletic Club games to-morrow and Sunday evening will be contested by a very full list of competitors. The Knickerbocker Athletic Club hold their tournament next Monday and Tuesday evenings. The programme is a good one, and there will be good work done. Both meetings are to be held in Gilmore's Garden.

WESTCHESTER HARE AND HOUNDS.—The second meet of the Westchester Hares and Hounds came off on Christmas Day. The hares for the day were W. B. Vosburg and L. A. Berte, and L. B. Haviland was master of the hunt. James W. Lowe and W. H. B. Du Bois were the whippers-in. The hounds were D. Bates, W. I. K. Kendrick, George Hilwig, W. W. White, J. Lustrado, B. Van Riper, H. Smythe, E. Fielding, W. J. Duffy, J. Brady, E. Molson, George Dolde, N. C. Hamilton and W. O. Merrill. L. B. Rolston acted as starter. The run was of about fifteen miles, and the time for the hares was 7h. 50min., the hounds bringing in somewhat later because of the difficulty they found in keeping the scent. The wind, which was very strong, blew the paper in all kinds of puzzling directions.

IRON WOOD RUN BOWS.—I think that your friends, the archers, would give our iron wood, *Ostrya virginica* (Thompson), also called levee wood, hop hornbeam and hard hack, a trial they would find it the best of our native woods at the cost for making bows. Its use for that purpose by our Northern Indians is traditional, and their descendants—at least the Abenakis—make bows of it now for their boys and for sale. In all the centuries during which the bow was their chief weapon the Indians were likely to make trial of all the woods attainable, and their choice may be depended on as the selection of the fittest. The Indian bows of our boyhood never broke, but whether their rough usage was anything to compare with what the archery clubs' bows have to undergo I do not know. They were flat on belly and back,

H. E. K.

WORTH TELLING.—Mr. Wm. L. Holberton, who is gaining some local fame for his skill with the weapons of our ancestors, has been trying his hand on a powder keg. It was set up at thirty-six feet distance, and Mr. Holberton aimed at the small hole, an inch in diameter, at the end. The first arrow struck half an inch from the mark. The second went through and came partly out of the other head, going through the thick hard wood with the force of a bullet. The bow is an effective weapon in the hands of an expert, and Mr. Holberton is fast becoming an expert.

PRIZE BOWLING.—Mr. Anton Meyer, of 393 Bowery, is holding a grand bowling tournament, in which the prizes aggregate over \$400. There are 2,000 tickets in two series. The competition is lively and some fine exhibitions of bowling skill given. Bowling is a very popular sport among our German citizens. The devotees of the game have a little paper devoted to their interests.

HARVARD INDEX.—The Harvard Index for 1878-'79, is a most useful compendium of Harvard intelligence. It contains a list of the officers and members of the societies of the University, a full record of boating, base ball playing, catalogues of officers and students, and all the practical information in condensed form that any one would ever think of looking for. The Index will be sent post paid, on receipt of fifty cents. Address "Harvard Index," Cambridge, Mass.

Furs and Trapping.

HOW ENGLISH LADIES ARE ARRANGED.—In a late number of *Land and Water* Mr. Frank Buckland tells us something about the sources from which the ladies obtain their winter cloak linings. The most common skin used for the purpose is that of the white rabbit. These come from Liege, in Poland, and many thousands of them are imported annually. Besides rabbit skins, many cloaks are lined with what are called "squirrel bellies"; these are literally bellies of squirrels. These animals are skinned in a peculiar manner, so as to make the most of the fur. The squirrels used for this purpose are of various kinds and prices. The most expensive is the Silver Liner squirrel. The general color of this is blue—some light blue, some dark blue; the dark blue are the most valuable, particularly if it is void of the red stripe down the back. These squirrels are killed by thousands in Siberia; they are mostly shot with a small bullet. Those from Sweden and Norway are caught in traps, probably pitfalls baited with food; they are also intercepted when in the act of migrating. The Swedish squirrels are very large. Some of the squirrel skins are of a red color; these are the same squirrel as the summer dress. Squirrels are also imported in large numbers, especially from Kasaan, in Russia, but they are rather inferior to other sorts. There are various modes of dressing squirrel skins. The Russian skins are pickled in salt, and in consequence are apt to feel damp in wet weather. They do very well in Russia, as the weather there is always dry. In this country the skins are dressed with butter or lard, and it is a very remarkable thing that the Russian furs cannot use butter-dressed skins, because in Russia the skins thus prepared become quite hard in very cold weather.

For years past the trade of dressing squirrel skins has been their headquarters in Saxony, principally at the town of Weissenfels. Leipzig is celebrated for its fur market, especially at Easter, when the great fair takes place. From Leipzig furs are sent to China, Russia, Turkey, Greece, etc., in fact, all over the world. Large numbers of common wild rabbit skins and silver grays are exported from England for use in Russia. Cats are largely cultivated in Holland, especially for their skins. The fur of the Dutch cat is very long and soft as compared to the English cat, the fur of which is hard and wiry. There is some secrecy as to how the cats in Holland are fed; it is possible that they are fed on fish. The best Dutch cats are black. A good skin of jet-black color is worth half a guinea. The best cat-killers have a most peculiar and clever way of killing their cats. It is a fallacy to suppose that cats are skinned alive. In the first place, to skin a cat when alive would be utterly impossible; and secondly, it does not make any difference in the quality of the skin. The origin of the fallacy is, probably, that a cat is easier skinned immediately after death than if allowed to become rigid. It is very remarkable how fashions set by English ladies influence and tame animals even in the most distant parts of the world. I am very glad the ladies have made cats fashionable, as at last some use is found for these animals, which, being untaxed, are so abundant that any night and in any weather cats—many of them half starved—swarm in the London streets, and the poorer the neighborhood the more abundant are the cats.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

J. P., Paris.—Nov. and Dec. Nos. not at hand. Kindly oblige.

F. T., Derby.—Will you kindly send us your column dated April 187

ADLER OBSERVER.—We have not received slips containing Problems No. 655, 549, 549 and 550.

H. G., Erie.—The class of yacht you inquire about will be shortly illustrated by a set of plans in our columns.

J. M. M., New Castle, Pa.—We would recommend a gun with 30 inch barrel, one barrel a modified choke and one cylinder bore.

BUCKSKIN.—You can find buckskin shooting slugs of Holberton & Co., 111 Fulton st., N. Y., who make a specialty of Indian tanned antelope, buck and doe skins.

SUBSCRIBER, Philadelphia.—What is meant by a thirty inch circle as a target for making a pattern; is it thirty inches in diameter, or in circumference? Ans. Diameter.

H.—The author's solution to "Barrytown." No. 37, is: 1—Kt (B3) the P. 1—Kt (B3) ch; 2—Q. the Kt ch, 2—Kt; 3—Q-Kt mate. The other variations (3) are similar on White's part. Mr. Briggs thinks Kt ch will also solve it—Will it, or will it not?

C. S. T., Lynn.—How much arrow pull is allowed in testing say a 30 pound 5 feet lancewood bow? Is it, a 40 pound 6 feet lancewood bow? Ans. A 30 pound 5 feet bow, 34 inches; a 40 pound 6 feet bow, 23 inches.

N. G. H., New York.—Will you please inform me where I can buy a young staghead and what they are worth? Ans. We do not know where you can buy a staghead; possibly from J. B. Miller, Newburgh N. Y.

W. C. J., Providence.—Can you, or any of your correspondents or readers, give me, through the columns of your paper, the address of the firm in Boston who manufacture dog baskets? Ans. Perhaps some of your readers can supply this information.

J. D. A., Collinsville, Ct.—During a prize shoot held on Christmas Day two scores of three consecutive shots each were made by two individual contestants as follows: 10, 10, 12; 8, 12, 12. Mass. target lists decided by Creedmore rules; distance 200 yards. Which of the two scores is the best? Ans. The first is the better one.

B. T., Quebec.—For description of Connection "Sharpie" see our issue of Dec. 24, 1874. In general they resemble a flat-bottomed boat, sharp forward and a slight round to the bottom, rising up clear of the water aft and no skag. They can be built cheaper than any other kind of boat, about \$50 per foot complete, according to finish.

GUY RIVERS.—Prof. D. S. Jordan drops us a line to say that the *Centropomus nigricans*, or American black bass of Curvier and Jardine, concerning which "Guy Rivers" inquires, is the salt water fish now called *Centropomus atrarius*, "blackfish," "black perch," or "black sea bass" of the fishermen. It is an excellent food-fish, but does not ascend the rivers.

J. A. H., Raleigh, N. C.—Please send me a list of works on fishes and fish culture. Would like to have "Gill & Jordan's" nomenclature of fishes. Ans. For list see bibliography in "Hale's Sportsman's Gazetteer." For "Gill's Nomenclature" address Smithsonian Institution, Washington, D. C.; for "Jordan's Vertebrates" address Jansen McCleary & Co., Chicago.

N. G. D., Schenectady, N. Y.—My brown spaniel is infested with a peculiar species of lice, a little smaller than head lice and of a very pale, blue color. They do not seem to have much vitality, as they move but little. Kerosene seems to kill them, but when one is killed another dog appears. What will kill them? Ans. The lice you describe are natural to the dog and can be destroyed by rubbing his coat with whale oil.

PHILADELPHIA.—Your sketch of boat with double beard will be published in connection with some remarks thereon. We cannot approve of two boards. They are a complication of parts which no well-designed yacht needs. Only tubby boats of short, round body will find them such an arrangement necessary to make them stow easily and prevent them spinning around their centre, or "yawing" widely, especially when off the wind.

A. B. C., Milwaukee.—In the matches at Boston and elsewhere when scores of 21 out of 25 are made at 500 yards are they made off-hand, with a 3-pound pull of trigger, or are hair triggers allowed? A score such as 15 for 25 was published in the *FOREST AND STREAM* of the 10th inst. being made at Walnut Hill Range on the 14th and impressed me as a very bad mark, made off-hand, with a 3-pound pull. Ans. Scores made with a 10 pound ride, 3-pound pull off-hand.

SUSSEX, North Hamden, N. Y.—A foetus is troubled with much blood with his urine. He is in good condition otherwise. Will you please prescribe for him. Ans. Give the dog three barley water to drink and avoid everything in the shape of purgatives and diuretics. Place hot fomentations over the loins, and give two tablespoonfuls of the following mixture two or three times a day: Supercatol of lead, 20 grains; tincture of matric, 1/2 oz; vinegar, 2 drs; water, 1/2 oz.

H. O. T., Leland, Md.—1. Is rice raised or grown in or under water? 2. Where can I procure the Nichols & Lever guns besides at the factory? 3. Are the Greener hammer guns of the \$150, or cheapest grade, good? Are they as good as a Scott or Parker of the same price? Ans. 1. Rice (cultivated) is flooded periodically and a portion of the time is growing in water. Wild rice is, as a rule, always in water. 2. We have no list of their agents, but can recommend the firm at Syracuse, N. C. cannot express opinions regarding guns. The makers you name are all first class.

CHAS. C. NEW YORK.—The flood in Hell Gate makes from the W. to the E. changes and comes in from the E. to the W., rising an additional foot. The flood makes nearly six hours difference in the tide. In the twelve slack water at Hell Gate ferry and Little Hell Gate. In no part of the East River is it high and slack water at the same time, for the flood continues to run on the surface, while the ebb runs underneath, so that though apparently still running flood the water actually falls a foot before the visible ebbs sets out. High water at the Tenth street buoy corresponds pretty nearly with high water at New London in regard to time.

WADING PANTS, Galveston.—Is there an article that will encase one from sole to waist and keep you dry? or are such garments worn in connection with a waterproof boot? I wish to obtain something that will cover my shoes. The heavy rubber boots are good enough to drown in, they get going through a marsh safely they are a mistake? Ans. We send you a copy of our paper of Dec. 19 illustrating a possible wading suit. There are no wading pants made in America, we believe. Cording, of London, sells the combination stocking and pants which come to the anempts, and the same can be bought in this city of Abbey & Imble, 43 Maiden Lane, and perhaps of most dealers in sportsman's goods. Price \$14. For full description of quality, utility and method of wearing, see our article of Dec. 13, above referred to.

TRAPPER.—1. What kind of traps do the Canadian trappers use, and where can they be procured? 2. Are there any laws against trapping in the uninhabited parts of Canada, especially toward the north? 3. Is trapping allowed around Hudson Bay, or are the grounds controlled by the Hudson Bay Fur Company? 4. How are the trappers armed in Canada? Ans. 1. When trappers use iron traps, which they usually do, they must always use No. 10 gauge traps which can be bought of the Onoda Company, Onoda, N. Y., which address. 2. Yes, there are; but only as respects close seasons. 3. The Northwest and Hudson Bay Companies are jealous of intrusion upon the lands over which they claim or exercise jurisdiction. You would probably be hustled off by rival trappers. 4. "Armed, my lord, from head to foot!"

J. W., Le Roy, N. Y.—No, Hoyle is not. Stanton's "Handbook and Praxis," Wormald's "Chess Openings," or Goslip's "Chess Manual," Mr. Goslip is about to issue a new work, "Theory of the Chess Openings," and we will forward your name as a subscriber if you wish us to do so. It will cost from \$3 to \$6. No good American author on chess, White can castle after "being in check"—that is, if he is not on check at the time of casting and the King does not pass over a square common to the opposing pieces. If he has been moved from his square at any time before, then the privilege is lost, and you must move any piece that you touch. When a Pawn has a free path to go before as the opponent's P's are consecrated to the 8th square it is passed Pawn, by a White P on K4 is a passed Pawn if there is no Black P's on K, Q, and B's 2d, 3d or 4th.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

(Post Office Box 2832.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JANUARY 2, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

Trade supplied by American News Company.

SENSIBLE HOLIDAY PRESENTS.

FOREST AND STREAM.

Clubs can obtain subscriptions to FOREST AND STREAM and ROD AND GUN at \$3 per annum. Now, at the beginning of the year, is the time to start new clubs; subscriptions to begin Jan. 1. The circulation of FOREST AND STREAM is now distributed among 2,400 post offices in the United States and Canada, and over 100 in foreign countries. Twenty-nine foreign countries are represented.

FOREST AND STREAM TOURNAMENT.—This tournament for Gallery Rifle shooting, open to all rifle clubs in the United States, will be held at Conlin's Gallery at 1,223 Broadway about the first of February, 1879. Nine clubs were represented last year, and this year we hope to see double that number of entries.

THE TEAM OF 1878.—The letter we publish in our rifle columns, read by Captain Jackson before his team, should rouse the N. R. A. directors to do at a late period what should have been attended to a long time ago. The Palma has now been home from Paris for some months, and in place of being locked in the Tiffany vaults, it should be in the hands of Captain Jackson and his men. If the directors will but use half the energy of the Boston captain a match may be secured for the season of 1879, and the old interest in long-range sport be revived. Of course should a match come off it will be in a measure a Boston show, and this gives the more opportunity for the N. R. A. directors to show that it is a national body over which they preside, and not a mere adjunct to the First and Second Divisions N. G. S. N. Y.

THE TRUE AND THE FAUCIBLE.—It is said that the late Major Whyte-Melville confessed his inability to write anything interesting about the fox hunts which he had really attended, while we all know that he could give a most spirited account of a hunt that had never occurred. Indeed, we suspect that very few persons could write entertaining sporting sketches did they not light up the sober narrative with their own fancy. Plain narrations of shooting, fishing or fox hunting, when told without embellishment, may be models of truthful stories, but they may go begging for a reader. It is all very well for the capacious writers to say, stick to the facts. We want the facts, but we must have something more with them. Needless exaggeration, willful perversion of truth and misrepresentations are no more desirable in sketches of sporting travel and adventure than in any other branch of literature. But clothe the dry bones.

HAPPY NEW YEAR!

WE not only wish our readers a "Happy New Year," but can almost promise it. The forecast is auspicious of a brighter future than many past years have enjoyed. With a very general adjustment of financial difficulties, the adaptation of men's requirements to changed circumstances, and the severe lesson of practical economy well learned, prosperity seems almost assured; and where prosperity is, there happiness and content dwell. May these twin blessings be the Penates of every household where FOREST AND STREAM enters with its annual greeting.

Happy New Year! The Forest is as wide as our beloved land, redolent with the odor and freshness of perennial spring; the Stream gushes pure and refreshing from its pellucid fountain, generous in its life-giving properties. "One touch of Nature makes the whole world kin." So does the magic influence which emanates from the forest and the stream pervade the wide circle of our devoted patrons, making us all homogeneous in our tastes and brotherly in our relations. Substantial evidences of the beneficence of this kinship have we enjoyed this holiday season; not, we protest, through the kind offices of a mythical Santa Claus (whom we delegate to the children), but through and out of the fullness of good will of the givers, on whom may the blessings of the grateful receivers forever rest.

To-day there are evergreens in every household. Hopes and promises and good gifts are wound like a wreath of brightest flowers around the chain of our life's servitude, concealing the links which so often rust and wear into the heart and flesh, and make existence irksome. It will be time enough to mourn when we come to the places where these looked for flowers lie withered upon the inevitable finality. The old year is dead, and the ashes of the Yule log, which erst cheered his exit with a ruddy blaze, are cold upon the hearth. It was a most happy conceit which designated the closing months as the "embers of the dying year." Let us be grateful that Christmas comes, like a last cheerful flash, to relieve the chill and gloom of their expiring. And now that the New Year has begun, let us take joy of its auspicious premonitions. Let us at least be happy in the anticipation, though the realization may never come to all of us.

Many tried and valued friends of this journal have departed this life the past year. We feel their loss in common with friends who claim the right of kinfolk to do chief honor to their memory; but we cannot withhold a tributary tear for some with whom we have followed the field together, and others whose sympathy of tastes and close correspondence had allied our hearts to theirs. Their footprints are seen in all the forest aisles and along the margins of many streams; the old dog mourns under the vacant chair, and Rods and Guns are hung up forever; but if, in the long hereafter, they find no actual realization of the ideal "Happy Hunting Grounds," let us hope that they may find grateful rest under the Tree of Life, and satisfying draughts from Living Fountains of whose waters all are invited to partake freely.

Of our labors during the past year we have but little to say here. The record of our endeavors has been presented to our readers weekly, and the increasing favor we receive justifies us in believing that they have been acceptable. We hope we have done some good. The mission which we undertook at the outset was to inculcate morality in field sports; to studiously endeavor to promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. The support given to our enterprise at and since the beginning, encourages us to persevere. We believe that physical culture is absolutely essential to our manhood and well-being, both as individuals and as a nation; and we also believe that by fostering the natural inclination for exercise inherent in us, boys and men will not only become more scholarly but more Christian. Accordingly, we plant another mile-stone here at the beginning of a new year, not only as a tally of passing time, but as a stepping-stone of progress; and lifting up our eyes over the propitious outlook, gird our loins with alacrity for our next long-distance walk, hoping that the entrance-money of new subscribers will be large, and the reward of accomplishment munificently remunerative. As we are not rich enough at present to give each of our 10,000 subscribers a gold watch and a new suit of clothes, the best we can do is to thank them for their good will and valuable aid hitherto, and wish them many and abundant returns of the "HAPPY NEW YEAR."

THE O'LEARY-CAMPANA MATCH.

BARNUM, we believe, first formulated the proposition that Americans not only enjoyed being humbugged, but were willing to pay handsomely for the privilege. Barnum has made several snug fortunes out of his sapient discovery, but never did the hero of the woolly horse himself originate a more cunningly-devised and successful catch-penny scheme than that which snatched at Gilmore's Garden. The history of the whole thing is briefly this: A newspaper reporter heard of Campana's walk at Bridgeport, Conn. He saw in it the chance of a big speculation. The first and only necessary thing was to "write it up." He wrote it up. Others wrote it up. Every one read it. Then, as had been planned, the O'Leary-Campana match was announced, and the anxious public was invited to pay their shakels and see the show. They paid their shakels and saw the show. It was pretty generally understood in the early part of the week

that the whole proceeding was a hippodrome from the word "Go!" (uttered at one o'clock Monday morning); but despite this, the Garden was daily crowded with people eager to see the farce. The returns show a total attendance of 50,000 people, and the men who pulled the strings pocketed over \$20,000 net.

To one who was not too blinded and choked by the dust and smoke, nor too disgusted with the spectacle of Campana's suffering, there was much of humor—very low humor, to be sure—about the walk. There was more that was thoroughly disgusting. It is said that the only way to arouse the South African ox from the mire is to roundly swear at him in Dutch. "Old Sport" was for the time being an ox, or rather a whole yoke of oxen. They swore at him in High Dutch; they reviled him in Low Dutch, in English, French, Italian, Chinese, Choctaw; oaths cut a *la* Chatham street, and ribaldry served up in Fulton Market style. The slums sent up their most accomplished blackguards, and the blackguards did their work thoroughly, conscientiously and with untiring devotion. The weary "lepper" brightened up only when they showered upon him the choicest epithets in their extensive repertoire. He seemed to gain renewed vigor by heartily replying the unsavory compliments. His whole course was a triumphal procession amidst the choicest tributes of Billingsgate. Once, indeed, when he was hobbling and staggering along, and some one cried out, "Boy, Sport, you old bluefish, cheese 'em!" the old man brightened up immediately, pulled off his red shirt, and wanted to swallow the man as a bluefish would a squid. Why his attendants should have objected to a little mauling, we are at a loss to conceive. It would certainly have been a most fitting episode. As it was, the "Old Stag" cheered up wonderfully, went on his way rejoicing, rubbing his shining poll and swearing with increased strength.

To discuss the subject with the seriousness it merits, we may only say that the exhibition and its surroundings were thoroughly disreputable. The audience was for the most part a congregation of the coarsest classes. The bar did an enormous business. It was an inspiring sight to see the wrangling throngs leaving their blackguarding of Sport for a fierce clamor at the counter. It was still more inspiring to witness the police thrusting the thirsty crowd back that they might themselves have a turn at the cheering glass. The atmosphere was horribly foul and thick with tobacco smoke, dust and the exhalations of drunken men. Breathing it ten minutes made the average spectator choke and cough. That O'Leary and his companion were able to live in the garden six days, walking as they did, is simply a marvel of human endurance. A fish would die in water half as foul. It is no matter of wonder that O'Leary was splitting blood before the conclusion of the match. Walking in such a vitiated atmosphere could be no fair test of his real power as a pedestrian. The Hippodrome is probably as good a hall as could have been secured for the purpose, but at the best it was stifling, and for a man to submit to semi-suffocation was only a form of slow suicide. O'Leary's pluck and endurance were under these conditions, wonderful. His walk had elasticity to the end. But otherwise O'Leary has done much better walking before. We all knew he could accomplish the feat he has performed. It has won for him no new honor. We fail to see where it has benefited any one save in a pecuniary way.

It is for the interest of generous rivalry in sport and the elevation of the tone of public contests of skill that such exhibitions as that of last week and all like them should be discouraged. We would gladly see them done away with. They are in no way healthy in their influence; they serve no good end; they degrade pedestrian contests below the level of prize-fights, and have not one redeeming feature.

THE VALUE OF CAPT. BOYTON'S EXPERIENCE.

IN the restless strife for wealth, the ceaseless toil and struggle for a foothold in the world of business, our people are apt to overlook the merits of many a worthy invention which should redound to our own fame. But we seem not to have the time for other thoughts than those of the "almighty dollar," and with a fretful wave of the hand pass over to other nations the care of developing and applying to their full some of the best thoughts of America's sons. "Is there money in the thing?" Yes, but it will take time and capital to pursue it from a small beginning to full blown popularity. Then it is not for the American, for unless he can see a fortune in his enterprise within the short space of a few years he is apt to toss from him with a shrug as unworthy his attention any article, any idea, unless "there is money in the thing."

This is what has happened to the Merriman Life Saving Suit with which the gallant Boyton has been astonishing for some years past the rural and the urban population of Europe from the Thames in the dreary north to the Tiber and the Bay of Naples under the blue skies of sunny Italy. When the new life-saving suit was first brought out in America many exhibitions were given in our own waters, and crowds of the curious collected to see the sight, the same as they would rally to any other free show; but none had time to spare to give more than a passing thought to the many points of excellence which the invention possessed or to its conversion to humane purposes. A few cheap medals and a little public notoriety was all that the inventor and his agent reaped; so they turned their attention to foreign fields, with what success the rapid rise into popularity and general use of the Merriman suit abroad attests. Much is to be attributed to the

darling and indefatigable enterprise of Capt. Boyton, who has now, we believe, obtained as a fit reward a large interest in the invention which he has so fully tested. His experiences abroad read almost like pages clipped from the "Arabian Nights;" for, closely woven with his deeds of prowess and endurance, are the many receptions, public and private, which he received at the hands of admiring kings, queens, courtiers and such, while the common herd of mayors, generals, old sea dogs, alcaides, and the what-nots of Europe's ancient civilizations, turned out upon occasions too numerous to mention, to do honor to one of America's brave and self-made men. Whether floating down the sluggish tides of old Father Thames, or shooting rapids and tumbling down falls in the boiling, hissing currents of the Tagus; whether under sail or paddle, working his tedious passage across the Straits of Dover or the Straits of Gibraltar, the tireless energy, the success and modesty of Boyton met with a hearty response from prince and people alike, and while medals, speeches and dinners fell thick upon his shoulders, he has not failed to reap and gather in the solid profits of a thriving business. Thus fame and wealth have waited upon the man who chose to help himself.

The practical value of Boyton's experiences lie rather in the proof they afford of the reliability of the suit he wears and its adaptability to special services than in its life-saving qualities. It would be idle and a waste of money to fit out steamships with the suit, for not one in a hundred persons could be expected to acquire the cool head and proficiency its use entails. For ordinary avail on board vessels the rig has little or nothing to commend itself, but as a means of saving life along the coast, when in the hands of stalwart men brought up to efficiency through a systematic course of training and practice, the suit will form a most valuable adjunct to all life-saving stations. As a safe means of exploring the unknown rivers of the West, shooting canyons and rapids where no boat or canoe could live, as an equipment to men-of-war for special service in time of need and as an indispensable accessory to the torpedo service, the suit can have no superior. If it has not yet been appreciated as it should by those in authority with us, it is certain that we cannot afford much longer to remain in ignorance as to the merits of the new method of attack by a brigade of swimmers in the Boyton dress and armed with the means of sending an enemy to the bottom with all on board in a few seconds. Some years ago, when the rubber suit came out, we were the first to suggest and mature a plan of attack by torpedo and the Boyton suit, and though we are loth to glory in the loss of human life, it is flattering to one's pride to know that the first iron clad blown up in the Turco-Russian war was accomplished by precisely the methods original with us.

SKATES AND CROWNS.

THREE travelers from the Occident, bent upon seeing the wonders of the American world, arrived in this city last Saturday. Sunday afternoon they found their way to Central Park, and halting on the Balcony Bridge they witnessed a scene for whose equal they may seek the world over in vain. They will find neither in America nor in Europe a more impressive sight than that vast concourse of fifteen thousand people who were gathered upon the ice, and the thousands more who thronged the elevations all about the shores. Between eight o'clock in the morning of that day and half-past four o'clock in the afternoon, when the ball fell, Superintendent Dawson and other experts estimated the number of skaters to be not less than fifty thousand. There were one-half as many more who visited the Park and did not go upon the ice. Seventy-five thousand pleasure seekers and not a single arrest! Where in the broad world can that be surpassed? If the magnitude of the *fete* be wonderful, surely this universal good spirit is equally impressive. But the policemen—good fellows—had their hands full, very full. Wherever was there not a small boy bound to see how near the hole with the "Danger" signal he could glide without gliding in? And a "cop" in heavy uniform and clumsy brogans is no match for the fleet small boy. Yes, the policeman and the superintendents must have been rejoiced when the ball finally fell and the merry skaters reluctantly departed. New Yorkers may point with a very large degree of pride to the forethought which has provided their beautiful park with its drives, walks and boating courses in summer, and the grand skating grounds in winter. It is an institution that affords healthful, invigorating recreation to thousands of rich and poor, old and young, men, women, boys and girls, day after day and week after week. Too much praise cannot be given to the Commissioners and their assistants for the very happy way in which they provide this entertainment, and the uniform freedom from accident which makes it unnecessary for us to record any of the frightful fatalities which are not unknown elsewhere. Skating is a royal sport; the Central Park a royal skating ground, and the happy mortal who has a pair of steels under his feet may turn his back upon the cares and troubles of his life, and for a brief hour at least revel in all the joys of royalty without its sorrows. Sweeter the ring of the ice than the plaudits of subjects: better a pair of skates under the feet than the crown of a Czar upon the head. So, at least, reasons the gamin, and so, too, think many who are not gamins.

URANINE.—This is the most recently discovered, and perhaps the most remarkable, of all the coal tar or aniline group of coloring substances, now so extensively used for the adornment of the finest fabrics. Uranine is said, by chemists, to be the most highly fluorescent body known to science. Its

coloring power is astonishing; a single grain will impart a marked color to nearly five hundred gallons of water. A most interesting experiment, which anybody may try, consists in sprinkling a few atoms of Uranine upon the surface of water in a glass tumbler. Each atom immediately sends down through the water what appears to be a bright green rootlet; and the tumbler soon looks as if it were crowded full of beautiful plants. The rootlets now begin to enlarge, spread and combine, until we have a mass of soft green-colored liquid. Viewed by transmitted light, the color changes to a bright golden or amber hue; while a combination of green and gold will be realized, according to the position in which the glass is held. For day or evening experiment nothing can be prettier than these trials of Uranine, which are especially entertaining for the young folks.

In our issue of Dec. 13, we referred to most interesting scientific experiments which are being made in Europe to determine the sources of the Danube and other rivers by the use of fluoresceine. Uranine is only another name for this subtle agent, and derives its origin from *Uranus*, which means *Heaven*. By the use of fluoresceine we suggested how scientific research might be promoted in various ways. We are indebted for examples of Uranine to the editors of the *Scientific American*, who are sending out specimens, free of charge, to all their readers. The subscription to the paper is \$3.20 for a year, or \$1.60 half year; and a better investment for the money could hardly be named.

THE MONGREL GOOSE.—We sat down to dinner the other day to discuss the comestible qualities of a goose, whose origin is indefinite and untimely end certain. The lesson of the day is laid down in the following passage from a letter received on Christmas:

KRESSVILLE, N. Y., Dec. 25, 1878.
Mr. Charles Hallock—I send you to-day a goose for your dinner. "Only a goose!" say you? That's all; but said goose has a history. A few miles from here a gentleman has time since been, and marvellous to say, one Madame Goose from the belfame dock has been visited yearly for several years by a Mr. Wild Goose, and the result is one of four children, raised this year, and which I engaged last spring to be sent to you—and here you have it. I trust it will not only be acceptable in memoriam of yours truly, but also prove good eating. I regret to add that the Madame has just died, and whether we shall have any more of the same sort remains to be seen.

Yours truly,
J. R. ROMNEY, M. D.
"Ye that have tears to shed, prepare to shed them now." As a *bonne bouche* our goose was appreciated; as a *piece de resistance* it enabled the race which saved ancient Rome, notwithstanding its bar sinister; as a present from our time-honored and beneficent friend, the doctor (who may be referred to as the noblest Romyen of them all), we valued it. But while we partook we mourned the probable untimely extinction of a race which might be said to have scarcely begun. We deplored the short-sighted extravagance of her taking off. No basket-full of golden eggs unbatched could compensate for such a pitiable loss. Oh! countrymen and friends! that for such a momentary titillation of the palate such great sacrifice should have been made! We cannot recall the past. What is done is done; and what has been, is. Now that the "old goose is dead" to all posterity, all that remains to us of rites and duty is to "go and tell Aunt Susan" and enjoin upon her to preserve all the feathers for an old-fashioned bed.

The scientific world will deplore no less than ourselves the great loss which we feel constrained to lament. One can hardly realize what results might have been realized from the great expectations excited by the successful crossing of the two breeds of birds. But now all hope is dead, and the spirit of the old bird has flown.

KIMBALL'S VANITY FAIR TOBACCO.—When the editor of FOREST AND STREAM first began to smoke "Vanity Fair," in the year 1873, the tobacco had already taken the highest award for quality at the Vienna Exposition. The verdict of the Austrians was subsequently affirmed by the judges at the U. S. Centennial and again at Paris in the present year. After due trial and test, the editor is now prepared to approve, endorse and clinch the decision of the combined commission. He has had every facility afforded him to form his opinion. Each year, for five years past, the Messrs. Kimball, of Rochester, have presented him, about Christmas time, with a munificent gift of many packages—so many, indeed, that the gentlemen must have supposed either that the editor was an incessant and exhaustive smoker, or that he had legions of friends, or that his term of life was guaranteed beyond the age of Methuselah. The second is probably the correct statement. No doubt his friends would multiply as long as the tobacco remained to be distributed.

All of our employes smoke (except that office-boy, and he is just beginning to learn), and the "Vanity Fair" has made them happy as Indian bucks. They all bless their benefactors, and it would be difficult indeed to induce them to go back on the decision of the Vienna, Philadelphia and Paris Commissioners. All hold to "Vanity Fair;" their pipes hold the tobacco, and the tobacco holds its own. So there is peace all around, and we trust a fortune for the consolations, square-dealing firm who are content to give the public an honest weed which "won't bite the tongue."

SUNRISE ON THE PRAIRIES.—As a specimen of what may be called bathos, the following cannot justly be compared with anything written in English. It is seldom we find things so far above us brought down to the dead flat low level of this earthly plane. The metaphor leaves a dazed impression upon the mind, something like the effect of ether after a man has

had a tooth pulled. It is proper to state that this description of sunrise is from the New York *Star*, which deals only in reflected light:

The sunrise upon the prairie was one of unsurpassed loveliness. Crimson and gold, and amethyst and violet, pale lavender and delicate greens and blues glowed and blended, and mantled over all the east. No object interposed to break the complete circle of the horizon where the pure porcelain of the heavens, like an inverted bowl, shut down upon the brown and neutral tinted earth, as though a priceless cup of porcelain proportions and matchless workmanship, molded from the finest porcelain, should be placed upon a coarse and carelessly constructed platter of common clay.

HANDSOME GIFTS FROM HANDSOME MEN.—Dr. Robert Taylor, of this city, received a very substantial Christmas present of a fine Kentucky thoroughbred horse from Mr. Henry Reiche, proprietor of the New York Aquarium, on Wednesday last; also, a fine carriage from Dr. C. H. H. Sayre, son of the well-known Prof. Lewis A. Sayre. A handsome set of harness from another friend. May his friends live forever, is the doctor's wish.

THE BENNETT POLAR EXPEDITION.—The steamer *Jeannette* of the Bennett Polar Expedition, arrived at San Francisco, Dec. 27, and hauled alongside at the Mare Island Navy Yard. There she will receive the rest of her outfit before leaving for Behring's Strait. The success of the recent Swedish explorations along the northern coast of Asia, may be taken as a sign very favorable to the new route chosen by Mr. J. G. Bennett for his latest attempt to unveil the mysteries of the North Pole, hitherto so securely locked in their impenetrable casing of frozen seas.

FROM A CANDID ADVERTISER.—Mr. Will H. Cruttenberg, of Cazenovia, who manufactures the Card Rotating Glass Ball Trap, sends us the compliments of the season, with the following pleasant endorsement:

EDITOR FOREST AND STREAM AND ROD AND GUN:

Enclosed find check to pay for another three months. While we are not among the first of your patrons we are "a regular," well knowing the advantage of advertising in your valuable paper, and we are going to stay with you as long as we can sell enough to pay the ad., and longer; so don't leave out adv., until we send you word to that effect. With our improved machinery and experience we are enabled to make our trap more perfect, and it is fast gaining ground with the sportsmen at large.
WILL H. CRUTTENBERG.

[FROM OUR OWN CORRESPONDENT.]

THE TROPICAL WANDERINGS OF FRED BEVERLY.

A FAREWELL—THE MYSTERIOUS OCEAN CURRENT—DOMINICA AND COLUMBUS—ROSEAU AND ANTHONY TROLOPE—THE FIRST CAMP—THE MOUNTAINS.

AS I observed twenty-two months ago, in that letter which I never reached you, the Doctor and myself safely reached the Island of Martinique; also the vessel, captain, and all hands. We ran in as close as we dared, and then stood off and on for the harbor master and pilot. It was late when he arrived, and we were much incensed, especially the mate, who vented his anger in strange oaths and abuse of our negro boy. The harbor master was gentlemanly, but he possessed a limited knowledge of the English language, which fact, of course, reduced him to the level of a barbarian and increased the resentment of the mate.

"How much chain overhaul, sir," said he, addressing the captain.

"Sixty fathom," replied the pilot.

"Sixty fathom! Sixty devils!" roared the astonished officer. "Damn your old Frenchified town anyway; it ain't worth the chain we're sinkin' here."

It was a case of necessity, however, and ere we were securely moored, like the other vessels of a long line before the town, we were obliged to pay out that length of chain. Then, with the anchor ahead in the bay and two strong hawsers astern, our little craft lay quietly after her long buffeting with wind and wave, and we watched the lights appearing in the busy town and the sailors as they furled the sails and cleared the deck.

As Martinique was visited by me eighteen months later for a stay of six weeks, I will defer my description of its many beautiful scenes until I reach it in the course of events. But the Doctor and myself here enjoyed a few days on shore, previous to my departure for Dominica and his for more northern islands.

Now, the Doctor was a genius. He had a genius for making money, and a special tact for taking care of number one. Leaving New York with but sixty dollars and his stock in trade, he landed in the West Indies with his cash greatly augmented and with the captain, mate, cook, and, in fact, the whole crew, deeply in his debt. That I escaped with a whole tooth in my head I attribute to some special interposition of Providence, or to the fact that I had but little cash. The Doctor's period of sojourn on shipboard may be divided into two portions—that in which he was pulling or "fixin'" teeth, and that in which he was sea-sick. He was happy in the exercise of the former and unhappy in that of the latter. When the Doctor appeared on deck with a particularly happy expression on his countenance, and polishing somebody's darling molar on the lapel of his coat, beware of him! The whole crew would then shudder with apprehension.

The Doctor and I went on shore. We climbed the paved streets and descended again to the beautiful Jardin des Plantes. On our way the Doctor indulged in a free flow of that happy humor peculiar to the Western Yankee (for we

are all Yankees in those islands). We met boys and boys—boys by dozens and boys by scores, and some girls; but the very first group that drew our attention and provoked an outburst of the Doctor's ever ready wit, was of boys.

"I say, young man, pull down your vest!"

This was addressed to a ragged little darkey with beaming face and bright eyes, the centre of a bunch of the raggedest and nakedest gamins we had ever beheld. There was not a whole article of clothing furniture among them. If one had a shirt he hadn't any pantalones, and the fellow that boasted the latter had the least of the former. There was not even the apology for a single whole garment in the crowd, yet every member of it was as blissfully unconscious of the grotesque appearance he made as were the Doctor and myself aware of it. But the most glaringly conspicuous feature of the collection was a huge vest worn by the brightest and sauciest of the five—a very grandfather among vests, which, descending to the urchin's thighs, left but a scanty drapery of shirt for the rest of his belongings.

You, reader, will now appreciate the keenness of the Doctor's thrust at these airy costumes, and be able to enjoy, with him the exceedingly loud merriment in which the astonishment of the unsophisticated natives caused him to indulge. The successful termination of this sally of wit encouraged the Doctor to hope for more fun of the same nature, and to the next urchin we met he propounded that question which has vexed the brains of the talented of all ages, and for I don't know how many ages: "What time does the half-past six train leave?"

Now the Doctor had reckoned upon this boy being like ninety-nine out of every hundred we met, of French extraction and incapable of uttering one word in English. Imagine, then, his discomfiture when the perfectly correct answer, in equally correct English, was hurled immediately full in his face—a reply that silenced him for the rest of the day, and not all the wonders of the enchanted garden could bring him again into tone:

"At ten o'clock to-morrow morning, sir."

Upon our return to the shore we went on board and made preparations for departure. The Doctor had contracted with the genial captain of a Down-East schooner for a passage to St. Thomas (he subsequently left captain and crew in a toothless condition), and I entered into negotiation with the owner of a crazy sloop for passage to an adjacent island.

Along the entire group of the Caribbean Isles, sweeping their western shores, flows a strange, mysterious current. Not subject, apparently, to the laws that govern the winds and tides of this region, it for years puzzled and baffled the ablest navigators and oldest sailors. Among the northernmost of these islands large ships were often sunk, carried by the force of this unseen and unsuspected stream upon sunken reefs or barren rocks. Even so long ago as when Columbus was making his voyages, we have on record that he was detained by this very current among these same islands.

It was not known until a comparatively recent period that it was the overflow of a mighty river, no less than the great Orinoco, that caused all this disturbance of waters, and that, dependent upon its different stages, was the force of this river through the sea. Though my first experience with this current was in January, when the Orinoco was at its lowest and the consequent marine flow at its weakest stage, I yet had sufficient proof of its strength to understand how it was that vessels of all sizes were sometimes many days in making ports but few miles apart.

We left the port of St. Pierre, Martinique, for that of Roseau, Dominica, the distance being less than thirty-five miles and the channel separating the islands but twenty in width. Late in the afternoon we hoisted sail, taking a fair land breeze from the mountains and getting a fresh blow from the trade winds drawing through the channel, and at midnight were close under the southern point of Dominica, with a fair prospect when I went below of landing early in the morning.

The captain was a good fellow; he had given up to me, as the only white man on board the sloop, the only berth the cabin afforded. Into that I crawled, with a lurking fear of centipedes and scorpions, and fell asleep. Soon the wheezy pumps awoke me, and a stream of water trickling through the uncalked deck-planks gave sweet assurance that the water in the hold was being abstracted. As this process was repeated every half hour my sleep was not so sound that I did not visit the deck frequently, and at each succeeding visit note with alarm that the land grew dimmer and more dim. Daylight revealed that we were much further away from shore than at midnight, surely drifting to the northwest with sail flapping idly and rudder useless.

The sun is late in showing himself, for he has to climb well up the heavens ere he can look over the crest of the mountain ridge that shows in the distance cool and misty. But as day advances and the hour of noon arrives, the cool hours of morning are more than compensated for by the intensity of the heat radiated from the glassy sea, a heat that makes itself felt and a glare that causes every one on board to seek earnestly a shady spot.

And this is the "tropic sea," on which we are drifting; the sea so often sung by the poet, the sea we have often contemplated in our fanciful dreaming in more northern climes. Like many an object of the poet's adoration, it is far pleasanter to look upon through his eyes than through visual organs of your own. Though the sun and sea make it painful to look abroad, there is nothing offensively new and glaring about the little sloop that wears the eye with bright

colors. The prevailing color, in fact, is that of the wood of which it was built, the native wood of the island. The knees are of the natural twist and bend of the native trees; the deck planking and sheathing are likewise of the native wood; the mast, the boom and the bowsprit are of the native woods of the island; and captain and crew are, doubtless, also fresh from the woods—natives fresh from the native woods—of Dominica. There are more than twenty people of color lounging in various attitudes about the deck. They seem wholly indifferent to the fact that the vessel is drifting with them away from the island, and when I suggest to the captain that he utilize this material at the oars there is a general howl of indignation. The captain also gazes at me like one who has heard information of a character novel and startling, and informs me that what I propose is not only useless, but impossible.

Struggle against the current of the mighty Orinoco! Attempt to baffle the wiles of a power unseen, that always had acted in just such a manner and had carried him over the same course every voyage he had made! It would be preposterous. At night, the land breeze would come down from the mountains and he would calce inshore without any trouble whatever.

Late in the afternoon, however, we descried a speck dancing on the waves, which speck was, of course, a boat; and in that boat, when it reached us, I engaged passage for the shore, my unhappy companions drifting about until the next afternoon, sometimes in sight, sometimes lost to view for a long time. As we neared shore I had time to examine the character of the scenery of the western coast, as one object after another was unfolded, and the mass of green and blue resolved itself into wooded hills, narrow valleys and misty mountain tops that reached the clouds. A planter's house gleamed white in a valley; a pebbly beach stretched between high bluffs, with a grove of cocoa palms half hiding a village of rude cabins along its border.

I was approaching an island of historic interest and scenic beauty, of which the events of one and the elements of the other are little known to the world at large. It is the first island upon which Columbus landed on his second voyage. Having been first seen on Sunday, it was called by him Dominica, and this event dates from the 3d of November, 1493. Blessed Isle of the Sabbath Day! Many changes hast thou known since the great Navigator first saw thy blue mountains and landed upon thy fragrant strand.

Does it not read like a fairy tale, this second voyage of Columbus? With three ships and fourteen caravels, containing, 1,500 persons, he set sail from Cadiz, touched at the Canary Isles, and then shaped his course for the islands of the Caribs—of whose prowess and fierce nature he had heard many stories from the mild people of Hispaniola. "At the dawn of day, Nov. 3, a lofty island was descried to the west, to which he gave the name of Dominica, from having discovered it on Sunday. As the ships moved gently onward, other islands rose to sight, one after another, covered with forests and enlivened by flights of parrots and other tropical birds, while the whole air was sweetened by the fragrance of the breezes which passed over them. They were a part of that beautiful cluster of islands called the Lesser Antilles, which sweep almost in a semi-circle from the eastern end of Porto Rico to the coast of Para, on the Southern Continent, forming a kind of barrier between the main ocean and the Caribbean Sea."

Dominica is but thirty miles in length by eleven in breadth, yet presents a greater surface and more obstacles to travel to the square mile than any island of similar size in the West Indies. Well did Columbus illustrate its crumpled and uneven surface when, in answer to his Queen's inquiry to its appearance, he crushed a sheet of paper in his hand and threw it upon the table.

In no other way could he better convey an idea of the furrowed hills and mountains, deeply cut and rent into ravines and hollowed into valleys.

"To my mind," says Anthony Trollope, "Dominica, as seen from the sea, is by far the most picturesque of all these islands. Indeed, it would be hard to beat it either in color or grouping. It fills one with an ardent desire to be off and rambling among these mountains—as if one could ramble through such wild bush country, or ramble at all with the thermometer at 85 deg. But when one has only to think of such things, without any idea of doing them, neither the bushes nor the thermometer are considered." In this, as in all his sketches, Mr. Trollope is right so far as he goes; but he does not go far enough. "Filled with an ardent desire," he should have given those woods and mountains the months of camp life that I did; then would the world be richer in pictures of forest life and mountain scenery than my poor pen so feebly tries to portray.

And of Roseau, the principal town in which I land, the same author speaks disparagingly. "It is impossible to conceive a more distressing sight. Every house is in a state of decadence. There are no shops that can properly be called so; the people wander about chattering, idle and listless. The streets are covered with rank grass."

Alas! poor Anthony Trollope. Alas! poor Roseau. Didst thou not consider, oh, Anthony, the many times this poor town has been sacked and burned? that it has passed from French to English; from English to French; and just as it began to recover from the evil rule of war it was again prostrated by the flood of blacks let loose by the emancipation? Didst thou think to describe the features of a place in an hour's stay?

The island has, unfortunately, few white residents, and, to many, this lovely isle is fast approaching Hayti in the blackness of its population; but oh, Anthony, if you had but met some of those few white men!

In the language of your western cousin, Anthony, they are white. Had you but tarried among them but a little while you would have reversed your verdict upon the people. The people of a place, Anthony, are not represented truly by the scum that settles in the market-place and wanders about the streets. Had you strayed into one of those unprepossessing shops you would have found it crowded with the wares of England, "Old England," of which you are proud to be called a son, as am I to be known as one of its grandchildren.

Those white people, those people so few in number that it almost makes the heart bleed to think of it, they and their virtues shine forth from the cloud that envelops them like a light in a dark place. Did they not take you, as they did me, by the hand, and did they not say to you as they said to me, "Come to my house and make it your home?" If they did not, it was only because you didn't give them time to do so.

A WEST INDIA TOWN.

At five o'clock the gun in the fort sets off the bell in the cathedral spire. It is an hour before daylight, good, and even at six the mists of the valleys cover all, even to the mountain-tops. The sun climbs steadily, though it is eight o'clock before he has shown his face to Roseau, and darts over the mountain tops to windward his scorching rays. It is interesting to watch the changes that come over the mountain sides and valleys as the sun dissipates the morning mists. The Lake Mountain, 4,000 feet in height, towers black against the sky; five miles it is from town, yet seems so close as to overshadow it. Its head is veiled more than half the time in mist. Stretching away north and south is a long line of hills, an isolated peak jutting up at intervals. Their summits are blue and purple in the distance. Within this line is a cordon of hills, with valleys deep and dark behind, half encircling the town. These hills are broken and ragged, seamed and furrowed and scarred, yet are covered with a vegetation luxuriant, of every shade of green; purple of mango and cacao; golden of cane and lime, orange and citron. Palms crown their ridges, cultivated grounds infrequently gleam golden brown on their slopes, and dense clouds come pouring over their crests from the Atlantic. North and south this bulwark of hills ends in huge cliffs plunged into the sea. Roseau is seated at the mouth of a valley formed by a river. From the centre of this valley is shot up a hill—a mountain it is called here—Morne Bruce.

From its smoothly-turfed crown the view of town and sea is superb, especially at sunset, when the sun sinks beyond the Caribbean Sea, and the cool evening breeze plays through the trees, La Morne becomes an attractive spot. From it we look upon the town; many palm trees, few houses, a rushing, roaring river that meets the sea in a surf line like a northern snowdrift; a picturesque fort, the jail, the Government House, and the Catholic Cathedral—a building of stone, with arched windows and doorways, short, though shapely spire, with a palm tall and slender, a priceless gem, to lend grace and beauty; westward, beyond the shore line, the Caribbean Sea, its bosom, which glowed so fiercely in the sunlight, now cool and inviting in its stillness.

Looking eastward one can see far into the Roseau Valley, to the wall of mountains from which dashes out a great waterfall, divided to a mere silver thread in the distance. The Roseau River emerges into a plain beneath, a valley filled with cane, containing in its centre a planter's house and buildings, palm-surrounded, and the river—dashing over its rocky bed with a roar that reaches our ears even at this height of several hundred feet—runs at the foot of a high white cliff across another plantation into the sea, peaceful enough at the end. The streets of Roseau are straight, paved with rough stone, and they never echo to the sound of wheels. They cross at right angles and dwindle down to three bridge-paths leading out of the town, one north and one south, along the coast, and one, narrow and tortuous, over the mountains to the eastward. Most of the houses are one-storied boxes of wood, with bonnet roofs, 16 by 20 feet; many in a state of decay, with tattered sides, bald spaces without shingles, and dragging doors and shutters. Every street, however, is highly picturesque with this rough architecture, (and cocoa palms lining and terminating the vistas. The town is green with fruit trees, and over broken roofs and garden walls of roughest masonry hang many strange fruits. Conspicuous are the mango, orange, lime, pawpaw, plantain, banana and tamarind. Over all tower the cocoa palms, their long leaves quivering, their dense clusters of gold-green nuts drooping with their weight.

From the mountains, from the "Sweet River," comes the purest of water, led in pipes through all the streets, and gushing out in never-ceasing flow from the sea wall on the shore. The market, near the south-end of the town, a small square surrounded by stores, is the centre of attraction on Saturdays, when it is densely packed with country people, black and yellow, who come, some of them, from points a dozen miles distant, each with his bunch of plantains, ayam or tray of bread-fruit. All are chattering, so that there is a very babel of sounds. Little stalls, temporarily erected, contain most villainous salt fish for sale, ancient and vile smelling, and every few feet is a table, presided over by a contented wench, who has for sale cakes and sweets of her own manufacture.

Near the market is the fort, a low stone structure, pierced with loopholes, commanding from its high bluff the roadstead, in which, save the trading vessels and the weekly

eleanser, there are seldom few craft besides the sugar vessels. Near the fort is the English church, with a clock in its face, and four magnificent palanquies to guard its entrance. Adjoining is the Government house in a garden of flowers, and near, the Court House, of stone, yellow and low. Opposite, on a bluff overlooking the sea, is the public garden, neatly inclosed, tastefully ornamented ; a few large trees, many roses, humming-birds, butterflies, and a grand view of the sea, or mountain towering south, and a circle of shore stretching away down, terminating in the headland of Scot's Head—an interesting rock, with a beacon and the ruins of a fort. The road leads by a broad green *savanna*, near which is a ruinous cemetery, down between long rows of lowly cabins, its bed green and grassy, within a stone's throw of the surf on the pebbly beach.

This was Roscau, which I left one March morning for the mountains. Early came the women, who were sent by a kind friend to carry my luggage - heavy boxes and bales they had engaged to carry to the mountains for me on their heads. It was all the way ascending, but they faithfully performed their duties, nor once complained. Astride an island colt, the loan of another friend, and accompanied by still another friend, whom I knew not a few days before, I left behind me the town, and set my face to the mountains.

Down the street, past the jail, across the river over an excellent bridge, under the cliffs of St. Aromaat, into the banana and citron groves that lie at the mountain's base; then up higher and higher, the path growing rocky and slippery, past the lovely valley of Shawford, where the house of my friend Stedman, built upon a small plateau, surrounded by hills, embowered in limes and plantains, overlooks a tropical garden. A mile above, we enter a deep ravine, where I see the first perfect tree ferns on the trail; the gorge is filled with them, and the banks along the path covered with smaller ones, infinitely beautiful. Here I first heard the melody of the "solitaire." Long since the air of the town, hot and parching, has given place to cool and delicious breezes. We go out under the shade of trees, passing many a trickling stream, until nearly on an elevation of 2,000 feet is reached, when we hear voices, and suddenly come upon a party of mountaineers (half Carib, half negro), who present a very fierce appearance—naked to the waist, hatless and armed, each with his machette or "cutlass," over two feet in length. They salute us politely, however, and we pass on until near the "high woods," when we turn to the right and dive down a narrow trail under large trees, and reach, finally, a narrow gate of bars in a tall hedge of oleander.

Descending rapidly from the forest was an open slope of a hundred acres, perhaps, sloping westward, green and smooth as a lawn of Guinea-grass could make it. Over this were scattered volcanic rocks and clumps of trees. This slope terminated abruptly in a cliff so steep that the people living here could not descend except by a long detour. Over this cliff fell the waterfall we saw coming up. Deep ravines came at intervals, all tending toward the valley wall, and on all sides but this are nothing but forest and hills. From one of the mountaintains I secured a cabin, one of the seven comprising this little hamlet, and before nightfall had comfortably established myself. My companion then left me alone to what proved but the first of many camps in tropic forests.

GAME PROTECTION

DINNERS AND THE GAME LAWS.—A full stomach, makes a willing ear. It is wise, therefore, to argue with men who have been well feasted. The merchant makes his bargain over the table-cloth; the Alderman secures his Aldermanic feasts only after having feasted his constituents; the young lords with much eloquence, it is true, but the ice cream counts more than all his fine language. Annual dinners are time-honored and necessary adjuncts of all social, political, literary, religious and benevolent societies. Game protective associations follow the custom, and a yearly feast of good things excites a very commendable degree of transient enthusiasm in the cause. We have heard of game associations (their headquarters are nearer than at the North Pole), whose whole energy was given to these annual festivities with such gusto that there was really very little left for any of the other minor interests of the cause—such as securing the enactment of proper protective legislation, the introduction and protection of new game birds and fish, and the conviction of offenders against the game laws. There can be no possible objection to a social gathering of sportsmen, but to invest such an occasion with the assumed importance and dignity of what is, in fact, a cause worthy of earnest and determined effort, strikes the disinterested observer as something of a farce. Sportsmen's associations, whose active labor does not go beyond their annual dinners and speeches, accomplish very little in any other way. Eating is not protecting.

NEW YORK STATE ASSOCIATION.—The New York State Association for the Protection of Fish and Game will hold its twenty-first annual convention in Rochester, May, 1879, under the auspices of the Monroe County Sportsmen's Club. The prize list is now open for contributions from sportsmen and dealers in sportsmen's goods. The prize committee has been appointed, and may be addressed through Mr. Edmund Redmond, Rochester, N. Y.

MESSINA QUAIL IN PENNSYLVANIA.—Mr. A. F. Clapp, of the *Sinburg American*, announces the receipt of a migratory quail which was shot at Trevorton, Pa., in the first part of December. The bird was evidently a straggler from the broods

set at liberty by the Pottsville Game Club last spring, and was, when shot, with a covey of our common quail.

VERMONT GAME LAWS.—By an act of our last Legislature the close season for woodcock is extended to Sept. 1, which is a very good thing for the woodcock, as hardly any are to be found here, except perhaps in the southern part of the State, after the middle of August. The top notch of absurd legislation was reached by prohibiting the use of dogs in hunting ruffed grouse! It seems a little strange that our State Association for the Protection of Game and Fish did not prevent the passage of such a silly law. It is a little more common for commercial men who could if they would strain the legislation on such matters. Now, I understand, "it will express its disapproval" of some of the fish and game laws just passed!

J. E. R.

WILD FOWL IN BARNEAT.—*Editor Forest and Stream:*—I have read the article in last week's issue in regard to what keeps the wild fowl away from our waters. With all due respect for Oscar B. Smith, and approving of some of his suggestions as to the scarcity of fowl, yet I must beg to differ with him as to the cause of the non-appearance of brant here this season. After considering very some of our oldest gunners, I find that at least eighteen years ago there was just such a scarcity of brant, only three known to have been killed. They (the gunners) have been letting drive at large bunches of brant at 100 yards from time immemorial, and killing them at that; yet for the past ten years, I cannot see any perceptible decrease of that species. Some years they are scarce, and some years they are very numerous. I am inclined to date twenty brant have been killed, and not more than one dozen bunches made their appearance. Yet we attribute to some other cause than shooting at them at 100 yards. We cannot see how it will frighten them any more at that distance, and knocking a few, than it would at close quarters and demolishing two-thirds of the flock. As for the cause of the scarcity of fowl, I am right, but from one of our sportsmen, I learn that immense numbers of brant have been seen from five to ten miles at sea on their southern tour.

J. W. KINSEY.

The Rifle.

MILITARY PRACTICE IN 1878.

General G. W. Wingate makes a very complete report for 1878 of the doings of the Department of Rifle Practice in the State of New York, and it is interesting as well to Guardsmen in this State as to members of the Militia in other States and throughout the ranks of riflemen. New York is not only the pioneer State in the matter of military rifle practice, but in the completeness of its appointments, and in the extent of its facilities for ball practice before the butts it is far in advance of any other State. There was a time when in long-range practice with small-bores New York was also in the lead, but that period appears to have gone by, and the superiority now exists in the department of military practice only. For 1878 General Wingate finds "that the progress that has been attained in this branch of instruction during that period has been more satisfactory than anything that has been accomplished in any previous year." And this improvement is not alone in an actual increase of marksmen, but in the general careful and systematic manner in which the schedule of practice has been carried out. It has been found a good policy to encourage the establishment of many small ranges, easily accessible to the men, rather than the opening of a few large and elaborately appointed places of shooting.

By this means men are encouraged to take a few hours now and then, and put in a few shots when they would not find it possible to leave business for a whole day. From 1873 to 1875 Creedmore was the only range in the State, now there are thirty official ranges used by the National Guard as follows: Creedmore, Elmville, Kingston, Albion, Erie, Malone, Whitehall, Port Henry, Glens Falls, Syracuse, Oswego, Utica, Watertown, Auburn, Moravia, Oneonta, Binghamton, Rochester, Elmira, Buffalo, Westfield, Warsaw, Ellicottville, Batavia, Lockport and Jamestown, and several new ones are now in process of clearing up and preparing for use. Many of these ranges are of limited pretensions, while a few are able to accommodate a large force of shooters and are put in use for Division and other large matches. The State is thus a vast free range, and the State militia stand-point, and does nothing to aid long-range practice. Each of the State ranges are described in detail from notes taken by Gen. Wingate and his assistants during their tours of inspection.

The change in the manner of recording and reporting the work of the troop is commended as a great improvement over the old and complex way of working out the regimental figure of merit. Each organization is now divided into four classes. Each man starts in the fourth-class at the opening of each season. As soon as he shoots a deer he may make a third-class man, and if he scores he may make, he having necessarily learned more about loading and firing his rifle than men who have never visited a range for practice. The other classes are the same as last year, the third-class shooting at 100 and 150 yards (standing), the second-class at 300 yards (kneeling) and at 400 yards (lying), and the first at 300 yards (standing), and at 400 yards (lying). Each class must have a minimum of 25 points to qualify, and must make at least 25 points in the possible 50, in November of each year, and the "figure of merit" reached by allowing

For each man who has become a marksman.....	100
“ “ “ remaining in the 1st class.....	80
“ “ “ “ “ 2d “.....	80
“ “ “ “ “ 3d “.....	10
“ “ “ “ “ 4th “.....	0

These figures are aggregated and divided by the number on the muster rolls at the last annual inspection, and the result is the "figure of merit." During the past year reports were received from organizations numbering 17,628 men as against 17,628 on the rolls. The number of men who were given the number of marksman now entitled to wear the badge is 3,059 as against 2,126 in 1877, 918 in 1876 and 533 in 1875. It is noteworthy that the fourth-class men, those who never visit the ranges, number 8,049, or nearly half of the men enrolled. As light has participated with darkness, it is hardly surprising that the men who can readily call out their whole strength go to the top of the list and the full highest figures.

of merit are made by as many such companies as the Ninth Separate Company, practicing on the Whitehall Range, leading the list with 81.30 points per cent. 'The Forty-ninth' Regiment is the head of the regular regimental organizations, followed by the Twenty-third Regiment of Brooklyn and the Seventh of New York. The Fifth Separate Company foots the bill at 74.30 per cent. The companies are ranked on the company roll. It has been found that the bronze badge is highly valued by the National Guard, and the desire to possess it has induced many to learn to shoot who would not otherwise have done so. It is rare that a man who has once won the badge will not keep it, and many of the men go on to qualify on the first occasion almost invariably practice at their own expense until they can win it.

Gen. Wingate hits a vital point, and one which cannot be taken too closely to heart by militia officers anxious to show a good record, when he says: "The fundamental principle of our system of rifle practice is that accurate shooting is a matter of drill, which should be carried on in the armories during the drill season, the ranges being used to test the lessons previously taught." The report is very full on the subject of armory instruction and volley firing. This latter, as that which the National Guardsmen would probably use in case of civil disturbance, is valuable as tending to make the men steady and accustom them when in ranks to obey commands given by an officer in their rear, as they would have to do in service.

Camps of instruction are urged, and the question of how to best economize the time taken from business for rifle practice. During the year over 700,000 rounds of ball cartridge have been expended, and an annual allowance of sixty rounds per man and officer is recommended, or about 1,200,000 rounds for the total State Guard. The report closes with the full scores of the important military matches of the year, including the 100-yards, 200-yards, 300-yards, 400-yards, 500-yards, 600-yards, 700-yards, 800-yards, 900-yards, 1,000-yards, 1,200-yards, 1,400-yards, 1,600-yards, 1,800-yards, 2,000-yards, 2,200-yards, 2,400-yards, 2,600-yards, 2,800-yards, 3,000-yards, 3,200-yards, 3,400-yards, 3,600-yards, 3,800-yards, 4,000-yards, 4,200-yards, 4,400-yards, 4,600-yards, 4,800-yards, 5,000-yards, 5,200-yards, 5,400-yards, 5,600-yards, 5,800-yards, 6,000-yards, 6,200-yards, 6,400-yards, 6,600-yards, 6,800-yards, 7,000-yards, 7,200-yards, 7,400-yards, 7,600-yards, 7,800-yards, 8,000-yards, 8,200-yards, 8,400-yards, 8,600-yards, 8,800-yards, 9,000-yards, 9,200-yards, 9,400-yards, 9,600-yards, 9,800-yards, 10,000-yards, 10,200-yards, 10,400-yards, 10,600-yards, 10,800-yards, 11,000-yards, 11,200-yards, 11,400-yards, 11,600-yards, 11,800-yards, 12,000-yards, 12,200-yards, 12,400-yards, 12,600-yards, 12,800-yards, 13,000-yards, 13,200-yards, 13,400-yards, 13,600-yards, 13,800-yards, 14,000-yards, 14,200-yards, 14,400-yards, 14,600-yards, 14,800-yards, 15,000-yards, 15,200-yards, 15,400-yards, 15,600-yards, 15,800-yards, 16,000-yards, 16,200-yards, 16,400-yards, 16,600-yards, 16,800-yards, 17,000-yards, 17,200-yards, 17,400-yards, 17,600-yards, 17,800-yards, 18,000-yards, 18,200-yards, 18,400-yards, 18,600-yards, 18,800-yards, 19,000-yards, 19,200-yards, 19,400-yards, 19,600-yards, 19,800-yards, 20,000-yards, 20,200-yards, 20,400-yards, 20,600-yards, 20,800-yards, 21,000-yards, 21,200-yards, 21,400-yards, 21,600-yards, 21,800-yards, 22,000-yards, 22,200-yards, 22,400-yards, 22,600-yards, 22,800-yards, 23,000-yards, 23,200-yards, 23,400-yards, 23,600-yards, 23,800-yards, 24,000-yards, 24,200-yards, 24,400-yards, 24,600-yards, 24,800-yards, 25,000-yards, 25,200-yards, 25,400-yards, 25,600-yards, 25,800-yards, 26,000-yards, 26,200-yards, 26,400-yards, 26,600-yards, 26,800-yards, 27,000-yards, 27,200-yards, 27,400-yards, 27,600-yards, 27,800-yards, 28,000-yards, 28,200-yards, 28,400-yards, 28,600-yards, 28,800-yards, 29,000-yards, 29,200-yards, 29,400-yards, 29,600-yards, 29,800-yards, 30,000-yards, 30,200-yards, 30,400-yards, 30,600-yards, 30,800-yards, 31,000-yards, 31,200-yards, 31,400-yards, 31,600-yards, 31,800-yards, 32,000-yards, 32,200-yards, 32,400-yards, 32,600-yards, 32,800-yards, 33,000-yards, 33,200-yards, 33,400-yards, 33,600-yards, 33,800-yards, 34,000-yards, 34,200-yards, 34,400-yards, 34,600-yards, 34,800-yards, 35,000-yards, 35,200-yards, 35,400-yards, 35,600-yards, 35,800-yards, 36,000-yards, 36,200-yards, 36,400-yards, 36,600-yards, 36,800-yards, 37,000-yards, 37,200-yards, 37,400-yards, 37,600-yards, 37,800-yards, 38,000-yards, 38,200-yards, 38,400-yards, 38,600-yards, 38,800-yards, 39,000-yards, 39,200-yards, 39,400-yards, 39,600-yards, 39,800-yards, 40,000-yards, 40,200-yards, 40,400-yards, 40,600-yards, 40,800-yards, 41,000-yards, 41,200-yards, 41,400-yards, 41,600-yards, 41,800-yards, 42,000-yards, 42,200-yards, 42,400-yards, 42,600-yards, 42,800-yards, 43,000-yards, 43,200-yards, 43,400-yards, 43,600-yards, 43,800-yards, 44,000-yards, 44,200-yards, 44,400-yards, 44,600-yards, 44,800-yards, 45,000-yards, 45,200-yards, 45,400-yards, 45,600-yards, 45,800-yards, 46,000-yards, 46,200-yards, BIG SCORES.

EDITOR FOREST AND STREAM:

The fairness of your remarks in your issue of Nov. 25, on Mr. Partello's "big score," and on the desirability of keeping the degrading influence of betting as far aloof as possible from all rifle contests, will commend them, I am sure, to all your readers.

You are perfectly correct, also, in your statement that a match score ought to have precedence over a practice score of the same, or even a greater, number of points. But I cannot help thinking that you give a little more importance than it really deserves to Mr. Sumner's record on the first day of the so-called walk-over at Creedmoor, in classing it as a match score, thereby giving it the precedence over that of Mr. Partello.

In the first place, there was no match, in the sense that previous international contests have been matches—namely, as much as no competing team was actually present. It seems to me, therefore, that the conditions for making a great score were more than usually favorable on that occasion.

First, there was none of the excitement and trepidation incident to the great international matches hitherto shot on the same range.

Third, every member of each squad, especially the one in which Mr. Sumner shot, had the benefit of the experience, on matters pertaining to wind and elevation, of every other member, and of the coach besides. The members of this squad knew also from long practice together at "Walnut Hill," that each could rely implicitly on the honest judgment and watchful helpfulness of the other.

In short, it would be difficult to conceive of a practice score which could by any possibility be made under more favorable circumstances than the walk-over scores referred to.

I have no desire to underrate Mr. Sumner's score, by any means. It was a great score, and one that will not be equalled soon again. My object is to estimate it fairly, and at its true value. And in doing so, it seems to me unfair to class it among match scores in the same sense that Mr. Bruce and Mr. Blydenburg's scores would be classed in the great actual contest with the British team.

Indeed, in whatever light you view it, it seems evident that Mr. Sumner had more and better help from his surroundings in making 231 in the "walk-over" than Mr. Partello had in making his score of 234, with no one but a friend to coach him. Therefore, can we do otherwise than accord Mr. Partello's score, *de facto* and *de jure*, a higher rank than that of Mr. Sumner's. For the sameness I would consider Mr. Jackson's score of 230, made in an individual match, at Walnut Hill, Nov. 27, entitled to fully as much credit as Mr. Sumner's 231.

While speaking of Mr. Partello whom, by the way, I never saw), what remarkable scores he has made since assuming his new position and practicing a more approved method of loading!

Beginning with 224, his ten consecutive scores have been (as I learn from most reliable authority), as follows: 224, 214, 207, 214, 207, 217, 213, 218, 217, 213, making a total of 2,146, and an average of 214.6; or, taking the average of the best five, it is 218.

This is certainly a remarkable record for an amateur who had had very little previous practice, and it will bear comparison with that of any expert in the world.

There has been no parallel to such sudden and phenomenal excellence, except in the case of Mr. H. Jewell, of the American team, who, on assuming a more favorable position, astonished the ride world with some of the largest scores ever before known.

Dec. 17, 1878.

THE TEAM OF 1878.

COMMUNICATION READ TO THE AMERICAN TEAM AT THEIR MEETING, DEC. 17, 1878.

BOSTON, DEC. 12, 1878.

GENTLEMEN OF THE AMERICAN TEAM:
 We answered a call of the National Rifle Association to compete for places upon the American team, and shoot a walk-over for the Palma. We devoted our time and skill to sustain the dignity of that association, and are recognized as the American team of 1878. It has been the custom for the President of the N. R. A. to present the trophy to the captain of the team, and he (the captain) becomes the custodian of the trophy. It is with regret that I have to repeat to you that your captain does not know where the trophy is, as the customary presentation has been omitted.

I find that in the original conditions of the international long-range

ness of its fibres and their closeness one to another. Calcutta hollow bamboo, out of which all the best makers manufacture their rods, increases the density of its fibres and their closeness to each other from the centre to the circumference of the cane. Probably no wood does this in so great a degree, for, in less than one-third of an inch, what is almost pith becomes an enamel that often turns the edge of the best tool. Another peculiar feature of Calcutta bamboo is that one often finds several canes, equally strong and elastic and equally good for making rods, which vary much in density of structure. When I say much, I mean much in the eyes of a fine workman. The one thing useful in this matter is that these discrepancies must not happen in any two sections of the same rod. All the pieces used in any one rod must have a natural relation to each other in regard to comparative weight and elasticity. There must be a natural calibergency of all the sections. From this it follows that rods of the same calibre may be equally good in every respect and yet vary as much as seven per centum in weight. Possibly on the whole there is a slight percentage in favor of the quality of the heavier rods, or rather rods that weigh less than you expect them to ought to be scrutinized very carefully. A perfectly balanced rod will always seem lighter than rods of the same weight, that is not a natural calibergency but one who is used to handling fly-rods soon detects a lightness that is not due to delicate adjustment of proportions.

I said that section bamboo rods which weigh less than one expects them to weigh should be regarded with suspicion. Some manufacturers make the butts of their section bamboo either wholly or partly of cedar. This, of course, reduces the weight very materially, but I think it does so at the expense of perfect action. This is, in my opinion, no wood that works exactly right with bamboo. Another way of reducing the weight of section bamboo rods is by making them hollow, and still another by cutting off the hard part which is, of course, the part which should be most carefully preserved. To sum up in a few words, be extremely careful how you buy a very light section bamboo, and be still more careful whom you buy it from.

As regards to the weight of full s-lid metal reel-plates. The thickness of the metal is the main element, but of course the length and circumference have something to do with comparative weight. As a rule the circumference of the butt of a section bamboo rod is greater than that of a solid wood rod of the same calibre. Many think that this increased swell is made mainly for ornament; but besides adapting the rod to the hand, it helps to give that magnificent single action which every body in this country admires so much. The weight of the reel-plate, especially in single-handed rods, is by no means a disadvantage; in fact, it makes the rod seem lighter, because it balances the rod. I speak, of course, of those rods which have the reel below the casting hand. The close confirmation of the fact may be obtained by any one who will use an old-fashioned fly-rod, with the reel above the hand, for an hour, and then take up one made with the reel below. He will immediately perceive that the additional ounces really seem to deduct themselves from, instead of increasing, the weight of the rod.

The following is a tabulated statement of weights given me by Mr. Imbrie. They are, for the reasons which I hope I have made plain, only approximate:

Length of Rod.	Weight of Reel Plate.	Total Weight.
11 feet.....	1½ ounces.	9 ounces.
11½ feet.....	2.....	10.....
12 feet.....	2½.....	11.....
12½ feet.....	3.....	12.....
13 feet.....	3½.....	13.....
14 feet.....	4.....	14.....
15 feet.....	4½.....	15.....
16 feet.....	5.....	16.....
17 feet.....	5½.....	17.....
18 feet.....	6.....	18.....
19 feet.....	6½.....	19.....
20 feet.....	7.....	20.....

Pardon me for taking up so much of your space, but I must urge as my excuse that I believe that what so much interested me may prove equally interesting to some of your subscribers.

Yours most truly,
S.
[We feel greatly indebted to our correspondent for opening up this important subject in a logical and intelligent manner. The facts he gives, and his table of relative weights are not often found in the literature of angling and anglers' implements. We note with pleasure a progressive development in the art of rod-making, as in gun-making. A rod is no longer "a stick and string, with a fish at one end and a foot at the other."—ED. F. AND S.]

THE FISH MORTALITY IN THE GULF.

JACKSONVILLE, Fla., Dec. 26, 1878.

EDITOR FOREST AND STREAM:

In reply to your communication soliciting information regarding the mortality among the fish on the coast and ocean near the Keys, I can only say that from personal observation I have none to communicate. Through the public press I have noticed that fish have been dying in immense quantities for some time.

By some the mortality is attributed to the freshness of the water, as a consequence of the heavy rains of the past summer and autumn. In my opinion this explanation will not suffice, as the main outlets of Oceanoeber empty into the ocean north of Pavilion Key, and that sheephead, tarpon, channel bass and mullet visit and live in brookish and even fresh water. By some it has been attributed to volcanic action, and by others to the breaking forth of a subterranean stream, the waters of which are poisonous. One fact is positively known, and that is that fish in enormous quantities are dying over a large extent of the Gulf from the effects of something contained in the water—be that something deleterious gases, mineral substances held in solution, or fungi.

The fishing interest of Key West is an important one, for it supplies thousands with the means of subsistence, and the fish mortality should continue it will bring privation and suffering to many a family.

It appears to me that the existing mortality among the fish is a matter of scientific importance, and should be thoroughly investigated. I would suggest the advisability of the Revenue Department or the Smithsonian Institution sending a commissioner to investigate the cause of the mortality. The Government has a dispatch boat at Key West which could be spared for the purpose, and the expense would be trifling. As a matter of scientific interest, independent of its commercial importance, this subject demands investigation.

I remain yours truly,
C. I. KENWORTHY.
We warmly second Dr. Kenworthy's suggestion, and hope the Government will permit the use of facilities for investigation which it appears to have in readiness at Key West. We have already hinted that the use of fluorescein in those waters of Florida which empty into the Gulf might serve to indicate the origin of the boiling spring, whose discovery somewhere

off the Gulf Coast was announced two months ago. If such a volcanic spring exists, the poisoning of the water can easily be accounted for; though the remedy to prevent continued mortality of the fish is not so readily found. The locality of this boiling spring was given by the Key West Key of the Gulf, of November 6th, or thereabouts, as "along our bay coast from two to ten fathoms out." This is not very definite, but it is the most positive designation that we have seen. No authentic information seems to have been derived from any other source. The fishermen whose occupation has been cut short so suddenly should devote their leisure time to efforts to determine the locality of the obnoxious cause, wherever or whatever it is, and report at once to the revenue station at Key West, thereby seconding the efforts of the Government to remedy the evil. It will be a direct way of putting bread in the mouths of their now starving families. The polluting substance, whatever it may be, is evidently most subtle, for its influence is seen for a distance of 200 miles, dead fish covering the surface of the ocean wherever the eyes rest. One proof of its volcanic origin is that the water so polluted is of a "red brick color," at a distance of less than a mile from shore, while the interval of water along the land is natural in color and taste. Of its subaqueous origin there can be no doubt, but whether it has connection with waters in the interior of Florida by subterranean passages, or has a deeper and independent source and seat, is what we wish to know. The phenomenon in itself is not wonderful or incomprehensible, being only a reproduction of boiling springs in all parts of the globe, both in land and ocean. Off Matanzas there is an immense spring, not hot, but of clear, cold, pure water.

—See Bogardus' advertisement.

Game Bag and Gun.

GAME IN SEASON FOR DECEMBER

Moose, *Alces malchis*.
Elk, *Cervus canadensis*.
Hares, brown and gray.
Wild turkey, *Meleagris gallopavo*.
Woodcock, *Fulica americana*.
Muffed grouse or pheasant, *Bonasa umbellus*.

Red or Va. deer, *C. virginianus*.
Squirrels, red, black and gray.
Quail or partridge, *Orizix virginiana*.
Capped grouse or prairie chicken.
An Eastern species of
Caribou, *Tarandus americanus*.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacina* or *Silene* birds.

20 In New York State December is a close month for deer. Deer shooting is permitted only during the months of September, October and November. Sale of venison is permitted until January 1, and not after.

NEW SPORTSMAN'S HOUSE IN FLORIDA.—Capt. Wingate, of the Cincinnati Rifle Team, has opened a house in the Gulf Hammock, seven miles from the Beaver Creek station on the Ferdinand and Cedar Keys R. R. The house is 40x60, two stories high, with accommodations for thirty guests.

CANADA.—Montreal, Dec. 20.—Since the shooting began I have hunted over a large portion of the Province of Quebec that lies south of the river St. Lawrence, and have bagged but little game. Small game has been very scarce in this vicinity. In many places where last year I killed full bags of ruffed grouse, this season my dogs some days would not flush but one or two birds, and they were almost invariably old flocks. The great majority of the woods were swamps and as I had kept the streams at flood-tide, which spoiled the gun in a great measure with snipe and ducks. There was, however, early in the season an invasion by bears and wolves on some of our border settlements, near Thurst, a small village on the Ottawa. Twenty-two bears have been killed, and five of this number were brought to grief within the village limits, and one of them was, in fact, laid low in the doorway of the only hotel of the place. The writer, while crossing the river there one night, nearly ran afoul of one; but Mr. Bruin made his escape in the darkness. As yet there are but few deer here in our markets, though one party claims to have shot twenty near one camp on Bear Brook, Ont. The ground is now covered with a few inches of snow—enough for still hunting—and we may expect to see some caribou brought in by some of our sportsmen soon. I have information that a yard of caribou are within a short ride by rail from this city.

NEW JERSEY.—Madison, Dec. 23.—The gunning this season has been better than at any time for ten years. Under the West Jersey Game Protective Society, all the five counties comprising West Jersey (New Jersey South and West), have been stocked with North Carolina quails, and last winter was a favorable one to the young birds. Judge Miller, Secretary of the Game Protective Society, spent two days here this month and bagged 107 quails, which we think is good shooting. The Judge is one of our brightest lawyers and a good shot. He tells me that he killed 65 quails last winter in one day at Cape May Court House, Cape May Co. The beach near Cape May abounds in rabbits. The best ground for ducks is near Leeds Point (mentioned in your paper of Dec. 5), where Jorty Looy will meet parties at Albemarle and show them some rare sport at geese and ducks.

Yours,
MATLACK.
PENNSYLVANIA.—Williamsport, Lycoming Co., Dec. 19.—The hunting season just closed has been a very uninteresting one in this locality. Ruffed grouse, our principal game bird, contrary to all expectations, were extremely scarce. Having had very little tracking snow, and running deer with hounds being unlawful and generally discontinued, comparatively few deer have been killed in the country. Our hunters generally are dissatisfied with the present law, as the season, ending Dec. 15 practically prevents tracking in this latitude. The law will doubtless be broken more or less, and the question arises, "Will the man who hunts two weeks after season by that time not become reckless and demoralized enough to hunt even later?" The most of us think it would be wise to restore the gunning time to Jan. 1, and rather take off two, or even four, weeks from the beginning of the season.

BOROLINE.

SOUTH CAROLINA.—Charleston, Dec. 28.—Our sportsmen turned out en masse on Christmas Day, and several fine bags of woodcock, partridge and ducks were brought in. A large number of deer and turkey were also killed by different hunting parties from the city. Our party hunted about twenty miles from here, and on Christmas morning started ten deer in less than two hours' time, and although several shots were had, we succeeded in getting only a fine buck. Deer are more plentiful in some sections of this county this season than at any previous time since the war. During a recent freshet in the Santee Swamps, about forty miles from the city, a hunting party killed sixteen in one day's hunt. It is to be hoped that this wholesale slaughter will not be permitted again, or we shall soon be compelled to hunt rabbits for lack of larger game. During the recent critical illness of Gov. Hampton, an incident occurred which shows his intense fondness for hunting. It had been raining hard and continuously on the Friday preceding the day fixed for the amputation of his leg, and notwithstanding the depressing influence of the weather and the intense pain that he was suffering, he remarked to one of his friends present, "Well, as it has been raining so heavily all day, the deer will be driven out of the swamps, and it would be a famous day for hunting." We are happy to report the Governor's daily improvement, and trust that it will not be very long before he will again be able to indulge in that glorious sport of which he is so fond.

YESSOTS.

STRAINING AT GNATS.—It is rather remarkable that in such a sporting State as Tennessee there should be found persons narrow-minded enough to take the action below, yet such appears to be the case. In July last a number of gentlemen of Nashville, known as the Nashville Team, and comprised of members of the A. B. Fowler and Fowler and Fowler Clubs, accepted a challenge from a gun club in Murfreesboro to shoot them a match at glass balls. The match was shot, the Nashville team being defeated. Now the Sheriff of Rutherford County has served upon the gentlemen of Nashville notices of indictment before the criminal court at its next April session to answer to the charge of gaming. Our correspondent who gives these particulars says that he has made inquiries into the matter and finds that the sums did not gamble in the true sense of gambling; they shot for a sweepstakes, the proceeds of which were to defray expenses. If such interference on the part of the law continues it will naturally affect that class of sport out here. Glass ball shooting is quite an expensive amusement, and if sweepstakes are not allowed, so that a shooter might win a little from time to time, many of them would have to give up shooting.

J. D. H.

TENNESSEE.—Nashville, Dec. 26.—During Christmas week great quantities of game and fish were offered for sale by the different dealers in this city. In the market-house two bears were offered for sale besides a number of deer.

J. D. H.

GEORGIA.—Americus, Dec. 19.—Every year we take one big hunt—that is, turn out for a day to see how many birds we can kill. We do this only once a season, and then arrangements are made previously to prevent wasting birds. We took the hunt for this season on the 14th inst. and shot five dogs all on ground entirely new. To say we did poor shooting tells only the truth; poor as to quality, but for quantity rich in profusion. Sportsmen are said to be both punctual and truthful, and I must not go back on the profession. There was only one first-class shot among us, and he did worse than any. He was shooting Dittmar powder, and continued to do so, hopes and expectations were forced to attribute this as the cause. The first shot was a quail, the first trial of the powder. Perhaps his was not the right shot, or his shells were improperly loaded. We hope it was some such fault as this, and trust to succeed with it yet if we can get it to be quicker. It is too slow entirely. In watching my friend shoot I could absolutely see the shot strike the bird. Our greatest trouble has always been the smoke, the abundance of smoke spreading in a cloud before us just in time to obscure the birds both living and dead. In shooting ducks this evening, the atmosphere was light, and I was able to get in a second barrel a single time on account of the smoke. We bagged only 159 all told, every one quail, and every one honestly killed, for what lover of a good dog and fine gun would have a bird obtained otherwise? One thing that perhaps is peculiar to us is that we never shoot a hare. Experience has taught us that for true and handsome work by a dog in a country abundant in hares, the hare is the latter should never be shot, and consequently they soon will be pointed. Nothing is more provoking than to dismount to point and have scamper away from your approach "Molly cotton tail." It is a handsome shot, I admit, but my word for it, it spoils your dog.

SNOT.

MISSISSIPPI.—Corinth, Dec. 27.—Weather fearfully cold; two inches of snow on the ground. Have had part of one day in the field since my return from Nashville; made quite a fair bag of quail over my brace of pointers Kate and Maida. Have not been after ducks this winter; some reported in at this writing. Received a letter from Dr. Caldwell, of Texas, an immense pair of ears of a jackass rabbit run down with his pack of greyhounds. While showing the ears to some gentlemen in the street, a negro fellow saw them. "Great golly!" said he, "See dem yers—gwine rabbit hunting right off!"

GUYTON.

MONTANA.—Virginia City, Dec. 7.—Our hunting season is drawing to a close. It has been a prolific one, and many fine bags have been made. Geese and duck have mostly gone to their more southern winter quarters, but still there are a few to be found in the open marshes and streams. Chickens are very plentiful, but very wild and hard to approach; will not lie for food. I have just returned from a two days' shoot, bagging a fair bag of chickens and ducks topped off with three fine geese, very fat and weighing from twelve to fourteen pounds. I had fine sport at jack snipe for an hour or so one day this fall, killing 51 in the time. Something unusual in this country.

A. B. K.

SHELLS OF TWENTY GAUGE.—Editor Forest and Stream: I see in your issue of December 26, you say, "No shells of twenty gauge are made in this country." In this shell of twenty gauge are made in this country." In this shell of twenty gauge are made in this country." In this shell of twenty gauge are made in this country." In this shell of twenty gauge are made in this country.

Yours respectfully, HOOPER.
New York, Dec. 26. Winchester R. A. C.
RUST PREVENTER.—Schenectady, N. Y., Dec. 28.—In answer to the many inquiries which you have in reference to a rust preventer, allow me to state that in my opinion the most perfect one in existence is cosmoline. It can be obtained at any

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co's cartridges, No. 32 and 38, extra long, and No. 44, model 1875. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,
NEW HAVEN, CONN.

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London, who, it will be remembered, received the highest award at both Vienna and Philadelphia, have secured the most perfect machinery for Gun making ever set up in any one factory in England. The result is, that they can now turn out guns perfectly uniform in excellence, and in such increased quantity as to greatly reduce the cost.

Their specialties this year are their BEAUTIFUL TREBLE WEDGE GUNS, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has fine Damascus or Laminated Steel Barrels, Rebounding Bar Locks, Pistol Grip, Extension Rib, Lever Forepart, and Treble Bolt. It is a new thing to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience, or excellence in shooting, at the price of ordinary guns.

In addition to the Treble Wedge Guns, we have on hand about fifty of Webley's Breech-Loaders, Top and Side Lever, Single and Double Bolt, of various grades, which arrived last year, after the season was over. These guns we are rapidly closing out at greatly reduced prices. It is fair to say that as regards soundness, durability, and perfection in shooting, these guns are in no way inferior to the Treble Wedge Guns. Many of them are from 5½ to 11 lb. weight, and are splendid guns for duck shooting or for killing large game at long range.

The fifty guns mentioned above are all that now remain of a much larger number referred to by us in the FOREST AND STREAM in October, and as the season is now well advanced we will allow an additional discount upon the few that are left, provided they are ordered in December.

WEBLEY'S GUNS are remarkably Strong, Close Shooters, and do not need any additional choking.

THE LEROY SHOT AND LEAD MFG CO., NEW YORK.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.
The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we
would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.
No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the glass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.
Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with
25 in each barrel, and by having a rough surface strengthens the ball for ship-
ping, and prevents the glancing of shot, while the smooth ball has to be made so
thin to break successfully when hit that sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by
Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from
England, and used them myself, and sometimes would not find a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where clubs use them you can readily see which is the hardest shooting. It
matches reported in paper, saying Bogardus' rules and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and, further, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upped the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb.
1878, the Grand Prix de Casino, an objet d'art valued at
£100 and a money prize of £700, was competed for by
prize ever shot for at that time, was won by
sixty-six of the best shots of all nations, and won by
Mr. Cholmondeley Pannell, with a full-choke bore
Wedge-Fast Gun by W. W. Greener, killing 11 birds
out of 13 at 23 yards and 1 foot and 2 1/2 yards. He
also won the second event, killing 3 birds in succession
at 33 yards, making a total of 13 birds out of 50. This
is acknowledged to be the best shooting on record.
The winning gun at the choke-bore match, 1877, beat-
ing 17 guns by the best London makers, and winning
the silver cup, valued at 50 guineas, presented by Mr.
J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and
Mr. South for \$500 a side, South killing 88 birds out of 100, using one barrel only.
The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest
and most durable ever invented, and the most successful gun of the period. Patented in the United
States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OF IMITATIONS.

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, and therefore
would respectfully caution the dealers against laying in a stock of unsuitable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.
No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 500.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with
250 in each barrel, and by having a rough surface strengthens the ball for shipping,
never over three or four in a barrel. My traps are the best to practice front, and
where clubs use them you can readily see which is the hardest shooting. In
matches reported in paper, saying Bogardus traps and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and finally, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upheld the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

I Will Warrant my Balls Against Breakage by
Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from
England, and used them myself, and sometimes would have used them myself, and
never over three or four in a barrel. My traps are the best to practice front, and
where clubs use them you can readily see which is the hardest shooting. In
matches reported in paper, saying Bogardus traps and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and finally, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upheld the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2.

THE GEORGES' BANKS CODFISHERY.

SMITHSONIAN INSTITUTION,
Washington, D. C., Jan. 2, 1878.)

EDITOR FOREST AND STREAM:

The Georges' banks are extensive shoals situated to the east of Cape Cod, of which they appear to be an extension, which for forty years have been a favorite locality for the codfishermen of Cape Ann. About 130 vessels from Gloucester habitually frequent this region, and the trips are not discontinued even in the winter time. Many vessels venture there in January and February for the purpose of meeting the large schools of winter fish which, at that time, come up on the shoals to spawn. The Georges' fishery is the most hazardous branch of codfishing, and other ports which are not, like Gloucester, forearmed against loss of property and life by a complete system of mutual insurance, are unable to take part in it. One of the chief dangers is that of collision between the schooners. The fish are very apt to congregate in certain localities and the fishing vessels then find it necessary to anchor together. In case of a storm some of them are almost sure to drag their anchors and to collide with their neighbors. When two vessels come in contact destruction to both is almost certain. Under ordinary circumstances it would be very easy for the other vessels to get out of the way of those which are drifting toward them, but this is impossible when, as is usually the case, the decks are covered with ice and the ropes and sails are frozen stiff. The following poem, by Captain Joseph W. Collins, for forty years skipper of a Gloucester schooner, portrays in a vivid manner the incidents and the dangers of a winter trip to Georges'. Captain Collins has been very successful in preserving the peculiar dialect of the Cape Ann fishermen, and the verses have the salty flavor of a Northeastern gale:

WINTER FISHING.

When winter's cold and cheerless storms
Have covered earth with snow,
Forth from our harbor's shelter
Our little vessels go.
Their snow-white sails and trim-built hulls
Soon dot the distant main;
Like seagulls now, but some, alas!
May not return again.

For Georges' bank these venturesome men
Their little vessels steer;
Their courage falls not when the lead
Warns them the shoals are near.
But sailing on, they anchor now,
Their fortune for to try;
The fleet are anchored all around,
And some are very nigh.

Like dancing stars the twinkling lights
Do now appear to sight.
The watch is set; the rest turn in;
It is a pleasant night.

"Give me an early call, my boys,"
The skipper he doth say;
"The morning watch will note the time,
And my commands obey."

The morning dawned; the watch calls out:
"You'd best on deck repair;
The day has broke; 't is fish are here,
For I have caught a pair."
On deck they hurry now,
No time is to be lost,
For moderate days are very rare
Upon our wintry coast.

With varying fortune each man tries
His best to make a trip.
They bait their hooks, heave out their lines,
And pull with steady grip.
Thus pass long days upon the sea,
The trip is nearly done,
When o'er the ocean and the sky
An ominous change has come.

The murky clouds and bright halo,
Now circling round the sun,
And screaming sea birds, soaring high,
Foretell a coming storm.
With practiced eye they note the signs,
But still the risk they run;
For fish they must have, while they bite,
Whatever else may come.

'Tis night again; the scene has changed;
The wind's a howling blast.
The snow falls thick and blinding now,
And ice is making fast.
All hands on deck now shivering stand,
A good look out is kept,
While breaking waves, with giant force,
Come sweeping o'er the deck.

Each man for safety grasps a rope,
Or to the rigging clings,
While high above the tempest's roar
The skipper's voice loud rings:
"A light ahead! There's one adrift!
She's right astwart our bow.
Keep cool, my boys. The cable cut,
Run up the foresail now."

One vigorous blow; the cable parts,
But cold has done its work.
The sail, with ice and snow congealed,
Is firm as any rock.
Nearer the other vessel comes;
No power on earth can save
If once they strike, then all is o'er—
The sea will be their grave.

With firm set lips, and bated breath,
They watch her through the gloom.
They've done their best; the sail won't start,
And each expects his doom.
But, see! The other heaves a sail,
And now she shoots ahead.
"Thank God! We've saved," they all exclaim;
For even hope had fled.

That danger past, 'twas not alone,
There are others yet to meet;
For right to leeward, not far off,
Lay several of the fleet.
To the foresail, now, they all do spring,
And work with eager haste,
To clear the sail; for moments now
Too precious are to waste.

With heavy clubs they pound the ice;
The blows fall thick and fast.
The sail is clear; they hoist it up;
She's under way at last.
They keep her off to clear the fleet,
And run awhile southeast.
While day, now breaking through the gloom,
Lights up the dreary waste.

With joyful exclamation
They hail the coming light,
And well they may, for unto them
It's been a fearful night.
But others worse than they have fared,
For some lie in the deep—
Leaving widows, mothers, sisters—all
In sorrow for to weep.

Meanwhile the wind, which was northeast,
Has hailed to north or west;
They heave her to; all but the watch
Turn in to get some rest.
Toward night the wind does moderate;
The snow has ceased to fall;
The sea goes down, while, fore and aft,
Is heard the skipper's call—

"All hands, ahoy! Our reefs shake out.
Our course once more we'll shape
For old Cape Ann, where anxious friends
Our coming now await."
Once more in safety they arrive;
Kind friends their hands do seize.
"Right welcome home!" they all exclaim.
"How fared you in the breeze?"

I leave them now, while round the fire
Each one relates the tale
To listening friends; now wild it was
O'er Georges in the gale.
The fortunes thus of one I've traced,
Endeavoring for to show
The hardships great those do endure
Who winter fishing go.

And this, though sad, is not the worst,
For these are safe on shore,
While many a noble vessel
Has sunk to rise no more.
In vain they strove; in vain they tried;
O'erwhelmed by many a wave,
They sink at last; all are lost—
The ocean is their grave.

That this is true, let those attest
That now have come to mourn
For husbands, sons and brothers dear,
That nevermore return.
May God in boundless mercy
Bind up each bleeding heart
That from their dearest loved ones
Have thus been forced to part.

At Sea, on board Schooner *Marion*, Aug. 22, 1878.

J. W. COLLINS.

For Forest and Stream and Rod and Gun.

Moose and Cariboo Hunting in New Brunswick.

A FAVORITE pastime with English officers stationed in Canada is cariboo hunting, and in winter they endure many hardships on the march and in camp in pursuit of this noble game, frequently accompanied by their wives, who brave the discomforts of winter in the woods with a fortitude that may well be emulated by the ladies of the United States should they seek to rival "chaste Diana" and gain renown with gun or rod. In March 186-, N. and I arrived at the St. Louis Hotel (Quebec) where we fared sumptuously, and experienced much kindness from the Russells. After consulting "Bob" and laying in such supplies as were needed, we decided to go to Madawaska in New Brunswick to hunt for cariboo and moose. Traveling in Canada in winter is uncertain business. At St. Jean Chrysostom, a scattered French town on the Rivière du Loup R. R., we were snowed up, returning to Quebec the same night, having lost both time and patience. The following day, however, being still, the snow did not drift so badly, and we reached R. du Loup at evening, thence a night ride of 80 miles in a box sleigh brought us to Little Falls, Madawaska, where we found good accommodations at "Babin's." Little Falls is on the St. John's River, and boasts a hotel, store, and the remains of a block fort. On inquiring at Emerson's store for a suitable guide, we were advised to send for Albert, a French Canadian hunter and trapper, living nine miles up the Green River, a tributary of the St. Johns. The next day Albert presented himself and we arranged with him to act as guide, furnish sleds for our traps, etc., also to have his son Placide, a good hunter, accompany us, each at 80 cents per day. After a night in Albert's log cabin, which consisted of one room and a loft, the said room containing at night four boys, three girls, the old man and his wife, N. and myself, bed, loom, a cook stove, two dogs, and fleas *ad infinitum*, we were up and preparing for a tramp at an early hour. Our couch had been the floor of the cabin, stretched with our feet to the huge square stove. Our party left the clearing, taking the course of the Green River, and traveling on the ice, thus avoiding the deep snows of the forest. Albert and Placide each drew a light sled, while N. and myself burdened ourselves with snow-shoes, sticks and hunting pistols. At noon we had made nine miles with comparative ease, keeping on the river, except where open water, caused by the rapids, obliged us to take to the woods and cross short carries. Albert made frequent stops to inspect or gather up his steel traps set for beaver, otter, mink and sable. After a hasty lunch of white sausage, made of suet and flour, brought from home and a tin cup of hot tea, we renewed our march. Cariboo tracks were abundant, showing that the game had taken the river for the same reason as ourselves, viz., to avoid the deep snows in traveling, and signs were plenty, where they had approached the banks to browse on the moss pendant from the trees. Although we did not intend to hunt while on the march, the temptation to follow a fresh track was irresistible, and two of the party struck into the woods with the dog, a small black and white cur, whose appearance denoted anything but the hunter; however, Diamond proved himself a valuable assistant. The chase led N. and Placide about two miles from the river to the mountain whence they returned and joined us, without getting a shot or seeing the game. The old man who had gone further up the river soon returned and reported that having left the sled, with his gun strapped on it, he was coming down to us, when two cariboo appeared suddenly near him, and crossing the river disappeared in the forest. Later in the afternoon, as we were again on the march, being somewhat fatigued with the first tramp on snow-shoes, I was taking it easy, expecting to reach the camp before dark, when I heard a shot far away up river, and soon, to my great astonishment, a buck cariboo with splendid antlers, appeared coming round a point, and directly toward me, followed closely by the dog. With an awkward pacing gait he kept on until within about 200 yards, when seeing me he stopped, and tossing his head, stood staring at what was probably a new apparition to him. However, nothing daunted, he advanced slowly toward me, evidently intending to run the gauntlet in preference to taking to the deep snow of the woods. Unfortunately, my only weapon at hand was a large-sized cartridge pistol, with which I gave him two shots as he passed down the river, which only seemed to quicken his pace before he disappeared in the woods. Albert and Placide soon appeared coming down and seemed to take it as a good joke, that the buck had surprised them, and ran by so safely. Placide had hurriedly seized his gun from the sled, and fired at long range without effect. N., more lucky, had struck the game with a ball from his long hunting pistol. While

had peppered away without doing serious injury, traces of blood showed that he was hit by N.'s first shot, especially when he had stood for a moment gazing at me, and hesitating whether he should attempt to pass. It being nearly dark, and camp to be made, we followed the stream several miles until we reached a deserted lumber camp on the bank where a few minutes shovelling with our snow-shoes cleared a space inside for beds, and a rousing fire made all comfortable for the night. While regretting being taken off our guard by the buck, we decided to rest here, waiting for the following day. The morning broke bright, clear and cold, a splendid hunting day, the crisp snow glistening in the sun, while the smoke of the camp fire ascended in a straight column to the tops of the stately spruce and pine trees. Camp duties were soon done, and snow-shoes strapped on. I found my feet somewhat chafed by yesterday's march, and leg muscles stiff and lame. Snow-shooting for pleasure in clubs is very different from a day's march or hunt, waiting for a wide day in deep snow; then the things will chafe and the ankles get so that a few severe wrenches while pushing through thickets of spruce and undergrowth, climbing over fallen trees or sliding down steep banks. The usual protection for the feet is the Indian moccasin, over two pairs of thick woolen socks; but whatever is worn must be pliable. I have used the moose shanks stripped from the hind leg with the hair on, but found them too lacy, as they were, for the most comfortable thing I found to be moccasins, extemporized by cutting down a pair of ordinary rubber boots and removing the heels, these are sufficiently pliable, keep the feet dry, and are a perfect protection against the constant wear of the snow-shoe treads.

The following morning we left camp, and taking only our guns and a day's rations we followed the river on the ice down to the scene of yesterday's adventure with the buck and moose.

Placide, Albert and N. took the track of the wounded animal and followed into the forest, while I stationed myself on the bank for a chance shot in case the game sought to escape by taking to the ice. But although the track gave evidence that the buck was badly wounded he still had sufficient vitality to distance his pursuers although the snow was fully six feet deep. The caribou gets over deep snow which would impede a moose or a deer, and he goes with great ease. Owing to the great spread of his hoofs and to the placing the hind shanks horizontally on the snow he makes astonishing progress, sinking only a few inches where other animals wallow painfully. By this means the buck was able to escape and the hunters gave up the chase after a long and wearisome tramp, and returned to the river and then to camp. The hide of the caribou is covered with thick, short and wavy hair, except around the eyes, where the hair is long and coarse; in color it is patchy on the flanks, white and brown, changing to grayish white under the neck and belly.

The antlers are fine and beautifully curved. It is very rare to find both brow antlers perfectly developed. By comparison the antlers are finer than those of the European reindeer, an animal which it very much resembles, and the flesh sweet and juicy, with more flavor than venison and without the sticky toughness of a moose. The moose is a source of delicate stews, juicy steaks and toothsome marrow bones, in place of our luscious meagre fare of salt pork and hard bread, were doomed to be postponed for the present.

The caribou of Northern Maine, New Brunswick and Nova Scotia seems to be identical with the reindeer of Lapland, where it is almost invaluable to the natives, not only in traveling, but in furnishing the means of subsistence. It yet remains for some enterprising hunter to send the first horses of America by appearing in the Central Park with a four-in-hand harness, a sledge decorated with wolf, moose and caribou robes.

For four days, during which we lived in a deserted lumber camp, the rain fell persistently. Hunting in such weather is out of the question; snow-shoes sink deep in the yielding snow and lose their elasticity, and, becoming clogged with snow, make traveling in the woods laborious and fatiguing. Nevertheless, N. and Placide made short rambles into the woods in search of signs of a moose yard ravages, in the Canadian French, showing where the game had browsed during the winter on spruce or moose-wood branches, breaking the limbs and stripping off the buds for food. Meanwhile Albert and I supplied the camp with firewood, caught trout through the ice in the Green River with a few rods of camp, or shot partridges and white rabbits, such were abundant. As the weather became cold, the sky cleared, and the snow, by freezing, became so stiff as to bear the weight of a man without snow-shoes. Taking only our guns, snow-shoes and a day's rations, with a sled and ax, we left the camp one bright morning, and in single file started into the woods, leaving the river and ascending to the high ground. Whether we knew of the existence of a moose yard or not, before noon the dog Diamond showed by his uneasiness and occasional sniffing in certain directions that we were near the game. Advancing with great caution, we followed the lead of our sagacious dog, peering right and left through the dense spruce thickets for a glimpse of a moose. At first the only signs were those made months before by the moose in browsing on the low shrubs, then a faint depression in the snow showed where he had stood, or indicated the form of a bed was visible beneath some large spruce tree; the tracks became more distinct as we neared the yard. Many have an idea that a moose-yard is beaten down like a pen, but none that I have seen have that appearance. There are deep holes in the snow where the heavy animals sink, in traveling, to the belly, and furrows plowed through by wallowing. Soon the barking of the dog was heard, and darting forward saw two large black objects fast disappearing through the thick spruce. The snow was trampled and discolored by the moose, as usual when fresh started. Now comes the chase! plunging, tripping, catching snow-shoes in twigs, falling and wrenching of ankles, up and on again. The hunting party is scattered here and there, as each takes his own course. A momentary glimpse is all that one may have before the great moose speeds away through the forest to be seen no more; but a quick hand with the rifle can send a bullet into the plunging brute, if no envious twig or treacherous bole stops the hunter in his haste and brings him headlong in the snow, where he buries his rifle arm deep and twists his snow-shoe things till he cries out with agony.

It is generally supposed that to catch a moose in the snow is an easy matter. This may be so in some cases, but usually the moose gives the hunters a long chase, in which all one's muscles persevere until the animal is nearly exhausted, before the game is run down and receives his death shot. Unless there is a depth of from six to eight feet of snow, a moose is rarely caught by running. With less snow still hunting must be resorted to, which to me is the most sportsmanlike and ex-

citing method of hunting any game, and requires the greatest skill, caution and patience if one would shoot a moose by still hunting within a few rods of the thicket where I knew them to be standing, they have started and crashed away through the spruces without a chance of my seeing them, and at such a pace as made pursuit useless. But besides the patience required in still hunting, the exposure of night damps in the snow, wet clothing and the fatiguing tramps through the forests, make it the most difficult and hazardous of sporting, but one that well repays the hunter who is willing to endure so much for the shot of the largest and most wary of American game animals—the moose.

The term moose-yard, however it originated, has given an erroneous impression to those who have never hunted this animal in winter. A yard conveys the idea of something fenced in, and in quite recent accounts the preposterous story is still repeated that moose are accustomed to trample down the snow over a large area quite smooth and level, within the walls of which they can move and feed unmolested. Having invaded a score of so-called moose-yards in deep snow, I have yet to see more than a single track made by one moose, but used, perhaps, by several, as they move here and there from tree to tree, breaking down or ravaging, as the Canadian hunters term it, the limbs and twigs on which they browse. The flavor of the spruce on which they feed impregnates the flesh, and the smooth coat has a mass of green pulverized spruce which gives it a greenish color.

But to return to the chase. I soon found myself gaining on the huge animal and expecting every moment to get a shot; but still, in spite of the deep snow, he made good progress, though often floundering badly.

As this is a straight-away chase, a side shot is impossible, so, trusting to luck, I pitched up my rifle and aimed at the exposed flank. Still on he goes, but blood in the snow shows that the bullet has gone home; still on, now concealed by the low spruce or thickets of spruce, the huge animal is straining every nerve, but in vain. He is evidently losing strength, and must soon yield.

It is no easy matter to overtake a wounded moose. Snow-shoes are invariably treacherous, and doubly so when following moose tracks, into which they have a most aggravating habit of sliding, accompanied with severe wrenching of ankles, and occasional plunges into holes, still on, now concealed by the low spruce or thickets of spruce, the huge animal is straining every nerve, but in vain. He is evidently losing strength, and must soon yield.

Meanwhile N. had taken the track of another moose, which, after a long chase, he overtook and killed with his twelve-inch hunting pistol. This was a young bull, and still carried horns, one short one and the stump of another which had been broken off.

Having now secured the moose meat, hides and heads, the day was nearly spent and the question of making a camp was considered.

Old Albert announced that we were too far from the river camp to think of reaching it before dark; besides, we should require all the following day to haul our game out to the river; so, selecting a site well protected by spruce and pine timber, we soon cleared a space in the snow—using our snow-shoes as shovels—large enough to allow four persons lying side by side. The bottom and sides of the camp were then lined with spruce twigs, and a fire built at the end, toward which we turned our feet; then, after a hearty meal of moose meat broiled on sticks and fried moose liver, with a pull at a flask of Dominion whisky, we were glad to seek rest after a fatiguing day.

To say that one is comfortable lying in a snow hole on branches, with wet feet, eyes inflamed with smoke, a chilled spine, feet chafed by snow-shoeing, and aching bones, would be far from the truth; but we slept and wakened at intervals, and although the fire had died out under the snow, we rose refreshed and ready for the hardest day's work yet to come.

Any hunter who has helped to haul a moose out of the woods will admit that the work is beyond question the most laborious ever undertaken by hunters. A quarter of moose meat, weighing about 250 pounds, is placed on the hide and dragged over the snow, with many obstructions, accidents and delays, at a rate of perhaps one-half mile an hour, so that hauling one of the game is the hardest and most disagreeable duty, and explains the fact that so many hunters leave the greater part of the carcass in the woods to spoil, and take only the hide and the meat they want for present use.

It is to be hoped that the protection of this noble game will be thorough, and that the wardens will allow no violation of the provisions of the new laws in Moose and the Provinces. The laws have been wisely designed to allow the moose several years of comparative rest and an opportunity to rear their young in peace, and thereby preserve this noblest of American game for future generations of sportsmen. If this is not done their total extermination in the Eastern States and Canada is only a question of a few years, and our descendants will form their idea of live moose from the caricatures preserved in our museums of natural history.

With considerable trouble we saved all our game, and had the satisfaction of sharing with friends at home the trophies of our moose hunt in New Brunswick.

JOHN AYERT, Sec. Blooming Grove Park Ass'n.

For Forest and Stream and Rod and Gun. DUCK SHOOTING ON THE CHOPTANK RIVER, MARYLAND.

ABOUT the first of March last I visited the Choptank River, expecting a grand time shooting ducks. I did not take my decoys with me on so long a trip, and found it impossible to obtain any in that section, and consequently found it rather tame sport. Although that was a failure, I had a good time generally, and was well entertained and cared for at a fine old mansion, beautifully located by this fine water. The weather was as warm as any May day up North. Having in contemplation a ducking excursion down the Potomac from Washington with a gentleman of that city, who would furnish all the decoys, etc., necessary for success if we should find any game in that section, I took the small, comfortable steamer at Cambridge, Md., for Baltimore at three o'clock p. m., landing there early the following morning.

About five miles away from on the Choptank River, I began to see ducks, and until dark they kept rising in immense flocks in front and on both sides of the steamer, only to soon settle down again near some point, close by, and then rise again of other ducks. It was a fine sight, and I did not hear a gun-shot on the trip. The points for decoy shooting that I passed were grand, and I could have had excellent sport if I had had my decoys and a house to put up at, as I could have left the steamer at any of the stopping places, which were frequent. The water is very shallow on the broad flats on both sides of the river, which is very wide here. Cambridge is the mouth of the Choptank Creek. We had to go up this narrow stream about seven miles to Easton, Md., after dark. Easton, I believe, is the terminus of the steamer's route from Baltimore. The country on either side of the Choptank River from Fredhaven Creek to Cambridge is thinly settled, and I learned that there was very little shooting done in this section. Gunners from Philadelphia and Baltimore go mostly to the Chesapeake for ducks and geese. I doubt if there is a brace-hander used by any of the residents in this vicinity, and I was surprised to find ducks so plentiful here, when most of the favorite resorts—Currituck and the St. Lawrence River and bays in Canada—were so poorly represented by the usual flights last fall and winter. I found the captain of this steamer very sociable, and capable of giving the best of information to any one intending visiting this locality as to where to go and also the best time for a good day or week's sport with ducks and geese. I was informed by a resident that the latter game were rather plenty just then in the small bays letting out from the river. The prices are very moderate in Easton and on the steamers, and fare good enough. The train leaving New York at twelve o'clock at night arrives at Easton, Md., at about three p. m. next day; and at Easton I saw, at very low prices, can be had to transport any party to any point on the Choptank River; a distance overland to Cambridge about twenty miles, and roads excellent in March, and I should judge at all seasons of the year. It would not be a difficult job to get all the information, as to where to stop and when to be on hand for the best of duck shooting in that section from the proprietor of the only hotel in Easton. I found him a perfect gentleman and willing to aid any stranger. A small duck boat could be secured and man also at Easton, and the trip of a season could be made with a few days' sport with ducks and geese on the route, and by that you would have your sport for I think there are few of them, and poor at that, in the vicinity of the best shooting.

There are any amount of good points here, and at no rental, I was informed; but you must go prepared to rough it and take plain fare, which will cost you only a trifle.

Duck shooting is uncertain sport at best. Any one that has been out with success of rods and breadbills at times has been fortunate and knew his customers well, for to-day the main flocks may be feeding several miles from where you saw them yesterday. Any change of direction of wind may send them to other localities to feed, but generally within a few miles you will find them congregated, when a good day's sport may be had with certainty.

I was in Canada in October last duck shooting, and, although I saw thousands of rods and breadbills at times every day on the wing or feeding, I could not get near them, do my best. The wind was from southeast, finally it shifted to northeast and blew a gale. The immense flocks were feeding just in front of the house I was stopping at and close to shore, and they had it all their own way, as not a gun was fired on that day, Sunday. I was restless, and finally took my setter to a short stretch of hard land close by and screened myself behind a few stones, where I kept my dog retrieving a ball which I threw along the shore. I did this about twenty minutes, and had an immense flock, covering more than an acre of water, close up to me, so that I could have slain them with a club as they stretched their long necks and looked so wild, almost at my feet. It was a trying time, I assure you. I quietly stole away and patiently waited till next morning. The wind had died away during the night, and after an hour's work nearly weary, when I kept my dog I only got one shot, and secured nine fine railheads. They took another favorable place to feed that day, and I had to hunt them up again. To learn their ways it requires considerable time and patience, also their favorite feeding places in every bay or river that one may visit.

LEATHER STOCKING.

For Forest and Stream and Rod and Gun. LAKE INNISCANNING.

NOT enjoying my usual good health, owing to too close office confinement, I was obliged to take a holiday to recruit. An old school chum of mine, who is engaged in the lumber business on the upper Ottawa, invited me to accompany him up to Lake Inniscanning, the source of the Ottawa River, where he was taking out a square timber raft. I accepted the invitation, and left home on the 23d of September, and we reached our destination after six days' traveling. The first three were done by steam and the last three in our own boats, loaded with the men's kits and rowed, towed and portaged by the gay and light-hearted French Canadian shanty-men, who seem not to have a care in the world to shadow their jolly faces except a passing thought of wives or sweethearts left at home and whom they will not see for seven or eight months to come. The first few days after my arrival were employed in fitting up a thirty-foot river boat for the navigation of the lake, while my chum busied himself in planting the shanties for the winter's work. The lake is seventy-five miles long, with an average breadth of five miles, and, having plenty of time to do the trip, we started, short-handed, for the head of the lake, trusting to wind for locomotion. We did not reach the head until the third day, owing to contrary winds, but were fully recompensed for our long up trip by the abundance of geese and ducks we found there. At the head of the lake there is nine or ten miles of low marsh and rice beds, affording good feeding grounds for water-fowl, and this seems to be their favorite resting-place on their journey from the far northern waters to their southern winter quarters. The two or three hours from daylight each morning were spent at the wild geese, which would about that time mass themselves in V-shaped companies and start on their journey south, leaving behind them many companions of their previous day's flight to swell the number of our slain. Nine A. M. generally found us with ten or twelve brace each, and our stomachs

howling for breakfast, which we always had ready, having left a man in camp for that purpose.

After breakfast we smoked our pipes and loafed around camp for two or three hours; then, taking a bite, would for the remainder of the day harass the ducks which were not in such a hurry south as their larger brethren. For about a week each year this seems to be their favorite haunt, affording them rest and food on their journey southward. When not disturbed they stay a day or two, but as they are coming and going by independent flocks there are lots always, and, although driven away in the morning, others will come at night, and on quiet nights their incessant squawking are almost deafening. We spent four days after this fashion, and on the fourth morning, when the sun shined as brightly as ducks, when, a good north breeze rising, we packed up and started south, doing the seventy-five miles in eight hours. We gave our French Canadian some good feeds of game, dished up "a la Slaughter," which was a welcome relief to the monotony of salt pork.

After lounging around the shanty for a day or two I expressed a wish to have a shot at a moose, which I understood was plentiful in that vicinity. So the shanty boss engaged to pilot me to a small lake about seven miles inland and covering about twenty acres, where, he said, there were moose. So I shouldered my Ballard and followed the heels of my guide. We tramped around the lake for some time, but without success, although the shore was tracked like a cattle-yard. The lake at one point becomes quite narrow, and from the well-beaten path leading from the water we concluded it was a favorable place for them. So, at a short distance from here, we so started a ride camp and returned to the shanty. The next day I packed up my blankets and some provisions and started alone for my hunting-ground. I tramped around until dark with no success, when I rolled myself up in my blankets and went to sleep to dream of moose.

At the first peep of dawn I was on my feet and took up the most favorable position on the runway, thinking that if any were moving they would come my way, as it was a well-trodden runway and the running season had commenced.

After keeping quiet for about half an hour, I began to think that moose hunting wasn't what it is cracked up to be, when my ears were saluted with the sound of a tremendous splashing in the lake and at the narrows; so I made for that point as fast as I could quietly, and there, swimming straight for me, were three moose—an old cow leading, a young cow calf next, and an old bull bringing up the rear. I was about twenty paces from the leading cow, when I sent a ball through her head, leaving her splashing in the water with her death kicks. I had reloaded before the astonished calf thought of retreating, and it became an easy victim to my second shot. By the time I had again reloaded, the bull had reached the opposite side, about sixty paces off, and as he showed a good length of back in ascending the bank, I took a good aim and pulled, but seemingly without effect. I, however, had two moose that I was sure of, but I was wanting a pair of horns as trophies of my sport; so I went around the lake to see if the bull would grant me a second interview, and upon examining the tracks leading out of the water, I saw by the blood that my last shot had taken effect, and upon following the track for about half a mile I found him lying dead. The bull had entered midway down the bank, and passing through with a forward inclination, had touched a vital part. The horns were very large, being 6 ft. 8 in. at the widest and 4 ft. 10 in. at the tip.

My chum received news from home that imposed his immediate departure, and I was unable to have any more sport of this kind, of which I am sure there is abundance. We started down in a small bark canoe that was barely large enough to hold us and our valises, and which led me to think that the Yankee's description of a bark canoe was very appropriate, when he says: "They are made of a little bit of bark and a few pieces stuck together with gum, and when you get in you must have your hands and feet very close to the middle and be careful in passing your quilt from one cheek to the other."

I, however, arrived safely home, after spending the most enjoyable month of my existence.

OSHAWA.

NOTES OF AN OLD-TIME TRAMP.

I AM not prepared to state off-hand what my grandmother's grandfather knew about fishing, but in looking over what he entitled "Journal of My Proceedings in My Excursion in the Country," I find here and there remarks which show that he was as fond of fishing as of fish, and I will quote one or two extracts from the worthy old gentleman's diary. He begins thus:

"July 20, 1763.—In the morning took my departure from Philadelphia. Breakfasted at Copeland's, in Chester, where I could not help remarking the luxury of the country—six or eight lubberly country laborers sitting down to tea and bread and butter."

What would the farm hands of to-day say about such luxury? Not a word said as to the toothsome pig or the stiff though warm-hearted fried potato. Mr. Benjamin Milfin seems to have been an early riser or he would hardly have thought of riding horseback from Philadelphia to Chester before breakfast. I do not intend to follow him on his journey, except to pick out an occasional sentence that may interest you. He no doubt knew how to ride, for he "bated at Grubb's and dined at Wilmington," "bated and refreshed at Newport," and from thence reached Oglestow, where he writes: "I thought to have pushed on to the head of Elk, but the sun being down, myself and horse fatigued, and being a stranger to the road, and Ogle telling me he still entertained travelers, concluded to lodge there, but could get neither punch nor wine, but good oats and hay for my horse, which made amends, as I took on it the most material affair in traveling to take good care of one's horse." There is traveling for you—neither punch nor wine! Think of that! Good oats and hay, though; take good care of your horse; "bate and refresh!" That refresh sounds comfortable. Fancy our worthy traveler spinning along in the limit of express. Wilmington—ten minutes for refreshment! So, we wish, glass of beer, and here is to smoking car. Where are we now? Back to the town! Our manuscript says Baltimore had one grist mill and another a-building, and contained about 150 houses, with thirty or forty going up. "It seems to increase very fast."

Let us get back to our journey. The journal says:

"27th.—Set off early, and breakfasted at Hollingsworth's, the head of Elk, could so because the tide comes no higher; a pleasant, cool, agreeable situation, the house but mean, but good entertainment. Here I fell in with Mr. Keyes, Clerk of the Court, who was cheerful and agreeable, and we walked me thither. Refreshed on our way at Curry's, the head of N. E., where we had a prospect of Charlestown; distance, about four miles. Here I understood that one Hank Rudolph put up about 400 lbs. of herrings last season, which he sold at twenty shillings a barrel, and expects to put up 500 lbs. next season. They say they are little inferior to mackerel, and fetch in the West Indies almost as much."

What our friends Pomeroy and Seneca know about the herring fishery at Charlestown. Our traveler, who reached this town—of which I will say a word, by the way, he seems to have formed a poor opinion—(at 11 A. M., says: "I set off from thence about 5 o'clock P. M., and arrived at Susquehanna a little before sunset; but seeing a fine dish of the largest old wives, and best that I ever eat, did not choose to pass by such a delicious repast, but made a hearty meal on them, with Indian Johnny cake. The people here call them sun perch, and catch what quantities they please in a very short time. But we were badly off for drink, the house affording nothing but rum, of which I ordered a bowl of toddy, but could not drink but very little." Crossing the Susquehanna after dark, he went two miles on, reaching the "Three Turns" about 8 P. M. "The house afforded wine, of which I had a lullaby, and went to bed." This constant reference to wine, or the want of it—for the ingenious narrator seems to have thought the water sufficiently taxed to support the "delicious" sun perch, without man's taking any of it—sounds odd nowadays; but that was much more of a wine drinking age than this. The rum hints at the West India trade. You would be amused at the descriptions of Baltimore town and Annapolis, but they have nothing to do with either the forest or the stream.

While at Annapolis, however, on his way home, Aug. 2, he went "with Jones Keane to view his printing office," and "took a walk in the garden, where, among other things, observed a tree, which he calls a catclaw tree, planted about ten years ago, and is now about nine inches thick, about twenty-five feet high, the leaves as large as the water beech, and grows in regular, beautiful order, much like the English elm." I wonder where Green's tree is now. It sounds to me more like an alantus tree. The method of leaving Annapolis may interest some of your boating readers.

Aug. 3.—Got up very early; had my horse bated and taken down to the dock, where the boatman was obliged to stay till one side of her was graved, and about 9 o'clock A. M. set off, the wind blowing hard at N. W. About two miles down the river the fore sheet tore away the bolt rope from the sail, which obliged us to come back, unbend and take it to a sailmaker's—perhaps for the best, as the wind was very high and a great sea would have run in crossing the bay, which might have endangered our lives in an open boat. About 3 P. M. set again on our way, and crossed the bar at Hutchinson, on Kent Island, but the wind being right down the bay, and our boat turning badly to windward, was till dusk before we could reach a ferry, three miles below, kept by one Capt. Thomas Kimmner, an old skipper of mine, where I took up my lodging. From Annapolis across the bay is computed about fourteen miles, four of which is the river to the entrance of the bay. The price of ferrage for man and horse is 12 s. There are several ferries, and the sheep boats on both sides, so that a traveler need not wait long at any time for a passage. We must remember this. Twelve and six will take a man and horse by boat from Annapolis to Kent Island. On the 4th, passing through "Queenstown, the county town of Queen Anne's, about half-past ten," our traveler says "there are about five or six dwelling houses in it, besides the prison and court-house, built, as appears by the date in the table end, in 1768. The only good dwelling-house is the tavern, which I did not go to, and a new and large building, brick." What sort of a place is Queen Anne's Court House now? Is the building of 1763 in existence yet? Only five or six dwellings besides the prison! Nice place that last, no doubt. Still, he prefers the tavern.

He got to Flowers', "said to be the best house on the road, at 4 P. M., and, seeing they had no hay, turned my horse out in the pasture, and had hardly got in the house before an impatient planter, who I saw I was not to go to, and a large building, brick." What sort of a place is Queen Anne's Court House now? Is the building of 1763 in existence yet? Only five or six dwellings besides the prison! Nice place that last, no doubt. Still, he prefers the tavern.

He got to Flowers', "said to be the best house on the road, at 4 P. M., and, seeing they had no hay, turned my horse out in the pasture, and had hardly got in the house before an impatient planter, who I saw I was not to go to, and a large building, brick." What sort of a place is Queen Anne's Court House now? Is the building of 1763 in existence yet? Only five or six dwellings besides the prison! Nice place that last, no doubt. Still, he prefers the tavern.

7th.—A sudden fit having taken V. L. to go to Philadelphia, after breakfast borrowed T. Parkes' chair, and went with my tea to Little Creek Landing, and put it on board Lock's shallop. Here I came across a hawk's-bill turtle which I bought and likewise put on board of Lock. Having enjoyed his fish while traveling, it would not do to come home empty-handed to talk of these delightful messes, but tea and turtle must go by shallop to the city house. No express in these days. "To those who are fond of horseback travel the last day's record of the home journey will be interesting; and, by the way, let me here ask something: Why do not some of the many people who are always seeking new ways of amusing themselves, take to the old-fashioned horseback riding? I mean to take horse, saddle bags and gun, if the latter is wanted, and take a good long journey, enjoying the thing much in the same way as once a pedestrian excursion. I travel hundreds of miles each year, and am as much as ever very pleasant. Let us see how our little friend traveled and took care of his horse."

"14th.—Intending to rise very early" [he was at Jacquet's, formerly Witherspoon's, twenty-eight miles from Dover] "this morning, the moon shining bright mistook it for daylight. Arose and dressed, but after rousing the family and getting a light found was not two o'clock. Bated and set off three. Bated and refreshed seven miles from Jacquet's and breakfasted at the Red Lion, eight miles further; arrived at Christen about 10 A. M.; bated and refreshed, it being eleven miles from the Red Lion." This was doing very well for a quiet middle-aged traveler—twenty-six miles horseback by 10 A. M. "Set off at twelve, bated and refreshed at Grubb's and got to Chester about three; dined at Copeland's, and at five

set off. Bated and refreshed at Darby, and about nine o'clock" [did what I wish all readers of FOREST AND STREAM who fish, sail or ride may do] "arrived at my wished-for port, where, through mercy, I found my family well, myself enjoying a better state of health than when I set off." Let us hope we did not mar this by too much turtle. C. C. Philadelphia, Nov. 25, 1878.

For Forest and Stream and Rod and Gun.
THE OJAI VALLEY, CAL.

SOME six or more weeks ago my wanderings carried me into one of the prettiest little nooks in all California. The Ojai Valley—or valleys rather, for there are two of them—commences about a dozen miles directly east of San Buena Ventura, on the Pacific coast. It is of the lower valley that I wish to speak. It is about six miles long and two wide. Through it run two streams that never fall even in the driest season, while during the rains they are increased to two or three times the number. A portion of the valley, almost one mile wide by two in length, is almost as level as a floor, and is filled with grand old live and white oak trees, giving the appearance of some old and well-cared-for park. The whole valley is a Colorado park on a very small scale. On all sides rise the mountains like the sides of a Roman amphitheatre. With every hour's motion of the sun, with every passing cloud, these mountains have a different color, tone and shade. Sometimes they are covered with heavy, threatening storm clouds, and sometimes they are bathed in the most tender and delicate shades of green. But it is at sunset that they are most strikingly beautiful. While the whole west is filled with light, liquid, golden light, the mountains at the western end are in dark shade, but those at the eastern end are covered with a brilliant amethyst. Often have I watched the sunsets, and thought them unequalled by any I had seen elsewhere.

A true sportsman should be a lover of nature; but in this happy valley he is not confined to nature in her unadorned forms. Game abounds in plenty at the proper season. In the Ventura River some fine trout are caught. Unfortunately my visit was made just before the close of the season. When the water grows low, as it does by August, the fish retreat far up the streams to the shades of the narrow canyons to enjoy the cooler waters nearer their source. Owing to this fact I took but few fish. But the quails—the pretty, lively, active little quails—how they did abound! In the morning or evening they might be found in immense numbers almost anywhere along the base of the foothills, or at mid-day by the streams, to which they go with the utmost regularity. The middle of the day was usually so hot for walking, and so my friend D. (one of the best companions on a hunt or anywhere else that I have ever had the good fortune to meet) and myself used to go out about half-past three in the afternoon and return about half-past five with well-filled bags. One day we each had twenty; another day I had twenty-two and D. not quite so many. We had quail to our heart's content. Just as I was going away English spurge began to make their appearance on the lagunas. Rabbits were abundant enough.

I am not a good shot with a rifle, but had I followed myself a week more in the valley I would have tried my hand on deer. Just as I was packing up word came to me that the deer were beginning to come into the valley in considerable numbers. One young man killed two in one morning within two miles of where I stayed. As I drove away, "Nick," an Italian, a good hunter, called to me as I passed him on the road, "Oh, you make mistake; you got too soon; deer come plenty now." There is a hotel and a boarding-house in the little village of Nordhoff, about the middle of the valley, at either of which one will be comfortably entertained.

It was with a real reluctance that I packed my trunk, put up my gun and turned my face from the Ojai. Pleasant hunts with my good friend; pleasant social evenings and discussions with the hotel and other guests at McKie's boarding house, and a new measure of vigor to combine to give the valley a place among my happy remembrances. Los Angeles, Cal., Nov. 23, 1878. C. B.

Fish Culture.

FISH BREEDING IN CANADA.—In his report on Fish Breeding in the Dominion of Canada, 1877, Mr. Samuel Wilmot, Esq., has prepared a very elaborate document which may well serve as a model of such reports. The particular character of the Canadian reports is found in the extended and circumstantial statistics gathered from every part of the broad field and so systematically arranged as to afford a clear and comprehensive exhibit of the condition of affairs. If the several reports of our own States do not show the work of the commissioners with the same exactness of figures, they are nevertheless scientifically valuable because of their discussion of the various fish cultural methods in use, the natural history of the subject and its scientific bearings.

The report now before us shows the work of the previous year to have been quite in advance of that of former years, both in plants and distributions. The total numbers of fry distributed in the spring of 1877, from the seven establishments of Bedford, Miramichi, Restigouche, Gaspe, Tadoussac, Sandwich and Newcastle, were: salmon, 5,451,000; speckled trout, 99,000; California salmon, 7,000; whitefish, 7,050,000; or a total of over 13,500,000. The eggs laid down in the fall of the same year were: Salmon, 6,004,000; salmon trout, 1,000,000; speckled trout, 150,000; California salmon, 40,000 whitefish, 23,500,000, or a total of 30,604,000.

The educational value of the report is much enhanced by a series of pictorial illustrations, comprising eleven drawings, representing different views of the Newcastle Government fish breeding institution and of the apparatus there in use, the whole delineating as minutely as possible the entire process of the work. There are also accurate drawings of the salmon from the first development of the head in the ovum to fully-grown fish as it appears at the spawning season. The Miramichi

ch establishment is also represented in a large illustration, accompanying which is a special report. The document contains many facts of interest, and we shall from time to time avail ourselves of the fund of information it contains and lay the same before our readers.

Abstract of the Biennial Report of the Fish Commissioners of the State of Vermont, for 1877-8.

IN their last report, now before us, the Vermont Commissioners join the Massachusetts Commissioners in strongly condemning the selfish and unjust attitude assumed by Connecticut in relation to the shad and salmon introduced into the Connecticut River. To this complaint of a lack of interstate courtesy we have already referred. The Connecticut Legislature allows the greedy fishermen of that State to so interrupt the annual run of shad and salmon that their passage through to Massachusetts, New Hampshire and Vermont waters is almost wholly cut off. It is not to be expected that these latter States are to expend money year after year for the benefit of the fishermen at the mouth of the river. Even the Connecticut Commissioners themselves appear to have been unable to effect any remedy of the abuse. They confess that they are powerless to remove the causes of complaints.

Of the re-stocking of the Merrimack the report speaks more encouragingly. Since the fishery at Lawrence, Mass., has been renovated the returning fish have had free passage, and everything promises here a great success. The detailed observations of the passage of fish has already been recorded in the *FOREST AND STREAM*.

Some attention has been given to the introduction of migratory fish into some of the waters emptying into Lake Champlain. Further effort here is held in abeyance until the necessary co-operation of Canada and New York can be secured.

In previous years some twenty ponds have been stocked with black bass. In spite of early deprivations upon the parent fish by unscrupulous spearman and netters the fish have increased and multiplied, and now the ponds are well stocked. Although it is still too early to predict with certainty the result of the plantings of land-locked salmon in 1876, there is every reason to believe that the experiment will be attended with complete success. Their introduction is still, however, an experiment.

Smelts have been introduced into the tributaries of Lake Champlain. They have so far done very well, and further effort in this direction will be made if the results appear to justify it.

The present laws relating to the capture of fish are found to be inefficient, because they are not properly enforced. The Commission suggests that in the public waters of the State there should be the greatest possible freedom given to angling compatible with the efficient reproduction of fish. Fishing with nets and seines should be more stringently regulated, and confined to October and November. Several statutory regulations, whose importance have long been recognized in other States, are also very sensibly advocated. The report concludes with an advocacy of the present law relating to trespass, in which the reasons for such a statute are very clearly set forth.

—Commissioner McDonald, of Virginia, writes: "The salmon reported to have been taken in the Shenandoah must have been one of the 'land-locked' placed by the Virginia Commission in the headwaters of the Shenandoah two years ago. It is hardly probable that any of the Californians are now in the river."

Natural History.

THE PARTRIDGE FLY.

NEWARK, N. J., Dec. 23, 1878.

EDITOR FOREST AND STREAM:

[This insect is about a third larger than a common house fly, is black, a little slimmer in proportion to size, longer winged and smaller; the proboscis or beak is broad at the base, about one-sixteenth of an inch long, and tapers to a point; this beak at the base is flat transversely to the long axis of the body, consequently is V-shaped. This fly is found attending our pheasant or partridge wherever it exists, and at all seasons, whether hot or cold, wet or dry. When the bird starts to take wing the fly starts also, and, like the pilot-fish to the shark, keeps close to the bird's head and neck until it alights or is shot down, when the fly stops on the bird and conceals itself under the feathers. It may also take shelter under the feathers of the bird in cold or storm. It is said to subsist on the excrements of the bird, and some are of the opinion that it breeds there also. The breeding of these insects is what mostly interests us. The last year in Pennsylvania, southwestern New York and western New Jersey a large number of the young of the ruffed grouse have been destroyed by what is called a tick, which is lodged on, and eats into the neck, throat and head of young pheasants, and I strongly suspect that this tick is a product of this fly for the following reasons: The tick is very tough, and unless greatly gorged with blood is hard to mash, and so is the fly; indeed the fly will bear a pressure with the thumb-nail on a hard substance of ten or fifteen pounds; the beak is formed for burrowing and so must be that of the tick, and, though they are occasionally found every season, their great number appears to be attended with a larger number of ticks, and a greater destruction of the young birds, as noted the past season. The reproduction of this fly, probably, is by the insect depositing the blow (ovum) on the neck of the young bird before its feathers, where it hatches and forms the tick-maggot (larva), as it may be properly called, and where it subsists by eating into the neck of the bird until it develops into this peculiar fly. There are rarely more than three or four ticks with one bird, often there is but one, and they appear mutual friends at this season of the year.

On bringing in a number of birds and removing them from your game bag, near a warm stove, perhaps the first thing that will claim your attention will be one of these flies, resolved to alight on your neck. This he will persist in doing,

even though you may slap at him a dozen times. If you are not acquainted with the fly, the visitor will pass for a bothersome house-fly, and you may never be wiser unless you get a crack at him on some hard substance, upon, on giving him a good hard slap, you will be surprised to find that he does not mind it more than a piece of India-rubber. Until within a few weeks I have been accustomed to regard the ticks on the partridge as the wood-tick, such as we see on dogs, foxes, minks, rabbits, etc., and it never occurred to me otherwise until the fly suggested it; and now, from my memory of the partridge tick and wood-tick, I am persuaded they differ.

STRAIGHT-BORE.

We are under obligations to our friend "Straight-Bore" for the information which his interesting communication conveys, and while we do not think he quite succeeds in establishing the connection between the so-called tick and the fly, we think that it is by no means unlikely that such a connection may exist. The probabilities are more in favor of this view of the case, if, as we think, the fly belongs to the family *Hippoboscidae*, a group of flies which are parasitic on the deer, sheep and some birds. The young of the species of this group are not produced from eggs in the usual way, but are brought forth alive, and in the pupa state somewhat resemble a wood-tick, but have only six legs. They live upon the blood of the animal to which they are attached. Dr. Packard has described one from a great horned owl under the name *Hippobosca bubonis*. We hope before long to receive specimens of this fly, which we shall submit to a competent entomologist, from whom we may expect to receive very full information on this subject. We shall be pleased to receive from Mr. Hope, whose note we print below, the specimens to which he refers. They can be sent to us by mail in a small bottle of alcohol. We feel confident from the interest taken in this subject by sportsmen in general that we shall before long be able to accumulate some interesting facts with regard to this parasite.

There can be little doubt that the flies referred to by Straight Bore belong to the family *Hippoboscidae*, and this is the more probable from the fact that this family is viviparous, and that the young assume a shape not unlike that of a wood tick, but having, of course, only six legs, and are parasitic on many birds and mammals. Dr. A. S. Packard has described a species (*H. bubonis*) which was taken from a great horned owl, and we would refer our readers to his "Guide to the Study of Insects" for a figure of the young. We hope shortly to be able to clear this matter up satisfactorily.

SOMERSET, O., Dec. 23, 1878.

EDITOR FOREST AND STREAM: I notice in your issue of Dec. 19 an article on parasites on the ruffed grouse and their supposed effect in destroying the young birds. I have noticed these parasites on the adult birds for many years, and wondered that no sporting writer or naturalist (at least those with whom I am familiar) should have mentioned them. I have never seen the grub, or young, of the insect, as I never had a young grouse, or any grouse, in my hands in the summer season; but I have noticed five or six on one bird in the fall, and have in two or three instances noticed them on quail. They are about the size of a house-fly, with larger wings and a leathery, bat-like appearance.

You say you have never seen a specimen. I have two, preserved in alcohol, which I will send you if you wish it. Say how you want them sent. I have no doubt but that in wet seasons, when the young birds cannot readily find dust in which to wallow, that these parasites would prove very destructive. Yours, C. H. HOPE.

THE WHIPPOORWILL.

NEW YORK, Dec. 21, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Now that the real question is settled, please give us information regarding the whippoorwill. Webster defines it as a species of the night-hawk. It is doubted, and by many believed to be a distinct species.

T. E. P.

[The whippoorwill is perfectly distinct from the night-hawk.—Ed.]

INTERESTING PAPERS.—We have recently received from the authors two papers issued by the Engineer Department at Washington, which are of great interest to naturalists. The first of these is a "Report upon the Reptiles and Batrachians Collected during the Years of 1875, 1876 and 1877 in California, Arizona and Nevada," by Dr. H. C. Yarrow and H. W. Henshaw, both of whom have been long and favorably known both to naturalists and the general public for the excellent work which they have done in connection with Lt. G. M. Wheeler's Geographical Survey West of the 100th Meridian. The superb volume on the zoology of this survey, which was issued some time since, was in a very considerable part, the work of these two writers, and would speak emphatically enough in their behalf even if they had never done any other scientific work. Besides this, their pamphlets and shorter publications in various periodicals have been numerous and valuable.

In the paper now under consideration thirty-nine species are mentioned, of which one—*Bufo copel*—is new to science. Very full synonymy of all the species noticed is given, and the notes on the habits and relationships of the various forms are extremely interesting.

"A List of Marine Fishes Collected on the Coast of California, near Santa Barbara, in 1875, with Notes," is by the same authors. Twenty species are noticed, one of the most interesting of which is the viviparous perch (*Cymatogaster aggregatus*, Gibbons), an account of which was published in *FOREST AND STREAM* some years since.

CAPE PIGEONS AND HOW TO CAPTURE THEM.—Of all modes of capturing birds that described by our correspondent

in the subjoined letter is one of the most novel. About the vexed question of the pigeon's edibility, we confess, we are unable to decide. We have visited half a dozen ships, and found ever so many men who have "been around the Cape," and, while one spoke high in praise of the flavor of the bird, another never knew of their being eaten, and a third never heard of them. We did not confound the Cape pigeon and the albatross. Sailors differ as much as other people in their superstitions, and while some tars may relish the flesh of a sea bird, others may refrain from it with superstitious dread:

In your issue of the 28th ult. there is some confusion as to the birds alluded to under the caption, "Albatross and Cape Pigeon," the latter being clearly confounded with the stormy petrel or Mother Carey's chicken. So far as the sailors being superstitious as to the capture of the Cape pigeon, which is of a black and white color and about the size of a tame pigeon, their catching is looked upon as an amusing recreation for the younger passengers on board and occasionally for the sailors themselves. I have caught many molly mawks, a bird of the same description, but of smaller size, but never heard of their being edible before, and their rank smell is enough to convince most people who have handled them that it would require a very good cook indeed to fix them up into an eatable dish. The only use I have ever seen them put to has been the preservation of their plian bones for pipe-stems. I have never seen one shot, the method of capture being the dropping overboard of a pork-baited hook at the end of a log-line, the bait being kept stationary (to the limit of the line) by board floats. The albatross is very suspicious, and will touch nothing in motion; so as soon as the line has run out it must be reeled up and the process begun anew. Hauling a good-sized albatross up a quarter of a mile with wings and flat feet set against the water is good work for two or four men. Most are labeled and colored and let go again.

In Southern latitudes the Cape pigeons follow a ship in thousands. They are caught as follows: A common bottle cork is tied to the end of a long piece of thread and trailed behind the stern so that the cork touches the water. This gives the required tension or tautness to the thread. As the birds fly in clouds from side to side, some of them constantly touch the thread, and, as the cork is being pulled in, enough to turn them over it, when the thread is wrapped round the wing and the bird is hauled on board. It is no exaggeration to say that hundreds are thus caught in a day. I remember when sailing to India on board the ship *St. Lawrence*, with troops, in 1861, and a ship full of passengers, that on the 1st of September (the opening day of sport in England) we first struck pigeons, and sweepstakes as to numbers soon took the place of the race. The first bird was secured on board. As well as I can recollect, we caught over 600 to half a dozen corks. Against such numbers of pigeons I saw but one stormy petrel caught on that or any other voyage. The ship's doctor, a young surgeon named Garner, caught one on his thread. He took it to his cabin, where, being an enthusiastic naturalist, he proposed to kill and skin it. It was his first voyage, and he was much elated at securing the specimen. Half an hour afterward a deputation from the crew, headed by a boatswain's mate named Hawes, arrived to beg him to let the bird go, or some dire calamity would happen. He agreed to do what they wished, but killed and preserved the bird as soon as their backs were turned, a fact which came to their knowledge later on, when they grumbled exceedingly at the risk he had put the whole ship to. I forgot whether it was on the following Christmas or New Year's Day, but on one of the days while the *St. Lawrence* was at anchor in the Hooghly, off Calcutta, the Doctor dropped dead off his chair after dinner from heart disease, and, on a visit which I shortly afterward paid the vessel to liquor up those who had brought me through a four months' voyage, the sailors, one and all, gravely attributed his death to his slaughter of the Mother Carey's chicken; and I am convinced that meddling with another on any future voyage would have provoked that ship's company almost to mutiny.

UNIQUE.

DESTRUCTIVENESS OF AN OTTER.—An instance proving that fish cutters are able to catch even the largest of the inland water fish has been communicated to the *German Fishing Gazette* as having happened in Norway. The fresh remains of an otter meal have been discovered a few days ago upon the banks of the Lardalselvi in Norway, consisting of the head and tail-end of salmon. The weight of the head was six pounds, and that of the tail-end up to the lowest point of the dorsal fin, twenty English pounds. The marks of the forepaws of the otter on the tail-end of the salmon indicate clearly that the otter must have caught hold of the fish at the tail, and that he had let himself be dragged along by the salmon until the latter's strength had been entirely exhausted, when it fell an easy prey to its enemy. To judge from the proportions of the discovered remains, the total weight of the salmon could not be estimated at less than fifty pounds; the otter having, therefore, in one single meal, devoured some twenty-five pounds of fish-flesh.—BZ.

We have had some queer experiences of this kind ourselves in the course of many years wanderings. Once on the Nepigon River we ran a rope through the gills of two twelve-pound lake trout which we had caught by trolling, and left them in the water by the riverside with the rope made fast to the stem of a sapling, hoping to boil them for next day's meal. In the morning they were missing, with the rope cut. After a brief search along the shore we found the head of one of them protruding from the bank, and taking hold of it, found the body eaten off to the shoulders. A mink had tried to drag it into its hole tail foremost, but being too large, it stuck, and the mink made the best he could of his reprisal. The fish weighed three times as much as the mink.

Seals are vastly more destructive to fish than minks or otters. During a long cruise on the Labrador coast we observed their ravages every day. Pound nets are set all along shore for salmon, many of which are taken and smoked or salted. But twice as many would be caught but for the seals. At almost any time, by silently watching, we could detect the round bulb heads of one or more seals in the water inside or outside of the pounds, and on inspecting the net abundant evidence of their destructive work could be found. They seldom, if ever, devour an entire fish, but contented themselves with a bite at this and at that one, mutilating a large number, and almost impoverishing the poor fishermen. Once a member of our

partly paid a silver dollar for a fine salmon which he laid on a rock near shore, while he stepped away momentarily on an errand. He came back just in time to see the seal in the water with the salmon in his mouth.

Woodland, Farm and Garden.

TEXAS CLIMATOLOGY—CUPID AND IONA.

Vapors, and clouds, and storms. Be these my themes:
These! that exalt the soul to solemn thought,
And heavenly singing.

EDITOR FOREST AND STREAM:

If such weather as we have been having for some time should continue much longer, I guess you will have to write me down either as a "poet" or a lunatic. I will state this winter of ours, as far as I am concerned, is a winter of pure cussedness, against any winter in any corner on the globe. It was ushered in by a succession of rains, usually accompanied with a cutting north wind, filling all the land with sloop and confining every fellow remorselessly within doors. No plowing, no planting of trees, no riding, no shooting in such weather as this. Nothing to do but to chafe around one's fireside like a hyena or Texas peccary in a cage. And I can't see where the "heavenly musings" and exaltation of the soul, which Thompson speaks of in the above extract as being due to winter's ugliness, came in at. I am convinced that he never wrote that poem in the winter and did not know what he was talking about. It is a poetic falsehood—and all poets are extraordinary liars—on a par with that declaration of Horace, that if he were placed among the icebergs of the North Pole, among polar bears, or in the deserts of Gaetulia, among lions, he would still sing of Lalage all the same under his own vines and olives. As for myself, I feel more like cussing than singing, and I assure you I have of late done an immoderate share of that former. In fact, I seriously doubted if I could ever go to heaven if the weather were always ugly.

On Friday morning before Christmas there was a prospect that all of this was going to break. The sun peeped out from behind the clouds, and the gentle north breeze fell. The moon, that one who had not uttered a word for a whole month, flew to the tops of the trees and poured forth his soul in a melody of delight. Poor soul, he thought his greatness was a ripening! And so did I think that mine was. I ordered my traps for a trip I had been putting off from day to day and week to week for more than a month, and felt happy that I would be off on the morrow. But at 4 o'clock that evening great blue clouds began to puff up from the north, and quicker than one can say Jack Rascal a terrific Arctic wave rushed down upon us. In a few moments the blue clouds had covered the whole heavens, not even leaving a crack where you could pick a pin. The mercury fell from 75 to 31, and my spirits fell from 150 to zero. I ordered my traps to be laid aside, and there they lie yet without much prospect of their soon being called for. Soon the blue clouds began to precipitate a misty rain, mingled with hailstones about as big as mustard seeds, and the devil was to play generally. This inordinate and most monstrous state of affairs continued unremittently till the next Thursday evening, when the sun went down in a cloudless sky. And now here was a spectacle rarely witnessed in this region. The rain as it fell had all turned to ice on the trees, the grass, the roofs of the houses, the fences, and even upon the backs of the hogs, cows and chickens; and when the setting sun threw its red rays upon all of these, it looked as if the whole world had been bent into flaming maps. My three-years-old boy went into raptures and danced until I thought he was likely to turn "poic" like his father. Just as the sun disappeared the northern ceased, and a night of wonderful beauty came on. All the heavens were throbbing with stars, which seemed ten times more brilliant than ever. It was a glory to look upon the flashing Sirius and the gaudy Canopus chasing the hue of his light every second. And there hung the young moon close to the great white Jupiter. It was nice, but the night was cold. I looked at the thermometer and it showed 39. "Now," said I, "our oranges are gone. The mercury will fall ten degrees during the night, and that will shay 'em!" I went to bed with a mind perfectly resigned, for what is the use of feeling bad over that which cannot be helped?

It has been my habit for many years to sleep for the most part in the open air. My bed-room has five windows—two opening on the north, one on the south and one on the east. I always keep the sash out, closing only the blinds when the weather is inclement. But that particular night got away with me, though I had three heavy blankets and a quilt piled upon me, and after midnight I crept down stairs into more comfortable quarters. I haven't been up into that room since.

When morning broke I hurried to my thermometer, and to my surprise found it at 28, the mercury having fallen only one degree during the night. I examined my orange trees, and some of them looked like the angel of death had been in their front limbs, but nowhere else. I have watched them ever since and am now satisfied that they have received no injury whatever; so the truth is now ascertained, that the orange will stand four degrees of frost without injury. I have but one lemon—which is considered much more tender than the orange—and that also escaped unscathed. I would like to know exactly how many degrees of frost the orange will stand without injury. Who can tell? Will not some of your Florida readers give us their experience on this point?

I have been talking with the oldest citizens about this cold snap, and they say that it is the coldest since 1869, when the mercury fell, as some say, to 21 for a few hours. They may be right, but I was here then and cannot recollect such excessive cold. These old citizens also say that years ago our winters were quite severe, and that the orange was accordingly becoming more moderate. I believe this is true, because it is only within the last three years that we in Houston have had bearing oranges. Why is this thus? Is it cultivation and the thickening population doing the work? May be the *Vii Superii* tempering the wind to the storm lamb; and I think some of the lams I eat it badly enough.

And right here comes a little thought which I know Dr. Draper, whose "Conflict Between Science and Religion" we read with a great deal of interest, will laugh at me for if he ever sees it. I do think there is some Power which occasionally interrupts the regular operation of His laws to prevent harm to His creatures: in other words, that He tempests the wind to the storm lamb. Is not that little fact that I have just given you an instance of it? I have noticed for years that almost every night in this climate the mercury falls from ten to twenty degrees. For instance: Last evening

at sunset it was 44 and this morning at sunrise it was 34. Now, why was it not 18 the other morning instead of only 38, when it was 39 the evening before? I have noticed this twice within the last few days. May not this be an interpolation to arrest a regular operation? Suppose the mercury had fallen ten degrees or more as usual that night. I shudder to contemplate the ruin that would have been wrought. Let the hard scientists say what they choose, but I do believe with all my heart and all my soul that there is a power who often intervenes to do us good and save us from harm, whether we deserve it or not. That is the exercise of a God-like heart as well as a Godlike power.

But to return to our matter: The weather has moderated. The thermometer now says 51, but the clouds are again ominous and the tail end of the gentle north wind is still upon us. Ah, me! his tail is far better than his head. There is no telling where this thing is going to end. I was very anxious to send you a weather report from all portions of Texas on our coldest day—the 20th—but unfortunately the telegraph wires were everywhere obstructed, and there was no getting through that day. But yesterday's weather report in to-day's *Galveston News* is curious. At Galveston yesterday, at 8:30 p. m., the thermometer marked 39, wind north. At Denison, about 400 miles north, thermometer 32, wind northwest; at Griffin, 500 or 600 miles northwest, thermometer 43, wind southeast; at Davis, 700 or 800 miles northwest, and further south, thermometer 49, wind southwest; Eagle Pass, on the Rio Grande, thermometer 44, wind southeast; at Brownsville, at the mouth of the Rio Grande, thermometer, 50, wind northeast; at Indiana, on the Gulf, about midway between Brownsville and Galveston, thermometer 39, wind east. This shows that this singular wind is blowing in a great circuit all around the State of Texas, with streams shooting out here and there and running every which way. For instance, a stream seems to leave the great current somewhere about Eagle Pass and flow straight north, hitting Stockton from the south, while another breaks out between Davis and Griffin, flowing east to the south and hitting Mason from the north. When it is considered that Mason and Stockton are not very far from the same line of latitude, and only about 200 miles apart, this looks singular. The great timbered region of Eastern Texas seems to interfere with the circuit of the wind, pushing it somewhat to the west, for if the circuit was a perfect one the wind should hit Galveston from the northeast instead of the north. But this is now not true north. It is a beggarly, blabrous nondescript, and, in my opinion, portends very unsettled weather. The true north always hits every place from a few points west of north.

CUPID AND IONA.

I said I had to turn "poic" in self-defense against the inclemency, and now I make you another translation—not this time from Horace, but from an old Portuguese sonneteer. My five-year old girl pronounced it "bootiful," but my three-year old boy most positively declares "It is not." In my version of it I agree with the boy, but in the old Portuguese's version I agree with the kind little girl. I dedicate it to any pretty girl who may be named Iona:

Of late the little God Cupid
Strayed away from his father's eyes,
And he went in a manner so stupid
That he died all the while with his cries.
He wandered o'er plain and through wood,
And of all whom he chanced to see,
He implored that they'd be so sweet good
As to tell where dear mamma might be.
His quiver, so lately his pride,
Dropt his darts unobserved the plain;
And his bow seemed to say, at his side,
"I will never shoot arrow again."
And while in this piteous plight—
With the tears streaming down his sweet face—
He saw, with unbounded delight,
Iona, a maid of much grace.
When she heard the complaint that he made,
She told him in words rare and sweet,
While the smiles on her dimpled cheeks played,
That soon his dear aim he should meet.
But the little god raised up his head;
Her lips with words scarce he could plies,
And—
"For Venus I care not," he said,
"As long as I love Iona in these eyes."

That reminds me of the frozen adder which the old farmer put into his bosom to thaw, and while being thawed, sung the good farmer. Love is a dangerous thing, Mr. Editor, even for old fellows like you and me.
N. A. T.
Houston, Texas, Dec. 23, 1878.

The Kennel.

THE NATIONAL AMERICAN KENNEL CLUB.

FROM the letters of Mr. Munson, which we print below, it will be seen that there has been a reorganization of the National American Kennel Club, with such an abrogation of the rules regarding the admission of candidates as should result in a very large membership. In the election of Mr. Sterling, of the St. Louis Kennel Club, a gentleman of large means and an enthusiastic lover of the dog, as president, the club has done wisely and well. The immediate publication of the "Kennel Stud Book" is a duty which is owed to the general public, who have furnished, in the pedigrees of their dog, the material for it; and we may be allowed to remark here that the book would have been published two years ago if our own Register had not been handed over to the club. We have been accused, by members of the N. A. K. C., of being antagonistic to their association, and it may not be out of place for us here to state our position in the premises. In the first place we will say that as far as the members of the club are concerned, or, for that matter, the club itself, we have no antagonistic feelings whatever; and, moreover, when we are assured that the club is about to do anything that will promote the well being of all matters pertaining to the dog, or that it is able to do so, it will receive our heartiest

support. What we are opposed to is anything that has for its ends or aims the furthering of the interests of professional dog breakers, or those who make their living solely by dog breeding or breaking, as against the interests of sportsmen, or those who breed and keep dogs for amusement only. If one of the first acts of the National American Kennel Club, provided it possesses the power, shall be to so reform field trials that gentlemen sportsmen may have equal chances in running their dogs with the professional breakers, they will already have earned the gratitude of all who take, or would take, an interest in these events. We might remark *en passant*, that it was perhaps unfortunate that at the important meeting of the club noted below the professional breaker of the St. Louis Kennel Club—worthy man though he may be—should have been appointed one of a committee of two to form a code of rules for Field Trials.

Our reasons for not having hitherto given the N. A. K. C. a warmer support are as follows: The National Kennel Club has been likened to abbreviate its title—to the National Trotting Association; and its members and supporters are fond of making the similitude. Now, the Trotting Association is composed of all, or nearly all, the local trotting associations in the country, each of which sends delegates to the annual conventions with power to frame rules for the guidance of all. If the N. A. K. C. was organized in the same manner, and its members were delegates from the different clubs and societies under whose auspices Dog Shows and Field Trials are held, then there would be some similarity. But the N. A. K. C. is composed of private individuals who not only frame rules which they would have adopted by working associations, but they even arrogate to themselves the right to appoint a "Board of Appeals" which is to review disputed cases occurring at dog shows held by regularly organized corporations. It is extremely improbable that any of the large kennel clubs would pay much attention to any action taken by this "Board of Appeal" if it offered to interfere with their decisions. In fact, we know that a joint committee will be appointed by two of the principal clubs to act as a board of appeals on cases occurring at either of their shows. Unfortunately, "National Associations" have not been successful in this country, nor do we anticipate that they ever will be until they are properly organized in a parliamentary manner. The National Sportsmen's Association may be cited as a case in point. We have now explained our position and sentiments regarding the N. A. K. C. If it can show to us and the public its ability as well as its inclination to effect reforms it will have the heartiest support of both. Its legitimate purpose appears to us to be the publication of the Kennel Stud Book, and little beyond that. If it attempts to interfere with the work of regularly-incorporated and legitimately constructed clubs it will have its hands full. The letters of Mr. Munson, the Secretary, are as follows:

NATIONAL AMERICAN KENNEL CLUB,
St. Louis, Dec. 23, 1878.

EDITOR FOREST AND STREAM:

At the annual meeting of the National American Kennel Club, held at Nashville, Tenn., on Dec. 2 and 6 of this month, the following business was transacted: The first edition of 750 copies of the stud book was ordered printed at once, and the secretary was instructed to receive entries for Vol. II, also to take advertisements for Vol. I, at \$25 per page. The secretary has charge of the disposal of the stud book when printed. Section 7 of the constitution making the initiation fee \$15 a necessary part of membership was suspended for that meeting, and until the next annual meeting. The following new members were proposed and elected: D. C. Sanborn, R. B. Morgan, M. C. Campbell, J. E. Nicholson, M. L. Brown, M. D. Collier, Geo. B. Clason, Gen. W. H. Jackson, J. T. Trezevant, I. B. Nesbitt, W. B. Shattuck, J. H. Dew, Capt. Patrick Henry, John Fotherly, Jr., Jno. W. Munson, J. Y. Ross, Gen. T. J. Churchill, T. L. Martin, John Nesbitt, Dr. Steele, H. C. Pritchett, E. C. Nichols, Anthony Higgins, C. G. Maffei, V. L. Kirkman, Dr. Rawlings Young, J. V. Cowling, J. M. Taylor, Henry Bishop, A. M. Waddell, Samuel B. Duffy.

The following officers were elected for 1879: President, E. C. Sterling, St. Louis; 1st Vice-Pres., Theo. Morford, Newbury, N. H.; 2nd Vice-Pres., P. H. Bryson, Memphis; Sec. J. W. Munson, St. Louis; Treas., L. H. Smith, Stratford, Canada. Executive Committee—Luther Adams, Boston, Chairman; M. C. Campbell, Spring Hill Tenn; E. F. Stoddard, Dayton, O.; Jno. E. Long, Detroit, Mich.; J. V. Foster, Leesburg, Va. E. C. Sterling, J. H. Dew, Luther Adams, Capt. Patrick Henry and L. H. Smith were appointed a Committee on Bench Show Rules.

Annual meetings of the club are to be held hereafter on the evening of the first day of the field trials. A Board of Appeals was created, and a section to that effect added to the constitution. The board for 1879 is as follows: J. H. Dew, Chairman; J. A. Nichols, E. F. Stoddard, E. C. Nichols, A. Higgins.

The Committee on Field Trial Rules, appointed in May, 1878, reported, but not being able to agree on anything satisfactory, a new committee of two, with the president an ex-officio member, was appointed to frame a code of rules, which, when reported, are to be accepted and considered the rules of the club for 1879; Capt. Patrick Henry and C. B. Whitford appointed on the committee.

The bench show rules, as amended, will be sent to the papers the first week of January in pamphlet form. The club decided to give field trials on equal some time in the fall of 1879, and time to be decided on hereafter.

Mr. C. B. Whitford acted as secretary *pro tem*, during both sessions of the club.

Yours truly,

J. W. MUNSON, Sec.

EDITOR FOREST AND STREAM:

The constitution and by-laws, and the bench show rules of the N. A. K. C. are to be published in pamphlet form, and ready for delivery the first week of January. Copies can be had on application to your paper or to me. The field trial rules will be ready by April 1, and will be published promptly. New members, for the present, are not balloted for. To become a member of the National American Kennel Club now

it is only necessary to pay \$5, which is the entire expense of membership for the year 1879.

Respectfully,

JOHN W. MUNSON, Sec.

THE MINNESOTA FIELD TRIALS.

St. Louis, Dec. 30, 1878.

EDITOR FOREST AND STREAM:

In replying to the statements of Mr. Mulliken in your issue of the 26th inst., wherein he attempts to whip me over Mr. Rowe's back, I would promise by saying that you undoubtedly recognize this personal fight between the judges and the public, and would add that I am convinced you will in the interest of future shows and field trials admit to your columns such evidence as is necessary to show the true position of each.

I do not propose to simply declare some "facts" are false, but will prove them so by testimony of a character not to be impeached, and to show the position of the Hon. gentleman on the 27th day of Nov., after the following extract from his letter to me of that date: "I believe all the judges acted on all decisions honestly and according to their best judgment, and outsiders have nothing to do with the matter," and added: "I have the kindest feelings toward you and Mr. Davidson, whatever may be said by any one hostile to either." All of which is in strange contrast with his allusions to me in his statements concerning Mr. Rowe. From the way he speaks of that gentleman walking arm in arm with one of the judges, one would think he considered such an act a crime; if that the case we would like his objections, and as I plead guilty of being the judge this is aimed at, I not only acknowledge the charge, but will say with pleasure, that on more than one occasion I was so close to the editor of FOREST AND STREAM that Mr. Mulliken could not tell upon oath whether or not we also were "arm in arm," and as many will bear me witness, there were times during the trial that the Hon. gentleman could not have told whether we were two or a myriad. It is an actual fact, Mr. Editor, that I sat on the ground with Mr. Hallock while he made a plan of the battle over Nellie, and it is with a high appreciation of that gentleman's worth that I take pleasure in recording the fact that he favored my position and complimented me for having convinced a Scotchman.

The version of the controversy in regard to Nellie's point, as given by Mr. Mulliken, must appear to those of your readers that have ever witnessed a field trial, either a poor attempt to cover a fraud, or an error of judgment that a school-boy should blush to commit. It is easy to see how there may be a difference of opinion between a point and a flush, or a false point and nothing; but between a point and a false point there is no room for discussion, as it is positively one or the other beyond a doubt. The one is a point where no bird is found, and the other a *bona fide* point on game, which is proven by the presence of a bird within reasonable distance of where the point is made. Now, the facts in relation to the disputed point made by Nellie are strictly as follows: She faded a bird into a slough and for a long distance down wind, finally making a firm stand, which Mr. Mulliken was first to accept, saying to me: "There, I call that a point," to which I agreed. As Mr. Sanborn walked in to put up the bird his dog ranged off to the right, having passed the bird lying about twenty feet to the left of her point; Mr. Mulliken, taking it for granted that there was no bird there, proceeded to mark the dog a demerit for a false point, to which Mr. Sanborn objected. I then said to give the dog a chance to find the bird, and told Mr. Sanborn that unless she did find a bird we should be obliged to score her a false point. From that time I had no further to say. Mr. Davidson, who had been some distance to the rear and right of the stand up between Mr. Mulliken and myself and flushed the bird within twenty feet of where the dog had established her point. This of course was the necessary proof that the point was not false, and I at once gave her credit for it. Mr. Davidson, who evidently had not seen the whole work, appeared very much surprised that I should give a dog a point for a bird he had flushed while the dog was in the act of being so engaged, and at the idea that it was some time before I could get him to understand that the dog had once established a point on the bird and we were looking for it as he came up and flushed it. Mr. Mulliken, it would seem, had already scored the false point that he expected she would get, and had not changed it when the bird was found; so just as Mr. Davidson began to see through the matter he looked over Mr. Mulliken's score, found Nellie charged with a false point and asked the same on my part. I can hardly tell you Mr. Mulliken how he had erred, and about all he had to say was that he had ordered the dog to road up the bird. He was willing to acknowledge that the dog had established a point, and a bird was found that "might have been" the one she pointed, but he seemed to have an idea that this particular dog should have walked straight to the bird and put it up. Mr. D. again put in his ear and gave me to understand that it was two against one, and in reply I think he understood me to say I saw clearly through his little game and did not propose to see the dog fraudulently deal with; and I am sorry to say it was only after much emphatic language on my part that he consented to see the matter as it really stood, and changed his score to agree with mine. Mr. Mulliken's statement, that the point was granted by two judges against one to heal the disturbance, would come with a poor grace from him even if it was true; for two judges to grant a point to a dog, and then to allow competitors as to grant what they were positive a dog was not entitled to must surely have a poor opinion of themselves, to say the least of it. And now, to draw as mild a close as possible on Mr. Mulliken, I can truly say I fully agreed with Mr. Davidson in the early part of the trial, that it would not do to depend on his judgment, Mr. D. considering him wholly unfit for the position. This fact became more apparent as the trials progressed, which Mr. Davidson thought it to turn to account by changing his tactics to bidding for his vote, hoping thereby, according to the plan of eight to seven, to sit down on my score and place his favorites with the consent of his colleague. For the damage done I hold Mr. Davidson personally responsible, and pity Mr. Mulliken for his weakness.

On the small target Mr. Davidson set up in a recent issue of your paper and said there he let me make "bulldog" with shells of his own loading. He says, and declares he can prove it, that his score in the Nursery stakes was copied from mine, but in his manipulations to establish another point his right hand so far loses its cunning that he sends for publication in the Chicago Field an entirely different score that he swears is mine. Now, according to his statement as recorded in the FOREST AND STREAM over his own signature, and his other statement as recorded in Chicago Field under "Shamrock," it becomes apparent that he has

lost his little hatchet when we look at the official score; for he clearly says his score is from mine, and our scores must, according to his showing, be official; and since this score, which he paraded at Detroit for the purpose of proving his best capacity to keep his own show and record sent to "Shamrock" for publication, is not like the official score, no doubt will take back one or the other of his statements rather than stand convicted of a falsehood by his own testimony. I have still another stick of his own rearing, and will use it precisely as I found it, additional weight not being necessary to break it to atoms. This is word for word what he wrote to a competitor: "Mr. M. and I think you were unjustly kept out of a point which you were entitled to, by Mr. Whitford, on his responsibility alone, without speaking anything to the other judges about the matter."

He strengthens his statement by assuring the gentleman that both himself and Mr. Mulliken saw the whole matter.

Does Mr. Davidson wish us to believe he was writing what he knew to be false, or would he have it stand as above quoted? Tell me, ye lovers of justice, your opinion of a brace of judges that will stand silently by and permit men whom their honor should bind them to protect to be unjustly robbed of a point honestly earned! What would our field trials come to if this sort of proceeding was permitted to go unnoticed? They would die an ignoble death, from which they could not be resuscitated. And it were better that it should be so than to have trials run as Mr. Davidson attempted to run the Minnesota event.

In conclusion, I beg to assure Mr. Davidson and Mr. Mulliken that, though they join forces and attempt to kick against their fate, that I have still more nuts for them to crack, which I will promptly present if they will give me the opportunity.

O. B. WHITFORD.

FROM MR. DAVIDSON.

EDITOR FOREST AND STREAM:

In regard to assertions made in a Chicago paper about the score in the Nursery stakes being changed at the Minnesota Field Trials so as to place "Tempest" before Jennie, and that which could be taken from the facts in this case are as follows: When Mr. Lincoln came into the tent in which we were figuring up the scores of the puppies which had run in the Nursery stakes and asked for the score, Mr. Whitford stated to him that his score was too much crossed up to give him, but that if he would give him another blank he would make out the score for him. Mr. Lincoln then procured for him another blank, on which he made out the score and gave it to Mr. Lincoln. I was in the tent while this was being done. My score was never out of my possession (in the Nursery stakes), neither was it changed after being made, and I defy any one to prove that it was. I supposed, then, as I do now, that the duty of a judge was to give each dog the respective figures of merit or demerit that he considered him entitled to, whether or not it suited an imaginative reporter. To contradict the impression that those insinuations might lead some to entertain that I had changed my score or that my score was the one given to Mr. Lincoln in the Nursery stakes, is my reason for again briefly trespassing on your generous columns.

Like many others, I can testify to the gentlemanly, unofficious and courteous behavior of the representative of the FOREST AND STREAM at the Minnesota Field Trials.

JOHN DAVIDSON.

The managers of the Pittsburgh, Pa., Dog Show, which is held in connection with the Eighth Annual Exhibition of the Western Pennsylvania Poultry Society, have invited Mr. John Davidson, of Monroe, Mich., to act as judge. This show, which is rapidly growing into importance as a regular annual occurrence, commences on the 13th inst., the entries having closed on the 3d.

DEATH OF PHIL, JR.—It is with great pain that we announce the death of the fine black pointer dog Phil, Jr., the property of G. G. Barker, Esq. Phil was bred by Mr. A. C. Waddell during the time he resided at Newton, N. J., and was by Col's Old Phil out of Fanny, a very fine bitch, once owned by Mr. Jacob Glahn, of West Meriden, Conn. He was a splendid field dog, and for several successive years had been taken by his owner to Florida, where he died a few weeks since of the congestive disease peculiar to that climate. As a mate for Phil, Mr. Barker and the writer purchased in the spring of '77 from Mr. Chas. Lincoln the fine young black pointer bitch Princess, by Dilley's Ranger out of Columbus Kennel Club's Fan; and as there are two litters—the result of the union—Phil, Jr.'s blood will be perpetuated. It is the intention of the owners of Princess and her puppies to send them to England to be entered in the dog shows there, as black pointers are extremely rare on that side of the water.

SETON FOR DISTEMPER.—A correspondent writes: "A month ago the writer was the happy owner of two fine Irish setter pups. They were taken with distemper or *plura pneumonia*, symptoms as described in Hallock's Gazetteer. Thought I would try the Seton remedy, did so, and both puppies fell untimely graves. They had good care and proper food. Am a little off on Setons."

L. O. RAMSON.

The seton remedy was suggested by a correspondent, who was corroborated by several others as to its efficacy. We have never recommended it from personal experience, nor should we ever even suggest it for puppies.

THE NOM DE PLUME "MOHICAN."—Editor Forest and Stream: In regard to the above nom de plume, all the articles over this name in the Country, as well as the recent articles in the FOREST AND STREAM on "Breeding for Sex," issue of Oct. 24, 1878; "A Hint for Breeders," issue of Nov. 28, 1878; "Canine Skin Diseases—Eczema," issue of Dec. 12, 1878; and "Canine Ovarianotomy," issue of Dec. 26, 1878, were mine. With this explanation that they may not be supposed to be from your correspondent Mr. Joseph E. Fisher, of Brooklyn, and that he may not on my account have to father anything which does not belong to him, I resign any future claim to the name of "Mohican," and allow him its full use, either to write ads. for a nameless Chicago paper, or to cover his individuality when trying to defend a powerful corporation, or in any way which may seem to him to bring to it the most credit.

Yours truly,

The blanks above represent the name of a professional gentleman well known to us, who prefers, for reasons of his own, for the present to remain incog. Although he resigns the pen name over which he has been writing, we trust that we shall nevertheless still have the pleasure of providing our readers with more of the admirable articles with which, as "Mohican," he has enriched our columns.—Ed.

LECTOR.—Editor Forest and Stream: Through your columns I would respectfully ask A. Pope, Jr., Esq., to change the name Hector, which, in your last week's issue, he claimed for his red and white setter, whelped Jan. 7, 1878, and recorded in the National Kennel Register. I am sorry to say that on yesterday I lost by death my liver and white pointer bitch Lady Francis, caused by blood poisoning.

Yours faithfully, R. G. HAMILTON.

The Rectory, Hart's Falls, N. Y., Dec. 27, 1878.

OWNER OF JESSIE.—Mr. W. H. Bryant, of 1,237 N. Broad street, Philadelphia, writes, in answer to the inquiry of "W. O. B.," of Boston, in our issue of Dec. 12, that he has owned for the last four years the imported Irish setter bitch Jessie. He has her pedigree. Is not a member of the Philadelphia Kennel Club.

TO KEEP FLEAS FROM DOGS.—Editor Forest and Stream: I have seen at different times inquiries in your paper how to keep dogs free from fleas. I have kept a dog all my life, but no fleas. Take common tobacco stems, such as you can get at any cigar factory, and put it in the dog's bed, and you will have no fleas. In the winter I make beds of equal quantities of hay and tobacco stems. In the summer all stems.

Yours truly, H. W. BRADLEY.

Romeo, Mich., Dec. 27, 1878.

DOG BASKETS.—A correspondent recently wrote for information regarding the manufacturers of the wicker baskets for transporting dogs. They are made by the Wakefield Rattan Co., 98 Canal street, Boston, or 814 Broadway, this city.

DETROIT NOTES.—Our Detroit correspondent writes that J. N. Dodge, of that city, has sold to F. W. Savage the pointer dog Don. Don is the first dog to win a first prize at a bench show in this country, winning first prize at the first Detroit bench show. Jos. Hatch lost by death, Dec. 26, the pointer bitch Flora. Had she lived until Jan. 1 she would have been eleven years of age. She was one of the best stock dogs in this section.

—Dr. Luke Corcoran's pointer bitch, Bess (Springfield, Mass.), has been bred to S. B. Dilley's Champion Ranger. This is the third time she has made the trip to Lake City, Minn., and will remain and be bred in the Lake City Kennel. Dr. Corcoran writes that the progeny is the finest and handsomest he has ever seen. Bess is the dam of Psyche, winner of first best bitch and special for brood bitch at the late New York Show.

S. B. D.

—Mr. J. W. Muns n, of St. Louis, writes that his large lemon and white pointer bitch Queen whelped on Christmas Day thirteen to Bow. Three dogs and three bitches are lemon and white, and four dogs and three bitches are lemon and white. The whelps are large, strong and healthy looking. "Queen is in splendid condition, and with what help I can get for her I want to save the whole litter, as Bow's pups are scarce." Mr. Munson also writes: "I lost my black and white setter bitch Graceful, 10 months old, out of Rose (Rock-Pickles) by Stafford (Rake-Dart) by distemper. She was at Kay's Boarding Kennel near this city."

—Mr. W. H. Holabird, of Valparaiso, Ind., writes that his Blue Daisy (Baton-Dimple), litter sister to Sanborn's Nellie, was bred to champion Joe, Jr., on the 24th of December. This cross will combine the finest field qualities on the continent, as Dimple, the dam of my bitch, is sister to champion Drake.

—Mr. P. Dunham's (of Leeds, Mass.) red setter bitch, Belle II., whelped, Dec. 20, twelve puppies—seven dogs and five bitches; sired by Mack (Carrie-Plunkett).

—Mr. James Hanley's red Irish bitch Jung (formerly Adcock's) whelped, Dec. 21, eight all red pups—six bitches and two dogs; sired by Dr. Jarvis' Champion Elcho.

—Mr. T. F. Taylor's, of Richmond, Va., champion Gordon setter bitch Fan, bred to Champion Rupert, has whelped eleven puppies—eight dogs and three bitches.

SAGACITY OF SHEPHERD DOGS.

MR. EDITOR.—Major Campbell Brown, of Maury County, a noted sheep breeder in Tennessee, was telling me some evidences of sagacity, as shown by his shepherd dogs, which are worthy of notice. On one occasion two of his dogs noticed three straggle cattle in among his herd of Jerseys. Without an order from any one, these dogs started for the intruders and attempted to drive them out. Finding it impossible to get the three together, they drove them one at a time to the gate, and then attracted attention by baying until some one came to open the gate and let them out. He also stated that he had been amused at noticing the manner in which one of his dogs would attack a strange animal. He would steal up behind him, bite him on the pastern joint, and drop on his belly, thus avoiding the certain kick.

H.

RANGER II.

BIRMINGHAM, UTAH, Dec. 21, 1878.

EDITOR FOREST AND STREAM:

Mr. William Muller's orange and white English setter bitch Belle (she by Tomlinson's Dandy out of Muller's Maude) gave birth to a litter of six beautiful orange and white puppies, sired by Ranger II. (she by Macdonald's Ranger out of his Wonder). Ranger II. is owned by Mr. O. W. Donner, and at present is being kept at the Astor Kennel in this city. Knowing full well that you are a good dog in the field as well as on the bench, and the fact that I can say so, Ranger II. has proven this season one of the most staunch setters I ever saw. He is very fast, and since the second week out he has not made a false

point, and very few flushes. Barring his non-retrieving, he is a dog that cannot every day be beaten. The handling of this dog this season has been to us as a source of pleasure than labor. He is now having some fine native bitches, all well fed, broken, and being of his color, we are consequently expecting some fine puppies to exhibit at the coming New York Bench Show. S. S. FRASE.

CANINE OVARIOTOMY.

INDIANAPOLIS, Jan. 4, 1919.

EDITOR FOREST AND STREAM:

Permit me to suggest that you would place some of your readers under obligations if you would give them a carefully prepared article from competent authority on "Canine Ovariectomy." The article should describe the place and length of the incision; what tissues would be cut through when the ovaries are to be found; character of manipulations required to reach and remove them; the precautions necessary to avoid injuring the intestines or other organs; how the external wound should be dressed; what subsequent treatment, if any, is required; how long before danger from the operation is past, and the best time as to age and season of the year for the operation. I have the impression that no more dexterity and skill would be required to perform this operation successfully than to apply a clip. If this be true, by a little practice, sons to familiarize the operator with the use of instruments, the location of the ovaries and adjacent organs, almost any one could perform this operation successfully, and thereby have many valuable animals, and introduce a new element of strength to the kennel. H. G. CAREY.

CROTON BREWERY.—W. A. Miles & Co.'s pale and sparkling ales are rapidly taking precedence of all others, and very justly, too, as we are able to testify from samples. There can be no better ale for the dinner-table, not excepted the celebrated Bass. Office, 55 Chrystie street, New York.

—The most complete bowling alley in this city or New York is that of Col. Anton Meyer, located at 392 Bowery. The building was arranged especially for the business, and has every convenience for clubs, with meeting rooms and banqueting halls. The alleys are two in number and are on the ground floor. The room is large, well lighted, and has a cheerful appearance. The Colonel is a jolly, good-natured man, and withal a capital bowler as well as a fine shot. In connection with the bowling alley there is also a Creedmoor shooting gallery with the most improved rifles, and Colonel Meyer takes pride in teaching his patrons how to shoot. He is also an importer and dealer in California, Rhine and Hungarian wines, and makes a specialty of American champagne. See his advertisement.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 64, Wolcottville, Conn."

Problem No. 39.

Motto: A Long Look Ahead.

White to play and give mate in two moves.

SOLUTIONS TO PROBLEMS—NO. 39.
1—Kt-K5
2—R-Kt1
3—Q mates; other variations.

Game No. 93.—GINOCO PLANO.

Game played in the International Tourney between Mr. F. E. Brenzinger, of Saratoga Springs, N. Y., and Rev. J. T. Chatto, of Trinity College, Cambridge, Eng., one of the Cambridge team in the International annual chess match:

White F. E. B.	Black J. T. C.	White F. E. B.	Black J. T. C.
1—P-K4	1—P-K4	14—R-K2	14—B-K15
2—K-K3	2—K-K3	15—P-K12	15—P-K12 (f)
3—B-B4	3—B-B4	16—P-K12	16—P-K12
4—P-Q3 (a)	4—Kt-K3 (b)	17—Kt-K4	17—Kt-K4
5—P-Q4	5—P-K4	18—Q-K3	18—Q-K3
6—P-Q4 (c)	6—B-K3	19—K-K5	19—K-K4

8—K-BK5	8—K-K5	21—P-K15 (g)	21—Q-Q7
9—P-K5	9—B-C2	22—Q-K14	22—K-K1
10—B-K5 (d)	10—B-K3	23—Q-Q7 (f)	23—B-K4 (k)
11—P-Q4	11—P-Q3	24—P-K6	24—K-K1 (l)
12—Castles	12—Castles	25—B-K15	25—K-K1 (l)
13—R-K3 (e)	13—B-Q2 (e)		

NOTES.

(a) This move is that variation of this form of opening known as the *Gioco Piano*, which was, not many years ago, considered the best line of defence at White's command; but modern analysis has caused it to be regarded as a laborious and unprofitable *debut*. That modern analysis is searching and exhaustive, we are all aware; nevertheless we think that this opening is entitled to its ancient proud position, and believe that it will again "come to the front."

(b) This the modern analyst, we believe, pronounces the best defensive move at this juncture, and thereon erects his castle.

(c) P-K5 leads to a good attack, but Black's best reply equalizes the game. It strikes us that P-K5 at this point or on the succeeding move

is the proper line of attack, and should, we think, result in White obtaining a superior game.

(d) Perhaps this is the best line of play, but we should delay it until the last moment. This B could have been of use further on, we think.

(e) The game is at least equal. We, however, prefer White's position.

(f) A very good move, and one of importance in view of White's last play.

(g) A weak move. Black's position is superior, which is, we think, attributable to White's 16th move.

(h) A good move.

(i) A very fine move.

(j) Not his best move, as the following moves show. The position is complicated, and it is not an easy matter to decide on White's best move.

(k) Again good. Black's play, for the last few moves, is of the highest order of chess.

(l) Decisive, and it is to be regretted that Mr. D overlooked this obvious reply.

The *Derbyshire Advertiser* appends the following: "Mr. Chatto here states, 'It would have been as well to have tried the effect of 25-B3 before resigning.' He also directs attention to the mate which is threatened by the vanquished American—Q-K5 Pch, Black's best and winning reply to B-B3 is Q-K5 B. That of Kt-K5 Q, probably leading to a draw. We recommended our readers to examine this move—Kt-K5 Q. The after-play on both sides is full of interest, through P-K5 B and threatening to Q-K5."

The December number of the *American Chess Journal* is readable and interesting. Its table of contents is varied, the games good specimens of chess genius, and the problem department unusually attractive. Eighteen problems entered in its tourney comprise the problems. We suggest that the publisher add one or two small prizes to the amateurs who compete for honors in the general tourney, as an inducement to them to enter future competitions of this kind. Our amateur talent needs considerable encouragement, which our professionals should be willing and anxious to extend to them.

—Mr. Bull, of the *Free Press*, calls upon the chess players of Michigan to join hands in the effort now being made to hold a State tournament for players during the winter. This is a capital scheme, and we do not well see why it cannot be made enthusiastically and practically a success. Tournaments of this kind awaken an interest in the game, and should receive the encouragement of every chess player.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

N. Baltimore.—We know nothing of the firm you inquire about.

B. T., Quebec.—Sharps cost about \$3 per foot, not \$30 as misstated.

P. E. G., Charleston, S. C.—For white-bodied bantams write to Knapp & Van Nostrand, Fulton Market, New York.

S. Baltimore.—The trouble with your bitch will probably pass away as she grows older. It may be caused by the approach of her first season of heat.

C. H., Blevins, New York.—The statements made in the cutting which you send us are largely imaginative. We know of no observations which confirm them.

H. S., Shicks, Pa.—All you can do for your puppy is to give him plenty of strengthening food. He will probably come out all right unless the joints become enlarged.

W. B. B.—Is there any game in the southwestern part of Kansas near the Arkansas River, and if so what kind? Ans. Deer, quail and pinated grouse chiefly, and in abundance.

W. W., Paris, Ill.—We cannot interfere in dog transactions, and the party you mention had no authority to give us reference. Had you written to us you could have ascertained this.

B. C. D., Waterville, Mass.—What book will give me an accurate description of "Frank Forester's" life? Ans. Best biography we know of was published in *Turf, Field and Farm* last year.

C. B. P., Boston.—1 Is besawax a good lubricant for rifle and revolver bullets; if not, what is? 2 Is Smith & Wesson's new patent revolver considered a good and safe arm? 3 Would Ballard's Kentucky rifle, cal. 46, be large enough for deer? Ans. 1, 2, 3, Yes.

H. E. S., Sparta, Mich.—What is the best work on the rearing and breeding of dogs and the best book giving instruction for shooting on the wing, and price? Ans. "Stonehenge's" "Dogs of the British Islands," to be had only in England, and Logan's "Field, Cover and Trap Shooting," price \$2.

J. H. D., Poughkeepsie.—Please inform me what a mountain lion is? Californians often speak of them, but I can find no description of them in any work I have. Ans. The mountain lion of the Rocky Mountains and California is the puma, panther, or cougar (*Felis concolor*), the largest feline found in Northern America.

G. O. P., Harrison, N. Y.—1. What is the best gun to use for sand-hill crane shooting, and what size shot would you recommend? 2. What varieties of game would I be likely to find in the northwestern portion of Wisconsin? Ans. 1. Ten gauge; No. 1 or 2 shot. 2. In Wisconsin, deer and bear chiefly; also ruffed grouse, squirrels and hares.

M. H. B., Greenville, Pa.—I have six puppies three months old. They are covered with dry scales which make them appear rough. They are kept in a dry kennel, fed on venison and have plenty of exercise. What is the cause and what remedy shall I use? Ans. Anoint them carefully and sparingly, occasionally, with crude petroleum.

J. L. M., Atlas Centre.—Can you tell me where I can get some boots that will turn water, that are not rubber? Please to tell me the boots' name. Ans. Canadian sheepskins, called booter sheepskins, are perhaps the best. Any shoemaker in the Province of Quebec sells them; price \$3. These were fully described in our paper three or four weeks ago.

C. A. K., Buffalo.—A bird rises from the trap, is shot at and drops within the boundary; a dog rushes toward the bird before the shooter has had a chance to gather him, and the bird gets up and dies beyond the boundary and is killed by an outsider. Was the shooter entitled to another bird, or should it have been decided "dead, or lost bird"? Ans. The shooter should have had another bird.

G. M. S., Boston, Mass.—In your revised list of close sea-otters, published Dec. 19, you do not mention any law in New Hampshire against salmon catching. Is there none? Ans. There is no special law on

sea salmon; for fresh water or land-locked salmon the open season is from April to September. There being no sea salmon, except plaice, in the waters of the State, we presume the lawmakers thought a law on salmon would be superfluous.

J. A. W., Newcastle, Pa.—The symptoms you describe are those of chorea, a sequel of distemper, for which there is rarely a cure. It is possible also, from his voracious appetite, that your dog may have worms, and we should advise first a dose of areca nut followed by one of castor oil. If the twitching continues give him two grains of sulphate of zinc three times a day, with plenty of nourishing food.

ALLEGHONIS, Phila.—Vision has not a regular cuter's rib and is not quite as handy. She simply has her rib cut up into stylized and flat, both running on standing stays; whereas a cutter's rib is set up upon its own lid and is run in, unbent and stowed away when not wanted. A cutter's mat steps further aft, diminishing the weight in the bows and reducing the length of boom. The yawl would certainly be an improvement upon her for cruising and for racing in reeling weather.

F. H. W., Elmira, N. Y.—I have a puppy, sired a pointer and dam a setter; do you think he will make as good a dog as pure setter or pointer; age about three months? Should I begin to train him yet? Why are dogs half setter and half pointer called "droppers"? Ans. He may make as good a field dog, but not so good to breed from. Do not begin to break him before he is six months old. We presume the name "dropper" originated from these dogs dropping when on a point.

W. C., Bowling Green, Ky.—I have a pointer pup which is just getting well of the distemper and he is now very weak in the joints and hind legs; jerk all the time as though he had the St. Vitus' dance. What shall I do with him in order to get him cured? He is about 5 months old. Ans. Your puppy has chorea. Your only chance is to give him plenty of fresh air and a tonic, say quinine and iron in one grain pill twice a day, with plenty of strengthening food. If he does not improve give him nitrate of silver in doses of one-sixth of a grain.

J. S., Salem, N. Y.—In your answer to "Nimrod" in Dec. 26 you say, "To make your gun scatter use more powder or less shot." In Parker & Brother's circular it is said "The distribution can be increased either by decreasing the quantity of powder used or increasing the quantity of shot. And to produce better penetration increase the quantity of powder used, or decrease the amount of shot." Who is right? Ans. Messrs. Parker Bros. mode of boring may be such that an increase of powder gives improved pattern, but it is a well-known fact that increase in powder or decreased shot gives greater spread to the charge.

T. M. S., New Bedford.—Permit me to inquire, through you, of Mr. Whitcomb, Commissioner of Canadian Fisheries, whether any "discrimination against Americans" is made in the fishing licenses of the Negigon River (front)? Are Americans required to pay for such licenses? Are Canadians required to pay for such licenses? If such discrimination exists, by what authority does it exist? Ans. The agent of the Hudson's Bay Company at Red Rock Landing, Negigon River, is also Dominion fishery overseer for the river. He issues special angling permits to foreigners, to catch trout for pleasure, at a uniform charge of \$1, we believe. British subjects require similar permits, but are not charged.

H. H. R., Rockford, Ill.—We send by mail a copy of Athorpe's map of Florida, price \$1.50, and also Whitney's Pathfinder (25 cents), which will give you all needed information. The fares from Jacksonville, up river, vary so much and so often that we cannot tell you. From Gainesville to Orange Lake is about fifteen miles. Can fit out at Gainesville, if you like. Hunting on Orange Lake and creek is good; on the Ochlocknee River some sport was in turkey, jacks, buzzards, egrets and the like, useless for food, and no fish. On the upper waters of the St. John both hunting and fishing are good. The O-good canvas boat is large enough and perfectly reliable.

CANYAS BACK, Cleveland.—You will find the sharpe a handy, safe and comfortable boat, and above all a very cheap one. When decked with cabin the boat will make a fair substitute for a yacht, and to be preferred to an open boat or cat boat for all purposes. A light-draft boat cannot be made as weathery in rough water as a deep-keel craft, but the sharpe is safe in a seaway owing to her extreme buoyancy, and the small area of canvas required to drive her makes her stiff and able under sail, though of comparatively narrow beam. For hunting, shooting and fishing, as well as for sailing with ladies aboard, we recommend this style of boat to all who need a small, cheap and safe boat for general purposes. Full particulars of this type will shortly be published in our columns. A general description is to be found in our issue of Dec. 24, 1914.

J. M. Jr., Philadelphia.—1. I have a setter dog that has either a cork or something that makes me think he is deaf or partially so. Can I do for him? 2. Are we to have a bench show in this city soon, and what would be the cost of entering a dog? 3. Does the fact of a dog receiving a first prize prevent or hurt his chances in any subsequent show that he might be placed in? 4. How sound a dog be fed at this season of the year with little exercise, and what is the best food? Ans. 1. If your dog had cancer you would know it by his shaking his head and his ears being sore. A blister behind the ear might relieve the deafness. 2. The bench show of the Philadelphia Kennel Club will probably shortly be announced. 3. It puts him in the champion class, where he competes with other dogs of like breed who have won first prizes. 4. Twice a day on scraps from the table.

G. F., Pittsburgh, Pa.—I am anxious to procure information relative to the "carp" pond fish and its adaptation to a small lake (actually of about three acres, the water of which is always free from inundations and of uniform purity. Can you give me data as to its growth and size at certain ages, or can you put me in communication with any intelligent German who can give information of this kind? Any information relative to this fish as to its habits of breeding, the kind of pond, the proclivities, etc., will be thankfully received either by letter or through the columns of your valuable paper. My correspondence with Prof. Baird, of the Smithsonian Institution, thus far has not resulted in much valuable data. As of FOREST AND STREAM are well filled with explicit information and instruction respecting the culture of carp. We can send you the requisite copies containing the articles, if you desire. Carp are extensively cultivated in California, where they were introduced four or five years ago.

F. J. H., Winesapago.—The builder of the Shawano canoe is one of those neglected heathens who does not know enough to go to the end of the rain, and therefore does not advertise his business; nor will he allow the lines of a Sawdow to be published. This canoe is 14 ft. 2 in. long, 11 in. deep, 28 in. wide at gunwale amidships, and 32 in. at widest part, which is 5 in. from the top. To build one, set up the midship section of the form given in *Harper's Monthly*, April, 1878; bend battens around to conform to deck p an shown in same article, and other lower down on the midship section; round off forefoot and stern to a semi-circle, and you will have a very close outline of her form. Then proceed as in boat building—keel, keelsons from end to end, stern and post same or of hanknatch; deck, Spanish cedar; battens and carlings of yellow pine; white cedar for planking; paddle of spruce 7 ft. long, 60 sq. ft. of canvas, cut as shown in the article mentioned. See articles on boat building in F. & S., and "Canoeing in Kanooka," Harper & Bros., New York; price 75c.

DEVOTED TO FISH AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A LIFELONG INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY
Forest and Stream Publishing Company.

NO. 111 FULTON STREET, NEW YORK.
(POST OFFICE BOX 2882.)

TERMS, FOUR DOLLARS, A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.
Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible. All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JANUARY 9, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real names of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money is not paid to us as lost.

Trade supplied by American News Company.

THE NATIONAL KENNEL CLUB.—The views expressed by our Kennel Editor in his special department are endorsed by the management of this paper. Experience has taught us that permanent success holds to no enterprise which is not legitimately constituted. As soon as the self-styled "National" Kennel Club thinks it wise to reorganize in a parliamentary way, we will recognize it and give it our unequalled support; but not until then; and so, undoubtedly will the State Kennel Clubs. If it had originally been organized by a duly called convention, then its jurisdiction would be undoubted, and for that reason undisputed and accepted. We shall take and maintain issue on this point until the principle for which we contend triumphs. It must prevail, or the so-called National Kennel Club will first make a spurt, then linger for awhile, and finally peter out.

THE SHORT-RANGE TOURNAMENT.—The announcement of the second annual contest between the off-hand clubs of this city and vicinity for the short-range championship is made in our rifle columns. The great success of the meeting of the teams at the close of the winter season of 1877-8 was encouraging to all connected with the affair. Excellent scores were made on all sides, and the nine teams participating, at the close of the contest, were satisfied that the first medal had gone to the then champions. A few minor changes will be observed in the manner of carrying out the match, the object being to leave the match, as far as possible in the hands of the several captains. There will be no lack of prizes, as a number of friends of shoulder-shooting have requested opportunity of offering trophies in this tournament. Those teams entering on or before Feb. 23 will have a voice in the final arrangements, while those entering after that date, if the captains shall provide for such entries, will have to accept such provisions as may be determined upon. The FOREST AND STREAM AND ROD AND GUN will keep its readers informed as to the progress of the match, and will be glad to give any information respecting it. The date of shooting will doubtless be early in March, and at least twenty teams should come to the firing point in so interesting a contest.

GREAT CHARACTERS OF HISTORY.—Dr. John Lord, who has long been known as a lecturer of great power, will give a course of historical lectures, which are intended to present a continuous view of the progress of society from the time of the Roman Empire to our own day. Dr. Lord's lectures are characterized by breadth of thought and a philosophical treatment of the themes. The tickets may be obtained of Randolph or Brentano.

FEED THE SUFFERING GAME.

AN APPEAL FOR FOOD AND SHELTER.

THE New York Sun is not trespassing upon our prerogatives when it spreads such facts as the following before the public. We are gratified to have such an influential co-worker in the interest of game protection. We wish the great daily journals would often lend us valuable assistance of this sort.

We do not know that farmers, pot-hunters, and shippers, can be blamed for taking advantage of the mortality which stress of weather has brought upon the feathered game of the great West, to reap pecuniary profit therefrom. Indeed, we are rather inclined to congratulate ourselves that so much food has been preserved and distributed at low prices among poor people, to whom such delicacies as game of any kind is a rarity, instead of been suffered to waste upon the prairies. We cannot blame the collectors and shippers of game because the elements have been pitiless, and killing cold has had a wider range just now than climatic lines generally permit. The thermometer at 5° to 18° above zero is a rare phenomenon in the meteorology of the extreme Southern States, and ten inches of snow in Texas brings an experience to the birds and animals there to which even the occasional bitter "northerners" have not accustomed them. We can only deplore a dispensation which has destroyed so much of what makes uninhabited and wilderness places attractive to gentlemen sportsmen, and gives intrinsic value to districts which would be waste and unvisited but for the game which is found within their limits. The commercial value, too, of the game of our country can only be appreciated when we examine the manifestations of the express companies, and see the tons which are annually transported. The destruction of so much game, even in years not exceptional, like the present, is a severe drain upon the country, which nothing but the most earnest, untiring and judicious efforts can replace. It does not so much become us conservators of game to sit idly and deplore destruction, be it wanton or providential; or to prosecute pot-hunters and common carriers; or to arrest chance sportsmen who may have inadvertently dropped a bird beyond the limit of the close season; or to clamor for severe restrictions, because the elements have been unpropitious; as it does to put our wits together at once to restore, and by the prompt employment of scientific or common-sense means, remedy the disastrous depletion. To the starving and shivering remnant of our valued game the chief of these means is food and shelter. There are four millions of farmers to join in the philanthropic work. In wooded localities, let them send their hardy sons out with their axes to cut a few armful of brush to scatter here and there in heaps wherever the birds and animals are suspected or known to frequent, or where stress of weather would be likely to drive them in. The labor is slight, not half what is required to set a snare for partridges or rabbits. The time can be easily spared. On the open prairies, where no trees grow, nature will second the efforts of the farmers. Let them build up their little brush shanties in the vicinity of straw stacks and farm yards. Exigencies will drive the suffering creatures to the haunts of men whom their instinct has taught them to fear. By the simple processes we suggest myriads of quail, ruffed and pinnated grouse, rabbits, and other small game can be wintered through. Nature, if not interrupted, easily recuperates; it is wonderfully prolific. It can endure not only decimation, but it can survive and replenish upon ten per cent. of itself.

There are some considerations to be looked at in the purchase and consumption of game so killed. Creatures which have perished by freezing are certainly not as wholesome or as palatable as those which have been killed by strangling or bleeding; no more than frozen fruit, or even malt or spirituous liquors, retain their best properties and qualities after having been frozen and thawed out. It is a natural law of chemistry which we cannot gainsay. Still, we do not think that any positive injury to health can result from eating drowned, suffocated, or frozen game. Better a pot-pie of such viands than hunger and starvation. So, while we lament the devastation of the woods and fields, we rejoice that so much has been added to the sustenance of a multitude of impoverished people at a season when bitter cold makes increased supply so necessary. It is the lives of brutes for lives of human beings. On the score of health, the chief objection to eating this questionable game lies in the fact that unwonted sustenance of any kind is utilized, in place of the wholesome varieties of food which are covered and scaled up by snow and ice. In wooded districts, these are chiefly the berries of the sumac and leaves of the laurel, which not only impart a bitter taste to the flesh, but absolutely make it unfit and dangerous to eat. On the open prairies there seems no escape from death unless the friendly shelter of a farm yard or hay stack is within the distance of easy flight.

We hope our wealthy friends who read this article will not quietly turn their toes to their warm blazing fires, but devote some little energy and a very little money to sheltering and feeding the game. It will be the best pecuniary investment they can make. A few bushels of grain and a few brush heaps will save a great deal of game, as well as the cost of rust preventives to useless guns hung up in the idle future.

"Trappers and hunters are gathering in a marvellous quantity of game in the country west of the Mississippi River just now, and wholesale dealers in centres like Chicago and St. Louis are kept busy receiving and forwarding it. At wholesale prices, the game arriving at each of these points is estimated to be worth something like \$50,000 a week. This

large sum of money represents vast heaps of flesh, feathers and fur, at the low prices for which these products of the Far West are now selling. Quails out there go by wholesale at fifty-five cents a dozen, while rabbits retail in immense quantities at the astonishing price of five cents apiece, squirrels at seven and a half cents, brant and wild geese at fifty cents apiece, ducks at forty and fifty cents a pair, and other game at similar figures. Venison, which is retailed at fancy prices, is sold, with the hide on, to butchers and packers at five cents a pound. The venison which comes from Minnesota is considered the best, but much also comes from Indian Territory, where the Cherokee nation have an interest in the preserve of fifty square miles in which deer and jack-rabbits abound. Out on the plains rabbits are hardly looked upon as game worth the notice of professional Nimrods who have lived long enough to call themselves grown men; when snow is on the ground they are slaughtered in droves and sold at the railroad stations by the cord.

As Eastern markets are well supplied with game; Western shippers, seeking some other outlet for their surplus, have been experimenting upon London. Quails principally are sent, partly because of the unprecedented numbers of these birds which have come to an untimely end this winter, and partly because the expected profits on them are larger than on any other kind of game. When the quails reach St. Louis and Chicago they are frozen; they are then packed in barrels, tightly wedged in by hydraulic pressure, and placed on fast freight trains to New York, where they are transferred to the decks of fast ocean steamers for Liverpool. The steamship companies agree that the barrels shall remain on deck during the voyage, and if the weather keeps cold the quails arrive in London as fresh as when they started. Quails cost the Western shipper fifty-five cents a dozen, the freight to London is from \$1.50 to \$2 a dozen, and the price in London is hoped to realize a handsome profit on the quails exported to London.

In spite of the low price at which the birds are selling, however, some of our Western fellow citizens are grumbling at their quail on toast. A sportsman on the Missouri River declares that the great quantity of game brought in to market since the severe cold and heavy snows set in is pretty conclusive proof of our old play practiced upon the game, but upon the consumers thereof. Instead of falling in an easy prey to the trapper and sportsman when the ground is covered with hard snow, as at present, the quails are never more shy and unapproachable than at such seasons, since there is then no covering under which they can hide. This winter they are said to be wilder than they were ever known to be before. This sportsman is therefore positive that of the quails now on the market a very small percentage have died of gunshot wounds. Most of them are, he affirms, found dead in the snow, or the snow, either frozen, starved or poisoned by the berries and other unwonted varieties of food to which they are compelled to resort. The belief in such poisoning, he thinks, is strongly supported by the dark color of the flesh and other indications of disease presented by many of the birds sold. Wild turkeys are as frequently found standing stark dead in the snow, and there seems to be little doubt that in a severe season like this, the prowess of huntsmen on the plains is largely supplemented by the weather in bringing down the game."

A POWERFUL GAME ASSOCIATION TO THE FRONT.

ON June 1st, 1871, nearly eight years ago, the editor of this paper presented in the following words, through the columns of the Brooklyn *Ensign*, the claims of the Blooming Grove Park Association, then recently incorporated, to the consideration of the public:

"England and the older countries of Europe long ago found it necessary to adopt means to preserve their wild game and fish from total extinction. The rapid increase of population and the spread of settlements not only depopulated the forests and the sea, but denuded the land of its timber, so that eventually plans for restocking and reforestation became objects of most serious consideration and earnest practical application on the part of scientific and thoughtful men. Judicious legislation, combined with the active cooperation of landed proprietors and sportsmen, have secured results exceeding the anticipations of the most sanguine, results remarkable for the ease with which they were accomplished, and remunerative in every instance. At present nearly every Kingdom, State and Province has its own laws. Zoological gardens, acclimating societies, public and private parks, fish works, and all manner of associations for breeding and preserving game and fish are found all over the Continent.

In England alone are no less than 800 parks, chases, and forests. Timber is extensively cultivated, with more certain returns and larger assured profits than any other agricultural product. Fish culture has become a most lucrative branch of business, especially in Germany. The surplus stock sold from breeding parks invariably pays the running expenses of the preserves. Indeed, the whole subject considered in its length and breadth, involves the prosperity of communities to a degree that is not dreamed of now, but will be recognized and appreciated in years to come. It stands in the same relation to mankind as the early attempts to domesticate and breed cattle and sheep; and just as, at the present day, no branch of industry is deemed more praiseworthy than the improving the breed of our domestic animals and aiding their increase, so eventually will be the preserving and propagating game animals, birds and fish. If we would live, we must produce the food that nourishes and sustains life.

Our own country, though comparatively new, and originally teeming with game animals, has already suffered so much from reckless and indiscriminate slaughter, that measures equally stringent with those of Europe, have become necessary to prevent their total extinction here. Excepting in those wilderness districts not yet penetrated by railroads, game is now actually scarcer than it is beyond the Atlantic."

Impressed by facts so patent as these, the Blooming Grove Park Association procured its 12,000 acres of broken country in Pennsylvania, built a commodious club house, enclosed with a fence a breeding paddock one mile square in the heart of the forest, stocked it with game, provided gamekeepers, and invited membership and co-operation. To divest it of the hard features of dry detail and drudgery which simple devotion to the development of a principle involves, they made it attractive by adding club

features and combining all those inducements which render our select summer resorts so popular and agreeable. Everything which could contribute to the amusement and comfort of families, as well as mere sportsmen, was included in the plan. If not then actually carried out at the beginning, it was because the endeavor was not warmly supported. Candor compels us to state what the public already knows, that the enterprise did not meet with that immediate success which its too sanguine promoters anticipated. Lack of confidence, a misunderstanding as to its objects, jealous interference and misrepresentation, the ensuing panic and five years business depression, a failure to realize those convictions of the necessity for propagating and preserving our game which others more prescient and provident proclaimed, all combined to defeat the prompt fulfillment of an enthusiastic sportsman's dream of full bags and full preserves. Where the association hoped to discover Arcadia they found only a mirage. A very considerable outlay for outfit and appointments was utterly wasted and wiped out; dues were not paid; shares were incontinently forfeited; in vain the board of management proffered most liberal terms; memberships could scarcely be sold at any price; therefore, the allotted annual income for maintenance not being forthcoming, the Association languished, and was only saved by the devotion of an undismayed handful of steadfast members.

This was the true condition of affairs up to the spring of 1878, when a new hope dawned. After seven years of tough experience the clouds rolled off, and we have now merely to exhibit the list of members appended below, (and all obtained within a few short months,) to convince the most incredulous that the Association is now in a position to go on with the work which it long ago assigned to itself. It is a guaranty, readily accepted, of its financial integrity and high social standing. Such an array of prominent business names was never before attached to any non-political organization in this country. All have paid their fees and dues, and the balance in the treasurer's hands is far in excess of immediate requirements. We have before us the reports of several standing committees and sub-committees made at the December monthly meeting of the Association, of which we had purposed to publish a full abstract, but our space will hardly justify it. Certainly no necessities of the Association require it. Special pleas in its behalf are no longer needed. Its objects and merits alone, backed by its cohorts, and led by success, are all the recommendations it requires. Suffice it to say, that the Association has now a reorganized and efficient Board of Management, a superintendent, and gamekeepers at remunerative salaries, and all club appointments at present required for the entertainment of visitors to its grounds. A competent committee has carefully examined the Park territory to ascertain what measures are necessary to replenish the depleted game; and such ascertained measures have already been taken to erect suitable paddocks for deer and coverts for birds, and to purchase whatever live game is necessary to abundantly stock the preserves. If circumstances demand, several thousand grown quail and several hundred grouse can be turned loose into the grounds at short notice. A large number of wild turkeys are also available. As soon as the ice breaks up in the early spring, the whole tract will be astir with animated life. Of course all necessary police protection against poachers will be afforded. The new Superintendent is John M. Stellenwert, late of the Lake House, at Islip, Long Island.

The following is a list of members of the Blooming Grove Park Association, elected during the year 1878:

Hon. De W. C. Wheeler, Prof. R. H. Day, S. H. Wolfe, W. L. Jencks, Jr., N. Y. City; R. A. Packard, Penn.; Ronald Thomas, Charles Abbott, L. N. Johnson, N. Y. City; Isaac S. Garner, Utica, N. Y.; J. De Rivera, Col. E. S. Bowen, J. H. Beard, C. Alfred Grymes, A. A. Drake, John Sikes, N. Y. City; J. E. Mescham, N. Y. City; A. Patterson, Geo. H. B. Hill, Dr. Morris J. Aech, Major S. B. Eaton, Jno. McGinnis, Jr., Geo. W. Towle, D. B. Babcock, H. Durand, F. L. James, Wayland Trask, W. P. Jones, S. J. Harriott, N. Y. City; Horace White, Chicago, Ill.; Dr. T. A. McBride, Dr. S. M. Nash, N. Y. City; Wm. Lamson, Le Roy, N. Y.; Conat D. B. De Moulzilly, T. E. H. Curtis, N. Y. City; John H. Swayer, Wilkesbarre, Penn.; J. F. Brady, Geneva, Switzerland; Alfred Bonar, E. A. Johnson, R. N. Hazard, W. S. Andrews, Geo. H. McLean, J. Kearney Warren, N. Y. City; G. D. Clark Jr., Baltimore, Md.; E. Sanford, N. Y. City; L. J. Sissone, Syracuse, N. Y.; Thos. A. Vasey, N. Y. City; Dr. E. Dodd, Brooklyn, L. I.; E. A. Corey, A. Dilling, James Benard, Chas. F. Peating, John W. Balfour, Herman H. Le Roy, Genl. Daniel Butterfield, Roland Redmond, E. E. Chase, John Benjamin, Christopher H. Robert, Arnold Marks, N. Y. City; Wm. J. Binns, Boston, Mass.; G. G. Coleman, W. B. Williams, Montford, Leices. Walter B. Lawrence, Leon C. Greer, Major Kinney, Wm. R. Barr, Genl. Jno. J. Anderson, Dr. P. J. Baumsted, T. C. Carey, Genl. Z. C. Deas, R. S. Elliott, W. H. Peating, O. W. Joslyn, O. McIlvren, Frank Reynolds, Dr. A. Russell Strachan, Phoenix Remens, B. W. Dyer, Louis Snyder, H. O. De Rivera, H. B. Holmes, Geo. W. Hall, N. Y. City; Prof. Chas. T. Jenkins, Salem, Mass.; Joseph Jefferson, Hoboken, N. J.

Previous members number about ninety.

It is hardly necessary to state that the stock of the Association has very materially appreciated since the publication of its committees' reports. The price of membership has also advanced. Recent memberships have been secured chiefly by the purchase of forfeited shares at a nominal price of \$50. When all such shares are disposed of, the membership will be large enough to support the Association by its annual dues, which are fixed at \$35, subsequent to April 1, 1879; at which time the price will return to \$450, as per charter. Life memberships, exempt from taxation and dues, can be purchased for \$1,000.

The congratulations of all persons who foresee the extinc-

tion of game in our eastern country by the steady advance of settlement, are due to those who have at last succeeded in placing this Protective Association on a firm and permanent footing. It has within itself the elements of great strength. It is the pioneer organization of its kind in America. The good it can accomplish by its influence and direct aid in preserving game and sport for our sportsmen will manifest itself in time; while the fact of its having rescued from the clang of shops and the tramp of multitudes one choice spot which it will keep secluded and sacred hereafter to Nimrod and Diana, will at least be recognized. Accordingly, we feel it to be the duty of this journal, as the representative of sporting interests in America, and independent of what might be charged as the personal considerations of its editor, who was one of the incorporators of the Blooming Grove Park Association, to give this enterprise its unequalled support, and to wish all connected with it the most eminent success in their efforts to preserve the game of the country.

TRUE SPORTSMEN AND SPORTING LITERATURE.

PISCATOR.—You are well overtaken, gentlemen; a good morning to you both. I have stretched my legs up Tottenham Hill to overtake you, hoping your business may occasion you toward Ware, whither I am going this fine fresh May morning.

VENATOR.—Sir, I for my part shall almost answer your hopes, for my purpose is to drink my morning's draught at the Thatched House in Fiddenden.

PISCATOR.—Most gladly, sir; and we'll drink a civil cup to all the other hunters that are to meet you to-morrow.

VENATOR.—I will require a part of your courtesies with a bottle of sack, milk, oranges and sugar, which, all put together, make a drink like nectar; indeed, too good for anybody but us anglers.

ISAAC WALTON.

A true sportsman, says a well known authority, must possess a combination of virtues which will fill him so full that no room can be left for sin to squeeze in. He must be an early riser—to be which is the beginning of all virtue—ambitious, temperate, prudent, patient of toil, fatigue and disappointment; courageous, watchful, intent upon his business—always ready. Confident, cool, kind to his dog, civil to the girls and courteous to his brother sportsmen.

While possessing the above traits the sportsman should be a most faithful devotee of the attractions of the universe—birds, flowers, woods and streams. He should have sufficient control over the various appetites and passions of the mind and body as will endow him with the capability of dealing moderately in all things. From time immemorial conviviality has been a prominent feature—yea, the wind up of very many jaunts of the angler and fowler, none of which out of every ten are epicures who would as soon think of eating a raw salt mackerel as sit down to canvasback and terrapin without an accompanying quail of their favorite wine.

Isaac Walton frequently terminated a day's fishing with a generous libation at the "Thatched House," and 'e'en said grace for the refreshing cup of barley malt.

A man may drink wine, even carry a little with him on a fishing or shooting expedition, and be both a gentleman and a sportsman, provided he has force of character sufficient to stop when he has partaken moderately. But he, who to every shot at a leatherhead, has three glasses from the whisky flask, or he who deems it necessary to provide himself with a cask of beer and a hundred weight of ice for a day's fishing or shooting, and who, before the sun is fairly in the meridian, is noisily drunk, and then, and then, parades before the public in the columns of a first-class sporting journal, over the appellation of a Sportsman deserves chastisement, which delicacy forbids mentioning in this paper. "My Shooting Box," "The Quondam Hounds," "The Warwick Woodlands" and "The Deer Stalkers" are a series of sporting sketches meant more as a literary amusement than an example or lesson to be taught or copied. It was against Herbert's will that they have been published in book form, and in no other of his works can the reader say dwells the slightest degree of redolency from the whisky flask or brandy bottle.

Had Herbert failed to note in his peculiar but descriptive way those *petit soupers*, or the jest at Harry Archers then would he have written narrative void of true delineation. Macaulay might as well have omitted the revolution and the reign of James II. That the whisky flask should be rigidly excluded from rifle practice where victory is the hard-earned result of clearheadedness and steady nerves is an indisputable fact worthy the co-operation of all organizations competing whether with rifle or shot-gun. The great trouble nowadays is the want of judicious discrimination between a sporting man and a sportsman. The former must as a consequence be over just to himself with the bottle, must deal at the pool room and consequently visit the gaming table. The latter must be either painter or poet, a thorough naturalist (Darwin's views excepted), must keep the ten commandments, the revised statutes and the thirty-nine articles of the Episcopal Church.

—Reports of the various railroad companies carrying passengers to Coney Island have been filed in Albany, from which it appears that the total number of persons taken to the popular resort last season, exclusive of those who went by boat, was 2,750,000. Enough went in other ways to swell the number to three millions and a half. The average number carried by the roads a day was 20,000.

—Wilbur & Hastings, Fulton street, New York, publish some very neat and handsome calendars for 1879.

—Sleet in Florida and ten inches of snow in Texas are among the rare phenomena of the present winter. Norfolk Harbor, in Virginia, is frozen clear across, and the James River is blockaded by ice throughout its entire length. In California the growing oranges have been incased in ice, and great quantities of ripening fruit destroyed in great variety.

—Our well known correspondent, Oscar B. Smith, Esq., the author of many pleasant sketches in *FOREST AND STREAM* during past years, has gone into business with Messrs. Pomeroy and Cox, under the firm name of Pomeroy, Cox & Smith, bankers and brokers, 37 Broad street, this city. If our friend is as earnest in the pursuit of fortune as he is in the prosecution of the game laws, and the hunting of quail, he will have to hire a stout boy to carry his bag of shekels as well as his bag of game.

GOOD NEWS FROM GOOD GROUND.—Our friend Wm. Lane, of Good Ground, Long Island, well known to all sportsmen who visit that region, writes us the cheerful news that Shinnecock Bay is once more provided with an inlet. It was opened on the 17th of December, not on the spot of the last futile effort, but further to the westward in the precise location of the old inlet, which remained open for eighteen years. The surplus water, and which crossed some of the best feeding grounds, was all run off before the bay became frozen over. The last day of the shooting Lane killed 181 broad-bills and red-heads. The prospects for good shooting in the spring were never better. Lane says that he never in his life saw so many geese as passed south this fall, and as a very large proportion of them were young ones the chances for the spring shooting are so much improved. With an open inlet there should also be excellent fishing in Shinnecock, as the bluefish appear to be particularly fond of the bay. We hope to join friend Lane in some "bumming" next summer.

[FROM OUR OWN CORRESPONDENT.]

THE TROPICAL WANDERINGS OF FRED BEVERLY.

THE CARIBBEAN SEA—MY NEIGHBORS, THE MOUNTAINERS.—THE IGUANA—A WORK OF ART—MRS. GRUNDY.

Mr. Editor:

The pictures from my cabin door are all beautiful, but all suggest alike the sea. Detached peaks rise to the eastward and southward, connected by a continuous chain of hills to the sea. Their line is irregular, and very sharply are those mountain peaks, clothed with verdure to their summits. The broken slope in front of my cabin slants rapidly to the precipice that borders the valley that contains the river which hastens to the sea. Outlined against its silvery surface are dark green mountains; a loosely-branched tree stands out against it as against the sky; palms, with gracefully spreading foliage, show dark against it. It spreads so far and wide, and seems to climb so high to meet the sky, that it is hardly possible to tell where sea leaves off and sky begins. Every day I am puzzled to ascertain the horizon line. Every day it blends into sky so softly that all seems sky, or all may be sea. Is the sky blue, so is the sea; is it smoky pearl, the sea is dim, and hides its face beneath a hazy cloud. A cloudy day, with the sun shining on the water from behind the clouds, turning the sea to burnished and glistening silver, is as puzzling as a day with sky of clearest ether; for the sun, reflected from the silver surface of the sea, dissipates the line of demarcation in the glare of the reflection.

There are times when the sea does not rise up to meet the sky, but spreads out miles and miles, until I almost fancy I can see to Avea Island—that solitary island far west in the Caribbean Sea, where a colony of birds breed on the sands alone. The best view is obtained at sunset; then, whether the bright orb disappears behind the mountains without a cloud, or whether he leaves a threatening array, clad in armor of gold and silver, the horizon line is well defined. At moonlight also, when mountains and valleys are but gradations in depth of shadow, the sea reposes peacefully beneath moon and stars, content to rest itself as a sea, and claiming no affinity with the vault above.

It seems to me that it changes every time I look upon it—pearl blue, silver shot with gold, bazy depths, from which no light is shown, and again a sea of deepest ether. It has never been otherwise than calm and placid, though the fierce winds that sometimes sweep down from these mountains and dive into the valleys are enough to rattle the tranquillity of any sea. Indeed, it is a well-known fact that vessels are often becalmed under the lee of these Caribbean islands for days together, and there is not even a white break the monotony of existence on board. I can see white sails, sails of sloops, of schooners, of ships, drifting lazily over the placid sea. Sometimes the morning will reveal the sail of the evening before—the sail that I watched listlessly as I swung in my hammock. It is one of the pleasures of existence here that I can at any time raise my eyes and look out upon the still, dreamy, beautiful sea of the Antilles. It is not always that it is so peaceful. In the "hurricane season," when the tempests devastate these islands, it rises in its wrath—not like the miserable Atlantic, though, always in commotion; it is only disturbed by a hurricane—nothing less.

A century ago or thereabouts, when came to this mountain retreat (then unbroken wilderness as now it is save this little clearing)—when first came that sanguine Frenchman!

Jean Baptiste Landat, from his native isle of Martinique or Guadeloupe, he looked him about him for a wife. It is more probable, though, that he brought her with him as a slave, and that she was black; and that there afterward got admixed a *soupeon* of Carib blood is manifest in the color of these, his descendants. They are not yellow, nor bright olive like the Carib, but of a rich brown, with long hair, black and wavy. That the air of these mountains is conducive to health, their size, plumpness and activity prove.

There are but five families, ruled over by the present Jean Baptiste, who inherits his power from his deceased grandfather, as eldest son of his son. With him lives his mother, a yellow-skinned old lady of eighty, who hobbles about with a cane and is a frequent visitor at the door of my hut. Now, this old lady and her Jean can speak what they flatter themselves passes for English, but their native tongue is the perverted French of their white ancestor. To a Parisian their perversion of the French verb *faire* would be sufficient to drive him crazy.

For instance, the old lady strives to make intelligible the number of her grandchildren and their respective parents: "My son, Jean, he make ze enfans seex; Madile, he make huit, and *tout les enfans* make seexty." She passed my door one afternoon as I was busy preparing my collections for preservation, and told me confidently that she was going to "make petit walk," but a wall from the house of her eldest son caused her to hurry her old limbs to soothe the child "zat make ze cry." "Me make my sleep," is a common expression to make yam, cane, ground provisions, etc. "Moi cafait souper, dejeuner," I go to make supper, breakfast.

J. B. is full of wise sayings, and gives vent to some very strange expressions in his confidences to me. One day I returned from a long hunt in a heavy rain, and my worthy friend was greatly exercised that I did not immediately change my clothing: "Who drink ze watah," said he. "It is yourselfs feet," meaning that the moisture had been absorbed into my system. "White man next to God (ze Mon Dieu)," "White man not like colored, he no eat ze bones of ze poule." "I tank ze Mon Dieu if I speaks ze Engleesah." He exercised a sort of paternal sovereignty over me, as the first white man who had honored his little hamlet with his presence, and many a day has he staid from his labor in the mountains to procure something for my table or some new bird.

The walls of this little cabin, which is a new one, and occupied by me solely, are covered with writing, from which I learn that this is his journal. Among other things he chronicles his first visit to the confessional, when he received absolution from father O'Reilly.

One day J. B. brought to my door an iguana, nearly five feet in length and very ugly. He had seen it basking on a limb beneath the cliff, and had pinned it with a long bamboo while his brother secured it with a noose made from a liane. I expressed a desire to obtain its skin, and hastened to do so, but a woman was already scorching the scales, which she afterward scraped off in water. It looked quite repulsive, but a piece they later sent me late, finding it sweet, tender, white, not unlike chicken. This is the season (March and April) when the iguana leaves the rocks and precipices and takes to the trees. He lives on grass and leaves, principally, if not solely, and only frequents the trees, they say, during the dry season; then he is hunted. During the wet season he lives in his hole, or if he comes out he is hard to find. The dogs of Landat are trained to hunt this lizard.

I always held that for daring, pure and simple, our good old grandmothers of the good old times held rank *par excellence*. This was conclusively proven one day, when, having made a long rent in the leg of an old pair of trousers, I took them to Mrs. Jean Baptiste to be repaired. As I turned to go I was arrested by an exclamation, and looking back found her attentively examining them. Now, they were very old; how they got mixed up with the rest of my wardrobe I do not know; but as they were there I made use of them in the woods, intending to leave them there, peradventure they survived. Lest any one think they were my only ones, I will mention that I had another pair. Years before they had been patched by my grandmother—may heaven rest her soul—for that maternal relative had a passion for darnings perfectly unaccountable. Like Alexander, she would shed tears when there were no more conquests to make in her world of darnings, and a new pair of pantaloons or a coat without a rent was to her a source of grief. How eagerly she would seize upon a garment that showed signs of dissolution! The fact that the early spunkings of my boyhood made but little impression was owing to the double thickness with which a portion of my pantaloons were lined.

Like the Dutch girls of early New York, so graphically described by Irving, I was impregnable. Jabbering a few hurried words in patois to a *garcon* who quickly departed, she sat down with the garment in her hands to await the arrival, as I soon found, of the adult female population of Landat. When they had all arrived she arose and displayed to their united view the broadest part of my inoffensive rather habiliments. At first they were speechless with admiration, but soon broke forth into a chorus of *Mon Dieu!* each one reaching forward for a closer inspection.

The simple explanation of this is they recognized the work of a master hand. Had some connoisseur of paintings found in a garret—as some one is constantly finding in a garret—a painting that, the dust being removed, disclosed a Murillo or a Van Dyke, he could not have been more delighted and surprised. I say delighted, but sober reflection convinced them that such a thing should not be shown their lords and

masters, and they grew troubled lest they should see this masterpiece, and, becoming dissatisfied with their spouses' needlework, eventually sue for divorce on grounds of incompetency or some kindred cause. Then they desired I should teach them; but I protested that I never had taken lessons in that science, and that unless they could puzzle it out for themselves the art, as an art, must be a lost one to them. Mine host heard of it, however, and to him I gave the garment. And it is said that he has caused to be preserved (by framing or some other way) that design in darning, and, having lopped off the legs for his youngest son, regards the remainder as an art treasure of the highest value. If his wife gets refractory he has but to point with warning gesture at that specimen of needlework, and she at once subsides.

Even in this wild island, in the depths of the deepest forest, there exists that fear of Mrs. Grundy that smolders in the human breast in town and city. Though the young people of the mountains go about for days and weeks with nothing on but a single gown or ragged shirt, when the time comes for going to town they must carry with them all they possess in the way of a wardrobe; and they will carry on their heads a large Indian pannier, or basket, with nothing in it but their best clothes. When they reach the banks of the last stream nearest town they don their finery and cram their unwilling feet into unaccustomed shoes, and then limp painfully into the metropolis, conscious they are objects of envy and admiration. They are really prettier in the more becoming costume of the mountains—a simple dress gathered about the hips, reaching to the knees; and men and boys handsomer in merely cotton pants with broad breast and muscular arms exposed. I have seen the policemen, when in secluded country districts, walking with their shoes held carefully under their arm. Though imprudent of time these people are very careful of their clothing.

GAME PROTECTION.

NEW HAMPSHIRE LAWS.—We are indebted to Mr. Samuel Webber, of Manchester, for a copy of the revised Fish and Game Laws of New Hampshire. These laws provide, in brief, that the Governor shall appoint a board of three commissioners on fish and game, whose duty it shall be to restock the waters with fish and enforce the fish and game protective statutes. Every town or city council shall appoint fish and game wardens for its territory, who shall be sworn to enforce the laws and prosecute offenders. The State Commissioners are also empowered to appoint private detectives for their assistance. Provision is made for proper posting of streams, and fines and penalties affixed for violation. Section 9 provides that any town or city may, at a duly notified meeting, by the major vote of the citizens, or if the city government prohibit all fishing in the waters of the town for a period of three years for the purpose of restocking the same.

Chapter II., pertaining to game, protects the usual insectivorous birds and fixes the close seasons as follows: Plover, yellow-legs, sandpipers, woodcock, ducks and rails, Feb. 1 to Aug. 1; ruffed grouse, partridge and quail, Feb. 1 to Sept. 1. Penalty, \$10 or 60 days' imprisonment for each offence, and possession counts. Snaring grouse, partridge and quail is penalized with the same fine. Provision is made for posting corporation or private property. Moose, deer and caribou are protected for a term of three years, from Sept. 1, 1878, with heavy penalties for convictions. It is lawful, however, to kill deer within Coos County between Aug. 1 and Dec. 1, and moose and caribou Sept. 1 to Dec. 1, of each year. Minn., beaver, sable, otter, fisher, protected from April 1 to Oct. 15; raccoons and coons, Jan. 1 to Sept. 1; hares, rabbits and muskrats, April 1 to Oct. 1. Railroads and express companies having for transportation or other purposes any of these animals or birds during the close season shall be punished by a fine not exceeding \$100, unless it can be shown that such animals or birds are being transported from without the State. Chapter IV. provides for the protection of game waters. Generally prepared for breeding purposes; for the legal capture of salmon, trout, land-locked salmon, grayling, bass, striped bass, pike, pickerel, white perch, pickerel, muskallunge and smelts by angling with a single hook and line only; for the forfeiture of all implements illegally employed; for the protection of land-locked salmon, lake trout and brook trout between the month of Sept. and the month of April following (lake trout may be taken during January, February and March); black bass, pike perch and white perch protected during May and June; muskallunge, pickerel, pike and grayling cannot be taken in April and May. For a period of five years from the 14th of June, 1875, salmon, parr, smolts, grilse, shad, alewives and lamprey eels are prohibited in the Merrimack and Connecticut Rivers and all tributary waters. All fish introduced by fish culturists are protected for five years from the time of introduction. Owners of dams and weirs are subject to fine or action for neglect to provide suitable fishways; nor is fishing allowed within four hundred yards of such fishway. Possession of any fish in the close season subjects the possessor to all penalties provided for the other offences, such possession being deemed *prima-facie* evidence. Section 23 prohibits the capture or having in possession any brook trout, caught from any waters of the State, of a less length than four inches, or of any striped bass of a less length than ten inches. Section 24 provides that owners of private waters may take fish from the same at any time for purposes of propagation, dissemination or science, but not for food during the close seasons prescribed.

The present Commissioners are: Mr. Samuel Webber, Manchester; Mr. Luther Hays, South Milton, and Mr. Albina H. Powers, Plymouth. Free copies of the laws may be obtained from any of these gentlemen.

THAT MIGRATORY QUAIL.—In a recent issue of FOREST AND STREAM we noticed the capture in Centre Brook, Conn., of a specimen of this little quail by a correspondent. "G. H. C.," and being anxious to have a more detailed account of the circumstances, we wrote to our correspondent, asking him for fuller particulars. In a reply recently received he says: "The bird I sent to you I found alone. My dog was per-

haps two minutes feeding and pointing after striking scent, following about 150 feet, footing it out and coming to a dead point, pointing toward myself. I advanced, say 100 feet, and sprang the bird. It lay close and sprang quick, and flew about the same speed of our ordinary quail. I was shooting in the town of Westbrook and found this bird 1½ miles from Long Island Sound. I think there was a possibility there were more birds where I shot this, it being a large tract of level land and light soil. But I only went across one corner.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship of 1879

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams.—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles.—Limited to 10 pounds in weight; minimum pull of trigger, three pounds; 22-00 cal. Teams may furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots.—Ten by each competitor. Sighting Shots.—Two shots will be allowed each competitor. Position.—Ordinary. Targets.—200-yards targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice.—No practice allowed on the day of the match. Entrance Fee.—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams. The captains of the several teams entered before 9 o'clock on the evening of February 22, will meet at Conlin's gallery at that hour, and fix upon the arrangements for carrying out the match, choose referees, and decide in what order the respective teams shall shoot. The assistant captains shall decide upon the date of opening the matches, and the date at which the entries shall close. The referees shall elect an umpire, whose decision in all cases shall be final.

THE RIFLE CAMPAIGN OF 1879.

The American Team of 1878 seems determined to secure some sort of an international match during the current year and are not disposed to sit down under the somnolent influences which seem to have overcome the N. R. A. and its officers. They are acting a prudent part in affording every opportunity for the national organization to unite with them, and take the lead before coming to a determination to start off on an independent course. The FOREST AND STREAM advocated the walk-over match to gain a record and take the control of the Palma out of the hands of the wrangling half-dozen then in possession; but to keep up a succession of walk-overs would only provoke a succession of broad grins. A live match must be brought about by all means, and Capt. Jackson and his associates seem possessed of sufficient energy, pluck and skill to bring about such a contest. The following letter to the National Rifle Association and the resolutions explain the position of the team of 1878:

TO THE PRESIDENT AND DIRECTORS OF THE N. R. A.:

Gentlemen.—At a meeting of the American rifle team, held in this city on the 17th inst., the following resolution was passed, and also the accompanying communication. It was voted to respectfully present them to you, hoping that there may be unanimity of action for the best interests of rifle practice in America:

RESOLUTIONS.

Whereas, The original conditions governing competitions for the "Palma" had been authoritatively declared unalterable, and had not been altered at the time the American Team of 1878 was organized and acquired its standing by shooting the match or "walk-over," at the request and under the direction of the National Rifle Association; and, whereas, said conditions invest the American Team for the time being with the custody of the Palma, and with the power to name the time and place for the next succeeding competition; and, whereas, by the said conditions, the team are to receive certain recognition in the form of badges; and, whereas, the months have elapsed since the "walk-over," and not only have none of the conditions which affect the team being fulfilled, but a proposition is before the National Rifle Association, apparently intended by *ex post facto* legislation, to deprive the team of rights to which they are clearly entitled,—

Resolved, That the American Team of 1878 respectfully request from the National Rifle Association the recognition to which they are entitled, and enter their protest against any action based upon the proposed alteration of the conditions governing the "Palma" contest, which will curtail their just and proper privileges.

Resolved, That with respect to the time and place for the competition of 1879, the team believe they can be relied upon to take such action as will inure to the best advantage of long-range rifle shooting in the country at large, whatever may be their local interests; and they will be glad to have a reasonable conference with the officers of the National Rifle Association, with a view of reaching a concurrence of judgment.

LETTER.

TO THE PRESIDENT AND DIRECTORS OF THE N. R. A.:

Gentlemen.—The American Team of 1878, standing at the present time, however worthily, in a position which may give some weight to their opinions respecting long-range rifle shooting in the United States, take the liberty of expressing to you their views upon the measures which seem to them necessary to maintain the interest in that which, whether regarded simply as a genteel recreation, or as an auxiliary to an important element of military instruction, has claims upon our attention.

There is in the country at large an apparently lethargic feeling in regard to the matter. It seems to us to result, in a great measure, from the lapse in the series of international competitions. In our judgment these competitions have been the main cause of our late progress; it is these which form the general basis of comparisons; and it is these which hold out the greatest incentive for emulative practice, local competitions, and a general diffusion of interest.

This party—a stranger—came here without giving me

could for him; but he was too hard to satisfy, and now rushes me into print in what I think an ungentlemanly manner.

We trust that this may relieve our friend of any unfair criticism he may have had at the hands of our readers, as we are assured such is undeserved.

MASSACHUSETTS—Salen, Jan. 6.—Quail season is over; a good lot left to breed; woods now full of snow; harbor now frozen up; men culling on the ice. Pickering's fishing has been good about the county. Morgan, of Salen, has done well. Mr. Snow and friends also got some fine fish. Some mink caught about Buxford; Thomas Peabody got a fox just before the last snow; Messrs. Bailey and Stevens shot sixty-one muskrats in four hours on the Artichoke, at West Newbury, recently. Mr. Bailey and one other gunner got ten white-baited in Maine State recently; chances now are good for foxing in most any part of the county. Our new Massachusetts game laws leave just loopholes enough for unprincipled gunners to crawl out and evade detection; but then, I suppose, what the wise heads say and do must be right. R. L. N.

CONNECTICUT—New Haven, Dec. 30.—Duck shooting at Thimble Island can hardly be called fair, what there is being in the bays east and west of the Thimbles. The coot have most all gone. Old squabs in fair numbers. The look-out for broad bill shooting for the next two months is good; two gunners are now getting eight to a dozen birds a day. Black ducks have been scarce but are now on the increase. JAKS.

New Haven, Jan. 4.—Two gunners, on Jan. 1, at Thimble Island, bagged 34 broad-bill. This can't be done every day. T. J. B.

KENTUCKY—Hickman, Dec. 28.—The lake is frozen over, and the ducks, geese and swan flock in vast numbers to the air holes. Sportsmen find it difficult to get to them and sport is consequently slow. No shipments for this week, 500 lbs. for last week. Few turkeys in market for Christmas dinners; sold for fifty cents each. I believe there is nothing doing at the lake; all visitors have gone home for holidays. Following prices for game—Turkeys, 50 cents each; geese, 35 to 40 cents each; ducks, mallards, \$1.50 per doz.; mixed do., \$1 per doz.; quail, 60 to 75 cents per doz.; venison, scarce, 15 cents per lb.; swans, \$1 each; rabbits, 8 to 10 cents each. VAL.

TENNESSEE—Nashville, Jan. 1.—Last week we had quite a fall of snow, and very cold weather, just the kind to make quail hunting. Many availed themselves of the opportunity, and many were killed. I heard of two men who killed 190 in two days. Quail still continue abundant. Two large owls are on exhibition at a fish and game dealer's in the street. Ducks in large numbers are being hawked about the streets. J. D. H.

TEXAS—San Antonio, Jan. 1.—Game was never as plenty before as now, according to accounts of our old hunters. I find quail inside city limits. Bexar County affords good cover. Brownweed and Mesquite are just alive with quail and rabbit. Deer are brought in by the wagon load, and turkey can be counted by the thousand in the live oak country. ALMO.

ONTARIO—Oxford, Jan. 2.—Game has been plenty here, but hard to get. The choke-bore gun is not just the thing for quail in corn and the close cover in which they are sure to be found. Some of us have resolved that before another season we will have an extra pair of cylinder barrels added to our guns. The snow has been on for two weeks, and the quail are said to be starving. I have succeeded in bagging 112 quail and 45 rabbits since Nov. 1, and have now oiled my gun and laid it away. J. S.

MICHIGAN—Detroit, Dec. 28.—Dec. 23 and 24, Wm. Smith and a friend were out hunting and bagged 16 quail and 2 partridge. Alex. Whitmer was out in the country for five days after rabbits and bagged 98. Wm. O. Lumsden returned to-day from his annual week's hunting; he went well prepared for good sport, taking 600 loaded shells with him and had excellent sport, bagging during that time 3 partridge and 1 quail. James Skuse and Nelson Simpson, of Windsor, Ont., were out on the 24th and 25th and had very fine sport, bagging 72 quail and 5 partridge. DRUM.

WISCONSIN—Baraboo, Dec. 31.—Our deer hunting is over for this year, thus putting a stop to some excellent sport which our hunters enjoyed so much. Since Nov. 24th to date from 200 to 300 deer have been killed in our vicinity. Frank Houghton bagged five coons alive some time ago which he makes great pets of. He has them trained so they will come to him as their names are called. ED. HOLLAND.

A LARGE SCORE—Editor Forest and Stream: I send you the following account of the amount of shooting done by a party assembled at his Highness Duleep Singh's, at Elvidon, Norfolk. Among the invited guests were the Dukes Manchester and Athol, Lords Lonsborough, Duces, De Grey, Walsingham, and Sir R. Hervey, the average number of quail being eight. The shooting differed widely from that to which we are accustomed at home, for at times there were as many as six hundred pheasants on the wing at a time. Consequently they made a good bag, as the enclosed score shows. There has been little or no hunting for some time past, on account of frost and bad weather, besides several packs being mad. The bags made were: Dec. 3, 1,081 pheasants, 9 partridges, 138 hares, 80 rabbits, 6 woodcock, 2 quail; Dec. 4, 1,091 pheasants, 9 partridges, 175 hares, 610 rabbits, 7 woodcock; Dec. 5, 2,205 pheasants, 16 partridges, 213 hares, 1,662 rabbits, 7 woodcock, 40 ducks. The totals were 1,316, 1,792 and 2,646, or grand total, 5,755. The market value of game here is: Pheasants, 10 shillings per brace; partridges, 7 ditto; hares, 5 shillings each; rabbits, 1 ditto. WOODCOCK.

Hastings, Eng., Dec. 25, 1878.

MY FIRST DEER—Putnam, Conn., Dec. 29.—*Editor Forest and Stream:* Fifty years ago deer were abundant in Plymouth Woods. I was then a boy of sixteen. My uncle had given me a small flint-lock fowling piece. I cleaned out father's cartridge box of powder and ball, flattening out the ball and cutting it up for shot, and with our yellow dog was in the woods most of my time. Once I went over to a small woods called Cook's Swamp which came up near the door of Widow Cook's cottage, the old orchard being partly in the swamp, the dog and I treed a partridge, which I shot. The dog began to bark, and I saw a large crowd coming and barked away at it. I saw me, and in a flash came directly for me. I scrambled up an old apple tree and hallooed with all my might for help. I soon heard the widow coming. Taking up a stick, struck the fawn and, "Go home, Fanny, let the boy alone," then said to me,

"You needn't be afraid, boy, she won't hurt you, it's Jane's deer."

A DOG SHOOT A MAN.—*Charleston, Col. Co., Ill., Dec. 31.*—Near Stockton, a railway station five miles west of here, on Dec. 14th last, Edjies Williams was out on a hunting and training a young dog. He had killed a quail, and he was holding it up with his left hand, so the dog could scent it, and at the same time was holding his gun in his right hand cocked. The dog was rearing up after the quail and knocked the gun out of Williams' hand and shot him in the right arm, between the elbow and shoulder. It is a very bad shot, the doctor has taken out several pieces of bone. W. may miss amputation if he is careful. J. B. Dazey.

PAINE'S SHOOTING.—Mr. Ira A. Paine has been giving glass ball shooting exhibitions in Troy, N. Y., and Jersey City, N. J. Week after next he appears at the London Theatre, this city, and afterwards at Harrigan and Hart's.

THE LAWS OF TRESPASS.

EDITOR FOREST AND STREAM:

The question propounded by a correspondent in your issue of the 5th inst. has been answered by another in a manner not altogether satisfactory to the writer, and, as the subject is interesting and a proper decision of it important to sportsmen, a little further discussion may not be out of place.

Your correspondent, "C. G., Jr.," in your issue of December 12 very properly says, "Trespass was undoubtedly committed by sending the dog on the neighbor's property to retrieve the bird." But this gave the neighbor no right to shoot the dog. It was a mere personal trespass of the master, the only remedy for which is an action at law.

Now as to the right of property in the bird. Your correspondent says, "If a wild bird flies from my land to the land of another, and I shoot that bird after it has crossed my line, I have no right of property in the bird so shot." So under the common law the correspondent really did not own the bird at all.

This is not law, either common or statute. On the contrary, we hold that, "If the game passed into a neighbor's ground the property vanished and became the captor's, although obtained by trespass." (See *Oke's Game Laws*, p. 34.) In England it is established by many early decisions that a trespasser killing an animal *fera natura* and carrying it away is not guilty of larceny. (See *Hale's P. C.* 510; 7 Coke, 1. 156; 9 Russ. on Cr. 84; 4 Bl. Com. 266.) The reason being that, in order to constitute larceny, the property must have previously belonged to some individual. In the United States questions of this sort are governed by State laws, differing very widely in their scope and operation as to the mere fact of trespass, but the right to the possession of the game remains as above stated—in the captor. But in England the exact point raised by your first correspondent has been settled positively in his favor. There the whole subject is provided for in 1 & 2 Will. 4. c. 32. Sec. 30, which enacts, "That if any person whatsoever shall commit any trespass by entering or being in the daytime upon any land in search or pursuit of game, or woodcocks, snipes, quails, landrills or conies, such person shall, on conviction thereof before a justice of the peace, be liable to pay a sum of money, not exceeding two pounds, and to the justice shall seem meet, together with the costs of the conviction. Under this section the case of Kenyon vs. Hart arose, and it was there decided that "It is not a trespass within this section to enter on another's land to pick up game which rose on other land, when the shooter had a right to shoot, and which was shot while in the air, after the shooting took place while the bird was in the air over the other land." (See *Kenyon vs. Hart*, 34 L. J., 2 S. 31. C. 87. 11 L. T., N. S., 733.) The distinctions, however, under this law are exceedingly nice. In the case of Osborn vs. Meadows it was held "that a person who, on his own land, shoots a pheasant on the land of another, and goes on that land to pick up the bird, commits a trespass of entering land in pursuit of game within 1 & 2 Will. 4. c. 32. s. 30"—the shooting and picking up the bird being one transaction and not larceny, as it would have been had they been treated as separate offences, and in that case Mr. Justice Erie said, "I beg to reserve for another time whether the entering the land for the purpose of picking up dead game constitutes a trespass within the statute."

It is to be noted, however, that it is only in the fresh pursuit of game that the trespassing captor is entitled to his possession. If sufficient time has elapsed between the killing and the taking it away the law infers that the wrongful possession has been abandoned, and then (and not till then) it becomes the property of the landowner.

If this is not a correct view of the law, it will give the writer pleasure to be instructed in regard to the matter by your legal friends. But we think that though the act of your correspondent was a trespass under his State law, yet he was entitled to bag his bird, and as many more as he could.

Norfolk, Va., Dec. 20, 1878. T. S. G., Jr.

EDITOR FOREST AND STREAM:

Bro. B.—I am a reader of your paper, and is sometimes given to the discussion of legal questions. He called my attention to the communication of "C. G., Jr." in your issue of the 12th, wherein "C. G., Jr." answers the question "What is Trespass?" It will not be considered presumption in a backwoods lawyer to call in question the opinion of a Philadelphia brother. The point is, however, one of interest to sportsmen, and I need make no apology for employing with Bro. B.'s request to criticize the position assumed by "C. G., Jr."

He says: "If a wild bird flies from my land to the land of another, and I shoot that bird, after it has crossed the line, I have no right or property in the bird so shot." He says that the common law sustains this position. Blackstone, whom we all consider authority, says: "If a man starts any game within his own grounds and follows it into another's, and kills it there, the property remains in himself," 2 Bl'k. Com. 419. In *Sutton vs. Moody*, 14 Raymond 250, it was held that a man has property in animals *fera natura* on his land, and there are decisions of the English courts much older. He may lose his property in such animals if they voluntarily quit his land, but it seems otherwise "If they are hunted out of the forest or warren." In your own State this question of ownership was involved in the case of *Pierson vs. Post*, 3 Caine's Rep's 175, decided in 1805. Again, in 1822, in *Bus-*

ter vs. Newkirk, reported in 20 Johnson, 75, the same question arose, and the doctrine laid down in *Pierson vs. Post* approved. In the case of *Buster vs. Newkirk* the court uses this language, after stating that property can be acquired in animals *fera natura*: "It is sufficient if the animal is deprived of his natural liberty, by wounding or otherwise, so that he is brought within the power and control of the pursuer." According to these authorities, then, if I flush a bird on my land, and bring it within my control by shooting it while it is flying over my neighbor's field, the bird is mine.

As to the question of trespass in retrieving the bird, that would depend upon my right to go upon my neighbor's land to recover my property. I could not be charged with trespass for taking away my own property, though I might be for going upon my neighbor's land without leave if I caused him any damage by going upon his land. Evidently *in rem sine damno* is not actionable, notwithstanding the ancient maxim that wherever there is a wrong there is a remedy. I should have no hesitation in going or sending my dog into my neighbor's field, under the circumstances, to retrieve my bird.

The English case of the rifle ball is a trifle thin. *Chynus est solus, etc.* He who possesses land possesses that which is above it—"is an ancient maxim that must command respect; but," He who adheres to the letter of the law will stick in the bark" is another maxim demanding grave consideration.

The balloon case, as your correspondent puts it, is also airy. It was not for sailing through the air, but for descending upon and destroying the plaintiff's potato and radish patch that the defendant was mulcted in damages. *Guille vs. Swan*, 19 Johnson, 351.

Denver, Col., Dec. 23, 1878.

COOTING OFF SEA VIEW.

EDITOR FOREST AND STREAM:

BOSTON, DEC. 1878.

The wind which had been blowing for several days from the east, at last veered round to the north and west, and I hastened to drop L, a gun that we might have some use, ready for a few days of coot shooting. Friday, Nov. 1, dawned bright and clear with wind west, which I knew would soon beat down the heavy sea caused by the easterly blow. Accordingly I took the 3:30 p. m. train from the Old Colony Depot, Boston, and after an hour and a half found myself at the Sea View station and L. there to meet me. Everything gave promise of a fair day for the morrow, and we retired early. At 3:30 in the morning I was awakened by L., and, hurrying on my clothes, I found a hot breakfast waiting. This was soon disposed of, and L., seeing the necessity of a square box divided into compartments for powder, shot, wads, etc., an article still used by the old coast gunners, who fondly cling to the old muzzle-loaders, declared himself ready. My pockets were soon filled with shells charged with No. 4 chilled shot (10 my mind the best killing size for sea fowl, loons and geese excepted), and with my 10-gauge over my shoulder, I followed to the river. We pulled out into the glassy water. The morning was quite dark; overhead the stars bright, not a breath of wind stirred, and perfect stillness reigning, save the dull, regular boom of the surf far away on the beach over the sand hills. The air was clear and crisp, and a delicate film of frost work lay spread over everything. When we were a mile or more from the shore, the incoming tide became too swift to row against with comfort, so we landed, and, trusting to the painter to the bow of the dory, and making fast the oar to a row-lock amidst the water, we proceeded to tow. While plodding along in silence near the mouth of South River, we were startled by quite a large bunch of geese rising from the water with loud honking. We caught a glimpse of them as they made out to sea, their bodies being darkly outlined against the eastern sky. Soon the mouth of the river was reached, and after a hard struggle against tide and rollers, we passed the bar and pulled out on a more or more, and soon had our dorys (or "wombs" as they are termed along shore) out and our dory anchored a gun-shot off. Arranging ourselves comfortably in the straw covering the bottom of the boat, we waited for daylight. Ere long the stars grew dim, pale stars appeared in the east, the shore before shrouded in darkness, was slowly revealed to us as the light increased. Smoke from the chimneys of the houses on shore lazily ascended the still air, and now and then the shrill crowing of crows could be heard above the roar of the surf. The world was again wide awake. Away to the north the Four Cliffs looked like islands in the distance. The morning light shone on the water. The rock could be discerned, also the great collection of cottages and fishermen's huts on the shore. Then the sun slowly sailed up from the sea, his golden rings lighting up the rich, autumnal foliage of the Marshfield hills, sloping nearly to the ocean. So taken up was I in watching the various changes, that I was startled by the report of L.'s gun as he tumbled a black scoter from a passing flock. Throwing overboard the buoy we bagged the bird, and had hardly reached our berth again when we discovered a bunch of three swinging in to our decoys. Two were tumbling at our first discharge, and the third returning was quickly sent upon his back. These proved to be young females black scoters and in excellent condition. A large shrike loon passing overhead received a salute, bringing him down, but he died immediately and was seen no more. Then another loon sailed over us, and was tumbled by L. in a splendid style, striking the water, as L. said, "like a log of bacon dropped from heaven." This bird was retrieved, after which we took occasion to stand erect and tap our arms in triumph, and thus restore the circulation to our benumbed hands. For one hour the birds were fairly in small bunches, and we bagged eight. Then the tide turned, compelling us to return in order to get up river. In the afternoon we went out again, but a smaller breeze than in the morning, and witnessing a glorious sunset. During the night the wind picked up to the north and blew hard nearly all the next day, sending in a heavy sea and rendering it impossible to go out. Before sunset the wind died entirely away, and, according to the hint back of L.'s house, I obtained a view repaying me for the whole trip. A fine hotel erected upon the hill was burned several years ago, and owing to the general depression has not been rebuilt. I consider the view from this point one of the finest on the south shore. Seating myself comfortably I passed nearly an hour in contemplating the view before me. Below, across the marsh land, bounded in the west by wooded hills in all their rich, autumnal glory, and protected from the sea by the long range of snow-white sand hills; beyond the sand hills, the ocean, now and then covered with white-caps, but calm and peaceful. Few sounds disturbed the quiet of the Sabbath afternoon, save the tinkling of the cow-bells upon the hillside, and the voice of the cow-boy driving the cattle home. Out to sea a large flock of gulls were fishing, now and then their snowy wings showing a delicate pink hue, the reflection of the setting sun; the sound of their discordant voices reaching me softened and mellowed by the breeze. Twilight soon came on, and I reluctantly descended to the house, where Monday evening was to Boston.

"So, then, beach, bluff and wave, farewell!"

I bring with me

No token, stone or glittering shell,

But long and oft shall memory tell

Of this brief, thoughtful hour

Musing by the sea."

MERLIN.

her widest part, and tapered gradually toward bow and stern. She was floored half-way up to the gunwale with wooden strips and had a hard-wood grating in each end. The boat had a plain, flat wooden thwarts fitted into the gunwale. Her oars were of white ash, and ranged from thirteen feet six inches long in the waist to twelve feet in the bow and stern. The captain's gig of a man-of-war will give a very good idea of her general fittings. She was painted red for some years, and then black, until she was sold in 1857. Down to 1856, when regular race-boats were introduced, the college boats were used partly for exercise, but principally for pleasure parties, and were seldom racing, except some races. "Catching a crab" was a serious matter in those days, both for the unlucky oar and the boat. The rower was sure to be knocked stiff in the bottom of the boat and the gunwale split or thole-pins broken.

The friends of Harvard in New York have given substantial aid to the Harvard crew.

The theatrical entertainments given at the Union League Theatre Jan. 2, 3 and 4, were eminently successful and the means of adding a goodly sum to the credit of the Harvard University crew. So far as finances can affect the issue, there is no longer any question but that Harvard can send a crew to England next summer. We hope our English cousins will not let national prejudices or petty crotchets interfere with the possibility of bringing about a race.

SOUTHWARK YACHT CLUB.—*Philadelphia, Jan. 1.*—*Editor Forest and Stream:* Although the Delaware is closed with ice from its source to within a short distance of the northern limits of this city, and from thence to the bay filled with large fields of floating ice, some of our yachtsmen are already making preparations for the coming season. Your correspondent paid a visit to the houses of the Southwark Yacht Club and found some of the members busy at work on their beautiful little crafts. These boats are the handsomest we have, and their owners take great pride in keeping them in good order. Some of them are so particular that it is said they will not allow a fly to alight upon their keel for fear he would leave marks of dirty feet upon the boat's white hulls. The metal work upon them is mostly nickel-plated, and flashes in the sunlight like burnished silver. The boats are divided into three classes: First class, double-enders (16ft. 3in. long, 4ft. 6in. beam); second class, double-enders (16ft. 3in. long, 4ft. 2in. beam), and tuckups same size as first-class double-enders, except that they have square sterns. The carry of the sails of the *Sparks* is 100 sq. ft. of canvas. Most of the crew of these tiny crafts is the *Thomas W. Sparks*, built and owned by the commodore of the fleet, John C. Saunders, who very kindly opened his house and allowed me to inspect his boat. She was built last summer, too late to enter into the annual regatta in May, but took part in the second regatta and was leading boat coming home, when she carried away her throat halliards and came in second. The second and third races in which she entered, the wind was very light and the time consumed was beyond the limits allowed by the club, and of course were both considered off, but she was leading boat each time. The next regatta in which she entered was between three boats of the Southwark Club and six boats of the Philadelphia Yacht Club, for a purse of seventy dollars, and she proved the victor, beating all the others. She has also been victorious in several scrub races. The following description of the *Sparks* will answer for the others as they are almost fac-similes of each other: Length, 15ft. 3in.; beam, 4ft. 6in.; depth, forward, 2ft. 2in.; depth, aft, 2ft.; centre-board, 4ft. wide, 3ft. 3in. deep; mast, 25ft. high; length of boom, 24ft.; gaff, 13ft. 6in.; spread of canvas, 50 yards. The commodore is having a new board made an inch in thickness, as the old board, which was but five-eighths, was not stiff enough, and caused her to fall off when working to windward. She is provided with eight life-lines (four on each side) by which the crew can hang out to leeward to keep her up, as she has no ballast and is kept upon her keel by the agility and nimbleness of her crew. She is sailed by Capt. Wm. Keach, a very expert yachtsman.

HUNT'S MAGAZINE.—The December number of "Hunt's" contains the regular annual summary of amounts won by the racing yachts of Great Britain, one of Capt. Coffin's semi-humorous, semi-moral yarns, and a continuation of several yachting cruises, besides some very pertinent remarks in favor of length over beam as shown by the 18-ton *Algonie* walking away from an 80-ton beamy schooner in a half gale off Dartmouth last August.

CHANGED HANDS.—The schooner *Mela* has become the property of Mr. Frank Dexter of the Eastern Yacht Club, and will hereafter hail from Boston; likewise the sloop *Addie V.*, bought by Mr. Marshall K. Abbott from a member of the Seawanhauk Y. C. They will not go round to Boston before the opening of the season.

A SHORT TALK ABOUT CANOEING.

BROOKLYN, N. Y., Dec. 10, 1878.

EDITOR FOREST AND STREAM:

Truly summer is over. A cold northeaster howls about the house, slamming shutters and shaking window-sashes, while sharp fusillades of rain-drops rattle on the roof. D-r-r-r! how it must be sweeping over the bay, chasing the white-caps seaward, humming through the tugging of the anchored schooners, driving the spray over the wharves and rocks. I wrap my dressing-gown closely about me, puff away at my stubby old pipe, and try to read, but in vain; my thoughts will wander, and at length I find myself blinking through the smoke at the red-bladed paddle in a corner of my den.

It is not nice and pretty any more, as it was last spring; its blades are dented, the point has been knocked from them in spots, and by the joint are two dark rings where my hands have worn the varnish away; but for a' that it could tell many pleasant tales—of cold, misty mornings, and long, warm summer days, and jolmy evenings when the moon hung low over the water; of hard struggles against wind and tide, with the spray breaking over the bows and pattering on the apron; of quiet skims before the wind over placid waters, and quick, sharp runs, under shortened sail, over long, foam-crested rollers, with the captain stretching out to windward, and the lee washboard all but under; of silny wharves, where the ships lay, and the black water gurgled among the pilos; of white, sunny beaches, thrashed and pounded by Atlantic breakers; and of others, nearer home, where the camp-fires blazed, and the boatman slept to the murmur of the waves; of bluffs and headlands, rocky and wooded; of terraced gardens, green salt mead-

ows, granite forts and grassy batteries, cheery bay-side taverns—of the thousand and one things more which join to delight the mind and eye of the solitary canoeist. Alas, that that stout piece of spruce is tongueless—"tis true, 'tis pity; and pity 'tis, 'tis true"—else should I leave it to deal with skeptical land-lubbers and envious catboatmen, and rest my pen.

Many were the warnings, kindly and sarcastic, which greeted my first announcement of the purchase of a Nautilus. I was told that I should never get anywhere; I should certainly never go beyond the breaker; for if I went below the Narrows I'd be blown out to sea; she'd turn turtle in the first blow; I'd be run down, and swamped, and drowned, and get wet and tired and hungry, and have rheumatism and the chills, and want to sell her in a month; that canoes were not suited to tide-water; that I should grow heartily sick and tired of paddling about the bay; that—in fact, that I'd made a mistake.

Dear friends, kind, disinterested advisers, I began to think that perhaps you really had a little knowledge whereof you spoke. Pardon me; therein I did mistake.

"*Jedes Thierchen hat sein Plaisirchen*" they say across the water, and these be wise words—"Every little animal has its little pleasure." You have yours, and I have found mine. I have never been upset, nor blown out to sea; nor have I met with any of those other mishaps, barring an occasional touch of hunger and wet. I have spent many pleasant hours on the bay without growing in the least tired of it; and I have come to the conclusion that, to the man of little leisure and light pocket, canoeing affords, of all aquatic sports, the greatest pleasure with the least expense and trouble.

I do not, however, seek to rank myself with those enthusiastic giants of the pen and paddle, whose writings would lead a novice to suppose that the sailing canoe combined all the characteristic good qualities of the centreboard sloop, cruising cutter and racing shell; but will at once confess that she has faults, as well as virtues, eminently peculiar to herself, and as I never mix my quinine with my whisky, but always take it first, shall name them without delay.

In the first place, under paddle she is slow, and an ordinary light working boat, propelled by a pair of sculls, will slip away from her with ease; a fact which will at first chagrin her owner, and expose him to considerable chaff.

In the second place, as the boat must have more or less sheer in order to be decently dry, the bow will catch the wind, and the paddler must occasionally work hard to keep her head straight.

Under canvas, with the wind anywhere forward of the beam, unless provided with a false keel or troublesome leeboard, she will drive her owner to the verge of idiocy—in a light breeze by moving with the velocity of a catboat; in a good sailing wind by sliding off to leeward like a crab, which is natural enough, as she is designedly built with a draught not worth mentioning.

With a free wind and following sea, such as rolls up past Coney Island Point and through the Narrows when the breeze is from the south, she will steer hard, especially if a rudder is used; for a wave will now and then lift her stern clear out of water, and if care is not taken she will broach to.

In really rough water she is a wet boat, and nothing else should be expected in a craft of her size. Being short and light, she rides the seas easily, but their crests will go over her, and if placed broadside to the waves, she will fill.

So much for the canoe's faults; I can think of no others, and pass to a pleasanter theme—her virtues.

To begin: She's a pretty boat; her hull of varnished cedar, with its graceful sheer and cambered deck, combining with the slender spars and white sails to form a picture that would delight even a farmer. Then she certainly is safe. With water tight compartments forward and aft she cannot sink; a fact which I have demonstrated by filling the cockpit with water, and indulging in a refreshing bath while I paddled; and her alleged fondness for wantonly capsizeing I pronounce purely mythical. Of course, if a man chooses to treat her as though she were a wash-tub—to attempt to sit on her gunwale; to make her sheets fast; to give her the job of a catamaran and the main-sail of a North River sloop, and then carry full sail in a blow, she will probably relieve her outraged feelings by promptly spilling him overboard—and serve him right. I once knew a man who shoved his mainboom to windward, and tried to hold it there with his head—he only did it once. There are men who would upset a mud-scow. With a few weeks' experience, however, and reasonable care, there is little more danger of capsizeing in a canoe than in an oyster-boat.

When properly built she is also comfortable. The canoeist sits on the floor boards, looking forward, and the swinging backboard behind him adapts itself to whatever position he may choose to take. In the rain, or when the salt water is coming aboard, he may cover the cockpit with moveable hatches, or an India-rubber apron, and keep comparatively dry.

If he desires to sleep in his boat, he has only to haul her up on the beach, remove the after hatch and sliding bulkhead, stretch the painter between the masts and throw her blanket over it, and he will have a perfectly dry lodging.

The canoe's light draught, which prevents her sailing well on the wind, is in all other respects an advantage, as it makes her easier to paddle, enabling her owner to cruise along within a few yards of shore, and opens to him numbers of little coves and creeks, only accessible to most boats at high tide; moreover, it of course adds greatly to her speed when sailing free.

Her slowness under paddle, which I have mentioned as a fault, is due simply to the fact that whereas in sculling two blades fake the water simultaneously, in paddling but one blade can be used at a time; and after the canoeist has found by experience that a paddle of twenty-five miles will tire him no more than a pull of half the distance, he will not feel disposed to quarrel with his boat because he cannot hold her own in a race with a ten-inch shell.

With the wind over her quarter, and a moderate sea, the canoe will show her very best sailing qualities, skimming gracefully and swiftly over the waves, obedient to the slightest touch of the rudder, and filling her owner's breast with exultation and joy. He must be indeed an egotist who, after such an exhibition of her accomplishments, would refuse her the extra touch of varnish, or the new stylish cleat, for which she so manly but touchingly implores.

Last, though by no means least, she is light; when at home may be kept in a safe boat-house; when abroad can be easily drawn

up on a beach or wharf, or carried to some shed or stable, where she will be out of harm's way, advantages not possessed by any other sailing boat afloat.

Such, in brief, are the characteristics of the best types of sailing canoes; but, as Mr. Alden justly remarks, each boat has, in addition, her own moral character, and the man who intends running one must be prepared for as many surprises as he who marries a pretty girl of sixteen. In either case he will at first find his hands rather full.

And now as to canoeing on our bay.

Oh, friends, wisely agree—yes, I mean, those solemn warnings once disturbed my mind's quiet—do you really think that you know that splendid shed of water? that you are familiar with its shores? that in your shells and catboats you have seen all that is worth seeing, and done all that is worth doing? Ah, you do. Very well. But listen a moment to a short tale, which, in the words of the immortal Mr. Barlow, "as you have never heard, I will now proceed to relate," of a supposititious canoeist living—let us say in Brooklyn, and then retire to the sanctity of your boat-houses, or crawl into the dark, mysterious regions below your half-deck, and commune with your hearts.

Let us suppose him an early riser—I like to think well of my friends—and that, after a hasty bite and a drink of water, he runs down to the boat-house to improve his wind. His boating togs are quickly donned, the canoe launched, and he is off. If the water is smooth, well and good; if rough, so much the better, for while the shell owners idle about, and gloomily watch the water washing over the float, he is driving his boat at the waves, his spirit rising, and blood warming with every paddle-stroke. A mile or so down the shore he finds a quiet spot, lands, and treats himself to an invigorating swim, and then, fresh and glowing, and hungry as a hawk, paddles back to breakfast.

In the evening we find him again in his boat, but the day has been warm and his work hard—altogether he feels somewhat demoralized; so he pipes all hands to make sail, shapes his course to suit the wind, and as the boat slips smoothly along, leans back com- fortably, stretches his tired legs, and smokes his after-dinner cigar, at peace with all the world—even those feudish tugs.

Bye and bye the shadows fall, the light on Robbins' Reef winks faintly, then shines clear and bright across the bay, and the moon rises over the trees on shore. He is rested now, takes in his tiny sails, piles the paddle, and soon floats under the shadow of the bluffs. Then the bow is turned homeward, and lazy strokes carry boat and man past well-known rocks and trees and houses, looking new and strange in the white moonlight. Here he finds a party of boys bathing, and paddles around and among them amid yells of delight and much splashing of water; there he spies a spoony couple out for a moonlight row, and tantalizingly hovers about them, just within earshot; stops, perchance, at a waterside house of call for a glass of beer, and finally reaches home and sleeps the sleep of the just. Not so bad, eh?

On some Saturday afternoon our canoeist loads his boat for his first cruise of a night and day. And this will be her manifest: One rubber blanket, 1 air pillow, 1 fishing rod (jointed), 1 Rob Roy cuisine, 1 cup, 1 plate, 1 knife, 1 fork, 1 spoon, 1 water can, 1 coffee pot, 1 frying pan, 1 box pepper, 1 do. salt, 1 do. sugar, 1 do. butter, 1 do. matches, 1 do. tobacco, 1 do. coffee, 1 camp light, 1 bottle alcohol, 6 bottles beer, 3 cans soup, 5 lbs. potatoes, 1 can corned beef, 2 loaves bread; 1 fruit cake, 6 oranges, 1 lb. cheese, 1 roasted chicken, 1 overcoat, 1 extra pair trousers, do. shoes, do. socks, 1 rolled shirt with fringe, 1 hair brush, 1 comb, 1 tooth brush, 1 looking glass. What, *messieurs*, you smile. I have been there; *moi qui vous parle*. A week later he will again load her, and thus will her manifest read: One rubber blanket, 1 pea jacket, 1 tin box, containing 2 lbs. corned beef (pressed), $\frac{1}{2}$ lb. cheese, $\frac{1}{2}$ lb. butter, matches and tobacco; 1 can water, 1 loaf bread, 1 flask brandy and 1 dirk knife. Experience is everything.

And on those Saturday afternoons and Sundays, on the infrequent holidays, and during the week's vacation which he manages to secure, his cockle-shell glides and dances and creeps, under sail or paddle, over the length and breadth of the upper harbor, past the forts at the Narrows, through Gravesend Bay; outside Coney Island Beach, with its mammoth hotel, and thousands of jolly bathers frolicking in the surf; and behind it and Barren Island, through tortuous, shallow, nameless creeks to Jamaica Bay; through Rockaway Inlet, and across the heaving water to Sandy Hook; up along through Sandy Hook Bay and the Horse-shoe, past the frowning Highlands, bearing aloft the brown twin light-houses; up and down the North and South Shrewsbury; past long stretches of sand, Port Monmouth and Keyport; over Raritan Bay, and past the mouth of the river. Or, down along the South Shore of Staten Island, past Elm Tree Basin and Great Kills and Prince's Bay, the wharves of Perth Amboy; and up through Staten Island Sound, so like a quiet English river in its low, grassy shores and smooth water and sleepy hamlets, to dirty Elizabethport; over the dreary surface of Newark Bay, and in the heart-breaking tides of the Kills.

When he is hungry or sleepy, and near an inn, if a wise man, he will seek it and eat a hot meal, or creep between cool sheets and rejoice; or if away from civilization, he will munch his cold food, and wash it down with water from the can and a sip from the flask; or beach his boat and lie down in her, and smoke his pipe and be thankful.

When the yacht or the wind fair, he will hoist sail and follow them, albeit some distance astern, mildly but firmly declining all proffered "tows;" and when the breeze clops around dead ahead, or a flat calm ensues, he will take to his paddle and politely return those kind offers of assistance, particularly if night is falling and a thunder-storm coming up.

He will occasionally get soaked with rain or spray, and have to sleep in a wet jacket, and the sun and wind will burn and tan him; but he will eat like a bear, and sleep like a top; his lungs will expand, his eyes grow bright, his muscles hard, his step light, his spirits buoyant. And in a season or two he will know every eddy and tide, every cove and creek and inlet, every rock and shoal, headland and light, wharf and beach, restaurant and tavern, between Brooklyn and Rockaway, the Battery and the Hook.

W. M. C.

THE AGENTS' HERALD.—The *Agents' Herald* is a paper devoted to the interests of active agents all over the country. Having had some experience with it we can highly commend it as an advertising medium.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*.
Drum (two species), Family *Sciaenidae*.
Kingfish, *Mentiscus nebulosus*.
Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Archosargus probatocephalus*.
Snapper, *Lutjanus blackfordii*.
Grouper, *Epinotus nigricans*.
Trot (black bass), *Centropomus viridis*.
Striped Bass, or Rockfish, *Roccus lineatus*.
Morone, *Pomatomus saltatrix*.
Black Bass, *Micropterus salmoides*.
M. paludicus.

SEINING CODFISH.—Through the efforts of Prof. Spencer F. Baird the Norwegian method of seining codfish has been successfully introduced among American seamen. Hitherto the hook and line alone has been employed.

THE FIRST SHAD came early this year. They have been abundant in the Savannah River for several days.

THE FISHING FLEET DURING 1878.—The number of arrivals reported at this port the past year was 3,180, averaging half a dozen a day from the more important fishing grounds, Georges, the Banks, the Bay St. Lawrence, Newfoundland and Grand Menan, etc. This does not include the boat and dory fishermen, the short trips off shore in the winter cod and haddock fishery, while only a part of the Shore mackerel arrivals in the month of January. The number of Bank trips reported was 503; Georges, 1,324; Grand Menan, Bay of Fundy and Eastport, (herring), 30; Newfoundland and Magdalen Islands, 18; Greenland halibut fishery, 2; Southern and Eastern mackerel trips, 280; Bay St. Lawrence, do., 113.

The estimated mackerel catch of this port for the year 1878 is 60,293 bbls., 34,197 bbls. off shore and 26,096 in the Bay St. Lawrence. Only a small proportion of the latter could have been taken within the Atlantic limit, and as Gloucester is the principal port sending vessels to the Bay, and this the chief privilege for which we were called on to pay, it will be seen that five and a half million dollars for a dozen years' right to the inshore fisheries was "paying dearly for the whistle." The Gloucester inspection last year was 49,044 bbls., showing a gain this year of over 11,000 bbls., but the quality of fish is much poorer and the prices obtained considerably less than last year, and the business has been less remunerative.—*Cape Ann Advertiser*, Jan. 3.

KENTUCKY.—*Hickman*, Dec. 28.—Fishing is froze up; that is, the lake and ponds are. The river is full of ice and fishing in it is inaccessible. No shipments this week; last week only 6,085 pounds shipped; was shown two very fine salmon, taken from the river a few days ago. **VAL.**

TENNESSEE.—*Nashville*, Jan. 1.—Shad, from Savannah, are quite plentiful and at moderate prices. Oysters are brought to this market from Mobile, as well as New York, Baltimore and Norfolk.

For Forest and Stream and Rod and Gun.
CONCERNING STRIPED BASS.

MR. EDITOR: There are in the waters of the United States three different fishes properly known as striped bass, inasmuch as all three are bass and all three are striped. These are: 1. *Roccus lineatus*, the rock, rockfish or striped bass of the Atlantic States, which ascends all suitable streams from New England to Florida, and which may perhaps be considered as properly a salt-water fish. 2. *Roccus chrysops*, the white bass, or lake bass, of the great lakes and Mississippi basin, called also sometimes striped bass, and in Wisconsin cisco bass. 3. *Morone interrupta*, the yellow bass of the lower Mississippi and the rivers of the Gulf States, sometimes called in books the short-striped or brassy bass. A near relative of these is the so-called white perch of the Atlantic States, *Morone americana*; but as that small fish is not striped, and is not usually called a bass, it may be omitted in the consideration of the kinds of striped bass.

The three species above enumerated belong to two groups, which are considered as distinct genera by most late writers, and probably correctly so; but it must be admitted that *Roccus* and *Morone* are very closely related, and one of them, *Roccus*, is still more nearly related to the European genus *Labrax*, to which genus our species both of *Morone* and *Roccus* were formerly referred. Those who do not admit *Morone*, *Roccus* and *Labrax* as separate genera should notice that of the three names *Morone* is the oldest and *Roccus* next, and that a Pacific coast genus of *Chiroide* had received the name *Labrax* before it was given to the bass.

The skull of *Roccus* is said by Professor Gill to differ considerably from that of *Morone*. I have not verified this difference. The principal evident differences between the two genera are the following: In *Roccus* the scales on the head are either cyloid or imperfectly ctenoid; the teeth on the tongue are developed in one or two patches at the base, besides the series along the edge; the two dorsal fins are not at all connected, and the second anal spine is not so large as the third. The spines in general are less developed than in *Morone*.

In *Morone* the scales about the head are very rough on their edges; there are no teeth on the tongue except a series along its margin; the dorsal fins are connected by a low membrane; the second anal spine is longer than in *Roccus*, and usually considerably larger than the third.

The first of the three species is the striped bass *par excellence*, or rockfish, of the Atlantic States. Its scientific name, *Roccus lineatus*, recalls the common names, for *lineatus* means striped and *Roccus* is rock, taken bodily into Latin, with more directness than correctness. This fish reaches a large size, and is highly valued as food and for its gameness. It is a salt-water or brackish water fish, ascending all streams, especially southward, but usually returning like the salmon and shad to the salt water. It has not been taken in the great lakes nor in the Mississippi Valley, nor is there any authentic account of its occurrence in the Gulf of Mexico so far as I know. It is especially delicious in the wide mouthed rivers and bays, with which our coast is so well supplied.

The second species, *Roccus chrysops*, is not so well known to most anglers, but it is a beautiful fish, and by no means rare. It much resembles the rockfish; so much so that you will find many anglers who will maintain that they are the same thing, and that they have the real eastern striped bass in Lake Michigan or in the Mississippi River. The following are some of the more evident differences between them:

1. The "white bass" is a chunkier fish than the striped bass; its body is shorter and deeper and more compressed—more like that of a sunfish. The greatest depth of the body is about one-third of the distance from the snout to the base of the caudal fin, instead of nearly one-fourth, as is the case in *Roccus lineatus*. The back is much more arched in the white bass.

The teeth on the base of the tongue are in a single patch.

In *Roccus lineatus* there are two patches.

3. The spines—especially of the anal fin—are longer and stronger in the white bass than in the striped bass.

4. The coloration in the white bass is usually whiter, and the black streaks are commonly narrower and more frequently interrupted than in the other.

5. The maximum length of the white bass is certainly not much over a foot. It is therefore a much smaller fish than the striped bass.

The white bass is very common in the Great Lake region, notably so in Lake Erie and Lake Michigan. It is also found in the Ohio and Mississippi and their principal tributaries clear down to the Gulf. It does not often ascend small streams, and even the young are seldom seen except in large rivers and lakes. It takes the hook readily, and is reckoned as a gamey fish. As a food fish it is excellent. It has never been found east of the Alleghenies, except, perhaps, in Lake Champlain, and so far as is known it never descends to the sea. This is the fish termed *Labrax multilatus*, *albatus*, *notatus*, etc., by different writers, but Radcliffe's name, *Chrysops* (Golden-eye), is the oldest.

The third species—the yellow bass, *Morone interrupta*—is one, the history of which is little known. It has somewhat the form of the white bass, but it is slenderer and less compressed, and its expression is different. It may be known by the following characters:

1. There are no teeth on the tongue, except the band along its edge.

2. The dorsal spines are very strong, and the two dorsal fins are connected by a low membrane.

3. The second spine of the anal is larger and stronger than the third.

4. The color is decidedly brassy or yellow, and the black stripes are broader and more conspicuous than in the other species. The lower stripes are usually broken near the middle of the body. Hence the name, *interrupta*.

The yellow bass is found in the Lower Mississippi and Ohio, at least as far up as St. Louis. I have never taken it, and I know little of its habits, except that on general principles we may suppose that it does not ascend small streams, and that it is "gamey" and excellent food. Whether it ever descends to the sea is not known. Anglers from the Gulf States will do well to tell us what they know about this fish. The largest specimens which I have seen were something less than a foot long.

I have written out this outline of the characters of these species in answer to numerous correspondents of the Editor of FOREST AND STREAM. Those who care to study further will find a general account of the group, with figures of the yellow bass and the white bass, in Prof. Gill's Report on the Ichthyology of Capt. Simpson's Explorations of the Great Basin of Utah. The relations of the species were first worked out by Prof. Gill in the Proceedings of the Academy of Natural Sciences, at Philadelphia, for 1860 and 1861.

As throwing further light on the habits of the white bass, I subjoin the following extracts from letters received by Mr. Hallock, and placed by him at my disposal.

Irvington, Indiana, Dec. 30. DAVID S. JORDAN, M. D.

My efforts to settle the question as to the existence of striped bass in our waters have been rewarded by the following proof, from letters of two or three reliable persons, who are known to be the best fishermen about here, and men of intelligence. Captain Stockwell, Chief of the Fire Department of this city, says that he has frequently, during his many years devotion to the sport of angling, caught the striped bass, both in the Cumberland River and Piney Creek. He described the fish as being of a milky white color with several black stripes running longitudinally on the side, from tail to head, the latter being a little more tapering than the black band, and in weight about a pound to a pound and half. He says they apparently go in small schools. He makes the above assertion from the fact that each time he has ever met with the fish he has taken several in pretty quick succession. The fish is, and has always been, very scarce with us. Some four years ago he succeeded in taking five in the Cumberland River, using minnow bait.

From another gentleman, who professed his remarks by describing the fish I heard several striped bass being taken every year in Turnbull. They are found in clear, deep water. He also reports them as very scarce.

Another person told me that he had occasionally taken the striped bass in big Harpeth with hook and line, and also with seines, but that it was a rare fish.

Nashville, May 29, 1878. J. D. HILL.

You ask me if I know of the striped bass in the waters of Tennessee, and in reply will answer: Yes, lots of 'em; they are, however, deeper, and not true to this section. They live in the deep, still eddies of the mill pond and decay holes in the streams, always preferring still water, and next to our black bass is the most abundant and valuable fish of our waters. In general appearance they much resemble what is known in Virginia as the "chub," or "southern chub," preferring still to running waters they become larger in size than the black bass. I have caught them within twenty miles of Nashville, six or eight miles from the river, and have known them to be caught eight and a half pounds, with hook and line. They are not so game as the black bass, but will take every advantage of their prey. In ponds he usually lies near a log or brush pile and will gobble up any size minnow they can get into their mouths, hook and all.

Very truly, etc., Geo. F. AKERS.

Nashville, Tenn., May 6, 1878.

Striped bass can be found in the Swashin River, a small stream that empties into the Mississippi some twenty-five miles below St. Louis, in Jefferson County. They are not large in that stream, but the black and yellow bass are. If striped bass—genuine—are found in any other Western streams than those I have named, I have never seen them. They are *Sul genera* indeed.

St. CLAIR.

Lutonville, Georgia.

STRIPED BASS IN INLAND WATERS.—"B." writing from Greenville, this State, says "striped bass are being caught in the Shenango here in large numbers." "B." means black bass, as there is not a striped bass in the Shenango River.

Sharon, Pa., May 8, 1878. A.

A DIARY FROM THE BEAVERKILL.

NEW YORK, Dec. 30, 1878.

EDDIE FORD AND STEAM:

My Dear Sir:—The following extracts from this year's report upon our Beaverkill Club may interest you and your readers. Bulkley began to keep a record of the thermometer at Weaver's, June 7, 1878. On June 6 it "froze ice;" after that the temperature at noon was as follows:

	Highest.	On	Lowest.	On	Average.
June	90 deg.	30th	62 deg.	10th	70 deg.
July	92	28	71 1/2	8	82 1/2
August	88	16th	67	2nd	76
September	78	1st & 2nd	55	20th	68
October	70	2d to 10th	49	10th	60
Nov (to 14)	50	11th	43	8th	56

I make the following extract from Bulkley's diary: On Sept. 28, 1878, saw the first trout on the spawning bed in the Beaverkill.

Oct. 5. The first trout ran up the inlet of Balsam Lake.

Oct. 14. The trout in the Beaverkill are in the height of spawning.

Nov. 4. The trout have all left the inlet at Balsam Lake.

Nov. 10. The trout are all off their spawning beds in the Beaverkill.

The total number of trout caught on our preserve was 1,234, of which 369 were caught by other than members, leaving 865 trout taken by the club rods. Besides these, members of our club took in other waters than our preserve, in accordance with our privileges, 355 trout. Total taken by club members, 1,232. The total expense to the club was a little less than \$400.

So far as known to our warden, there were caught in Balsam Lake this season 1,379 trout. Doubtless many were taken of which we have no account.

On the club preserve the catch by members was in May, 10; June, 321; July, 535; April and August, none.

On Weaver's were caught 988 trout.

So far as recorded, 34 trout were taken in April and 40 trout in June, in Beecher's or Thomas' Lake.

In Balsam Brook, outlet of Balsam Lake, Barnhardt took 75 trout in April.

Notwithstanding our supposed privileges on Leal's, but one of our members, with a friend, availed himself of their fishing, and took but 23 fish.

In all our members of our club fished on our preserve during 1878; and only seventeen persons altogether, of whom four were friends of members, united under our rule; three were owners along the stream. The other three men were friends, the two owners of Balsam Lake and a friend of theirs. Four of our members did not visit the stream at all.

On Snyder's (above Mead's) there were caught, so far as known, 810 trout. Doubtless many more of them were taken.

On Mead's and Merwin's we know of 846 trout. Of course many were caught.

Our warden, Bulkley, is worthy of all praise. Owing to an early spring and late winter it was necessary to keep him employed from April 5 until Nov. 14.

The grand total of these figures shows more than 5,427 trout caught in the upper Beaverkill this past season.

Yours cordially, G. W. V. S.

FISHING A LA FLORIDA GULL.

(From a Paper read before the Ocala's Ford Farmers' Club.)

THE following interesting paper was read by Joseph Willcox at a meeting of the Chadd's Ford Farmers' Club, of Pennsylvania:

On the western coast of Florida, at least on that portion between Cedar Key and the Homosassa River, about thirty-two miles farther south, a level, submerged plain of coral rock extends its wide expanse several miles from the shore, covered with only a few inches of water at low tide. A soft, cohesive, slimy ooze, disintegrated by the action of the water from the rock beneath, covers the surface to the depth of several inches, too unsubstantial to support marine vegetation; but which on small patches of coral patch grows above the surface of the mud, and they are of frequent occurrence. These several species of sea weed attach their roots and flourish. Anon, the space is shared by the companionship of a friendly sponge, which fastens its strong tentacles to the rough surface of the porous rocks, affording shady retreats to multitudes of aquatic animals, such as crabs and fishes, and protection to them from the attacks of myriads of birds, which wade and swim and fly over this great expanse of shallow water, attracted by the abundance of animal food subsisting there. Quite a number of islands may be seen, covered with a dense growth of mangrove trees, ten or twelve feet high. These odd-looking, amphibious trees, living upon a soft, precarious soil, which is covered with water at high tide, adapt themselves with wonderful facility to their anomalous, insecure condition. A foot or two above the ground they send forth their branching roots in all directions, which intervene among each other, how far they penetrate, and preventing the soil from being washed away. Numerous coons resort to these islands to feed upon the oysters which are abundantly exposed to view at low tide, and which are not inappropriately called "coon oysters." A dozen of these animals may sometimes be seen at once foraging upon the bivalves, and they manifest much ingenuity in this occupation. They slyly peep around, and when an oyster is observed with its open shells, the coon, with great dexterity, inserts one of its long fingers beneath to prevent them from closing. While the oyster, surprised and doubtless somewhat discouraged, vainly endeavors to close its shells, coony, with much satisfaction, leisurely removes the delicious, molluskous morsel. Former experience, directed with youthful, impulsive thoughtless vigor, resulting inundry undesirable compressions of the toes, has taught the coons how far they may safely insert their nails between the shells of the oyster. A little inattention on such occasions usually results with serious consequences, as the oysters usually grow in clusters which are not easily removed from their bed. Several fatal cases are known where the paw of the coon has become fastened between the shells of an oyster. The tide begins to rise. Fear, added to the pain, redoubles the bewilderment of the entranced victim. Deserted by its commander, who has hastened away in alarm, the unfortunate animal suffers, for some time, the terrors of prospective death, until it is finally submerged by the surging waters.

Concurrent with the vernal sun, Another season has begun. Now leaves spring forth, the flowers dilute: The feathered songster courts its mate, and the birds expand: The time for nesting is at hand.

For reasons best known to themselves, countless multitude

of aquatic birds, such as pelicans, cormorants, cranes, ibises, frigate birds, etc., have selected for their nesting-place two of the secluded islands, in particular, about five miles from the main land and thickly covered with mangrove trees. In April every available place on the branches is occupied with a nest. During the night, particularly, such an amount of quarrering, and scolding, and cawing, and screeching, and cackling takes place, as would outrival ten thousand bedlams. I once passed a night in a boat anchored about half a mile from one of these island rookeries; but even at that distance the hideous noise was so loud and intolerable as to preclude the possibility of sleep until near morning, when tired nature's claim to rest received at last a scanty, intermittent response. But soon is ushered in the carnival of gorging and extermination. The spoils are scented from afar by buzzards, crows and eagles, which congregate in flocks to revel in the wanton feast of eggs and nestling birds. They make flesh quarrels and contribute new, uproarious noises to the general clamor and confusion. Many young birds, having fled from their enemies above, and other assailants equally merciless below, fly at high tide, when the islands are covered with water, sharks and other voracious fish assemble to the entertainment and luxuriate in the shade of the trees, surfeited with the feast of eggs and young birds, that, in the riotous tumult, are hustled out of the nests.

The following incident was related to me by Mr. Alfred Jones, who lives at Homassassa, only a few miles from this rookery. With the view of obtaining an assortment of eggs for a friend in the North, he once went in his boat to one of these islands, accompanied by two assistants. In a couple of hours they collected five or six bushels of eggs, which they carried home. They were obliged to use clubs to drive many of the birds from their nests, especially the pelicans. Before proceeding to blow the contents from the eggs, if any was discovered to contain a young bird, it was at once thrown into the Homassassa River. It was soon observed that when an egg was thrown into the water it was at once gobbled by a black bass, which fish grow to a large size in that river. Immediately advantage was taken of this discovery, and, procuring fishing lines, they threw them into the water baited with eggs, which were at once seized by the bass. In this novel manner they caught bass large and fast; but they soon relinquished the sport from a feeling of compassion for the fish.

When on this coast a stranger might inquire, what means that long and solemn line of forms, apparently almost inanimate, standing in close array, soldier-like, in single file? No sign of life is seen save an occasional spasmodic movement like an uplifted arm, to be as suddenly depressed, when all is still again, as if some solemn scene proceeds. 'Tis now high tide. The flats and oyster banks are covered. A long and narrow coral reef has raised its crest above the surface of the water, as rocks are prone to do, in that peculiar coral region. The pelicans, having completed their labor of foraging, sat with their heads, too lazy for further exertion, have selected this reef as the only available spot of dry land on which to repose and to digest their food at leisure. Their distended pouches, heavy with the freight of tiny spoils, hang down against their breasts, and their great bills assume a peculiar attitude. When a portion of the food is digested, a vacancy exists within the stomach the pelican elevates its head and pouch to such a degree that, upon opening its bill, a fish or two are detached and slip down into the stomach. The bill is then closed and depressed to its former position, the whole proceeding occupying only two or three seconds of time, and the operation is extremely ludicrous. Each pelican performs this action in precisely the same manner, and after a fish is swallowed the bird remains as tranquil as a statue, until the recurrence of another vacancy within calls forth the repetition of another similar performance without. Mr. Jones also stated to me that when he was once in Tampa Bay he observed, standing on a reef of rocks, a lot of pelicans, on the head of many of which was perched a gull, in peaceful companionship with the former and unmolested by them. This strange proceeding excited the curiosity of Mr. Jones, and he determined to make a closer investigation. Soon a pelican elevated its head and opened its bill, in order to swallow some fish from its pouch, when a gull, extending its neck from its position on the head of the pelican, thrust its head into the pouch of the latter, seized a fish from within and flew away, screaming with delight, well satisfied with having so successfully "gulled" the pelican.

THE FISH MORTALITY IN THE GULF.

JACKSONVILLE, Dec. 21, 1878.

EDITOR FOREST AND STREAM:

Since my last was written I have interviewed Capt. James McKay, of Tampa, and he informs me that he has been engaged in the cattle trade between Punta Rassa and Havana during the autumn months, and that he noticed large quantities of sea fish, either dead or in a dying condition, from Key West to Punta Rassa. He attributes the mortality to the freshening of the water as a sequence of the heavy rains during the summer and autumn in southern Florida. In forming an opinion regarding the influence of an excessive rain fall, we must take into consideration the fact that the coast line of Florida, from Key West to Punta Rassa, presents a shallow coast. Adjoining the coast is a reef of coral, and from the reef to the shore is a shallow bay. The water along the coast is shallow, it scarcely seems probable that the rain fall of the past year could so freshen the water in the gulf as to destroy the fish.

Yours respectfully,

O. J. KENWORTHY.

Rational Pastimes.

A MEMORY OF INDIAN RIVER.

In the hot summer noon,

Watching the green lagoon,

I saw the cunning bowman of the swamp
Deep in the edges, crouched upon the damp,
Soft hammock, where the lily lilies encamp.

In the hot summer noon,

Watching the green lagoon,

I saw a plover coming down the lake,
Not caring for the water or the milk
Stop at the weedy water's edge to drink.

In the hot summer noon,

Watching the green lagoon,

I saw along the meadow margin pass
A solemn bird, sad and companionless,
And pitted the blue heron's loneliness.

In the hot summer noon,

Watching the green lagoon,

I saw a small crane droop his stately head,
Too indolent to drink or care to feed,
On a spaw of frog or root of water weed.

In the hot summer noon,

Watching the green lagoon,

I saw the cunning bowman once again,
Carrying into his camp, across the plain,
A plover, a blue heron and a crane!

BOWMAN.

NEW YORK ATHLETIC CLUB.—The second annual winter handicap games of the New York Athletic Club were held at Gilmore's Garden, this city, last Friday and Saturday evenings. The contests were participated in by a large number of well-known amateurs; the work done was of a very creditable standard, and the tournament was most happily conducted. The Garden has come to be regarded as the place for athletic winter meetings; every convenience and facility are afforded both contestants and spectators. The programme was as follows:

Seventy-five Yards Run.—First trial heat, four runners, won by George E. Parys, Short Hills, C, 6½ yards start, in 81.54; second heat, four runners, J. F. Jenkins, Jr., Gloucester, C, 2½ yards, 82.26; third heat, A. B. Wilson, Carman R. Ass, 6½ yards, won in 74.46; S. Stearn, Amateur A. C, 6½ yards, walked over for the fourth heat; A. Noel, Jr., Short Hills A. C, won the fifth heat in 83.58. The final heat, run the second evening, was won by Payne, 6½ yards start, in 84; Noel, 5 yards, second; Wilson, third.

Four hundred and forty yards.—First trial heat, three contestants, won by L. S. Myers, Knickerbocker A. C, 15 yards start, in 51.54; second heat, three contestants, W. R. Baker, C, 15 yards start, in 51.54; American A. C, 35 yards, won in 53.24. The third heat was won from five others by Ralph Voorhees, Greenpoint A. C, 18 yards, in 58.34. In the final heat, the following evening, Hewitt won in 56.24; Myers, second; Bissell, third; Rommell, third; Voorhees, fourth.

One mile walk.—Sixteen walkers appeared in the first heat, and William O'Keefe, Yorkville A. C, won in 8m 11½; J. H. Gifford, New York, second. In the second heat thirteen appeared; W. C. Howland, New York, won in 8m 21½; J. H. Gifford, second, in 8m 21½. In the final heat, contested the following evening, O'Keefe won in 8m 14.34; J. W. Adams, Newark, N. J., second, and J. Cameron, Y. M. C. A., third.

Two hundred and twenty yards hurdle.—Six started in the first heat; the winner was M. J. Gilligan, Clinton A. C, 15 yards start, in 2m 11½; Myers, Knickerbocker Y. C, 8 yards, won the second heat in 2m 27½.

The third went to William H. Douglass, New York, 6 yards, who covered the distance in 2m 27½. Gilligan won the final heat in 2m 26½; Myers, second; Douglass, third.

Amateur tug of war.—The four teams who appeared for the tug of war were the Knickerbocker-American, Empire City Gymnasium, New York Athletic and the Ninth Regiment, N. G. N. Y. The rope was held by E. J. Jones in diameter, and the side crews were twelve feet from the line. The Knickerbocker-Americans easily defeated the Ninth Regiment boys in 1m 11½. The tug between the Empires and the Athletics was one of the finest ever witnessed. The Athletics quickly pulled their opponents six feet over the line, where they were quickly halted. Then the Empires regained their ground, and the mark on the rope was once more over the central crease. When fifteen minutes had elapsed and time was called, the Empires had fifteen inches only to their credit, and the Athletics had the final count against the victors. Teams were pulled on the following evening, and was another fine display of effort and grit. The Empires pulled their opponents slowly, inch by inch, until they had five feet to their credit, and then they made a dash for it. The Athletics pulled their opponents there were ten men on each side. The names of the champion amateur team are: James McCarthy, captain; Augustus Schneider, George Barry, Clarence Halpin, William Payton, James Coughlin, John McGeehan, George Mullen, John Jennings, Thomas McLoughlin.

One mile run.—Among twenty-two runners, W. H. Robertson, Brooklyn, 58 yds, won in 4m 52½; C. Morton, Scottish-American A. C, 95 yds, was second, and P. Noel, Short Hills A. C, 60 yds, third.

Regimental tug of war.—The teams were of six men each. "C" Company first team vanquished the second team from the same company in 1m 43½. The "K" Company boys had a walk-over, their opponents from "I" not appearing. The "B" team defeated the "F" boys in 3m 39½ in the final tug, Saturday evening, the "B" team defeated the "K" team in 1m 46, and were in turn vanquished by the "O" team. "O" then defeated "K" in 2m 30, and bore off the trophy, a stand of arms. The "K" team were: Walter Smith, captain; C. H. Bruel, James Walden, John Gillies, James O'Gilley and J. E. McNiel.

Four Hundred and Forty-four Yards Hurdle.—Of four competitors, Joseph L. Jones, 34½ yards start, won the first heat, and won in 1m 18½. John Kuoxy, Knickerbocker-American Club, was second. There were 20 hurdles 2ft 6in high.

One mile race.—The first heat of the two-mile bicycle race was contested by William H. Pittman, who came in ahead in 10m 34, Van Ness New York, second, in 10m 34. In the second heat William M. Wright, New York, won in 10m 54; Joseph Lafon, second, in 11m 36; and W. Addison, Ravenswood, L. I., and S. J. Pomeroy, Manhattan A. C, behind. Wright was protested against on the ground that he was entered under a fictitious name, his real name being Butler, and that he was not an amateur, having competed for money with Stouton, the English champion, when he was in this country. In the final heat between Lafon, Pittman and Wright, Lafon held the lead for fifteen laps, when Wright drew up with him and finally won in 2m 54, Lafon second.

International Tug of War.—The American team of Greenpoint defeated the Irish team of Greenpoint in 53½. The Irish team of New York won the second heat, the American team of New York won the third heat, and the American team of New York won the fourth heat. The Greenpointers pulled their opponents within three inches of the line, and there the two opposing forces stuck until the expiration of the fifteen minutes.

Two Hundred and Twenty Yards Hurdle.—There were ten hurdles 2ft 6in high. Only two runners started, and Arthur W. Anderson, New York Athletic Club, with 8 yards start, won in 32.24.

Two Miles Walk.—There were eighteen entries, among whom William O'Keefe, with 40s start, won in 17m 43½.

Half-mile Run.—Twenty-one contestants engaged in this. M. Ellis, Jr., Scottish-American A. C, with 60 yards start, won in 2m 12½.

KNICKERBOCKER ATHLETIC CLUB.—The second annual winter games of the Knickerbocker Athletic Club were held at Gilmore's Garden last Monday and Tuesday evenings. There were a very large number of entries—too large to be well managed—and the consequence was some confusion in the ring. The events were as follows:

Seventy-five yards race.—First heat, W. S. Swords, Peerless Club, time 8½; second heat, J. S. Baker, Peerless Club, 8½; third heat, W. T. Livingston, Harlem Club, 8½; fourth heat, F. Nichols, American Club, 8½; fifth heat, J. F. Baker, Brooklyn Club, 8½; sixth heat, M. McFarland, Ravenswood Club, 8½; seventh heat, G. McDonald, Brooklyn Club, 8½; eighth heat, A. W. Wilson, Peerless Club, 8½; ninth heat, J. W. Murray, Plainfield Club, 8½; tenth heat, W. Kendrick, Hare and Honnds Club, 8½; eleventh heat, James King, New York City Club, 8½; twelfth heat, E. B. Kittle, New York City Club, 8½; thirteenth heat, J. H. Wiegand, Western Club, 8½.

The final heat was won by M. McFarland, of the Fanwood Athletic Club, in 7½; Joseph King was second.

One mile walk.—Won by F. L. Lackemacher in 8m 4½, E. W. Mol. second, E. F. Leinhardt, third.

One mile run.—Made in 4m 43½ by J. F. Dobbs; L. Wrangler second, H. C. Roman, third.

Running broad jump.—Won by W. T. Livingston, who cleared 5in; G. E. Payne, second, with 10ft 10in.

Two hundred and twenty yards hurdle.—Won by M. J. Gilligan, in 30½, with J. S. Voorhees a good second.

Half-mile run.—Won by H. O. Romel, Triton Boat Club, in 2m 25½; Walter Smith second, and A. E. Gordon third.

Three mile walk.—Won by J. H. Carter, in 30m 38.

Running high jump.—Won by J. H. Oakes, who cleared 6ft 3in, Elliott Marshall coming second with 6ft 2in.

Quarter-mile run.—Won by H. H. Morrill in 57½.

The five mile run brought out a large field, and after a hard struggle, was won by W. H. Robertson in 30m 56½; J. C. Christian second, and D. O. Rupert third.

Of the forty-seven entries for the championship twenty-five miles walk thirty-seven appeared for the start. Charles Corner, Scottish-Am. A. C., was ahead until the second mile, when T. H. Armstrong, the former champion, went to the front and stayed there until the fourteenth mile, when he sprained his ankle, and was out of the race. Budd How, of Philadelphia, then had first place, and kept it until the finish, winning in 4h 12m. 40½, which is 3m. 37½ behind Armstrong's record last year. William O'Keefe was second in 4h. 22m. 9s. A. Varian, third.

MR. ANDERSON.—The indomitable lady walker of Brooklyn is now rapidly nearing the successful completion of her task of walking 2,700 quarter miles in 2,700 consecutive quarter hours. Shortly before midnight Tuesday she had finished her 3,128th quarter mile.

ROLLER-SKATING.—The Sixty-third Street Rink has recently been transferred to the Pleasant Place rink, in a roller skating salon for the fashionable recreation of "rinkers," as it is called by the English nobility. The large hall has been divided into two compartments, one for beginners and the other—the larger one—for experts. There is to be an opening invitation reception to the press next week, before the regular public opening of the new rink.

At the Brooklyn Rink the roller-skating is now limited to two nights a week, on Monday and Saturday nights. The former is for the fashionable season, and Saturday as the popular night, the rates being lower.

HOW LOGS ARE GOT OUT OF THE MOUNTAINS.—A chute is laid from the river's brink up the steep mountain to the railroad, and, while we are telling it, the monster logs are rushing, thundering, flying, leaping down the declivity. They come with the speed of the thunderbolt, and somewhat of its roar.

A track of fire and smoke follows them—fire struck by their friction with the chute logs. They descend the 1,700 feet of the chute in fourteen seconds. In doing so they drop 700 feet perpendicularly. They strike the deep water of the pond with a report that can be heard a mile distant. Logs fired from a cannon could scarcely have greater velocity than they have at the foot of the chute. Their average velocity is over 100 feet in a second throughout the entire distance, and at the instant they leap from the mouth their speed must be fully 200 feet per second. At the mouth of the chute is perhaps fifteen feet above the surface of water. A huge log hurled from the chute cleaves the air and alights on the floating log. You know how a bullet glances, but can you imagine a saw-log glancing? The end strikes with a heavy shock, but glides quickly past for a short distance, then a crash like the reverberation of artillery, the falling log springs 150 feet vertically into the air, and with a curve like a rocket, falls into the pond several yards from the log it struck.—*Truckee (Nev.) Republican.*

THE GIANT HUMMING-BIRD.—The giant humming-bird of Chili is the largest of its family, and besides its size differs from all the rest in some very noteworthy respects. Mr. Gould describes it as a bold and vigorous flyer, quick in all its actions, passing from flower to flower with the greatest rapidity. Unlike other species of its family, it may be frequently seen perched on some small tree or shrub. It has a very extensive distribution over nearly all the more southern portions of South America. M. Warszewicz collected specimens in Bolivia at a height of nearly 14,000 feet. The nest is a somewhat large, cup-shaped structure, composed of mosses, lichens and similar materials put together with coarbs and placed in the fork of a low branch of a tree, generally one that overhangs a turbulent stream. Charles Darwin, in his narrative journal of the voyage of the *Beagle*, refers to this species as a resident of central Chili during the breeding season, and his account of it differs, in some respects, from those of other writers, especially that relating to the absence of the rapid vibrations of the wings, generally supposed to be a peculiarity of all humming-birds, without exception. He states that the species, when on the wing, presents a very singular appearance. Like others of the family, it moves from place to place with a rapidity which may be compared to that of syrphus among flies, and the sphinx among moths; but while hovering over a flower it flaps its wings with a very slow and powerful movement, totally different from that vibratory motion common to most of the species and which produces the humming noise. Mr. Darwin had never seen any other bird the force of whose wings appeared (as in a butterfly) so powerful in proportion to the weight of its body. When hovering by a flower its tail was constantly being expanded and shut like a fan, the body being kept in a nearly vertical position. This action appeared to steady and support the bird between the slow movements of its wings. Although it flew from flower to flower in search of food, its stomach contained abundant remains of the insects which it fed upon. Darwin believed to be the most of the objects of its search than honey. Its note, like that of nearly the whole family, was extremely shrill.—*Dr. Brewer, in Scribner for December.*

A STONE IN A HORSE'S JAW.—For a long time a lump has been observable in the side of the jaw of a horse belonging to Superintendent Osbison, of the Gould and Curry and Best and Belcher mines. Yesterday a veterinary surgeon, from a London, and to his astonishment brought to light a hard and smooth stone, about two inches long and one inch in diameter. The stone was of a yellowish white color, and apparently as hard as marble. In order to make sure as to the nature of the stone, Mr. Osbison took it to a jewelry store and had it sawed in two halves. When it was incised, and to his surprise in its centre what had once undoubtedly been a grain of barley, half of which was visible in each piece of the stone, the grain looking as though petrified. Around this nucleus the stones had formed in regular layers or growths, the rings of which were distinctly to be traced. The material of which the stone was formed appeared to be the same as is found in the incrustations on the tubes of boilers. It is thought that the grain of barley pierced the skin of the horse's mouth and imbedded itself in the flesh; and that the saliva then deposited upon it limy matter. The stone is as hard as marble, and the annular markings are very distinct. —*Virginia City (Nev.) Enterprise.*

—What a wicked boy that was who slyly put a chestnut burr under the saddle of the parson's horse! Up to that moment the animal had never played him a single trick; but all at once he became a very spirited brute and pranced along with a kind of military enthusiasm. For a single moment the parson thought of selling him at a high price to a showy colonel of the army. After that his attention was so concentrated on the sense of holding on that he had only time to wish that he had sold him the day before, and to the highest bidder. The little boy stood on the roadside with his thumb in his mouth and tears of sympathy in his eyes. The parson thought the boy had a very tender heart, but when he took the saddle off and saw the burr he grasped his riding whip and looked around, but the boy was gone.

—“Great ceremonies are necessary,” says the *Railroad News*, “to get a train off in Germany. When all is ready a bell rings. Then another bell rings. Then the engine whistles, or rather tooth-tooths gently. Then the conductor tells the station-master that all is ready. Then the station-master looks placidly around and says ‘So?’ Then the conductor shouts ‘Partig!’ interrogatively. Then the station-master replies ‘Partig!’ positively. Then the conductor blows a horn; the engine whistles; the bell rings; the other bell rings; the station-master says ‘So?’—the passengers swear in various tongues—and the train starts. That is, unless there is a belated fat man—in which case they do it all over again.”

—Dean Remsey, tells this story. A man lost his wife and on the same day. His neighbors naturally thinking that the greater loss of the two was the loss of his wife sympathized with him very deeply, and intimated the possibility of a new partner who could be had for the asking. “Ouah,” he answered in contemptuous tones; “you’re at ‘ken enough to get me another wife, but no one’ll ye offers to give me another coo.”

—A Methodist paper beseeches its readers to abstain from playing croquet, because it “detracts from the glory of God and the salvation of souls.” It is a timely warning. It is wrong to play croquet after the frost sets in and snow begins to fall. That it is at all seasons of the year an immoral play unless you have a good eye and can hit the ball instead of your own foot we have strong personal evidence.

—Bashful Lover:—“Ah, miss, I—I wanted to see your father. I’ve some important business matters to propose to him.” Benevolent Young Lady:—“Well, I’m sorry father is not in; but can’t you make the proposal to me?” The wedding cards were soon ordered.

FEATHERS.—Solomon in all his glory was not arrayed as will be the St. Louis woman who wears a feather cloak made of 33,880 feathers of the quail, prairie-chicken and wild duck. It will cost her husband \$500.

—If anybody wants to know what a jack-rabbit looks like let him go down to Coney Island next summer and take a glance at the donkeys on the beach. If he should paint the donkey red and do up his tail in cotton-bating the illusion would be complete.

—A young lady said to her lover: “Charley, how far is it around the world?” “About 24 inches,” my darling,” replied he, as his arm encircled her waist. “She was all the world to him.”

—A gentleman was threatening to beat a dog which barked intolerably. “Why,” exclaimed an Irishman, “Would you bate the poor dumb animal for spakin out?”

—“I like to make sponge cake,” she said, uncently; “it makes my hands so clean.”

—It was Mr. Grandley Berkeley who, under the skillful cross-examination of Mr. John Bright, then on a committee to inquire into the operation of the game laws, was made to show that the average farmer made \$175,000 a year by the crows on his farm. As thus: Crows kill wire-worms. Where there are no crows boys had to be employed to kill the worms at 13d. a hundred. The boys made about 9d. a day each. A single crow, Mr. Berkeley declared, was worth fifty boys at such work, or within a small fraction of £2 a day. On an average, Mr. Berkeley said, there were fifty crows on a farm, hence as each bird earned £700 a year the average farmer made \$175,000 a year out of his crows.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussil with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb.
1878, the Grand Prix de Casino, an objet d'art valued at
\$100 and a money prize of \$700, this the greatest
prize ever shot for at Monaco, was competed for by
sixty-six of the best shots of all nations, and won by
Mr. Chomont of France, with a full choke bore
Wedge-Fast Gun by W. W. Greener, killing 11 birds
out of 12 at 33 yards and 1 foot and 2 3/4 yards. He
also won the second event, killing 8 birds in succession
at 33 yards, making a total of 19 birds out of 20. This
is acknowledged to be the best shooting on record.
The winning gun at the choke-bore match, 1877, beat-
ing 17 guns by the best London makers, and winning
the silver cup, valued at 50 guineas, presented by Mr.
J. Purdie, gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus
and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest
and most durable ever invented, and the most successful gun of the period. PATENTED in the United
States, Oct. 5, 1875; No. 163,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

weight and quality of the "EAGLE BRAND" remain as heretofore, but its Range and Penetration
are increased by the bright

BURNISHED TIN COATING.

ALSO

Drop Shot, Compressed Buck Shot and Balls, Bar Lead,
Chilled Shot, Lead Pipe and Sheet Lead.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore you
would respectfully caution the dealers laying in a stock of unsalable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with
250 in each barrel, and by having a rough surface strengthens the ball for shipping,
and prevents the glancing of shot, while the smooth ball has to be made so
thin to break successfully when hit that sometimes nearly one-third of them are
broken by shipping, and the feather-filled ball is the same. Now

I Will Warrant my Balls Against Breakage by
Transportation,

and will pack 10 extra. I have had 8,000 shipped out West since my return from
England, and used them myself, and sometimes would not get a ball broken, and
never over three or four in a barrel. My traps are the best to practice from, and
where clubs use them you can readily see which is the hardest shooting. It
matches reported in paper, saying Bogardus' rules and traps used, you do not
see all the balls broken. Amateurs and young boys who want to learn to shoot
and will follow the instructions laid down in my book, "Field, Cover and Trap
Shooting," will become crack wing shots, and, further, patronize the man
who introduced this sport to the public, and who has been to England twice and shot and upheld the
American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and
published by a market hunter and experienced man. I will return the money to any one who has bought
the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with
Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$4; "Field, Cover and Trap Shooting," \$2.

NEW YORK, THURSDAY, JANUARY 16, 1879

Volume 11—No. 24.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun. THE FLORIDA COAST.

By ISAAC McLELLAN.

Wild the gale its majestic trumpet blows,
Wild the night with intenser darkness grows,
As the sailing ships fleet
Struggles on, staggeringly thro' the gloom,
With no light, save the lightning to illumine,
To warn them where the tumbling billows boom—
Where the eddying whirlpools beat!

But the perils of the sea, 'scap'd at last,
With the red'd and ragged canvas on the mast,
Behold the little vessels sailing fast

By the headlands of the shore.
Like a flock of white-wing'd fowl, see they come,
Like the sea-birds to their nests winging home,
When the tempests out at sea lash the foam,
And the ruidan surges pour.

When they anchor by those shores so serene,
What a fair, what a soft, delicious scene!
What rosy hues, what tints of living green,
Beam on the fisher's view!
Not a ripple, not a dimple crisps the deep;
So pellucid that the coral groves that sleep
Far below are disclos'd in all their sweep,
Gay with every lovely hue!

Far along the curving shores gleams the sand;
High aloft the branching evergreens expand,
And the orange and the lemon o'er the land,
Wave their globes of spangled gold.
Like emeralds shine the grasses and the leaves,
The grape, its fruit and foliage interweaves,
And the rustling corn, with its sheaves,
Is in ruddy bloom unroll'd.

White and pure shines the cotton o'er the plain,
As if snows, and the sleety, icy rain,
Their daky storm had shewer'd down amain
From winter's frosty train.
Soft, soft the odoriferous breeze seaward blows,
Delicious with magnolia and the rose,
And the spicy air is sweet as it flows,
Where flowers their incense burn!

For Forest and Stream and Rod and Gun. The Summer Argadia.

AS the Eastward bound traveler on the Chesapeake and Ohio Railroad steps out of the train at Kanawha Falls he finds himself, like the famous ass, hesitating between two prizes—for the tocsin sounds for dinner, the conductor calls the number of minutes allowed, and the odor of fragrant viands is wafted from the adjacent hotel; but the eye wanders from the cozy-looking inn to the beautiful landscape which surrounds it, and at one glance takes in a picture framed in blue sky and towering peaks—a clear blue lake at the confluence of New River and the Gauley, and a varied cascade tumbling over great boulders and then spreading out over a field of shingles in ten thousand little jets of frothy foam. To the eastward the sharp peak, that rises abruptly, is crowned by the old Indian Fort Defiance, along the face of the Southern Mountain winds the road made by General Washington, and just beyond the yard of the hotel is the log cabin occupied by Col. Rutherford B. Hayes, of the Twenty-third Ohio in 1861, when a saucy rebel gun, almost overhead, pointed by the ex-Secretary of War, General Floyd, often caused the prospective President to trespass with a violent expletive on that staid and pious bearing which at present makes such a contrast to the cigar of his predecessor. Above this charming glen the train toils up a deep narrow canyon, through which the New River comes plunging down over immense masses of rocks, piled as if to commemorate the battle of the fabled Titans, that with earthquake and thunder moved earth and heaven in their giant strides. On the left hand Jefferson's Pillar arises fifteen hundred feet, a gray, jagged tower of rock, jutting out from the thick masses of green and displaying from its scarred battlement, like tattered banners, the storm-torn cedars, which the unyielding spirit of the wild seems to hold there in defiance of nature and man. A few miles above here Big Sewall advances two immense cliffs like gray, grim sentinels rearing their crests to the very sky, while opposite the deep wooded mountain rises to an equal

height, and far below the solemn roll of the river gives the effect of awe and sublimity, the deep, reverberating monotone proclaiming the ever-rushing flow of time on and on to the sea of eternity.

The face of nature changes abruptly as the train leaves the New River and courses directly eastward up the valley of the Greenbrier. It is a panorama of sweet, homelike pictures—the white farm-houses set in green meadows and clumps of orchard trees, and the cow-bells faintly heard along the narrow valleys, making the refrain of that picturesque, quiet and happy bucolic life which is nearest to nature and to God. At Fort Spring Station we behold what in midsummer to the eye of the sentimental rambler is the synonym of all delights—a coach and four—representing the old-time pleasures of the road, as Cinderella's chariot typifies the enchantments of fairyland; yes, verily, it is the fairy vehicle to take us through the ideal golden time, for hath not the learned Dr. Johnson declared that perfect happiness sits on the box beside the coachman and travels at ten miles an hour behind four spanking bays? Therefore, hail to thee, Jehu of the old stage road! let thy whip be the enchanter's wand and thy four steeds like the flying coursers of Phæton, spurring the very clouds with their glowing hoofs and mounting the steep Olympus; and we will alight presently from the giddy throne of fancy and temper the icy draught from yonder crystal fountain with the stronger liquid which, in the dialect of Virginia, is yclept "Bumgardner."

This road from Fort Spring to Union is the ideal turnpike, running along the side of a spur range of the Allegheny, from which we view an enchanting landscape, as from the balcony of a grand natural theatre. The luxuriant meadows extend mile after mile, each farm set with parks of sugar-maple, buckeye and cucumber trees, and the rich green turf giving an effect of extreme luxuriance. The atmosphere is wonderfully exhilarating, even at noon, imparting the sparkle of champagne, and not less delightful to the sight than to the lungs, for it is a dreamy and magic lens, through which we behold a beautiful Arcadia—fanciful, yet real, giving body and form to Campbell's magnificent rhapsody and exalting the delicious incense of nature. He who enjoys this sight in the first blush of the morning, though his way-worn soul be racked with remorse and his future clouded with the dark shadow of a creditor, will say "Vade retro" to both, as the disenthralled spirit drinks the delight of nature's virgin beauty. Aurora, with rosy-tipped fingers, pulls back the curtain of mist, and unfolding yet finer, the night's dark uncertainty retaining the charm of its mystery, all the glorious view comes forth; and as the chorus of feathered songsters perform their beautiful pastorals, wrapped in a Sabbath-like purity, peak on peak the mountains rise and descend and rise again, until the blue on the horizon blends into heaven, and the rose-tinted clouds form into dome and spire, battlement and turret, the airy city of our fancy where hope leads us through dreamland.

Tumbling down from our lofty flight, we hear in the distance the early Vulcan of the village playing his ringing refrain on the anvil with a ponderous hammer.

THE VILLAGER BLACKSMITH.

Clank! clank! clank! ringing and musical it resounds on the morning air, and then you hear the double stroke of the small hammer in cadence, and then a single keen spire, tinted with gold, marks where the pretty town nestles in the valley, enshrouded in trees and gardens. The blacksmith looks like a grim ogre or a gnome in the glare of the forge, but when he comes out of the shop with a red-hot horseshoe in his tongs, he is a fair-haired giant, with laughing blue eyes and looking like the mythical Vulcan, a proper husband for Venus. He is one of the characters of the country, and upon occasion can draw a tooth as well as he can shoe your horse. The operation is performed by tying the subject to the anvil, the anvil to the forge, and a stout cord to the big sledge-hammer. He then swings the huge hammer thrice over his head, as Thor, the soldier-blacksmith, is supposed to have done, and launches it into the street, having first attached the other end of the cord to the subject's tooth. The result is certain; for, either the hammer has to stop, which it can no more do than the shot from Columbiad, or the tooth must come, unless the whole forge and shop give way, which is impossible. The blacksmith is so proud of this branch of his profession that he has marked in big charcoal letters over his shop door, "Futhe akre kured in hear." And never was a sign more indicative of success in any line of business, for the man in that country who has the malady is told by everybody else what to do, and if he declines the violent remedy he is pronounced a coward, and if he tries it he is not likely to confess to any more "futhe akre" for some time.

The handsomest man and most talented lawyer in West Virginia is Gion Patton, who has a beautiful mansion in this town of Union, and is the only man in the State who can have a preacher staying at his house and stay away from church, which he properly considers a moral institution conducive to virtue and, therefore, opposed to law in the professional sense of the term. And certain it is that the pure air and natural beauty of the country with the simpler and more devout sort of worship have set the imprimatur of primitive honesty on a people who are the worthy descendants of the bold pioneers of the last century. The vague legend of a single crime falls on the incredulous ear of the stranger, and in the midst of this serene and peaceful land of plenty

and content we are prepared to believe even that Gim Shanklin, the post-master, doesn't read the postal cards.

WALTONIAN.

Twenty miles south of Union on the main height of the Allegheny range is the Mountain Lake, a beautiful basin of blue limestone water, a mile or so in extent, a pretty cottage inn on the northern shore, and a jagged peak overhead, from which you may behold the territories of five States, the Black Mountain of North Carolina, cutting the southern horizon, and to the southeast the peaks of Otter, the two giant outposts of the Blue Ridge. In the ice cold depths of the lake no fish can live, but the tavern keeper can furnish you with a mule that can climb, and all you have to do is to make a trapeze journey "mule back," as the mountaineer calls it, to Booth's Fall, five miles down the mountain gorge, and the repose of these wild solitudes, a scholar of sixty years standing whose love and the world outlived, will show you the deep glen with the cascade descending like a sheet of molten silver from a window in the roof of green foliage that canopies the narrow valley. As we stand on a ledge of rock the glassy pool of water mirrors a single star at midday, and, looking aloft to see where the fallen gem came from, behold, there it is, set in a patch of emerald sky. A weird, uncertainly light dances along the walls of green and grey, and all the real world is gone. Stand on the dangerous ledge behind the sheet of water and the strange solitary spirit of the wild, more satyr than man, gives you a gorgeous colored fly and a line like the web of a spider. It dances down and down through the glistening light and rising spray into the frosty mass of foam, and then a sudden quiver on your rod and arm and a scintillating thing like a gleam of lightning leaps and capers at the end. It is only after the contest is over that the strange, wild excitement of the sport and the scene leaves you cooler enough to examine the prize, a speckled trout eighteen inches long. Let the wild man beside you bestow him in the creel and cast again with the same result; no waiting for a rise, the only thing is you may slip from your dangerous perch, from this unreal world into still another, for temptation in sport, as in vice, waits like a fisher of men. Some Waltonians say they are wearied at times by the monotony of success, but when you fish in this weird, fascinating elf-land it is the high tension on the mind and nerves, caused by the strange unreality, that leaves you longing to continue, but unable to stand up. The strange recluse of the valley follows you down and leads you along the ledges of rock, a tortuous path, and there leaves you standing on the mountain side alone in the glare of the sunlight with a creel full of trout in your hand to attest the reality of what seems a dream.

The old stage road takes the traveler from the mountain lake around a circuit of curious and interesting scenes. You may behold a giant oak, on which some faint scars represent the inscription cut by Daniel Boone: "Here Daniel Boone killed a bear."

The sweet springs in Monroe County, and a little further on Old Crow's tavern are notable stopping places. At the latter Daniel Webster, Clay, Calhoun, and many other great statesmen of their time have sat under the trees of summer's day, and marked the half hours by juleps brewed by Old Crow, the host of the typical innkeepers, and the biggest liar in all Virginia, politicians not excepted. His epitaph, cut in the white bark of a big sycamore which shadows the spring, runs thus:

"Old Crow is dead, that good old soul,
Who took his crog from a big stone bowl.
His face was red and his nose was blue,
But his hand was strong and his faith was true.
He drank all day and he drank all night,
And once on a time drank Bacchus tight,
And when the devil caught his ghost,
He played him a game of who'd drink most.
Though the liquor flamed with a fiery roar,
Crow drank and drank, and called for more,
'Till the devil saw he had caught a monk,
And staggered and drunk, and called for more,
While Crow skipped aloft like a shooting star,
And asked St. Peter to show him the bar."

The sentimental Waltonian may lounge away his holiday along here with delight, and six miles further on, at Dry Creek, is another pleasant tavern of the same sort, but more modern and very comfortable—honeysuckles at every window, and the cottage-house surrounded with pretty yard and flower-garden. A mile westward is the White Sulphur, from which you may hear the tapershorean revels of fashion, and a mile eastward is "Beauregard," the beautiful estate of Mr. Geo. Grant Peterkin, now occupied by Mr. McNeill. Both these accomplished gentlemen are Englishmen of means and high social rank, and their estate is one of the most beautiful in this State. The mansion is surrounded by an extensive park of magnolia-house surrounded with pretty yard and flower-garden. For Forest and Stream and Rod and Gun.

"J. M. S." SHOOTS QUAIL IN WEST JERSEY.

MORALIZES AND READS ROSSEAU—CHIMBO AND THE RABBITS.

I HAD spent a long day trying at the May's Landing Circuit the case of the Baroness Louisa Von Pochelstein against the German Evangelical Lutheran Reformed Zion Church. The Baroness boasted the blue blood of the House of Hapsburg, or some other "burgh," and was endowed with the qualifications which marks the excellent plaintiff—one who goes in to win.

The Baron Pochelstein, who wore "His wounds and honors in front," as the poet said, from the bird's-eye view I had of him, taken from the widow's lookout, must have been a jolly good fellow who could prove his doctrine orthodox

"By apostolic blows and knocks."

He looked as if he might be descended from the Burgomasters of the days of William the Silent and the Count Hoogstraalen, spoken of by Motley in his Dutch Republic, where he makes the Bitter Badavaro say of the Teuton of that period: "If by any chance he woke up and found himself sober he feared he was sick!" The Baroness claimed that her late husband was marvellously successful as a pounder and an expounder of the Gospel, and while ministering to the spiritual wants of "the German Evangelical Lutheran Reformed Zion Church of Egg Harbor City, N. J.," he had attended to the temporal wants of his "pod-nugation," and had the I. O. U. of the flock for \$1,666.67, which, as the declaration said, was yet due and owing to the plaintiff, and that the defendant, the G. E. L. Z. Church, had hitherto wholly neglected and refused to liquidate this small indebtedness.

If it is the perfection of art to appear natural, it is perfection itself to the mind of a *Liberal degenere* to see a plaintiff who can cry at the right time as the case progresses so, when I described "the wild charge they made" the heroic 79th from Egg Harbor City at Chantilly—and how the bloody Baron had to be lifted off his horse, and from thence (later) into the Egg Harbor pulpit, his interesting relic, the Widow Baroness Pochelstein and Gluckstein, wept copiously and the jury too, chiefly from along shore and ranging in the latitude of Somers's Point, most of the day of judgment to the glistering tenderness from either eye, and they quickly brought in a verdict for the handsome Baroness of \$1,666.67 with costs to be taxed. The Baroness dried her eyes on her lace *mouchoir* and bowed and smiled at the jury. The jury also "smiled," but I think it was at Veal's Hotel across the way from May's Landing's antique court house. The Baroness recovered her judgment *rectus in curia*, but I fear she will not get much more out of the Day of Judgment. This is only a brief prelude to a conversation with my Honor Burnett Vansyckle, one of the brightest minds of our Supreme Court, who can himself cast a fly *secundum artem*, or bring down the swift-winged woodcock in mid-air. Our excellent Judge Vansyckle, the youngest man save one on our Supreme Bench, was preceded by Judge Vandyk, the father of T. S. Vandyk, Esq., whose pleasant memory while among the Jerseys is recalled by the fact that he was a Fox-hunter and sportsman, which have so recently made his name a household word among all generous lovers of field sports. Many were the words of wit and wisdom treasured up from the judge's many-sided mind as we sat over our wine and walnuts at home, or discussed the red-head or canvas-back duck at the Hotel de Veal.

Judge Vansyckle was talking about quail-shooting in old country for quail shooting at all comparable to the Vineland County (Cumberland County, N. J.). This the judge seemed to doubt, and openly proclaimed himself a skeptic, when I told him that my friend, Wm. B. Rosenbaum, a glass manufacturer at Malaga, frequently killed a hundred quails in a day.

"Well!" I replied, "Judge, what has been done can be done again." I well knowing the Judge's conscientious Presbyterianism. I did not venture to bet with him as to the number of quails to be slaughtered in a day around Vineland, but I insisted that I would have made such a bet had I been in company outside of the Supreme Court. I promised to report inside of a week what could be done at Malaga.

The next day, having folded up "Ram on Facts" and "Sedgwick on the Measure of Damages," I left for home, via the Egg Harbor Pacific R. R., preceded over at the calls of Abbott, a man of note, which the wicked boys say runs only a tri-weekly train, so-called because it runs up one day and tries all the next day to get back. I addressed a letter to the Hon. Wm. B. Rosenbaum, ex-member of the House, saying that I would cheerfully accept his invitation, hitherto given, to visit his hospitable home at Malaga, and test the power of his breech-loader, on my promised day's shooting among the rabbits and the quail. W. B. R., prompt over at the calls of hospitality (for his ready toast at dinner was that of Lord Brougham, "Friendship and Liberty") telegraphed back: "Come Thursday, equipped for a week's sport." The West Jersey R. R. (which unites in one person a Superintendent and a Senator, whose motto seems to be *Eto Perpetua*—"Let me be a Senator perpetually") soon carried me to the village of Malaga, in Gloucester Co., one of the sporadic settlements peculiar to West Jersey, where patriarchal habits reign, and—widow glass in hand—"Sweet William," as I was wont to call my friend W. B. R. in the days when we went gyping, was at the depot with his gray mare, and we were soon seated by a blazing log fire in an old frame house, comfortable in all its appointments aglow with light and hospitality, like some of the old farm houses in which I used to spend Sunday at Tipton, Tennessee, in the anti-bellum days.

Rosenbaum began to talk of pro-Taphoret painting, but I ineffectually snubbed him by suggesting that being hungry, post-prandial conversation would better suit my ideas of "High Art" about that particular hour.

Hospitable as a prince, Rosenbaum called "Chimbo," as the much be-kicked and be-cuffed Scipio-Africanus was called, and ordered him to put on the dinner. There was an entire lack of ceremony, but no lack of all the substantial and delicacies which my friend had made. He himself never more complain of his "bad quarter of an hour."

Dinner over, we devoted ourselves to gun talk and congrat-

lated West Jersey on the surprising advantages accruing from the Game Protective Society under the fostering care of Major Walker (a regular), and of Judge R. T. Miller, who is as familiar with a breech-loader as he is well versed in the sinuities and angularities of Blackstone. I suggested to W. B. R. that one of our judges, to put it mildly, "damned with faint praise," my oft-recurring plaint on the "intransigent fact" that he and Richmond had more than once bagged 100 quail in a single day in and around the Vineland tract.

"Far be it from me," said the elegant William, "to make up a case against the Supreme Court, for they have had more or less to do with my affairs for some years, but I'll just bet my retriever's fine head against the Judge's annual salary (say \$10,000) that we will bag 100 birds before sunset to-morrow." I saw the Duke's blood of my good friend was up. "I was pleased and knew there was (Chimbo) music in the air." "Sweet William" sent Chimbo down the lane after George Richmond and said that he must run out at 5 o'clock in the morning and have the dogs ready, because he meant to let them slip and cry "havoc" among the partridge in and around every buckwheat field between Nat. Chew's house and North Vineland.

Richmond said everything was ready, and that we must breakfast with him. I insisted that early rising was never invented for sportsmen; that Sancho Panza was correct in saying "Blessed be sleep for it covers me all over like a cloak."

But I made a tremendous effort to be up with the lark, and Chimbo did not call us in vain. We rose the country never looked more beautiful as we left the village, with three dogs in our open wagon, all of us armed and equipped as the law directs, with Chimbo at the tail-end of the wagon, carrying a huge home-made sack, a cross between a haversack and a knapsack, and a smile reaching from ear to ear.

The country is as level as a barn door, and the piping of the quail could be heard in the gray of the dawn along the roadside, but it was no sporadic or nomadic partridge that sweet William was gunning for that November day. He made the driver strike for the nearest buckwheat field, for well we knew Bob White there most did congregate.

I was to be taught to slay "the partridge in the mountain," for in India, so Stevens says in his "Travels in the Holy Land," quail have their *habitat* in the mountain, hence the *soubriquet* formerly given to one of our local statesmen, the "Mountain Partridge."

I had not counted on the fact that I had struck with a Minnie rifle at 200 yards the bounding deer on the banks of the Mississippi, and had filled a boat (a big canoe) with wild geese on the Arkansas bottoms; but an expert on quail (except quail on toast) with that expert swordsman and soldier, M. E. F., at the League, I did not claim to be.

The dog stood still, a study for Whistler, or some other artist, and soon two birds got up from the high grass, and I sighted with inward satisfaction, as I blazed away with a single barrel, to see one drop twenty yards away. I was saved from absolute disgrace in the sight of my two gunners of the period, Richmond and W. B. R., who began to think I was not so green with a gun as I looked. Then the sun grew fast and furious. In a little patch of woods Richmond's dog routed a quail, ten in number, and it took half an hour to kill one of them; the other nine begged a cessation of holding on, and we left him to the tender mercies of the game utilities, and I would here timely suggest to that society, whose directors are my friends, that "Lehigh must do better" than some of their recalcitrant officers or agents have done recently; for one of these took a couple of dozen brook trout down to the Elmer Mill Pond to stock it, and by some accident or design or obfuscation of the moral or digestive faculties he let the trout, as the W. J. G. Protective Society cooked for breakfast. The agent of the W. J. G. P. Society stocked his stomach at the expense of the Mill Pond! Such conduct as this ought, surely, to be reported to Seth Green, Roosevelt, or some other high piscatorial mandarin!

Richman must have had a spic of a Cockerian or Far-down Celt in him, for his wit was fragrant of the shamrock, and he amused himself by humming "A Lady Lived in Leith," etc., while Sweet William was steadily (as a sleuth-hound trailing a deer) following through briar and brake each fugitive quail.

Woe betide the bird that escaped the Westley Richards of the glass manufacturer, and none escaped unless it rose in the dim woods or from out the crowded saplings, thick as gravel in a fountain of July. The bird escaping Sweet William's deadly aim was sure to fall before Richmond's breech-loader. He never missed.

In going from one field to another two birds ran across the road. I blazed away; both dropped.

"Why in thunder don't you let 'em get up?" said W. B. R., disgustedly.

"Get up!" said I, "I wanted 'em to get down!"

By this time my score had reached eight, and we paused a few moments to take a light lunch beneath the nearest persimmon tree, and a square reckoning counted thirty-eight birds. It was only high noon. Rosenbaum was a light, wiry fellow, all sinews, with not an ounce of spare meat on him, but he could travel all day, and like "Old Virginia Never Tire." His equal in forest or stream or with rod and gun I have never met, whether in the Adirondack woods or among the Jersey buckwheats.

My fighting weight is now 203 lbs. was then 200, and I filed a denumer to this perpetual tramp, and gently urged Richmond and W. B. R. to move on the enemy's works while I paused beneath the unbragging persimmon—for repose.

It was a heavenly day. There was that warm, sympathetic silence in the air which gives the Indian summer days almost a human tenderness of feeling. A delicate haze that seemed only the kindly air made visible. It was a philosopher's day, and as the bushes and gunners disappeared over the brow of half a hill—a gentle, clean, level and white to the sun showed. The dead birds were spread before me, and gentle Elias' lines sang themselves in my memory:

"I have had playmates, I have had companions;

In my days of childhood.

In my days of manhood.

All are gone, the old familiar faces.

Some, they have died, and some, they have left me.

And some are taken from me—

All are departed,

All are gone, the old familiar faces."

Rosenbaum rudely broke my reverie, he sitting on the top rail of a Free-olver's fence in the Vineland Settlement, and I rudely replying, "You're nodding, my feet, lazily tying the quails up with a string. He yelled:

"I say, old boy, get out of that! I thought you came here

to shoot birds, not to study out a speech for your next municipal case."

I stunned him with a rejoinder from Rutherford Institute, thus: "I say, Bill! do you think perfect slavery is an obligation to give all our labor for a supply of the bare necessities of life?"

"Have I not lunched by the side of your frugal knapsack? O, who would fardels bare or chafe the flying quail on such a day as this—a very bridal of the earth and sky! I seek repose, O, mighty Nimrod!"

"Bride be d—ashed d—ashed!" said Rosenbaum, "I thought you was a gunner, not a philosopher."

He laughingly shook his finger at me, whistled for his retriever, and was soon over the field and far away, striking a fresh quarry every ten minutes. For I never saw such a countess of the birds, and never heard of one so prolific. For the long-haired denizens of C. K. Landis' earthly Paradise (?) are more given to trimming the midnight lamp, ameliorating the woes of mankind, or teaching the young idea how to shoot, than to shooting themselves. They may be vegetarians; gunners they abominate.

I could not feel the stirring of my wings, and yet I soared. The clearing of my shooting jacket pocket my London edition of the "Confessions of J. J. Rousseau, citizen of Geneva," on the fly-leaf of which I had written when a college boy at old Hanover, on the banks of the beautiful river, the Ohio, the heroic words of the much-suffering, much-enduring, much-loving and prophetic citizen and scholar, lover and patriot: "This is what I have done and what I abide by."

I sat drinking in the air, satiated with the mere sense of existence in air as pure as the air in a January morning on the Ocklawaha, in Florida. I drank in also what Chimbo had brought me in a cup made of leaves—a draught from my little spring, and awaited the coming of my companions, who, heated with the chase, had gone far out of sight and hearing.

On every height there lies repose—

Here was rest, not warfare.

My gun was forgotten as I read from the "Confessions" words so in accord with my mood that Jean Jacques might have written them himself beneath the persimmon tree in Cumberland County. He says in the fourth book of the "Confessions":

"Although I have for several years past been frequently in the country, I seldom had enjoyed much of its pleasures, and these excursions, always made in company with people who considered themselves as persons of consequence and in-sipid by constraint, served to increase in me the natural desire I had for rustic pleasures. The want of these was the more sensible to me, as I had the image of them immediately before my eyes. I was so tired of *salons* *jets d'eau*, groves, parterres, and of the most fatiguing persons by whom they were surrounded, so exhausted with pamphlets, harpers, trios, unravellings of plots, stupid *bon mots*, insipid affectation, pitiful story tellers and great speakers, that when I gave a side glance at a poor, simple Hawthorne bush, a hedge, a barn or a meadow; when in passing through a hamlet I scented a good cheivil omelette and heard at a distance the burden of the rustic song of the *Harvesters*, I wished all rouge, furbelows and amusements to depart, and the dim of a good housewife and the wine of our own vineyard. I ardently wished to give a slap on the chops to Monsieur le Chef and Monsieur le Maître, who made me dine at the hour of supper and sup when I should have been asleep; but especially to Messieurs the lackeys, who devoured with their eyes the morsels I put into my mouth, and, upon pain of dying with thirst, sold me the adulterated wine of their masters, for time does not alter that of a better quality would have cost me at a public house."

The sun had begun to go down toward the baths of all the western stars, when Chimbo, forgotten by me, suddenly exclaimed:

"Boss! what dat? what dat?" Through the bushes I spied the white tail of a rabbit, and forgetting Erwin, Diderot, Rousseau and all his loves and woes, I ran, diving at the rabbit fifty yards away. Chimbo gathered him in, and gathered and our scattered munitions of war, we crossed the road into an apple orchard, and from thence into a stubble field which promised well. Here I did my best shooting, and by crossing and recrossing the field twice, for the birds were very tame, I increased my bird count to seventeen. This satisfied me, and Chimbo devoted the balance of the afternoon to rabbits in briars and hedges, and to the birds in the hands and on the sky we had abundance of sport, rarely missing, and soon counted seven rabbits, which made an elegant sufficiency.

We heard our companions bring nearly a mile up the road. Chimbo gathered up the game, his burished ivory visible at every step, hitched up the horses and we turned their heads homeward. Rosenbaum and Richmond, wearied at last, sat at the foot of a big oak tree by the roadside. It was a sight to see, for time does not alter that of a better quality would have cost me at a public house. How our skipping spirits danced would take an hour to tell, and time wanes. Rosenbaum said his affidavit would go before the court to detail our day's labor. Richmond declared it his best day.

Judge Vansyckle's circuit was changed to North Jersey, and I met him no more until the midsummer vacation, when I encountered his smiling face at the Grand Union Hotel, Saratoga. His first salutation was:

"J. M. S., you never reported the amount of Malaga quail you bagged in November."

"Well, Judge," I replied, "we beat the best score ever made in that county. We killed, three of us, in one day, from sunrise to sunset, one hundred and twenty-eight birds, and divided them, like 'all Gaul was divided,' into three parts."

The Judge looked amazed. He was too polite to say so, but his looks plainly said: "There seems to be a flavor of Eli Perkins about this thing!"

I saw the "doubting Thomas" stamped upon the judicial face, a reflex from the judicial mind, and I produced the following affidavit, which forever settled all cavil on that question, and has come to be regarded as good and sufficient evidence, and as Rabelais says, "Oats!" ("Hy Mackies; oats is evidence in the case.") It is as follows:

"CUMBERLAND COUNTY, ES."

"William B. Rosenbaum (glass manufacturer), of full age, on his oath saith, that on the fifteenth day of November last, the deponent, together with one James M. Scott and George Richmond, did kill, bag

and carry home from the immediate vicinity of North Vineland, Cumberland County, New Jersey, between the rising and setting of the sun on the day aforesaid, seven rabbits and one hundred and twenty-eight quail; and further his deponent says now.

(Signed) "WM. B. ROSENBAUM, before me, Inspector, Justice of the Peace, Clerk of the District Court, Commissioner for all the States and nearly all the Territories," "JAMES M. CASSADY."

The Judge acknowledged himself convinced, and I cheerfully admitted that I had only bagged seventeen myself, but insisted that I was like the Western Judge who said, "Gentlemen of the jury, I don't know much law, but when you come to evidence, I am a clairvoyant on evidence!" So I claimed that while I didn't know much about bagging quail in briar patches, when it came to rabbits, "I was a clairvoyant on rabbits!"

I tarried a while at Saratoga, but the Baden-Baden of America and its odor of graceful women, its moonlight and music, with all its elegance, did not please me like the breath of the woods and the repose I felt while gipping around Vineland with Chimbo at my side; and a magnificent dinner at the Grand Union, beginning with Julienne soup and broiled trout fresh from the Adirondacks, followed by a long line of French, Spanish and Chinese dishes, ending with a *meringue glacée*, did not fill the corner in my heart so fully filled by the blazing log fire at Malaga as we rested from our fruitful labors that November day and counted our names as the dogs lay lazily at our feet. Dull care, like Sheridan at Winchester, was a hundred miles away. But they are gone, all gone, the dear familiar faces. Somewhere in the prairies of the far West, Rosenbaum carried his household gods, and the weapons belonging to the mighty hunter go with him as Ruth went with Boaz. He was my beau-ideal of a gunner. He had a grace in handling a double-barreled shot-gun of which even Bourque approved (if I may trespass a poet). If these lines reach him in some happy hunting ground, let them say to him: "Sweet William, these made that interview with the quails a pleasant one." Yours, J. M. S.

Fish Culture.

AMERICAN FISH CULTURAL ASSOCIATION.—A meeting of the officers and members of the Executive Committee of the American Fish Cultural Association will be held in the office of the President, R. B. Roosevelt, 76 Chambers street, on Saturday, 18th inst., at one p. m.

CONVISED.—The United States Fish Commissioners, at their stations in Gloucester, Mass., turned out into the sea about a million young codfish week before last. The work is progressing satisfactorily.

DISTRIBUTION OF LAND-LOCKED SALMON.—We understand that the crop of eggs of land-locked salmon obtained at the Grand Lake Stream Hatching Establishment, in charge of Mr. Atkins, has not been so successful as usual, although there will be a supply for distribution by the U. S. Fish Commissioner. We would suggest the propriety of immediate application to Prof. Baird, at Washington, by those who wish to obtain eggs of this desirable species.

MARYLAND.—The Baltimore *American* gives the following report of the work of Mr. T. B. Ferguson, the State Fish Commissioner at the Druid Hill Park hatching-house, for the month just passed: "On the 17th instant, 12,000 California salmon were sent off to be placed in the Chester River, near Millington, and 1,000 were placed in the tributaries of the Little Gunpowder, Baltimore County. On the 19th inst. 10,000 were sent to stock the waters of Octarara Creek, near Liberty Grove. On the 21st instant 20,000 were placed in Deer Creek, about eight miles east of Parkton. Besides these there were 15,000 sent from the hatching-house that had been hatched for Professor Baird, United States Commissioner, for the rivers of Georgia; 7,500 of these were placed in the tributaries of the Ocmulgee River, between Conyers and Cunningham, and the other 7,600 were equally divided between the Oconee, at Milledgeville, and the Ocmulgee, near Macon, Ga. Yesterday two messengers started on the 4:35 A. M. train with 20,000 for the Savannah and other rivers of Georgia and Alabama. These fish are from eggs that were sent to the hatching-house by Professor Baird for some of the Southern States that have not yet established Commissioners. There are left at the hatching-house some 15,000 belonging to the United States Commission that will be sent to stock the rivers of South Carolina, and about 50,000 more for Maryland waters. The Park Commission are now gathering a supply of ice from the new carp ponds to fill a large house recently constructed. The carp ponds are not only a great ornament to the park, and useful for fish culture, but are now used for furnishing the ice supply for summer use.

TENNESSEE.—In his message to the Tennessee Legislature, delivered at Nashville, January 8, Gov. James D. Porter, urges a liberal appropriation of public funds for the furtherance of the efforts of the State Fish Commissioners. The appeal of North Carolina for co-operation in restocking the Tennessee River is also recognized, and the necessary appropriation recommended.

Two much credit cannot be written to Col. G. F. Akers for the zeal he has manifested in the fish interest of this State. Although an officer without pay, and obstacles innumerable thrown in his way, he has toiled unremittingly, and it is to be hoped he will succeed in getting such protective laws passed as will insure us a fine supply of all varieties of game fish suited to our waters.

WILD RICE IN FISH PONDS.—Editor *Forest and Stream*: Having noticed in my various hunting expeditions to Reel Foot Lake, Tenn., that there was no wild rice growing in it, and as there were doubts as to its growing so far south, I sent a friend, living at Hickman, Ky., some forty pounds of it, obtained from Brainerd, Minn., to plant in the lake. Though it was planted in the spring of 1897, it has grown so rankly that the question among the fishermen is whether to destroy the wild rice, or let it destroy their fishing? It seems it has taken such growth that they fear it will cover the entire lake. My impression is it will not take root or grow beyond six feet depth of water; also, that

it affords great protection to young fish. If so, our friends of the nets need be under no apprehension of impediments to their seining, even if they lose some of their water privileges; and as surely will the hunters be correspondingly benefited. Am I right? PERDUE.

It is not probable that the wild rice will spread to deep water. We have never seen it growing in water deeper than six feet. It has, however, been known to spread over large areas, leaving only narrow channel ways and lagoons. As a protection of young or old fish, nothing can be better. If the water is deep off-shore, we should have little apprehension.—Eo. F. and S.

THE McDONALD FISHWAY.

IN response to our request for information of his recently devised fishway, Prof. M. McDonald, of the Virginia Military Institute, Lexington, Va., has kindly furnished us with the accompanying illustrations and description. The excellence of the design will appear at once upon a careful study of its principles. The advantages which this design appears to possess are the efficiency with which it will accomplish the work for which it is designed, and its adaptability to all streams, without regard to the steepness of the ascent or the volume of the current. A maximum velocity of less than five miles per hour is not necessary, even for shad, and with a slope of one in four would permit the bays (L M, fig. 3) to be eight feet long; on a slope of one in six, twelve feet long. If the maximum velocity permitted is fixed at eight miles per hour, then for a slope of one in four the bays would be about sixteen feet long, and their width and depth would be regulated by the water supply. Mr. McDonald writes that he has constructed a miniature way in the hatching-house at Lexington, the slope of which is about thirty degs., the total rise being nine inches. Up this the young salmon shoot with such rapidity that the eye can scarcely follow them, and they move with apparently the ease of a bird rising from cover. The inventor is sanguine that the time will come when the principles developed and applied in his fish-way will be successfully employed, not only to pass fish, but boats over the natural and artificial obstructions of our rivers. Indeed the dream of the mercenary American who would convert Niagara into a saw-mill may yet be realized in a different and vastly better way when Professor McDonald shall have placed in that mighty flood a gigantic fishway and thus open the inland lakes to our migratory fishes. The illustrations given are as follows:

depth of the current is about 12 inches. The surface is therefore about 6 inches below surface of water in dam, and the velocity of the current at T' where the ascending fish enter it will not exceed three miles per hour.

The water from the sluice-way escapes laterally at h, Fig. 3, and may either be caught and worked over again at lower levels, if the water supply is deficient, or may be led by suitable means and discharged at the foot of the way. The same disposition should be made of all the waste, as it will serve to lead fish to the mouth of the way.

From T, the level of the bottom of the sluice-way, a sloping platform T' U, with an inclination of one in four, leads to the level of the water below the dam. Up the centre of this platform is a slotted opening, the width of which is regulated by the water supply. This opening may be adjustable to different widths, if desirable, to provide for a varying water supply. The platform or incline forms the top of a box-like sluice of sufficient capacity, which communicates freely with the water in the dam. When the way is in operation the water flows upward through the central slotted opening, and is directed up the slope by plates set obliquely and raking up the slope. To equalize velocity of efflux at all points of the slope, and to feed the current at all levels by water from rest, the space below the incline is divided into equal compartments by transverse curved plates, k k and c.

The water enters these compartments from beneath. The areas of the openings below being so proportioned as to vary inversely as the square roots of the effective heads at the different levels; consequently the quantity of water entering each compartment in equal times will be the same, and the velocity of efflux all along the incline will be the same.

When water is turned on the way there will be a central upward roll of water from the bottom to the top of the incline; each particle of water will ascend a certain distance, regulated by the velocity of efflux; will then come to rest and roll outwardly to form on either side lateral descending currents, whereby when the velocity exceeds the established maximum are intercepted and led off the slope either to be used over again at a lower level or by suitable channels, delivered on either side of the mouth of the fishway. The direction of the current in the way are indicated by the arrow heads, Fig. 3.

All the devices indicated are of the simplest construction and most inexpensive character.

The conditions on the incline simulate very closely those presented by the rapids of a river. The ascent to be made is in an open current of moderate velocity, and almost a direct line. At the head of the incline the fish swims into the sluiceway leading through the dam, with the current directly ahead and opposing him with the moderate velocity of three miles per hour.

Natural History.

PARASITES IN THE SKINS OF ANIMALS.

EDITOR FOREST AND STREAM:

I have had under consideration for some time the larva or worms sent by one of your correspondents from Mahonington, Pa. I find on investigation that they are mature larva of the genus *Cuterebra* embraced in the Dipterus order of insects, to which belong the bot-fly, gad-fly, etc., of our domestic animals. The specimens sent were said to have been taken from the neck of a rabbit (*Lepus Americanus*), protruding from each side. These larva belong to the class of parasites known as *Epitoca* or external parasites, inhabiting the skin and nostrils of various wild and domestic animals in distinction from the *Entozoa*, which inhabit the internal organs of the same. The former pass only a part of their existence in this shape, and after a while become perfect insects; the latter pass their whole life in this form, and are known as annelid helminths or worms.

Species of this genus *Cuterebra* have been known for hundreds of years. The species *C. bovis* is common in cattle throughout Europe, and also in this country, and is known as the gad-fly. This fly attacks cattle, and by puncturing the skin along the back and neck, deposits its eggs there, which are hatched in a very short time, and the larva becomes encysted under the skin in the living animal and live upon the purulent matter which the irritation of their presence engenders. In this position they are called "warbles," and can frequently be squeezed from the lumps often seen on the backs of cattle during the summer by a simple pressure of the hand. Their color is at first white, becoming considerably darker as the time approaches for their leaving their cell. Having passed a period of five or six months in this position, they work their way out in the spring and fall to the ground, and enter in the ground or under a sheltering stone turn into chrysalids, and in a short time emerge into the perfect imago or insect, ready to start against their peculiar voyage of life.

The species *C. ovis* deposits its eggs in the nostrils of sheep, where they are hatched almost immediately and the larva make their way through the nostrils into the sinuses of the head, where they likewise become encysted, and, when ready to mature, drop out and find shelter in the earth. This species, or one closely allied to it, is found likewise in the sinuses of the head of goats and deer to a limited extent. Both of these insects, *C. bovis* and *ovis*, are objects of great terror to the animals attacked, causing stampedes, and even abject terror when they make their appearance among them. Cattle seek to avoid these living torments by entering the water, and sheep by keeping their noses close to the ground and running around.

The third of this genus is known as the bot-fly (*C. equi*), and is a source of a great deal of torment and suffering to our most useful animal—the horse. These eggs are attached contrary to the usual custom of the genus upon the hair of the horse's legs or shoulders within reach of the mouth, whence they are licked off and transported to the stomach. There the larva attach themselves by two hooks to its coating and remain until fully matured.

The species sent by your correspondent, from the rabbit, is a member of the same genus, but has not, as yet been specifically described, nor am I aware that the imago is known. It is quite common in rabbits throughout the country. It is found along the back and neck, sometimes protruding, or entirely encysted. The reason for this protrusion is apparent. The larva in the case of the sheep and cattle take two days or more in coming out, and where they are found in this condition they are just making their way out. All the species are of a light color at first, gradually changing to a dark brown or black when leaving their cells. This species of the rabbit is commonly known as the "wolf," "grub" or worm. These insects in wild animals are not usually discovered by those who term themselves sportsmen, for the simple reason that they do not look for them at the right time of the year. The majority of these larva have left their victims by the time they are killed, or, if they are there, they are in a very immature state, having just been hatched from the lately deposited eggs. These remain in the skin through the winter and into the spring, and after about four, five, or even six weeks in the pupa state become perfect insects. Those in the rabbit are most noticeably abundant in August and the early part of September. After they leave the wound heals up rapidly, and in a few days no trace of them will be noticed.

In this connection I would say a few words in regard to the species of this genus which caused quite a discussion in your paper last winter, and which showed that skepticism on this point had not been cleared away. I refer to *C. encausator* of the squirrels, which is most emphatically the cause of the want of testes in many of these animals where they are not contained in the cavity of the abdomen. I brought the question up before the Linnean Society of this city a short time ago, and it was corroborated by Messrs. Merriam, Bangs and others who had been studying the worms from squirrels. The trouble, as I have stated above, is that sportsmen have not the opportunities to verify these facts, owing to the necessary game laws which prevent the destruction of animals when these larva are most likely to be found, namely, in the spring and summer.

There are very few who have any idea of the effect of these insects upon the commercial value of the hides brought to this city during the spring. Hides taken in February in Texas and the Southwest are found perforated by these grubs, some

being found with as many as thirty-five or forty holes in one skin, and damaging them to the extent of two and a half per cent. of their value making a difference of nearly a million dollars a year in this city alone.

The skins are not taken from the poorest cattle, either, for these insects seek out as a general thing the sleekest and fattest animal, in whose skin they deposit their eggs. Deaths from the presence of these larva occur rarely, except in the case of the horse and the sheep. In the latter they frequently are the cause of severe abscesses and ulcers in the head, causing great pain and frequently death.

That they have any fatal effect upon any of our animals designated under the name of game, I am unable to state; but it leaves a field open for future investigation.

FRANKLIN BRINER.

PADDLE-FISH OR SHOVEL-NOSE STURGEON.

Vicksburg, Miss., Jan. 8, 1879.

EDITOR FOREST AND STREAM:

Mr. Editor—In a recent number of the *Scientific American* was an elaborate and well-executed cut, representing what the author termed the paddle-fish of the Mississippi. Here the same fish is called a spoon-billcat. It is most abundant in the still waters in the old bed of the river where cut-offs have been made, and in the larger and deeper lakes subject to overflow, where any moment during the summer they may be seen coming up like an arrow out of the water to the height of three or four feet, and falling prone on their sides with a splash which can easily be heard from a quarter of a mile. The author of the article accompanying the cut says they have never been known to be taken with the hook. In this he is mistaken. My old friend and former partner, Mr. S. W. Boswell, of this city, has himself caught two, in a large lake near here, while fishing with minnows for bass. One of them weighed about twenty pounds, and before he was landed got first his bill or shovel entangled in the line and then his tail when he came out like a heavy, crooked stick in a strong current. I have heard of others being caught with a hook, but I know these two were so caught, each time taking a minnow quite sick and in a very active.

This curious fish is quite familiar to us. We have a few of their discolored "bills" in our private collection, which were taken from Lake Pepin on the Upper Mississippi. Scientifically it is known as the shovel-nose sturgeon, (*Scaphirhynchops platyrhynchus*), and belongs to the family Sturionidae, to which the common rock sturgeon of the Hudson River and the great lakos and all the larger Western waters, belongs. We quote the following description from Hallowell's "Sportsman's Gazetteer":

"This curious fish is found only in the Mississippi and its larger tributaries. It is certainly a strange-looking fish. Its striking characteristic is its long, horny, spade-like snout, which is from eight to eighteen inches in length, and from two to three inches wide, and its immense toothless mouth. In large specimens the mouth is sufficiently large to admit a man's head. The head and shoulders are very large, from which the body tapers gradually to the caudal fin, where it is not more than two inches in diameter. The tail is forked, wide and heterocercal, one of the very few fresh water species living possessing this paleontological characteristic. In lakes Pepin and St. Croix they swarm in countless numbers. How far toward the Gulf they extend has not been ascertained. They are eaten by Indians and half-breeds generally. The whites sometimes smoke and cure them. They weigh from ten to forty pounds.

The letter of our Vicksburg correspondent establishes the fact that the southward range and habitat of this fish extends at least to Vicksburg, and we feel gratified with the information he has so kindly sent us.

NUTTALL BULLETIN.—One of the most enjoyable presents which the New Year brings with it is the *Nuttall Bulletin*, which we found on our table on the second day of January. That this admirable journal continues to furnish to its readers the freshest and most trustworthy news on all ornithological matters goes without saying, for the names of its managers and the prestige of the Nuttall Club are enough to guarantee the character of its contents. Besides this, the *Bulletin* is constantly improving in its appearance, and the present issue is larger and in all respects more imposing than any that we have seen before. It comes to us at this time a large pamphlet of sixty-four pages, and is printed on heavy tinted paper, while its table of contents is quite as interesting as usual. Judging from these and other indications of financial prosperity, we are happy to be able to believe that this periodical is successful from a business as well as from a literary point of view, a statement which can rarely be made concerning any young journal in these days.

Mr. O. Hart Merriam in the present number continues his "Remarks on Some of the Birds of Lewis County, New York," and his account of some of the habits of the yellow-bellied woodpecker is most interesting and thoughtful, and contains several points which will be new to a majority of our readers. Being a continuation of his "List of Birds Observed at Coosada, Alabama," "The Terns of the New England Coast," by Mr. Wm. Brewster, is a perfect gem of bird literature, and will interest every one who reads it, whether he be an ornithologist or not. The writer's account of the persecution to which these charming birds are subjected during the breeding season is very pathetic, and we join with him in calling upon the Legislature of Massachusetts to extend protection to these charming creatures.

We heartily regret that the demands on our space are such that we cannot notice particularly each article in this *Bulletin*, for each one is in some point particularly interesting and deserving of more than a brief mention. As it is we can only give a list of the papers, and recommend all who take an interest in ornithology to send for the periodical itself. The remaining articles are: "On the Collection of Eggs," by S. D. Allen; "Nest and Eggs of the Corvacean Warbler," by J. Osborne; "Additional Cases of Albinism and Melanism in North American Birds," by Ruthven Deane; "List of Birds Observed in the Naval Hospital Grounds in Brooklyn City," by George Hughes Coues; "Notes on Some of the Less Hardy Winter Residents in the Hudson River Valley," by Edgar A. Mearns; "Breeding of the Winter Wren at Houlton, Me.," by Ruthven Deane; "Descriptions of the First

Plumage in Various Species of North American Birds," by William Brewster; and "Notes on the Habits and Distribution of the Rufous Crowned Sparrow (*Peucaea ruficeps*)," by William Brewster. The Department of Recent Literature contains notices of a number of valuable works on ornithology which have recently appeared, of which perhaps the most important is Dr. Coues' "Birds of the Colorado Valley," a work which the writer has not yet seen but which he hopes to receive shortly.

General Notes are, as usual, very full, and contains many notices of the capture of wandering birds far from their homes, among them the Frigate Pelican (*Zachyptes aquilus*) as far north as Nova Scotia.

APPROPOS OF WASPS.—Mr. Editor: I am no naturalist, but the habits of insects, winged or creeping, interest me greatly. About two years ago coming along a path in my garden I was attacked by a wasp, which I mistook for a large and fierce-looking spider, whose actions indicated terror from some other cause than my approach. Halting to understand the cause of his manifest alarm, I observed, cowering around him in quick, swift circles a beautiful black wasp, of a kind I do not remember to have seen before; bright black on body, more slender and more agile than the common variety, without a speck of yellow near the joint of the wings with the body. Whenever the wasp would come very near the spider would stand on the defensive, with every leg and spine stretched for combat, but at every interval when his enemy gave him the chance he would attempt to scurry to shelter, only to be halted again by the nearer oncoming of his foe. At last, the wasp hovering for an instant at a point where he seemed to be stationary in the air, launched himself like a flash on the spider. They rolled over together in their deadly embrace, and I gave up my little fight for lost, but to my amazement the wasp had alighted where he could strike his sting under the scales where the neck of the spider united with the trunk. I distinctly saw him thrust his dart into that spot, when, presto! Mr. Spider stretched out his legs, and with one convulsive shudder gave up the ghost. The plucky little wasp hovered for an instant over the body of his enemy to be sure that life was extinct and then flew rapidly away, making no word to remove the carcass which I remained. The spider was large, heavy and powerful in frame, weighing eight or ten times as much as his victorious adversary. JOE.

LINNEAN SOCIETY.—The meeting of December 14 was well attended, and several interesting papers were read. Mr. Fisher reported the following occurrences of several accidental visitors at Sing Sing: *Opornis agilis*, Connecticut warbler, taken September 19, 1878; *Colaptes auratus*, species unknown, June 10, 1877; *Stris flammea*, var. *americana*, barn owl, January, 1878; *Geothlypis trichas*, which caused such an excitement several years ago by its wholesale destruction of our shrike trees, and for whose eradication the English sparrows were introduced, has gradually disappeared, but not through the sparrow. The lack of food and a parasite of a species of *Ichneumon* (*Ichneumon platygaster*) having a distinctive effect upon them. This insect enters into the economy of nature as a powerful factor in keeping in check the ravages of obnoxious insects. The disappearance of our shrike-worm and potato-bug (*Doryphora decemlineata*) from our potato field, must be attributed to about the same cause. The influence of birds has little, if any, appreciable effect to this end. An interesting letter was read by Mr. Ingersoll, from Mr. T. L. Roberts, of Minneapolis, Minn., in which he gave a most minute description of the habits of the shore lark (*Erenophoria alpestris*). He states that he had taken a nest of four eggs in Minnesota in August, and another in Iowa as March 18, 1878, and several on March 23, with three and four eggs each. They raise two, and not infrequently three broods a year. The nests are slightly built and different of construction.

Woodland, Farm and Garden.

LIFE ON A SHEEP RANCH.—Sometimes a rambling family letter, such as an absent son writes to "the old folks at home," conveys a better idea of the vicissitudes and duties of ranch-life than a carefully prepared description for public perusal; and we are accordingly pleased to print the following extract from a letter of a young man in New Mexico which has been kindly handed to us for publication by a relative in New Jersey:—

"I started from the rancho the day before George and his pardner arrived at Troyburg, so just missed seeing them; but they followed on after me and overtook me about fifty miles down. I had moved camp that day and had gone to a spring up on the side of the mesa about fifty yards from camp for water, and when I returned I saw the two fellows in the distance. I was glad to see them. They stopped with me four or five days. We all went out after deer one afternoon. Jed got a shot at a doe and her fawn but did not succeed in getting either of them. I was sorry to have the boys go, but they wanted to get their winter's wood before the snow came, and I had to move on with my herds; so we had to part. George will come down again this winter; if not, I don't expect to see them again until June, for I am going to January herds down on the Rio Blanco and shall not come back to the rancho until shearing time, about the 15th of June. I let George have my pony, and now I feel lost, for whenever I wish to go away from camp I either have to walk or work my passage on a burro (jackass). I generally prefer the former as the easiest and quickest. But I am going down into the buffalo and Indian country, and can find plenty of good ponies which I can buy cheap in trade. I will strike some of the cowboys who want to ride, and shall not ride the old Perry off for a good horse. I am now about 65 or 70 miles down southeast from the rancho. I shall stay here until after bucking time, then move farther and look for a good lambing camp. I expect Leonard down on the 12th with his bucks and a good supply of grub and grain.

"We have just passed through the heaviest rain storm of the season (Nov. 10). For three days the rain has poured down steadily, but this morning it has cleared off bright and clear. We have a good tent, but everything got slightly

*This is recorded to be by the following named members of the Linnean Society of New York: Mr. C. H. Merriam reported taking it in Lewis Co., N. Y.; Mr. Edgar A. Mearns found it at the Highland Falls, N. Y.; Mr. A. K. Fisher took it at Albany, N. Y.; Mr. J. H. Allen, J. J. and your correspondent, Mr. G. E. Andrews, at Mahonington, Pa. Besides several other parties who deal in game.

The Kennel.

DETROIT DOG SHOW.

dump; so this morning I have everything out on the bushes drying—bedding, blankets, etc. I think they had snow at Troysburg, for I see this morning that old Sierra Grande is white. My herds are fat and doing well. I have lost only one out of 4,100 head since starting from the rancho on the 16th of October, and that was killed by a lion night before last. I poisoned the carcass and watched nearly all night last night, but he did not come back. I shall expect him to-night. They are a nuisance and hard to get, for they are as cunning as foxes."

In a letter dated subsequently Nov. 13th, we learn how the lion above referred to fared. We quote:

"I have at last succeeded in getting what I have so long promised you, a mountain lion (cougar) skin, and a fine specimen is, too. It is not as large as some I have seen, but is very average, in a heavy build, with yellow spots or blotches, except the bullet holes. I had quite a tough job before killing him. I had brought my herds into this canyon (the Garescos) about the 6th of this month, and knowing that there were lots of lions in this part of the country had been very watchful for fear they would jump the herds. They did not trouble me at all until the night of the 10th, when one came into the herd and killed one sheep. He had no time to kill more, or even to tug off one he had killed, for as soon as the herd ran I sprang from the fence, and with a single shot I shot a lamb's tail was at the place where he had jumped the herd; found the dead sheep, but it was dark and cloudy, in fact raining a little, and he (the lion) got off before I could get a glimpse of him. Well, the next night I stationed my men around the herd and took my position near where he had entered the night before. We watched all night long, but he did not come back. The next night I made the same arrangement, and secreted myself under an overhanging rock behind a bunch of brush, wrapped in a blanket, for it was as cold as "blazes" and the wind blew a gale. The night was clear except once in a while a wind cloud would obscure the moon, which was just past the full. Just after one of these clouds had passed I heard the loose stones rattle on the side of a bluff just in front of where I was sitting. I just drew myself more into the shadow of the rock, strained my eyes in the direction from which the sound came, and held my breath. And, behold, there on the side of the bluff in front of me about 80 yards off, was "the man I wanted to see." I wish you could have seen him as I did: I tell you it was a noble sight, although it made a fellow have a sort of a go-down-into-his-boots feeling. He stood with his front feet on a rock, broad side to me, looking toward the herd. I had a Springfield rifle in my hand (one of the men had the Perry). Now know they carry a fifty ball. Well, I assure you I had it to my back and I was holding it. I have been telling this, and had a head on his fifth rib about half-way up. When the ball struck him he jumped into the air and gave one of the most unearthly screams I ever heard, and came tumbling down the hill. By the time he arrived at the bottom I was there and stood over him with my six-shooter. He floundered and pawed around some, and thinking he might get his "hooks" onto me I gave him a shot from my pistol which struck him in the back and he fell. He had no time to get up. The victory was certainly not to the strong, for he was strong enough and big enough to have "chawed" me all to pieces. I believe about my first thoughts as I stood looking at him were: "I bet Mr. Robinson would give half his life to have killed that 'varmint.'" I skinned him this morning and now have his hide stretched out to dry. As near as I can tell by measuring with my hands the hide was 5ft. 3in. from tip of nose to tip of tail, and 10ft. from front paw to paw at the tip of the ear on the ground. His muscles have weighed 350 pounds at least, for two of us could only just raise him from the ground by clasping our hands under his body. A. B.

BUFFALO POULTRY SHOW—*Editor Forest and Stream*: The Buffalo International Poultry Association give their seventh annual exhibition here at the rink, on January 29th, 30th and 31st and February 1st, 3d, 4th and 5th. Your correspondent, "J. D. H." is mistaken in stating that Mr. Coleman's pair of buff Cochins were in the exhibition here last year, as the association held no meeting last year, holding off at the request of the Chicago association, this year the Chicago association held the courtship by sending no birds. The people of Buffalo always look forward to the "Hen Conventions" with pleasure, for the management of them has always been in the hands of men who have given them their whole attention. Probably more is due to the President, Mr. Chas. A. Sweet, than to any other one of the officers for the great success of this society's meetings. The association is to-day the only really successful one in America, having given six exhibitions and more premiums than any other association of the kind in America. One of the most interesting parts of the exhibitions is the show of fish, and one in which every one who visits it seems delighted. It was in the exhibition of 1875, I think, that Mr. Fred Matson showed some Michigan grayling, the first I had ever seen, and I believe, the first ever seen in Buffalo. We are promised something very fine in the way of fish this year. It was at one of these exhibitions that I saw for the first time a pair of pure white squirrels with black eyes. They were the property of Mr. C. G. Irish, of this town, who exhibited a large collection of squirrels. Is it not very unusual to find albinos with black eyes, especially where they are all white? I shot on the 24th of December last year (1877) a female red squirrel heavy with young. Was not that also very unusual? The weather that day was more like September than December, being very bright and warm, in contrast to the same day of 1878. I saw you with this prize issue rules of the Poultry Association, showing the number of classes, premiums, etc. The premiums aggregate about six thousand dollars. Will advise you of any point of interest to your readers when the show opens, if desired. KARE.

Buffalo, N. Y., Jan. 2, 1879.

BETOLD! A GREAT CLAIM!—A California paper, the Salinas Democrat, mentions the finding of a huge fossil clam-shell on the farm of Mr. Finch, in Tulare County. It measures 5 feet 8 inches in length, 4 feet 8 inches wide, and 2 feet 5 inches deep. And to think that so great a clam should die! What a lost opportunity for the most marvelous evolution!

—All that we want now is a new Homer to write out the travels of the modern Ulysses.

FOREST AND STREAM will be sent for six months for \$2, or for three months for \$1. T. clubs of five or more, \$3 per year.

OUR over-crowded space will not permit us to print a detailed list of the entries for the dog show held at Detroit Mich., on the 7th, 8th, 9th and 10th of the present month. The entries numbered exactly 200, of which a large number were owned in Detroit. Canada was also well represented. The most prominent exhibitors were L. H. Smith, of Stratburg, Canada; Arnold Burges, of Michigan, and the St. Louis Kennel Club. The English setter classes, including native, imported and puppies, comprised forty-two entries, the most noted being Mr. Smith's Leicester, Temple Bar, Clip, etc., and Mr. Burges' Druid, Rob Roy, Queen Mab, etc. Irish setters numbered twenty-nine all told, but as the list included Mr. Fottler's recent purchase, Berkley; the St. Louis Kennel Club's Sine II, Elcho II and Duck; Mr. Waller's Race; Dr. Jarvis' Rose, etc., quality was not wanting. Gordon setters numbered nineteen, including Rupert. The Toledo Kennel Club was well represented in this class, and Mr. J. Weighell, of Rochester, N. Y., was also a large exhibitor. Twenty-two pointers appear on the catalogue, the most noted being the St. Louis Kennel Club's Bow and Clytie. The spaniel classes were not well filled, as far as numbers were concerned, the entries averaging about four in each class. There were five entries of foxhounds and twelve of beagles. The fox-terriers (seven) all came from Canada. None of the non-sporting classes were well filled. We append a list of the winners and our correspondent's letter:

DETROIT, Jan. 11, 1879.

EDITOR FOREST AND STREAM:

The great International Dog Show has come and gone and the canines are taking a needed rest. The judge of dogs in the sporting classes, E. W. Stoddard, of Dayton, Ohio—gave perfect satisfaction to think of all the exhibitors in the sporting class. I have not heard a single complaint. Unfortunately, the judge of the non-sporting class did not give the same satisfaction, complaints coming from both exhibitors and visitors. Below I send you a few comments on the dogs, etc.:

The imported English setter class was the finest ever exhibited at any show ever held in this country, and were a grand lot, being represented in force by Arnold Burges' Rob Roy and L. H. Smith's Stratburg Leicester. Mr. Burges' Druid won 1st in dog class and his Queen Mab winning 1st in the imported bitch class, and winning the sweepstakes as being the best pair of imported setters in the show. Mr. Smith's old-time Leicester won 2d in the dog class. Mr. Smith's Temple Bar got a V. H. C. Jas. J. Scallenburg's Thunder received an H. C., as also did Rattler and Sport, exhibited by L. F. Whitman, of this city. In the bitch class Arnold Burges' late importation, Nilsen, and Wm. B. Wells' Star got a V. H. C., L. H. Smith's Lassie Gowrie getting an H. O. and J. N. Dodge's Rose getting a C. The puppies shown, bred from imported stock, were a fine lot, Mr. Wm. B. Wells' Mark, by Druid out of Star, winning 1st—a fine young dog—the same owner's Dido, from the same litter as Mark, getting a V. H. C.

In the native English class, Royal Ben, owned by T. T. Sawyer, Jr., Boston, Mass., got 1st, and Don, property of A. P. Fellows, Hudson, N. Y., got 2d. In the bitch class, a grand bitch, Mell, owned by L. F. Whitman, of this city, got 1st, also winning special for being best native bitch in the show, also for being best native bitch shown with suckling progeny, being shown with six handsome puppies by Burges' Druid. Unfortunately three of the whelps died the last day of the show. In the English setter class for puppies under 12 months, Brussels II, entered, won 1st, and he is the making of a very fine dog—a little rough, but well put together. In the imported Irish class, E. C. Waller's Race won 1st. He is a fine dog, but I think it was well for him that Berkley arrived too late to be judged, for I think him the finer of the two. The Gordon setter class were a grand lot, Grouse, owned by the Toledo Kennel Club, winning 1st over Rupert, who was supposed to be invincible. Grouse is a grand, good dog. He arrived in this country on the 13th of last August, and was known to be in this country by only a few persons. He has won the following prizes: 2d, Birmingham, Eng., 1874; 1st, same place, 1875; 1st at Alexandria, 1875; 1st at Crystal Palace, 1876; and champion at Birmingham in 1877, and now wins 1st the first time shown in this country. He seems to be almost perfection itself, if any dog can be perfect. Floss, owned by the same club, won 1st in the bitch class, and is a cracker for the bench. In the large pointer class Belle, the champion, owned by E. M. Gillespie, of Columbus, Ohio, won 1st. The Irish water spaniel class was small, but very good, 1st and 2d going to Big Point Kennel Club, Chatham, Ont. Beagles were an excellent lot, J. N. Dodge's Rattler winning 1st and R. M. Baker's Maud winning 2d.

The managers of the show were much disappointed on the non-appearance of Gen'l Rowett, of Carlinville, Ill., with his kennel of beagles (he having made a number of entries) on account of the death of some of his dogs. The Newfoundland class was small, and the 1st given to an inferior dog, Nell, winner of 2d, being far the best in the class, and should have been given 1st. The bull terrier class was small and not as good as it might have been. The winner of 1st seems to have gained his place on account of having won six battles and never having lost one. The 1st in the black and tan terrier was very much inferior to the 2d prize winners, and should not have even been placed. In the sky terrier class no award was made, the specimens shown not being worthy of one. The Scotch terrier class was good, but awards misplaced. The winner of 1st should have received no notice, he being a red dog, but nicely built. A much finer dog, owned by W. B. Bullock, did not receive any notice—not getting an H. O. In the trick-dog class, a fine little black and tan terrier, Lion, owned and handled by Mrs. Armstrong, of Wyandotte, Mo., and some Scotch, Irish tricks, such as turning somersaults, climbing ladders placed in a perpendicular position, and other tricks—forty in number—too numerous to mention. Below I send you a prize list in full, with the awards in the regular and special classes.

DROU.

THE AWARDS.

Imported English Setter Dogs.—1st, Arnold Burges, Druid; 2d, L. H. Smith, Leicester; V. H. C., L. H. Smith, Temple Bar, H. C., James J. Scallenburg, Thunder; L. F. Whitman, Rattler and Sport.

Imported English Setter Bitches.—1st, Arnold Burges, Queen Mab; 2d, L. H. Smith, Clip. V. H. C., Wm. B. Wells, Star; Arnold Burges, Nilsen. H. C., L. H. Smith, Lassie Gowrie. C. J. N. Dodge, Rose.

English Setter Puppies (dog or bitch) under 12 months.—1st, Wm. B. Wells, Jr., Mark. V. H. C., same owner, Dido. H. C., J. N. Dodge, Cash. C. T. W. Jackson, Bruah.

Native English Setter Dogs.—1st, T. T. Sawyer, Jr., Royal Ben; 2d, A. P. Fellows, Don. H. C., H. W. Sampson, Jack. C. J. R. Cooper, Bruah. H. C., Lord, Bruah.

Native English Setter Bitches.—1st, F. Whitman, Mell; 2d, Mrs. M. E. Gibson, Katie. V. H. C., Wm. B. Wells, Star. C. J. N. Thompson, Belle.

Native English Setter Puppies (dog or bitch) under 12 months.—1st, E. G. Sheldon, Brussels.

Imported Irish Setter Dogs.—1st, E. C. Waller, Race; 2d, St. Louis Kennel Club, Elcho. V. H. C., St. Louis Kennel Club, Sting. H. C., Toledo Kennel Club, Don.

Imported Irish Setter Bitches.—1st, St. Louis Kennel Club, Duck; 2d, Dr. Wm. Jarvis, Rose. V. H. C., A. E. Sterling, Fora. C., Marshalltown Kennel Club, Mag.

Irish Setter puppies (dog or bitch) under 12 months.—1st, St. Louis Kennel Club, Red. V. H. C., A. E. Sterling, Conn; Albert Hayes, Nelson.

Native Irish Setter Dogs.—1st, Capt. Dick Uren, Don; 2d, S. W. Griffin, Grouse. V. H. C., H. G. Arnold, Echo.

Native Irish Setter Bitches.—No prize awarded.

Native Irish Setter Puppies (dog or bitch) under 12 months.—1st, Robt. Shankis, Grouse.

Gordon Setter Dogs.—1st, Toledo Kennel Club, Grouse; 2d, Goldsmith Kennel, Raper. V. H. C., Toledo Kennel Club, Judge. H. C., J. N. Winterspoon, Grouse. C. A. R. Schlenker, Jack.

Gordon Setter Bitches.—1st, Toledo Kennel Club, Floss; 2d, E. F. Mulliken, Nell. V. H. C., J. N. Winterspoon, Nell.

Gordon Setter Puppies (dog or bitch) under 12 months.—1st, Toledo Kennel Club, Bob; 2d, Wm. S. Ponnard, Rosa. V. H. C., Toledo Kennel Club, Duck; W. C. L. Gilt, Gypsy.

Pointer Dogs over 55 lbs weight.—1st, St. Louis Kennel Club, Bow; 2d, Topeka Kennel Club, Sleaford.

Pointer Bitches over 50 lbs weight.—1st, E. M. Gillespie, Champion Belle; 2d, W. O. Lumsden, Rose. V. H. C., M. V. Saunders, M. D.

Pointer Dogs under 55 lbs weight.—1st, A. S. Leonard & J. E. Atherton, Don; 2d, Topeka Kennel Club, Keno. H. C., H. I. Gay, Convey. C. Frank J. Springfield, Dan.

Pointer Bitches under 50 lbs weight.—1st, St. Louis Kennel Club, Clytie; 2d, H. B. Gay, Vic. H. C., Topeka Kennel Club, Nell.

Pointer Puppies (dog or bitch) under 12 months.—1st, F. H. Brown, Lord Dufferin. V. H. C., F. H. Brown, Lady Dufferin; E. M. Gillespie, King Charlie.

Irish Water Spaniel.—1st, Big Point Kennel Club, Mike; 2d, Big Point Kennel Club, Bridget.

Retrieving Spaniels (other than pure Irish).—1st, F. A. Howe, Snider; 2d, Anthony Vogel, Dick. V. H. C., Chas. E. Miller, Chief Rogers.

Cocker Spaniels.—1st, Herbert Brown, Gypsy; 2d, Henry O. Wann, Floss. H. C., Francis Hewer, Floe.

Field Spaniels (other than Cockers).—1st, Col. G. Zowski, Duke; 2d, J. C. James, Track. V. H. C., J. C. James, Train.

Beagles.—1st, Frank J. Springfield, Dan; 2d, Wm. B. Wells, Star; 3d, J. N. Dodge, Nero and Speed.

Beagles.—1st, J. W. Dodge, Rattler; 2d, R. M. Baker, Maud. H. C., W. D. Hayes, Ringold; V. H. C., Hayes, Bugle; J. W. Dodge, Roxey.

Dogs.—No entries.

Fox Terriers.—1st, O. J. Fox, Young Spot; 2d, Herbert Brown, Boaster. H. C., Herbert Brown, Panch; C. J. Fox, Gypsy.

Greyhounds.—1st, Herbert Brown, Ariel; 2d, T. W. Jackson, Rex. C. J. A. McKay, Lord Beaconsfield.

Toy Terriers.—1st, J. B. Kanihan, Dandy Jim; 2d, Major Wm. J. Lano Milligan, Nell.

Shepherd or Collie Dogs (rough or smooth coated).—1st, Armstrong & Crawford, Bruce; Harvey Balaunt, Jack.

Toy Terriers.—1st, J. B. Kanihan, Dandy Jim; 2d, Geo. W. Voorhis, Jack. V. H. C., E. Heller, New York Harry.

Black and Tan Terriers.—1st, Wm. Smith, Gypsy; 2d, Wm. Zeese, Loafar.

Yorkshire Terriers.—1st, Mrs. W. Wright, Daisy.

Toy Terriers.—1st, Herbert Brown, Sandy; 2d, Mrs. W. Wright, Vic. H. C., Robt. G. Goulay, Rough. H. C., Miss May Talman, Topsy; Mrs. W. Wright, Toss.

Toy Terriers.—1st, Mrs. O. J. Johnson, Pinkie; 2d, A. J. W. Wilhite, Toy Terrier. H. C., Miss Lizzie Horn, Tidy.

Pugs.—Wm. Stewart, Gyp.

Miscellaneous.—(For any breed of dogs that have not been assigned a regular class, silver medals will be awarded).—1st, R. C. Allen, Jack, Chinese eddie dog; 1st, Thos. Thorley, English Bull Terrier; 1st, J. B. Kanihan, Dandy Jim; 1st, my bull dog.

Trick Dogs.—1st, Mrs. Armstrong, black and tan terrier Leon, gold medal; 2d, Anthony Vogel, Dick, silver medal.

TROY DOG SHOW.

A dog show was held at Troy, N. Y., on the 10th, 11th and 18th insts. in connection with the first annual exhibition of the Hudson Valley Poultry and Pet Stock Association. Owing to a want of time and due notice to owners of dogs, the show was not the success it might have been made, but for a first attempt it deserves commendation, and we have no doubt that Troy will yet have a dog show worthy of a town which not only contains so many good sportsmen but is so situated as to be the centre of a district abounding in good dogs and first-class sportsmen. In addition to the dogs competing, a list of which our space will not enable us to print, a number of celebrated dogs were entered for exhibition only. Among them were the splendid English setter bitches Rose and Nina, the property of D. T. Charles, Esq., of Albany, winners at New York and Boston; the pointers Brush and Fannie, owned by Mr. J. Macdonald, Mr. Adolph Stander's water spaniel and others. Among the competing dogs Mr. Sampson's red Irish bitch Nora was a really fine animal, and did credit to her sire Elcho, so also was Mr. King's Victor by Rory O'Moore. Mr. Jas. T. Walker showed a very fine brace of black and tan setters, the bitch being particularly noticeable. The Oneida Community showed a Sensation puppy, which, however, could get no better than second. Mr. John Hobart Warren, of Troy, showed some splendid collies, two of which were New York winners, and Mr. Morgan's handsome mastiff King Olaf and Miss Burden's Yorkshire terrier Tatters, would have done credit to any show. The judge was Mr. W. M. Tilston, Kennel Editor of this paper. The following is a list of awards:

Red or Red and White Setters.—Bitches.—1st, A. A. Sampson, Troy, N. Y., Nora, 18 months; 2d, O. T. Moore, West Troy, N. Y., Jessie, 3 years, no pedigree.

Black and Tan Setters.—1st, Alexander King, Lansingburgh, N. Y., Victor, 16 months; Rory O'Moore-Jennie.

Black and Tan or Black, Tan and White Setters.—1st, James T. Walker, Albany, N. Y., Black Boss, 2 years, Dash-Mat, 2d, same owner, Dash-Mat, 3 years, Colburn's Dash, Thompson's Belle.

Pointer Dogs.—1st, H. B. Gay, Vic. H. C., J. N. Winterspoon, Nell; 2d, Oneida Community, Sensation II, 18 mo, no pedigree; 3d, Oneida Community, Sensation III, 18 mo, no pedigree.

Beagles.—W K Rice, Pittsfield, Mass, 1st, Jalop, bitch; 2d, Mint, dog.
 Collies.—1st, John Hobart Warren, Troy, N Y, Colin, Queen's Kennel, Dalton; 2d, same owner, Daisy, 1st, same owner, Dumbo; H C. O'Neil's Community, Lulu, 9½ mo.
 Coach Dogs.—1st, Geo. Allen, Troy, N Y, Fannie; 2d, same owner, Capt.
 Greyhounds.—1st, M E Filley, Lansingburgh, N Y, Fannie; 2d, same owner, Daisy.
 Mastiffs.—1st, Wm F Morgan, N Y, King Olaf.
 Yorkshire Terriers.—Miss M S. Burdett, Troy, N Y, Tatters, 5 yrs, imp.
 Scotch Terriers.—1st, John J Hooley, Troy, N Y, Fly, 5 yrs, imp.
 Italian Greyhounds.—1st, D O Denison, Greenbush, N Y, Ino.
 Poles.—F Aiken, Greenbush, N Y, Pauline; 2d, Thomas Knapp, Troy, N Y, Chinese dog.
 St. Bernards.—Red trace of setters, without regard to sex, nickel plated couple and pair collars, awarded to James T Walker's black and tan setters, Dash and Black Boss.
 For Setter Bitches, any Breed—1st premium, nickel collar; 2d premium, whistle.—1st, A A Sampson's Nora; 2d, James T Walker's Black Boss.

THE MINNESOTA FIELD TRIALS.

MR. DAVIDSON HIKED FROM AGAIN.

EDITOR FOREST AND STREAM:

In reply to Mr. Whitford's attack upon me in a Chicago paper of Jan. 4th, which has been longed for, I will commence with the beginning of the field trials. The judges appointed by the Minnesota Kennel Club were, Mr. Butler, Mr. Mullenken and myself. Mr. Butler being unwell when required to act, a substitute was necessary to fill the vacancy. A prominent sportsman of Sauk Centre was selected to take the position, who declined to act, when Mr. Whitford, who was Mr. Morgan's dog, was quartered on the grounds prepared for the field trials, for a day or two. It was, however, suggested by Mr. Sandborn and finally selected to fill the vacancy caused by the absence of Mr. Butler. It was well known at the time that he and Mr. Morgan had been shooting together, and that Mr. Morgan had an entry in the nursery stakes; but I heard no objections made to that, neither to my having been shooting with a prominent St. Paul sportsman previous to this, who also had an entry in the nursery stakes, which was equally well known. I merely mention this to show the difference between shooting with one person and with another in the eyes of a certain editor, who made so much fuss over my having been shooting with Mr. Whitman. The complaint came of course after Mr. Whitman's bitch had won a place, greatly to the mortification of said editor. There was no quarreling with the judges in figuring up the scores in the nursery stakes. The first quarrel took place between Mr. Whitford and me, in regard to the shooting of Mr. Sandborn's dog Dan in the puppy stakes, of which I will state the facts. Dan had run out his score with the exception of backing, and was put down to back Snap, who was one of the first that ran in the champion stakes; he refused to back and went deliberately in before Snap and flushed the bird. When he did so, Mr. Sandborn remarked to me that he hardly expected he would back, and the dog was ordered up. Daisy was then taken out by Mr. Whitford, and the dog having flushed a short distance off in the rubble from where we stood, Mr. Sandborn said to Mr. Waddington, that by going over there might be more birds, and that he would get a point for his bitch. Mr. Waddington went over, when his bitch made a staunch point; on being told to put up the bird none could be found, and she got a false point. When Daisy had gone on, Mr. Whitford who was a little to my right, said give Dan a back. I asked him when he backed, as I had not seen him do so, he replied that I ought to have seen him, and that he had backed now. I then said I had heard Mr. Sandborn told to take up his dog when he refused to back Snap, and that I had not heard him told to put him down again for a second trial. He then replied that it did not matter whether I had or not, he was told to put him down and that he had backed. I answered by saying that having seen him refuse to back, it was only right and proper justice to either dogs running that I should see him back, and that if he (Whitford) was going to judge the field trials alone that Mr. Mullenken had myself might as well go home. On inquiring of Mr. Mullenken, who was near by, he also had neither seen him back nor heard him again ordered down, and learned that he and Mr. Sandborn had a misunderstanding about the dog previous to this, when Sandborn threatened withdrawing him. These are the circumstances under which Dan got his back, and I resolved then to withdraw from the position of judge, as the ring was evidently at work. On mentioning my intentions to a few with dogs there they insisted upon my continuing to act, and nothing further occurred unpleasant until the trouble about Nellie, which Mr. Mullenken in his letter to FOREST AND STREAM so accurately describes. In that controversy I went to the wagon determined to have nothing further to do with the field trials, as to question anything about a dog of Mr. Sandborn's with Whitford present, was certain cause of a quarrel; and only for being reminded that two dogs alone remained to be run after those down, I would not have acted any longer as judge. Another little circumstance in justice to a bitch which ran, I will here notice. After the controversy about Nellie Mr. Dilly's bitch, Countess Royal, was down and had established a point and held it a long time, when Mr. Whitford, accompanied by Mr. Rowe, went to him, and said "Whitford said, 'Dilly, let it go, you have a point on this.' Mr. Dilly asked him, what was the reason he could not. Whitford said, 'Your bitch was not down.' Mr. Dilly replied that he had not been ordered to take her up and that he considered her down. Mr. Whitford then said it made no difference, Sandborn's was not down (Sandborn at this time had voluntarily called his to heel), and that if he had got a flush under the circumstances he would not have given it to him, and now he would give it to him. Mr. Dilly then replied to this was, that it seemed somewhat strange to him, and that he could not understand what Sandborn's dog had to do with the running of his. Mr. Mullenken and myself were in distinct hearing of this conversation, and in plain view of the bitch when pointing. In thinking the matter over we decided to say nothing then, she being one of the last down and a fresh quarrel the prospective result, and intended bringing the matter up at the close of the day, but Mr. Dilly withdrew her before running out her score, and she got no credit for an excellent point. It is a significant fact that Mr. Whitford was suggested by Mr. Sandborn to fill the vacancy caused by the absence of Mr. Butler, and that all the quarreling at the Minnesota Field Trials, and controversy since, has been in regard to Mr. Sandborn's dogs. It is also full of significance that Mr. Whitman is the only man who has ever run dogs in a field trial with whom it was improper for a judge to go shooting previous to the trials, in the eyes of a certain editor, who

at other trials has used his influence to advantage, and whose extreme intimacy with Mr. Whitford during the Minnesota Field Trials had a very ominous look. I shirk no responsibility as to Tempest's having gotten second place in the nursery stakes at the Minnesota Field Trials, for by Mr. Mullenken's score and my own she was justly entitled to it, let Mr. Whitford's scores have been one or a dozen. He can find nothing over my signature in FOREST AND STREAM stating that I copied from his score in the nursery stakes. I stated in FOREST AND STREAM that the scores in the nursery stakes were taken from Whitford's score, and do so now, and again state I can prove it. It might be interesting to Whitford to know the opinion of an expert as to the handwriting of the mutilated score he speaks of, and a postal card signed C. B. Whitford, in which he states that he was willing to divide the second prize in the nursery stakes between Tempest and Jennie, and therefore append it. And another little interesting matter to look over, that the many readers of FOREST AND STREAM and the Chicago paper, "which is sure to copy it," may judge for themselves which is the shirker, and whether he will be as willing to give his gratitude to FOREST AND STREAM for showing up fraud as he was to the Chicago paper for stating a volume of malicious and unprecedented falsehoods. JOHN DAVIDSON.

Monroe, Jan. 3, 1879.

APPENDIX.

I, the undersigned, hereby certify that I have seen and examined a letter of Chas. Lincoln to John Davidson, dated Detroit, Oct. 29, 1878, in which he states in relation to a debate contest, that he received the papers in the nursery stakes from Whitford. I have also examined a "scale of points" of the nursery stakes in Davidson's possession, and compared the handwriting with a postal card to Davidson, dated Pembroke, Ky., Nov. 14, 1878, and signed C. B. Whitford, and have no hesitation in saying that the handwriting in the two are the same; and further, that the "scale" has some erasures, and the "net total" is incorrectly summed up; that when properly added it gives Tempest 43½ and Jennie 43. I further certify that I have been an attorney at law for twenty years, and consider myself a good judge of handwriting. ELM WILLARD.

Monroe, Mich., Jan. 5, 1879.

JUR.—Editor Forest and Stream: Some weeks back I made mention of my bitch Jill as being pure Laverack. I wish now to correct this. She has some Glidersleeve blood in her, which, however, in no way detracts from her value. She was sired by Pedigree (pure Laverack), imported by Charles Vescoat in 1876. Her dam was Orphina, sired by the celebrated Bird of the Border, who, as is well known, was pure Laverack. Orphina's dam was Nellie, out of Bess and Bruce. A. F. HESTON, Coatesville, Pa.

—Mr. Jas. H. Clark's Princess Draco (Rob Roy-Livy) whelped, Jan. 5, 1879, ten puppies—six dogs and four bitches—by L. Adams' Champion Drake, late winner at the Nashville Field Trial. The owner retains a brace for himself, as names of which he claims Princess Draco II. and Drake II.

—The St. Louis Kennel Club has purchased from Mr. R. J. L. Price the pointer bitches Zeal and Lizzie, full sisters to his celebrated Bow-Bell and half sister to their Bow. Zeal is in whelp to her sire, Bang.

—Mr. J. W. Packer, of Philadelphia, claims the following names: a pair of black and white dog puppies, Chester; for black and white ticked bitch puppy, Daisy Bell out of his Queen by Levering's Harry.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*.
 Drum (two species), *Sciaenops ocellatus*.
 Kingfish, *Mentidierus nebulosus*.
 Sea Bass, *Sciaenops ocellatus*.
 Sheepshead, *Archosargus probatocephalus*.
 Upper, *Lutjanus blackfordii*.

Group, *Epinephelus virgatus*.
 Trout (black bass), *Centropomus*.
 Arapour, *Sciaenops ocellatus*.
 Striped Bass, or Rockfish, *Sebastes*.
 Tailorfish, *Pomatomus saltatrix*.
 Black Hawk, *Myxopristes*.
 M. pallidus.

FISH IN MARKET.—RETAIL PRICES.—Bass, 20 cents; smelts, 10; bluefish, 12½; salmon, 25; mackerel, 20; shad, 40; weakfish, 12; white perch, 15; green turtle, 10; frostfish, 6; halibut, 18; haddock, 6; codfish, 6; blackfish, 12½; dunders, 8; sea bass, 15; eels, 18; lobsters, 10; scallops, \$1.00 per gallon; whitefish, 18; pike, 16; salmon trout, 10; black bass, 15; red-snapper, 12½; smoked haddock, 10; hard crabs, \$3 per 100.

HOW TROUT TAKE THE FLY.

WE have been reading the characteristic sketch of a day's sport in the South of Ireland, written by our candid correspondent, "T. E. L.", for a late issue, and cannot forbear the reflection how far we of America, or at least the majority of us, are behind our trans-Atlantic friends in those piscatory arts and artifices taught by the good Walton and Madame Behner four hundred years ago! We are told by the relator that the shuffling tactics and common-place methods of our Rangeley and Schoodic school of angling will not answer for the bright streams of the Emerald Isle; that it is "absolutely necessary to keep as far as possible from the bank and throw the line with such lightness that only the leader will fall on the water," and that old resident anglers will fill their creels with wary two-pound fish while strangers can scarcely tempt an unsophisticated fingerling. We are impressed by the conviction that the inherent or transmitted intelligence of the trout of the Scone (and other such rivers) are as far beyond and out of the range of the puerile approaches of neophytes as the belles of St. James are above the limp rag doll imitations sold in the shops. The trout of the bright waters of Ireland are not in the habit of rising, like the hand-fed fish of preserves, to every leaf, dry case, or chance bit of rubbish which drops on the surface. They don't dodge when a bull-dog plunges into the drink, imagining it the splash of a football or a stone thrown in. Tremulous shadows on the shore, and the arrow-like flights of birds athwart the streams cause no

apprehension; but long shafts of shade suddenly projected over the banks are premonitory finger-points, indeed; while the zigzag of a clumsy line in mid air drives them to their holes like the play of a lightning flash against the clouds. Their intuitive perception has become so developed as to render curiously a superfluous instinct; and therefore the manoeuvres of the tyro have no positive interest to them. They merely lie perdu and passive until the force of fishing is over, and then proceed to habitual pursuit of bona-fide insects—not of humbugs. Sometimes they frolic aimlessly in mid stream and turn somersaults, just as the huge sturgeons and dolphins do when at play; often they amuse themselves by jumping at tired or disabled flies which dip and flutter above the surface. Juvenile larvae which drop from projecting branches along the margin are accepted morosely instantly snapped and swallowed, while the uncertain flight of a clumsy beetle or butterfly across the broad mid-channel affords opportunities for acrobatic practice seldom left unimproved. One of our correspondents has described this action by a diagram below, which contains more of the poetry of motion than is usually found in such simple hard set lines. Entomologists will confirm the artifice of dashing spray after flying insects to knock them down within their reach, when they will hesitate to indorse the bat-and-ball theory of striking a fly into the mouth by a flip of the tail.

We love to picture these summer scenes of purling, gently flowing streams of still waters running deep, into whose dark eddying pools, close by the shore, scraggy trees protrude their bare and withered roots, that the water may lave them. Tussocks of rank grass have slipped down from the abraded bank, and on the long filaments which sway in the current great dragon flies poised with outstretched wings of steel-blue glossamer. The big trout which are watching beneath the roots seldom molest them, provident, perhaps, of future supplies of more luscious larvae when the neocropter shall launch her egg-bag. But let an ambitious field-mouse attempt to cross the stream, or a top-heavy beetle tumble in, how like a shaft from a bow string will the trout dart straight for the prize, seize it, and with a triumphant flit of the tail, like the waving of a victorious battle-flag, dive for the bottom—not once only, should he miss it, but twice, thrice, yea, many times, until the hapless creature is drawn beneath the surface, drowned, torn piece-meal and gobbled up! No time lost then in useless leaping and by-playing with the tail; for what occasion is there to toy and dally with the game? Just so he takes the artificial fly which is skillfully trailed upon the surface. But often he is so positive of the deception that he refuses to be enticed and lies motionless in the stream, until, seeing the lure lift itself naturally off the surface when the angler withdraws his line for a fresh cast, he reasons, "By Jupiter! that was reality, after all!" and, starting in swift pursuit, he leaps, dashes water after the object and employs all the strategy which nature has taught him. If successful in hooking himself, the angler congratulates himself for adroitness instead of blessing his good luck and discounting the stupidity of the fish.

We are writing now in the interest of really good anglers who know how to manipulate a fly; who dare attempt the wide, smoothly-flowing, sunny stream, where every incautious movement is a death-blow to success; who can lay out a delicate cast of flies so evenly and lightly that the fish themselves can scarcely see them fall, the transparent, gut lengths touching the distant water first, and the taut, tapering line settling gently afterward, to be lifted by the pliant rod-tip, leaving scarcely a trace of the feathery riddle which follows its motion. Of such character, we are told, is much of the angling, and of such the quality of anglers, in most of the waters of Great Britain. In times past we have marvelled at the diminutiveness of the trout flies and the fineness of the gut snoods which the resident professionals there use. This article has no reference to salmon fishing, for its primary object is to define the flight of insects and show "how trout take the fly." But alas! how many self-esteemed experts there are who are woefully ignorant of both! They betray their deficiencies in their written views and opinions. They actually believe that, having delivered an interminable length of line, *et cetera*, their full share of the business has been accomplished, no matter in what predicament of tangled coil and thundering splash the line may fall. The belly of the line falls first, and the cast of flies follows "all in a heap." One writer has argued that, in the adjustment of droppers, no specified length of snood was required because the sag of the line invariably kept all the flies submerged! Just so! but Irish anglers don't cast after that fashion in the Scone. Another art our American anglers seem not to have learned, viz., that it is "absolutely necessary to keep as far as possible from the bank." Our candid correspondent, to whom we have referred at the beginning of this article, admits that "our rather nonchalant manner of fishing might do very well in the wilds of Maine, but it was evidently not the ticket in this old-fashioned country" (Ireland). The great drawback hitherto to American proficiency has been, that our anglers have usually frequented the rapid broken water of our narrow, turbid mountain streams, where the play of the current has given life and motion to their artificial flies, and a multitude of unsophisticated fish has granted success to their "rather nonchalant method of fishing." The necessity of fine fishing has not been discovered. In this fact, too, lies the secret of their ignorance of the natural history of insects and of "how trout take the fly." We hope more of them will follow the example of our Rangeley friend, and

learn the niceties of the gentle art from their friends in Ireland.

Our gun and dog friends, who take no interest in fishing, will excuse us, we hope, for what may seem to them the senseless prolongation of an absurd discussion, when we assure them that we are gradually evolving by this colloquial method a vast deal of information concerning the habits of trout which is not found in works on natural history. The letters which we print to-day are extremely instructive. It should be a matter of congratulation to the profession that the score or so of gentlemen who have approached this subject have done so over their true names, and that they are most of them widely known to the profession to be well versed in piscatorial matters. We hope others will take a hand in until the subject is squeezed dry:

NEW RUSSIA, N. Y., Dec. 31, 1878.

EDITOR FOREST AND STREAM:

I have been much interested in the discussion in your paper of the manner in which a trout takes a fly. I think the gentlemen who have written on the subject do not give the trout credit enough for intelligence. The truth is, trout are not only game fish, but first-class sportsmen. In proof of this assertion I will state what I have observed while trout fishing in the Adirondacks. I enclose sketch. The lower figure shows the manoeuvres of a trout to gain possession of a miller fluttering along just beyond his reach. The trout jumped at the miller twice, as high as he could, and failed to catch him; then changed his tactics by making sudden darts to the sur-

weight of evidence on either side must depend a good deal on who gives it. The testimony of a man who has been for twenty-five or thirty years fishing for trout in all sorts of places and under all kinds of circumstances, whose eye, naturally quick has been trained by constant use in the woods, on the cricket field or in the arduous duty of scouting in active service, would be worth more than that of a beginner in the art, but it would take the evidence of more fly-fishers than read even the FOREST AND STREAM to convince me that any trout ever knocks his food about before putting it in his mouth. I caught many hundreds of trout the past season, and caught quite a number by hooking them in various parts of the body. One day I caught several in one pool, none looked in the mouth, inside of five minutes. They jumped freely, and in swift water missed the fly, but were hooked as they went over it. If I want authority to decide for mouth or tail, I think my reply to the "how's that?" would be, mouth! I have never seen the tail-knocking performance in twenty-five years successful fishing. Let them keep on writing about it, though. One of the great points in making camp life in the woods is to keep things lively, never lose temper, be in a good humor and keep everybody moving.

C. CLAY.

STROUSE, Dec. 20, 1878.

EDITOR FOREST AND STREAM:

I have taken a few trout at different times and places, and have seen them strike with us on the water with their mouths hooked them in the caudal appendage by so doing. Now we all know this: many flies breed and hatch under water. The fly coming out of its larval state rises to the surface of the water, and, flying about four feet, alights on the water for a moment's rest to gain strength before the next flight, which usually carries them safely to shore. Master trout understands this and takes a whack at him with his tail, which causes a whirlpool that draws the fly down into the water about four inches, and then turns and takes the fly at his pleasure, because he knows that the fly being under water is entirely in his power as is the insect in the spider's web. Then he darts quickly to his hiding-place to swallow the sweet morsel, after which he is ready for the next object which may come in sight.

R. WOON.

POTNAM, Vt., Dec. 30, 1878.

EDITOR FOREST AND STREAM:

I have been very much amused and entertained by the sketches *pro* and *con* about the trout flopping the fly into its mouth with its tail. Now I don't see anything very remarkable about that; but suppose the fly had flopped the trout into the fisherman's mouth, or the fisherman had flopped the trout into the fly's mouth, or the tail had flopped the fly into the fisherman's mouth, or the fly had flopped the tail into the trout's mouth, or the fly had flopped the tail into the trout's mouth, or the tail had flopped the fly into the trout's mouth, or the fly had flopped its tail into its own mouth, or if the flop had flipped its head into the trout's mouth, or the trout had flopped its head into the fly's mouth, or, or—well, come up to the Middle Dam next summer and we will explain more fully.

O'VENECH.

MOON-STROCK FISH.—We have received and pondered over the following singular letter from a well-known sea-faring man who just barely missed shipping on the self-same craft with the historical "Ancient Mariner."

MR. EDITOR: The FOREST AND STREAM, I see, can explain almost everything, and now I should like to find out the why and wherefore of a fact which has struck me as very singular. Any sea-faring man will tell you that fish left in the moonshine is not fit to eat—that is, dead fish, just caught, left lying on deck or in a boat, or on the beach, or anywhere where the moon can shine upon them, get affected somehow, so that when eaten they make one feel very queer. I never heard of anybody dying from such poisoning, but there certainly is something in it, and I can get plenty of men who, like myself, have been to sea, and therefore naturally know more than those who stay ashore. The moonshine seems to affect all sorts of fish. Weather has nothing to do with it, for, as you say, moonlight in water is just as affecting as a scorching summer. The moon isn't tainted, but just poisoned; and if you don't believe what I know to be a fact, it's only because you don't know. However, all I want now is to know why this thing should be, and would be obliged if your book-learning would clear it up.

SEA.

We have often heard the assertions repeated which our correspondents make here; for we ourselves have served a three months' apprenticeship as a fisherman, having embarked in June, 1860, on the good schooner *Champion*, of Newburyport, Mass., and returned in September with a full fare of codfish, mackerel, and herring. Over Sunday dinners of plum duff, and appetizing kids of jo-loggers and lobsterhouse, we have heard the stories of mackerel which laid on deck and rotted in the moonlight, and of phosphorescent emanations from their bodies which drifted about the yard-arms and burnt blue in the binnacle, until the man on watch yelled to call "all hands up," as Tophet was just in sight. But we never have seen these weird effects of moonshine, nor have we perceived any suggestive fish-like smell at any time, though the odor of oil, gurry, and pickle, was always with us. Why such an opinion should prevail with substantial basis is what we wish to know. Have not popular assertions come to be accepted as popular facts? Is the belief founded on proof, or is it not, itself, all moonshine? In vain we have attempted to fathom the question. The log of imagination reels off knots faster than we can pay out the lead-line, and there is no way to stop headway except to scuttle the craft and let the mystery go to the bottom! We have consulted all marine authorities, and referred the question to our scientific men, in vain. All, save one, have given us no satisfaction. What that one says we append. It seems that words of wisdom are contained in his rejoinder, although he disclaims that his life associations have been such as to bring him much in contact with moon-struck fish. The burden of his argument is that the asserted fact should first be proven before an explanation is demanded:

SEVENTH ANTI-SLAVERY INSTITUTION.

WILMINGTON, D. C., Jan. 6, 1879.

MR. EDITOR: I return herewith the letter of your friend of the inquiring mind. I can only say that it seems to me desirable that the fact asserted should be proved true before any explanation of its reason is attempted. Personally, I very much doubt whether mackerel rot faster in the moonlight than in the sunshine, though I have for many

years been familiar with the popular prejudice, and have supposed it to be equally worthy of credence with the popular theory that beef taken from cattle killed during the waning of the moon "will shrink in the pot," or that the sailor always dies when the tide is ebbing. If there be any truth in the theory of your friend, it may easily be proved by a simple experiment, such as putting two mackerel on the same roof, one of them being protected from the rays of the moon. The only other requirement would be the co-operation of true lovers of truth who would test the two fish cooked in the same manner. I am always glad to aid you with any information in my possession, but this surject is rather out of my line.

G. BROWN GOOD.

Are our Cape Anners and Down East fishermen willing to let this matter rest in this indefinite shape?—E. F. and S.

NEW HAMPSHIRE.—Dover, Jan. 11.—Fishermen at Great Bay, situated five miles from here, report good catches of smelts; also the usual quantity of eels are being taken from our river through the ice. A few good strings of pickerel have been brought in, mostly taken some distance here, as the ponds are about fished out, being fished so much.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been five—one from Grand Menan and one from Eastport with herring, and one from the Banks with 6,000 lbs. halibut; two other Bankers arrived home yesterday, having just disposed of their fares in Boston.—Cape Ann Advertiser, Jan. 10.

FLORIDA.—Fishermen who visit the Halifax River this season will find boarding accommodations at the cottage of Bartolo Pacetti, whose name signifies that he knows how to handle the hook and line.

Rational Pastimes.

MADAME ANDERSON'S WALK.

LAST Monday evening Madame Anderson, the English pedestrian, brought to a successful completion her task of walking 2,700 quarter-miles in 2,700 consecutive quarter-hours, commencing each quarter-mile within three minutes of the beginning of each quarter-hour.

Madame Anderson is of German and English descent, is thirty-six years old, stoutly built, five feet one inch in height, and weighed at the beginning of her task 140 pounds. Her history is a checked one. At first a contralto singer, she became successively a variety actress, a circus clown and a managress, finally evolving into a pedestrian. In September, 1877, she walked 1,000 half-miles in 1,000 half-hours; shortly afterward she accomplished 1,350 miles in 1,350 hours, making 14 miles at the commencement of each hour. In an attempt to walk 100 miles in 23 hours, in a circus ring of 40 laps to the mile, she fainted on the completion of the 87th mile. Again she walked 1,500 miles in 1,500 hours, 14 miles at the commencement of each hour. The last feat before the one just finished was doing 2,633 quarter-miles in 2,633 quarter-hours.

The Mozart Garden course measured seven laps to the quarter-mile. Madame Anderson began her walk on the 10th of last December, and has persevered in her terrible task with wonderful courage and perseverance. Again and again it seemed to her physicians and friends a physical impossibility that she could go on. It was not the walking, but the lack of sleep from which she suffered. The aggregate of sleep for the whole twenty-four hours averaged only about two and one-half hours, and even this was taken in snatches of a few minutes. This struggle against nature was a severe one and very painful to witness. Her attendants had the strictest orders never to yield to her when she was overcome by sleep. They never did yield, though at times nature asserted itself even stronger than her will, and she resisted all their efforts to place her on the track. The feat was made while Madame Anderson was fast asleep, an attendant walking with her and guiding her lagging, slow-moving footsteps.

The sleepy times were periodical; the walker would recover from them to speed around the track in a style that sorely taxed the most plucky of her attendants. The varied accents of the singer and the actress here came in good play. Stepping on the stage, Madame Anderson would sing a song or make a speech, which the audiences never failed to receive with the greatest enthusiasm.

One noticeable feature of the exhibition was the character of the audience. Beginning her walk without attracting very much attention, people were generally incredulous. As time went on she became the subject of very wide and marked attention, and the character of the audience which thronged to see her was such as any one might be proud of, and was in every way marked contrast to the O'Leary-Campans gatherings. Indeed the ladies vied in showing her attention. Flowers and presents of all descriptions poured in upon her. But all the good will and respect which she has succeeded in inspiring are due solely to Madame Anderson herself. The whole undertaking has been conducted with a frankness, evident honesty and unassuming self-confidence worthy of a better cause.

At 8 o'clock Monday evening the Garden was packed with a tremendous jam, and as many more people were gathered outside clamoring for admission. Madame Anderson's course around the ring was then a triumphal procession amid the wildest cheers and shouts of the enthusiastic spectators. After finishing the 2,693rd quarter-mile she ascended the red carpet to the stage and sang "Nil Desperandum," one of her favorite songs. After finishing her speech and song she returned to the track and made the 2,699th quarter-mile in 3m. 12s.

The final performance was a scene worthy of an artist. Amid one continuous and deafening yell from thousands of human throats, Mrs. Anderson sped around the track, making the first lap in 16 seconds, the second and third in 17 seconds each, the fourth in 20 seconds, the fifth in 23 seconds, the sixth in 31 seconds, and the seventh and last in 28 seconds—the whole quarter in 2m. 37s., the fastest time during the whole walk. Then came a speech, and the plucky woman was driven off to Turkish baths, sleep, and the satisfaction of knowing that she had performed the most remarkable pedestrian feat ever recorded of a woman.

face, directly underneath the miller, throwing out his tail with a sharp jerk for the purpose of splashing the insect with water, which, of course, wets his wings and brings him down where the fish snaps him up at his leisure. I have seen trout make two and three successive shots in this manner before bringing down his game. I have seen them catch insects in this way that were flying eighteen inches above the water.

Now, as most artificial flies (especially hackles) are made to represent buzzing insects, it is very evident that trout often think they are above the surface, and instead of seizing the fly in their mouth, endeavor to throw water with their tails to bring it down. The motion of an artificial fly being unsteady, they sometimes break water just behind it. The other figure shows the manoeuvre I have seen trout make when about to strike an artificial fly. The one who did not understand the trick it would seem to strike the fly with its tail—which I do not doubt they sometimes happen to do. If the gentlemen will carefully observe the motions of a trout while hunting flies in a still time they will see why it appears to strike at a fly with its tail, and my word for it, their respect for the little beauties will be increased.

B. BISHOP.

OMAHA.—Nebraska, Dec. 30.—Well, what next? I have been an interested reader of the great variety of communications from the genial quills of your sporting correspondents upon all the varied subjects begotten by the manly sports with rod and gun, such as the "Drumming of the Ruffed Grouse," "Quails withholding their Secret," etc., etc., but I am sure that the trout flopping the fly with its tail is the champion of them all. The fellow who started this discussion is entitled to a monument in some way expressive of a sentiment of originality, and if any one will start a subscription list, "Bob White" will not withhold his cent from the enterprise. Until I emigrated to this delightful region of the sportsman's paradise some years ago my favorite sport was trout fishing with the fly in New western Vermont and Northeastern New York. But in Nebraska my Waltonian pastime is confined to bass, *micropterus salmoides*, with both fly and spoon; pike, *esocus lucius*, commonly called pickerel, and pike-perch, *Squalius*, or wall-eyed pike. The same swirl is noticeable with the bass in taking the fly as with the trout, the only difference being that the trout is more active. He comes to the fly with greater velocity (if I may use that term in this sense) from the bottom upward, and as quickly returns to the bottom again, hence the angle he describes is more acute, and making the turn the tail is brought into action necessarily somewhat as described in the cut in FOREST AND STREAM of Dec. 19. I have seen a trout in its eagerness jump clear of the water and pass over the fly. Indeed, I have taken hundreds of them, yes, thousands of all sizes from that of a finger's length to a three-pounder, under all the varied circumstances known to fly fishing. Yes, I have caught them, by the tail, and by hooking them in various parts of the body and head, but I have never as yet been expert enough to see one flip a fly into its mouth with its tail. If our piscatorial friends, Van Sickle and his confreres will observe the slower motion of any fish in the act of turning about they will not fail to observe the same movement of the tail toward the head when there is nothing to flip into its mouth. The tail of the fish is its rudder to guide it and steer in any direction, and controls all its movements with amazing facility.

BON WHITE.

ROSAVERKE, W. Va., Jan. 8, 1879.

EDITOR FOREST AND STREAM:

In discussing the grave question as to whether a trout knocks a fly into his mouth with his tail or simply seizes it with his mouth in the orthodox way, it seems to me that you will have trouble in deciding as to which side that you will have to be merely of the negative character unless the witness should be speaking of the same particular trout. One man says he has seen trout play cricket and catch themselves up; others say they have not seen any such game played. In considering the point, therefore, I conceived that the

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT LIFE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JANUARY 16, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

Trade supplied by American News Company.

OUR WORK.

ARE WE FULFILLING OUR MISSION?

IN the prospectus of FOREST AND STREAM, issued in August, 1873, this proposition was enunciated: "A practical knowledge of Natural History must of necessity underlie all attainments which combine to make a thorough sportsman," and one of the professed objects of this journal is the "inculcation in men and women of a healthy interest in out-door recreation and study." After so long an existence as five and a half years it is certainly fair to inquire whether FOREST AND STREAM has fulfilled its aim in this regard; whether it has encouraged in its readers a love for Nature and the study of Nature; whether it has striven to teach them to observe and to report their observations with some degree of accuracy; whether it has been able to set before them the facts of science in an attractive light—to clothe with ruddy flesh the dry bones of technical detail?

If we have not done this, it has certainly not been from any lack of material to work upon. Questions of very great interest have frequently presented themselves in our columns, which we have dealt with more or less fully, not hesitating to apply for aid on intricate points to the most eminent specialists in the various departments of science in this country and Europe. We have faithfully endeavored to set before our readers the importance of making careful and continued observations of the various phenomena of nature, and have exhorted them to take full notes, so that nothing which comes under their eyes may be lost. We have reason to believe that, in many cases, our advice has been gladly received and acted upon.

Opportunities for a study of Nature, and for observation, occur almost constantly, and every intelligent man, who passes any time in the open air, often has his attention drawn to some interesting point which is new to him, and which he would be glad to be able to explain. It is too often the case, however, that lack of time and the want of knowledge of how to go to work at the subject deter the amateur from following up his point and getting at the true facts in the case. Often, too, from an idea that it is impossible to learn much about nature without making science a profession, the observer lets pass, without noting them, interesting matters, which, if brought to the attention of trained naturalists, might lead to important results.

All this is wrong. At the present day no naturalist, be his attainments what they may, can hope to cover the whole ground, or to be acquainted with all the phenomena of

biology. It has been well said that he is not far from knowledge who knows where knowledge can be found, and the student of to-day who has his attention called to a fact out side of his special department, turns to the literature of the subject, and there finds out what is known about it. It has been our effort, therefore, to point out to inquirers the standard works on the subject which may have been brought forward, so that each one might, so far as possible, investigate for himself. We have always tried to impress upon our readers the importance of at once putting in writing all observations, so that if new, or of interest, they can be presented to other workers in the field, and attention can thus be called to novel points.

Every intelligent man, we care not how unlettered he may be, has it in his power to contribute some addition to our present knowledge of the mysteries of Nature. Each one, if he will but make the most of his opportunities, can observe and report facts which will be of use; for it must be remembered that in science, as in other matters, it is the little things that count, and the sum of observations, each one of which by itself may be apparently unimportant, may form a basis from which some general principle can be formulated.

The Natural History columns of FOREST AND STREAM are always open to observers, and we take great pleasure in saying that they have been freely used by some thousands of our readers, who have either had something to communicate or some question to ask. It is imperatively necessary that there should be some medium through which the general public may hold communication with the strictly scientific, and we have endeavored to furnish such a medium. From the congratulatory letters which we frequently receive we are led to believe that not a few of our friends look upon our course with favor and approval, and we are thus encouraged to persevere in our efforts.

If we have failed in our attempts to render our Natural History Department a prominent feature of this journal it has not been for the want of able assistance and valuable contributions from the first scientific men in all countries. Without mentioning the great army of less distinguished writers we may point with pride and satisfaction to such names as Baird, Marsh, Cones, Gill, Allan, Grote, Yarrow, Jordan, and Eaton, which appear on the list of our scientific correspondents.

We desire to make FOREST AND STREAM something more than a mere "sporting paper," something better than a weekly record of hunts, shooting matches and dog shows. It should occupy a higher plane than this. It has been our aim from the first to make it an educator, and to this work we have given thought, labor and time. Have we succeeded?

Are we fulfilling our mission?

THE SHARPIE.

THE "sharpie" is a boat of peculiar and eminently practical construction, known, curiously enough, only to a few miles of coast along the Connecticut shore and to a few such other ports where some enterprising individual has had the good sense to import and popularize this style of craft. The sharpie may be said to combine in her form those peculiarities for which the sloop is famous, but to a greater degree even than in the very best among her prototype and at the same time possesses certain other qualities to which the sloop can lay no claim. Length for length, or, better still, size for size the sharpie is perhaps in most respects a better boat than the common light-draft sloop. She is fully as weathery in smooth water, quite as fast, if not faster, on the wind, while with sheets checked her speed is reported as something astonishing. She is a comfortable, roomy, and, above all things, a safe craft in lumpy water. In this latter respect the sharpie must be considered as ahead of the shallow sloop, for owing to her lightness and extreme buoyancy she is a dry boat in the same sense as a life boat, and the records of little open sharpies riding out heavy weather will substantiate all we say so far as their safety, dryness and ease at sea are concerned. Moreover, they are not as liable to "broach-to," which, in light draft centreboards, is always the most imminent peril to which they are exposed in rough water. The sharpie's comparative exemption from this danger is to be found in the fact that she draws no water forward or aft, and has a considerable crown or round up to her bottom at each end, with hardly any flat to her section lines, and her great buoyancy is against her dipping her nose into a leading sea, and having her stern thrown round in consequence of being taken a little on the quarter. The sloop, on the contrary, being cut away fine and nearly on an even keel, with a rounded bilge, is at all times liable to play pranks with the man at the tiller, and if suddenly brought "by" may turn turtle and spill her crew. The deeper this class of craft is made, the more hold they are given in the water, the safer they become. If we prefer the sharpie build for vessels of small size it must not be inferred that this predilection is irreconcilable with our advocacy of the deep cutter for sea cruising, for, however safe, dry or easy the sharpie may be there can be no question but what for regular outside work the narrow cutter would carry off the palm over any light-draft boat, more particularly in turning to windward in lumpy water or when driven hard, owing to her momentum, easy form and low canvas then coming into play.

But for all purposes to which a small boat is likely to be put, for shoal water, creeks, inlets and bays, for sportsmen, fishing and short cruising, the sharpie may be accepted as equal to the light-draft sloop, with, it should be added, one

drawback and one advantage. Though pretty to look at from afar, when close aboard they seem a little too much on the square for eyes accustomed to delight in the gentle curve of the topside, the handsome hollow timber forward, and the sharper round of the quarter aft. But custom goes a great ways and fitness will cover up a multitude of sins against the laws of beauty, which are after all more or less empirical in their origin. As the cutter man sees no beauty in the "chubby, squatty sloop" and the sloop man finds naught to admire in the "wall-sided, half-sunk cutter" may not at some future day the sharpie, with her graceful sheer, clear run, hollow waterlines and admirable adaptability to the needs of a large portion of the community be viewed with more favor than at present? No doubt but that she will, for there is one element in this Fair Haven ship that is especially in accord with the times and appeals to the sympathies of the many; her cost is one-half that of the round timbered type.

Though the orthodox sharpie is narrow and rigged with comparatively small sail, distributed as leg-of-muttons on two spars; the more extensive use of this boat by yachtsmen will no doubt lead to a gradual change toward the sloop's beam and her rig, or that of the schooner. Just here let us enforce the reminder that the great speed and handiness, as well as safety from capsizing, so far as the latter quality can be incorporated in any shallow boat, arise, paradoxical as it may seem, from the very fact of narrow beam. No one will dispute the superiority of a small, light, narrow form on the score of "resistance," for in such a model both skin and wave-making resistance are less than in its opposite; it is obviously easier to drive such a form through the water with sheets free than something approaching more to the bluff and beamy, in which perhaps over 50 per cent. more skin is exposed and which commences to make waves at a lower speed. For this reason the sharpie requires less canvas and is a gainer in cost and handiness by just that much with the wind anywhere from four points around the rest of the half circle. On the water a rather large board should make up for her lack of draft, while her freeboard will enable her to carry a sail area which will be found sufficient, and should the leg of mutton be retained will send the boat closer in the wind's eye than any other. With an increase in size, however, a different rig must supplant the pretty oriental style lest the masts become too long and springy. For "sharpie waters" there is perhaps nothing as handy as the sloop to which the Chinese bamboo system may with advantage be applied. The use of the gaff does away with the excessive length of mast and carries down the centre of effort, and the celestial adjuncts will keep things flat and render shortening single-handed an operation easy enough to execute.

The elements, then, which contribute to a successful sharpie are: extreme buoyancy and light draft, moderate beam, fair round to her bottom, ample freeboard, large centreboard, fine lines forward, easy rise to floor aft, flare to sides, pretty full on deck all around, no skag aft, and flat setting sails.

These general remarks we propose to follow with more specific information of our own and of our correspondents, one of whom has furnished us with the description of a large schooner-rigged sharpie of which we may hear more this coming season.

[FROM OUR OWN CORRESPONDENT.]
TERRAPIN.

HOW AND WHERE THEY ARE CAUGHT—"DIAMOND BACKS" OF THE CHESAPEAKE BAY AND ITS TRIBUTARIES—AN EPICURIAN DISH.

WASHINGTON, D. C., Dec. 23, 1878.

The cold winds and nipping frosts of November which bring the savory canvas back to our section, open the season for terrapin also, and all along the Chesapeake Bay and its tributaries, in the shallow water beneath the lily-pads, among the roots of sweet flag and rushes, where the terrapins hibernate, they are sought more for profit than for pleasure, and quick sale awaits their arrival in the markets of Washington and Baltimore. There may be ducks in the creeks, and the "honk" of the wild goose may be heard in the waters beyond, but the terrapin hunter pays no attention to them so long as he can take the diamond back (*Emys terrapin*, which we read of in "Holbrook's North American Herpetology," but since more properly named by Prof. Cope *Malacodermis palustris*) from their winter abode beneath the mud, where they go at the beginning of cold weather to await the return of spring, when their torpid condition ends, and they resume the active duties of life. I have written of the juicy canvas back and other toothsome wild fowl of many varieties on these waters; the palatable sheephead, always grateful to appetite; the dainty Spanish mackerel, a welcome dish to every epicurean philosopher; the delicious cygnet and necessary accompaniment, a bottle of good old port; and now the succulent terrapin, its haunts and habits, shall be my theme.

Naturalists seemed to have slighted our favorite diamond back, and I have been able to find but little of its natural history. They have not given the same attention to it that they have to some other members of the *Emys* family. Away back in Schoeff, who observed it in this country during the Revolutionary war, he being surgeon to a German regiment, I find a very correct plate of the animal, and another in "Holbrook's North American Herpetology," but both have meagre descriptions. Other works on natural history are wanting in their accounts, most authors treating

the terrapin in a general manner with the whole turtle family rather than as a distinct species.

A prime specimen, suitable for the table, should measure about 6½ or 7 inches along the plastron or the lower shell. The females only attain this size, and are therefore the most desirable, a female, or "cow" terrapin, as they are called by dealers, measuring such length, is what is termed a "full count" in the trade, that is, twelve of them count a dozen. Those measuring five or six inches along the lower shell are termed "heifers," and in trade count two for one, or three for two, so that very often 18 or 24 are given for a dozen, according to size and weight.

The females never exceed nine inches in length, and one of that size is seldom caught, a terrapin measuring nine inches will weigh six or eight pounds, and one measuring six inches about three pounds before cooking. The males or "bulls" have scarcely any marketable value. They are very small, rarely measuring over three or four inches, and under the new law of Maryland cannot be sold if they measure less than five inches; neither can the heifers be sold when under that measurement. This law enacted by the General Assembly of Maryland at the last session prohibits any one from taking or catching diamond back terrapins from the waters of the State between the 1st day of April and 1st day of November in each year, and that no diamond back terrapin of less size than five inches in length upon the bottom shell shall be taken at any time. The fine for a violation of this law is not less than \$5 or more than \$10 for each terrapin, one-half going to the informer, and possession of the terrapin to be deemed *prima facie* evidence of the violation of the law.

To give the many readers of the *FOREST AND STREAM* a full and readable account of the terrapin trade, how and where they are caught, etc., I visited Baltimore, in which city terrapin *a la Marylande* is a dish as old as the city itself. I was taken in charge by Mr. Robert Rennett, the proprietor of the Rennett House on Fayette street, and soon found myself in his cellar among diamond backs fresh from the Eastern Shore of the Bay, Choptank River, St. Michaels and other Maryland waters, where they are numerous. First, he explained the noticeable marks of difference between a superior and inferior terrapin; for the genuine diamond back is different from the James River or "Slider" specimen, commonly known as "red belly," and some other species which resemble it closely, but do not compare to it in flavor the former having a rough under shell of a dark mud color, while the under shell of the latter is as smooth as glass and has a red tinge resembling that of the common land tortoise. We next visited dealers in this product of the Chesapeake Bay and its adjacent waters; for there are men in Baltimore who make their living during the winter in this trade, buying them from oyster pungies and other vessels arriving at Baltimore daily, and disposing of them not only in Baltimore, but forwarding them to Philadelphia and New York.

"To what extent do you trade in them?" I inquired of one dealer.

"Why, sir, I have sold as many as 1,000 terrapins here in Baltimore in three days. True, many of them were small, but the small ones are cheaper, and many society people giving parties will have stewed terrapin on the bill, but they do not buy the most expensive ones. The large ones we sell to the first-class restaurants, because they have their reputation to maintain, and will not serve inferior terrapin." In further reply to my questions the dealer responded as follows: "For twenty-five years I have been catching and selling them. When I first commenced, if we received six or eight dollars a dozen for full counts, we were doing well; now we get from \$20 to \$24 a dozen without trouble, but the terrapin are not as plentiful now as then." An old fisherman, who had devoted many years of his life to catching terrapin was so impressed with their value that he declared to me, "They are money, sir, they are money. If I had that boat full of terrapin (pointing to a puny near he wharf), I would never want any more money."

HOW THEY ARE CAUGHT.

Various methods of capturing them are employed, and many of the old negroes residing near the Chesapeake Bay and its tributaries, especially on the Eastern Shore of Maryland, are experts in the manipulation of drags, rakes, and tongs by which the terrapin is brought from his winter home in the mud. All along the southern coast the fishermen capture them, but the Chesapeake Bay terrapin seems to have the greatest commercial value. I suppose for the reason that they are shipped to the markets of Baltimore, Philadelphia and New York, immediately after being caught, and are therefore in prime condition. Those caught further south, on the South Carolina, Florida and Gulf coasts, are sold in the Southern markets. The experiment has been tried in that section of penning the terrapins caught until a sufficient number to ship north could be procured. The pen covering an area of some two or three acres, in a creak of shallow water, was composed of stakes driven in the mud, and the terrapins as fast as caught were put in the inclosure, where they were fed daily with fish, bits of meat and other things suited to their taste. Although the best of care was taken of them, it was soon discovered that the impounded animal became poor, and its flavor, when served at the table, did not compare with those taken at large, and served within a few days thereafter without being impounded. A fact easily explained when we consider that the imprisoned terrapin had not the same choice of food as the one at large;

neither had it the same exercise, and, besides, the worry of imprisonment and constant effort to get out of the inclosure caused the females to drop their eggs prematurely, and lose flesh as well as flavor.

One device for their capture consists of a drag net arrangement, which scrapes off the mud, allowing it to pass through the meshes of the net, but retaining the terrapin, and crabs too, many of which are scraped out of the mud at the same time. In places where they are closely bedded three or four are often caught at one time in this manner. Another method employed is by sounding for them beneath the mud with a sharpened stick, and upon striking one to rake it up with the tongs. Old fishermen say they can locate them by the bubbles which arise from their nostrils at intervals.

When raked out of their hibernating place they are of course covered with black mud, but they require little or no care; usually they are tossed into a barrel, and the fishermen claim that they thrive better this way than if scattered over the hold of a vessel or floor of a cellar. In case of bitter cold weather they are covered with straw to prevent them from freezing.

Terrapin deposit their eggs in the sand on the beach in June, and generally after rain, for the reason that the sand being moist they can make the hole without the danger of the sides falling in. The hole is always made beyond the reach of the tide, and at night, when from twelve to twenty-four eggs are deposited in the nest, and left for the sun to hatch. The young ones are soon able to care for themselves, and seek the water shortly after they are brought to life. The animal is exceedingly timid, hiding itself upon the least alarm. It is a rapid swimmer, and, unlike other members of its tribe, makes good progress over land, though they rarely leave the water, except to deposit their eggs. They can be easily tracked in early morning from the water to the point where they deposit their eggs, and their nests are often robbed not only by man but by various animals.

The eggs found in the female are always served with the terrapin, but in the winter they are, of course, much smaller than in summer when they are deposited in the sand. In a full grown female the eggs now are not as large as marbles. They are of a golden yellow, and exceedingly rich. As the time approaches for dropping them they increase in size and are covered with a pliant, parchment-like shell.

When the terrapin first seek winter quarters in the mud, they are in prime condition, and do not become poor until nearly time for them to deposit their eggs in spring. In this respect they resemble the fish creation, growing poor and losing flavor as the eggs ripen, and the time for their deposit approaches. A salmon, for instance, is unfit for table use when filled with ripe eggs, and so with a terrapin; but after attending to the duty of propagating their species they soon fatten again.

The proper cooking of a terrapin is a matter of great importance, and when served upon a chafing-dish with the rich eggs, it presents a most tempting appearance.

"Cannot the terrapin be dressed nearly ready for table, and then shipped abroad?" I inquired of Rennett. "Oh, yes," he replied, "I have frequently sent them partly cooked in cans to New York, Philadelphia, Chicago, and even to Europe. This may be done in very cold weather, but care must be taken in preparing the meat and canning it. I prefer to send them alive, however, and have shipped them to England and France to customers of mine temporarily sojourning in those countries."

In olden times terrapin were roasted in hot embers, and served with butter, pepper, salt and other seasoning, to taste. The old Marylanders always enjoyed the tempting dish, and all along the Eastern shore the colored people delight to tell of the festive occasions when roast terrapin was an attractive dish upon "old massa's" table. Now they are served in a more artistic style, and the cook who has had experience in serving terrapin is master of his profession. It would be useless for me to give the formal recipes for serving them, though Rennett gave them to me—French, English, and various other styles he mentioned, but *terrapin a la Marylande* is the favorite. To him I am indebted for much of the information in this letter. His long experience in serving them and his acquaintance with the dealers has made him quite a naturalist so far as terrapin are concerned, and there is nothing about the animal, its habits, or manner of serving it when captured, that he is not familiar with.

Mr. Crosby S. Noyes, the veteran editor of the *Washington Star*, has returned from Europe, where he has been traveling since June last. Being a close observer and interesting writer, his letters were of the most readable character, and for months have been an attractive feature of the *Star*, the oldest and ablest newspaper of Washington. R. F. B.

A DASTARDLY PRACTICE.

NOW that the Governor in his message has made allusion to, and some very sensible suggestions regarding, the game laws it may be an appropriate occasion on which to call the attention of the committee who may be appointed to take charge of the matter to a most outrageous practice which has been, if not initiated, at least carried out in the waters of Shinnecock Bay during this last fall. As is well known this bay is a favorite feeding ground for migratory ducks, and until the waters are frozen and the great body of ducks driven

out, it affords not only much sport for amateurs, but a good living for the many professional gunners who live along its shores. But it so happens that many of the descendants of the man who killed the goose that laid the golden eggs also lived in the same vicinity, and one of the number having found an unfortunate broadbill strangled in the meshes of a fish net it immediately occurred to him that by setting his net horizontally between the bottom and the surface on the feeding grounds he might capture more of them. His venture was so successful that all of his connections immediately followed his example, to such an extent that in a short time duck could not live for his food without being entangled in a net. 1,000 was not an uncommon number for them to take out in a single night; but this was nothing compared with the numbers that were driven out of the bay, and a correspondent writes that he has seen 20,000 ducks go out in one day after a big haul. By the middle of December there were at least 1,000 nets set for the purpose of catching ducks. The law already provides against taking ducks in nets, but these are set ostensibly for fish, and that is the way the perpetrators crawl out of it. If a law was passed prohibiting the setting of nets in Shinnecock Bay from October 1 until May 1 there might still be some shooting there, otherwise there will not be; and we sincerely trust that during the present session of the Legislature something may be done.

GAME PROTECTION.

HOUNDING DEER IN THE ADIRONDACKS.—From a private letter written by Mr. Chas. Fenton, of Number Four, we are permitted to make the following extracts. The destruction of deer in the Adirondacks is a subject well worthy of constant and repeated presentation to public notice until the abuses shall be rectified.

Mr. Hayt asserts that I boast of killing two thousand deer. This is a false statement, and in reply to the question of how many deer I have killed, I have stated that I have killed about one thousand in my life-time, which is very near the fact, as it would probably not vary fifty from that number. As the deer question has been freely discussed since my letter to the *Herald*, and as one would get the idea from Mr. Hayt's letter that a great many deer were slaughtered annually by still-hunting, I have taken the pains to ascertain the facts in the case. I know that in this town no more than thirty deer altogether are killed in this way. The town of Diana, in Lewis Co., always has been one of the best still-hunters in Diana average four and a half deer during the season. There can be no objection to parties of sportsmen going into the woods late in the season, and by the use of hounds killing a few deer. Such parties do not usually kill many. But this mode of hunting requires no skill except to know how to row a boat, every one who lives in or near the woods have taken to hunting in this way, and I have known boys twelve or thirteen years old who have killed twelve or fifteen deer the past fall.

Fifty deer have been killed at Smith's Lake the past fall by driving the deer into the water, and at another lake upward of a hundred have been killed in this way. At this time I saw a rack for jerking venison, which was being made eighty feet in length and capable of holding the flesh of twenty-five deer at a time. This man was one of a party who had twenty-five dogs. I had an interview with a most reliable guide whose business called him on a tour through the lakes during October, and he thinks my statement in the *Utica Herald* no exaggeration, but if anything underestimated. I will not pretend to say whether hunting deer with dogs is sportsmanlike or not, but I do know that in a country abounding in lakes, as is the Adirondacks, it is extremely destructive to deer. I have observed this mode of hunting rapidly on the increase, until it has attained gigantic proportions and threatens the speedy extermination of the deer in our great wilderness, and occupying the position I do, with a full knowledge of all the facts, I deem it a duty to sound the alarm ere it is too late, and I shall continue to sound it.

PENNSYLVANIA.—The annual meeting of the Northwestern Pennsylvania Game and Fish Association was held at the office of Colonel E. P. Gould, Easton, Pa., last Thursday. The following officers were elected for the year 1879: President, Hon. Wm. L. Scott; Vice President, Colonel John S. Riddle; Secretary and Attorney, Clark Olds; Treasurer, Col. E. P. Gould; Board of Directors, Wm. L. Scott, W. W. Reed, Henry Souther, John B. Riddle, W. W. Derby. All the members of the association are very enthusiastic in the protection and propagation of game and fish, and if the citizens of Erie will give the association the necessary assistance, it proposes to propagate muscalonge and other game fish artificially.

TENNESSEE.—Editor *Forest and Stream*: I have been very much pleased to see in the columns of your valuable paper that there is at last an effort making toward fish protection in this State. No one not a resident can fully appreciate how much such a move is needed and how much good it can accomplish. In regard to this section of the State especially it is easy to give proofs of how much harm has been allowed to result from the lack of suitable laws properly administered. We have in this county several streams, tributaries of the Tennessee River, from which, not five years ago, the most unsentient angler, provided with the roughest tackle, was sure of taking large strings of bass, pike-perch, bream, black and other varieties of perch. Now in these streams, after the most faithful fishing, it is rare that one secures anything at all approaching a good catch. In the language of the lamented E. Ward, "Why is this?" The answer is very easy. The mouth of every one of these streams in the months of March and April, when all of our game fish are seeking their spawning beds, are simply full of wing nets, trot lines, fish-baskets and other devices of that persuasion, whom I believe to hate the disciples of gentle Isaac Walton fully as much as he is said to detect holy water. Besides, near the head-waters on the very spawning beds themselves, you will find the industrious native with his three-foot gaff, assiduously sticking it into the back of every unlucky specimen of the kingdom of fishes that chances to show itself. Now, is it any wonder that our waters no longer richly reward the patient angler's care? And what encouragement is there to attempt to re-stock our depleted streams when such a

J. H. Jones, of the 13th Regiment, were elected, with Col. H. G. Litchfield, of Gen. Hancock's staff, to fill vacancy.

The election of officers by the Directors resulted in the choice of N. P. Stanton as President, G. W. Wingate as Vice-President, D. W. Judd as Treasurer, and Col. H. A. Gildersleeve, Gen. Alex. Shaler and Geo. S. Schermehorn, Jr., as members of the Executive Committee.

Secretary Schermehorn, who declined a re-election to the post, reported as follows on the work of the Association for the past year:

New York, January 14, 1879.

My President and Gentlemen of the National Rifle Association of America:

The seventh annual report of the Secretary embraces the year.

Immediately upon the adjournment of the sixth annual meeting of the Association on Tuesday, January 8, 1878, the Board of Directors assembled in special session for the purpose of organization for the year then opening. At this meeting there were present Messrs. Stanton, Wingate, Wylie, Schermehorn, Scott, Story, Holland, Beebe, Fulton, Woodward, Casey and Waters. The election of officers was at once proceeded, and resulted as follows: Hon. N. P. Stanton, President; Gen. Geo. W. Wingate, Vice-President; Geo. S. Schermehorn, Jr., Secretary; Gen. Dan' D. Wylie, Treasurer, and for members of the Executive Committee, in addition to the officers above-named, Hon. Hy. A. Gildersleeve, Gen. Alex. Shaler and Hon. David W. Judd.

At the October meeting Gen. Geo. W. Wingate, who had held the position of director by election, and was also director *ex-officio*, resigned his elected directorship. At the regular meeting of the Board, held January 7, Mr. John F. Waters presented his resignation, stating his inability to attend to the duties of his position, and the Board reluctantly accepted it.

The directors retiring from office by reason of expiration of term at this time (January 14, 1879) are: Gen. Geo. W. Wingate (resigned as above), Gen. Ira L. Beebe, Captain William E. Casey, Geo. Schermehorn, Jr., and Col. John Bodine, elected January, 1878, for one year, unexpired term. There are, therefore, six vacancies to be filled at this time, viz., five vacancies for full term, and one full unexpired term of two years of Mr. J. P. Waters.

The term for which General J. F. Rathbone was elected an honorary director expired on the 6th April last.

Hon. Thos. G. Alvord was elected an honorary director for three years on February 6, 1878.

General Ronald S. Mackenzie, United States Army, was elected an honorary director for three years April 2, 1878; Major Morcan Morris, M. D. Surgeon N. R. A., was elected an honorary director for three years June 4, 1878; and on September 3, 1878, the Board of Directors, in recognition of the liberality of Hon. Henry Milton, in presenting to the Association the first prize in the International Military Match, valued at \$3,000, elected Judge Hilton an honorary director for life.

For the first time in the history of the Association it becomes the duty of the Secretary to report the action taken in reference to the death of a director while holding office. Shortly after the regular meeting of the Board of Directors, in May last, information having been received of the death of Major Gen. Dakin, a special meeting was held on the 14th May, and upon the appearance of a quorum the President announced the object of the meeting, and for the purpose of taking action in reference to the sudden death of Gen. Dakin. Gen. Shaler moved the appointment of a committee of three to draft resolutions expressive of the sentiments of the Board, which was immediately approved, and the chairman appointed as such committee Generals Shaler, Woodward and Wingate. This committee shortly reported the following, through its chairman, who also moved their adoption:

Resolved, An inscrutable Providence has suddenly removed from our midst our esteemed friend and companion, Major General Thomas Spencer Dakin;

Resolved, That in his death this association has lost one of its most valuable friends and supporters, and has been deprived of the companionship of a genial and warm-hearted gentleman, and that we recognize in the career of General Thomas Dakin all that is noble and manly, furnishing an example rarely to be equaled, and that we deem it our duty to confer the distinction to the service of rifle shooting the honor of being recognized throughout the world as a most perfect type of an American rifleman, and as furnishing to the National Guard an incentive to become proficient in the most important part of their duties. As a soldier he was brave and accomplished, esteemed and beloved by the officers and soldiers of his command, respected and admired by the National Guard of the country, and his loss will be keenly and greatly deplored. As a citizen he was upright and sincere in his intercourse, urbane and courteous in his demeanor, and faithful to his friends. In his death society loses one of its highest ornaments;

Resolved, That as a token of respect and esteem for the memory of our departed comrade, the officers and members of this association will attend his funeral in a body, wearing the usual badge of mourning upon the left arm;

Resolved, That these resolutions be entered upon the minutes, and a copy furnished the family of the deceased as an expression of our sincere sympathy for them in their great bereavement.

The motion to adopt the report of the committee was duly seconded, and after some feeling remarks by Judge Gildersleeve and General Wingate, and the reading of a telegram from Hon. D. W. Judd, who was unable to be present, was carried, and the meeting adjourned after arranging to attend the funeral.

In accordance with the resolutions, the Secretary caused a suitably engrossed copy of the resolutions to be duly forwarded to the family of General Dakin. The Irish Rifle Association also adopted a resolution in regard to the death of General Dakin, and forwarded a copy, accompanied by a letter from its honored Secretary, Major Arthur B. Leech, who stated his desire that the resolution adopted by his association might be forwarded to General Dakin's family, which was promptly done.

At the February meeting of the Board the President announced the following standing committees for the year 1878, in addition to the Executive Committee previously given:

Range Committee—General Geo. W. Wingate, chairman; Col. D. Scott, Captain Jos. B. Story.

Finance Committee—Hon. D. W. Judd, chairman; Lieut.-Col. E. H. Sanford, Captain W. C. Casey.

Prize Committee—Col. John Ward, Chairman; Mr. J. P. Waters, Major Jos. Holland.

The annual membership roll has suffered a decrease of

about forty names during the past year. There have been twenty-five life members added to our roll during the same period, of whom twenty-two paid the usual fee, two were won as prizes in the late fall meeting, and one had the honor conferred by vote of the board without expense to him in recognition of great services rendered to the association. Four of our life members have died during the past year, viz: Gen. T. S. Dakin, Col. J. R. Hitchcock, Col. H. Clay Preston, Hon. Wm. Walsh. Fifty-five silver life membership badges have been issued, the numbers running from 71 to 85, both inclusive, and in connection with this subject it is respectfully recommended that the size of these badges be materially reduced, as it is believed that if this was done many who now decline to supply themselves with them, alleging that it is because they are too bulky to wear, would purchase them.

The roll of affiliated organizations has suffered a decrease, one having been only six during the past twelve months, viz: Amateur Rifle Club, N. Y. City; Seventh Regiment Rifle Club, N. Y. City; Massachusetts Rifle Association, Boston, Mass.; New Jersey State Rifle Association, Elizabeth, N. J.; Washington Gray Troop Cavalry, First Division N. G. S. N. Y.; N. Y. City; Columbia Rifle Association, Washington, D. C.

At an adjourned meeting of the Board of Directors, held May 13, a communication from the Adjutant-General, S. N. Y., approving the new regulations which had been submitted to him for approval, in accordance with the law, was read and ordered on file; and at this same meeting the Range Committee reported that, though the range was then practically open for practice, it would be formally declared open on and after April 1, 1878.

At the next regular meeting of Gen. Wylie (the Treasurer), reported that the Long Island Railroad promised to run trains from Hunters Point via L. I. R. at 12 o'clock p. m. and 2 p. m., and via Central Road 8 o'clock p. m. with convenient trains in the forenoon; also that the railroad company would sell excursion tickets between Hunters Point and Creedmoor to members N. R. A. and N. G. S. N. Y. in packages of 100 at 30 cents each. In consequence of this arrangement the Secretary undertook the supply of these tickets in packages of five round-trip tickets to our members, and distributed during the season just past 6,000 of them in this manner.

At the same meeting General Wingate offered the following resolutions, which were adopted, viz:

Resolved, That for the purpose of developing public interest in rifle shooting with military weapons, an International rifle match be announced to take place at the annual fall prize meeting of the Association, to be held at Creedmoor in September next, to be open to teams from each of the States of the Union, the Provinces of Canada, the kingdom and dependencies of Great Britain, and from all other countries, each country having a National Guard or Militia distinct from its regular army to be entitled to send a separate team to represent each.

Resolved, That a committee of three be appointed for the purpose of deciding upon the conditions of the match, with authority to confer with foreign rifle men and those of our States.

The committee appointed in accordance with the above were General Wingate, General Wylie, and Mr. J. P. Waters, and this committee shortly afterward prepared a circular letter upon the subject of the match, which was very widely distributed both at home and abroad, and elicited many replies.

The committee reported conditions to govern the match, which were approved by the Board of Directors, and the match duly announced for competition at the fall meeting. Major-General W. S. Hancock, United States Army, commanding the military division of the Atlantic, early took an active interest in the matter, and to his exertions the National Rifle Association owes it that the Hon. H. Hilton, of New York, made his munificent donation of the first prize, valued at \$3,000. The *Army and Navy Journal* provided the silver badge which was presented to the members of the winning team. For particulars in regard to the match, number and competition of teams entered, scores, etc., reference is made to the statistical portion of this report.

It is very generally the opinion that this match so happily inaugurated promises to be one of the most important and interesting competitions in the future history of rifle practice in this country, and in connection with the match for the military championship of the States which was established through the untiring efforts of Lieut.-Col. E. H. Sanford for two years past and completed for at the same meeting, marks a new era in the practice with the military rifle with us, and has exerted such a powerful influence upon rifle men, that it may be said to have neutralized the depressing effect of the absence from Creedmoor of any foreign team of rifle men to compete for the "Palma" in 1878.

Early in the regular meeting of the Board, the following was unanimously approved, viz:

Whereas, It has been the aim and purpose of this Association to foster and encourage the organization of Rifle Clubs and to disseminate information upon all matters connected with rifle shooting; and

Whereas, Very gratifying results of our efforts in that direction are shown by the existence to-day of no less than one hundred of such Clubs and Associations in various parts of the United States; and

Whereas, It is desirable that such organizations should take an active part in all matters connected with the development of this popular amusement, and with questions relating to Inter-State and International matches; and

Whereas, This Association called a Convention of Rifle men two years ago, which Convention, owing to the lack of interest in rifle shooting at that time, was so lightly attended that it was deemed undesirable to take any steps of importance in the direction of extending the span of usefulness of this Association; and

Whereas, The present appears to be a peculiarly opportune time for a convention, such as was called two years ago, therefore be it

Resolved, That the President be, and hereby is, requested and empowered to invite, in the name of this Association, the officers and members of the various Rifle Clubs and Associations throughout the country to assemble in Convention at Creedmoor, or some suitable place in this city, on the occasion of our next Spring Prize Meeting, for the purpose of considering and determining upon all questions which may be presented relating to rifle shooting and rifle matters generally.

Resolved, That all Clubs and Associations intending to be represented in this Convention be requested to notify the Secretary of this Association on or before May 1st, next, stating the number of members upon their roll.

And a circular letter containing a copy of same forwarded

to all known rifle associations or clubs in the U. S. The convention, however, provided for met in the President's quarters upon the range at Creedmoor, on the 24th and 25th days of May last during the Spring meeting of the N. R. A., and adopted the following resolutions unanimously:

Resolved, That the course taken by the National Rifle Association of America since its organization, which has made rifle shooting an element of national strength and American rifles and rifle men renowned throughout the world, merits and should receive the warmest commendation from all interested in rifle practice. It is the opinion of this convention that the interest of the rifle men of America could not be in better hands than it has been by it, and they trust that the rifle men of the various States will unite in giving it an earnest and cordial support in its endeavor to develop and extend rifle shooting throughout the Union.

Resolved, That the rifle men of the different States should endeavor to form State Associations, which in turn may be represented in the National Association, so as to enable the rifle men now divided in local clubs without any bond of union, and aid in inducing the military authorities of each State to instruct their National Guard how to shoot.

Resolved, That while in the judgment of the members of this convention it is inexpedient for a body of delegates, meeting as they do for so short a time, to deal with the numerous and complicated questions in regard to rifle shooting as can be done by the experienced officers of the National Rifle Association; yet in the absence of any organization in the great majority of States it is desirable that an annual convention should be held at Creedmoor at the fall meeting of the N. R. A., in which each rifle club should be represented in the proportion of one vote for each twenty-five active members in good standing upon its roll, (to be certified to by its secretary, on honor, and previously forwarded to the Secretary N. R. A.) which convention shall discuss and recommend to the Directors of the N. R. A. the manner in which the general interests of rifle practice throughout the country can best be developed and advanced.

Resolved, That in all international matches either for the "Palma" or other trophy, the vicinity of New York City is the locality most convenient both for the Americans and the foreign teams.

Resolved, That in case of competitions being required in the future for the selection of a team to represent America either at home or abroad, the conditions of selecting the teams should be made as little onerous to those residing at a distance from New York as is consistent with the certain selection of the best team.

It was further resolved that the Secretary of the N. R. A. call a meeting of the convention for the next Fall Meeting of the N. R. A., and also, that it be recommended to the Board of Directors N. R. A. that they endeavor to obtain for delegates to the convention and competitors from a distance who may have entered for matches at the Fall Meeting N. R. A., tickets to and from New York City at reduced rates. (An earnest effort was made in this direction by correspondence with different railway officials, but without success, largely owing to the impracticability of informing the proper officials of the numbers likely to travel for this purpose over their different routes.)

In compliance with the resolution to that effect the Secretary N. R. A. issued the following circular letter of invitation:

New York, August 15, 1878.

Sir: At the Convention of Rifle men held at Creedmoor in May last it was resolved that the next meeting of the Convention be called by the Secretary of the National Rifle Association to take place during the annual Fall Meeting of the National Rifle Association at Creedmoor, L. I.; and further, that each team to be entered be entitled to one delegate and one additional delegate for each team; members certified by the Secretary as in good standing upon the roll of the Club or Association.

In compliance with the foregoing, I have the honor to invite your Club or Association to send a delegate or delegates to the Convention to be held at Creedmoor, L. I., during the coming Fall Prize Meeting of this Association, commencing Tuesday, September 17th, and lasting through the week. A copy of the programme of the meeting will be forwarded to you as soon as published, and will contain a large number of matches open to all comers.

Very respectfully yours,
Geo. S. SCHERMERHORN, Jr.,
Secretary N. R. A. of America.

P. S.—Please notify me as soon as practicable of the number of delegates representing your Club or Association that will attend the Convention.

This convention assembled in the President's tent on the range at Creedmoor, September 20, 1878, during the Sixth Annual Fall Meeting N. R. A., and there were present, Col. John Bodine, Hudson River Rifle Ass'n; Dr. Dudley, Empire Rifle Club, N. Y. City; the Secretary N. R. A. and Gen. F. F. Millen, Irish-American Rifle Club, N. Y. City. After the election of a temporary chairman it was, upon motion, decided, that many representatives of other associations were at the time engaged as competitors in matches then progressing, to adjourn to the following day. There being no attendance on this occasion, no meeting of the convention was held.

There have been 138 matches in all shot at Creedmoor during the past year under the auspices of the Association, including the Leech Cup Match, shot during the Spring meeting, 1878, under the special auspices of the Amateur Rifle Club, this number is exactly double that reported for the year 1877, and by reference to the statistical tables will be found reported as follows: Spring meeting, 42 matches, including Leech Cup Match as above; Fall meeting, 28 matches; monthly or special matches, 68.

It is to be remembered that in addition to the above there have been a large number of matches shot upon the range at Creedmoor by the members of affiliated and local associations and individuals.

The monthly or special matches have been as follows:

Spirit of Times Badge No. 2: One competition, April 13; won by Mr. C. H. Jobr, who having also won it on the two previous competitions in 1877, this became the final owner. Wylie Badge: Two competitions, April 24 and May 29; finally won by Capt. W. F. Livermore, U. S. Eng. Ballard Rifle Match: Seven competitions, April 17, May 8, June 26, July 29, Aug. 21, Sept. 25 and Oct. 23, when it was finally won by Mr. W. M. Farrow. J. P. Waters Prize: three competitions, April 24, May 11 and June 15, being the final competition, won by J. L. Allen. Appleton Prize: Eight competitions, April 17, May 12, June 12, July 10, Aug. 7, Sept. 4, Oct. 16 and Nov. 13, finally won by Mr. W. M. Farrow. Sharps Rifle Company Prize, \$250 gold: Seven competitions, April 13, May 4, June 8 and 12, July 30, Aug. 24, Sept. 7 and Oct. 5, when it was finally won by Mr. F. Hyde. In accordance with the conditions of this match one-quarter of the entrance money received at each competition was deposited in the Appleton prize, and this amounted in the end to \$10. Champion Marksman's Badge, 1878: Seven competitions, May 18, June

22, July 27, Aug. 17, Sept. 11, Oct. 13 and Nov. 13, finally won under the conditions by Capt. Jas. L. Price, H. Co., 7th Regt., N. G. S. N. Y. Gildersleeve Medal: Five competitions, July 17, Aug. 23, Sept. 23, Oct. 30 and Nov. 23; finally won in accordance with the conditions by Mr. C. H. Eagle, 7th Regt., N. G. S. N. Y. Soldiers Medal: Five competitions, May 23, June 23, July 17, Aug. 17 and Sept. 11, and failed to fill on one occasion; won four times by G. C. 71st Regt., N. G. S. N. Y. *Turf, Field and Farm* Challenge Badge No. 2: Eight competitions, April 13, May 4, June 3, July 20, Aug. 23, Sept. 7, Oct. 5 and Nov. 23; not yet finally won. Skirmishers Badge: Ten competitions, April 20, May 29, June 15, July 13, Aug. 10, Sept. 14, Oct. 9 and Nov. 23; not yet finally won. Winchester Rifle Match: One competition, May 13, as announced on six other occasions, but failed to obtain the number of competitors. E. B. Remington & Sons Prize, \$300 gold: Two competitions, April 20 and Aug. 31, and has failed to fill five times. National Guardsman Match: Two competitions, June 15 and Aug. 10, and has failed to fill five times.

The Association has been indebted to the following parties for prizes donated during the year, viz.: Mr. J. H. Steward, optician to the Association, London, a telescope, field glass and a barometer, value \$8; Mr. J. McElroy, a ton, \$30; Mr. Richard Oliver, 11 John st., silver trophy and gold pin, \$110; Messrs. Schuyler, Hartley & Graham, 19 Maiden Lane, a Peabody Martini Rifle, \$50; Winchester Arms Co., 245 Broadway, two Winchester rifles, \$50; Commander-in-Chief N. G. S. N. Y., two trophies, \$850; State of New York, two trophies and twelve badges, \$275; Laffin & Hand Powder Co., 30 Murray st., three medals, \$270; Messrs. Baker & McKenney, 141 Grand st., one badge, \$50; Messrs. E. Remington & Sons, 231 Broadway, rifle and sewing machine, \$175; Messrs. Schoverling & Daly, 84 Chamber st., revolver, \$20; Messrs. D. Appleton & Co., 649 Broadway, American Encyclopedia, \$112; Messrs. Tiffany & Co., Union Square, silver vase, \$75; Mr. J. P. Waters, gold, \$50; Gen. Geo. W. Wingate, gold badge, \$50; Hon. H. A. Gildersleeve, gold badge, \$50; Hon. D. W. Judd, dictionary, \$10; Army and Navy Journal, two, silver badges, \$100; Mr. Homer Fisher, 200 Broadway, ammunition case, \$15; Mr. J. W. Frazier, 23 Dey st., gold, \$250; Col. Robt. Olyphant, 21 Courtland st., trophy, \$800; National Guardsman, 85 John st., rifle, \$125; Sharps Rifle Company, Bridgeport, Conn., four rifles, \$140; Hon. Henry Hilton, International Military trophy, \$500.

In addition to the above list of prize donors for the year, the Secretary begs to acknowledge in acknowledgment of the help of the Association to the following for contributions to the library, viz.: Capt. E. St. John Midway, Secretary National Rifle Association, London, England, a very valuable donation of a complete set (lacking 4 years, now out of print) of the annual reports of his Ass'n., probably the only one in this country; Mr. E. A. Buck, a copy of Gildersleeve's "Killed and Marksmanship"; Gen. S. V. Benet, Chief of U. S. Army, R. Post 1877 and Ordnance Manual No. 21; Gen. Geo. W. Wingate, Insp. Rifle Practice S. N. Y., Report 1877 and 1878; Capt. E. A. Perry, score book, new edition; Col. J. O. P. Burdiss, Washington, Map State N. Y., placed at his request at headquarters Creedmoor; Mr. N. P. Stanton, Fire Laws State N. Y.; Winchester Arms Co., a frame containing a handsomely arranged exhibit of ammunition manufactured by them; Province of Quebec (Canada) Rifle Ass'n., Report 1877; and to the Adjutant General of the following States for copies of their laws and annual reports—viz.: States of New York, Massachusetts, New Hampshire, Kentucky, Missouri, South Carolina, Maine, New Jersey, Nebraska, Michigan, Nevada, Illinois, Iowa, California, Pennsylvania, Connecticut.

At a regular meeting of the Board of Directors, held Sept. 3, it was resolved that any competitor refusing to deliver up or purloining his score ticket in any match of the Association, shall be fined \$5 and shall be debarred from further using the range until the value of the ticket is paid.

At the November meeting of the Board of Directors a report and resolution defining the opinion of the Board as to the method of deciding ties under Article XII. of the regulations were adopted.

During the month of October a petition to the Post Office Department at Washington was prepared and forwarded, asking for the establishment of a post office for the Association, and the application to the National Rifle Association is indicated to Col. J. O. P. Burdiss, Washington, for his valuable assistance in the matter.

Gen. John B. Woodward, the Executive Officer of Spring Meeting, 1878, carried into effect a change in the method of conducting the annual meetings, modeled largely after the plan so successful at Wimbledon, and which had been suggested by him in his Report of the Fifth Annual Meeting, and the plan was found to work with so much satisfaction to the members of the Association generally, that upon the appointment of Capt. Jos. G. Story as Executive Officer of the Sixth Fall Meeting, he proceeded with his preparations for that meeting upon the same basis, aided by Gen. Woodward's experience and assistance, and the result was in every way gratifying; for much valuable information upon this subject reference is here made to Capt. Story's report, which will appear in the annual report of the Association in its proper place.

On the 6th of August the Board of Directors "resolved that the conditions of the 'Inter-State Military Match' be modified so that competitors in subsequent matches shall consist of members of the regularly organized and uniformed National Guard or militia of each State or Territory, to be selected in such manner as shall be prescribed by the military authorities thereof."

At a meeting of the Executive Committee, held Sept. 10, a letter from Surgeon Morris, N. R. A., was read, in which he stated his inability to attend the fall meeting, and upon motion, Gen. W. F. Swalm, Surgeon-Gen. S. N. Y., was unanimously invited to act as surgeon to the Association during the meeting. Dr. Swalm very kindly consented, and was attentive to the duties of the position.

The following recommendations are respectfully offered for consideration:

That at annual meetings all competitors not members N. R. A., who may enter for any competition previous to the closing of the entry books at the office of the Association, be given a ticket good for admission to the range on such days as the matches for which they enter are to be shot, without charge; and to enable competitors from a distance to enter thus early, that full programmes of spring and fall meetings be issued at least a week before "opening day." That all subscription matches at our prize meetings at least seventy per cent. of the entrance fees be divided among the competitors in at least four prizes, re-entries to be permitted, but no competitor to take more than one prize in each match. That at these meetings all prizes of the Association

be announced upon the programmes as trophy or money at winner's option. And lastly, that the plan which meets with so much favor at Wimbledon and elsewhere be adopted—of accepting and offering prizes in kind—which would result in largely increasing the number of prizes in each match.

2. It is respectfully suggested that the time has arrived in which change in the regulations governing position in this rifle practice and competition should be adopted; and it is urgently recommended that at distances over 300 yards "any position," as in "any rifle" competitions, should be permitted.

Particular attention is called to the favor shown by members of the National Guard, as exhibited in the large and increasing number of entries in the monthly contests for the Champion Marksmanship Badge for this year over that of last, as also in the Gildersleeve Medal, shot under similar conditions; and it is suggested that the establishment of any-rifle competitions, both for long and short-range, upon some similar plan of low entrance fees and division of money received therefor, might meet with favor among our "any-rifle" members.

Perhaps the announcement of a small additional prize, to be awarded at the end of the season to each competitor who shall have entered in all of the matches shot during the year, might prove advantageous.

The report of the Range Committee for the year will be found to be of great interest to our members, and their careful attention is invited to it, as also to the several reports of the Treasurer, Prize Committee and Executive and Statistical officers of the late fall meeting. These several reports, in connection with the statistical tables of all matches shot during the past year, and presented herewith, give a history in detail of the Association for the past year.

It has been considered expedient to again prepare a separate report on the International Long-Range Match, although the absence of any foreign team this year deprived the competition of the greater part of its interest, still it is believed that these special reports on this match, furnishing, as they do, a complete history, year by year, of all matters and correspondence connected therewith, and the scores made, are generally acceptable to our members.

It is with pleasure the secretary makes his acknowledgment of thanks to the editors of the following papers (which have been regularly received) for their courtesy in continuing to supply them for the use of the Association, without expense to our members—viz.: *Volunteer Service Gazette* (London), *Turf, Field and Farm*, *Spirit of the Times*, *Chicago Field and Stream* and *Red and Green*, and the *Army and Navy Journal*.

All of which is respectfully submitted.

Geo. S. SOHRMERTHOEN, JR., Sec'y N. R. A.

PROFESSIONAL RIFLEMEN.

EDITOR FOREST AND STREAM:

Like causes produce like results. It would be strange, therefore, if amateur riflemen generally were to give expression to their feelings—if they should not very unanimously agree with the views expressed by Prof. Dwight in your issue of Dec. 12. I have myself, for several weeks, been meditating an epistle to *FOREST AND STREAM* on the same subject. The injustice of compelling amateur riflemen, in all prize meetings of the National Rifle Association, to compete on unequal terms, with semi-professional riflemen, and with experts, directly or indirectly in the employ of rifle manufacturers, has been for a long time apparent. It has resulted in a process where you "pay your money and don't take your choice!" In other words, I assume that the great majority of riflemen—those who furnish the money for the support of the various rifle ranges throughout the country—who compose the majority of contestants at prize meetings—are amateurs.

Now, when these amateurs find that the rifle prize, year after year, are going to be won by a few experts who don't do much else but shoot, they naturally feel some reluctance about making further contributions of money for their benefit, especially when the success of these experts is heralded abroad as the result of extraordinary personal abilities and of infinitely superior accuracy in the rifles they shoot, when the fact is that there are dozens of amateurs all over the country who, making due allowance for their lack of thorough and continued practice, are greatly their superiors.

We would never consider a circus rider entitled to special credit because he could perform a feat on horseback that a gentleman who rides only for pleasure and recreation. So of a rifle expert as compared with an amateur; the wonder is, not that he shoots so well, but that he doesn't shoot better than he does. Neither is it a special credit to his gun that it shoots well in his hands. There are, undoubtedly, several makes of guns which would do equally well with the same skilled use.

Few men will find fault with being beaten when they have had a reasonably fair chance of winning, but putting an amateur against an expert, who sleeps with the sun, who never doubts and drinks powder water, is simply a farce, for the acting of which the amateur "pays the shot." Besides, in allowing this state of things to continue, the rifle companies (those who are responsible for it) are really working against their own interests. They should do everything in their power to foster the interest in rifle shooting that has so rapidly grown up among us, and abstain from doing anything that will tend to kill it.

It is, I think, a questionable matter of policy, for instance, for a rifle company to offer prizes, for which amateurs are the principal competitors and pay the great bulk of the entrance fees, and then put forward their experts to compete with the principal ones themselves, especially when they interpret conditions which are more favorable to themselves than to any outside competitor.

If amateurs become disgusted with the little tricks, the wire-pullings and unscrupulous methods used to make a certain gun win in any contest, and if in consequence of this growing disgust the enthusiasm begins to grow cold, and the great body of amateurs cease frequenting the rifle ranges, then the rifle makers will, by so much, cease to sell guns, and they will die, too late, that they have "killed the goose that laid the golden egg."

It would require much thought, undoubtedly, to devise an adequate remedy for the present state of things, but it would seem that the National Rifle Association, or a committee of its appointment, might be able to accomplish the desired result. Experts might be handicapped in some way, as in trap shooting, by classifying all contestants, according to their records, in regard to distance shot over, or by causing those to draw class to allow a certain number of points to those in second class, etc.; or some matches might be arranged for amateurs only, and others for experts.

If thought could be given to this matter, however, in order to increase the interest in the Association, it might be well to allow amateurs to enter the match intended for experts, if they choose to do so, then if they are found at the bottom of the list in such a contest they can blame no one but themselves. For one, I sincerely hope something may be done to perpetuate and increase the interest in the many, gentlemanly, beautiful and useful sport of rifle shooting. It is one of the most sensible methods of recreation ever introduced into this

country. It requires only a moderate yearly expenditure of money; it takes little time—a half day or a day once a week, or once to two weeks even, being sufficient to keep an amateur in fair practice. It is eminently healthful; it takes one from sedentary occupations out into pure air and into the sunlight; it clears the brain, strengthens the lungs, trains the muscles, and requires strict temperance in food and drink. In short, it supplies that desideratum of healthful recreation—plenty of bodily exercise in the open air, combined with an absorbing and highly pleasurable mental activity.

Let us do what we can, then, to increase the number of its votaries, and, to that end, what we can to rid it of all things objectionable.

Dec. 21, 1878.

REUR.

EDITOR FOREST AND STREAM:

NEW YORK.

Dear Sir—In perusing Prof. Dwight's dignified and timely article in your number of the 13th ult., on semi-professional riflemen, some ideas occurred to me which I beg permission to lay before you. The subject in question, to my certain knowledge, has been deeply agitating the amateurs during the season just passed, and I know it to be quite a general sentiment that this inquiry, in which so many of us have found renewed health and strength, to say nothing of its fascination, or of the duty of every good citizen to give it whatever support it may be in his power to afford, is threatened with its complete loss from the inaction of the N. R. A. In the matter of barring professionals from the short and mid-range matches. It is lamentable that these matches should have been left open to any professional riflemen during the last season, though there is little doubt that the gentlemanly officers and directors supposed this matter could, with safety, be left to the sense of right and wrong of the professionals themselves. The event proves to the contrary, and unless action is taken in this matter before next season, short-range rifle shooting, that which, next to the practice of the military, has been the main support of Creedmoor, is in great danger, as Prof. Dwight very justly says, of being wholly destroyed. Many of the short-range men expressed themselves to me, during the late summer, as having lost their interest in the matches from having to contest against professional skill. Upon one occasion I met at the range four others who were there to enter a match, who, upon the advent of a professional, shouldered their guns and went away.

Permit me to say that while the evil is yet young it may be very easily nipped in the bud, but that to delay does one's duty invariably makes it difficult, disagreeable, or, sometimes, almost impossible to accomplish, and one's only safe course consists in meeting difficulties boldly and without fear or favor as they arrive. It is very much to be hoped that there may be no tenderness or hesitation on the part of the N. R. A. in dealing with this question as the exigencies of the case demand. It is their duty to settle it at once and finally, or it will become impossible for them to reacquire the confidence and respect of the great body of amateur riflemen.

Had the convention of riflemen taken place at Creedmoor last autumn, this would have been the first question to be taken up, as the delegates to be named to be named and very emphatically in favor of it. They, however, were mainly giving their attention to preparing for the Wimbledon Cup match, and, of the few who were present, all regarded it an urgent necessity to pass a resolution requesting the N. R. A. to take steps in this matter of barring professionals. By a "professional," no one will deny is meant one who finds in shooting (as in any other avocation) his principal source of livelihood or income. If such a one cannot perceive himself to be a "professional," he must certainly be called very myopic, however genial and well liked he may be. I do mean one who makes his rifle gallery or the printer of one as such, nor yet the agent of a rifle making or dealing firm, nor indeed the makers, testers or dealers, but one who, having spent more or less of time in making himself thoroughly proficient in using the rifle, finds in shooting it himself his sole or principal source of livelihood. What shall we say or think of any firm of rifle makers who, after furnishing many of the riflemen with their guns, then send their professional to see that those who patronized them shall not win anything? They should be brought up before Jockery. If they wish to keep their professionals from getting rusty, let them send prizes to the ranges for visits, open to all experts, and the amateurs will not then feel ill-treated as we do now, but will, I feel certain, enter in such manner with the utmost good nature for the sake of the record. But this latter motive, as the boys say, "won't wash." It is no ethereal diet to long sustain any one, and no one can be expected to continually enter matches who knows to a certainty that he can never win anything, nor make a creditable showing either. Many of us are, perforce, reconciled to the former, but all have hopes of standing at least among the leading ones.

This is really a matter of very great importance, and the feeling with regard to it is widespread and earnest, and that which was so evident to a casual visitor like Prof. Dwight had already long been discussed by probably every amateur riflemen in New York and vicinity. We all feel that our chances of protection are small, but we do know that in the *FOREST AND STREAM* we have an able enough friend and defender, whose good offices we will lose no opportunity of reciprocating. I trust that after pen has mine will ventilate this subject. Meanwhile believe me, your obedient servant,

S. T. G. DUNLAP.

Game Bag and Gun.

GAME IN SEASON IN JANUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Powl. "Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf-bird, phalarope, avocet, etc., coming under the group *Limicola* or Shore Birds.

How to Load.—A correspondent desires to inform any of our readers who may have a gun which scatters too much that they can improve both pattern and penetration by pouring hot tallow on the shot before putting on the last wad. The pattern can be made still closer by using a preparation of half tallow and half beeswax.

BEAVER HIVER CLUB.—The reunion of the Beaver River Club at Springfield, Mass., last Friday, was a very enjoyable occasion. The club is composed of gentlemen of Springfield, Hartford, Pittsfield and North Adams, who spend the summer at Beaver River in the Adirondacks. Many pleasant stories were told of summer pleasure, and the conversation was unflagging. Previous to the supper the club shot off a few targets at Mayo's gallery, the two sides making 161 and 153 out of a possible 200, and at the supper table the leather medal for the poorest shot was given to the Editor of this Journal, who had only just been voted in as an honorary member of the club. The fact that that gentleman's score was 4, while the lowest other score was 29, only demonstrates the phenomenal character of the Springfield marksmen. The old

officers were re-elected, S. M. Spencer, of Hartford, President, and Frank Bolles, Jr., of Windsor, Conn., Secretary.

NOTES FROM VERMONT—*Weston, Vt., Jan. 6.*—The trapping season with me is ended, winter having set in in dead earnest. The depth of snow and extreme cold winds have driven the few surviving foxes from the high ranges of my locality to the valleys and foothills. My catch has risen, thirty foxes and some minor kinds; less than half the amount I took, with the same number of traps, in a season when I first drove my stakes here. Catching off the foxes has resulted in an increase of partridges, very noticeable this season, when they have been exceptionally scarce. No young ones killed. I had, in common with all my friends, attributed the scarcity to the cold, wet weather of spring; but recent numbers of Foxes and Skunks have accounted for it. Otherwise I omitted to state that foxes are in unusual good color this season, being a rich, deep red.

WARFIELD.

LONG ISLAND—*New York, Jan. 11.*—I have just returned from a trip to Good Ground, where I found the duck shooting very good in holes on the ice, where the stools are put out and a box or boat cut out into the ice at a convenient shooting distance. Quite a number of good days' sport have been had in this way since the bay froze over. I had the good fortune to stop at the Bay View, and was made very comfortable by its genial proprietor, Mr. A. H. Corwin.

ARMER.

NEW JERSEY—*Kinsey's Ashley House, Barnegat Inlet, Jan. 10.*—Geese, broadbills and black ducks are thick here just now. The cold snap has frozen the bay over, and the only open water is in this vicinity. We know what is killed by our life station house boys; 15 to 20 geese and from 75 to 100 ducks are an every-day occurrence. This must be divided among six gunners. I also hear of 32 geese being killed by two men at North Beach, and of some of the gunners in air-holes scoring as high as 60 broadbills per day. Geese can be seen by the thousands. I have rigged a boat for paddling in the ice. It is 12 feet long by 8½ wide, and to give it the appearance of floating ice I painted it white, covered it with thin muslin, with two sideboards covered with the same material, cut scalloped. The only opportunity to test it was yesterday. It worked to a charm, and if that little "it" had not been in the way I think I would have made one of the greatest shots at geese known. Some 50 of them were sitting on the sand-bar with their heads under their wings. I paddled within some 100 yards of them, they never boding me on my boat. The boat struck sand water, and I moved back a few steps, and then I pushed out into the water about two inches of water to within 75 yards of them. When I found I could not get any closer your readers can imagine my feelings, with gun only loaded with No. 2 shot and no possibility of getting any nearer. Their heads were so thick you could not see through them. I waited some three or four minutes watching their actions and undetermined what to do. Finally I concluded that I had looked hard enough for a shot, and let them alone. I did drop a few, but I have the satisfaction of knowing that, with everything favorable, I will do some big execution before the ice leaves our bay.

B.

VIRGINIA—*Mr. M. D. O'Rourke, a dealer, of Staunton, Va.,* is said to have had handled 6,000 pounds of venison during the season.

KENTUCKY—*Stanford, Jan. 10.*—The goose-bone ranks Old Prob. now, as results have verified predictions. G. W.'s only surviving servant doesn't reside here. If he did it is a general belief that he couldn't refer to a winter of such prolonged severity. Three weeks of snow, ice and demoralized circumstances this would be to the remainder of the open season, and the pot-hunter with his pot-metal gun has full swing. Quails and hares, "thin as waters" and "light as feathers," glut the game markets, and are quoted at figures which make tramps ashamed to beg cold victuals. Nearly every correspondent to surrounding country papers tells of some fellow that has bagged half a dozen coveys at as many shots, and such wholesale slaughter, together with the continued starvation, portend a light crop next season.

THEY WILL BE SHOT BY THE NEXT SEASON.

KENTUCKIAN.

TENNESSEE—*Savannah, Dec. 31.*—In casting up my game record for the past two months I find that I have bagged 127 quail, 16 mallards, 13 geese and 3 snipe. The latter circumstances this would be but a poor bag, but my opportunities for shooting are limited, not averaging one day per week. The snipe reported as killed are three-fourths of all that I have seen, for, as one may readily imagine, this is not a famous snipe resort. Quail have been unusually numerous, but are wicker than I have ever known them. They do not lie well to the dog, and when they fly alight close together, and run or take to wing again without giving an opportunity for more than two shots. The ducks reported are the result of two days' shooting over the snow-covered corn-fields. We have none of the appliances of the professed duck hunters, such as decoys, snipe boxes, etc. Fully supplied with all the appliances for this sport, a good shot could achieve most astonishing results, as our river and creeks are at this time simply full of ducks. Several geese and a number of ducks have been killed by the market hunters.

WILL.

INDIANA—*New Albany, Jan. 8.*—We have had here the coldest weather I have ever experienced; mercury 14 below, two mornings in succession, and several mornings of late 4 below. A light snow fell three weeks ago and sticks tight yet. I presume every quail in Floyd County and vicinity is by this time dead, and the few that have been in Lewis and Clark counties are trapped and netted by everybody that they loaded them up at the depot in transfer wagons—actually shoveled them in, just as they do potatoes. They were frozen stiff as a hinge, and were carted off by the wagon-load.

KANSAS—*Abilene, Jan. 8.*—Quail shooting has been unusually good here this fall, and some good bags have been made by the members. The outlook for next year is poor. The long continued cold and the large number trapped will make them scarce. Quail are now selling at 40 cents per dozen in Kansas City. Deer have been quite plenty, and one member has bagged four. We can turn out as well an armed team as there is in the State. Sorry we did not see you last fall; hope to see you next trip West.

DIAGNO.

Silver Lake, Jan. 6.—The quail shooting has been superb this season, and we have made some fine bags. The snow has been six or eight inches deep for the last month, and has driven the quail into the barneys to feed. Saturday, the 4th inst., I found a quail frozen down. If this weather continues much longer our chance of good sport will be destroyed.

CALIFORNIA—*Los Angeles, Jan. 2.*—Large bags of wild ducks, geese and other wild fowl have been made near here and at Wilmington for some weeks past. The last five days have been one continuous run-storm, and it is expected that wild fowl will be found in great abundance on the streams and lagoons throughout the entire country.

NOT AN ARAB SHUK.—Next to having one's hunting exploits bungled there is nothing more distasteful to the modest, simple-minded American, imbued with the free-and-equal principles of this great and glorious republic, than the assumption of rank, and barbarous rank at that. A valued correspondent, who has suffered in both of these ways, writes the following explanation and disclaimer. We hope that such of our readers as may have read the article in question will accept the following:

Editor Forest and Stream: An article having appeared in the Philadelphia Sunday Times and other papers, headed "Bear Hunting in the West," etc., and many of the statements therein contained being incorrect, I trust you will allow me an opportunity of correcting the same. With reference to the bear which fought so long and eventually escaped, I would say that with the exception of a little embellishment the account is fairly correct, excepting that a very heavy snow storm came on the night, and that the bear did not escape, but that we left him dying, and that he was found dead the following morning. Then again the shooting of the gray pony I had nothing whatever to do with. Mr. Lature and his companion, the "heroes" of the adventure, having been at the time fifty fifty miles from where I was. As to the "Ex-Arab Chieftainship," with which I am invested, I traveled for some time among the Arabs of Morocco, disguised as one of themselves, it being necessary to do so in order to travel there at all, but, excepting that any one who travels there without any apparent object, and having a number of attendants is considered by the Arabs to be a great man, I can lay no claim to anything of the sort. I cannot imagine who could have inserted the article in question, but whoever it was drew some truth largely on his imagination, and should be a contributor to Bendle's dime literature.

C. MESSEIER.

RUNNING ANTELOPE IN NEW MEXICO.—Dr. Robinson, of Newark, has favored us with the perusal of a letter from a relative in Troyburg, New Mexico, which begins by detailing some adventures in treecing turkeys, a rather tame kind of sport, but remunerative, as game of this kind finds a ready market at \$1.50 per bird. The letter continues:

We started three bunches of deer on Monday evening, but had no rifle. Game is very abundant this fall, for all of the Indians have been moved off; and if they only stay away, we will be overrun with game in two years. I venture to say that I saw 500 antelope yesterday evening in Troyburg and Leonard, which are about six miles apart. The country is full of them. They are the prong-horn, light brown, or cinnamon on the back, and white belly and rump. The bucks have a coarse mane which stands up on their necks like a hog's bristles. They are very handsome: and can't they run! Stuyvesant found three in his vegs fence last week—it is a mile square, making four miles of fence. He went in with his pony and shot them all down. He was run them a mile, and then ride back slowly to the corner, and by that time they were all around there, and then he would run them again. They ran him one mile to their four, until they were completely run down. Two gave out on their tenth round (40 miles) and the other on his twelfth, or 48 miles. He killed them all with his knife. He had his rifle and could have shot them, but had heard how they could hold their wind, and said he never could get a better chance to try it. He had a blooded horse and couldn't catch them on the mile ride run until they had gone forty miles. He ran them all plumb down, and his horse pretty near it. Says he don't believe there is a horse living that can begin to run as far as that can. Some horses can outrun them for a mile, but they cannot keep it up."

The same writer adds the following little incident by way of a snapper:

"One of the Troysburg boys killed a big wild cat last Sunday with his boot—caught the cat out on the prairie, took off his boot, and pitched in, and got away with him too."

THE BAKER GUN.—*Editor Forest and Stream:* I see you desire some information as to the three-barreled Baker gun. Those who use them in this section are highly pleased with them. I find a 12-gauge, shot barrels and .44 cal. rifle, weigh 10 pounds, a weapon adapted for all shooting in either a prairie or wooded section. Mr. Edwards, firm of Vance & Edwards, has one of these guns in use since 1875. It has been in use in long camp hunts, and to all appearance is as good as ever.

San Antonio, Texas, Dec. 30.

AN ADVENTUROUS TITLE.—*Editor Forest and Stream:* We organized a shooting club here last July and named it the Hallock Sporting and Shooting Club, after the editor—shake. The club was represented by a team at the State tournament last October, and came out second best in the shoot for the State medal. We hope to take it next year.

Abilene, Kansas, Jan. 8.

THE OLD GANG ON THE ASPHEPO—Aiken, S. C., Jan. 6.—On the second of December, by invitation of that prince of good fellows, Mr. Emanuel White, of Colleton County, the King of the Gang summoned his born, "all hands reported," and we put out with fourteen hounds and two pointers, with "blood as blue as Castle," to join the Doctor in a hunt at his plantation on the Ashepo River. At 8:40 we took the night train at Augusta, per Yamisee, on the Port Royal R.R., which place we reached about 2 o'clock, when we struck the Charles and Savannah R.R., which we took. Twenty miles brought us to our destination, and we were met by the old gang, the roof of the old Doctor. The first day we got no deer, but squirrels and quail by the score, and one very small possum, "captured by the Clerk of the Court of Aiken County." The next day we moved camp for better hunting, where we not only made the hairs and feathers fly, but walked right square into the funny tribe. We camped in a baronial-looking old mansion, surrounded by enormous oaks, covered with graceful curtains of flowing moss, and interspersed with the old jays, with blue wings, snow white and variegated. It was a mighty big trip for the Piney Wood Boys. We killed four fine deer, three turkey gobblers, and ducks, quail and squirrel unnumbered. Had game at every meal mixed with rock fish and mullet by the bushel. Our camp was about the head of tide water on the Ashepo, which gave us fine fishing. Our hunting-ground was once the land of wealth, luxury and intelligence.

gence, but the fields that once waved with the snowy fleece and the golden rice, are now the haunts of deer, turkey, wild cats, foxes and possum. In the gang was five fox guns, two Parker and one Hemington, and nearly everything that rose before us folded their wings forever.

ONE OF THE GANG.

FIGHTS OF WILD GESE.—*Shelter Island, Dec. 19.*—*Dear Editor:*—The wild-fowl are still flying and feeding about these shores; but the weather has been too rough and blowy for much sport. The only way to get at them is in "battery-boat," but that can only be done in very light winds and smooth water. The boat is made very small, like a narrow coffin—so that its deck lies near the surface of the water, the sails to be lowered by the way. I tried my boat a few days since, in a calm morning, but a heavy gale of wind from the North nearly swamped me and forced me to paddle back to shore as fast as possible. But few, very few geese and brant have passed over these waters. Where are all the geese? They generally fly in good numbers at this season; but now they have been unusually scarce. We hear also that along the Jersey coast, especially at Barnegat Bay, they have been very scarce, so far this season. In former years I have always found them there in November and December in large flocks. Have they taken another route in their Southern migration this year? Do they pass far inland, or follow the line of coast far out at sea? They must have chosen one of these unusual routes, or we would find them here and on the coast of Jersey. In former years, the snipe and fowl shooting in Shinnecock Bay used to be most excellent, but then there was a good, sufficient inlet to allow the salt tides to flow in; but now the inlet is closed up, and the water becomes brackish, the shooting has become much less successful. The flats and bars are flooded with fresher waters, the feed is poor and the wild-fowl scarce, as we are told. I copy from a local paper some remarks on this subject: "Some years ago the natural inlet filled or closed up. Since then several attempts have been made to open others, but with little or no success; they would run for a short time and then again fill up with sand, entirely owing to ignorance as to the locality where an inlet would properly run or be properly dug. These were very improper dug or located, being too far to the east in the bay, and too narrow, owing to the people not having the money to employ a powerful machine digger; more man labor proving insufficient for the undertaking. The result is that this great and most valuable bay is closed in, and has been more or less so for years. All the clams and oysters are dead. Millions and millions of fish have died, and are still dying from the stagnation and freshness of the water, breeding every kind of pestilential odors and filth on the shores. From the occasional straggling of the ocean and the surplus water, with no outlet, salt and rich meadows are destroyed by the covering of sand and water. Not only this, but in places also, filling up the bay with sand, causing flats where previously was deep water, and thereby ruining navigation. Formerly there was some money spent by people coming to this bay from our cities for fishing and shooting. Now they have ceased to come, for there are neither fish nor birds. Hotels have been built for the accommodation of visitors, but they do not come, fearful of disease and the surrounding decay of fish and vegetable matter; consequently hotels must be closed, with severe losses on tenants and owners. The situation and condition of these hard-working and willing people is deplorable in the extreme." To remedy this, it is suggested, either that a canal should be opened from the salt tides to flow north, at Canoe Place, a distance of one-fourth of a mile only, or that a small canal be dug through Quantic Bay, thus connecting with the Great South Bay. One of these plans should be adopted.

ISAAC MACLELLAN.

Since our correspondent's letter was written an inlet, which promises to become permanent, has been opened into Shinnecock Bay. There has also been a large flight of wild geese, as the veteran gunner Bill Lane writes us that he has not seen so many pass South for many years.

BOGARDUS' BIG SCORE.

Captain A. H. Bogardus, the champion wing-shot of the west, took upon himself last week one of those tremendous feats in the way of marksmanship, for which he is now so famous. His match against time at 5,000 glass balls a year ago is familiar to all our readers, and his first trial was far below the common. On several of the hundred he broke at the rate of between 18 and 20 a minute, leading at the time his own gun. The match of the 8th and 9th was one of accuracy rather than rapidity, and the conditions required that he should break 6,000 glass balls, thrown at 15 yards rise from a Borden trap. The wagers were \$1,000 even that less than 6,200 would be fired at; \$500 to \$1,000 that not more than 6,100 would be used, and \$100 to \$1,000 that the break would be straight.

The Captain used his W. & G. Scott & Co. gun with two sets of barrels of 10 and 12 gauge, using 4 and 3½ drachms of Dittmar powder respectively, and 1½ oz. No. 8 Otis LeRoy & Co.'s tin-coated shot. The match opened at 11 o'clock on the evening of the 8th, and all the assistants were at their posts. Dr. B. T. Tait, the puller, Miles Johnson, of New Jersey, and Eliza Garrison, of Syracuse, as referees, and T. C. Banks, scorer. An active lad kept the trap supplied with balls, and in answer to the "pull" of the champion, ball after ball rose in the air to be shattered instantly. Many expert shots from this and other States watched the perfect work. Now and then there was a trifling dispute about balls which fell seemingly whole. In one case a bit broken from the neck of the shot, the work of the shot, and in another the load had passed completely through the sphere, without shattering it into the usual fragments. But from first to last of the match the referees were scrupulously careful in their rulings. During the first half hundred shots the dumb-piece of the right hammer broke off, and though the Captain did for a time lift the hammer by pressing his thumb up, he was obliged to stop when the broken and jagged fragment, the effort was very painful, and the hammer of shots fired during the day were from the left barrel. The Captain shot easily, not burying himself and taking liberal rest, and from first to last every ball was declared broke, and but one misfire had occurred during the day.

The last 500 balls shot on the first day were closely watched, for upon them hung a 1,000 ball match with Kleinman of Chicago, in which Bogardus was to give his rival 200 broken balls, and at 1 o'clock it was announced that 3,000 balls had been shattered without a miss. Cheers were given again and again. The Captain then threw two long of his gun, and his right arm and shoulder were very stiff. Kleinman in his 400 shots missed only six balls, choosing, however, very much slower than the Captain, and using

Oxford declined to row Harvard, chiefly because the Oxford men thought they were getting a little more business in the rowing line than they felt inclined to take care of; and unless Harvard can change their date to an earlier period of the year in all probability they will have to forego the sweets of revenge for many another year. With the Oxford race set aside, Harvard disbands her present eight, and therefore will not row Cornell. The latter college has been entirely too "touchy" in its bearing since its challenge to the Cambridge men went forth. That the latter should have shown anxiety for a reply from Oxford before asserting definitely any other challenge on this side, was owing only to the fact that unless an English race could be crewed the crew proposed to disband and could not well compromise itself as long as its very existence was in doubt. Cornell has had no just grounds of complaint, and has added nothing to her reputation for good sense by taking offence at a silly article from the pen of an amateur scribe.

THE AMERICAN HEVLY.—Harvard has replied to a telegram from Mr. Henry W. Garfield, Secretary of the N. A. A. O., that they would not be able to enter a four or an eight for the National Association race to meet Oxford or Cambridge, in case one of the latter could be induced to cross the ocean. We do not believe any English crew would consent to pull in America without some very strong inducements, in the present light which university and international racing is regarded abroad.

YALE-HARVARD.—A fresh crew will be formed to pull Yale, which will be the only outside race Harvard proposes to engage in.

WALLACE ROSS.—This St. John sculler has failed to get on a race with Tarryer, of England, and has now challenged Lumsden or Nicholson to row for \$100 on the Thames. Thames. Lumsden can pull Ross hull down.

HARVARD FREESHIPS.—The freshmen of Harvard are trying to arrange for a race with Yale or Columbia.

FRIENDSHIP BOAT CLUB.—At a recent meeting at their boat-house, Twenty-eighth street and East River, the following officers were elected: Pres., James S. Murray; Vice-Pres., A. C. S. Sauer; Cor. Sec'y, James J. Phinmons; Fin. Sec'y, Eugene F. Moore; Treas., Michael J. Murray; Capt., Philip S. Biglin; Delegates, William Frinke, William Hurley, Philip S. Biglin.

NERCID BOAT CLUB.—At the annual meeting of the Nercid B. C., of Brooklyn, the following officers were elected: Chas. R. Flint, Pres.; Louis H. Leonard, Vice-Pres.; A. C. Bance, Treas.; Heywood O. Brown, Rec. Sec'y; F. B. Fliske, Cor. Sec'y; Joseph P. Earle, Capt.; Chas. M. Bull, Lieut.

ARIEL BOAT CLUB.—The Ariels of Newark, have elected the following officers for the year: Com., John M. Ross; Pres., E. Freeman; Vice-Pres., Thomas Austin; Capt., J. Bennett; Lieut., J. Quinn; Sec'y, Thomas Sweney; Assistant Sec'y, Robert Cherry; Treas., W. S. Baine.

ECCENTRIC BOAT CLUB.—The Eccentric Club of Newark, N. J., elected the following officers for 1879 at their meeting held Jan. 6: Pres., S. C. Astley; Vice-Pres., R. Hilton; Sec'y, E. E. Smith; Treas., W. S. McLorinan; Capt., G. M. McCall; Lieut., S. H. Day; Log-keeper, J. E. Evans; Com., J. H. Jordan; Board of Trustees, D. Van Vollenburg, F. De Bow, W. Schriener and A. Watts.

N. A. A. O.—At the regular meeting of the Executive Committee of the N. A. A. O., at the Metropolitan Hotel, N. Y., Jan. 11, the Fairmount R. A. was recommended for reinstatement. The time and place for holding the American College Regatta was referred to a committee consisting of Messrs. Katts and Buermeyer. The regatta will probably be fixed for July, only undergraduates who have taken their degree during the year of the college race being eligible. Mr. Smith, Argonauta B. C., applied to have a reconsidering of the case in consequence of which he was dropped from the membership of the N. A. A. O. Referred to the above committee.

TURNED PROFESSIONAL.—Courtney has now found a second dangerous rival in Mr. Geo. Lee, of the Triton Club, of Newark, N. J., who announces his intention of becoming a professional oarsman. He will begin with the small fry first.

CRUISING IN THE CHESAPEAKE.

WASHINGTON, D. C., Dec. 15, 1878.

The days of sailing and summer saunterings having passed away for a season, and the diabolical weather seeming to indicate that old Boreas has given us the cold shoulder, it would seem to behoove all honest tars to be amiable, lie unto the comforts and refinements of their dogs, and think over the pleasures of events just gone, and recall to mind the exhilarating breeze and dashing spray of the last cruise, reid in delightful recollections of solid pleasure, mixed with ridiculous mishaps and exasperating accidents that befall all sportsmen, and which only serve to spice and enliven. To this end I have been fighting the battle over again, and grabbed my pen to gossip about a cruise of 500 miles, made last summer, and which may serve to revive some pleasant experience, and save something from things forgot.

The dumpy little ship, *Fanny Bell*, in which we traveled, has won many races, and her reduced rig is just the thing for inland navigation.—22ft. long, 8½ft. beam, and 39in. deep; with 23ft. boom, 12ft. gaff, and 23ft. hoist in the mainmast, which can be reefed from the deck, and a jib large enough to keep the tiller easy in a breeze, and small enough to carry a weather helm, with a single reef in the mainmast. A peep under the foot-boards shows 15 in. of iron about her longitudinal centre, which holds her down to biz in a blow, and forces her in style through the choppy seas. She is all decked except a small cockpit, which allows plenty of breathing room on hot nights—and also a popular resort for sunny rays. Any serious consequences from this pre-dilection of water, however, may be prevented when desired by a canvas cap, sitting snugly around the coaming, and covering the cockpit, except a small portion behind, for the accommodation of the steersman. It is true, a cabin which must necessarily be very small, will keep out the water, but it will not let in the air; and between a certain death from suffocation and the uncertainty of drowning, I choose the latter, and thoroughly enjoy the delightful uncertainties and luxurious inconveniences of a voyage in a partially open craft.

The dimensions of sails I have given are for cruising. At home for racing and general purposes, I have heretofore carried about twice the amount of canvas, including my light sails. Except for special occasions, I shall not do so any more, for the great inconvenience of reefing every time it blows a sailing breeze, and the

constant care required for manipulating so much rag, is not compensated for by the slightly increased speed, which can only be attained in light air; for just as soon as you begin to travel with the last six cloths of the mainmast, everything shaking from that point to the mast is dead weight, causes the boat to labor, and holds her back; whereas your rival, with proportional sail, has everything full, and walks right by you. Since I cut down my sail, every small boat on the river has done the same, and universal satisfaction is the result. When I say cut down I do not mean to advise any one to attempt sailing under almost bare poles, but simply to carry a boom, the outer end of which can be reached, and still keep a grip on the counter with your big toe, and reef; and thereby avoid taking your ship under your arm, and going ashore to reduce sail, or dangling on the end of a stick running as far beyond the stern as aboard, and looking like an animated frog on the end of a fishing pole. And nothing looks worse, and sticks faster at the mast inopportune time, than a complicated reefing apparatus that forcibly reminds one of a full-rigged man-of-war. Neither do I want a bowsprit that samples the bottom every time a wave strikes the counter. It is, as in all things, the happy medium which gives the best results and most pleasure.

The admiral and ornamental man of our ship is Frank MacArthur, a well-known bean, and whose specialty, says knowing Dick Marshall, the proprietor of a well-known summer hotel, is widows. He could generally be found reading in the shade of a sail, braced up by pillows. The skipper is Oscar Woodward, an old stager, who can go comfortably to sleep on the edge of a three-cent piece, and who always held the tiller in bad weather. The cook bears the name of Wickus, and still lives. The rest of his name has never been discovered, for fear of faring worse by going further. He has reduced the whole science of cookery to one rule, and that is fat; hence we more usually call him the King of Greece. He does all the delicate work, such as frying cornmeal and peeling potatoes. He has an assistant who does all the manual labor, such as washing dishes and watching him make the fire.

The expedition was advertised to sail Saturday evening, but the appearance of the wharf at that date indicated otherwise. A pile of baggage, provisions and apparatus, apparently the accumulation of years—and from its variety the result of much study—had to be disposed of aboard the *Fanny*. It was like putting a house with all the domestic arrangements in a cart; but the skipper, remembering the classical tip that eat a bucketful of dinner and then got into the bucket himself, went to work, and with the aid of some darkies—assorted sizes—incorporated everything in the craft in its proper place. Finally everything was fixed, the last rites performed, and we started.

It was a beautiful night. The moon was full, and beamed down so benignly that we could not help feeling the gentle influence, and from joking and talking became silent, and watched its ever changing silvery hues, the grim old wharf, with its dark shadows and pleasant recollections, and the serene, blue sky, with its sparkling lights. Then we thought of the dear old friends left behind, and the long journey to come, with its many probabilities and modest dangers; and then very unenthusiastically thought we were sleepy, wrapped ourselves up, and soon old Morpheus had us under his wing.

We stopped at Alexandria till morning to get an anchor. It being Sunday the blacksmith-shop was closed, and we had to go to the proprietor's house. He ceased operations on a sermon, as he was a minister later in the day, and sold us the article. It weighs 130 lbs., and is intended to be used only on a lee shore in a gale. It is carried in the bottom of the cockpit, with the stock folded, the shank alongside, and the flukes on each side of the well. In this position it was not at all in the way. We christened it Baby, and the ship always staid when it was dropped over, which was more than once. It is one of those articles that may never be used, but when it is wanted, is wanted like everything.

After squaring away from Alexandria, we had headwinds all the way to Piney Point, 93 miles, where we arrived without adventure. Dick Marshall keeps a cosy little hotel here, and we stopped over several days. Dick is jolly, and treats everybody just right. He has a little schooner, which he thinks can show anything inside the capes over a course, and offered us champagne to beat him. The race was an event, and everybody was excited. The wind was off shore, and a big woods close to the water's edge kept the wind off the little *Fanny*, but allowed the top and staysail of the schooner to push her ahead. They said we were anchored, and to come on; we did so, and to such an extent that when the turn was made *Fanny* was a mile ahead. So jolly Dick came to the conclusion that he could only beat us in rough weather, and as we never denied it, everybody is happy, and the goose hangs high.

But our journey must be completed, and so we bade all good bye, cast off the last mooring rope, hoisted sail, and slowly moved out toward the great Chesapeake, with the good wishes of all the people, and the predictions of the wise ones that they were taking their last farewell. We reached the bay, and were delighted. It is true we could only faintly see land, and that only in one direction; and the cook remarked that *Fanny* was small for the occasion, and the assistant cook said nothing, but his usual blank countenance indicated a heap of thinking; and the Admiral said it was the most beautiful sunset he ever saw; and the skipper said to give him his blanket and pillow to sleep on, and if the wind changed to wake him up; and that was all that was said for some time. In the course of an hour a promontory extending away out into the water was approached, and the scene was one long to be remembered. My single blanket and the hard deck I would not have traded for the most gorgeous bed of a palace, and an old pair of breeches, resting on the fluke of the anchor, was softer to me as a pillow than the finest feathers. Oh, what a lovely night it was, and how happy I felt! I shall never forget it, and shall always long to again drift into the shadow of the great bluff that loomed up with such grand, calm dignity from the depths of night, and listen to the sad pines fade to sigh and moan forever. And well do I remember the dark, mysterious holes in the mountain side, and the fantastic, ever-changing shadows, that seemed like evil spirits playing hide and seek with the jutting rocks and sturdy bushes. And how lazily did the little, good-natured waves play with the glistening pebbles along the sandy beach, and how cheery the sweet music of their voices, and how strange they could be angered by a storm and rival the thunders of heaven! And then I saw the twinkling stars, and the deep, pure blue above, and the moon slowly rise from behind the wooing trees and cast its gentle

light or all nature, which seemed contented and at rest. Then I wished I could live forever, leave all humanity, and drift for an eternity on the crystal water, in the shadows of night, and watch the moon rise—and just then a spider bit me on the end of the nose, and I wished I had them all in a row under a knife ten miles long, so that I could cut off all their heads at once; and with this pious wish I innocently went to sleep.

The next day we had the first serious accident. We lost one of our men overboard, and he must have been drowned, for we never saw him any more. We were sitting quietly on the forward deck, when we heard the startling splash, and saw him come to the surface twice, but before we could get to him he had disappeared, and that was the last we ever saw of the unfortunate man. Drowning is said to be an easy death, and so it proved to be in this case; for he never made a sound, or we could no doubt have saved him, as he lay on and waited for him to come up or make a noise, but nothing was heard but the murmuring water that seemed utterly indifferent to the shocking tragedy it had committed. Poor man, though the king of fellows he was a blockhead and always in the way, but nevertheless indispensable; and so we out another one out of cork, and continued our game, as he was, after all, only a King in our set of chessmen!

In the course of time we concluded we should like to catch some sheephead, and so we went ashore in Great Wicomico River to find a man to get the bait and show us the most likely place to try our luck—and patience. We were told the very man we wanted lived three miles back in the country; the only way to get to him was to walk, and the proper road was pointed out. Two of us started, walked four miles an hour for three hours and a half in a bee line in the right direction before we scraped together those original three miles. We came back in a wagon, and it took four hours. Such is the Virginia "idea" in regard to distance. Such economy would be laudable in a Rhode Islander, but in a Virginian it seems entirely unnecessary.

We finally had our fish, and fine sport it was. There are a great many in the bay, but a guide is indispensable, as the fish only bite in particular spots, which are usually far from land, and can only be found by a system of triangulation on marks ashore, known only to the initiated.

We sailed up the York River as far as Yorktown, and stopped a day at that memorable place where the Revolution was settled. It is a hot, mean little place, with a few frame houses, and one brick one, including stork perforations, that existed at the time of the famous surrender. We put some corn doggers in our pockets, passed up back of the town, and from thinking of the great historical event, of what might have happened had the siege terminated otherwise, of the patriotic Americans dying in the cause they thought right—giving their life blood for principles, we became filled with emotion—and corn doggers, and felt like shedding a tear on those hallowed grounds; for, as usual, Wickus had used too little meal in the fat, and no one knows how much we suffered while thinking of the miseries of the brave men who made our country. After a few moments of agony my friend produced an electrical apparatus to be used on such occasions. It was hollow, made of dark glass, and had a detachable top. It was operated by removing the top, placing the exposed aperture to the lips, and giving the device a slow, oscillating movement in a vertical plane, at right angles to the axis of the shoulder. The theory is that if the device is in prime order, and not been tested too much by the skeptical, that sufficient electric fluid will be developed by the described movement to run down the throat, and assimilate with the system in an advantageous way. I cannot speak from experience, but think there must be something in it, as my friend's eyes indicated a result different from the ordinary run. Having finished this place, which nearly finished us, we once more embarked, and arrived at Norfolk, saw what was to be seen, and started on the back trip.

While *Fanny* is quietly sailing along with an occasional reefing breeze and sharp squall, I will observe one observation in regard to provender. Canned meats and soups were in abundance, but not satisfactory for the main staple, as they were too delicate, and do not "fill up" right. They some way or other do not seem to afford sufficient sustenance to compensate for the energy expended in eating them. Boston baked beans, that simply require warming, are the thing, and are palatable every day. A man can put himself on the outside of three boned chickens, and just feel like sitting down to dinner; but let him take a couple of table-spoonfuls of beans, browned just right, and he feels that he has something to depend on.

The Great Wicomico River is honored with the most extensive fish-oh! and guano establishments we came across. Their odor is fearful, and they become very evident about three miles off. This odor can tack half a mile dead to windward without effort. We had expected to make harbor in this place, but a headwind delayed us until after dark, when a very heavy storm arose. The channel is narrow but straight, and if you can only strike it all is well; but as there are no lights, the question is how to strike the cut at night, as each side is full of shallows. It was dark as pitch, the sea was running very ugly, and we had been running and bumping around a good while when the skipper said he was going to run in, to look sharp, stand by the halliards, and if he struck, hoist sail and strike for the shore. A thrill went through every man, for although it was tough work where we were, and the gale increasing every minute, it seemed perfectly folly to dash stem on into the breakers which we could not see but hear so plain. There is not one chance in a thousand of hitting the right place, we thought, and if it missed, we'd be churned into eternity. But with human thoughts like these the actions are like heroes. Not a word is said, but everything is done. Every rope is manned. The tough little ship is turned for shore, and fairly leaps in the darkness, the quicker to end the suspense. All is dark. Not a thing can be seen, but, oh! what fearful sounds can be heard. The wind howls, the rigging shrieks, and the mast groans. The brave little craft flies to her fate, and the maddened water fairly hisses as it rushes by. Every man peers into the baffling darkness with the fierceness of desperation, but sees nothing. A few moments more and all will be known; but time has ceased its flight, or become entangled in our heart-strings, and drags our life to gain a second! But, hark! The breakers are near! They come; and the sullen thro and methodical roar fall with painful exactness on the soul, and bode destruction. But, thoughts away! for none so vivid as reality, and the breakers, those insatiable tyrants, are quite near,

and seem to howl for us. They come closer! They are just ahead! They are here! One trying second more, and we pass safely through, while on each side, very near—too near—the furious waves, in seeming rage at our escape, dash themselves to pieces on the beach, while we pass to the haven within, and give one prolonged, heartfelt shout of joy.

"Boys," said the skipper, "there was nothing lucky or remarkable about that; for I sailed by the infernal smell of that fish factory, which is as good to reckon from in the dark as a light house."

The best time for a long distance we made was on the back trip, from Piney Point to Indian Head, a distance of 69 miles, which we made from 10 A. M. to 5 P. M., 7 hours, or nearly 10 miles an hour. The wind was blowing a shrike from the south. We had the jib unbuttoned from the foremast and boomed out from the mainstay like aqua regia. Most of the time we occupied seats behind the illor, and held the throat and peak halliards in our fists, ready to cut the sail drop at any moment. And so ended our cruise with a run hard to beat.

QUEBEC, FRUITERER.

Chesapeake Bay, with its many inlets, bights and rivers, affords delightful cruising ground for yachts of all classes. Many times have we toiled famous America in its upper waters, and it is a matter of surprise that our northern craft do not seek the pleasant Bay, and ring a change on the regulation skim up the Sound.

A BIG SHARPIE.

STAMFORD, Conn., Jan. 6, 1879.

EDITOR FOREST AND STREAM:

I have read with much interest your correspondent's opinions regarding "the coming boat" in your issue of Dec. 26, i. e. the Sharpie.

I believe during the next season it will be shown that this style of boat will be classed—for purposes either of sporting, pleasure, or coast work in point of economy both in construction and keeping her in commission after she is built, also as to her safety in handling, her speed and her accommodation—as vastly superior to any other class, at least of the same tonnage.

I give you herewith the dimensions of a schooner sharpie built in the fall of 1877 by John Richards, of Norwalk, Conn. Her length is 52 feet, her beam 16 feet. She draws 16 inches of water in full ballast; has no centerboard, so that her cabin is not encumbered with the centerboard trunk. She has six feet and one inch clear head room in her cabin, four large berths, and lockers, one State-room, water closet, ice chest, stove rooms, kitchen, two bunks in the forecabin and completely fitted out in every respect. I mention this because the room that can be obtained in the sharpie model is simply marvelous and could scarcely be credited by any one who had not seen such a craft. Her mainmast is 39 feet, her foremast 38 feet benches. She carries mainmast, foresail and jib. All her sheets trim aft to the cockpit, which is large, and she can be easily managed by one man and a boy, if her owner desires.

I think she is the largest pleasure sharpie ever built (in this section of the country) and she has sailed lately on trial, where she could lay her course, eight miles in thirty-four minutes; and she has been also out in heavy weather, behaving splendidly. This sharpie was built for Mr. Frank Burritt, of Norwalk, Conn., was sailed a few weeks and was recently bought by a gentleman of this city who is an enthusiastic yachtsman, who is now putting topsails into her, so as to carry topsails and stay-sail in light winds. I am an old man, have sailed in all sorts of craft, from the *Dreadnaught* down to the smallest cat boat and want now to predict that next summer this schooner sharpie will be a hard one to beat by vessels of much larger size that are accounted speedy. She is now at anchor in our harbor. Her name is K. Q. Taylor.

25—P-K4	25—P-K4	53—P-Q5	53—P-Q5
26—K-Q7	26—K-Q7		

And White wins. His play has been irreproachable, and makes the ending an instructive study. Time, five hours.

NOTES.

(a) The late Mr. Stanton, in his *Praxis*, pronounced this the best move for White. Philidor also did so, albeit it is not so popular now as the move attacking K-K3.

(b) Black could also play B-B4, or the Greco Counter Gambit—P-K B4. The text move was, however, recommended by the Russian giant, Major Jaenisch, and is also by the German theorists; and the great English authority, the late Mr. Staunton, in his posthumous work edited by the late Mr. Wormald, gave it the chief place when treating upon this opening.

(c) Mr. Staunton preferred K-K3, converting the game into the Petroff, which, he argued, was favorable to the first player. White can so safely play the Tonziani Counter Gambit, 8—P-Q4, or he can adopt

the tamer moves, 8—P-Q3 or 8—K-Q B3. Calvi decried the text move, but Mr. Staunton showed that it leads to an equal game.

(d) Bad. Black should play P-Q4.

(e) We prefer P-Q4 ex gr. 4—P-Q4, 4—Kt K3; 5—B tks P, 5—K tks B; 6—Q tks ch, regaining the next move by Q-Q5 ch or K5 ch.

(f) B-Q3 were safe.

(g) B-K3 was more to our taste.

(h) This gives up the surplus P at once; but if P tks P, White gets a strong attack by 9—Castles.

(i) A grave mistake Black makes in allowing the exchange of a Kt for a B, and isolating a P.

(j) Black halts in his play in an unusual way. Taking P were safer, for if 15—Kt tks Q B P, 16—Q R-B, 16—Kt-Q5; 17—Kt-K7, 17—K-R, threatening Kt-K7 ch if White plays R-K-B4 or K5 B P.

(k) At last Black is enabled to make the long sought exchange of the minor pieces.

(l) We don't like White's double pair of doubled P's, but his doubled R's on the K's file prevent Black from profiting by this device in his opponent's armor.

(m) One of Mr. Mann's piquant and clever strokes. If White now snatches at the coveted Q P, Black plays K-K3, and White cannot save his R!

(n) To prevent Black gaining the open file at Q B with his R.

(o) Mr. Steele plays the whole of this end game with fine judgment. Taking the P with P would give employment to the Black R. If Black now take P, White can recover it by K-B3, with a winning position.

(p) Black's tactics from this point are faulty. His only chance lies in playing off his P's to two on the K's side by P-R4, followed by P-B3 and P-K4.

(q) A mistake. Black should play R-Kt, meeting R to B6 or Q7, by R to Q or Kt3, and drawing if White persists in so playing his R's.

(r) Winning the Q Kt P by R-Kt3 ch if White K tks P.

Game No. 95.—KING'S BISHOP'S GAMBIT.

The following pretty little gambit occurred between Mr. J. Mann (Adelaide player in above game) and Mr. Holloway, of Williamstown, Australia:

White.	Black.	White.	Black.
J. Mann.	J. Mann.	Mr. Holloway.	J. Mann.
1—P-K4	1—P-K4	7—P-Q3	7—B tks Kt
2—P-K4	2—P tks P	8—Q tks B	8—Q ch
3—B-B4	3—Kt-K3	9—Kt-K3	9—Kt-K3
4—P-K5	4—P-Q4	10—Q tks B P	10—Kt-K3 ch
5—Q-Kt3	5—Kt-K5	11—Kt-K3	11—Q-R4
6—Kt-K3	6—P-Kt3	12—P tks Kt	

And Black mates in three moves.—Adelaide Observer.

CURSORY JOTTINGS.

—The Hartford *Times* and *Ayr Argus* have been leisurely plucking the feathers of the Derbyshire game cock of late, who, though strange it may seem, is disinclined to march, figuratively speaking, "On to Richmond."

—The Hartford Chess Circle exists no longer. We write its epitaph—O.

—The following "Prologue to the Gentle Game of Chess" we take from the *Ayr Argus*, of Scotland:

The game of Kings is war,
We draw blood and rifle flame,
And the tread of the hoof on the weary earth
Is to them a winsome game.

But here's a game more fit
For Kings and Prelates all,
Where thought rules, as rule it must,
Though stars and planets fall.

Then round our Queen all gather,
Gentle Knights and Bishops true,
For our game is not a game of shadows,
But we can think with bayonets, too.

The State and Church are one,
The Castle and Pegasus true,
Behold the Knave who meddles,
Checkmate and let him rot.

GIBBONS.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

H. SMITH, Monroe, N. C.—Your note of December 4 was received, but the head, tail and leg of the bird have never come to hand.

R. B. A., Freehold.—Please tell me the best and cheapest way to get a dog to Iowa City. Ans. We know of no other way than by express, and your local agent can post you as to cost.

J. H. W., Boston.—Your dog has paralysis of the nerve of the eye. By giving purgative medicines, and using the seton, you may cure him, but the chances are much against his ever recovering his sight.

LIGHT, Newark.—Sandy Hook Lightship is 64 nautical miles from Navesink lights. Two fixed red lights, fog bell and a Thier's automatic fog-horn. Lat., 40 deg., 23 min., 61 sec.; long., 73 deg., 51 min., 53 sec.

C. M., Albany.—Can you give me the name and address of some one who can perform the spaying operation, or one that can explain it to me? Ans. In business of last week you will find the operation fully described.

DORRIS, Greenville, Pa.—In the 1,000 ball match, where Bogardus gives Kleinman 200 balls in 1,000, does Kleinman have 1,000 shots before the 200? Ans. Kleinman shot at but 800 balls, 200 being given him as broken.

A. F. H.—Would you have any hesitation in breeding to a dog that had the mange? It strikes me that mange is not a hereditary disease but subject to all dogs when overfed, etc. Ans. No, only as far as risk of contagion was concerned.

W. B., Wappingers Falls.—Will you please give me the address of Ira E. Paine? Ans. A letter addressed to the care of this office would probably reach Mr. Paine. With regard to your second query we have no opinion to express on the subject.

H. R., Philadelphia.—As the symptoms you describe indicate no particular disease, it is difficult to prescribe for your dog. We would suggest a tablespoonful of cod liver oil, with two drops of wine of iron each day, which will probably restore her appetite.

C. P. S.—The Partello and Burnside scores at 500 yds. were made, according to letter of Mr. Partello, off-hand, at Creedmoor target, with rifles under 10 lbs. weight, and not less than 3 lbs. trigger pull. The riflemen here are straining their faith terribly over these scores.

D. P., Baltimore.—1. Does a Gorton setter necessarily have a cross on his breast? 2. Is the Dittmar powder any better than common powder? 3. No, better without it. 2. Certain advantages are claimed for it which again may be counterbalanced by advantages possessed by the other.

J., Baltimore.—1. My dog has a number of lumps on the end of his nose varying in size from a large pea to a pin head. They are red in color and "shining." Please suggest a remedy. 2. Will a bitch continue to come in heat after she has ceased to breed? 3. Yes. 1. Burn them off with caustic. 2. Yes, very frequently.

A. H. R., Red Wing, Minn.—Should a chip broken out of the neck of a glass ball in size be counted as a broken ball, providing the balance of the ball remain intact? Ans. It has been the custom to allow a broken ball where a shot mark is plainly to be seen, but we think the plan a bad one. A "hit" pigeon is very often a "lost" bird.

C. D. H., Columbus, O.—1. My dog's eyes run incessantly and he gets nothing of any account. 2. Is there any difference in the quality of guns made by Webster & Son, D. Webster & Co. and W. Webster? Ans. 1. Your description of symptoms is too feeble. 2. We believe they represent different grades, but the agents can inform you more definitely.

S. E. L., Pottsdam, Pa.—Where is the great dog Bismark? I have a puppy, 8 mos. old, said to be bred by him, that raves. How can I prevent it? Ans. As Bismark was smothered to death in an express car some years ago your puppy can scarcely be by him. You will have to describe your dog's falling in some other terms, as we don't know what you mean by raves. See our advertising columns for puppies for sale.

W. H. B., Boston.—Will you kindly inform me what is the best book on training dogs? Ans. We reply to this question almost every week. We answered it last week, recommending "Stonehenge," an English work. We may very properly add that the most concise and common-sense, practical instructions contained in any American work may be found in "Hallcock's Sportsman's Gazetteer."

C. F. J., Boston.—J. G. Wheeler, Wilton House, West Cove, Isle of Wight, England, and C. Wilson, 151 Leadenhall Street, London, E. C., England, will send you photos of English yachts upon receipt of price. They cost 2s. apiece, also x7t, and 4s. 6d. for size 15x12. For lithographs and chromos write to the latter firm. They will select for you if you indicate what class of yachts you prefer. Send money by O. R. For American yachts go to Black & Co., 333 Washington Street, Boston.

W. D., Jersey City.—1. Could a person (with the aid of some good book) train a dog if he had never trained one before? 2. If so what book would you recommend? 3. Where could the said book be bought, and at what price? 4. Are 20s and 17s good patterns for a muzzle-loading gun, weight 35 pounds 12 bore, 3 yrs. Dupont's smoking powder, 1/4 oz. No. 6 shot, at 30 inch circle, 40 yards. Ans. 1. Easily. 2. See reply to another inquirer. 3. We can furnish it; price \$5 postage paid. 4. Very good.

WHEELLOCK RIDER, Rochester, N. Y.—1. Please inform me where I can obtain "A Catalogue of the Birds of St. Vincent," and "Birds of Dominica," 2. Also "Journal of the Cincinnati Natural History Society," and "Papers on Entomology," by J. A. Linnaeus. Ans. 1. Address G. N. Lawrence, 45 East Twenty-first Street. 2. "Journal of the Cincinnati Natural History Society" can be obtained from J. W. Hall, Jr., 108 Broadway, Cincinnati, Ohio, and "Papers on Entomology" from J. A. Linnaeus, N. Y. State Cabinet of Natural History, Albany, New York.

G. P. W., Fairport, N. Y.—You will find general description of sharpie in our editorial this week. Further particulars in correspondence, etc., about to be published. For information on boat building, see thirteen papers published in Vols. IX. and X. of this journal. Can send them for \$1.50. No American work on boats and yachts published. Best English work for you is "Kemp's Manual." Can send it upon receipt of \$2. If you cannot get cedar, white pine is best; next, yellow pine, oak or other hard wood for keel, keelson, stem, stern-post, frames, etc., hackmatack or iron for knees, yellow pine for beams, spruce for spars.

WING SHOT, Marysville, Pa.—1. My dog has trouble in discharging his urine. Can you tell me a method of cure? 2. Does Capt. Bogardus use No. 6 shot for pigeons at 50 yards, or what No. does he use? 3. In shooting pigeons from five traps is there a pigeon in each trap, and does the gunner know which trap the bird is coming from? 4. Ans. 1. Give your dog every night and morning a ball composed as follows: Nitro 6 grains, digitals 1/4 grain, ginger 4 grains, with linseed meal and water enough to mix. 2. He uses No. 8, except on certain occasions when both barrels are used, when he might use a size larger for his second. 3. There is, but the shooter is ignorant as to which trap will be pulled.

H. C. M., Exeter, N. H.—An imported Irish setter bitch is accidentally lined with white hair. Pups are of course half white. The next time she is in heat, lined with white hair, double, an all Irish setter dog, consequently one white pup, rest pure red. Is it the rule or an exceptional case for a pup to take back in this way, provided she has visited none but the two dogs named? Ans. In the *English Line Stock Journal* there was recently printed a list of well authenticated cases similar to the one you name. We do not believe by any means that it would occur in each instance, and probably the white puppy would resemble the white hound more in color than anything else. It would be interesting to keep this puppy and see what it looked like at maturity.

CONVUS, Halifax, N. S.—Is there any very light single breech-loading shot-gun, suitable for a marksman to carry about without attracting attention when going through the streets of a town, manufactured in the U. S. in England there is a weapon of the kind, capable of killing small birds at a distance of twenty-five yards, or even more, made in the form of a walking cane and painted to represent one; a very handy thing, price 2 guineas. If no gun of the kind is made on this continent I think it might repay the trouble and expense of manufacture. Ans. There is such a cane-gun to blow pellets. Our naturalists use them. Don't shot is also used in shooting specimens with guns of very small caliber. Both can be bought in New York.

JACK CORKLEY, New York.—Slow down to twenty revolutions, please. We mentioned *Vision*, not *Vindicta*, as having an approximate center ring. *Vision's* fiasco in her attempt to sail a match with *Gracie* at sea should convince you of the correctness of our remarks. If you believe a 75-ft. boom an easier stick to handle than a 60-ft. you are running counter to generally accepted laws of dynamics. If you imagine weights stowed as far forward as possible a benefit to ease and dryness, you are out of step with theory and practice. If you prefer to snap a bowsprit off short to reefing it in a sea, you will no doubt be welcome aboard the *Vision* if you will agree to foot her bills. But if you do not accept the above you must own to the cutter rig in spite of your imaginary preference for the sloop. We do not think your remarks at all biased, but simply that you do not realize the necessity of an easy form and handy rig for a sea-going yacht, which we most decidedly do.

THE MOUNTAIN DWELLERS OF NORTH CAROLINA.—The Warm Springs are situated in Madison County, N. C., in the western section of the State, and are surrounded by various spurs of the mountains, known in the immediate section as the Warm Spring Mountains. On every side from the springs rise the various spurs of the mountains and beautiful peaks, on either side by deep ravines, from which in early morning large squadrons of clouds float off to the adjoining peaks and gradually vanish in the infinite beyond.

The springs are themselves a centre of trade for the mountaineers of the surrounding country, where they come to exchange their produce in the way of corn meal, corn, the corn and shelled, raw hides, skins of sheep, bear, and deer, together with chickens, squirrels, pheasants, and other game for the luxuries of coffee, sugar, salt, calico, cloth, powder and shot, and other things that they cannot themselves obtain at home. The stores here (two) deal only for trade or cash payments, making a discount of 12 to 15 per cent. for cash. The parties dealing here come from ten to twenty miles, or more, and make their trades only after a good deal of cautious bargaining, but all seems satisfactory in the end. Chickens, and tender young chickens, at that, sell from 5 to 10 cents apiece; eggs, warranted sound, bring from 8 to 12 cents a dozen, butter, with a good fair complexion, from 10 to 15 cents a pound; pheasants nominally 10 cents apiece, but raised to 25 cents by the aggressiveness of the bidders' appetites; squirrels are dropped from the lofty trees at 5 cents a piece, and chestnuts, or "children's fruit" (as some people call them, are dealt out at from 4 to 5 cents a quart. Everything else here is in proportion, but the parties bringing their produce in are much more unique than the prices charged for them. They are truly a study. They generally come in pairs, threes, fours or fives, and carry their goods on their shoulders, on horseback, in wagons drawn by horses, or, as is more usually the case, by that primitive and Scriptural vehicle, the ox team. There can often be seen here a single ox harnessed to a cart or wagon with regular horse harness and straw collar, or under saddle.

The women and men come together, each having their packages, which they trade separately. There is a peculiarity, too, about the mountain girls; they are not at all talkative, but come down to the plain facts of yes or no. They are more hairy than the men, and when your correspondent attempted to express sympathy for a couple of damsels that had trilled fifteen miles barefooted over the rocky roads to reach this place, a venerable mountaineer remarked: "These gals don't mind them rocks at all, but they make the men's pattern blinks, you bet." The "gals" here, as elsewhere, are fond of candy, but they only look at it with longing, and buy coffee. Of the men, "Old Uncle Joe," a regular in the mountains, and calling himself 88 years of age, walked here, a twelve-miles stretch, with two bushels of potatoes on his shoulder, and bargained for a pair of boots to him, he said: "When you 'tack a bar,' Joe says, 'you must go for him, and never let up till you have him. If you do,' he says, 'he's got you, or else your legs is better'n his!'"—*Baltimore Sun.*

EXTRA BIRD'S NESTS.—Some of the choicest delicacies of the Chinese kitchen are prepared from the so-called edible bird's nest, the nest of the Balanang, (*Collocalia nidifera*), and more than eight millions of these nests are annually imported to China, representing a value of about \$300,000. The nest, which is the size of one-quarter of a common hen's egg, consists of a gumlike, white or brownish, soft or less transparent mass, a salivary secretion of the bird itself, mixed with sea foam, and, when dissolved in hot soup, this mass imparts to the dish a peculiar flavor, which a refined Chinaman cannot withstand. What makes this article so expensive (one pound generally fetching from \$40 to \$50, or more than twice its weight in silver), is the danger connected with its production. The bird is found in Farther India and the islands of the Malay Archipelago, but its principal breeding-places are the high, perpendicular cliffs along the coasts of Java. Here it builds its nest in dark caverns, which it occupies in common with a species of huge bats, and the caverns are generally so situated that the danger of losing the entire brood strikes the rocks. The gatherers form a peculiar corporation. They are all natives, and none but he who was born into the corporation can be admitted as a member. They worship a goddess of their own—*Loro*—and inaugurate the harvest-time with trifling carousals and sacrifices. The Hollanders, who do not feel satisfied with taking the harvest in a few short times attempted to take possession of the field, but those Europeans who have entered the caverns have never come out. "Loro has taken them," say the natives.

POISONS AND THEIR ANTIDOTES.—The following list of poison-antidotes is now going the rounds of the press. It may be worth while to cut it out and preserve it:

Acids.—These cause great heat and sensation of burning pain from the mucus down to the stomach. Remedies—Magnesia, soda-

pearlash or soap dissolved in water. Then use the stomach pump or emetic.

Alkalies.—Best remedy is vinegar.

Ammonia.—Remedy, lemon juice or vinegar.

Alcohol.—First cleanse out the stomach by an emetic, then dash cold water on the head, and give ammonia (spirits of hartshorn.)

Arenic.—In the first place evacuate the stomach, then give the white of eggs, lime water or chalk and water, charcoal and the preparations of iron, particularly hydrate.

Lead. white lead and sugar of lead.—Remedies, alum, cathartic, such as castor oil and epsom salts especially.

Charcoal.—In poisons by carbonic acid gas, remove the patient to open air, dash cold water on the head and body and stimulate the nostrils and lungs by hartshorn, at the same time rubbing the chest briskly.

Corrosive Sublimata.—Give white of eggs, freshly mixed with water, or give wheat flour and water or soap and water freely.

Crocote.—White of eggs and the emetics. **Belladonna** (night henbane).—Give emetics and then give plenty of water and vinegar or lemonade.

Mushrooms (when poisonous).—Give emetics and then plenty of vinegar and water, with doses of ether if handy.

Nitrate of Silver (lunar caustic).—Give a strong solution of common salt and then emetics.

Snake Bites, etc.—Apply immediately strong hartshorn, and take it internally; also give sweet oil and stimulants freely; apply a ligature right above the part bitten and then apply a cupping glass.

Tartar emetics.—Give large doses of tea made of galls, Peruvian bark or white oak bark.

Verdigris.—Plenty of white of eggs and water.

White Vitrol.—Give the patient plenty of milk and water.

Opium.—First give a strong emetic of mustard and water, then strong coffee and acid drinks; dash cold water on the head.

Nux Vomica.—First emetics, then brandy. **Oxalic Acid** (frequently mistaken for epsom salts).—Remedies, chalk, magnesia, or soap and water and other soothing drinks.

Prussic Acid.—When there is time administer chlorine in the shape of soda or lime. Hot brandy and water, hartshorn and turpentine are also useful.

—It was a colored preacher who said to his flock last Christmas Day: "We have a collection to make this morning, and for the glory of Heaven, whichever of you stole John Jones' turkeys, don't put anything on the plate." One who was there, says, "Every blessed nigger in de church came down with the rocks."

—A man seldom finds out that the Bible is not true until he discovers that his course of life is condemned by it. After that the Bible becomes a book that will not bear the tests of the scientific method.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & Co. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Seinde Pottery made by the Bombay Art Society.

Recent examples of Glinori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

UNION SQUARE.

SOUP.—Recipes for cheap soup, distributed to the poor of Liverpool: Meat soup, 400 quarts—112 pounds shins of beef, 75 pounds split peas (steeped fourteen hours), 14 pounds ground black pepper, 1 pound celery seed, 12 pounds oatmeal; salt to taste. Cost, 2 pence a quart; sold at 1 penny a quart. Sago soup, 800 quarts—76 pounds rice, 44 pounds Sago flour, 44 pounds Scotch barley, 40 pounds flour, 40 pounds oatmeal, 28 pounds treacle, 14 pounds pimento, 14 pounds salt. Cost, 1 penny per quart; sold at 1 penny.

A PARADOX OF JUSTICE.—The Mayor of a Georgia town, so poor that it possesses no jail, had two prisoners put under a wagon box turned upside down on the ground and secured them by placing two cotton bales on top of the box.

But how could he have his prisoners in a box after thus allowing them double bail!

—The first news sent by telegraph was the nomination of James K. Polk for President, in 1844. It was telegraphed from Baltimore to Washington over the experimental line built from Baltimore to Washington, for which Congress appropriated \$40,000 on the application of Prof. Morse.

HORACE WATERS & SONS, manufacturers and dealers, 40 East Fourteenth Street, New York.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 33, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 33, extra long, and No. 44, model 1873. Send for a Circular and Price List.

FOREST AND STREAM

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.
Ten Cents a Copy.

NEW YORK THURSDAY, JANUARY 23, 1879

Volume '11—No. 25.
[No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun. A MEMORY OF TALLULAH.

A song in the distant dells,
A laugh in the ancient vales,
And dreamily sweet the moon of the land
As the southwest wind prevails.

A call from the great green hill,
The voice of one I know,
The low, long laugh of a fying shaft,
And the ringing of a bow!

Sharp and shrill and clear,
The cry of a wounded bird,
Thrilling the air till the sleepy soul
Of the wilderness is stirred!

And the bowman, glad of heart,
Goes on by the trailing flood,
And the warp and woof of waves and winds
Are woven through the wood.

BOWMAN.

For Forest and Stream and Rod and Gun.

Rambles in the Rocky Mountains.

BY J. H. BATTY.

"GOT any cartridges loaded?" "Yes." "All right; let's pull out for the mountain for sheep; the ponies are in a coule near camp. I saw them a few minutes ago. I'll catch 'em and you get our traps together."

Such was the salutation I received at daylight one morning when poking my head out from an A tent on the plains of Montana. As he finished speaking Chip started off on a trot and soon disappeared over a roll in the prairie. In a few minutes he returned, bringing our horse Breeze and a long-legged, stubborn-looking mule that had probably never worn a saddle. "What are you going to do with the mule?" I asked. "Make him pack me up the mountain; it's better than walking. My pony is lame, so I fastened on the first animal I could catch."

After considerable skrimishing the mule was finally saddled, tightly cinched, and mounted. Chip found his seat very uncomfortable for a few minutes, but finally the mule fell in behind Breeze as I led off up a coule to the mountains. Chip was a philosopher. He started life as a tinsmith in Pennsylvania, then became an expert at dentistry in St. Paul, Minnesota, where he afterward made considerable prowess as a taxidermist and collector. To have seen him in his greasy buckskin suit, fur hat and moccasins, with cartridge belt and rifle, one would think that he was a regular plainsman. He was a good horseman, a crack shot with the rifle, a quick trailer, a successful trapper, a good cook, and as crafty a skill hunter as ever tramped the woods.

We hunted together for nearly a year steadily, commencing by scouring the dry, treeless plains of Montana and the Provinces for scattering bands of antelope, thence west to the Rocky Mountains, where we climbed for days over their ragged sides when shooting big-horn sheep. September found us on the rolling prairies of the Province of Saskatchewan among the buffalo, and the following April we separated at a hunter's cabin near Long Prairie, Minnesota. We had deserted our old deer camp on the edge of the heavy pine timber, having been completely starved out after a full winter's hunt.

As we followed the course of the coule about three miles to the foot of the mountains, a few Western buck, sandpipers and gophers were killed on the way. Entering a pass, we followed it for about a mile, and were about to separate to hunt opposite sides of a mountain, when a band of about sixty big-horns was sighted. Chip had never killed a mountain sheep, and I passed my heavy Sharps rifle over to him as he skulked away to gain cover. Our riding animals were soon led under cover of a bluff, unsaddled and picketed. A few minutes later the writer was running up a ravine to head the band for some running shots, when the sheep stampeded at the first fire. Peeping over a knoll to locate the band, I was surprised to see the sheep loping away in an opposite direction. Bang! bang! bang! went Chip's rifle, and down went a big ram for only a moment, then he jumped up and went over a hill with the band, with a broken leg dangling after him. I was at a loss to know what had frightened the sheep, for Chip surely ought to have bagged one in such cover, and it was strange for him to shoot before I was "fixed," as we always made it a point to get in two guns at large game, if possible. Chancing to look at the foot of a hill opposite where the sheep were sighted, the mystery was explained. There was Breeze out in plain view watching Chip, and the mule tagging him. The horse had pulled his picket-pin, and the

mule was bound to pull his and follow, if his neck paid the penalty.

Chip followed the band, but soon joined me, and the animals were led to the saddles, and in five minutes we were mounted and riding further up the pass. We finally entered a narrow cut, coming out on a table-land surrounded with rolling grassy hills, the natural pasture of sheep, antelope and elk. We descended into a bottom to get the best feed, and picketed our animals. In addition to the picket pins we took two half hitchers with the lariats around two loose rocks; and to make matters more secure, I hobbled old Breeze Indian fashion.

We then started out to explore and hunt in earnest. Chip went over a mountain to the east and I went to the west. I tramped for over an hour and my game footed up two brown rattlesnakes and a porcupine. The hedgehog I tied to my belt when dressed, and packed it a long distance; but it became painfully necessary to discard it, as the quills were but half grown and perforated my thick buckskin breeches, and several of its smaller quills entered my flesh, one of the points of which I carried for nearly a year before it worked out. When free from the troublesome burden, the hunt was continued, and a small band of big-horns was sighted from the top of a bald mountain. They were on the opposite side of a ravine, and there was no cover nearer than the bottom. Some were feeding and others were watching me.

After taking in the surroundings, I commenced working my way down the hill in a lying position, hitching along with elbows and toes, making about two hundred yards, when a lot of loose boulders furnished the desired cover. The band was then about four hundred yards distant, and the moment I disappeared from view the sheep fell into single file and were soon lost from sight among the loose rocks and dwarf pines. Knowing it would be folly to follow them when they were watching the back trail, the course of the valley was taken, which terminated in a rocky gulch. A short cut over the rocks brought me into another ravine, which, when followed, would interrupt the course of the sheep. A walk of a mile brought me into another large pasture, where cover was taken and a look-out kept. Every hillside and bottom was scrutinized, and no game sighted. Only those who have hunted the big-horns can comprehend how difficult they are to find. When lying among the rocks they are easily overlooked, and are generally seen when moving or grazing in the bottoms.

While watching the capers of a gray fox that was hunting in a bottom, I observed a movement among some rocks. It was followed by other moving objects which were at once recognized as sheep. Approaching under cover of bushes and rocks, I succeeded in getting within fifty yards of the nearest. Peeping over a boulder about eighty big horses were observed within one hundred yards. A stiff breeze was blowing, and as the band was to windward and there was no danger of the sheep "winding" me, I sat quietly watching them for nearly five minutes. The band was composed mostly of three and four-year-old rams. Some were grazing, others were lying on rocks and in groups on the ground. They were keeping a sharp look-out; occasionally one would get up, walk to an elevated spot and look carefully around. Thinking further delay in shooting would be dangerous to success, I searched the flock for an old ram for the first shot, which would be a sure one. There were several large fellows on the further side of the band, but they were in such bad positions for shooting that a doe and young ram were selected that were near and in range, so there was a possibility of getting them both the first shot. As I pulled four cartridges from my belt and cocked my Sharps rifle I could not help but think of the repeating Winchester at camp.

Drawing a bead on the shoulder of the doe, I pressed the trigger, and at the report two sheep dropped. The ram, however, regained his feet and went off with a fore-leg broken. In ten seconds after the shot the whole band was in a mass, jostling and crowding in eager haste to get up the steep mountain side. Three more shots were sent into the surging band in rapid succession, and two more rams were left behind, apparently in their death struggles.

Laying the rifle across the doe, I climbed up the steep rocks to roll down the rams. When within a few feet of one of them, he jumped up and ran into some thick dwarf pines, with the writer in hot pursuit. He made better time over the sharp rocks than I did with the moccasins, and he was soon out of sight. Following the bloody trail, he was soon seen lying down behind a bush. Creeping within about five feet of the bush, I pounced upon him, seizing him by a fore-leg and one horn. He could neither buck nor bite, but he succeeded in kicking me off from him in about three seconds. As he jumped up I caught his fore leg and tipped him, placing one knee on his neck and the other on his hind legs. While trying to untie a lariat from around my waist to tie his legs, he bounced from under my knee and gave me such a kick in the throat that I was glad to let him go until my hunting knife was regained. Taking the back trail to the dead doe the hunting-knife was soon obtained, but on reaching the battle-ground the enemy had disappeared and the trail was not plain enough to be followed in the thick cover.

In the meantime the other ram had made himself scarce, so I hurriedly dressed the doe and packed it to the bottom, where it could be more easily reached with a horse, and started out in search of Chip.

I found him where the animals were picketed, and we were soon on the way to get the dead doe. After some uncom-

monly rough traveling—the doe was tied behind my saddle—we picked our way through a rocky gulch, over loose stones, to the prairie. During the ride Chip had kept his mule out of smelling distance from the sheep, but in an unguarded moment he rode up to me, and the hybrid got a smell of blood and saw the sheep's head flop. That was more than mule flesh could stand. The mule came down stiff-legged and Chip bounced up. My horse was trembling with fear, and on seeing the mule buck he jumped down a cut bank, and I had scarcely slid off the saddle when it turned, and the horrible sheep slipped down under his belly. Fortunately I had seized the lariat when unhorsed, which brought Breeze up in his wild career, and when he had bucked and snorted a few times he came to me for protection. In the meantime, Chip had wallowed his mule into submission, and after blind-folding both animals, saddles were righted, and we reached camp without further adventure.

For Forest and Stream and Rod and Gun. A DEER HUNT IN MARYLAND.

"Away, and away, we'll bound o'er the mountains,
Over the mountain, over the mountain,
Over the valley, the hills and the fountains,
Away to the chase, away, away."

"So there the wild deer, trembling, panting,
Trembling, panting, trembling, panting;
Fearfully panting, one moment standing,
Then off he speeds, away! away!"

I WAS induced to join two or three acquaintances, early in November, in a hunting excursion; two of them and myself taking the same route, and the fourth, from another State, to meet us by appointment where we left the railroad.

We were all provided with repeating rifles, as well as our driver, for neither the rough locality chosen and the absence of snow admitted of successful still hunting; hence a resort to our dogs to start the game. As I do not remember to have seen an account recently, if at any time, in the *FOREST AND STREAM* of a fighting buck, I propose to give you a brief sketch of one in our hunt. We killed six deer altogether, averaging about one a day—though one day we killed two—and all but one, I believe, were killed on the run or swimming in the river near where our stands usually were; nor were one-half killed that were started, as some took water at other points and were lost—at least to us. Two of the six were very large fat, and four or five prong bucks.

Two of our party—bachelors—for the fun of the thing, as they stated, preferred to camp in an old unoccupied shanty near the hunting-ground and do their own chores—as, I think, the Yankees term it—i. e., chop wood, cook their meat, wash dishes, etc. The other two, not appreciating this kind of fun so highly, had their quarters with an old hunting companion and friend of the writer.

After killing four deer, our dogs got up the first of the large bucks, and after a chase of a mile or two compelled him to take to water, but at a point where we had no watcher. The driver knowing this followed the chase, and this he could do but little behind the dogs, for he stands six feet three or four inches in his stockings, and is as agile and athletic as a Comanche Indian. When he reached the river—as I learned, for I did not witness this part of the affair—the deer had crossed over to another mountain; but through the indomitable energy of the driver, who waded the river, icy cold and waist deep, followed by the dogs, the buck was again started, and when seen by the driver he was swimming at his leisure, having whipped our three dogs and also a neighboring cur, which had joined in the sport on his own account. A shot or two at long range from the driver soon started the chase again, however, and turned his course down stream toward our stands, or to me, rather, on the river bank; as only in deep water could the buck whip his assailants; but before reaching my stand (at which, and near by, I have killed about a score of deer) he passed within range of a stand a few hundred yards above me, and received a running shot, breaking a hind leg, as my friend thought, which turned him at right angles from the river and open ground, into the forest again; but in making another turn for the river below me, the fleetest dog overhauled him—then another, and another joined in the fight. For several hundred yards, with a broken hind leg, he fought off the dogs, tossing them about seemingly as a terrier would so many rats, and still making for the water, until I reached a point between them and the river, when escape was impossible, having a dozen shots in reserve, and all could be used in about as many seconds.

Fearing he might yet cripple or kill a dog, for it was a life and death struggle, and no coward in the lot, I raised my rifle, but forbore to fire for a moment or two, as I might accidentally hit a dog in the melleé, as none were still a second. Just then the dogs got the advantage, and the buck was thrown; when my friend ran up from his stand and shot him in the head. It was his first deer; and seeing the broken leg in the fight, I supposed it was by his previous shot, and that he was intended to give the *coup de grace*. In my many hunting excursions, fights have occasionally occurred with the dogs and wounded bucks; and I have known the dogs to be badly wounded; and in two cases the dogs killed, with the

Fish Culture.

THE AMERICAN FISHCULTURISTS' ASSOCIATION.—A meeting of the officers and executive committee of the American Fish-culturists' Association was held on Jan. 18 at the office of Robert B. Roosevelt, Esq. It was decided that the eighth annual meeting should be held on Wednesday and Thursday, the 25th and 26th of February, at eleven o'clock, in the director's room of the Fulton Market Fishmonger's Association.

MARYLAND.—*Elkton, Jan. 14.*—Our country is largely engaged in shad and herring fishing. The Susquehanna, Elk, North-east, Bohemia and Sassafras Rivers pass through our country. Our State Fish Commissioners have been propagating shad and herring in our waters for three years next spring. The large increase of small male shad last spring (two years after they commenced hatching the spawn of shad) I think proves that they have been successful. Our fishermen think that the shad matures in one year. A. W. M.

INTERNATIONAL FISHERY EXHIBITION.—Following is the prospectus of the International Fishery Exposition to be held in Berlin, April, 1890:

CLASS I.—AQUATIC ANIMALS.

1. Alive or stuffed, preserved in alcohol or represented in pictures, casts, etc.

2. Prepared or dried, salted, smoked, pulverized, preserved in tins, etc.; the various stages of preparation to be shown.

In particular the following are desired: A. Sponges in their natural state and prepared for use, shown according to their various species and localities. B. Corals in their natural state and prepared for use. C. Mollusca; oysters, samples of shells from the most famous localities, anatomy of the oyster in enlarged proportions; shells of all sorts, pearl shells, mother of pearl, manufactured pearls, sorted according to their value; imitation of pearl, river pearl shells; mother of pearl, from the same. D. Starfish, stella marina, sea urchins. E. Worms. F. Insects (chrysalides of insects, as destroyers of spawn or as food for fish). G. Crustacea; various species of crawfish. H. Fish of all kinds and of all zones. I. Amphibious animals, tortoises, turtles, terrapins, etc.; tortoise shells in different stages of preparation up to the comb or bone furniture (for companion's sake, also counterfeited tortoise shell); salamanders, frogs (spawn of frogs), snakes (skins of snakes). K. Aquatic birds (all sorts of birds detoured to fishing, sea-gulls, herons, cormorants, etc.) L. Mammalia (seals, whales) and manufactured articles from the same; mammalia detrimental to fresh water fish.

3. All kinds of products manufactured from Aquatic animals.

CLASS II.—FISHING.

A. Fishing gear of every kind and from every country, or models thereof. B. Fishing craft of all nations, in models and representations. C. Fishing tackle and netting in different stages of preparation. D. Machinery and implements used for working up the raw material.

CLASS III.—PISCICULTURE.

A. Hatching apparatus in operation. All kinds of appliances and implements for the artificial breeding of fish, crabs and shells. Boxes for conveyance of fry, etc. B. Models or drawings of well-known breeding institutions. C. Models or drawings of appliances for protecting or perfecting aquatic animals (salmon ladders, etc.). D. Aquaria of all sorts. E. Illustrations of the development of some of the most important species, such as oysters, salmon, herring, crawfish, etc., shown in their various periods of growth.

CLASS IV.

Appliances in use for keeping and conveying freshly caught aquatic animals. Also working models of such appliances. Conveyance of freshly caught fish by railway.

CLASS V.

Models and other representations of appliances in use for the preparation and preservation, by drying, salting, smoking, etc., of the produce of fisheries for commercial purposes (smoking-houses, etc.) and for household purposes (fish-kettles, fish-disches, etc.).

CLASS VI.

Models of fishermen's dwellings and costumes; also of fishing implements not included in the foregoing classes.

CLASS VII.—SCIENTIFIC INVESTIGATIONS REGARDING THE STOCK OF FISH.

Physico-chemical researches; investigation of the bottom of the sea and lakes, shown by samples; aquatic plants in relation to fishing, herbaria, etc.; researches into aquatic fauna (animals of the suburbs) and researches preserved in alcohol or prepared, etc.; apparatus and implements used in researches.

CLASS VIII.—HISTORY OF FISHING.

Implementations of fishing, original or in reproductions, from the oldest time downward; also models, pictures, seals, emblems of ancient fishermen's guilds, etc.

CLASS IX.

Literature, statistics of fishery, maps showing the geographical distribution of fish.

Natural History.

DEATH FROM SKUNK BITE.

THE recent notes on this subject in the columns of *Forest and Stream* have excited a widespread interest among its readers, and we have been favored with several communications calling attention to Col. R. I. Dodge's mention of the fatal effect of the skunk's bite in his late work, "The Plains of the Great West." In 1877, when the above-mentioned work appeared, we noticed it at some length and referred particularly to this point. Unfortunately for the value of Col. Dodge's contribution to the literature of this very interesting subject, he gives no facts in support of the opinions which he there advances. Indeed, he expressly says, "I have never had the opportunity nor the technical knowledge necessary for a careful investigation" (of the subject), and it appears that he only reports the general opinion of hunters, plainsmen, etc., an opinion which had been brought to the knowledge of the scientific public three years before by Mr. M. C. Hovey (*Amer. Jour. Sci. and Art*, 3d ser., vol. vii, pp. 477-483, May, 1874).

Mr. Hovey's article was backed by a number of definite

facts, and the examples cited by him show the terrible effects which so often follow the bite of the skunk. In the paper just referred to the author quotes Dr. M. M. Spearer, Surgeon Sixth U. S. Cavalry, and this gentleman's opinion differs wholly from the conclusions reached by Dr. Janeway, to be stated further on. Dr. Spearer says, "I regard this virus as being as peculiar to the skunk as the venom of the rattlesnake is to that creature; and not an occasional outbreak of the disease, as the *astrus venereus* of the wolf or the *rabies canina*." A similar opinion is expressed by Col. Dodge in his book, where he says, "I am convinced that the terrible disease (hydrophobia) is the natural result to man of the bite of the skunk—in the territory designated; and that while inflicting it on the person bitten, it does not follow that the skunk is himself afflicted with the malady."

Dr. John T. Janeway's article in the *New York Medical Record* (vol. x., pp. 177-180, Mar. 13, 1875) deals with this question in a very conscientious and scientific spirit, and gives the fullest and most detailed reasons for the conclusions which he arrives at. He cites cases where death followed the bites of skunk, wolf and dog, gives the symptoms, treatment and result in each, and finally concludes that death from skunk bite is caused by *rabies* which does not differ essentially from *rabies canina*. Dr. Janeway also differs from Mr. Hovey in believing that the bite of the skunk is not always fatal, and cites one case in support of it. In this instance two herders were bitten, one of whom was treated by Dr. J., the wound being freely cauterized with nitrate of silver, and strichnine administered in 1-16th grain doses every three hours. Subsequently the strychnine was gradually increased; to one-half grain on the eighteenth day, and it was not until the twenty-fourth day that any symptoms of its toxic effects showed themselves. The man thus treated recovered, while his companion, who was not under the Doctor's care, was reported to have died ten days after being bitten. Dr. Janeway regards this form of hydrophobia as "evidently epidemic, no cases having been reported previous to 1870 in this region" (Kansas). In further confirmation of his belief that the bite is not necessarily fatal, the writer of the article above cited mentions eight cases of persons bitten (six hunters and two soldiers) who recovered, and states that two dogs in his possession have been frequently bitten by skunks and have never shown any symptoms of *rabies*.

This subject, as we have remarked before, is one that deserves investigation, and medical men who are stationed on the plains will no doubt see that no opportunities for observing the disease are lost. We have never heard of a death from the bite of a skunk anywhere this side of the Missouri River, and we should be glad to receive and print any information bearing on the question of the geographical limit, if such there be, of the disease.

We have been led to write thus fully on this subject, not only on account of its importance, but also because none of those correspondents who have written us on the subject seemed familiar with the articles from which we have quoted. We shall hope at some future time to receive some additional reports, which we will gladly present to our readers.

ARE WOODCOCK NOCTURNAL?

HOLLAND PATENT, N. Y., Dec. 24, 1878.

EDITOR *FOREST AND STREAM*:

My three companions and myself were spending our summer vacation at one of the many miniature lakes which so materially add to the attractions of the northern wilds of the Empire State. About sunset one evening we were seated outside our shanty, enjoying a quiet smoke, when a sharp "tweet, tweet, tweet" issued from the bushes a few rods away, and was taken up and repeated in the shrubbery all about us.

"I say, Bill," queried the professor, one of our number, "to whom or what are we indebted for this gratuitous serenade?"

"Ha! ha! ha!" roared our guide, the person addressed. "Ain't you been in the woods long enough to know a woodcock when you hear one?"

"A woodcock!" exclaimed the professor. "You don't mean to tell me those are woodcock making all this racket!"

"Well, that's about what it amounts to," said Bill. "If you wait awhile longer the air will be full of them."

This remark aroused the hunter's instinct in my nature, and I lost no time in getting out my "Parker." I stationed myself in the centre of the little clearing in which our shanty was located, and prepared myself to improve the first opportunity for a wing shot; for although the persistent "tweet, tweet, tweet" apparently issued from every bush, it was too dark to discern any small object on the ground. Suddenly, almost from under my feet, a bird rose perpendicularly in the air to the height of perhaps two hundred feet and sailed off in the darkness in a motion could be followed only by its note, in which there seemed to be an entire change when the bird was on the wing. The sound, however, gradually came nearer, and ere I had time to raise my gun the bird dropped into the identical bush from which it started and resumed its monotonous cry. The next bird that arose I was somewhat better prepared for, and as the air soon became literally alive with them, I succeeded in a short time in bagging enough to insure me a hearty breakfast of woodcock on toast for the next morning.

While sitting around the camp-fire that evening the conversation naturally turned on the habits of the woodcock. The majority of our party knew this bird was in the habit of seeking its food at night, but as we had often hunted them successfully in the daytime and never succeeded in catching one asleep, the question arose as to where they slept and whether or not they indulged in this luxury. The question having arisen again recently, Martin's *Natural History* was referred to. This work, in describing the woodcock (*Scolopax rusticola*), says: "Every evening after sunset these birds sally forth to seek their food, consisting of larvae, slugs and aquatic worms, which they find in marshy meadows. Their cry is zig-zig-wauk."

The American woodcock (*Scolopax minor*), he says, "differs from the European species in the temperature of the climate they select for their residence. The sensibility of their beaks, as in the snipe, is sufficiently acute to enable them to collect their food by sense of touch. The snipe (*Scolopax gallinago*), when flying, mounts high in air and descends as rapidly as it rose." Now while this marks designates certain peculiarities in this class of birds, the author leaves us fully as much in the dark as before in regard to the matter under discussion, viz: Whether woodcock are, strictly speaking, night birds. Hoping to receive further information in regard to their habits we decided to lay the matter before the *FOREST AND STREAM*, for whose opinions we have the utmost respect.

Yours, etc.,

PONTIAC.

Woodcock are generally believed to be twilight rather than strictly nocturnal birds, though at the mating season their sharp note is often heard throughout the night, especially during full moon. We have never known of their "singing" except in early spring, when, of course, no one would shoot them. We should be glad to hear of further observations on this point.

VALUABLE STUFFED SPECIMENS.—We have seen some very fine specimens of stuffed birds and animals, preserved by Mr. A. Yeomans, of No. 70 Bowers, this city. The truthfulness of the poses and the life-like effect of the groups are very superior. In an artistic sense the works are of unusual excellence. Students of natural history, artists and seekers of these articles of household decoration should not miss inspecting Mr. Yeomans' work.

ON THE GOLDEN-EYES OR GARROTS IN NOVA SCOTIA.—We have received from the author, Mr. J. Bernard Gilpin, A. M., M. D., M. R. C. S., a very interesting paper with the above title. Mr. Gilpin's essay is devoted principally to the discussion of the differences between the common (*B. clangula*) and Barrow's golden-eye (*B. islandicus*), though he goes into the history of *B. albeola* quite extensively. His examinations of the two first-mentioned species have brought to light very interesting anatomical differences between the males of each, which are admirably illustrated by a plate showing the heads and windpipes of both birds. The paper is a most interesting one, and we only regret that the proofs should have been so carelessly read, as seems to have been the case. The number of typographical errors is inexcusably great.

THE ZOOLOGIST.—We are glad to be able to call to our readers' attention, and to recommend, the *Zoologist*, a very interesting monthly magazine of Natural History. It is by Mr. J. E. Harting, who is well known to the scientific public by his contributions to our knowledge of the Natural History of Great Britain.

The *Zoologist* numbers among its contributors many of the leading naturalists of England, and all who are interested in the study of Nature should have it. Its price is so low as to bring it within the reach of every student, the annual subscription, postage prepaid, being only thirteen shillings. In the first numbers of the present year will be found a continuation of Captain Fielden's interesting "Arctic Notes," in which a very complete outline of the observations of the British Polar Expedition will be given, and many other articles of very great importance. Persons desiring to subscribe to this excellent magazine should send a P. O. order for thirteen shillings to Mr. T. P. Newnan, 56 Hatton Garden, E. C., London; England.

ANOTHER MIGRATORY QUAIL.—We have received from Mr. A. F. Clapp, field editor of the *Sunbury (Pa.) American* a specimen of this bird, which was killed in that vicinity some weeks since, and a notice of which appeared at that time in the *American*. The specimen had been kept so long without apparently any attempt having been made to preserve it, that dissection failed to reveal its sex. From the plumage, however, we take it to be a young male.

The apparent success which has, up to this time, crowned the efforts to naturalize this bird to North America is most encouraging.

HOW THEY VIKED THEM.—A correspondent, G. H. W. writes us from Titusville, Pa., about the rattles of the rattlesnake, saying:

I have seen and helped kill a good many, all of which carry their rattles narrow side down and not the broad side.

PALE EGGS.—*Sunbury, Union Co., N. J., Jan. 6.*—*Editor Forest and Stream:* On the 10th of May, 1878, I discovered the nest of a robin built flat on the top of a beam under a bridge. It was constructed somewhat after the manner of a bridge-pewee's nest. It contained two eggs. During the same month I found a blue-bird's nest containing six pure white eggs. It is not this rather strange, as the eggs of this bird are blue? These eggs were much larger than those which a blue-bird ordinarily lays. Soon after the discovery of this nest I found a crow's nest which contained five eggs, four of which were colored as they usually are, but the other was pure buff.

GEO. LAWRENCE NICHOLAS.

A POINT WELL TAKEN.—*Rutland, Vt., Jan. 4.*—*Mr. Editor:* I call you to order. In two recent numbers of *FOREST AND STREAM* you have spoken of the migratory quail as the *Messina* quail. Let us try to call these strangers by their right names. There is no reason in the world why they should be called *Messina* quail, except that the birds imported into this country by myself, Mr. Hapgood and others, were purchased in Sicily and shipped from the port of Messina. There is an American bird known as the *Messina* quail; it is found in Texas, Arizona and New Mexico, rarely, however, north of the 35th parallel. They are totally unlike the European birds, and should not be confounded with them. We have confusion of names enough now. The Wilson snipe is

SAN FRANCISCO YACHT CLUB.—We learn with pleasure that the prospects of this club are exceedingly bright for the coming season. The new club-house at Sausalito has served to unite the bonds of friendship and rivalry closer than before, and the influence of the club is being felt in the community. The books show 110 members and a fine fleet of yachts. Eight schooners—the *Cousins*, 71 ft. long; *Minnie*, 68 ft.; *Aurora*, 69 ft.; *Freda*, 50 ft.; *Consuelo*, 50 ft.; *Ona*; *Pearl*, 52 ft.; *Virgin*, 52 ft.; *Lola*, 47 ft. 6 in. Five sloops—*Starling* 40 ft.; *Emerald*, 45 ft.; *General Morgan*, 40 ft.; *Sappho*, 40 ft.; *Ariad*, 31 ft. 6 in.; and *Mist*. Two yawls—*Frodo* and *Enid*, and three steamers. For the coming season, we believe, a number of the sloops will change to the yawl rig, which has given so much satisfaction in the West. The club-book is an example of completeness, and can be followed to advantage in its make-up by many organizations of the East. Besides giving the usual matter relating to constitution, by-laws, sailing regulations, etc., the book furnishes the addresses of the officers, the prevailing winds in San Francisco Bay, their force and velocity for a number of years back, the tides and currents, distances, and a chart of the bay and regatta course. Mr. Charles G. Yale, the secretary of the club, deserves the thanks of the members for his efforts in compiling a book which is a credit to the club.

LOYD'S YACHT REGISTER.—The third supplement has just been issued to "Lloyd's Yacht Register." It includes a long list of additional yachts, their dimensions, builders, owners, etc., and the classification accorded them. "Lloyd's Yacht Register" should receive better support from American yachtsmen than accorded it. Its influence upon yacht construction can only be beneficial, while as a book of reference it is invaluable.

QUAKER CITY YACHT CLUB.—At the fourth annual meeting of the Quaker City Yacht Club, of Philadelphia, held Jan. 5, the following officers were elected for the year: Commodore, A. F. Bauer; Vice-Commodore, Paul Kozitz; Rear Commodore, Charles B. Magee; President, William Post; Secretary, Charles S. Salin; Treasurer, Robert Baird; Assistant Secretary, J. I. Baughman; Measurer, John B. Vandervelde; Regatta Committee, L. Coleman, R. P. Thompson, John McCormick; Trustees, Alex. Wood, John McCormick, J. H. Stark, L. Coleman; Membership Committee, A. F. Bancroft, Robert Baird and John F. Loew. The club possesses eight first-class sloops averaging 30 ft. long, the second class sloops averaging 30 ft., and the fourth class sloops averaging 23 ft. In addition are in prospect this season and a good programme of races is proposed. We congratulate the club upon the acquisition of true Corinthians for Commodore and Vice-Commodore. Their influence will be felt in the future of the Club.

SEAWANTAKA CLUB.—The seventh annual meeting of the Seawantaka Y. C., of Oyster Bay, was held at Delmonico's in this city, Jan. 5. The attendance was large and the treasurer's report exceedingly satisfactory, showing a surplus of \$1,250 cash on hand. The club has had many members and yachts added to its lists last year, and now ranks among the strongest and most progressive in the country. The following are the officers elected for 1879: Commodore, S. J. Colgate, schooner *Idler*; Vice-Commodore, O. E. Cromwell, schooner *Eddie*; Rear Commodore, Walter L. Suydam, sloop *Clynet*; Treasurer, W. B. Simonds; Secretary, Chas. L. Grundy; Measurer, Carey Smith; Chaplains—William Irving, D. D., and Geo. Vandewater, D. D.; Regatta Committee—Mr. Roosevelt, Schuyler, James H. Elliott, O. Wylle Betts, H. de F. Weeks and Louis P. Bayard. Law Committee—John A. Weeks, Gerard Beekman and James M. Varum. House Committee—William Foulke, Jr., Francis De Luze and Thomas S. Young, Jr. Resolutions of condolence were passed respecting the death of Mr. Fred. G. F. ster, an old and respected member. The flag officers' committee reported concerning the changes in the Revenue Laws to be asked at the hands of Congress and the Secretary of the Treasury. The draft of an application to this end was read and approved by the club. A circular letter will shortly be addressed to all the yacht clubs in the United States and their signatures to the petition solicited. As the committee has been to a great deal of pains in compiling the grievances of yachtsmen in the form to be presented, we trust that a prompt compliance with their circular will be tendered to the part of all, as they will be benefited by the modifications proposed. Extra meetings should be called if necessary, for the movement is one in the right direction and concerns owners of small craft in particular. The same committee was requested upon motion of Mr. R. B. Stuyvesant to incorporate a similar petition praying for relief from certain steamboat laws which bear heavily upon the owners of steam-yachts. This matter will now be taken up by the committee. The petition from the petition relating to sailing yachts. The club book of the Seawantaka has also been revised, and the changes to the constitution, etc., will be called up by Mr. Robt. Centre for action at the next regular meeting.

THE SHARPIE.

ROSLIN, L. I., Jan. 11, 1879.

EDITOR FOREST AND STREAM:

As there appears to be much interest excited concerning the sharpie, I think that perhaps a few lines, showing just what she is and how much she will cost, may be acceptable to some of your readers who have never seen, or who having seen, passed her by—if she happened to be anchored—with the average yachtsman's contempt for anything differing from his type of boat. The simplest form of sharpie is a sharp-bowed, flat-bottomed boat, built by nailing two planks, which form her sides, to a plumb stem at the one end, and to a single piece of hardwood plank at the other. The sides are sprung around a temporary midship section, which is to remain in place until her thwarts are in and bottom planking secured. The latter are simply nailed athwartship to the lower edge of the boards which form her sides. She should have some inches flare amidship, which flare should be carried aft to the stern, and her bottom should be sloped up aft from amidship, so that she will leave the water easily. She may be decked over to suit her owner's taste, and her sheer cut to suit his eye. She has no keel or skeg of any kind. Her rudder is made from a single plank of an elliptic shape, hung on an iron rudder-post which passes up through her stern. The rudder should be so hung that about one-third of its area is in front of, and two-thirds of it aft of the iron post or axle. Such a rudder should be 30 in. in height at stem, 20 in. in height amidship, and carry a graceful sheer her entire length. Beam amidship, 5 ft.; on deck, 4 ft. 3 in. at bottom. Width at stem to suit the eye. These figures are for a boat 20 ft. in length. Centreboard at least 7 ft. long by 8 ft. wide. No position fore and aft can be assigned the centreboard, as its place will

be governed by amount of sheer on the boat's bottom. Rig to be of the triangular or lee-of-mutton type, and consists of foremast and mainmast, derrick tapering, from full size at deck to 2½ in. diameter at top. Foremast should be stepped as near to stern as is possible. Mainmast 12 ft. aft of foremast, the mainmast somewhat the shorter, thus reversing the usual schooner rig. The sails are bent without boom, but with a sprit, which is stretched across from sheet to mast. "Width of foresail, 11 ft.; do. mainsail, 9 ft. The foregoing is descriptive of the cheapest kind of boat that can be built; her cost will be governed by local wages and cost of material. I can and will build and rig complete such boats, of first-class workmanship and material, for one-half the price of ordinary boats, or sharpies of superior make and model, any size, at proportionate rates. This boat is just what is wanted for coast cruising and sporting, and is well adapted to carrying a cabin if desired. Although she is only locally well known, I am so confident of her future popularity that I intend making her construction a specialty. The sharpie is exceedingly graceful, regarded from any position, and I can hardly imagine a prettier sight than a fleet of them under way, with their slender triangular sails cutting cleanly against the sky, and their fine hulls gliding swiftly while leaving scarce a ripple to tell where they were but by an instant before.

THOMAS CLAPHAM.

DERIVATION AND CONSTRUCTION OF THE SHARPIE.

EDITOR FOREST AND STREAM:

If I remember rightly the first sharpie was built by a Mr. Taylor, a carpenter, who, leaving Vermont for his health, came to A. H. and took the Grove House at Five Mile Point. By some happy accident he hit upon very nearly the right shape, and, her cheapness and excellence being at once apparent, he had many imitators, and now they are about the only boat used by Fair Haven oystermen. They have many peculiarities, both of build and rig, and differ mainly in handling from any other boat that I have ever used. Their name was evidently given from the form of the bow, which is upright and very sharp. The dimensions most in use now are: Length, 33 to 35 ft.; breadth, about 5 ft. 9 in. to 6 ft. on the bottom; depth amidships, about 24 in.; at the gun, 30 in.; and 12 in. perpendicularly at the stern. The stem is a solid piece of oak, sometimes as much as 15 in. wide, fore and aft, and 6 in., or even 8 in., thick at the top. The lower end is made thin and sharp, so as to give a little flare to the sides. These are usually made of wide plank pieced up at the bow and stern to get the required sheer. Through the first third of the length the larboard is squared as rapidly as possible, to 3½ in. to 1 ft. of amidship, and more gradually toward the stern, where it is about 1 in. to 1 ft. Of course the flare of the sides, combined with the bend, gives a considerable round fore and aft to the bottom; the neglect of which, by unaccustomed builders, has caused many failures through the excessive roundness given by elapsing the lower edge wrong.

The stern is sometimes square, at others round. When square it is set with a great rake, not less than 45 deg.; when round it is nearly upright, and becomes quite light by being carried further out by the curve. The centreboard is long, and, as the boat is narrow, should come above the top to get the needed area.

The forward deck extends to within a foot of the centreboard, the intervening space being filled by a thwart, which is notched to receive the case, and has a mast-hole for using a sail in heavy weather. It also affords a convenient step to get up from the bottom to the deck.

The after end is decked some three or four feet, and the intervening space has a washboard 7 in. to 9 in. wide, with a combing rising two or three inches above, the whole opening being trimmed out to an oval form. About a foot from the after end of the centreboard the mainmast steps, through a very strong thwart, well secured and supported at the ends. The rudder is of peculiar form; known by some as the balanced rudder. The stock is of round iron or steel, passing through a tube flanged at one end to the deck, and at the other to the bottom, so as to be tight; split and spread below to receive a plank from 4 ft. to 6 ft. long, and 12 in. to 15 in. wide, shaped off on the forward end, which extends some 12 in. to 18 in. by the stock, so as to clear the bottom, and rounded on the lower edge to prevent catching. The stock is generally made of sufficient length to allow the rudder to be lowered some in a sea-way, giving a better hold. The head of the stock is squared to receive a corresponding socket on the tiller. The usual style of rig is with two lee-of-mutton sails. The foremast is set as near the stem as possible, and for racing the sail is cut so as to reach several feet abaft the mainmast, the after corner being cut off and a short spar called a club extending from the leech to the foot. This is done to increase the sail without adding to the height. The booms are not attached to the foot of the sails, but cross from the clew to aft on the mast about five feet up and are shoved out by a light purchase at the mast. The mainsail of course extends several feet over the stern. Their management is very different from that of a cat boat, resembling that of a racing boat with large jib. Being narrow they are rather crank and in fresh breezes must be eased by slackening the fore sheet, as too sudden easing of the helm slows the stern so swiftly as to take in water before the boat rights up in answer to relief from pressure. Of course such boats require quickness of judgment and action in the sailor, but when well handled no boats are abler. They go out in all weathers, and have carried racing sails in Long Island Sound when the coasters were reefed; and on one occasion, at least, a sharpie went from Branford to the reef off that harbor and rescued the crew of a schooner wrecked there during a heavy gale, when neither a smack nor a tug could be found in New Haven to venture out.

Many think that flat boats are unseaworthy. It is a great mistake when no boat can any longer carry sail and must be hoisted to leeward and is dry, while the deep one, being held fast by the bottom, receives the full force of it, rolls deeper and is wetter. And when worst comes to worst, and both must go ashore, the flat one, if crowded with head sail, is much more likely to make a safe landing. In view of their many advantages it seems strange that their use has not more widely and rapidly extended. For tonging oysters they are perfect; for the workman, standing on the flat bottom, with the coamings supporting his legs, stands

erect, and can relieve himself of much weight by drawing his tongue over the side.

Their cost is less than any other boat of the same capacity. All the space inside is available for yachting purposes, what little ballast is needed being usually a layer of bricks or paving stones. The clew of the foresail being necessarily cut high gives room for more heavy cloth of such form as to be useful. Their draught of water is so light that they can go anywhere, not exceeding 9 in. for a 35 ft. boat. Owing to their flatness, too, it is scarcely possible to injure them by pounding on the sand, as the water forms a cushion. These advantages will be duly appreciated by all who have cruised in the shallow waters of the Sound.

The chief objection is that they are unsafe in unskilful hands. They sail, like all narrow boats, on the side when it blows, and though very fast when properly built, they are never successful in the hands of amateur builders. No one should venture to build without getting accurate drawings. If any definite information as to details is desired, the best source is Mr. Geo. Graves, the most experienced builder in Fair Haven.

We refer readers also to the builders who advertise in our columns as reliable parties who will furnish particulars on demand.

ROUGH-WEATHER YACHTS.

EDITOR FOREST AND STREAM:

Through the courtesy of your columns I wish to gratify the request of people interested in deep-water sailing as to why the match between *Gael* and *Sunbeam* is not to take place. In the first place it will be necessary to go back to our first trial, and get the minute facts of the speed of both boats. Before we go into such explanation it might be well to state what we are willing to admit, and stick to what we believe. Our oft-repeated arguments in *Sunbeam's* favor are that going to windward in any water we are a match for *Gael*, but she being 4 ft. longer on the water line, would probably run away from us. Under some circumstances we are willing to admit that she can outrun us, but going to windward she cannot touch one side of *Sunbeam*. Some of her backers stand ready, and have admitted that they think us the best boat of the two in a rough time, and from what we saw in Capt. Weston's outside race, under the auspices of the Dorchester Club this October, we think so ourselves. As poor a specimen of a sea-going craft never heeled her side to a sea or roared such a failure. She was drowned out, and did not go over the course, and yet her admirers ventured to pit her against one of the best sea-going boats in Boston bay. Why did they do so, unless, as their actions speak, they knew the race would never be sailed? Why did they put *Sunbeam's* folks to the expense of losing time and money in making preparations for such a race, when they never even put in an appearance on the second day, the day appointed by the judges? Such action alone in sporting circles would cause them the loss of the stakes. In the first place we never cared for money, but considered the hard-earned reputation of our little craft enough incentive to call any yacht of her dimensions out for a trial of her merits.

Now for our first trial outside the light. Wednesday, Oct. 2 was the appointed day, and 9 o'clock A. M. the hour for both boats to meet. A few minutes past the time found *Sunbeam* lashed to the pilot boat's mooring off Boston Light. In a short half hour *Gael* bore down in company with steam tug *Dolphin*. According to the rules of our race we must go to leeward to start, and as the wind was southwest, the judges concluded to log off (the course by a patent log on board the *Dolphin*). This was certainly an error on the part of the judges, as it proved the longest ten miles that ever was sailed. On board our boat was a practical navigator who laid out the course on the chart in a proper manner, and when the bearings bore right by compass we bore to, and waited to hear from the judges, they having stopped the tug. In a short time the cutter *Enterprise* shot across our stern, with the word to "go about four miles further north-east." When we arrived at the place the judges decided to start us. We were to have three short whistles to prepare, and two long ones to start. Some little delay was caused in getting the flag buoy in position. As the wind was not over four knots, we were in a quandary about starting; but as we had decided to go if the judges ruled so, we were ready when they gave us the signal. To us it was an anxious period of time, and the race one never to be forgotten. On the result of the trial, perhaps, would rest the reputation of our floating friend. We had beaten our opponent in three fair trials, and were to lose all or gain another triumph. Shortly after 12 M. we got the signal to start, and *Sunbeam* crossed the line, standing up to her work in splendid style. Two and a half minutes later *Gael* crossed, looking easy and saucy, and giving us to understand that we must work to win. We tacked to the northward and westward, *Gael* going to the southward. When she tacked we tacked; then we found the work *Sunbeam* was doing. In that one tick we had made over double the distance we had on the start. We outpointed and out-sailed her for nine miles of the ten to windward, and but for a favored slant that *Gael* got to the southward, the result would have been different. Every one that witnessed the race conceded that we were doing the best work, and had the race our own way; but how futile one's efforts when Providence ruled otherwise. Gradually the wind died away, until we lay almost becalmed. In a short time our attention was called to *Gael*. By the glass we could see she was getting quite a breeze from the southward. She now was heading almost at right angles from us, and perceptibly leaving us. In less than five minutes she tacked across us, and we plainly saw defeat staring us in the face. For almost nine of the ten miles to windward we had badly beaten her, and now to lose by a shift of wind! *Gael* rounded the buoy first, and set her huge standing-sail running before the wind. Three minutes later we rounded Point Allerton buoy, and hoisted our kites. If we could now hold our own we were sure of the prize, provided the race was a five-knot breeze. The water was smooth as a mill-pond, and *Gael* was in her element. She ragged on everything she could, and we did the same, and a prettier sight never was witnessed. Both boats were smothered in canvas and going like birds. The wind kept freshening as we neared the goal, but we gradually saw *Gael* leaving us. She beat us on the run a little less than 3 M. Her time was 8 M. 43 s. better than ours. She had to allow for difference in size 7 M. 30 s., which left 1 M. 13 s.

her favor for a twenty-mile course; but as our charts may not be right, and we not so learned as some others, we had nothing to do but submit to an injustice—an error of judgment. As *Gael's* actual time was 5h. 55s., and the actual sailing distance 25 miles, she was 55s. too slow, and the judges decided "No race." We argued that the day was not what was called for, and would like the stipulations six knots or more; so on agreement the articles were altered. By request of the referee we decided to waive our right to start to windward, and if the next time we started the race could not be sailed to windward first, we would willingly go to leeward and beat back to exit referee. As *Gael's* folks had drummed this all the time for their own advantage, we hung off, and asserted our claims; but when it began to breed discussion in our judges' circle, we concluded to keep harmony in the ranks even at a loss to ourselves.

"Tuesday, Oct. 14; same time and place," was the word sent in by the judges for a second trial. We left our mooring with hardly steerage way on to get to our destination, but the case looked almost hopeless. The indications were, a breeze to the southward; but whether we should get it early enough for the race patient waiting only would disclose.

The steamer *Payette* hove in sight with the sailing master of the *Gael* on board; he proceeded up along side the judges' boat, the cutter *Enterprise*, and entered into a parley. What the sailing master said we did not know. The judges came on board of us and we asked where the *Gael* was (this was off City Point, South Boston,) and they told us "she lay at her moorings, East Boston." We asked if they intended to put in an appearance, but could get no definite answer. They showed plain signs of backing out and, as they had the care of the judges, we made up our minds we should not only not handle their money, but would never see the stakes. We offered them if they would go to the appointed place—"Boston Light"—to sail them for some prize to pay for going down. Sail for fun or marbles. Sail her in any wind or water for the cigarette, or a dinner, and let the other matter rest until we could get a favorable chance.

The judges went on board the steamer with our request, came back and reported the sailing master would not accept. We stated then we would go to the light and wait for our breeze, but were thunderstruck when the judges said they decided the race off and would refund the money. We were indignant at this state of affairs and said we should go to the appointed starting place and if we found the wind we wanted should claim the money, or a race, but we could not alter the judges' decision by coaxing or entreaty.

We went to Boston Light, found a splendid southeast breeze and a heavy sea. The judges stated that our rules required us to start at 9 A. M. Why did they not think of that on the first trial, when we did not get to the starting place until afternoon? We were at the light before 12 M., sailed over part of the course and proved that one of the judges made a mistake when he stated our little boat could not sail in such a sea. She was like a duck, shooting up to the top of a heavy ground-swell and sliding down the other side, occasionally dipping her bow and shaking the brine from her round, smooth sides. We proved her weatherliness.

Why was the *Gael* so reluctant to put in an appearance? Was she afraid of the *Sunbeam*, or of the rough water, or both? Why did she challenge us and put us to the expense and loss of time? She never made an appearance who was entitled to the prize? Under the circumstances was a great noise and she was presented with a consolation prize. We never would have accepted such a thing. The *Sunbeam* has earned all her prizes, and wants no others. Our race will never come off because they decided (from former trials) that our claim to being the fastest boat to windward is just and they backed out at last.

Sunbeam's skipper certainly makes out a strong statement in his yacht's favor and it will now be in order for *Gael* and the judges to render an accounting.

CORINTHIAN CRUISERS.

SAN FRANCISCO, Cal., Dec. 30, 1878.

EDITOR FOREST AND STREAM:

I am gratified to see that the discussion on Corinthian yachts in the *FOREST AND STREAM* has brought to the surface such valued authority as "Hard-a-lee," and after the arguments *pro* and *con*, on the question of model and rig have been digested, and the various good and objectionable points of the "broad flats" and "narrow deeps" duly set forth, the Corinthian contemplating building a boat can come to an intelligent conclusion, pay his money, and take his choice. I feel "constrained," however, before abandoning the field, to take up some of the theories advanced by "Hard-a-lee" on the question. I will endeavor to obtain the work he refers to ("Down Channel"), and see if the experience of the author can carry conviction to my mind on the superiority of the narrow deep cutter in a gale of wind over the "broad flat," having seen some rough weather myself in the latter craft.

Firstly—There is a vast difference between a boat "lying to" and under way in rough water. It is quite true his cutter may have proved herself an excellent sea boat under such circumstances, inasmuch as she was making no perceptible headway, but on the contrary, was constantly receding from the coming wave, and therefore less liable to "dive" into it. Again, it is pretty generally the case that boats are modeled and built to suit the waters wherein they are used, and as the English Channel, according to my limited experience, confined to crossing it in mail packets, is almost as turbulent and uneasy a sheet of water as I wish to see, and as yachting in England must almost entirely be done in rough water, John Bull has followed in the footsteps of his fathers, and built his boats according to the ancient theory that what was good enough for his grandfather was good enough for him; but as we cannot very well bring the English Channel over to our yachts for a trial of their sea-going qualities, and none of ours have been tried there, the comparison loses force. In building a yacht for Corinthian sailing, we necessarily consult the character of the water and navigation where she is to be used. While the ambitious yachtsman can by a little effort find water quite rough enough to satisfy him at times by cruising outside of Sandy Hook, he, as a general thing, has no great call to poke his nose into it; but should he venture out, as I have often done,

into the waters of our broad Pacific, there would not necessarily be any occasion to change the broad, buoyant boat for a "diver." I have often tested the very problem "Hard-a-lee" suggests, and can answer his commendation as to how the flat-bottom behaves; and as I am spared to write this, it is presumable that my craft never illustrated his fear that the might bounce up, by reason of her buoyancy, and flop over. Our "broad flats" have no such unseemly habits, are not given to such gymnastic performances; on the contrary, by reason of their buoyancy, are like corks, lively, and come what may, in the way of a sea, they can always be found on top, instead of "sounding." They are safe, for the reason that they recede from a sea more rapidly than a deep boat, and any boat that will "give way" to a sea is always accounted by old sailors as a good sea boat. They are not so likely to "trip" as a deep boat, inasmuch as the line of immersion is never below the moving surface of water; there is nothing for the sea to get hold of to cause that unpleasant little caper. "Hard-a-lee" says he is not convinced that seaws, although good for San Francisco Bay, would be a success in the English Channel. Who said they would be? And yet they go outside and cruise on our coast, which is quite as rough, certainly, as our Eastern coast, and do not lay to any oftener or sooner than the sharp-bottomed schooners that cruise in company. I might ask what kind of a figure his English cutter would cut on a Jersey mud flat, or along the Sound harbors at low tide. He would have a delightful night's rest with his boat at the angle she would present. "Hard-a-lee" may have had a boat that wallowed about in a seaway, but that fact, coupled with 16ft. beam, does not necessarily imply that it was the fault of the beam, but more likely the result of a bad model. I have seen deep and narrow boats that did the same thing, and for the same reason—i. e., bad model. The model has quite as much to do with a boat's ease in a seaway as anything else. As to the argument offered that the *Mohawk* carried away her boshtay, that accident is likely to happen to any craft, sharp or flat, and either would do just what the *Mohawk* did.

Tako "Hard-a-lee's" dimensions as his idea of a properly proportioned boat—36ft. keel, 45 over all, 6 to 6½ deep, 12ft. 9in. extreme beam; and I presume start out with him in my craft—of same length, but 14½ beam, 6in. deadrise, 4½ deep. He will draw 5ft.; my boat will draw about 2.9 or 3ft. I will have an equal amount of freeboard; my cabin will be 1ft. 9in., and consequently more roomy and comfortable for a foot in cabin width is like that proverbial inch on a man's nose—counts up amazingly. We got out into the Sound with a spanking breeze, and while my craft stands squarely on her bottom, and the decanter and glasses stand safely on the table, "Hard-a-lee's" craft is over on her side, and unless the crockery has been secured, has gone to general destruction. I "heel" over six inches, perhaps, while his lee rig is scooping up the water, his freeboard is unusable, and his side becomes the sailing mold. By virtue of standing up my centerboard is much more effective, and my boat is holding a better course. Bye and bye "Hard-a-lee" must reef. I go along, carrying all sail comfortably. We reach Bridgeport, and run in for a harbor for the night, as the weather looks a little nasty. I run in close to the wharf, and anchor. "Hard-a-lee" must drop his anchor a much longer distance off; or if he runs in with me to the sociable, and the tide goes out in the night, I hear a sudden ker-cunk as I lay snug in my wide berth, accompanied by a jingling of unshackled corkery and smothered imprecations on the cook who omitted to stow it away. "Hard-a-lee" passes a miserable night, trying to sleep on the ragged edge, his boat lying down on her side. In the morning we turn out fresh and ready for a start, with a fair wind, but we must wait for two hours for the incoming tide to float off "Hard-a-lee" from the mud, most of which time he is consuming in the effort to get breakfast under difficulties, unless I take compassion on him, and invite him aboard the "broad flat" as an act of humanity; and so we go. And so we mentally compare our different degrees of comfort all the cruise, "Hard-a-lee" stubbornly refusing to admit that his sharp bottom, much deadrise, and cranky craft is one whit inferior to ours. Finally, westerly rough water, where he has been wanting to catch us. We keep right along with him, taking no more water on board than he does, going just as fast, and if we have to "lay to," there we are—very buoyant, very dry and very comfortable. Now, where has he an advantage? Not in speed, not in safety, not in stability, and certainly not in comfort; and if he has a sensible man, he will mentally resolve that, when he gets back, if Jones still admires his boat, and expresses a wild desire to purchase, he will oblige Jones, for Jones is a good fellow, and he would like to see him have a good boat. The next thing you hear of "Hard-a-lee" he is building a new boat, with 18in. more beam and less deadrise. Now, suppose "Hard-a-lee" had started off in your blasted English cutter, with its V shaped bottom and tape-worm dimensions, how far would he have got, and what would his chances of Heaven be to clear the amount of fearful imprecations it would call forth? He would leave her stuck in the mud at Bridgeport, and go home by rail, damning Corinthian yachting as a fraud and a failure.

In using the term "broad flat" I do not intend to imply that I advocate a scow bottom; on the contrary, I give my boat a sharp entrance, a moderately hollow line below water, and a corresponding run, but retain all the floor possible. I will concede even 12in. deadrise, instead of 6, but carry my breadth well out, with a sharp knuckle, so as to get all the bearings I can. The midship floor timbers can be made perfectly straight, as I avoid anything approximating to a round or barrel bottom, in which there is no stability. Above water she can be made as graceful and presentable as any other model. A good sheer makes her dry, and raises her bowsprit above the plunging mark; in fact, it will seldom go under, and not as often as the stub straight spar of a cutter. And my bowsprit is on a line with the sheer of my forward deck, and not "braced down" on the curve to pick up every sea, according to the accepted style of your Eastern small craft, and some large ones, too, for that matter.

I have a friend, a thorough yachtsman, possessing skill and talent for drawing (that I am sadly deficient in unfortunately,) who has promised to make a series of outline drawings that will fully illustrate our styles of craft, and the worthy Secretary of our yacht club, Charles G. Yale, Esq., will try to find time from his arduous editorial duties to get up some diagrams and sketches of the modified "dandy rig," as adopted by the yachts of the San Francisco Yacht Club, all of which will be forwarded to the *FOREST AND STREAM* as soon as the aforesaid proverbially procrastinating

"old salt" first mentioned can be forced up to the effort, from which an idea can be formed of such a craft as I have tried imperfectly to describe, all of which will, out of compassion for your benighted condition, be respectfully submitted for your enlightenment. So, load up your guns, and get ready to give us a broadside of criticism. PODGERS.

TIN-COATED SHOT.—A look through Capt. Bogardus' shot gun at the conclusion would have delighted any old shooter who has known what it is to have the gun badly leaded, and has experienced something of the rubbing and scrubbing process of cleaning. The shot used by Capt. Bogardus was the tin-coated shot of the Leroy Shot and Lead Manufacturing Company, 393 Water street, N. Y., and by his direction no cleaning of the inside of the barrel was attempted. They were inspected, but beyond a few specks of powder dust, they were clean at each change, and the duty of his assistant was confined to cooling the barrels. The trial was a complete success for the Leroy Company, and this with the other advantages granted to tin-coated shot should make it a favorite everywhere.

BILLIARD CHAMPIONSHIP.—The Grand World's Billiard Tournament is now in progress at Cooper Institute, this city.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed to Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn.

Problem No. 40.

Motto: A Long Look Ahead.

White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 36.

Three solutions: Q-B3, Q-K7 and the author's.

PROBLEM NO. 37.

1.—Any

1-Kt K5
2-Mates

Game No. 96.—SCOTCH GAMBIT.

Game in the International Tourney between Don C. Rogers, of Detroit, Mich., and Mr. E. H. Heath, of England:

White. Heath.	Black. Rogers.	White. Heath.	Black. Rogers.
1-P-K4	1-P-K4	13-P-K5 (f)	13-Q-Kt K5 P
2-Kt-K3	2-Kt-Q K3	14-Kt-K5 Kt	14-Q-Q3
3-P-Q4	3-P-Kt P	15-R-K5 P	15-Q-Q3
4-B-Q B4	4-B-Q B4	16-P-Kt K5	16-P-Kt K5
5-Castles (a)	5-P-K3 (g)	17-R-K K5 (a)	17-Q-K B5 (h)
6-P-Q3	6-P-Q5 (g)	18-B K5 Kt (j)	18-Q K5 Kt (j)
7-P-Q K4	7-P-Q K4	19-R-K K5	19-R-K K5
8-P-Q K3	8-P-Q K3	20-Q-Q (i)	20-B K5 P ch
9-Q-Kt K5 (d)	9-Q-Kt K5	21-K-Kt	21-Kt K5 Q
10-R-K K5	10-R-K K5	22-R-Kt K5	22-K-Q7
11-Q-K K5	11-Castles		White resigns.
12-Q-K K5	12-B-K3		

NOTES.

- Castling at the 5th move is decidedly inferior to P-Q B3 or Kt-K5.
- Of course. The correct play.
- Although this move is often made at this point, B-K K4 is considered better.
- This looks formidable, but Black neatly parries the attack.
- Should have taken Q P with B, and then White has an open and attacking game.
- The advance of this P leads to a series of exchanges which prove disastrous to White.
- This R to K seems a better move.
- A good move. It is hardly possible now for White to avert disaster.
- This move is forced. He has hardly any other else left.
- Black is sufficiently pursuing his advantage.
- The strongest move.
- Although Kt-K5 B P ch looks promising, it would be of no avail. White's best move at this juncture would have been B-Kt, but even this would have saved the game.—*Harford Times*.

Game No. 97.—ODDS Q-R-REMOVE WHITE'S Q R.

Another specimen of Australian chess:

White. H. Charl'ck.	Black. A. J. Loughton.	White. H. Charl'ck.	Black. A. J. Loughton.
1-P-K4	1-P-K4	6-B-Q B4	6-P-Q4 (e)
2-P-Q4	2-P K5 P	7-B K5 P	7-Q-B4
3-Kt-K3 (a)	3-B-K5 ch (b)	8-B K5	8-Q-Kt K3 (d)
4-P-K3	4-P K5 P	White forced mate in three moves (e)	
5-P K5 P	6-B-B4		

NOTES (F. M. Teed).

- 2-B-Q3 is frequently played when giving a piece, and probably offers more chance to the first player than this move.
- P-Q3 or Kt-Q K3 would be more advisable, though the move made is best in even games.
- It is tempting to follow this by 7-P-Q B2, but White could then play 8-B K5 Kt P ch.
- 6-Q-Q3 is the only move, for if 8-Q-K K5, 9-B K5 P ch, winning Q or mating at once.
- 9-B K5 P ch 9-K-B1
- 10-Q-Q3 ch 10-K K5 B
- 11-Kt-K5 ch 11-K-K2
- 12-Q-Q5 mate

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

(POST OFFICE BOX 3832.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JANUARY 23, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

Trade supplied by American News Company.

HONORS.—Hon. Orville H. Pratt, of Meriden, Conn., who is well known among his many friends as a lover of the sports of the field, has been elected to the United States Senate. Mr. Pratt is well worthy of the position and will most certainly fill it with credit and ability.

THE FIELD TRIALS CONTROVERSY.—In our next issue we shall briefly review this little family quarrel, and, now that all the judges and parties most directly interested have had their say through the columns of our journal, it is possible that the editor may deem it worth while to exhibit the facts and occurrences in the case as they came under his personal observation.

SAVE THE QUAIL.—Our news columns this week contain frequent mention of the fatal effects of the snow upon the birds. We have already spoken at length of the necessity of giving food and shelter to the birds, and again call the attention of our readers to this important subject. We are glad to see that several of our most active game clubs are taking very commendable action in the matter. Their trouble will be more than repaid.

BEHIND THE TIMES.—Seth Green's letter concerning eels, contributed to this paper, having found its way into the "patent outsiders," is now traveling about the country newspapers with the concluding remarks, that "The eel question is still open." Keep up with the day, Mr. Country Editor. Don't buy old matter, even if it is cheap. Read FOREST AND STREAM and the scales will fall from your eyes.

A MOST UNCONSCIONABLE LITERARY PIRATE.—The most systematic and unprincipled literary thief we know—and we know a good many of them—is the *Canadian Gentleman's Journal and Sporting Times*, a semi-sporting sheet published at Toronto, Canada. To prove our assertion we need only refer to the scores of articles taken from our own columns without the slightest credit being given for their source. A paper so utterly devoid of honor and unsupported by brains should suspend.

FOREST AND STREAM will be sent for six months for \$3, or for three months for \$1. To clubs of five or more, \$3 per year.

THE NATIONAL MILITIA MOVEMENT.

THE convention of gentlemen connected with the regular and volunteer military forces of the country, which met in this city during the past week, began in a very quiet way and with little blowing of trumpets a task, which, when carried out to the extent which even the most moderate-minded among its members would hope for, is destined to work a great change in the power and prospects of this country. These gentlemen propose to carry out a plan by which the whole country shall be provided with a civic-military force which shall give us as a nation, not only a defense against ourselves in cases of domestic disturbance, but a power of resistance in the contingency of a foreign invasion.

The project is one which no one will object to on its general merits, and the only question open for discussion and for settlement by deliberation and legislation is the manner of carrying it out and the extent to which it should be carried. While we have in our conscription laws given to Congress the undoubted right to draw every able-bodied citizen into the ranks of the army, a very wise conservatism on the part of the people and of respect to private rights on the part of the Government will prevent us from plunging into the Prussian military system. Such a permanent harassing system would be universally distasteful to the American people; nor on the other hand do we want a large standing army of professional soldiers lolling about army posts living upon the cream of the land and growing fat and insolent at the expense of the tax-payers. While we have our Indian wards, who recognize civilization only at sword's-point, we may have real work for a few professional killers-of-men, and that after, in taking care of Federal property, the skeleton of an army may find service as armorers, etc. But the idea of having a regular army sufficient for all the uses of our vast land, is a preposterous one. There never was a time when such was the case, and never should be. Nevertheless, there must be a strong power somewhere in the Government or back of it, else our vast, unwieldy continent and nation will become the prey of the other nations of the earth. That power is in the people, and how best to get it out is the problem. The revolutionary fathers saw this necessity, and saw, too, on many a day during the dark seven years which preceded our birth as a nation, where and how that power was defective; and the Constitution provides that Congress shall have power "to provide for organizing, arming and disciplining the militia;" and it is to put Congress in the way of exercising this power, of making this section of the Constitution a living law, that the convention spent two days discussing the outlines of a code. The old laws of 1792 and 1803 are on the statute books, giving, with great particularity, how each able-bodied male citizen shall be enrolled and train, and shall have at hand a good firclock and two spare flints, or else a good rifle with shot-pouch, powder-horn, twenty balls, and a quarter of a pound of powder, while every officer shall have his hanger and spontoon. If we need nothing more we at least need a revamping and modernization of these ancient rules and regulations, or we should muster like a Falstaffian brigade, or a party of mountebanks. We need what the framers of the Constitution intended—a strata of force spread over the whole country, able to crystallize at the shortest notice into a compact mass ready to give and take, to crush or to resist, as it may be called upon. The lessons of the Revolution, repeated in the war of 1812 and again in the opening days of the Civil War, pointed to the want of uniformity. The State troops rushed to the defense of the nation more as an armed mob than as the steady advance of an intelligent force. They lacked the first requisite of an army—organization. There are nice points of law to be settled, and the matter is one to be handled with more than the average of statesmanlike caution. The States are properly jealous of throwing themselves under the great car of state to have their individuality crushed out; and, on the other hand, the Federal Government cannot afford to unbind the girdle which keeps us as a nation together by giving to the States the power and the incentive to bind themselves up into great armed Commonwealths.

In general outline the bill proposed, despite its haziness in general and pettiness in detail, aims very near a serviceable act. While laying down the principles of general military duty, the act is devoted almost entirely to the encouragement of that body of citizens who choose to make of themselves soldiers so far as their civic duties will permit. These men are to have one commission to devise a manual of discipline, another board will fix upon a dress, and then the hand of the N. Y. State Rifle Inspector is seen in a matter which would grow up naturally after the general movement had taken root, and before that it would be but a dumb show. "First catch your hare" is good advice here as elsewhere, and when the national militia is established it is time enough to offer prizes to encourage its members in rifle practice. This section is not only premature, but its offer of \$100 as gifts to State and \$1,000 to National team shooting is petty, and has, as was said, a smack of the premium chromo business about it. What the bill will accomplish is the setting in motion of a system of direct comparison, which will enable each State to judge itself as against other States by an uniform standard. This is now impossible, and the weaker States do not have their inferiority brought out in the strong light which it would be were this exhibit made possible through the legislation proposed. Emulation will be sufficiently strong to bring each State up to a fairly effective condition, and where coaxing fails it is pretty certain that the persuasion of force will be of no avail. Public sentiment will swell the ranks to a million where the

strong arm of the government could not get a hundred men in line. This public sentiment has grown dormant, the mere passage of a law will not revive it, for there are to-day hundreds of dead-letter laws on our statute book, and the gentlemen of the convention will find that with the enactment of the law they get merely the tool, and it will depend on the vigor with which they wield it how great an effect it will have.

[FROM OUR OWN CORRESPONDENT.]

A NEW ROUTE FOR SPORTSMEN.

St. Paul, Minn., January 2, 1879.

THE past autumn and beginning of winter, until within a day or two, has been distinguished in Minnesota by most charming weather. Old Dorcas, while his dominion has been severely felt in the whole middle belt from Kansas to New York, has as yet hardly touched us with the tips of his chilly fingers. The most glorious Indian summer lingered here until the beginning of December, then gradually, almost imperceptibly, transforming into an equally delightful winter; for although the thermometer now often falls as low as zero and below, the sunshine is so bright, the air so still, that out door life is most enjoyable. Some migratory birds, at least some mallards and jacksnipe, remained in the bottoms and spring-holes up till Christmas, and that not all of the latter half left as late as yesterday I can myself bear witness; for walking along Trout Brook, in the afternoon, I flushed a genuine *Ga. Wilsonii*, within 800 yards of my house, from a big spring between Ed. Rice's pond and the railroad.

Since you were with us last September the Extension Line of the St. Paul and Pacific railroad has been completed to its terminus at the British boundary line. To the enterprise of two business men of St. Paul, Messrs. Norman Kittson and James J. Hill, aided by Canadian capital, and to the indomitable energy and push of the general manager and receiver of said railroad, I. P. Farley, Minnesota and the whole Northwest beyond are indebted for successfully carrying through this important improvement, which in connection with the Pembina branch of the Canadian Pacific, makes a continuous line of 483 miles, and binds together by ties of iron the capitals of Minnesota and Manitoba. If we consider that this line of railroad has opened for settlement in its whole length the Red River valley, the very cream of the cream of the great Northwestern wheat belt, and that it has made Minnesota the gateway for the enormous immigration and carrying-trade now pouring into the vast British possessions to the north and northwest of us, and making our State the nearest and natural market for these new settlements, an idea may be formed of the importance of this improvement.

But it is not only to the business man and agriculturist that new fields have been opened by this line of railroad: it has also made easy access to the sportsman the most extensive hunting grounds on this continent, and stocked with a greater variety of game than may be found elsewhere within the limits of a single season's excursion.

Starting from St. Paul by the main line of the St. Paul and Pacific railroad, to the trains of which road elegant sleeping cars are attached, the sportsman-tourist will in less than twenty-four hours find himself in the lower Red River valley in the northwestern corner of Minnesota. On the prairies anywhere in this region the sharp-tailed grouse is abundant, and in the timbered bottom lands of Red River and its numerous tributaries there is good woodcock shooting and plenty of ruffed grouse! In the immediate vicinity of the railroad a few settlers have established themselves within the last year, but towards the east, for a distance of 250 miles, extends an unbroken, almost unexplored wilderness, where the deer, the moose, the elk and the bear as yet roam in undisturbed security.

Getting tired of venison, grouse and woodcock our sportsman may again take the northward bound train, and a journey of a few hours will land him in Winnipeg, the capital of Manitoba.

He will here find a city of some 8,000 inhabitants, which in the intelligence and cultivation of its people and substantiality and even elegance of its buildings will lose nothing when compared with any Western city of equal population and much greater pretensions. The city is prosperous, growing fast, and doing an immense business, being the *entrepôt* of the whole British northwest. The hotel accommodations are excellent; and, having rested here, take steamer down Red River and Lake Winnipeg to the mouth of Saskatchewan. Here have your traps transferred to one of the several steamboats plying on this great stream. Once on board you may, by this means of conveyance, without fatigue or trouble, reach the heart of the continent and penetrate, if such should be your desire, to the foot of the Rocky Mountains. The valley of the Saskatchewan is one of the finest and largest in America and destined, at no distant future, to become one of the great granaries of this country. It is as yet a great game resort. The varieties are about the same as those of western Dakota, Montana and Idaho—the buffalo (in untold multitudes), the grizzly, black and cinnamon bear, the elk, deer and antelope, and feathered game in great variety and abundance. At any of the forts or trading-posts of the Hudson Bay Company—at Cumberland House, for instance, at Fort Carleton, or at Battleford, the new capital of the Northwestern Territory—the gentleman-sportsman will find hospitable reception by kindred spirits, good accommodations and offers of every facility and assistance.

Returning to the mouth of the Saskatchewan, if there is

any time to spare, I should recommend a trip to the north end of Lake Winnipeg, which is not distant. Our sportsman will then find himself in the land of the caribou and the willow grouse. The former is very abundant in the timber belt, which toward the northwest extends in the direction of Lake Alabasca, and the latter, as I am informed by perfectly reliable parties, is swarming on the open barrens, which toward the northeast stretch out all the way to Hudson Bay. Those who have tasted the pleasures of partridge shooting in Newfoundland or a grouse hunt on the British moors will not hesitate to go a good distance out of their way to enjoy once more this delightful sport, and here it can be had to perfection. And although the scientist may discover some microscopic differences, which might justify him in making different species, it is the writer's unscientific and humble opinion that the willow grouse of this continent, the partridge of Newfoundland, the garcock, or moor-fowl, of Scotland and the dal-rappa of Scandinavia are all one and the same species, the *Tetra lagopus* of good old father Linné. If our sportsman-friend is not in too great a hurry he may after a while reach those famous grouse resorts in a comfortable sleeping car; for notice in the last report of the Surveyor-General of the Dominion, I. S. Dennis, that he strongly urges on Parliament the construction of a railway from a point on the lower Saskatchewan to the mouth of Nelson River at York Factory, on Hudson Bay, in order to make an outlet for the enormous quantities of wheat and other agricultural products presumed to be raised in the near future in the Saskatchewan and other valleys of the British possessions in the Northwest. In his report the Surveyor-General states that the length of the road would be about 400 miles, that from the magnificent harbor at the above factory the distance to Scotland is shorter than from New York, that for 200 years the Hudson Bay Company sent all their supplies and received all their furs by sailing vessels over this route, and that Hudson Bay is free from ice from the end of June to the beginning of October.

For his homeward trip the traveler had better take the same route that brought him within the dominion of Queen Victoria. There is, however, from Winnipeg another route, known as the "Dawson road," by way of Lake of the Woods and the Rainy Lake Region, along the boundary between Minnesota and the Province of Kewatin. But the first 125 miles of this road, from Winnipeg, is overland and will entail more hardship than all the journey from the Atlantic seaboard to the outmost post on the Saskatchewan. It is simply horrid, leading over coroduroed swamps for a great part of the way. Once on the Lake of the Woods, however, you are amply repaid. Nice little steamers provided by the Canadian Government will carry you over the most enchanting lakes, and at the several portages are good camping grounds. The banks are high and rocky, the waters, clear as crystal, are filled with fish—pickerel, pike, black bass, whitefish, etc.—and the surrounding country is well stocked with game of the same varieties as are found in northern Minnesota, excepting the pinnated and sharp-tailed grouse; but the ruffed grouse is found in goodly numbers, and now and then the spruce partridge (*Can. canadensis*). Lake Sagana, near the eastern terminus of this remarkable expanse of water, is one of the most beautiful lakes in the whole Northwest, surrounded by enchanting scenery. The end of this route will put the traveler down at the mouth of Pigeon River on the shore of Lake Superior.

J. S.

GAME PROTECTION.

MASSACHUSETTS.—The new game law, which, as we are informed, the Massachusetts Kennel Club will ask the present Legislature to pass, provides that pinnated grouse and quail may be bought, sold and had in possession during January, February, March, April and May, if not taken in the State; that is, birds killed over the border can find a market in Massachusetts. Such a law would be perfectly monstrous, and the citizens of the Old Bay State can never hope to enforce close seasons while such a proviso is in operation. It is really putting a premium on law-breaking in neighboring States. By this proposed law the birds referred to can appear in the Boston market to be sold as food when others of their kind are nesting. Of course provision dealers and restaurant keepers are well pleased that the State is going to legislate money into their pockets in this way, and well they may be.

We understand that, by the proposed law, all shore birds except four species, the golden plover, the knot, the turnstone and the tiltale are protected absolutely from April 1 to July 15; but why should these four be excepted? The fact is that the season at which game birds can be bought, sold or had in possession, should close on or before the first of February each year, and we should only be too glad to have all spring shooting, except at ducks and geese, put an end to.

We hope that by calling attention to this matter we may put the friends of game protection in Massachusetts on their guard. The question whether such a law as the one proposed is desirable or not, can be answered in five seconds by any person of ordinary intelligence who has given any attention to the subject. We do not believe that such a law can be passed if all sportsmen work against it.

MASSACHUSETTS FISH AND GAME ASSOCIATION.—A special meeting of the Massachusetts Fish and Game Association was held at their rooms in Boston on Thursday evening, 16th inst., for the purpose of giving a reception to His Excellency Governor Talbot, first Vice-President of the association, Lieut.-Gov. Long and other members of the State Government. There was a good attendance of members of the association. Previous to the arrival of the Governor, a busi-

ness meeting was held, the President, Dr. John P. Ordway, presiding. Three persons were proposed for membership, and their names were referred to the proper committee. The secretary was instructed to cause to be printed 300 lists of members of the association, to appear in connection with revised by-laws. It was also voted that the Special Committee on Fisheries be instructed to petition the Legislature that the present Massachusetts law for the protection of trout be changed so as to fix the close time of trout fishing on the 15th of September instead of Oct. 1, and to advocate the change before the Legislative Committee of Fisheries.

At nine o'clock Governor Talbot, Lieutenant-Governor Long, and several members of the Legislature arrived and were cordially received. The president welcomed His Excellency as one of the first friends of the association, who had been invited to visit them and see for themselves what the association was doing.

The Governor in reply said that he was gratified at the attention shown him and the evidences of the success of the association. He had been greatly interested in the preservation of game and the cultivation of fish. He believed in fish and the man who liked to catch them, and deemed the objects of the society—to protect fish and game and to seek better more extensive production and culture—were worthy the labors of intelligent men. He believed that much success had been obtained in the propagation of salmon and trout, and much more promised, and was glad to see that every year there is increased interest in the subject. He related some of his experience as an angler, telling of his mishaps as well as his good fortune. He declared that the stocking of the streams of the State with shad and salmon and smaller fish is a matter of great importance, not only in order to secure a supply for home consumption, but also as a matter of comity between States, as if the streams were full of fish, one of New Hampshire's complaints against Massachusetts would lose its force. He expressed an opinion that the association served a useful purpose, and wished it might be successful in all its endeavors to increase the quantity and quality of the game and fish in the forests and streams of the Commonwealth. In conclusion, he congratulated the members upon the success which had already attended their efforts.

His honor Lieut. Gov. Long, on being introduced, reciprocated the kind expressions which the President had not addressed to him, and looked upon the matter as a joke. Of course it was a good thing to stock the streams, as it would make the narratives of fishermen more interesting. Legislation shifts the burden of the Commonsense. In conclusion, his association was to be congratulated upon its labors for the improvement of the laws in relation to fish and game. He claimed that the desire to fish, or "go fishing," was universal in the human breast, and he certainly desired to see the Legislature and this association co-operate in the beneficent work proposed.

Brief remarks were made by Senator Stockwell and Representatives Bonney, Lowell and Locke, after which the members and their invited guests adjourned to the library, where they partook of a delicious collation, served by Stephen E. Sewell. During the evening two dishes of smelts were exhibited, in illustration of the benefits derived from the enforcement of the laws. One plate contained a dozen smelts, taken in a seine in Maine, which measured about six inches in length and weighing one pound in the aggregate, while the other plate contained eight smelts, caught through the ice with hook and line at Weymouth, Mass., weighing one pound and measuring eleven inches in length and four inches in circumference. The arrangements for the reception were in the hands of a committee consisting of Dr. John P. Ordway, H. H. Kimball, Weston Lewis and Ivers W. Adams.

NEW HAMPSHIRE.—*Plymouth, Jan. 16.*—For the last two years we have had sea-breeze *Salmo salar*, in the Temigwasset in large numbers, from a foot to forty inches in length, and the hatching-house at Livermore Falls contains eggs taken from salmon caught in the river this season. There is also a very stringent law in regard to catching any (par) smelts or salmon, it being \$50 fine for each fish caught at any time, and the close season extends to the 14th of June, 1889, being five years from the passage of the act. A gentleman fishing for bass near Concord last June hooked a salmon, and after a hard fight of three hours landed him, and then came the question what to do with him? And he did what most any one would have done. After looking around, and seeing no one in sight, put him under his coat and made tracks for home. The salmon weighed 14 pounds.

E. B. H.

THE VIRGINIA FISH AND GAME LAWS.—THE FOREST AND STREAM, of New York, an American authority par excellence in this line, observes that in no State in the Union are game laws better obeyed than in Virginia. Our markets have never in our experience shown such an abundance of game in season as they have exhibited since these laws became generally known. The poorest man may now enjoy a partridge for his Sunday breakfast. It is to be hoped that the same may be said before long of the fish laws. It is to be hoped that the business before the Legislature this session will not be so engrossing as to prevent proper attention to these most important matters. A prominent official in North Carolina writes: "Our Legislature meets in January, when we are going in heavy for game and fish laws, and we hope for a hearty co-operation from Virginia with regard to our interstate streams."—*Richmond Dispatch*.

The Virginia Association is ably seconded in its efforts by the Richmond papers, which are outspoken in their advocacy of game protection, and by frequently bringing the cause before their readers, keep up popular interest in the subject. The Dispatch is doing its full share of the work.

ILLINOIS STATE SPORTSMEN'S ASSOCIATION.—*Headquarters Illinois State Sportsmen's Association, Peoria, Jan. 17.*—A special convention is hereby called of the Illinois State Sportsmen's Association and all others interested in the protection of game and fish, to convene at Springfield, Ill., on Wednesday, February 12, 1879, at two o'clock p. m., for the purpose of devising means to secure the passage of a practical game law, one that would secure the objects to be accomplished, viz: protection of the game and fish in our State, and to prevent the same from being exterminated. It is expected that each local club in the State will be represented, whether they belong to the State Association or not. All sportsmen and others not belonging to clubs, who are interested in the protection of game and fish and fish culture, are cordially invited to meet with us and take part in the convention. It is hoped that every county in the State will be well represented, so that the convention can devise or suggest a new game law to

our Legislature, now in session, for their consideration, that can be put into practical effect in all parts of the State. An opportunity will also be given to local clubs to join the State Association. V. M. LINCOLN, President.

Geo. W. BAKER, Secretary.

MICHIGAN SPORTSMEN'S ASSOCIATION.—The annual session of the Michigan Sportsmen's Association was held at Lansing last Tuesday.

KENT COUNTY SPORTSMEN'S CLUB.—The Kent County Sportsmen's Club held its annual meeting Jan. 7, and elected the following officers: President, Dr. E. S. Holmes; Vice-President, Aaron B. Turner; Secretary, W. C. Dennis; Treasurer, George A. Gould; Vincennes in the executive board were filed, and it is now composed of Messrs. W. L. Calkins, James Stewart, H. Widdicombe, Geo. S. Baars and J. C. Parker.

CUVIER CLUB OF CINCINNATI.—The Cuvier Club of Cincinnati are giving their attention to the protection of the quail during the cold weather. They have issued appeals to the farmers for food and shelter for the birds, and are enforcing very strictly the law against their capture and sale.

QUEBEC.—The seventh annual dinner of the Fish and Game Protection Club, of the Province of Quebec, was held with the City Club at Montreal last Tuesday evening.

The Rifle.

GOVERNMENT vs. PRIVATE ARMORIES

SOME weeks ago we presented the views of the private manufacturers of small arms, as embodied in the memorial from the "Association of Manufacturers of Arms, Ammunition and Equipments," to Gen. Burnside and the other members of the Joint Committee on the Reorganization of the Army. A copy was also sent to the Secretary of War, who referred it to Gen. S. V. Benét, Chief of Ordnance, and he in turn presents a report drawn up by Col. Jos. G. Benton, U. S. A., in command of the Springfield Armory.

The subject was an important one, not alone for the large interest immediately involved, but as well from the perplexing condition in which the government would find itself in an emergency should the Government small-arms workshop be closed and a full and entire reliance be placed on the facilities to be got for hire at the armories of private firms and companies.

Col. Benton opens his reply by dividing the point of the memorial into two arguments: First, That it is the proper duty and policy of the Government to foster private manufacturers; and upon this as one which involves questions of political economy, etc., Col. Benton does not pretend to offer any opinions, preferring to leave it to the wisdom assembled in the Capitol at Washington. Upon argument Second, The greater cost of manufacture at Government, compared with private, establishments, the reply is long and interesting and backed up by an array of figures which seem to set aside the startling exhibit of the manufacturer's memorial that small arms were turned out at Springfield at a cost of \$115 each. The extraordinary factor of interest in this amount was obtained by multiplying \$7,000,000 by 10 per cent. and dividing the product by 7,050, the number of rifles and carbines made in the year 1877. But Springfield Armory is something more than a small-arms' manufactory. It has foundries, etc., for turning out cannon, and it is a great storehouse as well. In the seven millions of dollars all these items are included without explanation or comment. The number of arms made in each fiscal year since the present model was introduced are as follows: 1874, 29,539; 1875, 26,903; 1876, 15,144; 1877, 7,050; 1878, 13,005; a total of 90,640, or an average of 18,123. Taking the actual interest paid by the Government for its money and the real taxation of property about the armory Col. Benton shows that the proper amount to be charged on the 90,640 arms made since 1873 for taxes and interest was \$2.92. The balance sheet of the armory for the year ending June 30, 1878, shows that the cost of each was \$14.18. This includes cost of proof and inspection, items that do not enter into the price paid to private manufacturers.

Attached to the report are complete statistical exhibits of the costs of making arms since the armory was established in 1795. From 1808 to April 15, 1872, there were issued to the militia of the several States 680,686 muskets, rifles and carbines, and during that time \$3,103,494 had been expended in permanent improvements. During the war 805,537 rifle-musketts were made at an average cost of \$11.70 each. The cost of contract arms during the same period was an average of \$20 each, and with the cost of inspection made the rate \$9 more than the Government arms, or a total saving during the war of \$7,249,833, or more than twice the cost of the armory paid since its establishment.

THE MASSACHUSETTS RIFLE ASSOCIATION.

While the National Rifle Association was holding its seventh annual meeting in New York, the fourth annual meeting of the Massachusetts was holding at Young's Hotel, in Boston. Preceding the heavy, or routine, business the members sat down to the first annual dinner of the association. First Vice-President Colonel Nathaniel Wales presided. Speeches were made from the Chair, and by Captain J. L. Stevenson, Salem Wilder, J. N. Frye, H. T. Rockwell, L. L. Hubbard, W. Parkman and others upon the success of the Association in the past season and the position it has gained as the leading long-range body of the country. One marked

ABOUT THE PALMA.—*Boston, Jan. 8.*—I notice in one of your contemporaries a statement of last year's team—Mr. Bruce—says "that the team of '77 does not know where the Palma is in the same sense as that of the team of 1878." I think Mr. Bruce is mistaken; for the trophy was presented to the team of '77 at Gilmore's Garden; and, furthermore, the consent of the team was obtained before Tiffany sent it to Paris. Mr. Bruce was secretary of the meeting of the team held in his office. When the request of Tiffany was referred by the N. R. A. to the team Captain Weber was chosen to take the personal custody of the trophy upon the death of Gen. Dakin, and the sense of the team was that no member could resign his responsibility or trust. It was never expected that the team was to possess the trophy in the sense of having it in their rooms or to take it about upon their shoulders. It was understood that the presentation was a form, as Palma is simply a symbol; rob it of its halo and what is it? Riflemen are gentlemen, and if they are to be treated as such, they must stand on their own feet, and their honor worth nothing after the victor? When the N. R. A. call for rifleman to come forward and protect the Palma, do they not require of the gentlemen references that they are good and true men? If they prove themselves to be such, let the N. R. A. treat them accordingly. Rifleman have the honor of the trophy as much at heart as the N. R. A., and have proved it, and they now come forward and give their time and money to sustain it when the N. R. A. was in a sore strait. The N. R. A. would be nothing without the rifleman of America, but the head of the State military practice of New York and the rifleman could do nothing in the great international matches without the head. Then let each work for the good of the other, and the distrust that was expressed by the change proposed in the original conditions of the international match last September, and spring upon the team of last month, will be eliminated from our National Rifle Association, and we will all work in real earnest for the best good of rifle practice in America.

W. H. J.

ACCURACY OF EXPRESS RIFLES.

PAULUCKER, R. L., Dec. 30, 1878.

EDITOR FOREST AND STREAM:

I have become somewhat interested in late, through reading the numerous communications in your paper, on the subject of Express rifles, by which I understand a rifle having the Henry's system of rifling and using an excessive charge of strong powder, with a comparatively light hollow-pointed ball. Now, while I have observed a good deal about the straightness of the trajectory of such rifles, I have seen little to enlighten me as to their comparative accuracy. Every one will admit the great advantage of a straight trajectory for sporting purposes, if it can be obtained without impairing accuracy; but that has to be sacrificed to any great extent. I have seen one rifleman attempt to calculate elevation that to guess which direction his eccentric Express bullet is likely to fly, and attempt to aim accordingly.

My observation has led me to believe that in a small bore rifle, say not over .45-cal., a powder charge of one grain to five grains of lead in the maximum that can be used without impairing accuracy. I have a rifle grooved on the Henry system, with which I have grouped ten consecutive shots in a three-inch ring at 200 yards, with a charge of 110 grains powder, 650 grains bullet. With the same charge of powder, and an Express bullet of about 215 grains, the group of ten shots required a circle of twenty-eight inches to cover them.

I should like to know the experience of other rifleman who have tested the Express principle carefully. What would be desirable to know is what diameter of circle would be required to cover ten or more consecutive shots, fired from rest, at say 200 yards, sighting every time—the same as near as possible.

It frequently happens in testing rifles that a few shots will group handsomely together, then one or more will diverge considerably. It is advisable, therefore, to fire not less than ten shots to find the extreme divergence likely to occur. I take no stock in the "compressed air" theory of the explosive qualities of Express bullets. There is not sufficient volume of air to cause any explosion. Hollow-pointed bullets will undoubtedly turn inside out and break in pieces somewhat on striking an object, but it is due to the resistance and friction offered to the forward part, which causes solid but to telescope, and the hollow forward part turning outward. This is undoubtedly of advantage in killing large game, as the shock communicated must be very much greater.

If the Express principle does not impair accuracy to too great an extent, I understand the best yet devised for sporting purposes. I shall be glad to learn that others have obtained better results in the application of this principle than I have been able to obtain thus far.

Yours faithfully,

F. J. KASBETH.

The Kennel.

DR STABLES ON CANINE MATTERS IN ENGLAND.

EDITOR FOREST AND STREAM:

How rare you in America in the canine world. Here in England we are all at sixes and sevens, logger-heads, daggers drawn, or any other mild form of expression you think might represent the state of affairs. Ah! but some of us would cut each other's throats on the sly: don't we love each other just, and don't we fly into each other's arms, and don't we weep tears of joy down each other's backs when we meet. You see we prefer the form of canine friendship when it comes smiling, rather than the onions so carefully hidden in the cuffs of our coats.

There have been several base attempts at murder here lately. For instance, they—that is we, of course—have been trying to kill poor too honest old Kingdon of Colyton for the last five years, but Kingdon lives. The weapons they—that means we—use are plentiful abuse when his back is turned, and plentiful libel when he is company when he comes smiling, as he always does, to the fore. But, Lord, bless your honest soul, Kingdon doesn't mind it. He survives, I tell you. Why, he even gets fat on it, one more proof of the Darwinian theory of the survival of the fittest. But, look here sir, come closer, and lend me your ear. Ahem! the reason I think why Kingdon lives is this: He is a gentleman and a scholar. These are synonymous terms, you say. I grant it, but I assure you *Kingdon* makes the most of them. He is a gentleman, and he couldn't write a line of fair English if you were to promise them—us, you know—a free ticket to the soup kitchen every day they—ahem!—live—lived.

Now, Mr. Lord is another poor devil against whom a conspiracy to live was got up. But Lord isn't Keats. The poor devil exists, smiles, eats and can go to bed at night without half a gallon of hot Scotch in his stomach. I say, though,

wasn't somebody nicely and neatly bowled over the other day in the Lord business? I for one can't help pitying a wretch who causes his henchman to write under a *nom de plume* the venom, etc., he himself had not the manliness to indite. I tell you, sir, that effusion on its arrival at a certain editorial office found its way into Balaam basket with surprising celerity.

Talking about anonymous signatures, do you Yanks use that style of going to work? If not, let me recommend it to your notice. The man you dined and drank wine with last night don't know who calls him a fool and an ass (English terms of endearment) in this morning's paper if you sign yourself Karakukus instead of plain Peter Robertson, and you can meet him with a calm, untroubled countenance, and get invited to dinner again, which is more pleasant than a crowding.

I tell you how we review books in this country and call it honest criticism. Well, then, I could, but I won't this journey, because in the last glaring case of the kind an explanation was given, which I am bound to respect, until the like thing happens again. Bye and bye perhaps I'll put you up to lots of wrinkles in unjust journalism. But here is one which I must tell you now as you may find it come in handy.

To wit: If (first) if thine enemy—call him friend if you choose—has written a book, and if (No. 2) that volume is likely to become an authority, and if (No. 3) you wish to have a stab in the dark at it, and if (4th and last) you happen to be the man who answers the queries, then here is how to manage it: Write a query yourself under a *nom de plume* and sign the answer Ed. Thusly:

Q. Can you or any of the numerous readers of your valuable journal recommend a good book on the dog? I have written under Admiral Scott's work, but it seems full of errors, and I do not think the author knows a dog from a donkey.

LONORAHUA.

Ans. There is such a work as you need preparing at the office of this journal. We fully agree with you in your estimate of both the Admiral and his book.

By the way, a certain clique here, whose bones it may be my unpleasant duty to lay bare another day, has started a new paper (buttermilk, bless them, with the intention of setting the Thunders on fire the way to Sheerness. Perhaps it won't, though. But here is where the laugh comes in, and the pity too. Because its worthy editor once attempted a joke at a bacchanalian party of mixed sex, and because it seemed to take—every one being half seas over—he, the perpetrator, has gone in for wit wholesale. He gets the *London Figaro* and the *San Francisco Newsletter* by heart every week, and when he sits down to his desk he puts his fist in mustard and water—then, tickles him—like a wet sheet around his temples, rubs his face with buttermilk, and begins. But it won't do; a mistake avocation. But I can tell you one thing, sir, his attacks upon your humble servant do make one laugh. When I sit down to peruse this editor's jokes I have to get a servant to steady the chair, lest with backward, calculation-prompted spring I break my neck, and to order my own private piper to play all the while the most heartrending and doleful airs, else these sides of mine would simply split. That's all.

Such is life in the canine world.

By the way, here's a good joke—but no; I won't tell it to you to-day. Yet I could make you laugh. Never mind; don't cry; be good, shut your voice and I'll give you all the fun of the fair, you bet. Thine,

GORDON STABLES, M. D. R. N.

P. S. I declare I've been and gone and signed my name, and I really mean to have taken shelter under a nick. But down it is, down to it I'll stick.

Troyford, Berks, Eng., Dec. 30, 1878.

A PENNSYLVANIA FOX HUNT.

WEST CHESTER, Pa., Jan. 16, 1879.

EDITOR FOREST AND STREAM:

It has become the annual custom for the fox-hunting organizations in this section of the country to hold a meet at West Chester some time during the hunting season, and as this brings together quite a number of gentlemen whose interests are of a general nature as regards fox hunting, the result has always been that satisfactory and enjoyable reunions have taken place.

The well-known Rose Tree Hunting Club, which has its headquarters near the city of Philadelphia, and which includes such prominent sportsmen as the venerable Fairman Rogers, H. H. Kieckhefer, Drs. Harte, Lushe, of Philadelphia, and H. E. Saulnier, formerly of New York, but now a resident of Delaware County, and many other gentlemen well known to fame in the sporting field; and it is natural that it should take the various clubs which convene here on this occasion.

The members of the Rose Tree Club are all uniformed in the regulation English style, hold monthly meetings for business, when a club supper is always partaken of, and ride sleek glossy hunters whose leaping qualities bring them frequently into prominence as successful competitors in hurdle races. When these gentlemen arrive in our quiet town on the day previous to the one selected for the hunt to come off, great excitement prevails in the more juvenile portion of the community, and their scarlet uniforms, staunchly built foxhounds and handsome horses, led by their attendants, the cynosure of admiring eyes, and our more soberly attired local hunters sink into insignificance for the time being.

The hunt which took place here on Tuesday and Wednesday was partly for the benefit of the West Chester Club, and delegations from various other fox-hunting organizations, whose headquarters extended from the Brandywine to Thornbury. The Rose Tree pack of foxhounds, those belonging to Jefferson Shaner, of West Chester, which were awarded a medal at the Centennial, the pack of Jesse Hickman, Thornbury, together with numerous stragglers brought in from here and there, made an aggregate whose numbers promised destruction to any fox whose foot brought them to the venture forth when they were abroad.

The townships included under the comprehensive title of Goshen furnished the scene of the first day's hunt, and as the dogs streamed through the streets at early dawn, followed by three score and ten horsemen all bravely equipped and mounted, it was a sight glorious to behold and calculated to make the blood tingle with the vigor of youth in the veins of veterans of the chase, whose halcyon feet brought them to their doors to gaze as others had gazed on them in days of yore.

But little time was lost in starting a fox, and a cloudy day with the wind in a propitious quarter, presented every indication that the occasion should be one such as rarely experienced even by the most successful fox hunters; but alas, the

hopes of all are sometimes fated to disappointment, and after a tedious and baffling run of about a dozen miles, during which time the fox was seen several times to seat himself on hill tops to await the drawing nigh of the pack, a diversion was caused by a beggarly half-dozen of dogs belonging to another hunt crossing the trail and so losing the fox to the hunters from West Chester, who endeavored without success to start other foxes, but were finally compelled at the close of the day to return to town with the hopes of better luck on the morrow.

This disappointment was partly compensated for by a banquet which the West Chester Club had prepared for their visitors, and the supper hour was pleasantly passed by the tired hunters in feasting, speeches and songs, their couches being sought at an early hour that they might be amply prepared for the fatigues of the next day.

The daybreak of Wednesday found them again in the saddle with fresh reinforcements of men and dogs, the Brandywine hills being made the objective point this time, the historic fields of Birmingham soon furnishing a fox, which for trickery and agility is said to have equaled if not surpassed the original cause of all earthly trouble.

Slipping under the fence from one side to the other, he baffled the good intentions of the hounds in a manner very annoying even the best natured, brought to leading the field a tireless hunt, finally left them in the vicinity of Chad's Ford, after which nothing further was seen of any representatives of the Reynard family.

The combination having been so unsuccessful then dissolved partnership, the different divisions returning to their respective places of abode with the hope that at their next annual meeting the Fates should be more propitious and the foxes more unsuspecting.

ESOLAPUS.

CANINE OVARIATOMY,

ARTICIA, N. Y., Dec. 20, 1878.

EDITOR FOREST AND STREAM:

I have been very much interested in the various articles which have appeared in your journal relative to canine surgery, and particularly ovariatomy; and while I appreciate the necessity for a "canine surgeon" standing upon his professional dignity in all matters surgical, medical, or pertaining to his profession, still it seems to me that this matter is a very simple one and seldom attended with danger. When we remember the mutilations which dogs undergo for scientific purposes, and the almost invariable and rapid recoveries which they make, I am led to remark that the operation of ovariatomy is quite simple and requires but little anatomical or surgical knowledge. If you are not familiar with canine surgery, or are in doubt as to the truth of my statement, please call at the physiological laboratory of Prof. Flint, Jr., at Bellevue Hospital, witness a few operations on the doctor's pets, and you will be surprised that dogs can be literally dissected alive and yet in a few days be entirely well. The great plasticity of the blood, the readiness and rapidity with which clots will form in the wounds, and the rapid organization of this new material, is a fact well known to scientific men. The cat, rat, wolf, fox and lower order of quadrupeds generally, bear operations well. The shock is slight, and if the patient be brought well under the influence of an anesthetic, so as to prevent struggling and injury to contiguous parts, there is no reason why any intelligent person cannot perform the operation successfully. I have removed one of the kidneys from a dog, and in a few days the dog was perfectly well. I have cut down upon the stomach, introduced a silver canula into the stomach, brought the canula through the external opening, and in a week the dog was well; and with a fistulous opening into the stomach I have removed the entire spleen, with no other effect than to give the animal a ravenous appetite, or perhaps an unusual ferocity of disposition. I have performed many operations on the lower animals for experimental purposes, and I never have killed but one pup, and he died from strangulation through the carelessness of my assistant. Long ago, before I acquired any anatomical knowledge of the relation of the different organs in the pelvis of the dog, or had in any way familiarized myself with the surgical relations of the various parts, I was taught by an old English gentleman how to remove the ovary, and I have followed his directions ever since. It is true that we killed a young bitch to verify the truth of the gentleman's statement, but it was not a necessary procedure. I will give the opinion as demonstrated to me, and I will vouch for the fact that I never have been disappointed in the result. First, bring the bitch well under the influence of ether; then place her on her back; then spread wide the thighs and introduce a large blunt-pointed, curved wire probe into the vagina; carry the probe backward and upward toward the mesial line, and feel the point of the probe about two inches above the pubis, then place the finger firmly on the point of the probe; now run up one or two fingers, and cut down upon the point of a probe; pass the probe through the opening and you will find a Y-shaped tube projecting; the probe is in the lower part of the Y, which is the vagina of the bitch. The two lines which pass upward to form the upper part of the Y are the fallopian tubes, and lead directly to the ovaries. Seize these tubes, pull them out slightly, pass a small wire hook into the ovary and around a half length, and then be drawn away. Follow the same plan with the other fallopian tube and ovary. When both tubes and ovaries are out of the abdominal cavity, draw slightly on the vagina and cut it off. Bring the edges of the wound together, make the edges closely, and have by four or five sutures passed through and through. Chain up and two, give the bitch a preventive her pulling out the sutures and possibly producing a hernia. In a week she will be entirely well. I have performed this operation frequently, and have followed in detail just as I have given above. It is simple, devoid of technicalities, and any person who will intelligently follow my directions will be able to operate successfully. These are matters, I believe, in which I take much interest, and as time, ineluctable and opportunity present, I will look over my well-filled, well-kept record, and if I should find them in subjects of sufficient interest, I will gladly give them to the public through the medium of FOREST AND STREAM.

Caniney yours,

ARTICIA.

With these few facts I shall entirely drop the discussion, unless publicly assailed, when I ever stand ready to defend my position through the press in a gentlemanly manner. If you consider these remarks worthy of a place in your paper please insert.

J. H. WHITMAN.

BREAKING DOGS ON GROUSE.

GOSNEY, Mass., Jan. 6, 1879.

EDITOR FOREST AND STREAM:

In your issue of Dec. 23 I notice that your correspondent, Everett Smith, claims that my reference to dogs worked on the prairie is not to the point, because he says his "remarks were intended to apply to young dogs, and were made on the assumption that those dogs which had experienced work upon game, even if for but one season, were already broken."

And yet in the final summing up in his first, and also his last article, he says, "But after a dog has been broken on other game, he can break him on ruffed grouse." Now, I will leave it to the brethren of the sporting fraternity to say whether they would not infer that a dog had had the benefit of one season's training, at least, to entitle him to the appellation of "well broken."

Nevertheless, the stubborn fact remains that open country work with all the liberties usually allowed) sadly unites a young dog for the close, fine work required in successful ruffed grouse shooting. While, on the other hand, a dog that is first broken on this bird never ceases to exhibit the beneficial effect of the rigid discipline required at the start when afterward worked on other game. Mr. Smith admits that his friend, with dogs of "superior noses and unexcelled stanniches," will not allow them to hunt this bird, but calls them in. Are we to infer from this that in a country where three-fourths of the game is ruffed grouse we are to dodge them in this way, because a little more labor and skill is required at the outset to have the dogs capable of hunting any and every game bird in good style? I will venture to assert that those dogs were not first thoroughly trained on ruffed grouse, for if they had been we need not fear for them on either bird or any other game in the country. As regards the claim that dogs are apt to contract bad habits when first broken on this bird, I do not consider that there is the least danger of it if they are properly handled at the start.

RUFFED GROUSE.

BREAKING DOGS.

WISCONSIN, Minn., Jan. 6, 1879.

EDITOR FOREST AND STREAM:

I have taken much pleasure in perusing Everett Smith's letter, in your issue of Dec. 26, upon the subject of ruffed grouse hunting. My attention was called to his letter by the heading, "Breaking Dogs on Ruffed Grouse," and, although interesting, it falls in supplying the information many sportsmen on the prairie of Minnesota desire. We love to read of the fine feats performed by the intelligent dog. We admire his action in the field, and love his companionship at home, but we lack the knowledge of educating him. Sportsmen here have what are termed good dogs, and we can bag plenty of game with them, but none are skillfully trained. They are taught what the sportsmen learn by experience must be done to secure game, but we have observed that a more thorough training would enable us to bag greater numbers of chickens.

No doubt Mr. Smith's letter would be better appreciated by those familiar with well-trained dogs than by me. Evidently the gentleman is an adept in the training of dogs, and he certainly is a happy writer, and he could not more profitably entertain many of the Western readers of the FOREST AND STREAM than by imparting through its columns such ideas as would enable sportsmen to teach their dogs "in the way they should go." What should a dog know? How shall we teach him? I believe Mr. Smith would put many sportsmen under obligations to him if he would write a letter or two upon the education of dogs. Certainly there are many people in Minnesota who would thank him gratefully for imparting this knowledge.

We have had a fine hunting season. Prairie chickens in great numbers have been killed. Our hundreds of lakes abound in aquatic fowl, and as late as the 1st of December geese and brant were numerous. We have but little game in winter. There are, however, a great many wolves and foxes, and those who love to follow a hound over the prairie sometimes enjoy a fine morning.

The mercury reached forty degrees below zero on Thursday the 2d.

HUTCHINSON.

FIELD TRIALS AND THEIR INFLUENCE

EDITOR FOREST AND STREAM:

NASHVILLE, Jan. 8, 1879.

If the result of field trials has been the means of inciting the sporting fraternity to paying more attention to breeding and rearing dogs in other parts of the country, as has been the case in this State since such trials were first held here, there can be no doubt of the exceeding usefulness of them. The Southern man has been used to the gun from childhood; the savage nature of the country, and the great abundance of all kinds of game, being no doubt the cause of it. This very abundance of game has made him, however, careless about his dogs, they being, as it were, unnecessary to his sport; but as the country has become more thickly populated, game is scarce, consequently the more science is required to secure it. Setters and pointers are now as common as they were uncommon when I was a boy, and a trained dog is almost as necessary to the sportsman as his gun. Where the field trials must prove so beneficial to that they bring together large numbers of the best known breed of dogs, and give an opportunity of seeing the respective merits of each, and in facilitating the crossing and propagating of those breeds best suited to the different sections. One great point in such trials is to have judges selected from among such men as are above suspicion, and who are practical hunters themselves. In the last field trials held here, that lucky choice most have been made. I say so because there were dogs of grand reputation here from all parts of the country, and some very close matches were run—instance Luther Adams' Drake dividing first and second honors with Mr. Dew's Joe, Jr., though one dog was from Massachusetts the other from Tennessee. Mr. Nicholson, of this city (a thorough sportsman), had two dogs entered in the same stake, one of which he was confident would secure one of the three prizes, yet when he found the judges to have decided differently not one murmur was heard, nor did I hear from any one of the many present a solitary word of dissent; this is as I should be. The best dogs were all present and present. They enjoyed the recreation, and followed the dogs with as close interest as though they were the owners. From the general expression of satisfaction at the close of the trials, I have no doubt that the meeting to take place here in January, 1879, will be attended by the most of those here last year, and a great many more besides.

John Gillett has been having some fine sport done in Giles County. Mr. Gillett is a trainer of some considerable reputation about here. He has now in training some fine puppies—Rayor Geddes' red Irish setter Clint, Mr. Brooks' black dog, Mr. Dew's black male setter George, Mr. C. W. Smith's pointer, the Duke, and J. B. Nicholson's black and orange setter bitch. Mr. G. says birds are very plentiful and rabbits without number.

J. D. H.

SNOW AND SALT.—The Boston Board of Health have wisely prohibited the use of salt to clear the sidewalks and crossings from snow and ice, believing that its use was a prolific cause of the coughs and colds so prevalent just now. The accompanying slips show that the practice is perhaps as injurious to our canine friends as to ourselves:

To the Editor of the London Daily News:

Sir—As a good deal is being said about the use of salt for thawing snow, etc., I thought it might be interesting to relate what effect I myself observed the combined snow and salt to have on two dogs a day or two back. Happening to stand still for a few moments on a portion of pavement where the snow had been thawed by salt, I noticed that the larger of the dogs with his legs holding up and licking one paw as if in pain, raised his dog's paw, but it was uninjured; but directly it was set down the animal began lifting one hind and one fore foot alternately, and seemed with difficulty to replace them on the ground. The smaller dog likewise raised one paw and began yelping piteously. The dogs soon recovered the use of their limbs after leaving that part of the pavement, though at first they limped along in curious fashion. They are hardy dogs, and used to ordinary cold, but the excessive cold of the snow and salt seemed to have numbed their feet.

I am, sir, your obedient servant,

N. T.

To the Editor of the Boston Daily Advertiser:

We need not go to London for testimony in regard to the effect of salted pavements; I can add mine to "N. T.," as reprinted by you yesterday from a London newspaper. On two occasions, each time on a salted pavement, I noticed my dog go lame in our streets, about fifty days ago. He would stop, lift his legs from the ground, lick his feet, and show such evident signs of pain that a by-stander called my attention to it, and I examined the dog's feet carefully without discovering the cause, which I now understand. It is needless to say that this only happened on the salted snow, and has not been observed since.

L. C.

HOW TO ADVERTISE FOR A LOST DOG.—There is more than one way to advertise for a stolen dog. The novice writes a notice something like this one which appeared in a morning paper last week under the column of

LOST AND FOUND:

A **SHITZ DOG, OF THE YELLOWISH CAST, ANSWERING TO THE NAME OF "JACK,"** is missing since Saturday before last. Anybody presenting it at 191 West 35th will be properly rewarded. No questions.

Such an advertisement may bring the dog. But the experienced owner of a much-stolen dog knows a trick worth two of that. When all other methods fail, something like this is sure to recover the property. Insert under the column of

REWARDS:

\$600 REWARD WILL BE PAID FOR INFORMATION LEADING TO THE CONVICTION OF THE THIEVES WHO STOLE, SATURDAY before last, a spit dog, of the yellowish cast, answering to the name of "Jack," from 191 West 35th.

That frightens the guilty parties into the belief that they are harboring dangerous property, and, quaking in their shoes, they soon make overtures. But the professional dog-thieves are not to be caught with such chaff as this. They are up to snuff.

BREAKING DOGS.—All that is really necessary in the breaking of dogs, is a thorough knowledge of what constitutes a good dog and the manner in which it should work in the field, added to such judgment as will enable a man to determine between the different dispositions and characters he has to encounter. Few can be handled precisely alike; some are timid and need encouragement, others are headstrong and demand strict, and at times even severe treatment. An absolute command of temper must be observed by the instructor during his teachings so that not an unnecessary blow may be given; for work done cheerfully and with a desire to serve and benefit the master, is one hundredfold better than service performed grudgingly or only through compulsion.

A puppy should have but one teacher, no matter how close the methods of two trainers may agree; he must learn your voice, your manner, your very look; therefore, if you determine to break your dog, do it entirely yourself; do not break down in the midst of your labor and leave it to be finished by another; the result will never be favorable.

From the beginning attend to the feeding of your youngsters yourself, and if possible, let all food be taken from your hands. This is advised that the puppy may the sooner attach himself to you alone and look upon you as his master, for no dog, either setter or pointer, should ever be loaned or hunted by others than his trainer; therefore the breaking of all field dogs is better done by the sportsman himself, provided he possesses the requisite patience, and can devote to it the necessary time.

The check cord will be found of far greater assistance than the whip, the most unruly and headstrong animals being readily brought under subjection by it, while at the same time it can be so applied as not to intimidate. Always bear in mind that the dog should not be coerced, but that he should understand the fault for which he is reprimanded. Punishment becomes absolutely necessary at times with some dispositions, and that too of the most severe character; but you must be satisfied that the act which demands it was committed with full consciousness of its wrong. Where you see a dog responding to command in a cringing and supplicating manner, you may know that his master possesses an ungovernable temper, unfitting him for training or managing any animal possessing consciousness. Such a dog has been unmercifully dogged, perhaps kicked, before he has been taught and made to understand his line of duty, and fearful of a repetition of the lash, for what he knows not, obeys the summons crouching and creeping, an object of sympathy to the beholder, while his master is viewed with disgust.

From the moment you come into possession of your puppy, say at three or four months of age, lessons of obedience may be given at feeding time, before you undertake the more difficult part of yard or in-door breaking; in fact, whenever you may choose to offer him food, by placing it before him and not allowing it to be touched until ordered, slightly tapping him when greediness or a non-regard of your command is observed, persisting until you feel he understands nothing can be gained by disobedience.

The first important lesson to be given is that the puppy shall charge or drop at command, retaining his position until permitted to rise by the order "hold up." Very few dogs in

this country are trained to absolutely go down at the report of a gun, or as it is called, drop to shot; most sportsmen are satisfied if their dogs do not break and rush for the game the moment it is killed, and charge at the word, remaining until commanded to fetch, or keep the upright position until the gun is reloaded and they are ordered to move on again.

Notwithstanding so few dogs are broken to drop to shot with us, it should be done in every instance, as it undoubtedly leads to great steadiness in every active point, and acts as a check on any desire the animal may have to break in and in the mouth game when fallen; for in the excitement of the moment, the sportsman may neglect to give the order to drop or charge when he has brought down his bird, and the dog being left to act as he chooses, naturally moves toward it also, which, if too often repeated, will certainly unsteady him; hence the necessity of teaching to drop to shot, which, with very little trouble, may be accomplished by the following method:

Fasten to your dog's collar a strong cord thirty or forty feet long, and take him into a yard or lot, where no one will be present; secure the loose end to a short stake firmly driven in the ground; place him in a crouching position in front of you and keep him there, meantime exclaiming "down!" or "charge!" The moment you remove your hand, he will, of course, attempt to rise, but foil him immediately with a sharp jerk of the cord and an imperative "charge!" until he obeys, after which encourage and caress, allowing him to rise, using the words "hold up!" You may now make use of the cord in a more forcible manner, as a reminder that your command must be obeyed. Take the dog to the stake, and make him charge there, not allowing him to move while you slowly walk from him. Go a few steps beyond the distance to which the rope will allow him to come, and tell him to hold up. He will naturally run toward you, when, just as he reaches the end of his tether and receives the jerk, cry "charge." This teaches quick and prompt obedience to the order.

It is time now, supposing that you have thoroughly inculcated this lesson, to have the dog learn that the holding of the hand aloft is equivalent to the verbal order to drop, and from the start it would be decidedly better to always uplift the hand when the command is given, practicing him until the signal only is required to cause him to charge promptly. In the same manner, charge, dropping to shot be taught by firing of a pistol and instantly jumping the dog and saying "charge," but it is best to commence with the cast net, advancing to very small loads, and gradually increasing to full charges. The dog must fully understand to be perfectly broken in this particular—that the uplifted hand means he should charge, no matter how far he may be from you in the field; and likewise that the report of the gun has a similar signification.

In these lessons patience must be studied, and the dog forcibly impressed with the necessity of obedience, without being cruelly treated; on the contrary, praise and caress him when he does well, but then only.—From *Hallock's Sportsman's Gazetteer*.

NEW JERSEY FOX HUNTING.—Editor *Forest and Stream*: During holidays there was lively fox hunting in Morris County, just above Berkshire Valley. Mr. Maryland Smith killed three one day in front of his dogs, and, by himself and neighbors, several were shot during the week. Smith has ruffled dogs, that make a fox buzz from the score until the gun goes off. His Old Irish setter, named "Old Yellow," is one of the most successful fox hunters I have ever seen. When the scent will lie at all, any time of the forenoon, he can "bounce" the fox in a short time on the right track. A gray fox, a little fleshy, cannot stand the punishment of the run these dogs will give him more than one or two hours before he will take to tree or hole; but the red ones, this month and next, during rut, the males, can accommodate the best dogs living with a two-days' trot, and laugh at them half the time in rocky, mountain running. No country ever raised better fox dogs than Jersey, and I have seen some of the noted ones run—Jas. Bush's old fox, Abe Joraleman's old Phil, Bloomfield Leard's old Zac, Jas. Campbell's Boston, Europe and Drive, and many others—twenty-five years since, equally renowned for skill, speed and endurance; and the entire lot, started at one time at this time of year when the fox is thinned down, could catch a red fox by fair play. This fox hunting on Long Island and Mont. Clair, N. J., amuses old fox hunters—dragging a smoked herring, leading around a tame fox, or perhaps occasionally letting a tame one loose. Year before last Joe Donahue and "Gim" Campbell took the Bennett party up to the Ridge west of Mooncock Swamp, with about twenty dogs. After a short time Campbell started a little half-grown cub of a red fox and got the dogs on. I would not pretend to picture the time as portrayed by "Gim," but suffice it to say the fox shook off men and dogs in almost no time.

Newark, N. J., Jan. 6.

STANFORD-BONE.

DETROIT NOTES.—L. H. Smith, who won M. S. Smith & Co.'s capital prize—an elegant silver cup—for the best kennel of setters at our recent bench show, has donated the cup back to the managers to be used as a prize at our next bench show. J. N. Dodge, of this city, has sold to John E. Long the Leicester-Rose whelp, Cash. He was shown at our recent show with his dam and sister, in class 4—best English setter with progeny under eleven months old—winning first. He is a very elegant white, black and tan, and has some of the older heads take a back seat in the future. E. F. Whitman has lost his entire Druid-Mell litter of puppies.

DAVID.

NASBAU KENNEL CLUB.—This is the title of a club recently organized in St. Louis, and of which A. A. Mellier, Jr., is President and W. G. Mellier is Secretary. The specialty of the club will be Gordons, of which breed they already have a fine collection, and we are indebted for a picture of their champion Nell.

—The game claimed by Mr. H. A. Wilson, Silver Lake, Kansas, for his back, white and tan setter dog by Pedigree out of France should have been Grouse III, instead of simply Grouse.

—Mr. Fred M. Barnard, of Boston, claims name of Hindoo for his Siberian bloodhound by Al Wats' Champion Nero out of Wm. Muller's bitch.

—The name of Hector having been claimed by some one else, Mr. Alex. Pope, Jr., of Boston, withdraws his claim to it and takes instead the name of Hunter for his Elcho-Rose puppy.

—Dr. Edward J. Forster, of Brist n, claims the name Pinnare for his fox terrier bitch pup, w. elord December 2, 1873, by Watts' Turk (Rag-Vanity) out of Watts' Vixen.

—Mr. T. T. Sawyer, Jr.'s (of Boston) Gordon bitch Nellie whelped, on the 11th, ten dogs and three bitch puppies. Sire, Fred A. Tait's Gordon dog Dorr.

—Mr. J. H. Whitman's fox terrier bitch Fashion gave birth on the 13th inst. to two whelps; a very handsome evenly marked one, with black and tan head and white body saved. Notwithstanding he has withdrawn from exhibitions he will still continue his experiments to improve the canine according to his own ideas of breeding.

The celebrated Irish water spaniels, Barney and Judy, have been ordered from J. J. Skidmore's Kennel by a noted Western sportsman, and may soon be expected in this country. Judy will be bred to Patsey before leaving England. Patsey is brother to my bitch Lilly.

PRAIRIE OIL.—In March, 1878, I received a severe injury by stepping from a Fourth Avenue car while in motion, and the only remedy used for relief was "Prairie Oil," which acted like a charm. T. C. BANKS.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.
Pompano, *Trachinotus carolinus*. Spanish, *Ephippagrus nigritus*. Drum (two species). Fatmily *Sciaenidae*. Trout (black bass), *Centropomus viridis*. Rockfish, *Sebastes*. Sea bass, *Sciaenops ocellatus*. Sheepshead, *Archosargus probatopterus*. Pickerel, *Lutjanus jacksoni*.

FISH IN MARKET.—RETAIL PRICES.—Bass, 25 cents; smelts, 6 to 10; bluefish, 12½; salmon, 30; mackerel, 20; shad, 40; weakfish, 12; white perch, 15; green tartrac, 14; terrapin, 13; frostfish, 6; halibut, 18; haddock, 6; codfish, 6; blackfish, 12½; flounders, 8; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 25; scallops, \$1.50 per gallon; soft clams, 30 to 60; whitefish, 18; pickerel, 18; salmon trout, 15; black bass, 18; muscogallon, 18; red snapper, 22½; pompano, 60; smoked haddock, 10; smoked salmon, 18; dry cod, 7; hard cods, \$2.50 per 100.

There was received in Fulton Market last Wednesday a pompano weighing 16 pounds. It was caught by Capt. Latham, of the fishing schooner *Lillian*, while fishing off the reefs of Florida below Fernandina. It was forwarded to the Smithsonian by E. G. Blackford. The largest pompano on record previous to this one weighed 6½ pounds.

MOVEMENTS OF THE FISHING FLEET.—It has been rather a quiet week, there having been but six arrivals, and these from the Banks, bringing in 130,000 lbs. of halibut. There are some thirty sail engaged in the Bank fishery and twenty-five in the Brown's Bank, La. Hare and George's fishery. A large fleet of Georges bank men will soon be under way, which will give some activity to the business.—*Cape Ann Advertiser*, Jan. 17.

MASSACHUSETTS.—New Bedford, Jan. 17.—It is close season with both game and fish, the latter latter consisting of a few icebergs on all our harbors and rivers; no fish in market except eels, tom cod and a few codfish. During the severe snow storm this week I saw a flock of the snow bunting, rather a rare bird in this locality. COXONIA.

KENTUCKY.—Stanford, Jan. 10.—An item in a late issue of your paper recalls a novel incident which may be deemed deserving publication, especially as it is given on authority of a member of the clergy and other truthful individuals. Some years since our veteran slather, Dilexy, was fishing near the Cow Ford, in Rock Castle river, when a whale, after a few minutes, carried away his hook and nearly a foot of his new grassline.

It was during those days when Dilexy knew no more about the science of angling than he does now, and he had neither gut nor gimp seals, though dabbling in a stream famed for jack and salmon. Fortunately for the hero, a phlegmatic companion corroborated, in a measure, his extravagances about the encounter, by quietly pronouncing it a good one, and the fame of that particular pool was increased. The following season, old Hopwood, who is a professor of the happy capture of a lively jack of seven pounds weight, from that very rock upon which Dilexy had had a tussle with the biggest one in the river. While dressing his fish by-stander directed attention to a small trout on one side, and a careful incision disclosed a hook and two or three inches of line still attached, neatly scalloped between skin and ribs. Dilexy's legend was faintly recalled, and when the hook was line were shown him he immediately recognized them, without having an intimation or a suspicion as whence they had been brought. Doesn't the attachment of line prove that the hook must have passed through the stomach?

KENTUCKIAN.

TENNESSEE.—Nashville, Jan. 14.—A stranger walking through the streets of Nashville would come to the conclusion that its citizens were great fish eaters, judging from the quantities exposed for sale. Sulzbacher has salmon trout and Mackinac trout from the North; grouper and red snappers, red fish, sheepshead and lake trout from the Gulf. Oysters in bulk sell here for about the same price as in Baltimore. Besides the above must be mentioned the fish taken from the Cumberland and Reelfoot Lake. J. D. H.

STURGEON WHICH TAKE A HOOK.—*Lake City, Jan. 11.*—Mr. Editor: Your interrogations at hand, and in reply would say that I know of two shovelnosed sturgeon being caught with a hook and line. One I took myself, but do not believe that either bit at the baited hook. They were simply routed about the bottom and caught foul in the nose, about half-way from the mouth to tip of nose. Being hooked in this way they gave tremendous jumps, and it was scarcely possible to bring them to gaff. No instance is known here of their biting at the hook. We have no record of this singular fish occurring in any waters on the globe (as far as I can remember) except the Mississippi and its tributaries.

Respectfully yours,

Dr. D. C. ESTES.

MOONSTRUCK FISH.—*Editor Forest and Stream:* Moonstruck fish are not all moonshine, as I myself can prove from actual experience. It happened when I was whaling in the good old

ship *Marla*, of Nantucket, in the South Pacific Ocean, some time in the year 1848. We had caught quite a large number of ship-jacks (as whale-ships always have a plenty of) for taking small fish, which are in the habit of running around ships in mid-ocean, which, as soon as caught, were cleaned and spread on the try-works to dry. These fish were caught in the afternoon, and that night we had a bright moon. The next afternoon one other man and myself cooked some of the fish for our supper, and in about an hour afterwards our heads felt as big as barrels and a dizzy feeling attending our mised up, that is, there were strange things by nature, and he immediately said it was from eating the moon-truck fish. The effects did not last very long, as we were all right again in an hour or so. These fish went overboard as fast as many willing hands could throw them over. The effects of the moon at sea is well known to sailors, so much so that you cannot a sailor to go to sleep on deck with the moon shining on his face. I have never seen any of the moon-truck fish since (effect on land). I don't think there is any fish from the moon shining on the fish, but it gives them a phosphorescent glow. Now, why is it that porpoises when lung in the rigging will get a hard glaze of flesh on the outside, and will then keep going for a number of days, even in very warm weather. I can say, as the Dutchmen did when their King Charles spaniels got mixed up, that there are strange things by nature, and he was a New York Dutchman too. W. K.

Albany, Jan. 18, 1879.

But did the moon or the hot weather spoil the fish? We are awaiting the test proposed in these columns last week by Prof. Goode. Meanwhile, let us hear from others.

WHAT WAS HIS LEADER MADE OF?—We have received the following note from a Lynn, Mass., correspondent, who is moved, it appears, by a double motive—to confine even our humorists to the strictest verity, and to preserve the lives of numerous innocent felines, whose natural term of life might be shortened were Mr. Warner's humor to have full course:

In last his delightful little work, "In the Wilderness," Mr. Charles Dudley Warner has given the following words in his sketch called "A Fight With a Trout."

"The leader" (I am very particular about my leaders) had been made to order from a domestic animal with which I had been acquainted. The fisherman requires as good a catgut as the violinist. The interior of the house-cat, it is well known, is exceedingly sensitive; but it may not be so well known that the reason why some cats leave the room in distress when a pianist plays is because the two instruments are not in the same key, and the vibrations of the chords of the one are in discord with the extent of the other. On six feet of this superior article I fixed three artificial flies * * * * And Luke shoved off and slowly paddled toward some ily pails, while I began casting."

Mr. Warner is a versatile writer, and has always been regarded as a disseminator of useful and practical truths among the youth of America, by whom he is largely read. Now, to have the coming sportsman think, and perhaps think, of some unsophisticated countryman, whose inequities prompts him to ask the young man "What might that be made of?"—as said young man is on his first trip to "The Lakes,"—and, as they always do on their first trip, bring out their fly-books on the steamer or in some country tavern and make a grand exhibit of their flies, usually valuing the fourth platoon of Egypt in number by the number of the fin, the fin and variety of their colors; and to have him inform this inquirer, as he arranges his gaudy feathers and distributes them along at intervals on his leader, that said leader is made of "catgut" is certainly too bad.

I am not in love with cats, and it is not to save them from destruction and perhaps annihilation by the young sportsman who have been misled by the author of "My Summer in a Garden," a book looked upon by the farmers of our land as a standard work; neither do I expect the fisherman of to-day to be taken in by any such nonsense, especially if he has arrived at the supreme felicity of a "seven ounce split bamboo." He knows better. But that the rising youth, who will follow in our paths and whip our depleted trout brooks, may not grow up in ignorance on so important a matter, I hope Mr. Warner of his future editions of his work will give the correct definition of what a leader is made of, and that in the future he will not take so much license for the sake of giving his readers a little facetiousness. E. J. THOMSON.

VIVIPAROUS PERCH.—Viviparous or sapphire perch are very abundant along the Pacific coast, and will bite at hook baited with anything. The sapphire perch (*Agassiz*) is perhaps the known, a fish from eight to eleven inches in length. Its body is compressed, oval and covered with scales of medium size, which are peculiar in being cycloid. Another peculiar, and, indeed, unique feature, is that at the base of the long dorsal fin are two or three rows of scales separated from those of the body by a rather broad and deep scaleless furrow. The anterior part of this fin can be folded back and concealed. The female genital apparatus in a state of pregnancy consists of a large violet bag, so transparent that one can distinguish through it the shape, color and formation of the small fish with which it is filled. The fish when ready to escape are miniature of their mother in shape and color, and fitted to seek their own livelihood. This genital sac seems to be nothing but the widened lower end of the ovary; and the pouches into which it is divided are merely a part of the ovary itself. In each of these pouches a young one is wrapped up in a sheet, and all are packed in tightly. It is, therefore, a normal ovarian gestation. The external genital opening is situated behind the anus. As many as nineteen young have been found in one fish. The males are not quite as large as the females, either in length or circumference.

There is a great variety of these fishes, differing much in size and color. The following are the species generally met with:

E. webbi.	Girard.	E. cassidii.	Girard.
E. lineata.	Girard.	E. ornata.	Girard.
E. argyrosoma.	Girard.	E. perspicillata.	Girard.
Phanerodon furcatus.	Girard.	Damalichthys caeca.	Girard.
Heterostichus rostratus.	Girard.	Abura trilineata.	Girard.
Holomonotus rhodoleucus.	Girard.	Igysiocarpus traskii.	Gibbons.
Eusithichthys megalops.	Girard.	Amphileichthys argenteus.	Agassiz.
E. hermanni.	Girard.	Amphileichthys similis.	Girard.

The silvery perch (*Damalichthys caeca*), never takes bait. It is of a grayish olive color; scales have a silvery and a golden metallic tinge. The male carries the sac on the anterior third of the anal.

The golden barred perch (*Holomonotus rhodoleucus*), is the most abundant species of the family. It has a small mouth, sub-conical head, large eyes, and the colors vary from a bluish gray above to a silvery white, with three transverse

bars of golden on the belly and sides. It arrives in immense schools as early as May, keeping close to the surface, so that it can be readily taken freely at a hook baited with salmon liver; but the mode of catching it as practiced by the Indians is to push their canoes among a school, and as it is least afraid of the water, the canoes are filled in a short time, especially when the fish are crowded toward the shore. It leaps to its death quite frequently, without any other motive than sportive phylulines. It has rather good edible qualities, but this does not induce fishermen to seek it. There are quite a number of other varieties; all are good pan-fishes.

When scientific attention was first attracted to them, four and twenty years ago, it was generally supposed that the discovery was a new one, but that was a mistake. In 1769 a transit of Venus was to take place on the third of June. The event was of such importance that an expedition was sent from Paris to observe the transit at Cape St. Lucas, at the extreme southern end of Lower California. After the astronomical observations were finished the party went up the coast some distance. On their return to Paris the naturalist of the expedition reported that on the coast of California were found sea perch which had their young alive, and when the small fish were squeezed out of the parent they would swim with great celerity.—*From Hallock's Spotbaiter's Gazetteer.*

FISHING THROUGH THE ICE.—A. Danville, N. Y., correspondent, who writes of snow storms and winter blasts, and seconds our suggestions as to the precautions for the preservation of the game birds during the winter months, gives us some account of the sport now in season at Honeoye Lake:

Notwithstanding the fact that winter is here in earnest and the closed season on game has commenced, and we in the country are housed up, engaged in the pleasing pastime of reading and petting the children and dogs, we need not fill our gun barrels with tallow and put them away for now is just the time for running hares and foxes, and the fish of the former is never more delicate than in January, while the latter, speck and trout, brace up; put on rubber boots, fur cap and top coat; call the dogs, and away to the favorite runway, and the music of the hounds will soon drive all thoughts of snow and cold from your mind.

But we inland people, particularly those of us living in the vicinity of that chain of small lakes straggling through central and western New York, have another string to our sporting bow that yields us joyfully in winter. I refer to fishing through the ice for pickerel. Imagine a load of, say four good men and true, bundling into a pung, which contains, besides innumerable wraps and traps, two large milk cans well stored with live minnows for bait. Off we go to the music of the mellow sleigh bells, enveloped in a fragrant cloud of "Vanity Fair," and after a twenty-mile ride across the white-robed country, smoke rising from capacious chimneys, a species of ragged lads and winsome lassies gathered about the hearth-stone, discussing apples, cider and the latest country gossip, we arrive at H's, on the shore of Honeoye Lake.

We have been expected, as the good man's hearty welcome and the good wife's great pans of doughnuts, huge brown loaves of home-made bread and solid rows of mince pies greasing the pantry shelves, testify. Ah! she knows us. An experienced and training pick of half-dozen years has taught her that fishermen have common appetites. She says that our week's sojourn pays a hundredfold in drawing it very mild indeed. Up before daylight, our breakfast of hot buckwheat cakes, coffee, ham and stewed potatoes is soon dispatched, and off to the ice we go. After inspecting night lines and cutting out the ice formed in the holes during the night, the hooks are freshly baited and business commenced. We never have a cold dinner, but rather a cold lunch on the ice (and awful cold it gets too) at noon, and work on until darkness puts a stop to the sport; and fine sport it is watching for the bobbers to fly up, and hauling out the great fellows hand over hand. At night a hot supper awaits us; then come pipes, cider and "Old Sledge" until bed time. And so it goes—this pickering fishing at Honeoye Lake—one day being the counterpart of another, varied a little occasionally by the more or less fish, but the winter sport for home, freighted down with fishy spoil, we are sorry it is over, and mentally calculate how long it will be before we visit old Honeoye again. H. W. D. L.

—See Bogardus' advertisement.

Game Bag and Gun.

GAME IN SEASON IN JANUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Sulps, Ducks and Wild Pori. "Day birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Linnæola* or *Shore Birds*.

—Mr. J. Shaw Margerum, of Washington, Pa., would like to procure a few dozen live quails for propagation in that district, where the winter has been very severe. If any of our correspondents can oblige him they will also oblige us.

A MOVE IN THE RIGHT DIRECTION.—We are glad to publish the following. It suggests the story of the man who "felt for the heathen," and "felt" in the right place—his pocket. T. M. O. writes from Woodstock, Ohio:

I think I have made a move in the right direction for once in my life. I am doing all I can among the farmer boys to have them trap and keep quail during this hard spell of weather. As an inducement I obligate myself to pay 6c a piece for every quail so caught and cared for until I order them turned loose; and I further agree to stand between them and our State law for the violation of its provisions regarding the trapping of quail. The intent of the law is to protect the birds, and I don't believe there is any better way to protect them than to catch them and place them in good warm quarters, and feed and water them well until we are satisfied the severe weather is over. T. M. O.

NOVA SCOTIA.—Halifax, Jan. 10.—Game matters are very quiet just now. We have only just had our first snow—a few inches—so that there has not been much moose hunting as yet. We intend to have a few alterations made in our laws, chiefly in detail, a copy of which I will send you when passed by the legislature. F. C.

Yarmouth, Jan. 9.—The moose increased wonderfully during our three years' prohibition. The snow is too deep now for sport, but there are some butchers among us. S. K. J.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples selected by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

UNION SQUARE.

A FLENDID OPPORTUNITY TO WIN A FORTUNE. FIRST GRAND DISTRIBUTION, CLASS B, AT NEW ORLEANS, TUESDAY, FEBRUARY 11, 1896—1896 Monthly Drawing, Louisiana State Lottery Company.

This institution was regularly incorporated by the Legislature of the State for Educational and Charitable purposes in 1893, with a capital of \$1,000,000, to which it has since added a reserve fund of \$500,000. ITS GRAND SINGLE NUMBER DISTRIBUTION will take place monthly. *It never scales or postpones.* Look at the following distribution:

Splendid kennel accommodations; dogs have daily access to salt water.

COCKER SPANIEL Breeding Kennel

M. P. McKOON, Franklin, Del. Co., N. Y.

I keep only cockers of the finest strains. Sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs cannot be beaten for ruffed grouse and woodcock shooting and retrieving. Correspondents enclosing stamp will get printed pedigree circular, testimonials, etc.

The Kennel.

\$500 REWARD—RED SETTER.

By Elcho II., about 17 months old; full size; or red than usual; getting lighter from the back-downward; tall docked about one-third off; the only white on him is on the top of breast bone; very small and has to be looked for to be seen—not a spot but a strip following the bone about an inch. Has same face as Elcho I. Has been absent since 11 o'clock, Oct. 15, 1878. Will pay the above reward for him or information leading to his recovery.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1878. Send for a Circular and Price List.

Gunpowder.

THE HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6x10 lbs. tins. A fine grain, quick and clean, for upland game shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6x4 and 12x16 lbs. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6x10 lbs. and cans of 5 lbs. of FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRADE OF GUNPOWDER, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

55 WALL STREET, NEW YORK.

GUNPOWDER.

DUPONT'S

Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.

No. 1 (coarse) to 4 (fine), unequalled in strength, quickness and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.

No. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE.

A quick, strong and clean powder of very fine grain for Rifle shooting.

DUPONT'S RIFLE, FG., "SEA SHOOTING."

FFG and FFG.—The FG for long-range rifle shooting, the FFG and FFG for general use, burning strong and quick.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mining Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 WALL ST. N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long-range rifle shooting.

Lafin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in 1 lb. kegs, 6x4 lbs. each, and canisters of 1 lb. and ½ lb. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Blazes, FG, FFG and FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6x10 lbs., and in canisters of 1 lb. and ½ lb. All of the above give high velocities and less residue than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wild Shot of the World."

All of the above give high velocities and less residue than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wild Shot of the World."

**PURE TIN-COATED & BURNISHED
DROP AND BUCK SHOT.
AMERICAN STANDARD--EAGLE BRAND.**

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: New York, Jan. 13 1876.
Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have used it, and it has broken up, 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 10-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun.

A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MFG CO., NEW YORK.

IRA A. FAIRBANKS
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that this Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PRESSURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 500. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with 25 in each barrel, and by having a rough surface strengthens the ball, and prevents it from slipping and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now,

I will Warrant my Balls Against Breakage by Transportation.

and will pack 10 extra. I have had 5,000 shipped out. West since my return from England, and not one of them has broken. I have used them in the ball broken, and never over three or four in a barrel. My traps are the best of practice from, and where clubs use them you can readily see which is the hardest shooting. In matches, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot and will follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and further, patronize the man who introduced this sport to the public, and who has been to England twice and shot up the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$1; Field, Cover and Trap Shooting," \$2. HEADQUARTERS FOR THE LEROY SHOT AND LEAD MFG CO., 101 Hart Street, N. Y. City.

Address CAPT. A. H. BOGARDUS, Elkhardt, Logan Co., Ill., or can be had from him wherever he ships. DISCOUNT TO THE TRADE.

THE CROW AND DOVE.

ONE day a crow,
Black as a sloe,
His breast, too thoughts enslaving,
Sat by a stream,
Where, in a beam,
A snow-white dove was laying.

"O, dove clate!"
He cried with hate,
And shook with exultation—
"I'll make you black
As any back
In my denomination!"

From out his breast
He plucked with zest
A plume, where he was sitting—
And fixed the thing
In the pure wing
Of the white dove, unwitting.

And then he dew
The valley through,
And out of grass and willows,
From fence and rock—
A graceless flock—
He called his dusky fellows.

Oh, rich the sight!
With shrill delight
They chattered all together;
"Good neighbors, see!
The white dove—see!
Hath got a smuttied feather!"

From out the woods
They drew the broods
Of doves with their exultating;
Disturbed they stood,
No credence showed,
Nor spake aught to her shaming.

Loud screeched the crows,
The victim roe,
The wind dislodged the feather.
"We judged aright;
The dove is white."
The fair ones cried together.

If true we live
The good will give
Their confidence to cheer us;
When slanderers lie,
And hope would die,
Heaven's searching truth will clear us.

M. E. SUTHERLAND in *St. Louis Spirit*.

For Forest and Stream and Rod and Gun.

Long Lake of Michigan.

"DID you ever notice," asked a driver of a street-car, upon whose platform I stood to-night, with my overcoat-collar turned up to protect my ears from the piercing wind, "that it is colder in winter than in summer?" I replied that I had sometimes thought so. The scientific inquiry furnished a theme for thought, and sitting beside a glowing fire this evening, listening to the howling of the northwester without, I have lost myself in reverie. Ah! yes, it is colder in winter than in summer. The winter of life is certainly colder than its summer. Its frosts chill the dreamy and sweet August breezes and turn to ice the murmuring ripples of the summer joyousness. It stagnates the blood which, leaping and bounding in life's spring-time, flows so vigorously and calmly through its summer. With icy hand it chisels wrinkles upon the face and soul. Its glaciers glide over and crush and mangle the tender flowers of the heart. Its breath is laden with the moisture of death. Verily, winter is cold and summer is warm. Let us enjoy the warmth while we can.

I think of my pet lake and wonder how thick the ice lies upon its bosom, how deep the snow upon its banks, how charming it is in summer, how desolate it must be in winter. It is a perfect *bijou* of a lake. Mr. Hallock missed it by a hair's breadth during his rambles in Michigan in the season of 1877. It lies about twelve miles back from Cheboygan in the woods, about two miles, I suppose, east of Mullet Lake, through which he passed. It is called Long Lake, and lies so off and away by itself that it has been little visited by fishermen. In the summer of 1870 it was told at Cheboygan of its existence, and it was said to be a good place for bass. In

company with two others I visited it, and was more than charmed. We found it beautifully located in the "forest primal," with only one patch of new clearing upon its banks and one small house at its foot, in which lived, the life of a recluse, a mild-mannered man, the stray son of a president of an Eastern college, disappointed probably in love or ambition. He had once attempted a trout hatchery upon a small stream running from the lake, but his establishment had taken fire and burned up and the stream had filled with sand and disappeared; and when I first saw him he was living alone as a sort of hermit, an apparently aimless life, upon the shore of this lake, an intelligent, well-educated, gentle gentleman. Upon my second visit I partook of his hospitality and slept upon the floor of his kitchen. And when I returned last year the grass was growing over his head—consumption having claimed him as its own—and his house was empty.

So little known were the resources of this lake that at Cheboygan we were told there was only one place in it where bass could be caught, which was at a spot where a large tree had fallen with its top in the water, and where the minnows swarmed. This gentlemanly recluse had a boat which he kindly placed at my disposal, and we essayed the tree-top. Fastening the boat to a limb, we proceeded to catch a supply of minnows. I had rigged my line ready for business before we left the shore, and after half a dozen or so minnows had gone into the bucket, I thought I would see if there were any bass there. On the outside of the boat the water was about ten feet deep. I baited my hook and made a cast, and I will take my oath that the bait had not sunk three feet before it was taken. I made four casts and took in four bass in rapid succession, when I was ordered to desist and stop using up the minnows until we could lay in a good supply. The long and the short of it is that we took eleven goodly bass at the tree top and moved on to explore, and we found them almost everywhere about the lake. I don't dare to say just how many we caught, as I have some respect for the advice of "St. Clair," but we all considered ourselves pretty good bass fishers, and we carried away about the middle of the afternoon just all we had any use for, and enough to make a decided difference at the "Spencer" House, where we drove up, and they were lifted out. Last year, when vacation time came, a couple of friends and myself placed a large wall tent, a well-appointed camp chest, a sheet-iron cooking stove in pieces disposed in the camp-chest, and sundry banners aboard a northern transport propeller, and struck a bee line for Cheboygan, and on the day following our arrival we were in camp on the beach of Long Lake, and had everything in apple-pie order, and a man of all work from Cheboygan to do the camp drudgery. Right there we remained a fortnight, which was all a dream of delight. We had two boats—all that were on the lake. We built a small pier, we built a large floating reservoir in which to keep our bass alive, we had a small boat with wire-gauze ends which we towed behind a boat to receive the fish when first caught; we found a pile of boards, which some one had taken to the lake intending to build a shanty; we floored our hut with them, and made a kitchen and dining-room table, with a canopy of boughs such as we used to put up in the old days when we went soldiering; we set up our cooking-stove in the sand, and it worked to a charm. There was not a mosquito, black fly or midge, or "no see'em," as the Indians say, about. The lake was all our own. There was not a soul near except an old woodchopper working in the "clearing," who occasionally visited us to smoke his pipe and tell us bear stories in the evening. He was long, lank, lean and cadaverous, and withal very ragged. He had been a good deal troubled with the "ager," and looked as though it had been the daily companion of his life, and yet he was happy, and loved to sit on the bow of a boat and swing his long legs and whistle and tell us of his real or imaginary woodland experience. His prowess, as exhibited in his numerous contests with bears, was "fearful to behold." His usual and favorite weapon for hunting "bar" was an ax, and whenever he could get one to stand up to him for a fair fight, then good-by bear. He played somewhat upon our nervous systems by representing the woods full of the animals, that the game to the lake nights to drink, were very fond of fish, and would scent the camp a long ways. We always had a good laugh after he had shuffled away to his clearing for the night. We had only to row fifty or so rods from camp to be upon splendid bass and minnow ground; we could catch all the minnows we wanted by enticing them in swarms now, and in a landing-net with a bait, and at the same time take bass in at the other side, with a perfect looseness. They were then in general profusion, so thick that we could only fish an hour or so in the day without sheer waste, and we usually returned to the river all not weighing over 2½ pounds. I often saw a second bass follow right up the boat at the tail of the one on the hook. They were genuine black, as distinguished from the green or Oswego (I am sorry to have my conceptions of black and green bass disturbed by the late article of Professor Jordan, as I have always considered them distinct species, and it don't consort with my convictions of the eternal fitness of things to call a green bass a big-mouthed black, their general style and habits are so different. I shall expect to hear next that a "rocky" is a hump-backed black), and they were as gamy as any I ever saw. We caught, also, about a dozen pickeral, averaging about 8 pounds, which we buried. One incident afforded me an immense satisfaction. There were several American eagles, which seemed to live about the vicinity of the lake, and we occasionally saw

them circling about on the opposite side. One afternoon I had been in the woods across the lake with my gun for pigeons. I returned to the boat with only two cartridges left, one in one barrel with an ounce and a quarter No. 7 shot and in the other No. 8. Just as I reached the shore where lay the boat I saw an eagle sitting upon the extreme top of a tall dead tree. I thought I would amuse or scare him a little, so I crept close up to the tree. He was sitting with his breast toward me, looking grandly, and I sent my charge of No. 7 shot at him, and, as sure as there's a sun in heaven, he came halting to my feet dead. To say that I was elated don't half express it—an eagle at that distance with No. 7 shot—I could hardly believe it. I hurried to the boat with my prize, eager to display it on the other side. I pushed off and had got but fairly started when a second eagle, probably the first one's mate, attracted by the report of the gun, came whirling about in the air above me. Seizing the gun, I sent the No. 8's after him, and by all that's holy I fetched him! He fluttered down in circles to the water with a broken wing, and when I took him in he fought me fiercely with his beak. I was almost agast with astonishment. Whew! two American eagles, all in five minutes! How do you think I felt? How do you think the fellow felt who fired the Ephesian Dome? I have "chased the antelope over the plain" and shot him with my Winchester rifle, I have hunted deer and elk in the mountain parks of Colorado, I have hunted buffalo on the plains of Kansas, but I don't think that I ever felt quite so exhilarated with success as I did then. It was so sudden and unexpected. I was not hunting for eagles, but pigeons. The means seemed so inadequate to the result. It was like a boy fishing for minnows with a pin hook suddenly jerking out a three-pound trout. I felt that I must be a wonderful shot, and if Bogardus or Dr. Carver had then been around I verily believe I should have proposed a friendly match at glass balls. I placed the birds side by side in the boat and gazed at them with a kind of dazed intoxication. I patted my gun (No. 10 gauge) and talked to it. "Oh, no, old fellow, you can't shoot—you ain't worth a cent on eagles. I guess not. Perhaps there are some more round that would like to come and see you." Then I hid one in the bow and rowed for camp. My head stood straight upon my shoulders, but I repressed all appearance of excitement and rowed slowly up to our place. The others were idling about, and one asked me if I had shot any pigeon. "A few," I replied, as I tossed them out on the sand. "By the way, I've shot an eagle." I remarked, indifferently. "The devil you say!" said Jim. "You mean a hawk." "No, I don't; I mean an eagle. Come and see him" and I produced number one. Then there was excitement. He was admired; the stretch of his wings measured; the tree where he lay pointed out; plans made for sending him to town to be stuffed; an extra bottle of "Kelly's Java" produced from the cellar (wet sand) for my special benefit. When all had settled down to quiet again I casually remarked between two puffs of my pipe, "I shot two eagles." All looked at me as if they thought the wine had "crazed his brain." "You hunt round in the bow of the boat awhile and I guess you'll find the other one," said I. He was dragged forth, and then we *did* have a time, over which I'll draw a veil. I maintained my stolidity just long enough to remark that it wasn't a very good day for eagles, but I should probably have brought in a few more had I not run out of cartridges. The next morning Jim declared that I was muttering all night in my sleep, "American eagles—Number seven and eight shot—One flying." We passed the fortnight like a dream of contentment, and my peccable loves to linger about it. We were jazy, doubtless, and did not travel the woods much for the deer, whose fresh tracks we could find upon the beach any morning. At the end of the fortnight we struck our tent with regret and left for pastures new. We packed a barrel full of our largest bass—running along about four pounds—in ice, and shipped them to our friends. If we could have captured Mr. Hallock as he passed so near us I think we could have made him happy for one day at least. Unless vandalism has been at work, any one visiting the lake may find carved upon the trunk of a large white birch, close by where our tent stood, "M. J.," "J. W.," and "G. C." with the date and the following inscription: "*Foras et hinc olim meminisse juvabit.*" G. C.

Chicago, Dec. 7, 1878.

For Forest and Stream and Rod and Gun.

AFTER BLACKTAIL (?) IN THE ROCKY MOUNTAINS.

A NUMBER of progressive spirits, including your humble servant, had been figuring for a deer hunt back of Cheyenne Mountain for many a day, where we heard that the deer were very plentiful. But our great hitch was how to get there with any degree of comfort and surety. At this exciting juncture our esteemed fellow-citizen, Mr. Marsh, appeared, and proposed to join us with his outfit of burros, camping utensils, etc., etc., and made such a favorable offer that we were inclined, and in fact did, accept his proposition. The day was then appointed and unanimously agreed upon for Friday, November 22. In the interim we two, representing the K. C. Ranch, got out our '76 Winchesters in order, and

125 rounds of ammunition, and when the morning to leave the ranche at last arrived soon made short distance of the ten miles from the ranche to town. On our way, about three miles from the ranche, we shot at four antelope, but failed to bring any to grass. Arriving in town we put up at the Colorado Springs Hotel. Next morning we assembled in front of Bacon's Exchange Stables, and found the whole outfit on hand, consisting of three pack burros and six saddles. The party consisted of Mr. Sanborn, Dr. Sutherland, Mr. Bacon, Sergeant Choate, United States Signal Service, officer in charge at Pikes Peak, and Mr. Marsh, our guide, commissary-general, and major-domo, etc.

Mr. Bacon presented an affecting spectacle. He was arrayed in a wonderful Canadian ulster, which swept the ground, and when he mounted it totally obliterated the burro. Sergeant Choate was armed to the teeth. He carried a new Remington, an angry-looking six-shooter, a butt full of cartridges, a clink knife and wore six undergarments. Protection against the mountain blasts, which gave him a round and aldermanic appearance. The Sergeant was mounted on Balaam, an experienced mountaineer, of sure foot and fine proportions. The Doctor had his trusty Ballard, a carpet-bag full of cartridges, overcoat, etc.

We hunters started off ahead of the pack train, and took the old toll road over Cheyenne Mountain. We traveled all day, and reached in the middle of the toll-pike. After the necessary formalities here, we started afresh, making, at six o'clock, a log tent, where we camped for the night. Here we discovered our fatal mistake in going ahead of the pack, for we had nothing to eat. We, however, discovered the carcass of a bear, as well as some (buck) venison (Sanborn says he can taste it still, the liver it was), which we accordingly served up in primitive fashion. Mr. Sanborn, after an anxious examination of the premises, discovered an ancient wash-basin, which was utilized on the spot as a frying-pan, and did its duty nobly. In the morning Sanborn and Bacon repaired to the spring hard by to ablate, but just as they got to it S. was heard to utter in a hoarse whisper, "S-h-i-l-l! I down! deer!" B. dropped like a stone, while S. crept noiselessly back to camp on hands and feet for his rifle. Looking back to make sure of his game, he discovered, to his great disgust, that the general command of the pack train, which were none other than two of the jackasses which had strayed into the adjoining park, and were quietly grazing. About half-past ten o'clock our pack arrived, and we fared sumptuously on corned beef and bread. Refreshed, we again started. Up to this time we had had a very respectable trail, but here Sergeant Choate proposed the Government road to Pikes Peak. Our experiences on this national thoroughfare were not very pleasant. We extraneously concluded that it was a "flat" road, and the simple fact of the Government deciding it was a road, an absolute road, must needs be sufficient. Nevertheless the balance of the day was consumed by that noble ride. Five miles—five Government miles—were scored, and we poor fellows at last, hungry, weary, disgusted, dispirited, cold and frozen, finally arrived at the Seven Lakes Park House, at 6 P. M., where we were received by Messrs King and Walsh, who entertained us right royally, as becomes the custom of the country.

Messrs. King and Walsh have erected a block house of some twenty rooms and twenty-six windows, the main building measuring 42x22 feet, wing 15x20, both of two stories, sawing all the boards themselves by hand. The Seven Lakes are the highest in the world, they tell us, their altitude being 11,400 feet above sea level. The largest contains nearly 400 acres, and is separated from the larger by a narrow causeway, but a few rods in width, which furnished the road to the Lake House. The larger lake being some three feet higher, the water is continually running in little streams to the other lake. The Seven Lakes as a whole constitute an oval basin, the larger lake being nearly circular and seventy feet deep. The spring which feeds it is so powerful that it can be easily perceived bubbling vigorously to the surface.

Surrounding the lakes is a bench of white sand resembling the shore of the sea, while the mountains loom up perpendicularly nearly, from 900 to 1,400 feet. To the N. W. is Pike's Peak, to the eastward and south are King's Cone and Bald Mountain. The scenery here is simply grand—a lovely park sheltered on every side by mountains. In season doubt abound, there being six varieties. There are a few fish (trout), but as we cannot at all understand them, these gentlemen and these gentlemen propose to stock the lakes with trout at an early day. In the way of game we found sharp-tailed grouse in great numbers, some turkeys, chapparral birds, squirrels, both black and gray. There seemed to be millions of these squirrels, for we could hear them barking in every direction. The quadrupeds are represented by the black-tailed deer, cinnamon bear, black bear, bison, mountain lion and wild cats, and also a bear locally called Silver Bear, which is a hybrid between the grizzly and the black. This has lately been shot and brought down into the valley.

To return to the hunt: the Doctor and "friend" started out with the parting injunction that in case they did not return in a day or so no anxiety need be felt on their account, Sanborn, in bidding an affectionate adieu to the Dr., supplemented his parting remarks with the observation that he would look for "grub" and "grub" in Sanborn and "pard" started south and were joined immediately by Mr. Bacon, who brought up the rear with gallant strides, but it was soon proved that the "cost" was one too many for our esteemed friend and fellow sportsman, who was when last seen in deep meditation perched on a fallen monarch, evidently communing with nature, and positively chewing to lucco. That day's hunt proved a success, and the success is plenty.

With the "chub" in the snow and the want of excitement on the part of the hunters, the deer were not found during the "keep shy." Mr. S.'s "pard" was lost, and after a search in vain for the much, picked out a place to camp, but before going in entirely, he climbed the nearest mountain, from which he discovered the faint glimmering of a lamp; whereupon it is needless to add he went tumbling indiscriminately for home. True, the "chub" was not found, but he traveled "full thirty miles," and over mountains that looked clear over Pikes Peak, and through gulches that it would have been madness to attempt to describe. During the day Mr. Sanborn, being in the neighborhood of the Dr., heard strange noises resembling the infernal grating of a devil's fiddle. For some time he was at a loss to account for this, but finally the comment was S. lay down and sleep. The "chub" was by saying that the mountain climbing was pretty rough work on one lung, that a solitary acclimated lung is capable of doing such good work speaks highly in favor of this, our "glorious climate of Colorado." The roll was called at night and all found present or accounted for. The evening was passed in a quiet game of whist. For illuminating purposes,

and in the absence of an electric light, we filled tin plates with lard and used condemned shoe-strings for wicks.

The following morning opened fine, and all hands started out. Other signs of deer, more numerous than ever. At night the result scored two deer, a doe and a fine buck. The following day "Balaam," the Sergeant and Mr. Bacon returned to the Springs. The Dr. and Mr. Grant started around the point and came on a herd of eight deer. The Dr., judging the distance, elevated to a thousand yards, fired three shots without any perceptible effect. The deer not having shown any disposition to run, Mr. Grant became greatly incensed thereat, and discharged his rifle six times in the air, a la fourth of July, and finally succeeded in scaring them off. The deer ran up the side of Buck Mountain, and Sanborn and pard climbed after them. When they got on the other side they came upon another herd. Mr. Sanborn fired one shot without effect, and then separated. Sanborn followed the main herd. "Pard" branched off, and had not gone far when a beautiful one came loping by not twelve yards off. With deliberate and deadly aim, "Pard" levelled his piece and pulled trigger, but, to his amazement, without consequent discharge. Upon reflection he remembered how the night previous the Sergeant cautioned him against carrying around a loaded weapon, citing numerous and fatal cases in justification. On examining the piece he discovered the horrible fact that in following the Sergeant's instructions he had removed his cartridge and omitted to replace it. Mr. Sanborn, after following the main herd, came upon it again at a distance of four hundred yards, and crept up to within shooting distance, but, unfortunately, not being familiar with his arm, he raised the sight to four hundred yards, taking deliberate aim at a doe in the middle of the herd. He fired. The doe turned and brought herself in full sight. Bang! went the gun, and grasping his knife he rushed upon the foe; but, strange to say, no foe was there. He had missed his mark. S., disgusted, returned to the ranche, a matter of about three miles. Reverting to Mr. "Pard," we find he had followed a trail and came on to a fine buck, sighted his head, the only part of his body visible, took sure aim and fired. Unfortunately, not securing a buck, he fired his second shot, and the shot, a few minutes later by another gentleman of the party. The Doctor had started off in the morning on a burro as an innovation and scored three flying shots not worth mentioning, however, as to results. Wednesday we returned home with one buck, all we could conveniently carry. Coming down by the beautiful Pikes Peak trail, the Manitou and the Garden of the Gods, we arrived at the Springs safe and sound. Thus ended our hunt after black-tail deer in the Rockies. RANERO.

K. G. Ranche, El Paso Co., near Colorado Springs, Col., December 3, 1878.

For Forest and Stream and Rod and Gun. FIELD SPORTS IN GERMANY.

LEIPSIG, Oct. 27, 1878.

The surroundings of this city were always celebrated for their abundance of hares and partridges, and the beautiful woods were alive with an enormous quantity of roes, the most beautiful game at home in Germany. Though each village rents the right to hunt in its fields separately, and such districts, therefore, are not very extensive, the rent is rather high, for hares and partridges are high in price notwithstanding their great number. Forty years ago, when I lived here, I paid for each hare which I took home from a battue only a quarter dollar, and a partridge was only five cents; now we have to pay one dollar for a hare, and for a partridge about forty cents. The cause of this rise in the price is not the scarcity of game, though it is not as abundant as formerly, but the increase of means of communication, which permit one to sell the game in Berlin and other large cities of Germany.

I remember a battue held about forty years ago in a district where the owners had not held a battue the previous year. All the invited, about eighty shooters, expected, therefore a great number of hares, and provided themselves with a good supply of cartridges. We then used here, generally, needle-guns, as a common percussion gun would not do, the loading requiring too much time. These needle-guns were, however, no breech-loaders yet. The cartridge was put in at the muzzle, slipped down by itself, and was held in position by turning a lever. We could load even faster than we can do to-day our Lefauchaux or any other breech-loader.

I do not know whether you have a correct idea of the manner in which our battues are carried on. It is done in two different ways; either by "Standtreiben" or by "Kesseltreiben."

The whole district is divided in a convenient number of sections, and the larger than can be closed by the number of shooters and unarmed men—the "Treiber." The shooters are placed on the border of the selected districts, from eighty to a hundred paces distant from each other, their whole line forming a semi-circle. On the remaining border line are placed the "Treiber." Where the ground is too open, are not rarely dug two or three feet-deep pits with a low earth wall before them, as hiding-places for the shooters. These are then filled by the "Treiber" or his deputy, or very frequently by lot. At the beginning of the battue tickets, with numbers printed on them, are drawn, and every ticket has to place one in his cap.

At a signal given by a horn or whistle, the Treiber, who have either sticks or rattles in their hands, advance toward the firmly standing line of shooters, driving all the game toward them and preventing it to pass their own line. Such Treiber is called a "Standtreiber." In woods this is always the rule, as the kind of Treiben, called Kesseltreiben, is mostly impossible.

At such a Kesseltreiben the manager sends off from a certain point in the border line of the district two experienced shooters who are acquainted with the grounds, one to the right and the other to the left. Both have to go on to the border line until they meet. They are followed at a convenient distance, alternately, by a Treiber and shooter, until the whole district is inclosed. On the right side the whole line advances as regularly as possible, and slowly, toward the centre. Of course by doing so the interval between the persons forming the line is gradually diminished. Thus the Kessel (cauldron) inclosed becomes so narrow that it would be dangerous for the opposite line to shoot inside the circle. The whole line makes a halt at a given signal. Only the Treibers advance toward the centre with great

noise, and the shooters are only permitted to fire on hares outside the circle.

The first Treiben at that opportunity of which I was speaking above, was a Standtreiben. You may imagine our astonishment on seeing the hares advancing toward us in troops of five and six at once, leaving us scarcely time to load. The result of this one Treiben was eight hundred hares. I had, on my way, forty-six! I had, on my way, forty-six! I had, on my way, forty-six! I spent our cartridges, and we had to send to the city for a fresh supply. The battues were continued until dark, two consecutive days, and the total of killed hares amounted to a little above three thousand.

Traveling at that time by rail from Halle to Leipzig about sunset, it was by no means rare to see more than thirty hares offered or playing in a field of not half an acre. These battues were, however, not attended then as they are now, the latter offering a good exercise and to oblige the proprietor, as the hares had to be shot by some one. Partridges were not less abundant, and the district of one of the valleys furnished several thousands during one season, and still there remained enough.

The years 1848 and '49, when people did not care for any kind of, and, least of all, for game laws, great destruction was going on, and many parts of Germany never recovered from these revolutionary times.

I prefer hunting alone or in a small company, and with a good dog. A friend of mine has rented the adjoining shooting-grounds, of about four or five villages in the Spreewald, a district belonging to Prussia and inhabited by the remains of an old nation, the Wendens, speaking a language of their own and having preserved their old customs and dresses. In these parts it is to be found still a great variety of game, and especially one kind, which is not known in America—the great bustard. It is as large as a turkey and only to be found in the field, especially large plains, never in the wood. In summer you may shoot them now and then before the dog; but later, when they join in troops from twenty to thirty, and even more, they are extremely shy, especially if you are carrying a gun. Laborers and horses they are not afraid of at all, and the only means to approach them is in the disguise of some laborer, or, still better, of a woman, pushing on a wheelbarrow in which is placed the gun. You may approach them, also, in a farm wagon. Such a bustard is a most stately bird. They do, however, a good deal of damage. My friend arranged last year a battue for bustards, but as an immense district had to be inclosed he had not sufficient time to do so. It was, however, a particular success, although about five hundred bustards were seen.

On my return here last fall I of course found many acquaintances of olden times. Among them is one who had been once my dinner neighbor at a table d'hôte. He was then only a clerk and representative of a great Prussian firm in Leipzig, but he was a very gentlemanly young man, loving the chase, and we became friends, remembering each other all these years kindly. At present his brown hair has turned white, he has become a grandfather, and very rich. He had retired from business many years ago, and enjoyed his life in a very pleasant manner. He owns a splendid mansion in town, but bought already, twenty-five years ago, a knightly estate about an hour's walk from Leipzig. It was then a rather neglected concern, rented to a man who held there a large restaurant which was much frequented by the Leipzig people, as it was situated amidst a most beautiful wood. Mr. Keibe spent about half a million of thalers in changing this estate into a most delightful place, in fact to a kind of rural paradise, as there are scarcely any many miles around.

The farm buildings were pulled down and replaced by splendid solid ones, provided with all modern improvements. The dwelling-house was removed also and he erected a rather large, beautiful villa in its place. The glass-covered, large veranda looked toward the garden. The marble steps leading to this veranda were adorned by beautiful plants and two life-sized roe-bucks in bronze.

The greater change, however, the wood had to undergo extending in front and to the right of the villa. Before the veranda was a lovely lawn sloping to the right and left by a belt of beautiful trees. Beyond the lawn stretched a very long walk shaded by old lime trees, leading to the road to Leipzig.

Right before the veranda on the lawn a jet of water rises and falls back into a large basin. In the centre of the lawn has been made an artificial mound the sides of which are covered with roses, and on its top stands, on a high pedestal, a colossal bronze stag, held at bay by two dogs: a splendid work, costing several thousands.

On the left of the belt of trees, bordering the lawn extends a large square garden. All the beds along the different gravel walks are covered with beautiful flowers, and between them are standing the finest dwarf fruit-trees. In the interior of the squares formed by the walks are beds with strawberries, etc., etc. On the side of the square garden opposite the above mentioned belt of trees is erected the very new villa. It is the dwelling of the head gardener, and to the right and left of it are the hot-baths built of iron and glass, containing a splendid palm-house, one filled with camellias, another with tropical plants, etc., etc. I assure you the hot-baths in Kew are not kept in better order than these.

In the middle of the other side of the square garden, which forms a right angle with that mentioned before, stands a large jet of water of only two stories, guarded by two small dogs made of green marble, brought both from Florence, a lovely little villa—the pheasants' house—containing a good many gold and silver pheasants. In part of this extremely elegant structure are little yards with shrubs, as you see them in the zoological gardens; and close to them, amid a nicely arranged group of fine plants and trees, stands a table and chairs, from whence the whole square garden may be seen. On the whole, the terrace are standing in tubs fine orange, laurel and other trees.

The very large orchard, with nurseries and other hot-houses, is beyond a road passing behind the pheasants' house. To the right of the screen of trees belting the lawn you enter an English park, of no great extent, but of extreme loveliness. There you see emerald-green bowling green, as soft as velvet, with flower-beds, blooming shrubs, etc., and the finest of the original wood, which was left standing.

This little park, garden and lawn are fenced by a fine iron railing. Through a gate in it you enter the wild park, which is not fenced, but from which you enter directly the broad acres belonging to the estate. Though this rather extensive park is called by its owner wild, it is arranged with great care and art. The walks are graveled and kept as clean as a drawing-room. A high gravel walk with bridges is built along the sides of the shrubbery, and the shrubbery is overtopped by splendid trees, are interrupted by fine meadows, etc.

As this park is rather far from any other wood, Mr. Kelbe has stocked it with wild pheasants, which have increased to several hundreds notwithstanding the inroads made by foxes, martens, weasels and cats from the village, of which he caught this year not less than twenty-six in his traps. He formerly kept roes in the park, but finding that the young ones did not thrive and the bucks killed them, he got tired of them and shot them off.

Last Sunday morning Mr. Kelbe called on me. He was quite excited, for his head gardener had reported that a fox had invaded his park. Some laborers saw him kill a hare and took it from him, but very soon afterward plaintive notes from a pheasant proved clearly that he had found a substitute for his lost hare. Mr. Kelbe invited me to drive over with him to his park next morning and try to shoot the bold robber, together with a few pheasant cocks. I had coues accepted with pleasure, for since many years I had not had an opportunity of shooting a wild pheasant. There are plenty in Bohemia, but in Germany you find them but rarely, as they can be kept only in isolated parks and woods where the adjoining fields belong to the same proprietor, else kind neighbors will shoot them as they go in summer out in the fields to feed.

Two other gentlemen whom Mr. K. had invited were present, one from coming with me and two who came to ourselves. About a dozen garden laborers and the coachman and gardener were ordered to act as Treibers, and Mr. Kelbe and I placed ourselves where we thought it most likely that the red robber would pass. I took my stand behind an elm tree on a narrow dry ditch, from whence I could overlook an angle-point of a copse before me and the adjoining meadows. Mr. Kelbe told me that he had killed at that place two foxes, and that he would probably take a foot-pace to my left or remain in the ditch, in order to reach the opposite thickets.

The Treiber formed a line and advanced without making much noise, as it is not required to start a fox. Some hares and rabbits they met on their way took alarm and came out of the copse, and two Volke of partridges passed my stand. I resisted, however, the temptation. About eighty paces before me was a little bridge over the ditch, and looking straight on I saw the latter my attention was at once directed to something moving underneath the bridge. I stood as still as if I were made of stone and my eyes opened to double their size. No wild hare or noble stag would have excited me so much as did this red rascal whose pointed nose I recognized in the uncertain light under the bridge. It was amusing to observe him. The noise behind him did not alarm him much, but more attention was paid by him to the spring which separated him from the opposite copse. The wind did not teach him anything of my presence, for it came from him toward me. The hares and partridges, which passed unmolested, seemed at last to satisfy him that all was safe. He cautiously, and dragging one foot after the other, crept to the brim of the ditch and had a peep at the meadow. I might have fired at him then; but, as he was partly concealed behind a little shrub, I waited for his further movements. He stepped out from the opening, seemed himself as small as possible, he came along the ditch toward me. When he saw me he was not more than three paces from my feet, and he was so surprised that he lost his head. Instead of turning round and running back toward the bridge along the ditch, he suddenly jumped out of it and ran as fast as he could over the meadows. He did not go far. At about twenty-five paces I fired, and struck him in the hind leg, remaining in the spot. In the same moment the Treibers emerged from the wood, and, taught by experience, one of the laborers gave him still some blows with his stick.

The object of our expedition being fulfilled we might have gone home; but Mr. Kelbe wanted some pheasants, and the Treibers re-entered the same copse which they had just left, knowing very well that plenty of pheasants had remained. A few of them had passed me, but I had not taken any notice of them.

The birds must have been alarmed, however, for when the Treibers commenced their noise they rose at once, one after the other, above the trees and flew off with the velocity of a rocket. I dared not fire, as I did not recognize for certain the cocks, and was much afraid of killing perhaps a hen. Mr. Kelbe, however, shot a cock. When the Treibers placed themselves now at the border of that copse for which the fox had longed to reach, and I took my stand at its corner close to the same ditch mentioned before. Mr. Kelbe stood about sixty paces to the right of me.

Very soon I saw something moving in the ditch. I could not make out what it was, and, seeing only something grayish-brown, I took it for a cat, but it was a reconnoitering pheasant hen. She ran quickly back and just as I saw the golden breast of a cock coming toward me in the ditch. When Mr. Kelbe called out to me to change my stand for one he thought better. The cock turned round and all was still for a few minutes. Then I heard the noise of some pheasants rising to my right. Mr. Kelbe fired and a splendid cock fell heavily on the grass. I was rather envious and anxiously hoped my turn would come next. It came. Half a dozen of pheasants rose in the thicket before me. I brought down another cock. I might have made a doubt if I had not been so much afraid of a mistake. Again a noise before me. It was a beautiful bird, and I shot him before he was above the trees. When a third cock passed like a rocket I fired, but he went off, and Mr. Kelbe believed that I had missed him. I did not think so, and I was right. The cock was found dead on the meadow about two hundred paces from me. Mr. Kelbe fired again. The bird fell down, but as I saw a cock he got up and ran toward the ditch. He had only been winged. Whether the gardener found him afterward I do not know.

We had now one fox, three hares and five pheasant cocks. The whole affair lasted about an hour. My friend thought this enough for the moment. We returned to the villa and he fetched from his cellar a choice bottle of Rheinish. After having finished it we returned to Leipzig and were at half-past twelve, much satisfied with our little expedition.

COVINY.

CENTRAL SHORT LINE.—The new route to Florida via the Richmond and Danville Railroad offers many advantages of pleasant scenery, the privilege of extended stays along the route and the best of traveling facilities and conveniences. The route is via Richmond, Charlotte, Columbia and Augusta.

—In all the shots fired in the Brooklyn and Philadelphia Gun Club's match last week, it is noticeable that there was not a single mis-fire. The Union Metallic Cartridge Company's shells were used.

Fish Culture.

Palmer & Sons, of Boscobel, Wis., write that they will be able to furnish trout eggs to customers up to April. This would be remarkable—November being their spawning month—only that trout, like other animals, when long domesticated extend their breeding season.

THE SOUTH SIDE CLUB AS FISH CULTURISTS.—Through the efforts of two or three of its members who are well versed in fish culture, the South Side Club has been most successful in the propagation of brook trout; so much so that it has been able to contribute large lots to a neighboring club on Long Island and to the Blooming Grove Park Association of Pike County, Pa. It has also supplied the Messrs. Thompson, the fish breeders of New Hope, Pa., with several thousand fine fish.

KANSAS FISH CULTURE.—Thirty years ago what now appears upon our maps as the State of Kansas was a howling wilderness, the howling being furnished by the *fera natura* and the *feriores humani*. The hardy adventurer who should have braved scalping knife and tomahawk to penetrate its trackless wilds and returning thence should have prophesied that before the lapse of the third decade the intelligent citizens of that land should be giving their attention to the restocking of the streams with edible fish—this man would have saved his head from the Indians only to have it safely immured in an insane asylum. He would have been no madman however had he predicted this; for here is the "First Biennial Report of the Commissioner of Fisheries of the State of Kansas, for the years 1877-8." It is not the subject matter of the report that we wish here to insist upon, for Kansas fish culture is yet in its infancy, so much as this fact: that here is a State comprising an area greater than all Maine, New Hampshire, Vermont, Massachusetts, Connecticut and Rhode Island, whose organized history does not antedate the life of the average reader of these columns, displaying a degree of enterprise in one of the advanced economic interests of the day that may well serve as an incentive to many other States.

Commissioner D. B. Long calls attention to a very important and remarkable change in the character of the streams of Kansas, as noticeable as the alterations which have already been noticed in her plains. Lands which not so long ago were considered fit only for the savage and the wild beast have been developed into great broad fields of magnificent wheat and corn. Many creek beds which were once trickling alkali brooks are now full-flowing with pure water; springs and streams have gushed forth from the earth where formerly there were only barren wastes. All these manifestations may be accepted as auguring well for the efforts of man to introduce into the waters the valuable species of fish especially adapted to them, and we are confident that the liberal minded people of the State will through the Legislature give to their energetic Commissioners the pecuniary endorsement to advance the work.

PROPAGATION OF LAND-LOCKED SALMON.—Fish breeders who are interested in the cultivation of land-locked salmon will feel much encouraged by the following report which Com. Atkins has been kind enough to furnish. The communication also answers several questions which have lately been propounded to us. Increasing interest is deservedly felt in the cultivation of this fish, and we hope its presence will some day not distant ennoble our inland lakes. It possesses equal game qualities with its step-brother *salmo salar*, which has access to salt water, and its flesh is almost as toothsome. With our clean inland waters populated with land-locked salmon, we could boast such angling in America as no country has ever heard of. The persistent efforts of the U. S. Fishery Commission and the managers of the hatching establishment in Maine are most commendable. They will be watched with solicitude until the full result is accomplished and epicures and anglers are made happy all over the United States:

GRAND LAKE STREAM, Me., Jan. 21, 1879.

EDITOR FOREST AND STREAM:

The crop of eggs of land-locked salmon obtained here this season is greater than usual instead of less, as indicated by an item in your columns of January 16. During the four seasons of our operations here we have taken the following numbers of eggs, viz.: 1,077,500 eggs in 1875, 543,000 eggs in 1876, 2,159,000 in 1877, and 1,723,000 in 1878. From which it appears that this season's work has been more successful than that of any other except one (1877).

Schoolie land-locked salmon are less prolific than sea-salmon, and in proportion to the quantity of spawn obtained the work involved is far greater. It took 1,617 females, all fertile, to produce 1,723,000 eggs—an average of 1,065 eggs per fish. This was a much higher rate than usual, the fish yielded only 985 per fish, and some years it has been less than that. The average weight of the breeding fish is a trifle less than two pounds, average length about seventeen inches. The past season they somewhat exceeded these measurements.

The parties controlling these works this year are the United States Commissioner of Fish and Fisheries and the Commissioners of the States of Massachusetts, Connecticut and New Hampshire.

CHARLES G. ATKINS,
Asst't to the U. S. Com. Fisheries.

—The mighty brain of an astute Virginia editor evolves the argument that the rivers should not be stocked with fish, because, forsooth, that would encourage idleness among the people. With fish at their doors they would not cultivate the

soil, the pursuits of agriculture would languish, and the idle fish-fed population would degenerate into effeminacy and semi-barbarism. We commend this sapient reasoning to our fish culturists. Let them reflect whether they are not heaping up an accountability of sins, which no change of occupation or diet will ever atone for.

PENNSYLVANIA.—A large number of California salmon have just been placed in the small streams about Trout Run. It is hoped thus to replenish the streams which have become depleted of their once abundant trout.

POTOMAC FISHERIES.—Gov. Hutton is giving his attention to the subject of properly supplying the Potomac with fishways, and it is probable that at an early date that stream will be so furnished that there will be an open passage to the Virginia counties of Clarke, Loudoun, Shenandoah, Fairfax and Warren, and the Potomac counties of Maryland.

Natural History.

BIRDS OF THE COLORADO VALLEY.

GOOD wine needs no bush, nor does any work done by Dr. Elliott Coues require a single word of commendation to the practical student of science. Nevertheless, as FOREST AND STREAM visits each week a very considerable number of ornithological readers, many of whom depend upon it for their news of current scientific events, it becomes our duty to mention, however briefly, the appearance of the first part of one of the most important works on ornithology which has ever appeared in this country.

The present volume, Part I., treats of only a small portion of the subject as stated in the title, for in the 800 pages between its covers only the Passeres to *Laniide* are included. As far as it goes, however, it is so complete in its synonymy and its descriptions, and so altogether delightful in its account of the habits of the various species considered, as really to leave almost nothing to be desired.

The ornithologist who examines "The Birds of the Colorado Valley" will be especially impressed by the completeness of the synonymic lists, which preface the account of each species, and by the "Bibliography of North American Ornithology," which constitutes the last 200 pages of the work. Although to the untechnical reader these portions of the volume will perhaps appear dry and of slight importance, they are in reality its most valuable features, and the amount of labor which has been expended in compiling them is simply enormous. It must be remembered that, except in a few specified cases, no title or reference in the book has been taken at second hand, but that in each case the author has gone to the original work, and taken his material from that.

The "Bibliography of North American Ornithology" is intended to be a complete list of every work, article, or paper ever published on the birds of North America. It is, as Dr. Coues remarks, only that very small portion of the great work which he has in course of preparation—his "Bibliography of Ornithology"—which relates to North American birds as such. He therefore excludes all titles which refer to any group of birds which are treated of as component parts of a genus or family, as such works will appear in the final "Bibliography" under their proper family or generic headings. The titles which Dr. Coues gives us, in the volume under consideration, are nearly 1,500 in number, and represent, he says, only about three or four per cent. of the whole literature of ornithology. He tells us that he has now in hand for his final work 18,000 titles.

The present list is published at this time mainly for the purpose of bringing the subject to the notice of "those interested," so that any writers, whose works, or papers, may have been omitted, can communicate the fact to the author and the error may be rectified in the final work. We observe that Dr. Coues has quoted many titles from the columns of FOREST AND STREAM and we call the attention of our correspondents and contributors to his note on this subject which we publish to-day. We feel sure that any writers whose articles have been quoted will gladly furnish the information which Dr. Coues desires.

While to the ornithologist the "Birds of the Colorado Valley" will prove of the utmost value in all respects, the biographies of the various species will present to the unscientific reader the greatest attraction of the volume. Written in Dr. Coues' own inimitable style, they are simply gems of bird literature. There is a charm about them that can scarcely be characterized, but we venture to predict that no bird lover who peruses one of these delightful sketches will care to relinquish the volume until he has read it quite through. There is a pathos about some of these life-histories that is strangely moving, while others are mirth-provoking to a degree. Dr. Coues so cunningly blends realism and poetry in his descriptions of bird habits that we seem to be able to thoroughly appreciate all their characteristics and to enter, to a certain extent at least, into the secrets of their every-day life.

Our author goes very deeply into a number of curious points touching on various phases of bird life. He never hesitates to attack beliefs that he thinks are founded on error, and never takes anything for granted. His remarks on swallows are extremely interesting, and we know of no account of these charming *Alles de l'air* that is half so full.

Although the present work more nearly approaches the ideal ornithology than anything that we know of. Between its covers can be found almost everything that one wishes to

time, or had come all the way from cover under the snow. No one that I have spoken to on the subject ever saw or heard of a hare burrowing in the snow. It may be worth your while to "make a note on it."

H. R.

Hares sit still wherever as now storm overtakes them, and when the snow begins to cover them over, they keep crowding and pushing gently backward and forward from side to side until they form a little roomy chamber all around them. The snow gradually heaps up until a domed arch is formed, except where little round holes are left in the top by the warm air of their breathing—just as the snow houses of the Esquimaux are made. There they sit snugly, until hunger impels them to vacate, in search of food. No tracks are visible in the newly fallen snow; but the quick eye of the young hunter, or the keen nose of his dog, as they range over the waste on the morning after the snow-fall, soon detects the "forms," and it is but an instant's work to jump poor Molly Cotton out of her bed; and then all is up with her.

Ptarmigan (a species of grouse found in the North,) also have the same habit; and when kicked up out of the snow are as lively and strong of wing as in summer. In the sub-arctic regions where they have their habitat, the temperature is so uniformly low that a crust seldom forms; and they therefore escape the common fate of our quail which often perish by being snowed under. Deep snows are no detriment to acclimated birds provided they can obtain food, but rather a warm protecting blanket. Lack of food is what they suffer from. For this reason we have so strongly urged our friends to scatter grain for them. Molly Cotton, the hare, who is a good forager and wide awake to the means of subsistence, is often found nesting in those little hollows on the lee side of trees, where the eddy and whirl of the snow as it is driven by the wind, has left the ground bare and the dry grass and fallen seeds exposed. Our inquiring friend will at once perceive that it is anything but unusual to find hares buried under the snow.

ADVICE UNHEEDED.

FRAMINGHAM, Mass., Dec. 3, 1878.

EDITOR FOREST AND STREAM:

Perhaps, in your view, "one word more" on the "Sparrow Question" may be one word too many; but I think that all printed on the subject, in your columns and elsewhere, is read with interest by a very large portion of the community, both by those who side with the "at, tack" and with the "defense." From the various testimonies so far, to my mind those opposed have the best of it, and I send you the following to show that we were duly forewarned. It is from an old number of the *Naturalist* (1872). In an article on the "Birds of India," Rev. J. H. Bruce sounds this note of warning in regard to our proposed introduction of *Passer domesticus*. After giving an account of the noisy and impertinent ways of the sparrows and to that country ("P. bulbiceps"), and quoting Dr. Jerdon as saying, "it is one of the greatest pests of India," Mr. B. goes on to say: "I have been more particular in describing this bird, because of recent attempts to introduce a closely allied species into America. I look with some apprehension upon these efforts, as I believe them to be ill-advised and inexpedient. The European sparrow does not differ essentially from its Indian ally, and so far as I can learn is very generally regarded as a nuisance wherever it abounds." Then follows references to it in England, Spain and Syria. He concludes: "If the species is to be introduced into America to destroy the larvae of insects, it should be remembered that it is, for the most part, a feeder on grain, seeds and buds, devouring grub only in the breeding season. That season embraces but a small portion of the year; during the remainder they may cause great destruction. I trust those who have to do in this matter will act advisedly, lest they introduce that which may eventually become as great a nuisance in its way as the curculion and cankerworm." F. O. BROWN.

ATTENTION, CONTRIBUTORS.

OFFICE OF U. S. GEOLOGICAL AND GEOGRAPHICAL SURVEY
OF THE TERRITORIES, WASHINGTON, Jan. 17, 1879.

EDITOR FOREST AND STREAM:

Str.—The Bibliographical portion of my late work on the "Birds of the Colorado Valley" contains very numerous citations of titles from FOREST AND STREAM. Many of these, however, are anonymous, or of unknown authorship. I beg you to say through your columns that if the persons interested will furnish the required names and dates, they will be remedied in the final edition of the Bibliography. I wish to add, further, that any additions to, or corrections of, this piece of Bibliography will be welcomed and utilized.

Yours,

ELLIOTT COBES.

Woodland, Farm and Garden.

For Forest and Stream and Rail and Gun.
SHEEP RAISING IN TEXAS.

OF late years great attention has been paid to the culture of sheep and the production of fine wool in Texas, and indeed with marked success, as nearly the entire south and southwestern portion of the State is monopolized by the sheep man. It was formerly the stronghold of the cattle man, who reigned supreme from reasons of long occupation only, not from any right or title to the land, as there were scarcely any land-owners in this part of the country at that time, and indeed up to the first appearance of sheep. Cattle men, in the choice of their ranches, had but one thing in view, and that was the portion of country that possessed the most attraction for their business, as they were all squatters, and neither bought nor rented land. In those days the hills and fields were dotted in almost every direction with cattle, while now it is altogether different, as the fields that were once kept closely cropped by the cow and her young are almost thoroughly deserted by them, and in the place we find the dusky Mexican following his woolly flock. Cattle business, to be carried on successfully, must have large tracks of unoccupied range, with plenty of grass and water; and when the country was public property it was a most lucrative business, but when the necessary range must be rented or bought, the quantity is so great that it renders it much less profitable, in consequence of which cattle-men are moving back into the wilder and less

civilized portion of the State. In their stead we find the sheep-man, as he can afford to rent or buy land, for the reason that the same amount of capital can be invested and manipulated on one-tenth the amount of land, with almost, if not quite, double the profits. In former years government land could be obtained by the process of location, and the cost be so comparatively insignificant that a sufficient range could be obtained almost for the cost of surveying; but now it is different, as moneyed men and corporations have gained possession of nearly all of the unlocated land, and it is now necessary to either buy or rent from them. Most of the lands, however, belong to the railroads of the State, and as these lands are exempt from taxation for a term of twenty-five years, they can rent lands very reasonably. Their rates of rent per year range from half a cent to a cent a half per acre, and a lease is given for a term of five or ten years to suit the tenant. I might state, however, that none of the railroad lands are for sale. The sheep business in this State presents a golden face, and though it has been tested for upward of forty years, it has not yet proved a failure; but, on the contrary, where favorable circumstances surround and close attention is paid to the business, it is undoubtedly a profitable one. When the business is conducted on common sheep are raised almost exclusively, but of late years great improvements have been made in the grades of sheep, till now we can produce samples of wool to compare favorably with Australian wool, and were it not for empty reputation we could command as high prices. The modes of grading sheep are many, but the quickest, best, and most profitable way of bringing the common sheep to a paying condition is to take the common Mexican ewes, which are long-legged, straight-haired sheep, shearing from a pound and a half to four pounds, and use the full-blooded, greasy-wooled, wrinkly, short-legged Merino bucks, and the result will be that of shortening of the legs, increasing the weight of wool, as well as improving the texture at the same time. The lamb will take on the natural hardness of the mother, which is far greater than the Merinos—in fact full-blooded Merinos do not do well in this climate. After your sheep are found to bear a wool sufficiently gray and heavy, it is then time to change the breed of hives and grade the texture of your wool. Imported bucks can be bought for from thirty to one hundred dollars per head, and one buck is sufficient for fifty ewes. Mexican sheep can be bought for from \$1.25 to \$1.75 per head, according to age and time of year. The advantages in improved sheep are many, and though it is claimed by some that the remuneration is no greater, still it is a lack of judgment and calculation on their part, for it needs but a moment's thought to see that the expense attached is less in proportion, and the income far greater, considering the increased number that must be kept of the common ewes. A graded sheep is worth from \$2.50 to \$3 per head, just double the cost of the Mexican. A graded sheep will shear from five to ten pounds of wool, which is worth from seventeen to twenty-five cents per pound, while Mexicans only shear from one and a half to four pounds, and worth from ten to thirteen cents per pound; thus showing that while the cost is only double for graded sheep, the income from them is about five times as great, and as their amount of increase is the same as in the common sheep, that being one lamb a year, we arrive at the following conclusion: that every improved lamb counts as five common ones in wool producing, and is worth at least twice as much to sell. In keeping five times as many common sheep as improved it is necessary to pay and feed five times as many shepherds, five times as much salt, and have a range five times the extent. Another great item in favor of improved sheep is that the muttons are worth double that of a common sheep for market, thus leaving no inlet for argument on the advisability of handling graded sheep or the profits attached thereto. The average amount of increase in sheep is from seventy-five to ninety per cent. annually. The process of breeding is carried on as follows: The sheep are divided into different flocks; in one flock are ewes and another lambs, in another ewers, and in another are the bucks. Sometimes, however, if the number of sheep is small and insufficient for so many divisions, they are all run together with the exception of the bucks, which are kept separate except in bucking season, that being in September and October. By doing the bucking that time of year it brings the lambs early in the spring when the grass is green and juicy, producing a bountiful crop of milk and fat. By keeping all together the period of lambing is definite, and special attention and care can be paid to it, thereby saving all or nearly all of the lambs. The quality of land necessary for sheep is estimated differently, but from an acre and a half to two acres is about the right amount per head, and in very fine range possibly less. The character of range best adapted for sheep is slightly rolling land with plenty of fine grass and underbrush; though, in such rough country, it is better to have a level, as there is much of the famous cat-claw, which is a bush ranging in height from three to seven feet, and, unless visited by very hard frost, remains green all winter. The origin of the name (cat-claw) and the detriment attached is due to a thorn which is the exact shape of a cat-claw and sets with it point toward the body of the bush, thus making a regular hook-shaped thorn, and in driving sheep through it the loss of wool is great. The advantages of underbrush are undoubted, as it serves as food for sheep in the winter when the grass gets dry; and as sheep will eat almost anything that is green it takes the place of grass, besides being a thorough protection from the biting winds that visit Texas in the winter. The choice of underbrush would be about one-half vanilla with a small quantity of white brush, together with some live oak brush, and a little of other kinds will not hurt. As for grasses, the poorest, in such rough country, is better than any other, as, in the best, as a sheep will eat that kind level with the ground, and thereby get all the nutrition, while of large, heavy grass he will merely nip the tender ends off. In selection and choice of range care should be taken to get it well watered, that is to get land interspersed here and there with water, so that there shall be no great distance to drive to water, and also that grass shall be kept in the neighborhood of it that the sheep may feed to and away from water, thus losing no time in getting to water, and preventing a flock from scattering. Sheep, it is said, can subsist on less water than almost any other animal, as we have instances here of whole flocks having done without water for three or four months. The rule, though, is to water sheep in summer every second day, and in winter twice a week. Another matter in which great care and precision should be exercised in sheep culture is the salting of your flocks, as its benefits are many and as apparent as they are numerous. It serves to increase the appetite and causes them to drink when they would otherwise refuse, at the same time keeping up the general tone of the system. In some countries shepherd dogs are largely used, while in this country they are wholly unknown, as the main and serious objection to them here is that they herd the sheep too closely, thereby increasing the liability

ity to disease and also lessening the scope of ground on which to feed. Herding is done in this country almost entirely by Mexicans, as the life is a rough one and the remuneration small, and there are but few who will subsist on the wages gained and put up with the rough secluded life necessary to a shepherd here. The average wages paid in this State is twelve dollars per month and found, and indeed the word found implies little, as three words will explain all, viz: Meal, bacon and coffee, and a decidedly limited quantity of each. Each man has charge of a flock of sheep, which he follows all day on foot, and each flock consists of about a thousand, sometimes more; but one thousand is regarded as being about the right quantity in each flock for safety in every way.

Sheep, like men, are heirs to many diseases, and as many remedies are recommended for their cure. I will touch, however, on these subjects at another time.

In conclusion, I would say that it is a business which, if given sufficient attention, which means constant and undivided attention, and good judgment is displayed in conducting it, there is no doubt of its paying qualities. If, however, on the contrary, careless and neglectful hands manage it, there is no business that will result more disastrously and in so short a space of time as the sheep business. J. G.

FOOD FOR HORSES.—The German army has adopted as a food for its horses biscuits of three parts each of rye flour, oat flour and dextrinated pea flour, and one part of linseed flour. The biscuits are made with a hole in the middle of each, as they are strung to a string and hung to the saddle-bow or carried by the trooper in his waist. Each biscuit weighs, when baked dry and hard, about two ounces. Seven biscuits are broken up and given to the horse in the morning, moistened with water, if convenient, otherwise dry, twelve at noon and seven at night. After careful experiment in camp, on the march and campaigning, they are reported by all the cavalry and artillery officers better than oats. A trooper can easily carry thirty pounds of these biscuits, which will furnish his horse with full rations for eight days, or will serve, with forage, for twenty days' hard marching.

Dachting and Boating.

A CORINTHIAN CUTTER.

THE designs for an able little clipper, 30ft. on load line, which we publish in this issue, are from the plans of an experienced amateur, whose extensive practice with miniature or model yachts gives especial weight to the ideas expressed in the little yacht of the Corinthian order, which accompanies "Martin Gale's" letter treating upon the subject. The design meets with our approval in all its main features, and corresponds closely to the wants felt by many who desire to enjoy those heightened charms of the sport only to be experienced by the real sailor when aboard a little ship that he feels and knows can carry him wherever he listeth; that will not prove wanting in times of distress; that will not incontinently spill him and his crew into the briny should he carry on in a breeze, and fail to hull-out or cry, "I've a!" The design is an exemplification of Collin Archer's wave system, in which areas proportional to the ordinates of the cycloidal curve are considered in place of only lines themselves, as in the original theory of Scott Russell. The uniform satisfactory results which have attended the construction of such well-known flyers as the 5-ton *Preda*, 15-ton *Maggie* and 100-ton *Jullimar* in England upon the Archer system is a pretty good guaranty for the performances of the design published herewith. Upon inspection it will be found to unite a greater number of desirable qualities than the sloop of the ordinary model. Only in one point can the latter lay claim to any advantage, and that is in the matter of draft. To this we need only say that a deep, sea-going craft has no more business poking round mud-flats than a 2:14 trotter has before a Broadway "bus" or a laden dray. Suit your water to the boat quite as much as the boat to the water. Very few indeed are so placed that they cannot keep their craft in a fathom good and cruise when they want to with a Liverpool liner's water under their keels. Those few for one reason or other cannot get beyond a few feet of the needful, have our sympathies to the fullest extent, for they are debarred from one-half the life there is in the sport—sailing in deep and open water. The shallow centre boarder becomes to them a necessity; but others more fortunate in their opportunities will find in the design published what they have long been looking for: an able, easy, roomy, handy, fast, and above all, a safe craft, which will carry them safely anywhere; in which they can beat off a lee-shore in a gale; in which they can bunk in for a spell below and turn over the trick at the helm to the crew without any anxiety of awakening wrong side up. The design has more stability than the sloop, and will heel less excepting at small initial angles, a difference of no moment. She will cost very little if anything more than boats of the ordinary type, the excess in cost of a handy sailor-like rig and of some wholesome lead on her keel being very nearly covered by the less expense on her hull, due to her moderate beam. She is intended to be flush decked fore and aft, gaining thereby something like a third more accommodation below and a clear deck with 9ft. of room across to work ship in, instead of two narrow gangways and a lubberly mansard with a barn door. But if a cockpit be considered necessary to the ease of the city bred tars, it may be supplied without otherwise injuring the design than sacrificing cabin comforts under deck and increasing somewhat the possibility of having gorgeous fittings below nuke too close an acquaintance with salt water. For our part we much prefer to see the design carried out in its entirety and would make a tolerably high combing do duty in place of the cockpit.

YACHTING NEWS.

BUFFALO YACHT CLUB.—Yachting in Buffalo took a fresh start last fall, when several races were held and reported in the *FOREST AND STREAM*, and a club was also formed with a strong board of officers. The schooner *Fleetwing* proved herself one of the smartest in the fleet during these matches, and as four new craft are now building for racing purposes, the coming season is looked forward to with much interest. The club races generally take place outside the new breakwater to a point up Lake Erie and return and also 10 miles to windward and return. The *Fleetwing* made a lengthy cruise and did considerable fishing off Point Abino, Canada, a regular outfit in the way of guns and tackle being included in her stores for the trip.

HUDSON RIVER YACHT CLUB.—Officers elected for the year as follows: G. P. H. Geissel, Commodore; J. T. Goodwin, Vice-Commodore; O. Frick, Secretary; G. Heitzman, Treasurer; J. Clark, Steward; J. H. Harrington, Sailing Master; W. Palmer, R. V. Freeman, J. Stiller, J. Kelly, M. Robinson, Trustees; G. Tread, E. R. Wilson, S. T. Lynch, Finance.

CRUISING IN GEORGIAN BAY.—Says a correspondent: We were up in Georgian Bay, Lake Huron, not long ago during the fall months. We had a light keel boat, 16ft. long, 4ft. beam and weighing 250 lbs. We started from Lake St. Clair, went up through the river and coasted along old Huron to Goderich. From there a schooner took us round to Midland at the southern end of the bay. We spent five weeks among the islands, the number of which no man can tell. The scenery is enchanting, air and water as pure as any on earth, and the fishing—think of what it must be, for five weeks not a single white face was seen to disturb the swarms of bass, pickerel and muscalonge; and as for hunting, there was game of many kinds, partridges and ducks in great number, and a few bears to give zest to one's hunt. The black fly does not bite in these regions, and even the mosquito is almost inoffensive. The Bay and its shores are a veritable paradise during August, September and October. There are no currents nor tides, you have open water and sheltered sailing to your heart's content; you can camp on smooth and shelving islands of rocks, carpeted with moss, clean, cool and comfortable, and if a storm rages, haul up your boat and seek the protection of the thickets of cedar and cypress. Wild berries in quantity. Georgian Bay offers great inducements for the sailor and the sportsman alike, and as it is within easy reach of the great cities of the North, the Bay and its shores are destined to become in the near future a resort for the multitude and a chosen cruising ground for the Lake yachtsman.

G. F. W.

BOSTON'S FASTEST CATS.—During the past season *Pansey* and *Payche* had many close and interesting races, *Pansey* coming out slightly ahead in the showing for the year as will be seen by reference to our List of Winners, published a few weeks back. *Pansey* took 12 prizes and *Payche* 11, but the former counts in her locker 11 firsts and 1 second against the latter's 6 firsts, 4 seconds and 1 fourth. There is some chance of *Pansey* meeting *Wanderer* of Providence next summer, when a series of races will be instituted between these two little cracks.

STEAM YACHTS AND RED TAPE.—Official red-tape now compels owners of steam yachts to carry licensed pilots and engineers, and subjects them to a great many other annoyances which the safety of those afloat does not demand. Our steam yachts are generally of such light draft that they cruise in waters to which the regular licensed pilot is more of a stranger than the private skipper, and consequently his presence is of no value and his room often more precious than his presence. A movement is now on foot to have these legal restrictions so modified as not to interfere with the development of this branch of the sport, and we hope those who can in any way contribute to the success of the appeal will do so at once. All builders of engines and hulls, as well as the owners of steam yachts, are immediately interested in the success of the application to be made to the authorities for the much needed modifications, and should send a willing heart in championing the proposed petition to Congress and the Secretary of the Treasury as wide a circulation as many signatures as possible. Messrs. Clute Brothers & Co., engineers, of Schenectady, N. Y., had taken the matter in hand, and now that the flag-officers of the Seawanhaka Y. C. have been instructed to investigate the grievances of owners, and also to prepare a suitable application for the changes desired, we have no doubt but that the combined efforts of the two parties will result in an effective appeal, and that the relief sought for will be granted.

EXPORT TRADE IN BOATS.—The superiority of American woods for boat-building purposes as well as our acknowledged lead in all classes of fine joinerwork requiring skill in fastening light material in such a manner as to get the greatest amount of strength, combined with lightness, has led to a regular export trade in boats, and there seems a new opening for the more enterprising and intelligent of our builders. In this branch T. Desmond, of Peck Slip, has long held an eminent reputation, and only recently he shipped a number of six-rod gigs of handsome model and workmanship for foreign account, while an extension of this business to shells and club-boats as well as yachts will follow as the result of the excellent workmanship which Desmond makes it a point to put into all his work.

A SMALL CORINTHIAN.

BROOKLYN, Jan. 10, 1879.

EDITOR FOREST AND STREAM:

Having heard a little talk lately about "Tichen boats" I have been persuaded to shed a little link in that direction myself, as few seem to be aware of the merits of those remarkable little vessels. They were originally used as fishing boats, but the competition arising from the periodical races originated by the fishermen gradually developed a type of boat whose speed and ability has become famous. As these races were not sailed under the confining tonnage rule the type was at liberty to develop in every desirable direction, and develop it accordingly did into the very beautiful of a small cruiser. Then the yachtsmen took hold of the type, racing them on length, and what was the result? The fishing boats, which at first were built with a generous amount of beam to give them capacity, gradually became narrower and deeper, with more and more outside ballast, and each season the wider boats were beaten by those of less beam, until from 11 feet or so the average beam dwindled down to from 9 to 9½ feet on a waterline of 30 feet. Let the yachtsman who, having beam in his own eye, pocket and thrustout at the cutter, which is prominent in his neighbor's eye, take heed and tremble, for this is storm reality and

solid fact, and as such is worth more than all the logic and reasoning which can be advanced to refute it.

The accompanying drawings are for an "Tichen boat" 30 feet on the water-line, intended for cruising outside, and any other place where there is over 5½ feet of water, and also for racing whenever her owner feels so inclined. As she is to carry about 4 tons of lead on her keel, besides ballast inside, she is practically uncapable; and, being also possessed of comparatively fine lines on account of her moderate beam, she will be capable of very fair speed when driven. She is intended to meet the requirements of those who, not being able to afford a large yacht, do not wish to restrict the length of their cruises on that account, but prefer rather to tie down another reef in the mainsail and drive her through than to up helm and ingloriously run for the nearest lee. Her dimensions were taken as follows, for reasons which will be stated hereafter: Length L. W. L., 30 feet; beam do., 9 feet; draught, extreme, 5½ feet; displacement, 9 tons; freeboard amidships, 2½ feet. First, in regard to her beam. Only 9 feet were taken that the boat might be able to get out of her own way when running free; and having about 4 tons of lead at a depth of 5 feet beneath her, she will have great stability, and any further additions to her beam would be cumbersome and unnecessary, only tending to make her dangerously lively in a seaway. A little less beam might be of advantage to her as a racer, should she sail under the tonnage rule, but in our cruiser we wish to enlarge our cabin as much as is compatible with speed and weatherliness, even if we do ton a little heavier for it.

In regard to draught, all that can be said is, that as the boat is intended to sail in open water there will always be plenty of it under her, and, as depth is valuable as a lever for the action of her ballast, it would hardly be advisable to give her less.

The freeboard was taken at 2½ feet, for two reasons; first, because it gives her a standing height of over 6 feet under the skylight, which is rather good for a 30 foot finish deck boat; and second, because it allows her to heel to an angle of 30° before her plank-sheer becomes immersed. It may be objected that 30° is unnecessarily large and that no one would ever think of sailing a boat at such an angle. But let us assume that she be heeled by a wind-force to a smaller angle and is then struck by a puff, or sudden increase in the force of the wind, it is evident that the momentum engendered will at first carry the boat over to a much greater angle than would be reached by the same force of wind steadily applied. It is to supply the needed dynamical stability, of great import in a sea cruiser, that a liberal amount of freeboard has been chosen.

On reference to the plans it will be noticed that the overhang aft is 6 feet; this rather large amount of counter was given because it reduced the length of boom outward, increased deck room and diminished the apparent height of freeboard, which without it might appear unsightly.

The accompanying sail plan is for a moderate cruising rig only, and is in consequence very low and rather small for racing, or summer sailing, and 2 feet or so more all round would not injure her. The two sections here given are the midship sections of our little cruiser, and of a sloop of about equal water-line length. My intention in making this comparison is merely to show where our cruiser differs from the best type of centreboard boat and her relative amount of cabin room.

It will be noticed that the sections cross each other a little below where the bunks would come, the small amount of space thus gained by the wider boat being counterbalanced by the room taken up by the centreboard box; hence the width of the bunks and the space between them is about the same in each boat. As the only available cabin room in the centreboarder is under her trunk she is somewhat limited as to its length, while in our little craft it can extend her whole length under her floor deck if her owner so choose, or it can be divided up into an after cabin, main cabin and perhaps a little galley forward.

MARTIN GALL.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 41.
Motto: Festina Lente.

White to play and give mate in three moves.

Game No. 39.

A game in the series between J. Copping, of St. Neots, England, and Daniel Jaeger, of New York, in which Mr. Copping announces a mate in six moves:

White. Jaeger.	Black. Copping.	White. Jaeger.	Black. Copping.
1—P-K4	1—P-K4	10—K-K5 B	10—K-K5 B
2—P-K4	2—P-K4	11—K-K5	11—Q-Q7 C
3—Kt-K3	3—P-K4	12—P-K4	12—P-K4
4—P-K4	4—P-K4	13—K-K5	13—K-K5
5—Kt-K3	5—P-K4	14—K-K5	14—K-K5
6—P-K4	6—P-K4	15—K-K5	15—K-K5
7—Kt-K3	7—Kt-K3	16—K-K5	16—K-K5
8—Kt-K3	8—Kt-K3	17—K-K5	17—K-K5
9—Kt-K3	9—Kt-K3	18—Kt-K3	18—Kt-K3

NOTES.

(b) This defense, we believe, was first introduced by Herr Paulsen, and has found great favor with most of the strongest players. It is still considered the best defense in this gambit.

(c) I-Q? we consider the correct move here, and have no hesitation in pronouncing it superior to the move in the text. Blackburne and other masters generally, if not invariably, play it at this stage.

(d) We have no choice, but must pronounce this move as very careless, especially in a match of such importance.

(e) The correct move. Black has now an overwhelming attack, and must at least win a piece.

(f) White does not appear to realize the fatal consequences of his 7th move; in endeavoring to save his Kt he gets into a worse dilemma. In such circumstances we would recommend him at once to submit to the sacrifice and play Kt-K3.

(g) The student will notice that all the last moves of White were forced.

(h) In this position it is nearly immaterial whatever White plays, as the game cannot be retrieved; both R-K and B-Q Kt3, however, appear to us as offering a better chance for prolonging the struggle.

(i) A very good move and real chess.

(j) Black has played throughout in a masterly style, and now announces mate in six moves.—*Harford Times*.

CURSORY JOTTINGS.

—The Glasgow Herald problem tourney is a decided success. Forty-two three-move positions are entered, two of which, however, a preliminary examination discloses to be unsound. The American Chess Journal similar single-move tourney closed Feb. 1, but we have not yet seen the list of problems entered in it. The problems so far published (36) are not, as a whole, as fine a collection as we had expected to see, although it contains many fine problems, which we shall probably indicate when the award is made public.

—Mr. McKim has escaped 1. The list of competitors in the late tourney of the A. C. and B. Association he published recently in the *Evening Post*. His evasive statement regarding the causes for the long delay in the publication of the names of the competitors is but a poor excuse at the best. We pity the poor fellow, who, we doubt not, despite a realization of his faults and sins, loves himself still. Appended is the list which he could only make public at so late a date: "Around the World in Eighty Days." Ben S. Wash, St. Louis; "Mecat Iron Omnes," Geo. E. Carpenter, Tarrytown; "The Sara Sara," W. W. Coates, Cheltenham, Eng.; "Fair Play," A. W. Shuckman, Grand Rapids, Mich.; "Silo Transit," Dr. C. G. Allen, New York; "Eilat," G. W. Brown, San Francisco; "Make Both Ends Meet," H. H. Seymour, Holyoke, Mass.; "Easy Enough," Chas. Mohr, New York; "Follows, Stand Fast," T. Hawkins, Wolf Carr, Harper's Ferry, Ky.; "Open Locks Whoever Knocks," W. A. Balantine, N. Y.; "And Lang Syne," J. A. Graves, Delaware Water Gap, Pa.; "Leo XIII.," J. C. Meyer, Logan, Ohio; "A Fair Field, etc.," Samuel Lloyd, Elizabeth, N. J.; "I Stand at the Door and Knock," Ben R. Foster, St. Louis, Mo.; "Respecte Pinem," G. B. Flynn, Brooklyn, N. Y.; "Evolution," J. M. Tucker, Cross Roads, Tenn.; "Jordan Knew," J. K. Kupper, St. Louis; "None," Chas. White, Brighton, Mass.; "Qui Facit Unum," C. F. Weinberg, Jonkoping, Barnap, Sweden; "Field of Cloth of Gold," D. T. Brock, Chicago. So far as the names of the competitors are concerned, it was a fair field, and it is only to be regretted that the first tourney of the association is likely to be its last, as it now appears as if its days were o'er. That this or a similar association is necessary no one will deny, and it is to be deplored that one of its officers directly caused its demise. Give us no more secretaries like unto the disgraced McKim!

—Thompson, of the *Derbyshire Advertiser*, is no longer the shyest of the triumvirate—Belden, Morrish and Thompson. His avowal of late, and the indication that he will pick him in the other two, regardless of consequences. We'll wager a billion—that is, if the promised explanation proves satisfactory on Fred. Avenue the claret, or "Will in venery look like whine!"

—The Lowenthal Problem Tourney of the *Westminster Papers*, in which twenty sets were entered, resulted as follows: For the best set, "When shall we three meet again" takes the first prize; the second prize falls to set "My Riddle, the Judges, etc.," and the set under the motto "Many things perplex, etc." is awarded the third prize. Messrs. Duffy and Pierce acted as judges, and Mr. P. H. Lewis as umpire. Mr. Mealy has placed at the disposal of the *Westminster Papers* a further sum of £10 for a second problem tourney.—*The Lowenthal Problem Tourney No. 2*. It is open to the world. Motto, sealed envelope, etc., together with full solutions; the problems, etc., to be sent to the Editor of the *Westminster Papers*, 46 Cannon St., London, E. C., England, by American composers on or before April 29, 1879. The prizes are three in number, viz: 1st, £5; 2d, £3; 3d, £2; to which the proprietors offer a complete set of the *Westminster Papers* to the author of the best three-move problem out of any of the sets or single problems sent separately. A set must consist of three problems in two, three or four moves, at the option of the author. Duals will not disqualify a problem (as on the first move), but will nevertheless be regarded *prima facie* as a defect, and will then be considered from the standpoint whether their occurrence is unavoidable or otherwise, and how far their existence affected the idea sought to be embodied in the composition. The judges will be Messrs. Duffy and Abbott, and Mr. Lewis will again act as umpire. While we cheerfully congratulate the *Papers* on its good fortune, we can only wonder why Mr. Mealy does not place a portion of this fund at the disposal of the *Chess Players' Chronicle* or other chess monthlies.

AN ACKNOWLEDGMENT FROM CAPT. BOARDS.—The following letter from this noted sportsman carries with it a most remarkable statement. "People can form their opinion of the safety of the Union Metallic Company's shells when they find that the percentage of miss-fires was only two in 6,013! The modest statement of the Captain that he fired over 30,000 shells in one year, has a small of powder about it that makes one marvel:

ASTOR HOUSE, Jan. 23, 1879.

MESSES. SCHUYLER, HANTLEY & GRAHAM:

Gentlemen—It is but fair to state that the excellent record I have made, both at the trap and in the field, is partially due to the style of shell used. During the past two years I have fired over 30,000 of the Union Metallic Company's No. 4 paper shells, and consider them far superior to any in the market, both as regards flash and surety of fire, and cordially recommend them to all sportsmen.

In my late match at Gilmore's Garden I fired 6,013 shots from the U. M. C. shells with only two miss-fires. I have tried nearly all the other makes of shells, both of foreign and home manufacture, and have had more miss-fires in 100 than I had in the 6,013 U. M. C.

Yours respectfully,

A. B. BOARDS.

—That office boy of ours, who has visited Maine and Florida, and reported accordingly, has now been hearing three-dollar whistlers on our columns. He says "it is any hundred dollar watch, and no one need expect it." He can't see how a watch can be made for three dollars which will keep time as well as his has done for the past four weeks. He is determined to try it in the timber next season.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

E. K., Carmansville.—Bathe your poppy's eyes with lukewarm water and treat him for worms.

R. M. M., Milwaukee.—Plans of 24ft. yacht, with specifications, will cost \$10. Can get up a set for you.

G. W. G., Girard, Kans.—Has any one in the United States walked 160 miles in one day? Ans. Yes; O'Leary has.

A. J. H., Clermont, Ia.—Can I procure a telescope gun-sight for rifle? Ans. From Geo. H. Veris, of Utica, N. Y. Do not know cost.

W. H. N., Philadelphia.—See our game reports for duck shooting. The last news from Long Island reported all the game frozen out and departed.

T. B., Orange Lake, Fla.—Messrs. Turner & Ross, Water st., Boston, sells a cane gun for killing diminutive birds for natural history specimens.

I. L. L., Brooklyn, L. I.—The makers you inquire about are not known in this market. Four drachms of powder are enough for an ordinary charge.

Dexter, Albany.—Please tell me who Tyler & Boyd, gunmakers, are, and how they rank? Where are they? Ans. Gun was made in Boston, but has been out of market a long while.

J. H., Hamilton, Ont.—Price of "Kemp's Manual of Yacht and Boat Sailing" is \$3.00. Can send it upon receipt of price, or send to A. Williams & Co., 283 Washington street, Boston.

S. W. B., Vicksburg, Miss.—I see that Bogardus in his last great match used 3½ and 4 drs. Dittmar powder. Are we to understand that he used that quantity weighed or measured? Ans. Dixon's measure.

WER FEKT, Windsor.—To waterproof your boots apply the following preparation two or three times, thoroughly rubbing it in: Tallow, 4 oz.; rosin, 1 oz.; beeswax, 1 oz.; melt together and mix with equal bulk of neat's-foot oil.

P. B., Milwaukee.—Can send you a design of yacht as wanted, with specifications, etc. See back numbers of *FOREST AND STREAM*, where you will find much information on yacht building. For a model write to Alonzo E. Smith, Isthm, Long Island.

S. B. W., Augusta, Ga.—There are a pair of setter dogs here, brother and sister, which are being bred together. I would ask if you would advocate such breeding, also, if that is what is called close breeding? Ans. We would not advocate such close breeding.

G. F. T.—For charts of Lake Erie write to Merrill's Sons, Navigation Stores, foot of John st., New York and mention our name. Cost of charts merely nominal. Say for boat 15¢ should be about 5¢, ditto, boat, 7¢, gal., and 12¢, bomb. Must fit, from bow.

H. R., Sabattus, Me.—What will remove a skin or white skin from a dog's eye? My dog has one on his eye, caused by being hit in the eye with a twig making him blind in the eye. Ans. There is no remedy unless it is an operation performed by a surgeon.

M. C. W., Chippewa, Can.—Your dog answers the description of a maltese terrier except that the spots are objectionable; the color should be clear white and the coat long, soft and silky; tall curled over back. The riddle you mention would be very suitable for Colorado.

J. M., Worcester, Mass.—Could you tell me, should I buy some Western quail if they are easily domesticated, and would they breed should I place them in a suitable place (confined)? If so, what food do they most desire? Ans. Quail will not breed in confinement, at least we have never known them to, and we have experimented with them many times.

E. G. Jr., St. Charles, Mo.—I have a Parker, 23in. barrels, 12 gauge, about 7½ lbs. What is good pattern at 30in. circle at 40 yds., and what ought I to load for quail and ducks? Ans. Two hundred pellets would be a good pattern unless your gun is a close choke. The load for such a gun should be 3½ drs. powder, 1½ oz. shot for quail, and 4 drs, 1½ oz. shot for ducks.

C. W. R., Princeton, Ill.—My dog is sore and stiff in the fore-shoulders. When he goes to sleep he whines, and after he wakes he can hardly walk. He goes a few rods when he will get all right again; has a good appetite, will eat anything. Ans. Rub his shoulders with the following: Laudanum, liquid ammonia, spirits of turpentine and soap liniment; of each ¼ ounce.

G. W. I., Sandy Hill, N. Y.—On the 17th inst. a friend of mine owning a valuable fox dog sent him to me by express on the N. Y. and Canada railroad. I was delivered mo at this place with his left shoulder broken. I am very anxious for the speedy cure of the dog and your suggestions will be esteemed a great favor. Ans. We can only suggest to you to consult a surgeon.

R. W., Franklin, N. Y.—If a shooter's gun misses fire he has the privilege of another ball. 2. The powder is considered safe. See the correspondence in our columns on the subject. 3. The contestant who questions the position at the score of another shooter should make his complaint to the referee. 4. A club of course has the right to bar any particular brand of powder, kind of shot, gun, shooter, or anything else it desires.

P. A. T., N. Y.—My setter dog gives me great annoyance by barking constantly through the night. What would you advise me to do in order to stop this? He also seems to be very fond of meat, a habit which seems to be very injurious to him. He also is frequently attacked with Cysticele. Ans. Repeated application of a whip will soon teach him to stop barking, and depriving him of meat is the simplest way to cure him of the effects of eating it.

J. S., N. Y.—How long would it take me to train a setter so that I might use him in the field, if I worked hard with him? 2. What is the best age to begin to train a dog? 3. How much would a pair of double-barreled (muzzle-loading) 30 inch 12-bore cost? Ans. 1. So much depends upon the disposition of the dog that it is impossible to say. 2. Six months; yet here again much depends upon the season at which the training is done. 3. From \$30 to \$100, according to material.

W. T. S., Brownsville, Me.—Do not think water-tight compartments necessary in a canvas canoe. When filled she will still have buoyancy enough to hold up a couple of men. For life belt, cushion or pillow, use "deer's hair" life preservers. Send to Deer's Hair Mattress Co.,

West street, above Canal, New York, or ask Mr. West to procure you one. They are cheap and the best thing of the kind.

Ron, Vienna, O.—Mr. F. J. Kaldenberg, of this city, has this to say about meerschman: "The word meerschman is derived from the German, and its literal translation means (meer) sea, and sham (from) sea-foam, but this is not its component parts, as many suppose it to be. It is a kind of clay, composed of magnesia combined with silica and lime. The name was probably given to it on account of its pure whiteness of color and lightness of weight. It is found chiefly in Turkey and Asia Minor."

S., New Brunswick.—I have a bitch about two years old; have kept her a maiden till the last time she came in heat, when she escaped while I was at business and was lined by a big mongrel cur. Of course I don't want to keep any of the pups. Will it be safe for me to drown them as soon as born and do nothing for the bitch to dry up milk? Ans. One or two of the puppies should be kept to suckle the bitch for a few weeks and the milk gradually dried by bathing the teats with warm vinegar.

E. D. S., Jersey City.—1. Can you give me the address of Col. John Bodine? 2. One of your correspondents says woodcock and ruffed grouse, in thick cover, are usually killed at from 15 to 24 yards. What should be the spread of the wings of a woodcock, 10 gauge, at these distances, with a 4 dr. powder and 1½ oz. No. 8 shot? Ans. 1. The spread is at Poughkeepsie, New York. 2. If a choke-bored gun it would put the whole charge inside a 24 inch ring. If an open bore about 35 inch ring.

A. P. S., Boston.—1. Is the auxiliary rifle barrel safe to shoot with? 2. Does it shoot well as compared with a good breech-loading rifle? 3. Is it liable to injure the shooter? 4. Are a black back, yellowish-brown belly, and white marks on breast the right marks for a Gordon setter? 5. What would be the expense of having one trained, and who would do it that you would recommend? Ans. 1. Yes. 2. For its size calibre, yes. 3. No. 4. No, black and tan are the recognized colors of a Gordon, although there have been undoubtedly pure ones black, white and tan. 5. We cannot recommend trainers.

G. H. B., Worcester, Mass.—1. Is the Dittmar powder a safe article to use in a muzzle-loader? Does it possess the advantages claimed for it by the inventor, and is it used by professionals in preference to black powder? 2. I fired forty-three shots at a sheet of paper, 17x18 in., at 75 yards, with a Frank Weston pocket pistol, hitting the paper thirty-eight times. Would that be considered good shooting for such a rifle? Ans. 1. We believe it to be safe if used according to the manufacturer's directions, and it is used by professionals in the exhibition shoots in preference to black powder. 2. Yes; very good.

X. Y. Z., Warren, Mass.—1. Setter for a year had canker in ears; outside sores on back and tips of ears caused partly, no doubt, by shaking head; otherwise appears well. Treated with lead water and Donovan's Solution as usually given in such cases, without effect. Feed much, with slight quantities of meat. Age, 3 years. 2. Bitch with chronic sore eyes, matter and swelled, so for 6 months. Ans. 1. Wash thoroughly with castile soap and louch with nitrate of silver. When eschar is detached apply with camellia hair brush a lotion of tinct. myrrh and tinct. arnica in equal parts. 2. Bcon on the poll.

J. C. J., Tuscola, Ills.—My Gordon setter has had distemper bad for the past few weeks. Followed your treatment. She has a hacking cough, head dropped up and sniffs. In good flesh, good appetite, good on scraps from table. Ans. If the dog is in good flesh with good appetite it is not distemper. We should give the following expectorant and not feed too much. Ipecac powder, 1½ grain; powdered rhubarb, 8 grains; compound squill pill, 2 grains; powdered opium, ½ grain; linseed meal and water enough to make a bolus, to be given night and morning. A seton in the neck might afford immediate relief.

J. V. O., Bridgeport, Conn.—Read our back numbers for information on sea-going craft; also see plans in this number of small Corinthian cruiser. Best books on naval architecture are "White's Manual," being really the only work up to the latest developments in the science, and "Compensation," designed, which, though treating of yachts only, is, next to White's book, the only publication which can lay claim to being a treatise on really modern naval architecture. Cost, 25¢. Can send upon receipt of money. In it you will find the lines of *Hurlet* (Lilly, to tons). For a model can recommend Alonzo Smith, of Isthm L. I.

R. H. R., Canton, O.—If a thoroughbred bitch has been lined by a cur and in her next litter throws tra, or some true and some half-bred, has it ever been ascertained whether the true puppies have or have not any taint in their blood? I have a well bred Irish setter bitch which has fulfilled the first condition and I propose experimenting on the question if it has not been done before. Ans. Our opinion is that effect of a previous impregnation, as shown in a litter, refers more to color than to characteristics. We do not doubt that your "true" puppies are without taint. It would be an interesting and instructive experiment were you to keep some of each.

J. B. M., Strasburg, Va.—1. All other things being equal, is there any difference in shooting qualities between breech-loading and muzzle-loading double shot-guns? 2. What advantages and disadvantages do choke-bore shot-gun possess over those of the old-fashioned bore? 3. What length of barrel and size of bore do I want for hunting squirrels, partridges, pheasants and wild turkeys, especially wild turkeys, and what size shot shall I use for each particular kind of game mentioned above? 4. What is a proper load for said gun (breech or muzzle-loading)? 5. In muzzle-loading shot-guns should the powder be rammed, and should as heavy be put on the shot as on the powder? 6. For long range, say 75 to 100 yards, will long barrels throw shot closer and harder than short ones? 7. Can a gun be made to shoot all sizes, from No. 1 to No. 6 shot, equally well? If so, please describe it. 8. How many barrels, twist or laminated barrels. 9. Most persons seem to use short barrels, that is, they buy long barrels from thirty-six to forty-seven inches, make? Ans. 1. With equal charge of powder and shot, the average muzzle-loader would probably, until quite recently, have beaten the average breech-loader; but of late years the attention of gunmakers has been given almost entirely to breech-loaders, with the result of conferring upon the latter every improvement in the way of boring, etc. 2. The advantage is that they shoot closer than the other; the disadvantage is that the shooter is not so quick to load them straight enough. 3. Either a 10 or 12-bore and 32-in. barrel. 4. No shot for all but turkeys, and for them about No. 5, 6, 7, 8. 5. Four drachms powder, 1½ shot; the latter, perhaps, increase to 1½ for turkeys, but much depends upon how wild the latter are in your country. 5. Yes; lighter would over shot. 6. Longer barrels will burn more powder than shorter ones, and hence are apt to be effective at longer ranges. 7. No; guns vary very much in shooting qualities, some shooting one size of shot much better than they will another. 8. Laminated. 9. Such barrels are only made for duck and goose shooting for the reason given in answer 6.

—The entries for the Seventh Annual Poultry Exhibition, which opened at Buffalo yesterday, number 1,000 or more. Both Green is to give a display of fish.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE PROSECUTION IN MEN AND WOMEN OF A LIFELONG INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 35 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the **FOREST AND STREAM** for one year.

NEW YORK, THURSDAY, JANUARY 30, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the **FOREST AND STREAM PUBLISHING COMPANY**. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

Trade supplied by American News Company.

THE MINNESOTA FIELD TRIALS.—We have received from Mr. C. B. Whitford an instalment of a lengthy review of the Minnesota Field Trials and the judges' decisions, which we feel should be printed; but we prefer to wait for the balance so as to make a consecutive publication. The article will appear next week. Meanwhile the promised statement of the editor of this paper is withheld.

PIT, RING AND BREAKFAST TABLE.—Why do our morning papers feel it incumbent upon them to publish full and disgusting accounts of every disreputable cock fight, dog fight and prize fight? There are such things; they lurk in back alleys, isolated barns, cellars; they are enacted in the night with closed doors and sentinel approaches. Let them remain in the obscurity they covet and deserve. We do not want our morning journals filled with descriptions of them. The odor of the pit is unsavory, it offends decency; why must it greet decent people at the breakfast table?

SKATING AT GILMORE'S.—The entertaining paper, "On Skates," in another column is especially timely at this season of the year, when that sport is at its height. There is no more exhilarating and thoroughly enjoyable pastime than gliding swiftly over the ice in the keen winter weather, and skating is deservedly a favorite sport everywhere that the ice gives opportunity for its pursuit. In New York, the lake at Central Park, large as it is, has become too limited to accommodate the thousands thronging to its surface. The managers of Gilmore's Garden have transformed the interior of that structure into a vast field of artificial ice, and have made of it the finest rink in America. The spectacle presented there every evening is a very brilliant one. The arched lights above, the rocky cavern in the background, and the throngs of swift skaters gliding gracefully through the mazes of the course, all this is worth a visit, even if one does not put on his skates and join in the merriment. The garden is open from ten o'clock in the morning till ten in the evening. Mr. Frank Swift, the well-known skater, is in attendance to give instruction to ladies and gentlemen. Saturday evenings there are races for gold and silver medals.

FOREST AND STREAM IN JAPAN.—Mr. Charles F. Orvis, of Manchester, Vermont, writes:

I had an order the other day for an outfit—rod, reel, flies, etc., etc.—from Yokohama, Japan. The gentleman saw advertisement in **FOREST AND STREAM**.

ARCHERY AS A PASTIME.

ARCHERY is making rapid progress in all parts of the United States. Clubs are rapidly forming, and butts and ranges are being fitted up at large expense in our principal cities. There is promise now that archery will become as popular as croquet, if not more so. It is a most genteel pastime, in which both sexes can join; it can therefore be made most enjoyable. As the season for open air pastimes approaches, we shall give especial attention to archery, and impart all the information we possess to aid in the organization of clubs; to assist practice; to give hints as to dress; to designate rules, and to print reports of matches and scores. We therefore urge all those of our readers who are interested in the subject to send us any reports of scores or announcements of meets; to forward essays, suggestions, or field notes of any kind. We are prepared to make archery as important a feature of our pastime department as the character of the sport deserves.

We publish elsewhere a special report from Mr. Wakeman Holberton, President of the Oritani Archers, of Hackensack, New Jersey, who has just returned from an extended tour of observation through the country. He has interviewed the leading spirits of the archery movement from Chicago to Buffalo. What he has written indicates remarkable progress and an earnest of future growth. We have been promised the attentive assistance of this gentleman in this special department; also that of Mr. Will Thompson, who has already supplied our columns largely, and of other toxopologists east and west. Mr. Thompson has done more to promote this exercise and disseminate information regarding it than any other writer, unless it be his brother Maurice.

Base ball has been called "the American game." So widely popular is it that the number of base ball clubs has already reached at least five thousand. Almost every village of any considerable size has its club. But base ball is confined exclusively to boys and men. Archery invites the presence of women. It is therefore refining in its influence upon men. In every village from boundary to boundary of our country there are girls, lasses, maidens and women, who are pining for some diversion from the drudgery of common-place household duties or the routine of society engagements. Secluded hamlets are so monotonous in their daily economy that the mere advent of a strange cavalier sets all the maidens' hearts in a flutter. They need something to occupy their leisure hours in a harmless, helpful, healthful recreation. Archery affords that recreation. It affords the ladies opportunities to cultivate the acquaintance of desirable gentlemen—for he who courts the society of ladies of culture and is ambitious to draw the bow in honorable emulation with them, must have as fine aesthetic sensibilities and tastes as he who admires a rose, or tunes his soul in unison to music. The practice of archery is not difficult to perfect. Some may acquire more quickly than others; but let not the most awkward or stupid despair. Only place them before the butts, and Cupid will teach them to draw the bow.

Will not our lady readers desire to write us an occasional contribution? We prefer a few thoughts on Archery to a dozen columns on Bears.

HANLAN OFF FOR ENGLAND.

WE had the pleasure of a visit, a few days ago, from Mr. Hanlan, America's champion oarsman, in company with his friends Mr. David Ward, of Canada, and Judge Elliott, the well-known boat builder of Greenpoint, L. I. The champion is in excellent health and spirits and will give the men he meets in Great Britain a tough pull over any course they may select. It is gratifying to our national pride to know that he will take with him two boats built by Judge Elliott: one the famous ship he sent across the line ahead of Courtney in the great match at Lechnie, and the other a new boat from the Greenpoint shops. Mr. Hanlan will "take" in England, for his innate modesty, good sense and generous estimate of his rivals will certainly find a responsive feeling abroad and insure him a hearty welcome wherever he goes. The baseless, not to say thoroughly insipid charges of fraud raised against the results of the Lachine race, and the puerile attempts to question and belittle Hanlan's title to the championship of America, have been so fully exploded and exposed as the mere machinations of individuals soured by their losses through being on the wrong side of the gambler's fence, that the onslaught against the honesty and character of Hanlan and the Hanlan Club will fail to prejudice the public abroad, among whom the champion hopes to add fresh laurels to the wreath of victories that now grace his brow. The calumnies and aspersions upon the champion and his associates will fall flat upon the British ear and will dissolve as vulgar slander the moment the great sculler sets foot on England's soil. Hanlan has never yet pulled his level best, and our cousins will do well not to figure too heavily upon his races here, for they may find in him stay and power which he has not so far had the chance or the need of displaying at home. With the best of training and care, and seated in as good a boat as can be got for love or lucre, we look forward to the result of his first match with Hawdon full of confidence in the Toronto man's ability to give his wash to his opponent and add victory twenty-seven out of twenty-eight races rowed.

We are pleased to know that Hanlan and his many friends appreciate the fairness of the course **FOREST AND STREAM** has maintained during the controversy which grew out of Court-

ney's defeat, and they have our assurance that in the future, as in the past, we are prepared to maintain the position assumed pursuant to the dictates of honesty and fair play, and for the sake of the good name of professional rowing in America. Personal preference we do not permit to interfere with the conduct of our columns, nor do we allow a narrow-minded spirit to color our reports in compliance with the demands of a clamorous set blinded by national prejudice or the loss of precious dollars and cents.

RIP VAN WINKLE.

THE story of Rip Van Winkle was originally a German legend.

Yes, we all know that. But in one important particular, at least, Irving's version of the myth is solely and truly American. In no village of the Old World would such a complete and bewildering transformation of all familiar surroundings greet the returning dreamer as that which our own Rip found after his long sleep among the Kaatskills. To be sure, twenty years would leave their traces upon the quiet German burgh. The sprightly young host would be found filling the chair of the old innkeeper long gathered to his fathers; but there would be the same quaint old sign and the same banner flouting from the flagstaff. The busy tongue of the scolding frau would have ceased its earthly jarrings; and, instead of the prattling child of twenty years ago, the matronly young woman, with child in arms, would greet the old man, but the greeting would be at the door of the self-same cottage not at all changed in all these twenty years. In short, people would have changed; things would be found the same. It is just here that Irving's story is a true picture of American life. The new flag, the freshly painted inn sign, the altered village, the newspapers, the life and activity and bustle, the broadening of thought and interest, all these, much more than the changed faces of the children and the old-time cronies, were what puzzled Rip. Twenty years in American life—that means a century, two centuries, of the village life when and where this dreamer's myth first arose.

And there is something of a moral in all this; a warning to us all. It is not absolutely necessary to creep away to the mountain recesses to fall behind these busy times. We may be in the ranks of the wide-awake workers and still we may suddenly fall to rubbing our eyes and wondering if after all we have not been drowsing away while the winters and springs and summers and autumns have been gliding by. "We are living at a tremendous pace here in America!" such has become the tremendous common-place; but even as we say it, some new phase of enterprise and progress presents itself and we mutter the bewildered waking expressions of the confused sleepers who even as they speak do not know that they have slept.

THE MIGRATION OF BIRDS.

IN all ages the migration of birds has occupied the attention of the observers of Nature. Early writers among the Greeks and Romans mention the arrival and departure of various species and often debate gravely as to what these movements may portend. These early writers too seem to have had, mixed up with a great deal of fable, not a few ideas on the subject, which, in the light of our present knowledge, we can pronounce just.

In later times when the swallows were thought to pass the winter peacefully reposing in the mud at the bottoms of lakes and marshes, and when it was considered highly probable that the rails changed into frogs in the late autumn and sought the same refuge, the fact that most birds journeyed southward at the approach of winter was generally acknowledged, and the hibernators were thought to be the exceptions to the rule and that they failed to migrate only because their delicate organizations or their weak powers of flight rendered them unequal to so extended a journey. The larger birds of passage, the storks, the swans and the geese, in their regular spring and autumn migrations could scarcely fail to attract attention and to lead to a true interpretation of these general movements. But the movements of the smaller birds, and especially of such as migrate by night, were puzzling enough in earlier times, and it is not surprising that our forefathers held ideas on this subject which seem to us peculiar. Besides the fact that the sudden disappearance of certain species of birds gave rise to all sorts of hypotheses to explain their absence from localities where just previously they had been abundant, there is, as Dr. Coues in his recent admirable work on the Birds of the Colorado Valley has shown, a certain mass of testimony furnished by people of excellent character and standing to the absolute discovery in winter of certain birds, usually swallows or swifts, in a torpid condition. This testimony, though mainly contributed from Europe, comes in part from this country.

It is certainly a curious fact that little or nothing is known of the winter home of the common chimney swift (*Heterura pelagica*), when we are so well informed as to just where and how the swallows, which so closely resemble it in many of their habits, pass the period of cold. In the work above cited Dr. Coues discusses this point at some length. He believes that the swifts hibernate in hollow trees, and no doubt in the succeeding parts of his work he will give us his reasons for this belief. Published observations on this matter are as yet too few to enable us to reach any definite conclusions on it.

The old idea upon the subject of migrations was that they were governed almost wholly by temperature, and that these long journeys from north to south and back again were un-

deraken solely to avoid the cold of winter. At present, however, it is very generally believed that the food supply is in the main the governing cause.

The periodical movements of the various birds which visit us are to be classed under two distinct heads: the regular migrations and the accidental ones. With regard to the former we are more or less well informed, of the latter we know little or nothing.

Many of our birds are extremely regular in their times of arrival in spring, but the autumnal movement toward the south is usually more uncertain, and extends over more time. The birds seem loath to leave us, and many, even of the more delicate species, linger with us until late in the fall. At length, however, comes a keen frost which nips them sharply, or a snow flurry, warning them to delay no longer, and then, as if feeling that they have trespassed on the good nature of the weather as long as they dare, the word is passed along the line *sautez ouïe*, and they are off. When next you walk abroad you will find in the fields and hedgerows only the tree sparrow and the black cap; in the woodland and cedar thicket only the ringlet and the jay. Silence, where but a short time since had been heard the chirping and rustling of a hundred busy and eager feeders, unbroken now save by the shrill scream of the red-tailed hawk or the clamorous cawing of a clan of crows.

The practiced collector knows well just when each species among the regular migrants may be expected, and holds himself in readiness at the appointed time. Stress of weather may delay the oncoming host for a day or two, scarcely longer. It is different with the second class, the accidental migrants. They are like the proverbial and scriptural insect. They are here to-day and away, no one knows how far, tomorrow. There is no dependence whatever to be placed on them, and often no cause can be assigned for their presence in certain districts.

In a very important article on the "Distribution and Migration of North American Birds," published in the *American Journal of Science and Art*, in 1896, Prof. S. F. Baird brings forward some extremely interesting facts which we shall present to our readers in a future number of *FOREST AND STREAM* in continuing our remarks upon this subject. These reflections have been called up by the perusal of the very attractive work of M. A. de Boman's on *La Migration des Oiseaux*, in which the author gives a very entertaining account of many of the more important migratory birds of France. He divides them, somewhat arbitrarily, into migrants from the southwest, south and southeast, and describes very pleasantly the habits of each species, closing with a delightful chapter on general migration and the use and protection of birds. The book is written for the sportsman rather than the ornithologist and we can recommend the lesson which it teaches to all.

HONORS LATE AND EARLY.—The morning papers last Saturday contained two brief news items which however diverse in subject have something of a moral in common. One announced the fact that the New Jersey Historical Society having formally expressed its faith that the bones in the Cathedral Church of St. Domingo are the veritable relics of Christopher Columbus, makes known its determination to bring before the American historical societies and before Congress the belief of the Society—"that the discoverer of the Western World is worthy of a monument suitable to his greatness and the expression of the gratitude of a Christian continent, and that such monument should be built by the joint contributions of the republics of the Western Continent."

Yes, give him a monument. He is worthy of it. Much good may it do him. We have our misgivings—and possibly we should keep them to ourselves; they are ill-natured—that Columbus cares very little now whether these wise men who have sat in solemn conclave over his rusty old bones see fit to give him a monument or not. If the wise men some hundreds of years ago had done him honor when he was alive, that would have been more to the purpose. No memorial in bronze or marble can ever heal the heart wounds of the dungeon and the chains. The praise of after generations is of little avail in righting the ingratitude of one's own age. *De mortuis nil nisi bonum*, is all well enough; but of the living anything and everything. It would make an old time cynic laugh to see the Nineteenth Century newspaper vituperation, abuse and slander heaped upon author and statesman suddenly change to fulsome praise and adulation when the cable brings the message of death. We could name a score of men who have died within as many months whose virtues have become known and acknowledged only after they have ceased to exercise them. "Death hath this also," says Bacon, "that it openeth the gate to good fame, and extinguisheth envy." And it is all one—the monument after the lapse of centuries, and the newspaper eulogies which we read in the street cars as the hearses pass by. Each is tardy.

That the Government has finally, as our other newspaper item announces, awarded some public mark of esteem to Ida Lewis the heroine of the Lime Rock Light is something more to the point. Those who read years ago of the heroism of our American Grace Darling will learn with pleasure that she has been advanced to the position of keeper of the Lime Rock Light at Newport, the post being assigned to her by Secretary Sherman "as a mark of appreciation for your noble and heroic efforts in saving human lives." The reward is late in its coming but it is nevertheless vastly better than to have waited a hundred years for a paltry marble tablet.

THE PRINCETON BOYS AT TRENTON.—The Princeton students have again been accorded an unenviable newspaper notoriety. This time it is all about a merry sleigh ride down to Trenton. Arrived there, the Saturday-evening pleasure-seekers were too boisterous in their mirth to suit the staid opinions of the policemen. The whole party were nabbed by the knights of the club, tried before the justice who, being roused from his slumbers, was naturally out of humor, and sent home with light pockets, but, let us hope, with not very heavy hearts. Now all this was the most natural thing in the world. There was never any love lost between the collegian and the pillar of the local law. The former is too full of good-natured and thoughtless mischief to neglect any opportunity of aggravating his uniformed foe, and the constables, or "poelers," as the case may be, are always in spirit, if not in reality, "jugging" "them college fellows." Just what was actually done at Trenton it is impossible to judge even approximately, simply because the sensation scenting reporters and newspaper men have so misrepresented and falsified the actual facts. It is this which induces us to notice the occurrence. A bit of really harmless and unimportant college boys' adventure has been heralded throughout the land as a disgraceful escapade in which the students are represented as profane ruffians and blackguards. We know none of the parties implicated, but we do know enough of college students to warrant the assertion that the papers which have published the story from the standpoint of the Trenton officers, eager to be interviewed and equally eager to malign the boys, have erred. To represent the Princeton men as ruffians may make spicy reading in the police news sensations of the press, but it is wholly contrary to truth and fairness. Collegians are gentlemen.

—We record to-day the death of Mr. Silas Arnold, of Keesville, N. Y., who died on the 24th inst. For nearly thirty years he has been a constant visitor at the Adirondacks, and not only highly esteemed by his brother anglers there, but also at his place of residence by all who knew him. He was a true type of the old school gentlemen.

[FROM OUR OWN CORRESPONDENT.] THE TROPICAL WANDERINGS OF FRED BEVERLY.

CRUISING FOR CRUSTACEANS.

JEAN BAPTISTE came in one day with a bunch of "grives," or large thrushes, which are excellent eating and desirable specimens. At my request he went down into the woods and showed me the tree on which, morning and afternoon, they could be found feeding. It was then noon, and I could not find any; but next morning I started out with the intention of bagging a few. Heavy showers came down every half hour, but I donned my rubber poncho, and waded on through the wet forest with my gun securely covered. My course lay down the south ravine. On the hill to the right is a tall *figuier* tree, the fruit of which is liked by the birds. This fruit resembles in shape, size and color, a cranberry, and is attached to the twigs in clusters of two and three.

Now, I could have sworn to the exact position of that tree; yet, having tramped doggedly through the rain for more than half an hour without seeing any familiar tree or shrub, I began to look about me sharply. Though I had noted the direction in my mind's eye when J. B. had shown me the tree, I overshot it in my search and got further down. A group of tree ferns I remembered; farther on, across a brook, was a large rock—all right; but where was the ants' nest in a dead tree that I had especially noted? To understand why all my landmarks were small and insignificant, the reader must be informed that in these woods the trees were so large and shoot up so high that their crowns afford no means of identifying them; and all their trunks are so much alike, enveloped in masses of vines and ferns, that other objects must be chosen to guide the hunter in his rambles here. Under thick foliage, until the roar of the large waterfall came up to me, and I knew I must retrace my steps, as the tree was on the ridge between the two streams.

At once I was stopped by seeing on the ground before me scattered shreds of *figuier* fruit, and looking up, saw the tree above me. As I had approached from the opposite side to that of my first visit, its surroundings had seemed changed. The rain came down in torrents, but glanced harmlessly from my poncho. It was tiresome waiting, but I secured all I wanted of the grives and went back to the main trail leading to the Boiling Lake and sat down on a rock in a more open part of the forest to try to secure a few humming-birds.

The rain had ceased, and the sun was shining outside. Yielding to the overpowering influence of silence and solitude, I was indulging in a day dream, when a voice awoke me:

"Bon jour, Monsieur Fred!"

I looked up, and saw two brown-skinned maidens. One was a little mulattress, about ten years old; the other was Marie—light-haired, sunny Marie—in whose veins flowed the blood of three races. The blood of the African showed in her wavy hair and full lips, and told what was the original stock with which that of the Carib was mingled; and the blood of the jovial Frenchman who had wandered to these wild years and years ago, gave that roundness and suppleness of limb, the quick, merry eye, the oval cheek and little hands and feet—all combined to form a creation fit to become the mother of a new race.

"Bon jour, Mademoiselle Marie; where are you going?"

"Pour chercher pour les écrevisses"—To look for crayfish.

Crayfish! Why, just what I wanted; for I had promised one of the professors in Washington to make collections of these very animals. I glanced up through a hole in the leafy roof above me and judged it was about ten o'clock, unless the sun's rays were refracted in coming through.

"Have you anything for me to eat, Marie?"

"Yes, Monsieur."

"Then I will go with you."

"It gives me much plaisir, Monsieur."

"Well, lead the way."

Reader, if you look in a work on natural history for information regarding the crayfish, you will find it there given as a "long-tailed decapod;" and, pursuing the subject still farther, you will see that it is also crustacean—a "decapod crustacean." And thus [you might follow the author up to the branch, *articulata*, and back again through all its divisions and ramifications, and about all you will know about it will be that it is a long-tailed decapod and inhabits fresh water streams. Long-tailed decapod, forsooth!

Come with me, reader, and I will show you more of crayfish and their ways than you can learn in a week of books. Follow in my wake, or, as the path is slippery, take good hold of my hand. Marie won't mind you; she don't mind anybody. The way leads up hill and over rocks, wet and smooth, for perhaps a mile. Don't mind the wet leaves that continually dap in your face, nor the vines and creeping ferns that vex your feet. Take a good grip and come along. In the language of the immortal bard (who, by the way, never knew of crayfish like these), "I prithee, let me bring thee where crabs grow."

We may have completed a mile, when Marie stopped: "Stay there, Monsieur." I stood there while she went behind a large rock and removed her shoes. Then I was allowed to follow on until the path was left and we entered the deeper woods to descend to the river. Opposite another huge rock she stopped again. "Wait there, Monsieur." Behind this rock she darted with her little companion, and shortly reappeared. Satyrs and wood nymphs! I thought these girls about as thinly clad as possible to be when they disappeared behind the rock, but I declare, in all seriousness, they had left a large bundle of clothes behind.

What a mysterious combination is woman! And there they stood, laughing and blushing, in a single dress, each loosely gathered at the shoulders, and at the waist by a girdle. This was becoming serious. If there were any more rocks in our path I felt morally certain they could dodge behind them. And then how would they appear? It was very certain they could not take off much more. My hair began to bristle. What would people say? What would my Sunday-school teacher say? I was resolved to stop it at all hazards.

"Look here, Marie!"

"Yes, Monsieur."

"Don't do that any more."

"What, Monsieur?"

"Don't go behind any more rocks; don't take off any more garments." I blushed all over at the thought of it.

"Why no, Monsieur; it is impossible."

No amount of italicizing or exclamation points can render the astonishment in her tone as she thus assured me; and feeling I could then safely proceed, I gave the order to go on. We reached the river—the stream that flows out of the mountain lake—broad and with gravelly beach, with immense boulders as islands, and a wall of vegetation on either side that rose straight up a hundred feet. Here my guides led me to my own devices and waded into the stream in search of crayfish. I saw a bird I had not seen before and pursued it along the shore until stopped by a cascade. It was within shot, however, and at the report of my gun it fell into a little pool. The rocks were smooth as glass, and my great boots, though good protection from the vines and thorns, were but poor aids in clambering over these rocks. The result was that I unexpectedly sat down upon a rock, and very suddenly I came down, too. There was a stream of water rushing over that rock six inches in depth, so that my fall did not hurt me; but the rapid-flowing sheet struck my back with great force, and climbed up over my coat collar so rapidly that I was immediately as bloated as a bull-frog. The rain had long ago drenched me, but, though wet before, I did not care to get wet behind.

My half smothered yells brought Marie to my assistance, and she rescued me and the bird, and then suggested I could wade better with my boots off. Happy thought! The boots were removed. I need not detail, to any one who has had the experience, the pleasure of wading barefoot over stones and rocks for the first time in years. A little torture was enough for me, and in half an hour I was seated quietly drying in the sun, watching the girls at their work. The stream was broad, with deep pools, and it was in these pools the crayfish lurked, looking like miniature lobsters through the clear water. I could only see the small ones, but Marie assured me there were large ones out of sight beneath the cascades. I was glad of that, for several severe nips from these small ones had given me enough of crayfish, and I did not care whether my friends in America ever got a specimen.

Erect upon the rock she stood a moment, then plunged head-foremost into a foaming pool, disappearing from sight. A moment later, rising bubbles preceded a round little head from which hung long, limp tresses; a pair of shoulders brown and bare, and round arms reaching out little hands with sup-
port. She had a cray-fish in each hand, and another, with wig-

gling legs, in her mouth. These she handed to the little girl on the rock near me and then climbed out and stood erect, with heaving bosom and parted lips, and nonchalantly gathered up her skirts and wrung from them the dripping water. Outlined against that wonderful background of tropical leaves, with its depths of shade and gleams of light, with the water dashing against the rock upon which she stood and parting in sheets of foam, what a charming Naiad she appeared! Naiad she may have been, but she could hardly have been called a *Dryad*—as the water had caused her garment to cling closely to her shapely figure, and was pouring from it.

This was repeated, until the basket carried by the little one was half full. Once she came up breathless and excited and came to me with an ugly water scorpion between her fingers, one of which was red and swollen, where the venomous thing had bitten it. Thus we went on up the stream until near the mountain lake, when our way was stopped by a jam of broken limbs. Then we turned down again until halted by a series of wells, worn from the rock by the action of the water, twenty feet deep, into which the flood plunged wildly, ever descending, on its way to the grand leap of two hundred feet into the valley below. While my companions searched a side stream I remained on the banks by the trail. Daylight waned and they came not; the gathering gloom urged me to be up and on my way home; but the trail was obscured and I was not sure of reaching my hut in the dark without a guide. So I waited, perforce. Everything living seemed to have left the river's banks, and the only companion to my solitude was a gayly-colored lizard, which lay upon a branch and watched me. In the interest of science—but against my better feelings—I held a bottle before his nose, and he walked into it. Then I put in the cork, and later he was having his fill of rum; not the first victim of the bottle—and of science.

Their voices reached me not long after, and none too soon, for we had hardly light enough to reach the main path. Late as it was, however, Marie prepared some of the fish when she reached her mother's house, and sent them to me with some fragrant limes and a spicy pepper. The delicate flesh as far surpasses that of the coarse garbage-feeding lobster in flavor as a "saddle-rock" does a coon oyster. With a dripping of lime juice and a dash of West India pepper, some Peak & Pears' biscuit and a bottle of Tennant's pale ale, I supped so delightfully that all my mishaps were forgotten. I even queried whether crayfish hunting, with a pretty, brown-skinned maid of sixteen, who waded bare-legged in open-bosomed dress, extended a helping hand when you slipped, laughed merrily when you fell, talked musical patois as she pattered along,—I queried if it were not better than hunting through musty brooks.

WHAT IS THOUGHT OF US.

WASHINGTON, D. C., Dec. 23, 1875.

EDITOR FOREST AND STREAM:

I am so much interested in the sports derived from forest and stream, that being now unable to participate in them, because of duties to perform, I gain all the pleasure I can in reading the many accounts so entertaining published in your paper of hunting and fishing adventures; and as I read I am reminded of the many pleasant times I have enjoyed in the wilderness, and hope that I may again traverse the forests, gain in hand, for I am still young.

As I have just been reading the last number, I felt impelled to write to you, and thank you for the interest and pleasure you afford me through your columns, and for the manner in which you are conducting the greatest sporting medium in our country. Well do I remember when the *FOREST AND STREAM* first made its appearance, and with what delight I hailed it as being something much needed among sportsmen. I believed it could not fail to prosper. But its success has been due in excess of my expectations, and has caused its almost unbounded, and in the right direction. What efforts have been made of late years in nearly every State in the country to preserve the game and fish of its forests and rivers, and to restock rivers depopulated of fish. How much interest is taken in rifle matches and shooting contests of every kind. The people are awakening to the great importance of deer sports as a healthy and innocent amusement, and therefore to the great importance of preserving our game. But the *FOREST AND STREAM* is the trumpet which has been sounding in the ears of the public for the past six or seven years, and has caused its awakening; and it has spoken none too loudly or emphatically in behalf of our sporting interests. It is surprising how much influence it exerts directly and indirectly. Its power is felt in every community where there are true-hearted sportsmen. I have seen a copy handled and read with interest in the logging and hunting camps of Maine and Nova Scotia, as well as in the richly furnished rooms of city habitations. Thanking you in behalf of my sporting friends here and myself for the interests your paper affords us, for your willingness and attention in answering our inquiries, and for the honest and impartial manner in which the *F. & S.* is conducted, I remain,

C. W. B.

INDIANAPOLIS, Jan. 21, 1876.

EDITOR FOREST AND STREAM:

In your leader of the last number you ask if you have accomplished what you set out to do. Yes, you have done it most successfully. I took the *Naturalist* for a number of years, but found that my business was such I could not devote the time to those purely scientific matters presented in such a way as to "have that ramble my read." John White and John Cotton tell me have suffered for the past five weeks. Judging from figures given me by Budd & Co, shippers of game and poultry, fully 100,000 quails, and the same number of rabbits, have been received and shipped from this point from December 1. One man, twelve miles west of here, caught over 1,200 rabbits in less than a month. We fear that the greater portion of our quails are frozen to death. Even rabbits have been found dead when they were not pecking the even bushes. Suppose you suggest, in your pleasant way, that the girls as well as the boys be taught how to handle a gun. My wife is an excellent shot, and I have greatly enjoyed her company in Florida. In November I thought that I would give an oldest daughter, not quite eleven years of age, a few lessons with my No. 12, Dougal, C. G. lbs. The third shot at a time turkey brought it down. On Thanksgiving Day we went out in the country by invitation to dine. My niece asked me to "bring along my shot-gun and kill the pigeons."

(same ones) which had become a nuisance in his barns and granaries. I loaded some cartridges with two and a half drachms and one ounce shot, and decided that Eliza could do the shooting. She never missed a shot, and at one of the "cracks" broke down three birds! My little daughter has been so inspired that she intends making a hunting suit for herself, and go with me to my farm this coming fall. I merely mention this fact to show that it is not only possible, but a girl will grow up to love nature all the more if she can go with her father to the fields and woods.

My health is better than for fifteen years, and I attribute it all, with God's blessing, to my sweating and waiting and roughing in the piney woods and everglades of Florida.

J. P.

CHICAGO, Ill., Jan. 15, 1876.

EDITOR FOREST AND STREAM:

It is seldom now I put pen to paper, only when I think I ought to do so in the public interest. It is nearly forty years since I used to fill, page at a time, the old *Spirit*, when Porter and Richards were in the land of the living, and Herbert and Agassiz were my correspondents. But though sixty-five and rheumatic, I keep alive my interest in field sports, and must thank you for the pleasure your paper gives me.

T. D. L.

PITTSBURGH, Pa., Jan. 17, 1876.

EDITOR FOREST AND STREAM:

In your issue which reached me yesterday, you ask: "Have we fulfilled our mission?" We answer, You have instructed, interested and elevated the sportsmen of our country; you have created a love for outdoor sports; you have shown that it is wise to make laws to protect fish and game, and you have educated your readers to respect these laws and to force others to do the same; you are fast teaching the farmers that there is no conflict between them and the real sportsmen of the country; that true sportsmen are their friends in place of their enemies.

J. S. B.

GAME PROTECTION.

THE ADIRONDACK DEER SLAUGHTER.—While it is our desire to give all parties in a controversy equal privileges of presenting their views, we must decline to make our columns a medium for personal recrimination. We are in receipt of further correspondence regarding the slaughter of deer in the North Woods, the publication of which we do not consider conducive to the correction of the abuse. That there has been unlawful and culpable destruction of game in the Adirondacks, there is no good reason to doubt. There are officers and societies whose duty it is to rectify the evil. The question is: Will they do their duty? Newspaper talk cannot fill the place of derelict officials.

THE MAINE TROUT LAW.—Some of the Maine descendents of the original penny-wise pound-follish fellow are thinking to put money in their purse by extending the open season for trout from Sept. 21 to the middle of October. This, they reason, will lure late fishing tourists to the easy capture of the gravid October fish, while their shekels meanwhile enrich the coffers of the inhabitants of the land. This is a genuine case of killing the trout that lays the golden eggs. The belated tourist would undoubtedly linger for a season or two and thereby materially enhance the pecuniary interests of his host, but we can hardly conceive how that host could expect this blissful condition of affairs to last very long. Every one who has ever fished in Maine knows that the trout are spawning in September and October, and that they are not fit to be taken in the spawning period, and that even if they were, it is against all reason and common sense to capture them then. If the Maine Legislature alter the present law at all they might with great advantage set the beginning of the close season twenty days earlier than it is at present. We trust that the intelligent anglers and fish culturists of the State will exert their influence against the proposed change.

BLOOMING GROVE PARK ASSOCIATION.—A meeting of Directors of this Association was held at the Hoffman House on Friday, January 24, to fill the vacancies occurring by the resignation of Dudley Field, Col. Sanders D. Bruce, A. H. Wellington, and Dr. Geo. H. Glenney. The following gentlemen were elected in their stead, viz.: Count E. R. Mounzilly, M. B. Brown, Dr. C. Alfred Grimes, and C. F. Fearing. An adjourned meeting of directors was subsequently held at No. 30 Broad street on Tuesday afternoon, 28th, to elect a President in lieu of Dudley Field, resigned. John McGinnis, Jr., of the banking house of Dean, McGinnis & Co., was so elected. John Avery was re-elected Vice-President. The following is the full board of officers of the Association as recently reconstituted:

President, John McGinnis, Jr.; Vice-President, John Avery; Treasurer, Cassius H. Reed.

Executive Committee:

John McGinnis, Jr., M. B. Brown, E. Bradley, M. D.

Directors:

Dr. E. Bradley, Charles Hallowell, John Avery, John McGinnis, Jr., C. Alfred Grimes, M. D.; C. F. Fearing, Count E. R. Mounzilly, A. H. Glenney, Cassius H. Reed, M. B. Brown, Geo. A. Greene, Jr.

After the election the following gentlemen were duly elected members:

Messrs. C. M. Vanderbilt, C. Fellows, H. J. Nicholas, W. T. Wharton, Jas. M. Dunbar, and Martin Van Buren, all of the Union Club; W. H. Henderson, Beverly Robinson, and E. G. Field, of the New York Hotel.

Financially our numbers 142 live members, and stands financially as strong as any in the country. It has a large balance in the treasury, and its assured receipts from annual dues alone are amply sufficient for all current and contingent expenses. For the fiscal year beginning April 1, 1876, the annual dues have been fixed at \$35. The South Side Club, a large number of whose members are also members of the Blooming Grove Park Association, have offered a donation of trout from its own preserves to stock the streams at the park, while Director M. B. Brown has purchased \$100 worth of black bass spawners and made a gift of them to the associa-

tion; these will be turned into the lakes in the spring. The car load of deer presented by Gen. Harding, from his preserves in Tennessee, and a large lot of ruffed grouse will also be put into the premises after the snow leaves. Under the new management, it is confidently believed that all the plans of the original projectors will be fully carried out. The club house is fully appointed, and is one of the most commodious and comfortable in the country. It is now in charge of Major John Stellenwerf, late of the Lake House at Islip, Long Island.

NEW YORK ASSOCIATION FOR THE PROTECTION OF GAME.

The annual meeting of this association was held at Martineau's on Monday evening, Hon. Robt. B. Roosevelt, the President, in the chair. Among other business under discussion was the action of supervisors in tinkering with the game laws, which was strongly condemned. The counsel of the association reminded the members that the amendment of 1876 gives them authority only over such birds and animals as are not mentioned in the law itself. This, he said, did not appear to be generally known, and had been universally disregarded. The consequence was that every county had practically a different law. Even Gov. Robinson, in dealing with the matter in his annual message, seemed to be under the impression that Supervisors had a right to do as they pleased. The speaker was perfectly satisfied with the law as it stands, and disapproved of any attempts to tinker it on account of the difficulty the society had heretofore experienced in getting the Legislature to act sensibly in the matter. He suggested that the society should prepare a condensed edition of the present law, leaving out the clauses giving authority to Supervisors, and adding others making the open season for all game begin and end on the same date, and the time for having in possession also end simultaneously, instead of having different dates for different kinds of games, as now. He thought this would simplify matters so that everybody could readily understand the law. Another wise amendment would be one prohibiting the use of any water of the State of New York for the purpose of Dr. Green, President Roosevelt, Counsellor Whitehead and Senator Wagstaff were appointed a committee to take charge of the subject, and on motion of Mr. Meyer the committee were instructed to give particular attention to the evil of trapping, which still prevails to a destructive extent. The Treasurer reported receipts during the year of \$8,247.65, and a balance on hand of \$864.92, besides \$4,500 previously invested in Government bonds. The following officers were elected for the ensuing year: President, Robert B. Roosevelt; Vice-President, Clinton Gilbert; Secretary and Treasurer, Thomas N. Cuthbert; Counsel, Charles E. Whitehead; Executive Committee—H. T. Carey, William M. Fleiss and Wisner H. Townsend. The meeting then adjourned downstairs, where a luxurious supper was enjoyed. After the supper, in the course of the speeches, Mr. Fleiss stated that the South Side Club have succeeded in having their trout in one year of a weight of eight ounces, and they have trout two years old that weigh nearly a pound. These facts have never been made public before. Mr. Roach told of trout which he had seen in Maine weighing three pounds, and which, he had been assured by a reliable man, were only one year old. His informant ascribed their rapid growth to their extraordinary voraciousness. Other trout of the same age in the same pond were mere fingerlings.

THE VERMONT STATE ASSOCIATION—FERRISBURGH, Jan. 7.

I wish you could have been a little more pointed in your hit at our dinner-eating State Association; not that I have any personal spite against it or any of its members, but that it might be shamed from its inaction, which is disheartening to all who really desire the protection of our sadly persecuted fish and game, and who hoped for good work from this organization. To what extent this hope has been realized you can judge when I tell you that the fish laws have been openly violated ever since their passage, from one end to the other of Vermont, and part of Lake Champlain (except in this township, where our little club has done its work faithfully), without an effort toward their enforcement by the State Association. The same is true of the trout lakes and ponds of the northeastern portion of the State, and the illegal killing of deer in the northern counties. In one instance, as Secretary of our club, I notified the State Association of the illegal sale of pike-perch in Burlington. I know that my complaint was forwarded to the Secretary of the association, who lived where the offence was committed, but no notice was taken of it, and the illegal sale of the fish went on as before. All praise is due to members of the association for their effort to introduce migratory quail for carrying a trout's head of deer in the State, but I believe it is a blot on the State Association has done nothing that was expected of it. I firmly believe that our little club, without an influential man among its few members, has done more for fish and game protection than the State Association, with its judges and great men and great dinners. And I also believe, with my present light, that the hope of game protection lies not in such bodies, but in the earnest work of local organizations, towns and counties.

H. E. ROBINSON.

BIDDEFORD AND SAGO GAME AND FISH SOCIETY.—This society was formally organized at Biddeford, Me., Jan. 23, with a membership of nearly fifty and the following officers: Pres., Geo. F. Calef, Esq.; Vice-Pres., Ferguson Haines, Esq.; Sec., Dr. Thomas Haley; Treas., C. F. S. Blake, Esq.; Executive Committee, Dr. E. Hill, Wm. B. Burdett, John H. Andrews, Abijah Tarbox, who were unanimously elected. The new association have abundant work before them. The Saco once teemed with salmon; it can be made a good fishing ground once more.

MASSACHUSETTS—Boston, Jan. 23.—Editor Forest and Stream:

I notice in your last issue you call upon Massachusetts game people to look out for the game protection, etc. I would say that a committee of the Massachusetts Fish and Game Association, of which I am chairman, has the matter of game protection in hand, and that we are preparing a bill to present to the Legislature, now in session, which we trust will be satisfactory to all parties concerned, and afford us ample protection. The interest of game dealers and sportsmen should be identical.

JOHN W. ADAMS.

NETTING DEERS IN SHINNECOCK.—Editor Forest and Stream:

Is there no course to be taken by sportsmen to put a stop to the netting of ducks in Shinnecock Bay? We understand that large numbers are being thus caught in the openings

of the land on the feeding-ground. It seems difficult to enforce the law there, if there is such a law, as the bay-men and neighbors fear to complain on each other, and as the trial would be before a jury a conviction would be very uncertain. But we appeal to you is there no course a sportsman residing, say in this city, and in the habit of visiting that section occasionally for a few days' wild fowl shooting, can take to put a stop to this nefarious practice? At this rate we shall soon have no duck shooting in the vicinity of Gotham.

JACOBSTAFF.

We editorially called the attention of the authorities to this thing two weeks ago. It rest with them to correct the abuse.

SPORTSMAN'S ASSOCIATION OF WESTERN PENNSYLVANIA.—
Pittsburg, Pa., Jan. 15.—At a meeting yesterday evening the following named officials were elected to serve the ensuing year: President, Robert Dalzell; Vice-Presidents, D. C. Phillips, Col. B. F. Ruff, F. H. Kennedy; Treasurer, W. C. Macrum; Secretary, J. F. Wilcox; Assistant Secretary, Howard Hunt; Naturalist, S. A. Shuart; Directors, J. C. Brown, J. C. Brown, J. C. Brown, J. C. Brown, J. C. Brown, Howard Hartley; Elective Committee, John Caldwell, Jr., Edward Grege, N. M. McDowell, Charles Hays, J. H. Bughman, B. Bakewell, C. A. Carpenter.

WILD RICE.

JANESVILLE, Wis., Jan. 21, 1879.

EDITOR FOREST AND STREAM:

You may easily believe that I have been a peculiarly interested reader of the recent communications in your valuable journal concerning the propagation of wild rice, and especially so as to the article of "Howard," copied from the *Tuolumne*, inasmuch as that gentleman purchased his seed from my brother, and his directions as to procedure concerning the same, fully tallied with those which we shall now hear from other parties on the same subject. Speak out, gentlemen, and give us your experience, good, bad or indifferent. We are all comparatively tyros in its culture, and need all the instruction we can get. I am not selfish in this matter, for my experience thus far has been that the wild rice trade won't do much good, especially as it is now being monopolized by a few wife and children. The dividends are not enormous as yet. I find others think the same, for Cantwell writes that his stomach is full and this is his last year in the business. Indeed, we were rather forced into it by your paper referring so many to us as probably being able to procure seed for them. We hadn't any then, but at last getting desperate at not being able to do so, we decided to try it. I have the greatest interest in the matter, however, is that of every sportsman—i. e., "Will it grow successfully and attract wild fowl to otherwise barren waters?"

"Howard's" experience has certainly been remarkably flattering, and his account of his success in spring planting fully carries out my own ideas. I always believed that it could be planted in the spring as well as in the fall, and with as certain results. The only reason why others thought differently was because none had ever tried spring planting, thinking that because the seed sowed itself in the fall—as all self-sown seed do—that must be the proper time. There are many advantages in favor of spring as against fall sowing. In our cold and winter-prone climate, and in our periods are frozen in the ground, November, thus preventing planting in the seed in the next fall. Spring sowing not only does away with this, but it gives everybody plenty of time to secure the seed. Then again, in the spring there are no ducks about to gobble up the seed, as, no doubt, they do in the fall.

However, I intend to experiment in the matter myself, and I hope those who have already done so will give us, through the papers, the benefit of their experience. By the way, I see that another gentleman—a Tennessean—gives a favorable account of spring planting. He need not fear the destruction of his fish-pond; in fact, it's the most valuable plant he can grow there, affording both food and protection for his fish.

Another problem to be solved in connection with this rice is the culture is: "What is the greatest depth of water in which it will grow?" The minimum is already known, as it will flourish in only an inch of water. It must, however, be covered the year round. The question of depth I shall endeavor to solve. Some of our small lake owners have been growing rice. I have planted some in my aquarium, and am anxiously waiting for it to sprout. We have found a great difference in the weight of seed coming from different points—in fact, it might be graded like wheat. Our directions to buyers always say, "Do not wash the seed, but dry it in the sun." I have now sink stalk without soaking; indeed, we have sold but little that would not do so. Whether the difference in seed weight will make any difference in the crop, as in other cereals, is also an interesting question. I am inclined to think that lighter seed will beget light seed, and that being the case, but little seed will come from the bottom of the lake. The seed dropping from the stem, floats for any length of time without sinking, most of it will be eaten by the birds, and thus the wished-for result will not be attained. However, no doubt all these points will soon be solved, now that the sportsmenmen are so numerous. I have been told that the sportsmen of "Howard" and the Tennessee gentleman (his name escapes my mind) do much toward spreading the good work.

A. M. VALENTINE.

way down for thirteen days, and killed twenty-one deer. It is said the distance is 300 miles from Crawford to Au Sable.

G. W. SNIDER.

EAST SAGINAW, JANUARY 31, 1870.

Deer Mephars: There were four of us in the party at first, but one fellow from Sandusky got scared out and left us for home. We built a shanty on the old ground, but there were no deer on that side of the river. Lynxes had killed a goat many, and drove the rest across on the other side. There we found them thick enough, so we moved our camp to the west side of the river, where we were sure to find them where we were. The deer came back on the old ground very thick a few days before we left. We killed three over there the last day. We left Saginaw on the 6th of November at six in the morning and arrived at Crawford at one in the afternoon, got our lumber and worked on our boat until bed-time. We had a sail for a tent. It thundered and rained very hard, but soon turned cold and snowed until morning. After breakfast we went to work on our boat, finished the cabin and stove, and took some of the deer with us. We had a half-past ten; we ran on mill dalk, pulled up to the bank, landed, scraped away the snow, put up our tent, cooked supper, ate and went to bed, slept on our wet blankets, and had wet ones for covering; got up about four o'clock, built a fire, cooked our breakfast, and as soon as it was light enough pulled down the river. We began to come to the hunters along the banks, and hear the notes of the grouse, and see occasionally a deer. We passed West Branch, then Big Creek, and about noon came to some of the best hunting ground in the State. We were inquired to some number of deer killed. They said they had killed seventy-three, and the party had all left but six, and they were going next Sunday. Passed the camp, saw the usual number of dogs around the camp, and some deer hanging up. About five miles down we came to another party; inquired the number of deer killed. "Thirty-five," was their answer. The party was small, but they hunted with dogs. Passing their camp, we saw the saddles of four deer hanging from the sides of a small cabin. We were inquired how many, which had been killed. We pulled hard for an hour, before night. Saw a good many deer signs along the bank, and some bear signs. About four o'clock we turned a bend in the river, and spied the ever welcome habitation of Mr. Cummins. The banks of the river were lined with the boats of parties which arrived here ahead of us. We were greeted from the house with a yell. We answered, and passed on about three miles, and came to our camp. Went ashore and found our old shanty, stove and everything just as we had left it. It was a good thing, miles from civilization, but in a very nice place.

early 100 miles from daylight camp, but in a very rapid ascent to the top of the mountain, and then down to the valley, we arrived in Glenade's old camp. They told us there were no deer on that side of the river. Brundage and I went back to the hills and found deer signs very scarce. There appeared to be nothing but old bucks, and they very wild. We found a good many dead deer that the Lynx had killed. We hunted about a week on that side, and then moved down the river to hunt on the other side, so we built a new cabin and moved into it. One evening, as I was down by the swamp hunting deer, I shot and killed an old doe and wounded another. She ran into the swamp, and as it was getting dark I concluded to let her alone. I went back to the cabin and found the deer had been about half eaten up. A lynx had killed her. He had had a big time doing it, but he had done the job better than half a dozen large dogs. Jess, my son, was with me. We went on down the river about a mile; I found five deer tracks going into the swamp. The boy went in, and I got upon a runway and watched for the deer to come out, but they had crossed the river. The boy turned to come out on the back track, and met a lynx going in after the deer. He turned and ran. The boy followed him to the edge of the swamp, then left the tracks and came to me. About that time I saw the lynx jump over the river and follow the deer. I was very much surprised. I drew signs on him and fired. He gave one awful scowl, and that was the last of him. He was four feet ten inches from his nose to the end of his tail; the tail was about four inches long. He stands almost three feet high, has a very large head, with black tassels on the points of his ears, and a large black ruffe around his neck. I brought him to Seguin and sent him to New York. We had very good luck hunting on that side of the river; killed nineteen deer there in about two weeks. I did some very bad shooting, but Brundage did worse. My gun does not shoot powder enough. I shot twice at a doe that was about half eaten up, but I did not know I had lost them. I shot one old buck, the largest deer I ever saw, and I hit him through the neck, and he fell. I stood watching for another to move into sight, when the old buck began to baw and kick. At last he got up and started off. I thought he would soon fall again, but he ran off and I lost him. The Indians found him, cut his head off, and sold it to Cummins for \$2.50. I had one prong growing out on the under side of one horn that was over a foot long. It stuck straight down. If I had had my traps with me I could have got some fur-

I think the most suitable gun is a heavy breech-loader, about ten or twelve pounds, with two sets of barrels, one eight and one twelve gauge. I have seen some hunting men with such eleven pound guns. So far, he told me saw two bucks fighting each other, one took a shot off, and he killed one of them with each barrel; they dropped dead in their tracks. We came out by railroad. We hired Cummins to take our stuff out to Roscomomon. There were about thirty of us came out together. Brundage, Jess and myself walked that fifty miles in just thirteen hours, in from ten to twelve latches of snow. How is that for traveling? Ate but one meal, and saw but one house in the whole fifty miles. There were no bear there this fall, but up the river at Ball's place they were plenty. Ball killed forty-five bear in this section this fall. There were no acorns where we went. The Indians had been eating acorns all winter long. In the fall, there were about 100 deer killed at Cummins' place up to the north fork. It is said that 855 deer were shipped from Roscomomon, most of them killed down the An Sabie.

RUNNING DEER WITH DOGS.

QUEBEC, Jan. 22, 1879.

EDITOR FOREST AND STREAM:

to see your column on frequent discussion about the practice of running deer with dogs. The place most referred to in these articles is the Auldrondack range, but I suppose that what experience teaches there will be applicable to other places. Near my old home in Ontario is a very long and wide cedar-swamp, thick throughout its whole length of forty miles or more is a swamp broken by roads or clearings, and which I have often used for the purpose of hunting deer and a few bears. There is no noveler of any kind near it with the exception of a few rivers, which is almost dry in summer, so that running the deer into the water to kill is an impossibility. In several places along the edge of the swamp were small numbers of settlers who had tried their hand at clearing, but who had in no case managed to make a good farm. Nearly all of these men during the fall and winter did nothing much else than hunt, and for this purpose each one kept from one to three dogs, and these were used in the same manner as those of the first or September the cry of their dogs could be heard night and day. These men managed to kill a good many deer for the market, but they drove away many more than they killed. After the legal season for killing was

over they did not dare to bring any more to market, but after killing the animal they took the hide and as much meat as they required for their own use, and the remainder was left in the woods. Of course this kind of thing could not last forever; still, if they had been content to hunt only in the winter the damage done would have been less, though, but not so bad as it has been. While attending to their fur-trade in the spring and summer the deer were left alone as far as the men were concerned, but the dogs were allowed to remain in the woods, and the wolves and the bears of the West of course were not far off. The only cause was the house at intervals. At the turn of this life they were as bad or worse than wolves, and the consequence of their depredations is now easily seen. I have seen a party of sportsmen get out from the town for a day or two, and return with from one to five deer; but now I would defy the largest party of sportsmen in Canada or the States to find a dozen deer in the whole swamp, and this miserable result has been attained in the short time of about seven years. Since the constant persecution, have been completely driven out, and, as far as I know, have been exterminated from the whole of Muskoka, and along the shore of Georgian Bay, where they are seldom hunted, they are still very plentiful, in spite of all the wolves to be found there; and the swamp I have spoken of is only an extension of these same woods. The last deer I saw there was two years ago while building a road through the swamp. One morning, while my men were running out on an engine, three deer sprang from the cover on one side of the track, and, crossing it, were soon lost to sight on the other side. I followed the new line to the next village, and the same afternoon about twenty new ones turned out, but I did not have time to say they did not get them, and my best wish for them is—*long may they live.*

The Rifle.

THE FOREST AND STREAM AND ROD
AND GUN TOURNAMENT

For the Short-Range Championship of
1879

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. **Kides**—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-360 cal. Teams may furnish their own rides and ammunition, or use those at the gallery, as they may desire. Number of **Shots**—Ten by each competitor. **Sighting Shots**—Two shots will be allowed each competitor. **Position**—On the **Targets**—200-yards target, according to the regulations of the N.R.A. **Range**—The range will be at the gallery. **Practicing**—No practice allowed on the day of the match. **Entrance**—\$10.00 dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

The captains of the several teams, entered before 9 o'clock on the evening of Feb. 23, will meet at Conlin's Gallery at that hour and fix upon the arrangements for carrying out the match, choose referees, and decide in what order the respective teams shall shoot. The assembled captains shall decide upon the date of opening the matches, and the date at which the entries shall close. The referees shall elect an umpire, whose decision in all cases shall be final.

The championship team tournament is creating no small discussion, and from the number of letters already received there is every indication of a large line of entries. These letters come not only from the clubs in town, but from Rahway, Bergen, Newark and Elizabeth, in N. J., Boston, and even from Chicago, where the team of the Thos. Post, G. A. R., are discussing the question of coming on. The South Brooklyn Rifle Club will be represented by a team, and such clubs as desire to take practice in the gallery may have special practice by writing the gallery master.

MASSACHUSETTS—*Boston, Walnut Hill, Jan. 25.*—The bright glistening snow on the range between the winter-sled and the targets did not in any way help the marksmen out today. During the afternoon a gray light came on, and good scores were made in consequence. The wind was quite gentle, coming from the west, and the conditions were favorable to the sport. There was a large attendance of spectators, in fact the largest there has been at any time since the winter shed was erected, several ladies gracing the range with their presence. In the Maynard rifle match at 200 yards there were 104 entries. The leading scores were:

L Kirkwood.....	4	5	5	5	5	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5	4	5

Medford, Mass.—The directors of the Medford Rifle Association have decided upon holding rifle competitions every Wednesday (if possible) and following Friday, during February. The matches will be classified, and the conditions as follows: *Low*s; Distance, 200 yards. rounds, seven; the aggregate of two individual scores to count; off-hand firing; rifles, any within the rules; non-members to be placed in the first class. The prizes will consist of 50 per cent. of the entire entry fees in each class, divided as follows: First prize, 25 per cent.; second, 15 per cent., and third, 10 per cent.

CONNECTICUT.—In his recent report to the adjutant-general of Connecticut, Major J. E. Stetson, Brigade Inspector of Target Practice, expresses the opinion that, instead of sending representatives to Creedmoor, the State should, by the offering of prizes or assistance in some form, encourage the establishment of an annual State meeting on some central range.

DEER SLAUGHTER IN MICHIGAN.—We print the following communication, not by any means on account of its literary merit, but to show how abundant deer are in some of the Michigan wilds, as well as to expose the wanton persistence with which so-called sportsmen are rapidly exterminating them. The letter is also interesting in its description of one of the favorite grayling streams of Michigan, and of the methods of roughing it in the bush by the hardy but inconsiderate men who seem to find sport in wholesale slaughter.

WOOSTER, O., January 13, 1879.

EDITOR FOREMAN AND STREAM:

Having received a very interesting letter from my uncle, giving the particulars of his fall hunt on the Au Sable River in Michigan, I forward it to you for publication, hoping it will be of some benefit to those who are interested in the dispute going on in the Chicago *Field* between the Battle Creek party and others. Last year (Nov., 1878) I was one of a party of four, including my uncle, who made the trip down the river in one boat in just four days. Stopped about half-

in the third or fourth class is to be a recruit in the awkward squad. There were many men in this regiment—no less than 377—who did not go to Creedmore to practice last year. Undoubtedly the weather was disagreeable, yet many, perhaps most of them, were men who make it a point of honor to be in the ranks; whenever their regiment is called upon to perform any duty by which its reputation would be affected. Yet if these men had been present, and had shot even though poorly, the Seventh to-day would stand the first in order of merit, instead of the third.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.
Pompano, *Trachinotus scrotonius*. Groupers, *Silopomus nigricans*.
Drum (two species), Family Sciaenidae. Black bass, *Centropomus viridis*.
Kingfish, *Menticircus nebulosus*. Striped bass, or Rockfish, *Morone saxatilis*.
Sea bass, *Sciaenops ocellatus*. Broadsides, *Paralichthys oblongus*.
Sheepshead, *Archosargus probatocephalus*.
Scuppers, *Stenotomus xanthurus*.
Saber, *Lutjanus blackfordi*.
—See Bogardus' advertisement.

FISH IN MARKET.—RETAIL PRICES.—Bass, 25 cents; smelts, 10; bluefish, 12½; salmon, 55; mackerel, 20; shad, 40; weakfish, 10; white perch, 15; Spanish mackerel, 50; green turtle, 14; terrapin, \$18 per doz.; frostfish, 6; halibut, 18; haddock, 6; kingfish, 15; codfish, 6; blackfish, 12½; flounders, 8; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 30; scallops, 35 per quart; whitefish, 18; pickerel, 15; salmon trout, 18; black bass, N. C., 15; red-snapper, 12½; pompano, 60; smoked haddock, 10; hard crabs, \$2.50 per 100.

THOSE FLORIDA FISH AGAIN.—Who is Professor Knapp? We have some curiosity to know because it seems that Professor Knapp once made an awful prediction. The juxtaposition of certain planets to the earth is such, says the Professor, that one-half of the population of the world, including man, animals, fishes and vegetables, must perish before 1880. All this desolation is to begin with the dying of the fish in the sea, and pestilence and famine; and a Florida paper calls attention to the fact that the Chinese famine and the yellow fever scourge in the South may be put with the fearful fish pestilence in that State, and—yes, the world, or one-half of it at least, is coming to an end. We thought those fish were not to waste their sweetness on the Florida desert air for nothing. They are filling their place in Professor Knapp's prophecy. But who is Professor Knapp, anyhow? Because this is 1879, and next year is 1880, and if Professor Knapp is anybody, it's high time for us to move to the other side of the world.

FIRST SALMON OF THE SEASON.—Mr. E. W. Messenger, of the Bromfield House, Boston, informs us that the first salmon of the year was exhibited at Shattuck & Jones', 128 Faneuil Hall Market, in that city. It came from the Penobscot River, a short distance below Bangor, Me.; weighed twenty pounds, and was a perfect beauty. See article in Natural History department on winter salmon.

A RARE FISH.—Professor Spencer P. Baird has written to Mr. E. G. Blackford, of this city, regarding the large pompano caught off the Florida coast and mentioned by us last week: "Dr. Bean reports that the pompano is a *Trachinotus greenis*, a species of wide range and originally described, I believe, from South Africa, and but very little known in northern waters. It is a second specimen only that I have ever heard of as being taken in the latitude of the United States." Excellent casts of the fish have been prepared, one of which Mr. Blackford is to receive.

—"The 'angling catch' of salmon in the Restigouche division during the past year, 1878, were over 1,000 fish, and the 'commercial catch' during the same period 500,000 pounds, fully 100 per cent. over that of the former year, 1877.

CANADA.—Perce, District of Gaspé, Jan. 7.—We have had a remarkably open season; not sufficient snow for traveling; no ice along the beaches; navigation still open; codfish caught here up to the 23d ultimo. PHILIP VIBERT.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 11, viz.: four from the Banks, with 102,000 lbs. halibut; four from Georges, with 128,000 lbs. codfish and about 5,000 lbs. halibut; and three from the Bay of Fundy and Grand Menan with fresh herring. Three of the Georges men landed good fares, showing the presence of fish on the Bank, and the stock here reduced and prospect favorable, the early Georges fleet will soon fit away in considerable numbers. The weather has been unfavorable for shore fishing and but few have been landed of late. —Cape Ann Advertiser, Jan. 24.

FLORIDA.—Orange Park, Jan. 20.—Plenty of quail, ducks, larks, a few snipe, etc.; deer and turkey scarce; geese not very plenty. Last week the thermometer for two mornings stood at 23 and 23 deg., which made orange growers look blue. The past season has been very unhealthy. Almost everybody has had fever; many have it yet. The river is very low for the season. NAUTICS.

WISCONSIN.—Baraboo, Jan. 23.—Fishing through the ice has commenced. Gillson's slough seems to be the best fishing-ground. Waltr. Palmer caught, last Monday, twenty-eight perch, and Will Harris caught a fine pickerel the same day that weighed fourteen pounds. E. H.

A GOOD WORD FOR THE EDGAR BARBLESS HOOK.—An intelligent correspondent at Twin Lakes, Florida, writes:

I have seen in the FOREST AND STREAM some comment on the Edgar barbles fish-hook, and have used them bass fishing. They are a No. 1 hook when once you have hooked your fish. I have lost none that were hooked, but there is one objection to them I think, and that is the difficulty of putting on the live bait (if you use through the back) without tearing it. Nevertheless I had rather suffer delay in doing this than have a fish spit the hook out at me as he comes up to

say, "Howdy," or run into the bonnets and take a double bill, round a stalk with the line, while he is trying to get the feeding grounds, leaving me to spoil that ground in disencumbering my line. Tried the bass with the fly last year with good success, but in these waters one has best success near grass or bonnets in fly-fishing, and with a 12-oz. rod it is not always possible to keep the fish in clear water, so that many fish are lost. B.

EFFECTS OF MOONLIGHT ON FISH.

WASHINGTON, D. C., Jan. 23, 1879.

EDITOR FOREST AND STREAM:

While you are awaiting the results of tests proposed by Professor Goode, I will give you a bit of my experience in regard to the action of moonlight on fish. I have communicated it in person to Prof. Goode, and he thinks the evidence so strong that it should be contributed to your columns, he reserving his judgment until he becomes thoroughly convinced that the phenomenon I described was unmistakably due to the action of the moon's rays, and nothing else. After a day on a trout brook I obtained lodging at a farmer's house, and his wife selected from my basket enough trout for our breakfast, placed them in a pan, and the pan on the roof of a little porch to be safe from the cat; the remainder of my fish, four or five pounds, were restored to the basket which was hung up on a nail in a post in the wood-house.

The fish selected were simply the small ones, with a couple of larger for myself. In the morning the trout in the pan (which had not been covered) were spotted; those in my baskets were sound, and remained so until eaten, after a twelve-mile wagon ride and twenty-four hours' longer keeping. The farmer attributed the spoiling of his fish to the moon's effect, and chided his wife for not covering them. I imbibed the belief that the effect was produced as he asserted, and believe so yet. I confirm the views of your correspondent, "W. K.," as to the effect of the moon's rays upon men sleeping unprotected by awnings, for I have known two instances where sailors have been most singularly affected under such circumstances. In one case a boy, sleeping upon his back in the full glare of the moon, was snatched to such an extent that vigorous medical treatment was necessary, his face being inflamed and distorted as he had been bitten with paralysis of every muscle in it. Our doctors differed; some attributed it to the moon, others to epilepsy. On the other hand, men frequently sleep exposed to the moon's rays and are not so affected. Nor are fish always spoiled. Hence, Prof. Goode's test, while it might prove the positive side of the question should the effects take place, would furnish but negative evidence should it not. It is probable that there may be other causes or atmospheric influences which, when combined with the moon's rays, produce the described effects, which the rays alone are powerless to produce. L. A. B.

The foregoing testimony is from a source which makes it most valuable. Perhaps we may be permitted to say that the writer is a prominent naval officer. Hitherto the question of the lunar effects seems to have been confined to salt water—to fish exposed, or sailors sleeping, on decks of vessels. Now let us hear something of its effects on land. Has not one of the many thousands of emigrants, traders, soldiers, surveyors, meteorologists, and travelers, who have crossed the great plains and the bare exposed prairies no evidence to bring? What of those who have been stampeded and put afoot, without wagon-cover or saddle cloth for a shelter? What of the hairy trapper who seems any covering but a blanket—he who lies out for weeks at a time on prairies so level that not even a sage bush or iron weed breaks the monotony, or offers protection to the upturned faces of the sleepers? It is true the old hard cases roll themselves in their blankets, Indian fashion, and drawing the corner flap over their heads, sleep well. But do they never kick out with the nightmare? never turn over on their backs for a change? never toss in the restlessness of a fever or the torture of an arrow or bullet wound? Have the gentlemen no word of testimony to utter? And if they do allow the pernicious effects of the moon's rays, what scientist will account for it? Our paper circulates at thirty army posts; will not some of the intelligent officers who read it, render us their service?

THE STEAMER VOLCANO OFF THE COAST OF FLORIDA.—The following letter from a most intelligent contributor seems to confirm our theory of a submarine volcano off the coast of Florida, by whose recent eruptions countless numbers of fish have not only been killed but the business of market fishing, upon which so many of the coast dwellers depend for a livelihood, put a stop to altogether. The drift of pumice stone along the shore of the gulf would seem to be almost conclusive evidence in itself. That these eruptions are intermittent, as in other known volcanoes is proven by the data pertaining to similar occurrences twenty-five years ago in the same locality. Inversely, that there have been intermittent phenomena of precisely the same character, proves the absolute fact of volcanic eruptions.

If we were to be allowed to speculate, we might inquire what relation or connection these oceanic disturbances may have with the mysterious smoke inland, near St. Mary's, which has been visible for the past three years, and whose locality and source so many persons have made futile efforts to discover. The evidences of extreme volcanic action, not very remote, are visible all over the western part of Texas, while volcanoes are still burning in Mexico, localities not so far removed as to make the disturbances in the Gulf of Mexico unreliable for conclusive data.

PENSACOLA, FLA., Jan. 21, 1879.

EDITOR FOREST AND STREAM:

Noticing that there is at present considerable inquiry being made as to the cause of the discolored waters along the south coast, I herewith give my mode of evidence, hoping that it may assist those who are able judges. Although not so well acquainted along the southern coast as from this section, I know the "lay of the land" well enough to believe that it is hardly possible, and not at all probable, that fresh water from the interior could color the sea such distances, and not inundate the land in the vicinity before reaching the sea.

In April, 1859, there appeared along this coast just such a band of discolored water as is now along the southern coast. It was first seen fifteen or twenty miles off shore, extending all along the light from Cape San Blas to within about ten miles of the Mississippi Passes. In about a week it had spread inland, and finally entered the bays

within its range, which up to that time had been clear and pure waters. The appearance of this so-called poisoned water was as though colored with brick dust. After about two months from its appearance it gradually disappeared; whether it drifted off or settled I know not.

Fishing with snags on the banks outside was impossible, and the markets of New Orleans and Mobile were supplied with such fish as could be caught in the bays and bayous where the waters were brackish. The common kinds of fish caught were channel bass, sheepshead and salt-water trout. Captain Destin, my informant, is sure there was no unusual rise of the Mississippi or Alabama rivers, as at that time he caught fish all along the coast for the New Orleans and Mobile markets, and would have been known of any heavy freshets which in those parts. Any time after a heavy wind on shore a person may pick up on the sea beach pieces of pumice stone, varying in size from a square inch to a square foot, and almost all colors from black to white. I send you specimens by mail. Can you tell me where it comes from?

Yours respectfully,

SHAS STEARNS.

Since writing the above we have received the following letter corroborative of the other testimony:

TWIN LAKES, ORANGE COUNTY, FLORIDA, Jan. 18, 1879.
On Sunday night, Jan. 12, we were given our first dose of earthquake at 11:35 o'clock. It was preceded and succeeded by a hoarse roar, an angry rumbling, and I think came from the southeast, vanishing in the northwest; but every person has a different idea of this, owing to the soundness of sleep and amount of scare. The shock was severe enough to rock houses to quite an alarming degree, and lasted about half minute. Does not this shock prove correct the theory that the mortality among fish on the gulf coast arises from sulphurous gases liberated by volcanic action? I think undoubtedly so. The fresh water theory I think laughable. B.

Game Bag and Gun.

GAME IN SEASON IN JANUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Plover. "Bay trouts" generally, including various species of plover, sand, piper, snipe, quail, quail for deer, snipe, snipe, plover, avocets, etc., coming under the group *Littorina* or *Storer*.

MOVEMENTS OF SPORTSMEN.—Dr. Carver has gone to Europe, and Capt. Bogardus has gone to his home in Illinois for a two month's rest. Haulan, the oarsman, sailed for Europe yesterday.

THE COMING QUAIL SEASON.—Our suggestions that the suffering game birds be cared for having been so generally and heartily received and acted upon by our readers, a word for the future may not be amiss. A Pennsylvania correspondent very pertinently recalls the great cold season twenty years ago when the birds were all frozen and the sport destroyed. Not only were new birds introduced, but with a far-sighted forbearance and denial of immediate pleasure, the sportsmen refrained from shooting the following seasons until the stock had become again replenished. This course should be imitated the coming season in those parts of the country where the birds have been destroyed this winter. Nature must be allowed an opportunity to recuperate. Let the gun hang idle for a time. When the season comes again it will bring with it the reward.

LYNXES IN MASSACHUSETTS.—Framingham, Mass., Jan. 26.—A wildcat (probably *Lynx canadensis*) was shot a few miles to the westward of this (Boylston, Mass.). He was trod by the hounds in a fox hunt. The first individual of the species that I have heard of in this vicinity was killed in Concord, fifteen miles north of us, about 1855. F. C. B.

NEW YORK.—Lewiston, Jan. 26.—A fine bald-headed eagle has been seen around this place some time. Being the freshest in December, two of our sportsmen, S. S. Haine and J. J. Richardson, shot 101 muskrats in one day on the Black River Marsh, near here. Parker guns and chilled stool did the business. H. W. H.

Shelter Island, Jan. 22.—The bays in this region are all solid with ice, and the ice-gatherers and eelers are out in full force. The wild fowl are not plenty, yet numbers of whistlers, coot, and old squaws have been killed in battery, but the birds are shy and will not come well to stool, though the boat is concealed with ice. MEI.

BUFFALO GUN CLUB.—At the annual meeting at the club rooms, January 13, the following officers were elected for the ensuing year: President, Captain B. Hammond; Vice-President, Richard Edge; Secretary, R. P. Tipton; Treasurer, J. G. Gibbons. Board of Managers—R. Edge, Charles Rogers, C. G. Strong, W. W. Rancom, W. H. Price. J. G. G.

THE FRONT OF GESE.—Good Ground, L. J., Jan. 20.—Editor Forest and Stream: I see by your paper of last week that your correspondent from Shelter Island, under the heading of "Flights of Wild Geese," has made some gross mistakes, as, for instance, he says "we have had no flight of wild geese." Now, I have made a business of shooting in Shinnecock Bay for market for thirty-six years, and I never have seen such a flight of wild geese before as I have seen this fall; but your worthy correspondent is twenty miles away. Again, he says we have no ducks. We have a good inlet, and it has been running for five weeks, and he has not found out yet. Again, he says we have no shooting at ducks. Now, I have never seen so many ducks in Shinnecock Bay as there was during the past fall. They did not make as good shooting as they do at times when the feed makes more on shoal water, but we had some very fair shooting. Again, he remarks that the inlet being closed the feed for the ducks is all killed. Now, I will say a small inlet is just what we want for good feed for ducks. Brackish water is the best what we want for ducks. We want to make good feed for broad-bills, red-heads, canvasbacks, black ducks and geese. I will admit that coots, old squaws, shellcrakes and loons want plenty of tide, and that is why your correspondent from Shelter Island goes for. We can dispense with these birds without much effort. Your correspondent also says that the inlet closing up has caused all the fish, clams and oysters to die. Now, we never had in this bay better fish than we had all last summer. I am on the bay every day, and I have not seen the first dead fish yet. Perhaps they went over to Shelter Island to die. It is only twenty miles. Clams and oysters never were better, and as for stagnated water, the water never was purer, and it never was healthier than last summer. The inlet closed up in April, but we have got a good one now, and it looks like a permanent one. W. N. LANE.

DUCKING ON THE SUSQUEHANNA FLATS.—*Philadelphia, Jan. 9.*—*Editor Forest and Stream:*—Under certain conditions the Susquehanna Flats are an excellent place to kill ducks. At other times not worth a button, and in any event not worth the price charged for box, attendants, etc., unless indeed you are an Astor or Vanderbilt, and even then a few days would clean you out. Great bags were made at the opening of the season, noticeably by Messrs. Soule and Prosser, of this city, also Hamilton Disston, Sheriff Wright and Register Wells Neal. All these gentlemen are experienced and have very conceivably plenty of game and comfort that go to make up successful shooting. They are also excellent staggers at the business and would as soon face a nor'easter as an oyster supper. The sport at times is immense, and so is the cost. H.

THE MOORS AND FORESTS OF SCOTLAND.—Mr. Winans and his two sons, accompanied during the last week of the season by Lord Lytton, have killed 170 stags in Glenstrathfarrar, Inverclyde Forest. In the forests of Glunzie and Glenquish Mr. A. B. Bass, M. P., and friends have shot 70 stags. In the Merry Forest the Earls Cowper and Brownlow had 114 stags, the heaviest weighing 224 stones. In Strathvalch Forest Lord Dacre shot 45 stags. At Dundreggan, Mr. Grant, Mr. Macdonald, and Mr. Fraser shot 69 stags. On his own estate, the Canna-Crommoriston, and partly shot 35 stags. The Earl of Argyll shot 100 stags on his own estate. His son, the Hon. the Viscount Torcarrow has finished his stag season in 23 days at his Forest, where, with his sons, Messrs. Colville, James, and Edward Ross, 40 stags were shot, the heaviest weighing 18 stones 3 lbs., and six of the number were a few pounds over 16 stones. The Earl of Cadow left on October 5 for Wales. During the season the party at the Castle had excellent sport, the list of killed (including salmon) amounting to 4,024 heads. This total is made up as follows: Grays, 3,062; black game, 17; partridge, 493; and rabbits, 2,362. Of the latter, 2,362 were taken on the moor, and 1,000 in the forest.

Our present camping ground is located on what is known as Hammock Islands, differing from the cypress or boggy islands that are abundant throughout this swamp. Even on these we cannot keep the feet dry. Much of the cypress lands which are located near streams or bays, are covered with a growth of water lilies, and water lilies are everywhere, except one near Myrtle Island, upon which are about two large bucks feeding at midday the 15th. They did not start for the island, half a mile distant, until they had been driven at three times, and then halted to view us once more. This so-called prairie is always interspersed with open water, making a desirable location for ducking, as they are connected throughout by water courses which are filled with bass and many other kinds of fish. Mallards, blueheads and wood-duck are the most abundant. We had three inches of snow a little over a week ago, but the past few days' warm weather has opened the maple blossoms, and the hum of the bee is heard all along the banks of the Suwannee, which gives the greatest portion of the swamp a decided water course at a distance of eighteen miles from its western end. Near Milton's Ferry, at which place we commenced investigations by boat only, leaving it to draw over some sunken log, or walk upon the hammock islands to sleep, which is not always easily found, and when found is a camping ground for large swarms of mosquitoes, which take a lunch one has half completed supper. Alligators, otters and turtles keep one anxious, when a gun is on board, by their constant plunging, as many of them have not seen a boat since the war with the Indians, who undoubtedly availed themselves of its vinelined water when in quest of game, and to escape their foes. Mounds of turkey bones are everywhere, and the quail will endeavor to gather crumbs about camp every morning. To-night the air is fragrant with spring blossoms and mosquitoes, making this an undesirable pastime.

MONROE.

TO RENDER PAPER SHELLS IMPERVI-
 OUS TO DAMPNESS.

To claim that the simple process renders paper shells absolutely waterproof is a strong assertion, but unless there is some way for water to get in around the primer immersion all night has no effect on them; at least I find my own so treated sure-fire. My experiments were made with the Union Metallic Cartridge Co. paper shells, and they were all first class. Our club has used some 10,000 of them this winter, and the most diligent inquiry has failed to bring forth a single mis-fire. Lately I have been using well-sifted bran to fill shells—a Dixon scoutful between the two wads over the powder. It does not seem to foul the gun any more, and makes an admirable cushion.

The Kennel.

RICHMOND DOG SHOW.

A DOG show was held at Richmond, Va., last week in connection with the Second Annual Exhibition of the Virginia Poultry Association. It was the first attempt at a dog show in Richmond, the various years of course, not numerous, but the quality was very good, and next year, no doubt, the show will be largely patronized by breeders. The following is the report of the judges, which includes the prize list:

To the Managers of the Richmond Bench Show of Dogs:

Gentlemen—The undersigned, who were requested to act as judges at the exhibition, respectfully report to follow: At 10 o'clock on Monday, Jan. 13, 1879, we assembled to discharge our duties. Our associate, Dr. J. D. Wood, was prevented from attending by sickness. We secured the assistance of S. G. Tinsley, Esq., in judging setters and hounds. The following are our awards:

Class 1—English Setter Dogs—None exhibited were worthy of mention.

Class 14—Pointer Dogs—None exhibited were worthy of mention.

Class 19—Pointer Bitches under 50 lbs.—Two specimens deserving mention, but lacking size, sufficient to be awarded. At 10 o'clock on Monday, Jan. 13, 1879, we assembled to discharge our duties. Our associate, Dr. J. D. Wood, was prevented from attending by sickness. We secured the assistance of S. G. Tinsley, Esq., in judging setters and hounds. The following are our awards:

Class 21—Pointers over six months and under twelve months—Bitch—J. F. Gibson exhibited a very pretty liver and white tick.

Class 26—English Setters—Dogs—1st, T. F. Taylor, Richmond, blue, white and tan dog.

Class 27—English Setter Bitches—1st, T. F. Taylor's Queen Doss.

Class 28—English Setter Pups over six months—Dogs—1st, T. F. Taylor's Violet, black and white, under one year.

Class 32—Champion Black and Tan Setters—Dogs—T. F. Taylor exhibits Champion King, winner of prize for pups under two months old at Baltimore in 1878. We do not think highly of this dog.

Class 33—Champion Black and Tan Setter—Bitch—1st, Fan, with litter of pups by Champion Rupert.

Class 34—Black and Tan Setters—Dogs—1st, T. F. Taylor's Scott. Very handsome dog.

Class 39—Black and Tan Setter Pups under six months—Bitches—1st, C. H. Epps.

Class 42—Red and Red and White Setters—Dogs—1st, T. F. Taylor's Scout. Handsome dog.

Class 43—Red or Red and White Setters—Bitches—1st, T. F. Taylor's bitch Jane, by Rufus.

Class 46—Red or Red and White Pups under six months—Dogs—1st, T. F. Taylor's Scout. Handsome dog.

Class 47—Red or Red and White Setters under six months—Bitches—T. F. Taylor exhibited three gyps of same litter as last named.

Class 69—Foxhounds, best couple—Richmond Hunting Club exhibits Brandt and Joe Johnson—a fine pair; also handsome brace of pups; also lovely bitch of very delicate texture.

Class 62—Beagles—Mr. W. L. Bradbury exhibits a brace of very diminutive beagles, of which we are not judges, and as to us we could scarcely see them.

Class 65—Fox Terriers—Dogs—Mr. W. L. Bradbury exhibits a beautiful specimen.

Class 74—Ball Terriers, dog or bitch—George Ives for dog named "Buck."

Class 73—Bulldogs—None worthy of mention. Terriers—Several exhibited; wanting points of any specific breed; pretty, but mongrel.

We cannot conclude without saying that we regard the show as in all respects most creditable, considering the short notice given. We think it unjust to dog-owners in other portions of this State to do more than express that the prize-winners are entitled to the awards among those present. We think full opportunity for exhibition should be given to all portions of the State before any awards attempt to declare a State or other supremacy. We suggest that the State Fair presents a fine opportunity for a display where the whole State can be represented. We doubt, however, whether the State can furnish a handsome room for the exhibition of dogs than we had at your exhibition. We cannot conclude without expressing the gratification we feel at seeing in our midst a kennel of such varied, well selected, approved and carefully separated strain of setters as Mr. T. F. Taylor possesses. It is already doing much toward restoring the prestige of Virginia dogs, and we doubt not, will continue to do great good. All of which is respectfully submitted.

JOHN S. WISE, W. RUSSELL ROBINSON, Judges; S. G. TINSLEY.

SCOTCH TERRIERS AT DETROIT.

PHILADELPHIA, Jan. 21, 1879.

EDITOR FOREST AND STREAM:

Your correspondent "Druid," speaking of the Scotch terriers at the Detroit Dog Show, says: "The winner of the first prize should have received no notice, for being a red dog, but a blue one." I have no knowledge of the facts of the case other than the above words, and am not personally interested in this particular case, but I ask for information if the fact of a Scotch terrier being red should be against him in judging? Mr. Tilsen's book of points, compiled from Stonehenge and adopted by the Westminster Kennel Club, gives the colors as either pepper or mustard (which I understand to include all shades from red to yellow). At our last show here the first prize was given to a dog of the mustard or red variety, though there were some pure blue dogs exhibited which were not noticed. The second was taken by a light blue dog with buff legs (owned by the writer), and two remarkably fine seven-month pups of a red color were marked "V. H. O., but too young for prizes." I shall exhibit at our next show a pup from one of these two and the first prize dog, and I will add blue to the pup, as I suppose is a prettier color in itself, I think I have good authority in considering that, point for point, a red or mustard Scotch terrier should be judged as high as a blue or pepper colored one.

Very respectfully yours,
R. S. R.
Our correspondent is probably confounding a nondescript class which has found a place at our shows, known as the Scotch terrier class, which admits any broken haired terrier with the true Dandie Diamond class. If there was no class for Dandies at the Detroit show the judge was quite right in placing a red dog first, all other things being equal, as certainly the Dandie has a perfect right among Scotch terriers. It is true that this Scotch class was abolished and a class made for broken haired terriers other than those for which specific classes are provided.

MR. DAVIDSON TO "DEAD SHOT."

MONROE, Jan. 25, 1879.

EDITOR FOREST AND STREAM:

To "Dead Shot," in the Chicago paper of Jan. 25, on "Why Mr. Davidson should have received no notice, for being a red dog, but a blue one," who cowardly shoots from behind a screen I consider unworthy of notice. A ting cannot be either straight or square.

JOHN DAVIDSON.

ETHAN ALLIN ON DOGS FOR RUFFED GROUSE.

POMFRET CENTRE, Jan. 13, 1879.

EDITOR FOREST AND STREAM:

In the FOREST AND STREAM, of Jan. 2, I saw my name mentioned in an article on spaniels, in which the writer infers that my breed of setters have been made by crossing the clumber spaniel on the setter. To set this matter right I would say that I never bred from a clumber spaniel or had one in my kennel. Nor have I ever bred to anything but a pure setter. My breed of setters have been made from different crosses of setters that have come under my own observation in the field. I have always made it a rule to get blood from a dog until I have first seen him on game in the field. If all right there, and he showed indications of being purely bred, I did not hesitate to breed to him. It is by judicious crossing for forty years that I have made my breed of setters what they are at the present day. I have always bred for quality, irrespective of color, and the result has been color in all varieties except solid colors. I have always been a stickler for white, or part white, in preference to solid colors, so my dogs now are invariably part white. Ruffed grouse has always been my favorite game bird, and I have bred my setters with special reference to that kind of game, and my success in the matter I leave to those who have witnessed their field performance on that bird. Different writers entertain different opinions in regard to what constitutes a first class ruffed grouse dog, yet all agree that an obedient, easy controlled dog is indispensable to success. Some class a trailing, pottering dog, that depends on foot scent to find his game, as No. 1. I admit more ruffed grouse can be shot over such a one than over a fast, headlong one, that expects to be within ten feet of his game before he points. I do not class either as No. 1. A ruffed grouse dog does not matter how staunch they may be. A No. 1 ruffed grouse dog should carry a light head and have scenting powers sufficient to carry a fresh trail without losing the ground, and be able to point his game staunchly at from thirty to fifty yards with the wind in his favor, and have sufficient judgment, when roading before the wind, to point before he comes within flashing distance, and unless he can do it I do not class him No. 1. In the FOREST AND STREAM, of Nov. 14, 1878, Mr. Everett Smith speaks of the habits of ruffed grouse in the wilds of Maine, and tells of good sport to be had with them by riding along wood roads and shooting them from a horse, and I do not think it is too much to say that he called that sport I have yet to learn what sportsmen generally call sport. I reckon he would have a long ride in this part of Connecticut before he would make a big bag in that way. He also classes them as favorite runners, but here I do not think they are as much inclined to race as quails. With us they are the most shy game bird to approach we have in this part of New England, and it is only the most keen-scented, cautious dogs that can be depended on to point them. The idea of the prying a fast quail dog of his range that has been instilled into him once and again, and has been told him over to clear work in thick cover as an expert on ruffed grouse, is, in my opinion, like putting the ear before the horse, and to me seems ridiculous. Would it not be much easier to teach a dog to range in open than to shorten his range in cover after he had learned to range in open, especially on ruffed grouse, where a single word will often dash them; when they scarce mind the presence of the dog? Now, in this matter I do not claim to be right, but this is merely my judgment.

ETHAN ALLIN.

JUDGING AT THE DETROIT SHOW.—Editor Forest and Stream: I see your contemporary is still banging away at John Davidson. It only goes to prove what was originally asserted by Mr. Whitman, that it is not his great desire that fairness shall be shown at all trials and bench shows, unless a slight departure may be occasionally taken in favor of the blues. I, by chance, happened to meet Mr. Davidson at the Detroit Show, and he expressed himself well pleased with the judging of sporting dogs, and felt highly complimented that Mr. Stoddard should have corroborated his opinion regarding the merits of those he had formerly judged. I have heard that Mr. Davidson was solicited to judge the Detroit Show, but the decision was put off until after the Nashville trials, and in the meantime Mr. Davidson's article regarding Nellie appeared, and he was then informed that that article settled it—he could not act as judge. If Mr. Davidson did say the show, except in setter classes, showed but few good specimens, he was correct, as worse specimens than were shown in several classes on seldom seen. The management was good. I think the trade of abuse heaped on Mr. Davidson and others had much to do with there not being a larger show than there was. Sportsmen do not view with favor the rule or ruin policy of your contemporary; they believe in justice to all. No "ring" for them. FAIR PLAY.
Detroit, Jan. 24, 1879.

POISONING BY STRYCHNINE.—We are indebted to a correspondent at York, Maine, for the following account of a successful treatment of a case of poisoning:

December 15, 1878, Susie was discovered in a tetanic convulsion about 4 p. m. She was taken into the house in a state of complete rigidity. From the tetanic-like seizure, and the frequent recurrence, as well as the increasing severity of the spasm, I diagnosed strychnine poisoning.

In the *Pacific Medical and Surgical Journal* for July, '78, an article is copied from the *Daily Graphic*, which set copied from *Nature*, an account of a Skye terrier having been poisoned with strychnine. The article was copied from a hydrate. I determined to try it in this case. The experiments of the British Medical Association made last year proved conclusively that a fatal dose of chloral hydrate would neutralize a poisonous dose of strychnine, and that the minimum fatal dose of the former for a rabbit was twenty-one grains. Having only a syrup of chloral at hand, of course hypodermic medication was out of the question. I gave her a tablespoonful of the syrup three times a day, with the effect of relieving the convulsion in a few moments. When there were signs of a recurrence I gave her another spoonful. After having taken four tablespoonfuls of the syrup she slept quietly for a few minutes, and by 9 p. m. she was able to stand, although she had not the power of co-ordination. At 11 p. m. the action of the heart was at times somewhat irregular, but all symptoms of convulsions had disappeared, and the next day, except a slight stiffness of the legs and arms, she was as well as usual. If twenty-one grains of chloral is a poisonous dose for a rabbit, certainly one hundred grains would be a fatal dose for a dog of less than five times the weight of a rabbit, and the whole amount taken by Susie (about 240 grains) of itself was sufficient to kill her. From my experiences in this case I am led to the conclusion that chloral hydrate is as true an antidote for strychnine poisoning as is albumen for the ordinary quinine. The main point in the treatment seems to give a fatal dose of chloral to counteract the fatal dose of strychnine. J. C. STEWART.

SALT AND ICE.—Editor Forest and Stream: Our Board of Health has recently passed a resolution prohibiting the scattering of salt on the side-walks and horse-car tracks, on account of the very deleterious influence that this freezing mixture has on the feet and boots and shoes of pedestrians and the hoofs of horses. There have been some letters in the daily papers referring to the suffering which this process causes to dogs. My setter a few days ago, while following me through the slush on a side-walk, began to limp in a most extraordinary manner, very much as though he had a thorn sticking in the ball of each of his fore-feet. While I was looking at him in astonishment he knuckled over on his side and began licking his paws furiously. On examining I could not see any cut or foreign body in the ball of the paws, but I noticed that they felt very large and stiff, and further examination showed that between his toes were solid masses of ice, which stuck so hard he is very thickly furled there, that it was with difficulty that I removed them. I should think that it would not require a very long exposure of the feet in that mixture to freeze them enough to permanently disable a dog. Of the danger to bipeds of this practice this is not the place to speak, but I merely mention the fact as showing the advantage, even to canine companions, of having a competent board of professional men to watch over the health and well-being of a large city. MIO MAC.

Boston, Jan. 17, 1879.

A NEW RETRIEVER.—A correspondent writes: "A few days since I was out shooting wild duck on a pond some miles from Los Angeles, Cal. Some of them fell in the middle of the pond, which was deep. I had no dog with me and was casting about in my mind what I should do in order to get them out, when a boy came along from a neighboring ranch-house accompanied by a greyhound. I asked him to try whether his dog would bring out my ducks. He replied that he thought the dog would not do so; but at the same time he threw a small stone into the pond near to one of the birds, and immediately the dog started in, made up to the bird, took it into his mouth, and, without mauling it in the slightest degree, brought it out and laid it at the boy's feet. The boy threw in a second stone near another bird, and again the dog went in and retrieved the bird in the same handsome manner, just as though he had been regularly trained to the work. The whole performance struck me as a very unusual and remarkable one, especially as the dog had no previous training. I wonder whether any one ever used a greyhound as a retriever before. C. B.

NOTE.—We shall feel indebted if persons who desire to claim name will give the breed of their dogs and their age.—Ed.

—Mr. John N. Meyer, of New York, claims the name of Brenda for his liver and white pointer bitch pup, out of the Westminster Kennel Club's Flirt, by Sensation.

—Mr. R. M. Harvey, of Philadelphia, claims the name of Cora Black for his black and white bitch by Levering's Harry out of Levering's Dot.

—Mr. H. R. McLaughlin, of Baltimore, claims the name of Chance for his Gordon setter by Palmetto out of Belle.

—Mr. E. M. Kellum, of Vincennes, Ind., claims the name of Rupert, Jr., for his puppy bought of T. F. Taylor, Richmond, Va., born Jan. 2, 1879, out of Champion Foss, by Champion Rupert. Rupert, Jr., is full Gordon setter, black and tan, no white; exact color of Champion Rupert.

—Mr. Jacob Eckstein, of Philadelphia, claims the name of Roll for his black and white ticked setter puppy out of Puck's Queen, by Levering's Harry; whelped Oct. 14, 1878, also Lady Jane for a red setter bitch out of his Gypsy by Hart's Patsy.

—Mr. Geo. H. Thomson, of Philadelphia, claims the name of Diogenes for his red Irish setter pup, but gives no pedigree.

Rational Hastings.

THE PEDESTRIAN FRODO.—Incited by the success of Madame Anderson, a host of ambitious pedestrians are rushing into the sawdust arena, eager to surpass the feat of the English pedestreine. In East New York a woman is attempting to walk 2,700 quarter miles in 2,700 consecutive periods of twelve minutes each; in the Fifth Regiment Armory, this city, two men are on the track, one to cover 2,000 half miles in 2,000 consecutive twenty minutes, and the other to walk 2,000 half miles in 2,000 half hours; at the Browster Building, Fifth Avenue and Fourteenth St., Miss Annie Bartol is on the way to fame and fortune. Her task in 3,000 quarter miles in 3,000 consecutive quarter hours. Washington, D. C., has an exhibition of similar character, and there are others throughout the country of which we cannot begin to keep track. They are wise women in their day and generation who take advantage of the present interest in such exploits to bring a generous fortune from the sight-seeing public; for the time is coming when that same public will be so satiated with the spectacle of femininity propelling itself around a sawdust track that it will refuse to put its hand into its pocket for the chink; and the homely old proverb has it: "Money makes the mare go."

—Toward the close of her late walk in Brooklyn, Miss Anderson made many laps very fast—asleep.

—One of the pedestrians who recently undertook a long distance walk was named Trot. Trot ought to be barred Why not give Walker, Foote and Leggett a chance?

—A pedestrian who has been attempting to cover 450 miles in six days at Mozart Garden, Brooklyn, retired at the expiration of his time with 411 miles to his credit. Next!

—C. A. Harriman, who is to meet O'Leary, completed 150 miles in three days in Brooklyn last week.

FIFTY-HOURS' WALK.—The walk of fifty hours between Miller and Ross at the Baltimore Academy of Music terminated Saturday evening. Miller had forced the pace from the beginning, and had broken down his opponent. The score at the end was Miller, 131 miles; Ross, 105 miles. Miller was off the track 16 hours and Ross 20 hours.

For Forest and Stream and Rod and Gun.
ON SKATES.

IN these degenerate days we have no such skaters as there were in the sturdy old times. Notwithstanding the great popularity to which it attained only a few years ago, the average skater now requires more territory than ever in order to exhibit his spasmodic skill. He is very much such an artist as that ambitious academical who ordered a hundred square yards of canvas on which to paint a landscape that would have looked much better if reduced to ten feet by seven. In skating, as in many other arts, we do not condense and concentrate. It is only the most perfect among artists who can reproduce in perspective upon infinitesimal surface. The ability to do so is gained only by constant practice and earnest application. The vast area of our country and our lack of funds seem to lead us into corresponding ideas of doing things, and unless we attempt them on a grand scale—like that fellow who went "around the world on skates"—they attract no attention, although to compass the globe on skates requires less preparation than to write one's name backward on the ice with skates, or dance a minuet under the same conditions.

No doubt the god Uller, of ancient fame, derived much of his reputed beauty by reason of his fondness for skating. At all events, with the single exception of walking, there is no more natural or healthful exercise than skating. But as with dancing, swimming and various other amusements, we are apt to overdo it in the attempt to make excess answer for frequent and regular practice. It is only the strong, healthy man or woman, with plenty of leisure and funds, who can undertake long-distance skating. To those in suitable condition, however, this affords the keenest pleasure imaginable, especially if the additional charm of accomplished skating has been acquired. It is stretching away upon a frozen lake or river, where the ice has no mole limit, is a magnificent sport. In Scotland and Ireland, and other extremely cold countries, it is not an unusual thing to see parties of three or five spending weeks and months on the polished blades, visiting widely several localities, and making an average of fifty or even seventy-five miles a day.

It is only at rare intervals that such expeditions can be undertaken in the United States, owing to the extreme of almost unrelenting and frequent heavy snows; therefore, we must be content with fine-art skating and a day's excitement "all along shore," in pursuit of deer and fox. A thrilling adventure of the latter description once came under my observation, not far from the headwaters of the Chenango and Susquehanna rivers. I was skating with a friend on the former river, about five miles north of Binghamton. It was a clear, cold day, with a bright sun, two feet of snow on the ground, including a light crust, yet not a flake in the beautiful ice, for the swift river had not closed until most of the snow fell, and the little that had lain for a day or two had melted in the February sun, which came out genial and kind after the long storm. It was near the close of the month, and the sun was high, his welcome smile having tempted us out in pursuit of ducks, which came a long distance to one of the many coves in that vicinity, where water from several living springs kept the ice from becoming too hard. We ran an average of five inches of ice in mid-channel. This place was on lands belonging to the old half-mile square Indian reservation, known as "Glen Castle" and "Cascadel," the latter a beautiful brook, which empties into the river further south. The farm then belonged to a gentleman in New York named Pierson. The "Castle Farm," as it was sometimes called, contained 800 acres, and had every variety of landscape within its bounds. At that time a grove existed near the mouth of Cascadel, in which the ring where the Indians danced round their camp-fire was plainly marked, as no tree or underbrush would grow where so many feet had stamped the sod in days and nights gone by. This grove covered an acre or two, and had chestnut, pine, beech and oak within it, and several fine beech trees, as well as oak sprouts grow in the centre of this camp-fire-ring, as we then called it. This was a famous place, for the red men were buried at the base of the knoll on which the grove stood, and the brook which comes down from the northwest, makes a graceful curve to the southward around the knoll, so that during high water it washed out not only flint arrow heads and old Queen Anne cents, but bones of the fated red men as well. As a boy I have picked up many curious relics of the vanished race thereabout, and remember reading in Wilkinson's "Annals of Binghamton" the particulars of the sale of the reservation which, by means of this water-mine fraud, the Indians were induced to part with for our old rifles.

The cove is formed by setting back of the river upon marshy land extending southwestward to a circular ridge in the old orchard where the Indians had a stockaded or palisaded inclosure which they designated as "the castle," and within which some twenty or thirty families kept their lodge fires burning. The river abounded with fish of many kinds—I have seen very large bass caught there in my time, and the river was alive with deer and small game of nearly every variety. It was a paradise for the braves, and but for the red man's love of the pale-face's firewater their descendants might have been enjoying it still. On the day described my friend carried a double barreled side and shot-gun, and I had my splendid little top-and-bottom ride and shot, built by Stuart, of Binghamton—a capital gunsmith, by the way, who still lives, notwithstanding the terrible accident in the winter of South and Central America—he was a boy then, and our guns were muzzle-loaders. The "brecc-butchers," as we named the other kind, were only just making their appearance, and we did not like them, for our old guns would not only reach further but shoot more accurately than the breech-loaders, which have since been greatly improved, I am glad to add, and consequently my prejudice has been softened; but so strong is habit within me that I was going ducking to-morrow I would much prefer the old muzzle-loader, for the others have a "measly trick of missing" yet, which I do not like or care to get better acquainted with.

The traveler coming south over the A. & S. or S. & B. branch of the D. L. & W. may see the cove, as it is in plain sight of the Iron bridge, a few rods south of Chenango Bridge Station, on the latter railway. The river makes a sharp bend to the southward about half a mile west of the bridge, and in the elbow of the curve thus formed is the scene I have described.

As my friend and I were skimming on up the river with

our guns thrown into the water of our left arms and our skates making a subdued "ch-r-r-r" in the hard glacio ice, we caught sight, almost instantaneously, of two birds apparently covered with blood from head to foot. They were half or three-quarters of a mile distant up the river and near the opposite or eastern shore. They were on skates and had guns like ourselves, and somewhere further to the eastward, behind a strip of woodland, we could hear that long musical cry of a bound, which is unmistakable evidence of a strong scent.

My friend elevated his toes with an exclamation of astonishment, and as his skates ground into the ice, making a shower of its glittering dust fly right and left, he asked:

"What now? Are the red men returning?"

Before I had time to reply a loud shout and violent gesticulations from the red men, who were designated then, induced us to look down stream where, not more than thirty yards away, a string of three foxes were making a bee-line for the opposite bank, which was about 1,000 feet ahead of them.

While my friend and I stood looking at the tempting sight, but withholding our fire, a rifle cracked behind us, and a heavy ball passed between us, killing the middle and suggesting fox instantly. We never measured the distance between us, but I should judge it was all first shot, although my impression at that time was, and continues to be, that it did not exceed three feet. The free flight of the ball was not less than half a mile, and may have been a hundred feet more. To say that we were frightened does not do the occasion justice. I never shall forget the vicious hiss of that long ball if I live a century. There was nothing to be said and we said nothing. I saw my friend's knees tremble as he turned to look at the fellow who had fired, and I saw him start and rear and leading fox went up the bank like a cat, and the hound came down across the eastern flats at full speed. Not an instant did he lose at the dead fox, but gained the western shore and was gone several seconds before the hunters came up to us. We could now see that they wore red flannel underclothing, and nothing else except boots. I afterward learned that I did not know at the time, that the flannels were double, and each man was wearing two sets.

"Was you scarte, boys?" asked the larger fellow as they came up.

"No," said I; "but we are now. Don't you consider such experiments rather dangerous?"

"For the fox—yes! Come down, and we'll have a look at him."

"What's your name?" asked my friend, as we turned about and skated leisurely back.

"Ain't any—folks too poor to gin me one."

It was a year or more before we could learn his family name, which was Soper. The fox had an ounce ball through his heart, and I am morally certain that it passed within a foot or two of my friend's shoulder, as he always assured me that he felt the whiz, and more accurately, the quick quiver of the air as the bullet rushed between us on its fatal errand. Such experiences are very much the same as those attending earthquakes—the more one has of them the less one wants—for the fear increases with the repetition, and there is no such thing as getting used to it.

There were ducks enough that day, but we did not kill many, as we were a long time getting our nerves quieted.

We are indebted to Holland for the skate—*secaut*—wherein is used as we use boots and shoes or horses and steam, for the same convenience and conservation of time. It is a custom so ancient that there are no records of its invention, and yet good skaters are almost unknown in Holland. As a nation the Dutch are awkward on skates, flinging their arms about like the wings of their native wind-mills. Until recently it was an unheard-of feat to skate ten miles continuously. They would not do it any more than the average American would walk that distance. Several centuries ago the people of Edinburgh and London led the world in popularizing the art. Strutt records the fact in his "Sports and Pastimes" and describes four gentlemen who danced a double minuet on skates with a degree of elegance and ease far superior to that displayed in the ball-room. William Hone states that "the elegance of skaters on that sheet of water is chiefly exhibited in quadrilles, which some parties go through with a beauty scarcely imaginable; those who have not seen graceful skating." If we except a few of the northern countries of Europe, there is no place in the world where more accomplished skaters abound than in this modern city of New York, although many of them are foreigners. Outside the court circles of St. Petersburg very little skating is done in Russia. Mr. William H. Fuller nowhere met with greater success and attention than during his tour of Russia. True, most of his time was spent in the parlor skates, but it was art, for all that. He was dived and won by the ladies, especially the ladies, and more than once he enjoyed driving a team of four, and could only please the Dutch by skating with folded arms, which was the easiest part of his programme.

Probably one of the finest exhibitions of this description ever witnessed was that of the dancers, Dumas and wife, at Paris, in the opera of *Prophete*, roller skates having been introduced there as early as 1819, and the long, smooth avenues and boulevards were frequently enlivened by the swift skaters, who also flocked to the public gardens just as we do to go to Central Park and Prospect Park to see the crowd and skate awhile.

Mr. Fuller, the athletic gentleman who circumnavigated the globe with a pair of roller skates in his vest pocket, giving successful exhibitions of his wonderful skill in most of the large cities of Europe, is a native of Boston, which he left at the age of twenty, and going to Calcutta, thence to Liverpool and back to New York, where he soon became a master of a yacht. His first attempt at skating since he was a boy took place at Central Park subsequent to the events already mentioned, whether he went one day to see if he had forgotten his skill. Unconsciously he attracted instant attention, and before he realized what had happened to him the thousands around him divided into knots and long lines, watching his splendid efforts, and soon cheering him as he performed feat after feat of the most extraordinary kind.

He became the lion of the hour in no time, and throughout the winter delighted immense crowds who visited the park on purpose to see him and witness his unsurpassed exhibitions of skill.

The transition to parlor skates was quite natural, and a little practice gave him full command of them; and shortly, combining business with pleasure, he was engaged with the manufacturer in their sale. A little later he sailed for Australia, to Copple, the Baroum of Australia, to Sydney and Melbourne, where he made his first appearance as Dunderoy on ice—served hot—with all the side-dishes of that incorrigible character. But it did not wholly please the esthetic taste of that bourn; "his attacks upon the constitution and respectability of the old country were not, after all, just the thing, you know," and he ventured to return—to India—after seven

months of popular entertainments in the cities and large towns of that auferious isle.

At Calcutta the Nabob of Surat caused a platform, 50x100 feet, to be laid in a grove of evergreens, where the skater gave a superb exhibition, beginning with a waltz, then varsovienne, which created great excitement and applause. A polka and figure skating followed, and Dunderoy closed the fun; for all of his falls were free, my countrymen, and were intensely amusing. After the entertainment, was over an official presented our hero with a purse of 700 rupees.

The Nabob gave no visible hint of satisfaction or displeasure, but two or three months after Fuller left Surat the Nabob sent him a magnificent golden star of the most ingenious manufacture. The points were composed of diamonds, and the whole was valued at \$1,200.

He went to Suez, giving exhibitions of his skill on the deck of the steamer which attracted passengers and crew. At the hotel in Suez he was invited to give an entertainment, which was much more elaborate than that on the steamer, and he was rewarded with a purse of silk, which had been filled with rupees, to the number of 150. Very likely it was the first skating ever done in the desert of the Pharaohs.

At Constantinople our Knight of the Golden Star met with an equally cheering reception, but the countless dogs which infest that city nearly killed him.

Odessa was his next objective point, where he has won glory and his manager took the cash. Here he received his first bouquet from a princess. People shook hands with him in the street, and informed him confidentially that he had made a decided hit. He concluded such must be the case after his second appearance, when the same lady who gave him the bouquet stopped her carriage in the street, gave him a ride with her through the suburbs, and invited him to make her house—the Governor's official residence—his home while in the city. He dined there occasionally during the six weeks of his stay, but never with the lady, as that was not in accordance with court etiquette.

He went next to the handsome city of Kherson, thence overland to Katherinoff, Karkov, and Poltava were his next skating places. On again to Orel, where other ladies of high rank paid marked attention for his fame, had him in front, and everywhere his appearance was a signal for an ovation. He proceeded to Zula and Moscow, remaining in the latter city three months, and visiting the famous Williams' iron works. He tarried at St. Petersburg seven months, and often skated before an audience of a thousand people; once in the great national theatre, for which the Government paid him, on the 10th of the Opera, with and under the patronage of the Russian Noble Club, an organization as famous in its way as the N. Y. C. C.; then to Prussia and Germany, and finally to the paradise of skaters—Dolland. He spent the ensuing winter in Amsterdam, where he enjoyed only three days of ice skating. At Rotterdam he had one fine day, and skated in the harbor before thousands of spectators who lined the river shores. At the Hague he skated before the Queen, and there closed his engagements on parlor skates, having been away from home about five years.

The autumn of 1869 saw him once more in his native land for a short visit, after which he went to Paris and repeated his triumphs.

Those who have nothing else to tempt them from the fire cannot do better than acquire the art of skating. It brings every muscle into full and natural play, knits the bones and cartilages and stirs the blood so that it insures a course so conducive to health. Besides, it is a realization of the poetry of motion in its widest sense. "*Dem vletnits, vletnits.*"

Ego.

[Reprinted for Forest and Stream and Rod and Gun.]

APPROACH OF THE ARCHERY SEASON.

Mr. Dorrton: Hearing there was to be a convention of archers in Chicago the middle of January, I concluded to take the trip to that city, as I was anxious to become better acquainted with the already famous members of the Western Archery Club, an organization of which I was desirous to find the meeting postponed. My friend, Mr. H. C. Corvair, one of the best shots with a bow in the West, and President of the Chicago Archery Club, introduced me to a number of the members of that association, and showed me their arrangements for shooting in-doors. They are fitting up a 100-yard range at the Exposition building, and will soon be practicing regularly.

From Chicago I went to Crawfordville, the home of the brothers Thompson, who have done so much toward creating the great archery craze in this country. Unfortunately, Mr. Maurice Thompson, the author of the charming book, "Witchery of Archery," was absent, but I spent a very pleasant evening with his brother Will, who entertained me with his hunting exploits with the bow, and with whom I talked archery to my heart's content. Mr. Will and Maurice Thompson are masters of the subject, and their experience is very thorough. They and other members of the Wabash Merry Band were very much pleased with the patent split bamboo bow now being made by Messrs. Conroy, Bissett & Malleon, as also were the members of the Chicago Club. They subjected the bow to the most severe tests, but failed to break anything but a few bow-springs; in fact, Mr. Will Thompson pronounces them unbreakable. The texture or fibre of bamboo is entirely different from that of wood, and, as it runs the whole length of the cane, it makes the bow much tougher and more difficult to wear, and the severe and constant straining. They believe these bows will take the place of imported wood bows and drive them out of the market. It seems to be the experience of all clubs that no wood bows will stand the severe shooting at long range, and though I could not believe it possible at first, I am now satisfied that even the finest wood bows will give out after a certain amount of shooting. The heavier the bow pulls the sooner it will break.

I stopped on my return at Buffalo, where I found the archers very much in earnest. Their in-door arrangements for shooting are perfect. The City Armory, a well heated and lighted building, affords them a splendid range up to sixty yards. The club have a regular practice night, and the ladies are frequently found practicing there pleasant afternoons. This, of course, gives them a wonderful advantage over us, who have not the facilities, and the Buffalo team win nearly the rest of the archers in the great tournament at Chicago next season.

I will be happy to send the plans of the bows, etc., used by the Buffalo archers to any club wishing to use them. The cost is small, and they answer perfectly. Let them send their address to W. Holberton, President Orient Archers, 63 Fulton street, N. Y.

GEOGRAPHICAL DERIVATIVES.

"Now," in a chill tone she said,
 "I will be Frank, his true—
 Altho' you Arab brilliant catch,
 I do not Cafrize you!"

"O lady, Dame to beat my suit—
 This heart is Scot by thee!"

"Nay, sir, I can not make your words
 For you Arnaut to me!"

"The Welsh," she added freezingly,
 "Since Siam pressed so far,
 To Hindoo you, no longer here,
 And so, good sir, Tartar!"

"What Ottoman like me to do?"
 Bewailed the stricken man;
 "I'll finish up my life and career
 And wed the Gallian!"

—St. Louis Times.

SECRET OF SNAKE CHARMING.—In India the favorite snake for exhibition is the cobra, partly because of its magnificent appearance, and partly because its deadly character being so well known, any trilling with it appears to the uninitiated public the more wonderful. Nor, indeed, do the performances of the Hindoo snake charmer lose, on better acquaintance, all their marvellousness, for courage of a high order, arising partly from the confidence acquired in long practice, is manifested in seizing and bagging the dreadful ophidian.

In most cases the charmer renders the reptile harmless by drawing their poison fangs, and the exhibition becomes then merely one which exhibits the snake's highly trained condition. On the other hand it often happens that the basket contains the veritable death-dealer, and a cobra with his fangs undrawn is nearly always forth-coming if the temptation in money be sufficiently strong. But in the handling of the creature when once exposed there is no hesitation, for hesitation means death, and in the swift seizure and sudden release there is a daring of an exceptional kind. A cobra strikes, and before it has made up its mind to strike, with lightning rapidity, and to dodge lightning successfully requires considerable agility.

The snake charmers, however, when put on their mettle will grasp the erect cobra with impunity, owing solely to the superior speed of their movements, for by a feint they provoke the reptile to strike, and before it can recover its attitude seize it below the jaws. In the same way the ichneumon or mongoose secures in contest with venomous snakes a comparative immunity. It was for a long time an article of faith with writers of popular works on natural history that this animal enjoyed a complete immunity, but scientific experiment has corrected this fallacy. A mongoose and cobra confined together fought fiercely, and though the latter seemed to the eye to strike his antagonist repeatedly, the mongoose, it being examined after it had killed the snake, was found to be untouched.

Another cobra was then brought on to the scene, and, being made to close its fangs on the mongoose's leg, the animal confessed its susceptibility to the poison by dying in about four minutes. It was, therefore, by its superior activity alone that in fair fight with the reptile it had escaped unhurt, and to the same cause the snake charmer owes the immunity that attends his exhibition. But as in the case of the mongoose the snake charmer, who is actually bitten, dies as rapidly as any other creature, in spite of all the powers of his charms, roots and snake stone. The Hindoo spectator refuses to believe this, and enjoys, therefore, by his credulity, a pleasure denied to more intelligent audiences, for if we could only accept as truth the snake charmer's statement that he has really been bitten, and the red drops on the bitten spot were actually blood exuding from the fatal puncture, and could then believe that the root he smelt, the stone he applied to the wound, and the charms he muttered were veritably counteracting the magic of the cobra's poison, the spectacle would be of surpassing interest, since it would be a miracle. —London Telegraph.

PLANTING TELEGRAPH POLES BY THE AID OF AN EXPLOSIVE POWDER.—The Titusville (Pa.) Herald publishes the following: "A new and improved mode of planting telegraph poles has recently been discovered and tried with success in this city. The method being stacked off at a distance of about 200 feet apart, a man starts off with a pocketful of four-ounce cartridges containing the wonderful new explosive known as 'electric powder,' and with a crowbar in his hand. A hole is punched from 4 to 5 feet with the bar in a few minutes, and a cartridge dropped to the bottom of the hole thus made, fill in with gravel and earth, and the job is complete. It matters not what soil is perforated with the bar, wet or dry, loam, clay, gravel, slate or boulders (provided the bar can be inserted), the effect is the same. A gang of four men, with the poles delivered on the ground—one man to blast and three to erect the poles and tamper them—will put from 100 to 150 poles a day of ten hours each. The cost, therefore, of this new and improved process is about two-thirds less than the ordinary method of planting telegraph poles, as now practiced.

Admirers of Artistic Pottery and Glass are invited to inspect some choice examples select- ed by Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salvati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

UNION SQUARE.

A SLENDID OPPORTUNITY TO WIN A FORTUNE. FIRST GRAND DISTRIBUTION, CLASS B, AT NEW ORLEANS, TUESDAY, FEBRUARY 11, 1891—Monthly Drawing, Louisiana State Lottery Company.

This institution was regularly incorporated by the Legislature of the State for Educational and Charitable purposes in 1868, with a capital of \$1,000,000, to which it has since added a reserve fund of \$350,000. ITS GRAND SINGLE NUMBER DISTRIBUTION will take place monthly. *It never fails or postpones.*

Look at the following distribution:

100,000 TICKETS AT TWO DOLLARS EACH.	
HALF TICKETS, ONE DOLLAR.	
LIST OF PRIZES.	
1 Capital Prize of \$30,000.....	\$30,000
1 Capital Prize of 10,000.....	10,000

Shelton's Auxiliary Rifle

AND

COMBINATION SIGHT AND BREECH-LOADING SHOT-GUNS.

TESTIMONIALS from all parts of the country bear evidence to the fact that the SHELTON AUXILIARY RIFLE BARREL, combined with the Breech-Loading Shot Gun, makes the best hunting arm in the country, affording sportsmen a weapon to meet any emergency that may arise in the field, from the smallest game bird to the grizzly. Not cumbersome, quickly adjusted, and equal to any rifle for accuracy and penetration. No wear or injury to shot-gun or rifle barrel. Calibres 20, 28, 44, Winchester model, 1872; also 45 U. S. Government 70 grs. powder, 405 grs. lead. Send stamp for Circular and Price List.

Also, manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COM-PRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

WARRANTED WATCHES ONLY \$3 EACH

\$12 WATCHES

For Only \$3 Each.

A BANKRUPT STOCK OF WATCHES,
Warranted for One Year.

This bankrupt stock of Watches must be closed out in 90 days. The former price of these Watches was \$12.00 each. They are silvered case and open face, all one style, and of French manufacture, the movements of which being well known the world over for their fine finish. They are used on railroads and steamboats, where accurate time is required, and give good satisfaction. Think of it, a \$12.00 Watch for only \$3.00, and warranted one year for time.

CINCINNATI, O., October 1st, 1878.

The Walters Importing Co. is an old established and very reliable house, and we cheerfully recommend them.

At the closure of sale of this bankrupt stock of Watches, which will continue 90 days from date of this paper, no order will be filled at less than \$12.00 each; so please send your order at once. With each Watch we furnish our special warranty for one year for accurate time. We will forward the Watch promptly on receipt of \$3.00, or will send C.O.D. If customers desire and remit \$10.00 on account.

Address all orders to Walters Importing Co., 150 ELM STREET, CINCINNATI, O.

SEE TO WATCH SPECULATORS: We call particular attention to these Watches, as they sell readily at from \$12.00 to \$20.00 each.
